Summer Specialties

Have You Something To Sell This Summer? Do you want men or women to do special summer work for you? Are you anxious to attract people to a certain summer resort? Have you some definite service to be performed without waste of time or money? If you have—allow us to place your story before the readers of Collier's. According to our latest report Collier's goes into 718,000 homes or offices every week. You can reach these homes quickly, effectively, and reasonably through this classified page. There is a proper classification for you. This page will sell special summer foods and special summer beverages. It will sell summer clothing; summer games and athletic goods. It will sell real estate or attract people to certain summer resorts. It will sell photographs. It will perform any reasonable service. What have you to sell that is in demand? We will gladly help you prepare good, selling copy or follow-up literature.

Rates and Information

We Maintain A Department To Co-Operate with advertisers. We will prepare copy or help you in any way possible. Questions gladly answered and complete information supplied on request. We solicit suggestions as to ways in which to improve this page.

Smallest copy accepted—four lines. Cost, $1.00 a line. 3% discount for cash with order; 10&5% discount on six-time consecutive orders—total discount deducted from sixth insertion. The next six classified issues are: June 6, 20, July 4, 18, August 1st and 15th. Rate for all issues after September 26th, 1914, $1.50 per line. An average of eight words to each line of space. Forms close three weeks in advance of date of issue (for instance, forms close for the June 6th issue on May 16th). To eliminate bookkeeping, check must accompany order unless placed by a recognized advertising agency. Address nearest office: 1119 Westminster Building, Chicago, or 414 West 13th St., New York City.

MOST users of the RUBBERSET Tooth Brush will say that the old way of making the RUBBERSET was good enough. The bristles never came out, no matter what use or abuse the brush was given. But since we have discovered a better way of gripping tooth brush bristles in hard rubber, we have adopted it. We have improved the RUBBERSET Tooth Brush—if you can imagine this possible.

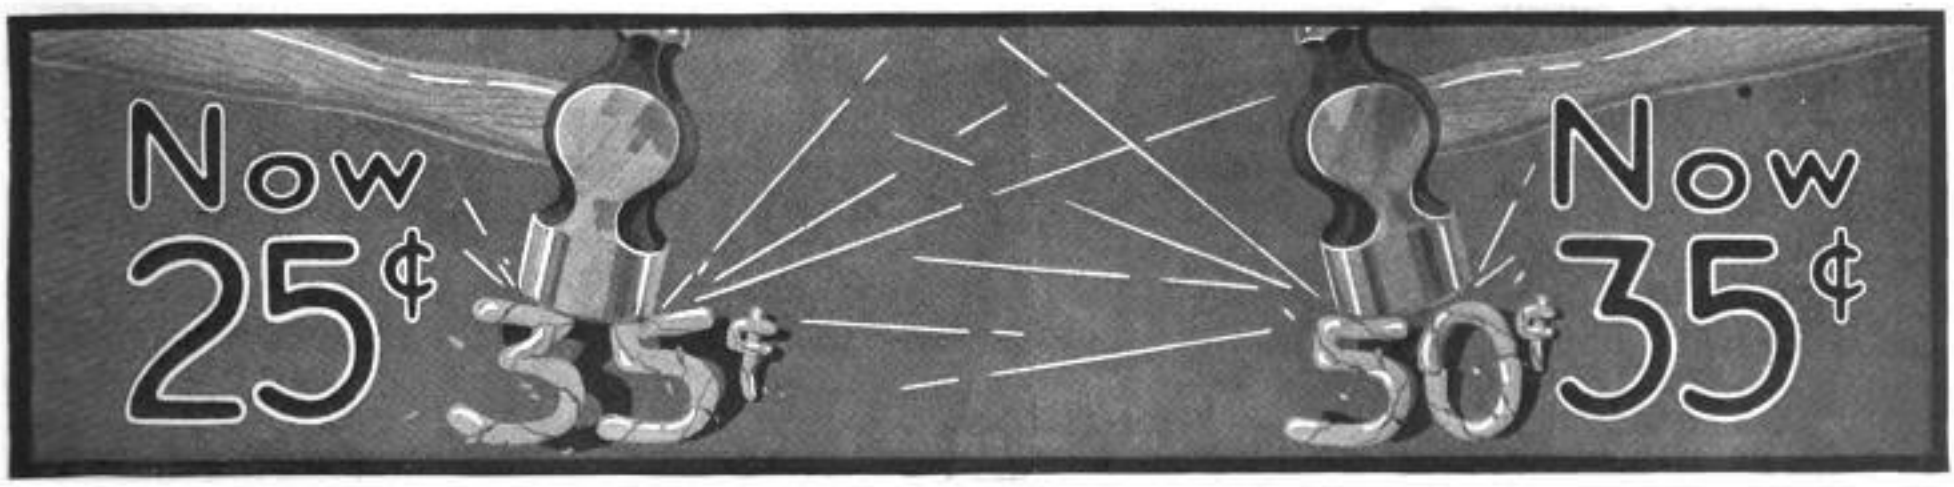
Now instead of gripping all the bristles of each brush in a single head of hard rubber, each tuft of bristles has its separate brush head of solid vulcanized rubber that holds each bristle with a vise-like grip. Thus a RUBBERSET Tooth Brush is composed of thirty to forty perfect little brushes—the bristles in each tuft being held in hard rubber as in the famous RUBBERSET Shaving and Paint Brush.

A solid blow from a heavy hammer might smash a RUBBERSET Tooth Brush into tiny pieces—but there would be no loose bristles. Each tuft would remain intact.

The tufts of bristles are held in a plate, in cone-shaped holes, and they can't be pulled through with a pair of pliers. The cone-shaped heads exactly fit the cone-shaped holes. Over this plate is moulded the top and handle of the brush—and the result is a brush with bristles, bristle-holding head and frame all moulded and hardened into one solid piece. The bristles haven't a chance to come out. Tug, twist and yank at them with a pair of pliers, and you can't loosen one of them.

RUBBERSET
TRADE MARK
SAFETY TOOTH BRUSH

THINK of the luxury of such a brush!—no annoying loose bristles to pick from between your teeth or to make you choke. Think of the safety of such a brush!—no chance for a loose bristle to lodge in the gums, throat, stomach or intestines where it may cause serious trouble. Think of the Economy of the RUBBERSET Tooth Brush! One RUBBERSET will outwear half a dozen of the ordinary make. Its usefulness only ends when the bristles are played out and worn out—because they can't fall out! And think of the price of the RUBBERSET Tooth Brush—NOW 25c for the brush formerly 35c—Now 35c for the brush formerly 50c—and worth the money. We have reduced the prices because increased output has reduced our manufacturing and selling costs.



You actually get a better RUBBERSET Tooth Brush for 25c and 35c than you formerly obtained for 35c and 50c

RUBBERSET Tooth Brushes are made in all sizes for adults and children—in plain, curved and serrated brushing surfaces. Their handles are shaped for convenient brushing and are slightly pliable. They are made of Alberite Ivory—and each handle of the genuine R-U-B-B-E-R-S-E-T Tooth Brush is stamped R-U-B-B-E-R-S-E-T. Look for this name in buying a tooth brush.

RUBBERSET Tooth Brushes are sold everywhere

Rich, mellow, fragrant Velvet, all the sun that kissed you ripe,
You have sto'ed up in your bein' to release it in my pipe.
An' to ca'm my troubled sperit, you have saved the mawnin' dew
An' the soft, shy summer breezes that have whispered peace to you.
An' you've learned me how to gather all the good things that I can
To turn 'em into kindness an' good will to'ds fellow man.

Velvet Joe

JOE, like every "dyed in the wool" pipe smoker, knows that there's a lot more than "just smoke" in good tobacco. He knows that Nature has stored up genial philosophy, sunny kindliness and real good fellowship in the "blessed weed". VELVET, the Smoothest Smoking Tobacco, mellowed by more than two years' ageing, is made of the choicest Kentucky Burley, the tobacco which Nature outdid herself to make all that pipe tobacco ought to be. VELVET is *Burley de Luxe* perfected by slow and careful curing that brings out all its flavor, fragrance and body—with an added aged-in-the-wood mellowness.

There's a whole lot of peace, contentment and satisfaction waiting for you now in a tin of VELVET.

One unit for starting the motor

Why *two* Units are better than one

One unit for generating the power

WHEN you call at automobile show-rooms much of the salesman's discussion will naturally be about the starting-lighting system.

You will find *two general methods* of generating current and cranking the engine.

In one type of system, the dynamo or generator and the starting motor are combined in a Single Unit.

In the Gray & Davis Starting-Lighting System, these units are separate and work independently.

With a few simple facts before you, you will soon decide in favor of the Two-Unit system.

The Single-Unit system is a good all 'round device, but because of the design must divide its efforts between two widely different tasks.

The combination of generator, starting motor, and in some instances an ignition system, requires more or less compromise.

The Two-Unit Gray & Davis System may be compared to a two-man team of specialists, each having a *separate* task.

Together these separate units are naturally in a position to give better service than a single unit having two, or perhaps three duties.

How Both Systems Work

In the Single-Unit system the starting motor armature constantly revolves.

In the Gray & Davis System, this armature works only when called upon to crank the car. On the average automobile this work amounts to about 50 hours a year. During the same length of time, a car equipped with a *Single*-Unit system running 4 hours a day, forces its starting motor armature to revolve *1460 hours*.

In the Two-Unit System there is absolutely no need of mechanical compromise because each separate unit has but one function to perform.

The dynamo is a sturdy, reliable generator.

The starting motor is simplified to a point where it uses no more power than is absolutely necessary.

What happens in Emergencies

Suppose, in a Single-Unit system an accident disables the generating function. *The entire system will be affected.* Should the starting function give trouble, the chances are that the *entire system* will be put out of commission.

With two *distinct* units, as in the Gray & Davis System, accident may impair the starting motor but the dynamo still continues to generate. The lighting efficiency is in no way impaired.

Should the Gray & Davis *dynamo* be temporarily out of commission, the starting motor continues to crank the engine as long as there is a charge in the battery.

Six years of proof

We have manufactured automobile equipment for 15 years. During the past 6 years we have *specialized* in electric starting-lighting equipment.

This work has been under the personal direction of one o the world's greatest experts in dynamo and motor constructio

The Gray & Davis dynamo has been in service s years. The starting motor has been in use over two ye on all types of pleasure cars and on several motor and department trucks.

Road service has proved beyond doubt the abs soundness of the Two-Unit System.

You will find the Gray & Davis Starting-Li System on leading cars in every price class.

When an automobile salesman says, "Yes, this complete Gray & Davis equipment," you may cou unvarying efficiency and reliability.

All the facts about starting-lighting systems ar our latest catalog. A copy will be sent you on

Design in young men's clothes

THE proper designing of clothes for young men is an art which we have brought to great perfection.

It is necessary to please the young men, of course; they won't buy what doesn't attract and satisfy; but it is also necessary to maintain the high standards of style and quality which we have set for all our undertakings—to make clothes that look young without looking frivolous; that have the lively, snappy lines which young men insist on, without being undignified.

Our designers of young men's clothes make a study of young tastes and preferences; they get just the right "air" into the styles they create and we make the clothes with all-wool quality and best workmanship in them.

Our illustration shows two of our best models for young men. Center: 31 inch soft-front coat, 3 buttons; a style for any figure. Right: 30 inch soft-front coat, 3 patch pockets; each has 6 button, no collar waistcoat. Such suits may be had of good clothiers from $18 to $50

THE NATIONAL WEEKLY

Entered at the New York Post Office as Second-Class Matter

MARK SULLIVAN, EDITOR

Entered as Second-Class Matter at the Post Office Department, Ottawa, Canada

Drawn by W. Herbert Dunton

THE COURAGE THAT INSPIRED *six hundred heroes at Balaklava to charge into a valley of death was no greater, perhaps, than that displayed by the signalman in modern warfare who posts himself for duty upon death's conspicuous peaks. The "wigwag" man goes to battle with flags in his hands instead of weapons,*

"Sniped!"

a helpless target for the enemy's marksmen. At the taking of Vera Cruz the first American killed was Private Daniel Aloysius Haggerty, Eighth Company, Second Regiment of the United States Marine Corps. Private Haggerty was on signal duty on the roof of the Terminal Hotel, where he became a conspicuous mark for the bullets of "snipers" in a near-by tower. The incident pictured above is drawn from descriptions

The Fall of Vera Cruz

When Is War Not War?

By Arthur Ruhl

Mr. Ruhl landed at Vera Cruz from the battleship Michigan on Thursday, April 23, and cabled, on Friday night, this impressionistic picture of the captured city

NO NOVELIST or stage carpenter ever devised a scene more curious and theatrical than that presented in the old Plaza of Vera Cruz this morning, Friday, April 24, when I saw it three days after the marines and sailors took the city. The sun blazed down. The air was filled with waltzes and musical-comedy songs pounded out by a band from an American battleship under the palms on the Plaza benches. Mexicans listened languidly, a trifle bewildered, rather pleased, puffing their cigarettes under arcades about the Plaza; and the little café tables in front of the mirrors shattered by Wednesday's rifle fire were crowded with American refugees from the interior excitedly telling how they had got away, humming the band tunes; with business men who had left behind them the work of years, not knowing whether they could ever return; with their wives and children; with adventurers and soldiers of fortune.

Yet This Was Not War!

THE same lazy, sun-drenched air that carried the band music was crackling with radios from Tampico, Tehuantepec, and Pacific Coast towns telling of hundreds fleeing, as they thought, for their lives; and of the five thousand troops preparing to embark at Galveston. Above the palms in the old cathedral belfry, on roofs, on the sand hills outside the town, sailors were incessantly wigwagging, sending and answering messages from the battleships in the harbor; and past the café tables went a steady procession of field guns, rapid-fire automatics, and commandeered wagons filled with tents and supplies, with guards, rifles in hand, watching the roofs, and companies of sailors in service uniforms of rusty yellow, and marines. Everything showed there had been a battle.

No one could tell what would happen next, and yet this was not war. The Mexican flag was still floating from the old fort of San Juan de Ulloa in the harbor scarcely two hundred yards from the *Prairie*, whose fire against the Naval Academy was so accurate on Wednesday morning. From the deck of the *Prairie*, scarcely a stone's throw to the old prison, the comandante was warned that at the first sign of activity San Juan would be fired on. Yet as this is not war the two lie quietly side by side; and the comandante, who flies his flag in face of the fleet that could blow him out of the water, punctiliously dips the ensign when a launch carrying American dead passes by.

Peacefully to take a customhouse and to continue civil government among a people accustomed to accept rules of conduct developed by highly civilized nations may be simple enough, but it is another thing among people who owe offices to favor of a dictator they fear to offend, and to not a few of whom Red Cross flags are mere red marks on white cloth and nothing more.

Greater Naval Losses than in All Spanish War

WHILE the great twelve-inch guns of the fleet merely frowned in silence the navy was suffering losses many times greater than it sustained in all the Spanish War; and while officers and men were being sent ashore to march through empty streets to meet a death that took them unawares; while mobs were marching through the streets of the Mexican capital and Americans were crowding the refugee trains, the Mexican transport *Progreso*, crowded with reenforcements, steamed into the harbor under the very guns of the dreadnoughts, and then, this not being war, was told not to anchor, and left to wander rather crestfallen out to sea. Surely not often in international relations has a situation arisen so extraordinary as this. It is often said by Americans living in Mexico that the unexpected always happens, and the longer you know Mexico the less you pretend to understand it. As this is being written no one can tell what will have happened before it is printed, or how, having stepped into Mexico in this strange and tragic fashion, we may get out again. It is one of the grim and inevitable ironies of the whole mixed-up business that those who fired from ambush on men who had no intention of firing on them should be regarded by Mexicans as patriots defending their homes from an invader—anonymous heroes, as "La Opinion" called them yesterday. Anonymous they were.

The Admirable Bearing of Our Men

THE very behavior of our own men was admirable throughout, forbearing under great difficulties. They went from their ships to the most disconcerting sort of land fighting resolute and undismayed.

While salutes were thudding out to a British cruiser this morning and radios pouring in from all four points of the compass from Washington to the west coast, in the midst of orders in official language came a message from the flagship, stiffly introduced like the rest.

"Following telegram," it said, and then quoted a sentence from parents in the far-off States to their son, a bluejacket on the *Florida:*

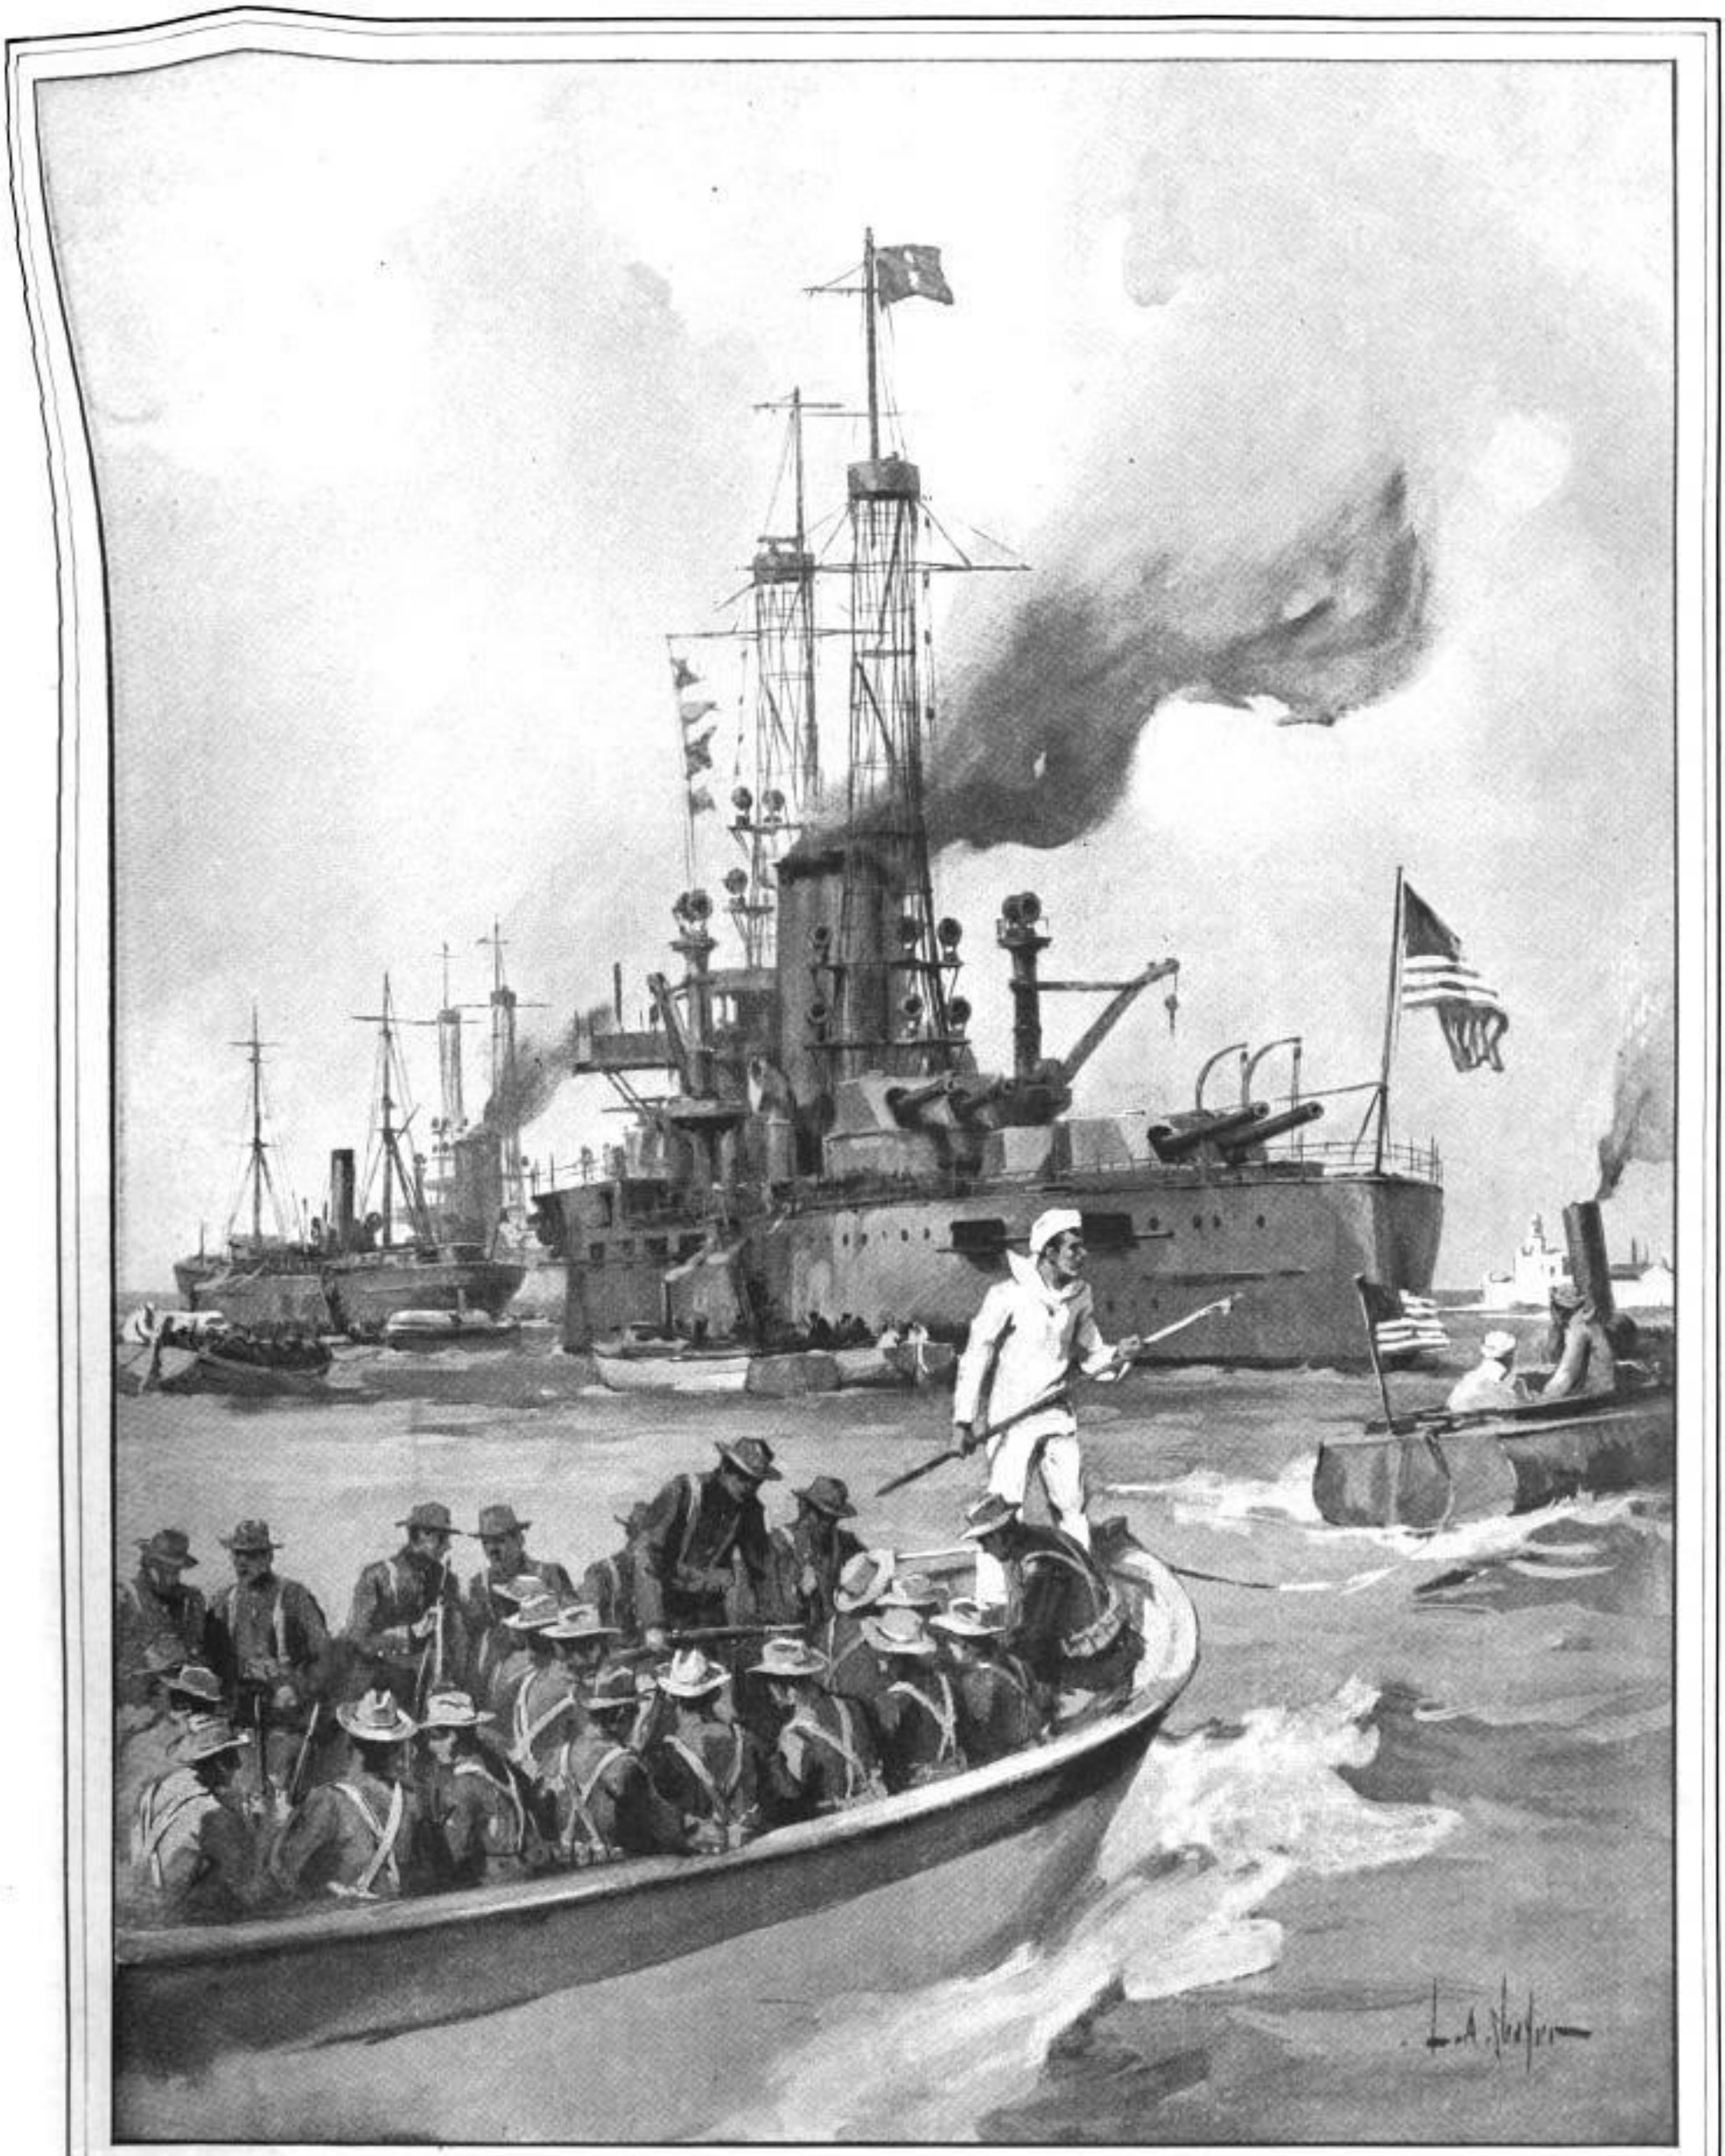
All our thoughts and sympathies are with you. Earnest prayers for your speedy recovery.

There was no hint of address. It had merely come out of the air, a human word faltering strangely across the spaces into this sternly beautiful company of great gray fighting ships.

There has been war for them at any rate.

The First Who Fell

(*At Vera Cruz*)



By GRANTLAND RICE

HE HAS come back home, asleep,
Yet, within his resting place
From the outer darkness deep,
Love's pale lilies hide his face;
And beneath blue summer skies,
Where he dreams below the sod,
But a single rosebud lies
Now between his heart and God.

From the day-gleam to the night
He has passed, and yet afar
He has found a greater light
Than we know from sun or star;
He has found a rarer gleam
Where no weary tears may blur,
He will know a sweeter dream
Where the wind-blown grasses stir

He has come back home, asleep,
With the flag above his face;
With the starry fold to keep
Guard above his resting place;
And beneath blue summer skies,
Where he dreams below the sod,
But a single rosebud lies
Now between his heart and God.

The Landing of Our Marines at Vera Cruz

This move, on the morning of April 21, put a new war date in American history. The Florida is in the foreground; the Utah and the transport Prairie in the rear, and the old fort of San Juan de Ulloa at the right

Drawn, from Descriptions, by L. A. SHAFER

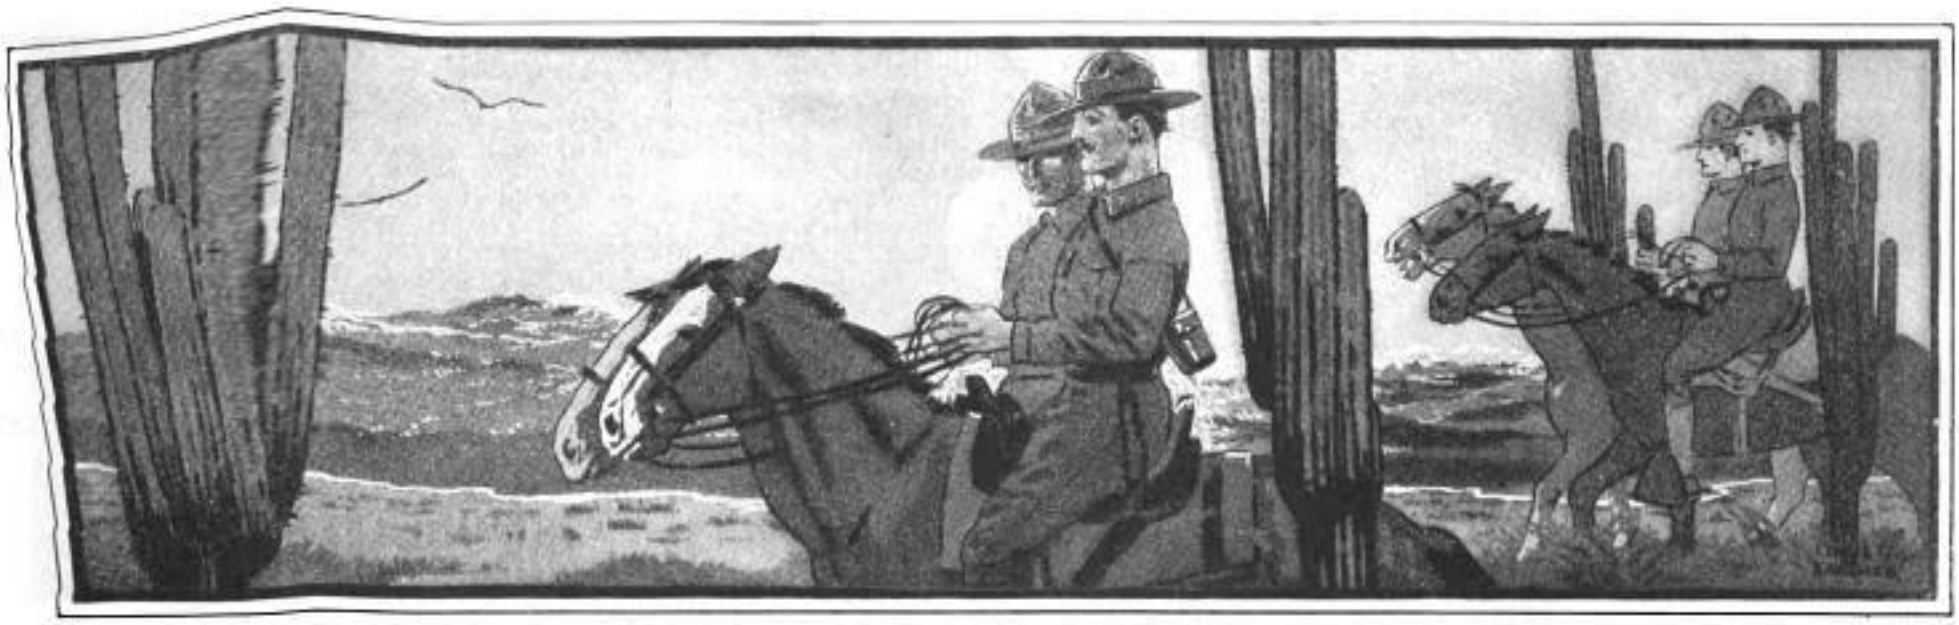
Featuring Four Principals in the Story of the Clash With Mexico

Photographs by W. Nephew Kinz

He did a good job quickly. That tells the story of Captain W. R. Rush's work as commander of the marines and bluejackets during the first day's fighting in Vera Cruz

Admiral Fletcher (left) and General Maas



The man who came and the man who went

At a glance you would take both of the men in our photograph for American officers. Their uniforms are similar, and General Gustavo Maas looks as much like a real fighter as Rear Admiral Frank F. Fletcher. But do not blame the snapshot. It was taken shortly before Admiral Fletcher broke into naval history by directing the hasty seizure ***of Vera Cruz and Huerta's commandant shied at Uncle Sam's guns and ran away so that he might live to fight some better day. General Maas had a chance to achieve fame by trying to hold the city, but he preferred personal safety to prospective glory***

President Wilson asking Congress to endorse his plan to eliminate Huerta from the Mexican situation. This was the first war message ever delivered by a President of the United States in person. An outstanding fact throughout this country's relations with the Federal Government of Mexico is Mr. Wilson's insistence from the first that Huerta must go. The Dictator's rise to power following the killing of Madero was something the President could not forgive

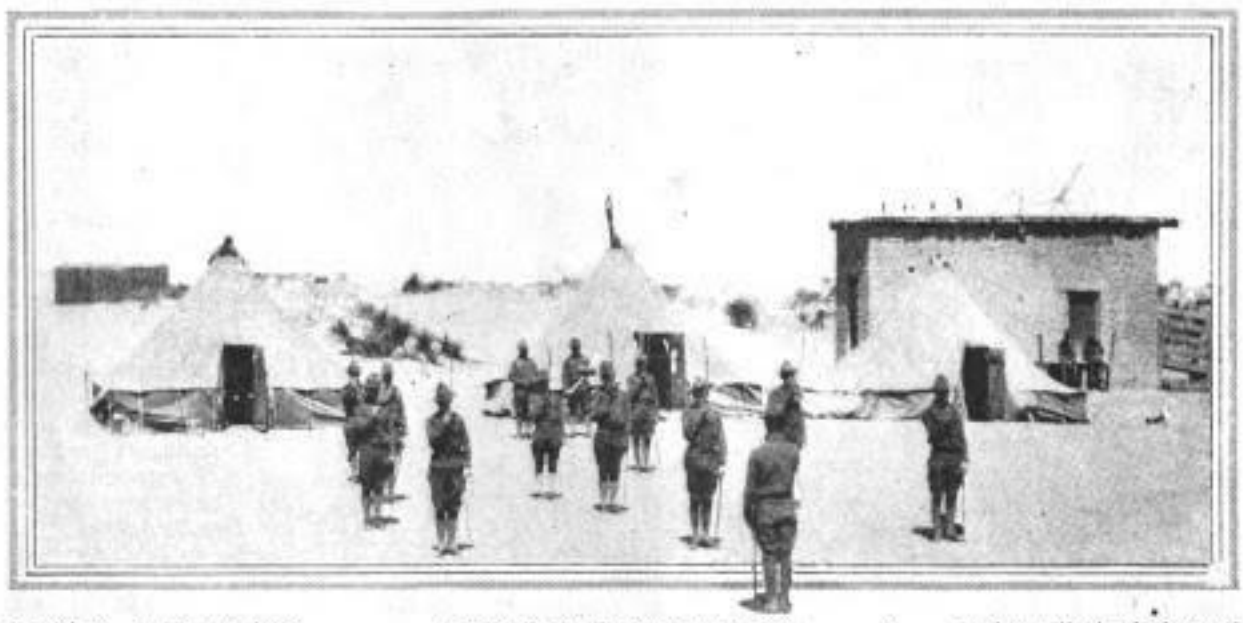
With the Border Guard

By Peter B. Kyne

PHOTOGRAPHS BY FRANK S. SPRING



I DO not know a thing about the navy except that bluejackets on parade are a most gallant sight. From recent developments, however, we know that the navy, in addition to being very gallant, is also determined in the matter of salutes. That is because the navy has traditions. But with the army it's different. The soldier of these United States is a little shy on tradition, for, with the exception of a few regiments formed just after the Revolutionary War, a large portion of our standing army is just plain army without any particular interest in past performances or precedents covering the correct procedure when confronted by a public insult. Indeed, many of our regiments are still too new to have laid even the keel for tradition, and, as for precedent, all the precedence necessary for a regular army man is to fight the fight when it is to be fought and accomplish this disagreeable duty in such a manner that the old man at home who carried a bullet back from Gettysburg won't be ashamed of him. Down on the Rio Grande they shoot at our army with malice prepense, and what does our army do? Is it insulted? It is not. It merely says: "Oh, the devil! They're at it again!" And an officer or a sergeant, or even a lance corporal, walks down to the edge of the river and yells: "Here, you fellows, stop that! You might hit somebody." Salutes on the Rio Grande? Hardly! To paraphrase Mr. Kipling:

They ain't no thin brown heroes, nor they ain't no blackguards too,
But single men in khaki, most remarkable like you;
And if sometimes their conduct isn't all your fancy paints,
Why, single men in khaki don't grow into plaster saints.

However, I did not go to the border to glean material for an article on etiquette in the regular army, or to get a new slant at that variable commodity from the viewpoint of $15 gold per month.

I went merely to look our soldiers over, to see how they stack up on a hard, dirty, thankless task, and what fun, if any, they are getting out of it. I discovered that they stack up a heap better than they did fifteen years ago when I was a regular soldier, although fun, in the concrete meaning of the word, is not included in the life of a soldier on the border—or anywhere else, for that matter. "Soldiering on the job" is a phrase that can no longer be adduced by a section foreman as an excuse for discharging a section hand without the use of that old-time expression constituting a libel on our army. Nowadays an enlisted man has a real job, and about all the fun he can get out of it is the joy of accomplishment—the pleasure of doing it a little bit better than it has ever been done before. A change has come over the service. Of course I knew that before I went to the border, but not until then did I realize the extent of this change. I was aware of it while still scarcely within the confines of the first military encampment I visited along the Rio Grande. I did not see it—for the general aspect of military encampments has not greatly changed except in color. They use the khaki tent now instead of the white canvas. I *smelled* it!

There is nothing remarkable in this assertion. All old soldiers will understand and remember that soldier smell—a combination of moth balls, new canvas, wood smoke, army stew, horses, earth, leather, perspiration, garbage, and filth. I had sniffed it in Camp Merritt in 1898, when the germs of measles, typhoid fever, and spinal meningitis were mixed up in it and Chopin's "Funeral March" vied with the drill calls, and I shall never forget it. As I stood on the edge of the camp of K Troop, Thirteenth United States Cavalry, at Anapra, N. Mex., and pointed up wind, the vagrant breeze brought me no hint of the dread old aroma, so I took heart of hope and descended upon K Troop.

"Spread out in little lonely detachments along the border." An outpost of the Thirteenth Cavalry in the desert beyond El Paso

Regular Food Cooked in a Regular Way

THE troop cook came to the door of a crudely constructed cookhouse and mess hall, looked out, saw that it was only two civilians and went back to his pots and pans. It was a warm day, the wind was blowing the desert dust through the camp, and he looked so weary and dispirited that my heart went out to him. I longed to tell him that I understood just how he felt; that once in the long ago I had done thirty days in the kitchen for impudence to my top sergeant, and was aware of the fact that cook's police are absolutely undependable and irritating. I wondered if, at twelve o'clock when mess call sounded, he would prove himself a reliable cook by having the meal ready on time, or would he, anticipating mess call by a few minutes, come to the door of his domain and shout: "K Troop! Come and git it!" In the old days the provender of patriots was always designated by the neuter pronoun, and when men approached their meals they did so warily, sniffing as they came and inquiring of the man in front just what familiar atrocity was about to be consummated upon them. I knew a man who used to abandon all self-control and weep when he had no alternative but beans.

I peeked into this cook's stronghold and saw marvelous pumpkin pies for seventy troopers cooling on the kitchen table. They were not the deadly pies of commerce purchased in El Paso, but baked by that K Troop cook himself. In a respectable bake oven he had roast ribs of beef and brown potatoes—so I backed away reverently and forbore to pester him with questions. Al de mi! How times have changed! Formerly they used to look over the recruits at drill, and when they found a hay-foot, straw-foot soldier who could never by any possibility learn to keep step, or a trooper who always straddled his horse's neck when taking a hurdle, they fell upon him with glad acclaim and nominated him a cook. It is with signal pleasure that I am enabled to announce that this practice has been discontinued and that regular food is now cooked in the regular way by all regular cooks. Lucrezia Borgia was a sucking dove compared with the average troop cook of fifteen years agone. Nowadays they select a capable and intelligent person, train him in cooking school, and give him good equipment to work with; in consequence of which the principal source of mortality and horror in modern warfare has been entirely eliminated.

K Troop was encamped about five miles up the Rio Grande from El Paso and a mile back from the river. It was plain to be seen that with the troopers the lighter aspects of soldiering did not obtain. Around them swept a blistering desert of sand and lava scarp, and save the distant trains crawling athwart the horizon, or a Mexican mounted patrol which sometimes rode to the monument on the hill above the camp and gazed down on the gringos, the monotony of camp life was unbroken.

Quartermaster Sergeant O'Mara and Corporal Gilmore received me and wanted to know what they could do to make me happy. Both were typical "old soldiers"—men who couldn't be happy outside of the service. O'Mara, in

Digitized by Google

particular, is the personification of the term "grizzled veteran"—a man with a body still young, but with the snows of more than twenty years of honorable and active service on his reckless head. He has a vast and consuming pride in the service and he loves a good horse. He rides one such—a sorrel five-year-old yclept Chub. He saddled Chub, and Corporal Gilmore saddled Chub's bunkie, and the four went over the hurdles together for the benefit of the photographer; and after Chub had jumped his highest he lay down and sat up and did all the things a wise cavalry mount must do if he expects to get along in the service. It was easy to see that should the day arrive when Chub would have to be condemned or killed, there would be a heavy-hearted Q. M. Sergeant in K Troop.

Pride and Fitness

SERGEANT O'MARA and Corporal Gilmore are fair samples of 90 per cent of the enlisted men of our regular army—only the public does not realize it. These are the men who give the lie to the popular superstition that there must be a lamentable lack of character in the man who joins the army and still remains cheerful and contented and in full possession of his self-respect. Their very appearance refutes the ancient slander that men join the army because they are too lazy or too incompetent to earn a living in civil life. These men could earn a living and accomplish bigger and better things in civil life if they wanted to—but they do not want to. They are contented and do not reduce all of the elements of existence to the dollar sign. I think the finest, the most lovable old man I ever knew was first sergeant in a company of regular infantry, and he was worth $30,000 and owned a quarter-section ranch in Nebraska! He had made that in judicious speculation by investing a few hundred dollars he had saved in his first enlistment. When his thirty years of service were in he retired to his ranch, having acquired the ranch for that purpose, although he would much rather have kept right on soldiering!

Let us take Q. M. Sergeant O'Mara as a type of this vast but thoroughly misunderstood and unappreciated element in our regular army. Before you have spoken to him five minutes you *know* why he is a quartermaster sergeant. He fits the job—and it is a job that necessitates a smart, sober, reliable, industrious, and efficient soldier. He takes pride in doing his work a little better, a little simpler and with less lost motion than any quartermaster sergeant in his regiment. And that's where he gets his fun in dreary Anapra.

Always Ready to Take the Field

HE TOOK me into the little adobe cabin he has built to house his quartermaster stores. Everything was in its appointed place—and a place for everything. All boxes bore the legend of their contents in a serial number, a detailed inventory of those same contents being entered under that serial number in a little book which is never out of the Sergeant's possession. He can place his hand instantly on anything that is needed for the troop. Also, since he does not know at what hour of the day or night the troop may be called upon to take the field, the top of every box is always in place, with two nails in each end of each board in the top, driven through and awaiting but two taps of a hammer to complete the job and make the box ready for shipment wherever the troop may be ordered.

As an instance of the efficiency of our regular army, it may not be amiss to cite a trivial incident that took place in K Troop recently. The Major in command of the squadron of which K Troop is a unit, arrived at Anapra without previous announcement and issued orders to K Troop to prepare to take the field immediately!

And that was fun—for of course K Troop knew it wasn't really going to leave Anapra at all. It was just the Major's way of ascertaining if they were on the job day and night. But it was fun just the same, for there is every manly sport in competition and that new spirit of the service which seems to be part of the personality of every officer and enlisted man was about to be displayed—the pride in doing the job well! In the heart of every man was a glad desire to make the Major understand that if he was looking for an opportunity to criticize he had come to the wrong camp.

One instant that camp was as deadly monotonous and devoid of activity as a cow county village at midday. The order was given and the scene changed instantly. But the activity of K Troop did not resemble the bustle and hurry of a three-alarm fire. One would not have been confronted with the thought that here were seventy odd troopers striking a camp they had occupied for a year; saddling seventy horses and packing personal equipment; harnessing four-mule teams to wagons; drawing extra ammunition and rations for three days; loading three days' forage on the wagons for the cattle; packing and loading on the wagons every vestige of troop property and lashing it in securely for a journey over unknown roads—a journey that might be one mile or a thousand—and striving to do all of this faster and better than it had ever been done before. There was no wasted effort, no stumbling, or falling one against the other, no lost motion. Perfect system and perfect training had obviated all that, and presently K Troop was ready, if need be, to ford the Rio Grande and start for the City of Mexico. The wagons were loaded, the drivers in their seats, the troopers led out, a bugle command: "Prepare to mount! Mount!" seventy odd olive-drab legs swung over seventy odd saddles, and the Major looked at his watch.

Here in the Mexican reconcentrado camp at Fort Bliss are 5,000 Mexicans—soldiers, women, and children. Their guards say they are not more difficult to handle than the same number of Americans

Thirty-two minutes had elapsed since he had given the order—and the major portion of the burden of this record had fallen on Q. M. Sergeant O'Mara.

Private of Federal artillery, surrounded by the family he supports on about three pesos a month. He is wearing a United States campaign hat of obsolete design, having lost his Mexican hat in action at Ojinaga

"Captain," said the Major, "where is your picket rope?" One could almost imagine him adding: "Ah—hah, villain! I have you." Thirty-two minutes was suspiciously fast; for, be it known to all civilians, the picket pins and the picket rope may not be loaded in a wagon, but must accompany the troop wherever it goes. Neither may they be loaded on a leisurely pack mule, to be left far in the rear at the command "Trot!" Picket pins and the picket rope must be lashed in a saddle somehow, and from time immemorial they have been a nuisance, for the reason that they *will* work loose and frequently a halt has to be made while the Q. M. Sergeant and an assistant trim cargo. The Major, knowing these things, figured that Sergeant O'Mara might have been sly enough to toss the picket pins and the bale of picket line into a wagon; or, granted he had lashed it on a horse, he had lashed it insecurely! Thirty-two minutes was entirely too fast. Surely something had been neglected.

"Sergeant O'Mara," said the Captain, "where are your picket pins and the picket line?"

"On a horse, sir," replied the Sergeant.

"Bring up the horse, Sergeant!" and a trooper trotted out with a led horse, to the signal confusion but sincere delight of the Major, for at last that eternal, damnable problem of picket pin and picket rope had been solved. And when one looked at it, the solution seemed ludicrously simple. In a word, Sergeant O'Mara had invented a saddle without saying a word to anybody, and now he sprung it on the Major, as who should say: "Ah—hah, villain! I have *you*."

He had merely taken a discarded troop saddle and over this he had fitted a neat leathern superstructure which hung well down on each side and was so padded and arranged as not to gall the horse. In a leathern scabbard on the offside the heavy iron picket pins reposed, fixed and immovable, together with a twelve-pound sledge to drive the same. Counterbalancing this weight on the near side was a buckled leathern bag containing the farrier's outfit, horseshoes, nails, etc., and in the seat of the saddle proper the picket line, neatly folded, was lashed in with straps and buckles. The weight was evenly distributed and a trained bucker could not have budged the load an inch.

Should a horse cast a shoe on the march it would not be necessary to wait until the wagons caught up with the troop at night in order to reshoe him. The farrier and one trooper would merely drop out a few minutes, light a fire beside the road, heat the shoe, tap it into shape on the sledge as an anvil, reset the shoe and catch up with the troop before it had gone five miles!

The Major went away happy, vowing to equip his squadron with O'Mara saddles before another week should have passed over his head.

I talked with the Sergeant about his saddle and said I supposed he'd patent it and sell it to the Government. He said: "I couldn't do that, you know. I'll just improve on it and present it to the service."

Putting it over the Major that way and the definite settlement of the picket-pin and picket-line problem was sufficient reward for him. A few days later I spoke to Captain Anderson of the Twelfth Cavalry about the O'Mara saddle, and he pricked up his ears, so to speak.

Evidently he considered I had said something, and I am willing to take the short end of any modest wager that he has since gone up to Anapra and interviewed Sergeant O'Mara.

Politeness on the Patrol Lines

M TROOP of the Thirteenth is stationed on the bank of the Rio Grande on the western fringe of El Paso, in consequence of which the troopers are in far better fix for social enjoyment than their fellows up river at Anapra, N. Mex. M Troop patrols about eight miles of river. They are supposed to keep an eye open for smugglers and to frown severely upon any shooting into American territory.

Were it not that a mounted Mexican patrol from Ciudad Juarez takes a notion to ride up the river bank opposite occasionally, "straight soldiering" would be the order of the day.

Nobody in M Troop knows why the Mexican patrol patrols any more than any civilian in El Paso knows why the Mexican guard on the international bridge steps out of the customhouse when one crosses into Juarez in an automobile, looks one over suspiciously, mumbles "Bueno!" whether one is bueno or otherwise, and then goes back into the customhouse. Nevertheless, when a detachment of Villa's picturesque cavalry

Digitized by Google

comes into sight around the bend of the river, a mounted patrol of M Troop politely parallels the course of the Mexican up river until K Troop's men pick it up. When the Mexican patrol comes back down the river again M Troop's boys solemnly escort it back to the starting point. Both factions eye each other warily across the forty or fifty feet of incredibly muddy water and say nothing.

M Troop, however, knows why it patrols. There is a Mexican settlement on the El Paso side of the river about a mile above M Troop's camp, and one day when the Mexican patrol was opposite this settlement a youthful Huertista cracked across at the troopers with a .22 caliber rifle, nicking one of the Villa crowd in the arm and irritating him more or less.

Of course prompt demand was immediately made upon the Captain of M Troop that this social frivolity be suppressed, in consequence of which the Mexican patrol now enjoys an escort of M Troop to protect it during its daily peregrinations, notwithstanding the fact that the small boy who started the disturbance and thus earned M Troop a job has been apprehended and spanked by a trooper. It is really remarkable to contemplate the narrow margin by which international complications have been averted.

There is a lot more courtesy between nations than many of the home folks realize.

One Shot for the Range and Then—

ALONG the entire length of the border there was very little swapping of lead indulged in during the winter, although in the past our troops have been fired on and have returned the fire more frequently, perhaps, than Chris Haggerty, who is conducting the war for the Associated Press, had had an opportunity of discovering.

You must know that the Rio Grande isn't really a river at all. They just call it that. It's a sort of glorified creek, and at no point is it so wide that a Mexican with ordinary eyesight cannot stand on his side and observe the marksmanship medals so liberally besprinkled among the troops on our side. In the olden days the Mexican brave used to think these medals were there for scenery, but he knows better now. Occasionally wild, impulsive young men would come up from the interior in pursuit of their fellow man, pausing only when their quarry waded the Rio Grande. Even then many daring individuals could not resist the temptation of taking a shot at the olive-drab clad gringo who proffered sanctuary to their enemy. However, they generally made the mistake of indulging in long-range shooting, so naturally they didn't see those marksmanship medals and naturally they didn't hit anything. Now, as everybody knows, marksmanship medals are given to those who excel in long-range shooting, and 800 or 1,000 yards is just old pie for any soldier who has put in one hitch and qualified at the butts. Consequently the border guard pays scant attention to this firing unless morally convinced that the patriots across the creek are really getting personal, and then I am given to understand that the troop commander, or the corporal of the guard, or whoever happens to be the presiding functionary in the United States army at that particular point, manages to create the impression that he is blind in one eye and has but imperfect vision in the other; whereupon the boys shove up the rear sights and try one shot for the range—and another for the patriot. Then the tumult and the shouting dies coincidentally with the patriot, and a little later the leader of the opposition comes to the river bank and explains that it has all been a mistake. And that's the most truthful thing that hombre ever said. It has been a mistake—a grievous mistake; but nobody entertains any hard feelings and these little misunderstandings are growing less and less frequent. Some irrepressibles from the South tried it on a troop of the Fifteenth down at Del Rio in March and killed three troop horses. But they won't try it again—and if you want to know why, ask the Fifteenth.

Lieutenant Colonel Perkins, Twentieth Infantry, and the author

Fretful Mexicans and Doughboy Sentries

DOWN by the gas works in El Paso a company of the Twentieth Infantry is doing its best to make time fly. Unlike the cavalrymen, who are burdened with the care of a horse and extra equipment and do long night patrols, the doughboys have more time on their hands.

* * *

It has been stated frequently that the infantry is the backbone of the service. Having more spare time than the other branches of the service, it follows then that these soldiers are also the rascals of the service, and I heard some gossip to the effect that cock fighting and prize fighting are not an unknown form of social relaxation with this outfit at the gas works. In that company they have an athletic private reputed to be very light on his feet and handy with his hands, and I am informed that very recently race prejudice was dispensed with long enough for emissaries from Juarez and El Paso to get together and promote a contest. The afternoon preceding the battle the money changers in El Paso did a rushing business with infantrymen anxious to pledge everything in their possession that wasn't Government property and get the proceeds down on their countryman. I am happy to state that the source of revenue for the Twentieth disposed of his Mexican antagonist in decisive fashion, and, in defiance of a strict military order which ordains that no soldier of the United States shall set foot on Mexican soil, the quarrel took place in Juarez. The source of revenue by some miraculous hocus-pocus was permitted to leave Juarez alive, and with $800 gold as the fruits of victory. How he ever got by the brigands on the bridge is a deep, dark, and unfathomable mystery. However, life is sweetest when it is most uncertain, and it is very dull soldiering along the Rio Grande. One must do something. It isn't an inviting country, western Texas, and personally I have been unable to grasp the point of view of Laska's young man who complained:

I do not know and I do not care
For the things that are or the things that were,
For half my heart lies buried there;
In Texas—down by the Rio Grande.

I made inquiry of a Kentucky private of the Twentieth as to what difficulties, if any, his company had had with recalcitrant Mexicans. He told me they had had some trifling experiences with surly Mexican gentlemen from El Paso who resented their presence in the land, and who, when loaded with aguardiente and sundry soul-destroying stimulants, had been indiscreet enough to dispute the right of way with a sentry. He said that while such regrettable affairs were not given undue publicity, still there were five or six good Mexicans planted unostentatiously in the sand along the river not far from our vicinity. It appears that when challenged by the sentries at night and requested to submit themselves to a search for contraband, these dusky dare-devils had essayed a little quick knife work on the sentries. He, himself, had been attacked on guard a few nights previous while examining a Mexican with a bundle of laundry in his possession, and in sheer self-defense he had been forced to fracture the latter's cervical vertebræ.

I thought I knew how he would do this and asked if he had given the foolish man "butts to the front." "No," he said calmly, "I lammed him across the neck with the barrel. One or two of the boys has broke the stocks of their pieces on these hombres' heads, giving them butts to the front—and I didn't want to take no chance on busting mine."

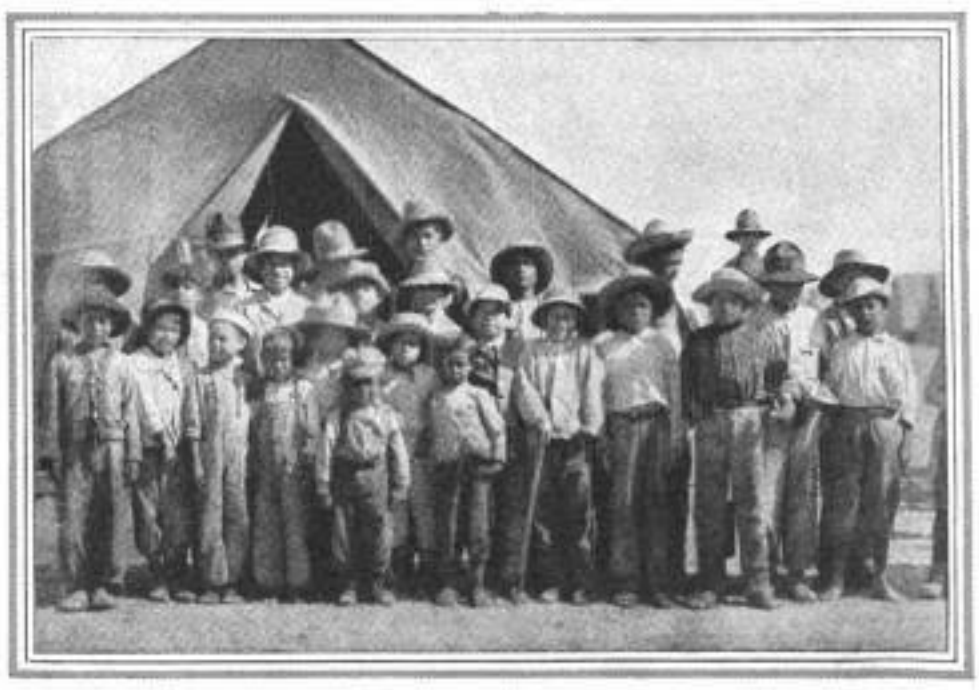
If that isn't efficiency carried to the nth power, I trust some citizen will write in and give the proper definition.

Q. M. Sergeant O'Mara, K Troop, Thirteenth United States Infantry, taking a hurdle on his horse Chub

The doughboys at the gas works had an easier time during the short period the embargo on arms was lifted.

I can readily imagine how weary a peacefully inclined doughboy would grow searching Mexicans—particularly the fretful, nervous kind that, during the operation, endeavors to introduce six inches of hardware under the floating ribs of the searcher. Our soldiers do not mind being shot at occasionally, but more intimate attentions are discouraged.

However, it is out at Fort Bliss, on the desert mesa north of El Paso, that real human-interest soldiering is going on so quietly and unobtrusively one would never know it until he had investigated rather thoroughly. Once, in Luzon, I helped herd a grub line of several thousand starving Filipinos our regiment was feeding, and I remembered what a problem they were; hence when I gazed upon the huge Mexican reconcentrado camp at Fort Bliss I realized that here was copy without stint.



I observed that the Twentieth Infantry had charge of this Mexican problem, so I called on Colonel R. H. R. Loughborough, commanding, and asked him for a pass. He said he wouldn't give President Wilson a pass inside that camp, but—he'd take me down to the gate, square me with the sergeant of the guard, and turn me over to the Hospital Corps. He didn't want to set a precedent on pass distribution. When we were inside, the Colonel introduced me to Private of the First Class Scott of the Hospital Corps and requested him to take care of me.

Uncle Sam as Foster Father of 5,000

PRIVATE SCOTT explained the situation briefly. When General Mercado evacuated Chihuahua and commenced his terrible march across the desert to Ojinaga, there marched with him the wives, consorts, children, dogs, chickens, burros, cattle, sheep, goats, and household gods of his soldiery. The record of that dreadful retreat will probably never be written, for death and suffering are common to the peon and do not stir his sluggish imagination to a recital of detail.

The record of the last leg of the journey from Marfa, Tex., to Fort Bliss is more complete, however, for the reason that it was a personally conducted excursion under the auspices of the Twentieth Infantry, commanded at the time by Lieutenant Colonel Perkins.

Ojinaga fell and the remnants of Mercado's force—together with the appurtenances and hereditaments thereunto belonging— (*Continued on page 20*)

Uncle Sam began the education of his wards right away. School was let out in order to be photographed, by order of Lieutenant Palmer, superintendent of education

Mary Long-Ago

By George Henry Shelton

ILLUSTRATED BY FRANK SNAPP

MY CAR was thinly inhabited, and I had the smoker to myself until a hale old man came in and engaged me in conversation — my friends say that is not a difficult achievement. During our adjustment of the world's troubles I changed my first guess of college professor to farmer only because of faint but unfailing signs of prosperity. Later I learned that he was a manufacturer and trust magnate, under indictment at the time for being a party to combinations in restraint of trade. Somehow, since my acquaintance with him began and ended, I have been unable to regard malefactors of this class quite so seriously. They should be put out of the way, of course, but humanely; they should not be tortured.

Perhaps an hour after he came in we passed a flaring row of signboards, among them a tobacco sign whose pictorial motif is a bull. Next to it a lightly clad youth, on the run, displayed the freedom enjoyed by those who wear R. S. V. P. underclothes; but he impressed the car-window observer as escaping from the painted bovine on the adjoining board. My companion, noting this effect of juxtaposition, laughed curiously, beginning heartily and ending softly.

"It reminds me," he explained, "of the time a cow drove me into proposing to a girl in my drawers."

HIS tone denied evil, and forbade more than a sympathetic smile.

"It was long ago," he went on. "I was nineteen then. I am a grandfather now of respectable standing. We were still innocent of railways in Clarendon County and guilty of as villainous roads as the State could boast." He turned to me abruptly: "Have you ever been in Maryland, young man?"

I set forth, with some pride, that I was born there.

"You know something about roads, then," he said, with kindly pity. "But ours were worse—fifty years ago. We're doing better now; otherwise my business wouldn't pay. But their condition didn't trouble me then. As a matter of fact, I had never been farther from home than the county seat, and knew nothing better. And I was used to walking. I had to be.

"So one Saturday afternoon, when I set out for an over-Sunday visit with my neighbor, David Elliot, I walked, even though David lived fourteen miles away. I remember it as though it were yesterday—which shows I'm growing old. It was November. The birds were gone and the trees were bare. I passed the Cross Roads, and after that a house now and then, and once in a while a rabbit scampered across my path. That was all the life I saw. Last week I went over the same road in an automobile. It's different now—I didn't see a rabbit; and it's crowded and lonely. But then the empty way was full of life, and I covered nearly the whole distance before my steps began to lag. A long, hard summer lay behind me, but I was richer for it by nearly a hundred dollars and was a man of parts. Moreover, my welcome at the Elliots' was assured. David himself had invited me; and I was not so deficient that I failed to recognize the significance of this, or to realize that, notwithstanding orphanage and poverty, my reputation as a rising youth, who had taught the district school for two winters, was too firmly established to be resisted even by the man with the prettiest daughter known to the widest-traveled man at the Cross Roads—and George Barker had been a dozen times in Indianapolis and once to Chicago.

"NEVERTHELESS, my feet dragged; and for a while I thought of turning tail incontinently and fleeing for home. It wasn't altogether Mary—she had been my pupil, and was, I thought, kindly disposed toward me; it was partly her mother's very motherliness, which I knew would surround me; partly her father's meaning smile, which I knew would welcome me; and very much her brother Jim's rude humor, which I knew would torment me. In short, it was plain stage fright. Were you ever shy, young man?"

I declared unblushingly that I was always shy—though I refrained from adding that my mission in life at the time was to sell encyclopedias. He shook his head. "No; I guess not. Nobody was ever shy but me. I used to read about a shy young man in the Fourth Reader, but he was brazen audacity compared with me. Nevertheless, I pushed myself on until I reached the Elliots' just as it was growing dark and growing cold. They were gathered in the kitchen, partly because it was supper time, partly because it was too cold to be elsewhere, and wholly because it was the custom of the generation. The room was aglow with a log fire that would have warmed anything but a scared boy. Mr. Elliot was a large, hearty man, and he greeted me with a meaning smile. Mrs. Elliot was a small, wiry woman, and she mothered me. Jim was an overgrown lout of my own age, and he tormented me. Mary—well, you've got to take Mary for granted, young man. I'm sixty-nine, and I've never seen another like her. I don't think there's been one." His voice softened, as it always seemed to soften when he spoke of this long-ago girl who if she were alive now must be almost as old as he.

"Mary and I sat there exactly as I had planned all afternoon, but nothing else was as I had planned. I was sore and embarrassed and heartily ashamed of myself"

"PREPARATIONS for supper were under way. Mary was helping, and so was Jim. Meats and vegetables, breads and cakes and pies, coffee and milk and sweet cider passed in endless procession into the little dining room opening from the kitchen. My shyness may have chilled my back; it only aroused my stomach. I was hungry as a grizzly, and everything that passed, every smell of things stirring and cooking, made me hungrier. It seemed to me that if I could once get to the table I could forget my fright in satisfying the cravings of an exceptionally healthy stomach.

"In the meantime I sat by the fire. David sat near me, out of the way of the others, and talked to me. I could only let him talk and wonder what to do with my hands, which seemed to be unusually large and red and altogether useless. Finally, in my embarrassment, I began to poke the fire. That was mistake number one. Did you ever use a gun barrel for a poker, young man?"

I had to plead inexperience.

"I suppose not; we don't have fires and pokers and guns any more. But it makes a first-rate poker. That's what David Elliot had—just the barrel of an old smoothbore muzzle-loader. I grabbed it and poked. When I stopped poking I found occupation in sticking my fingers, one after another, into the bore. That was mistake number two; but through it I learned a lot of things. First I discovered that all of the fingers of my left hand would slip their full length into the barrel, and then that all of my right would slip in except the middle finger, which I found next would go only as far as the second joint. This was useful information to me, and in my interest in finding some way of inserting that lone middle finger, and catching at the same time the trend of David's conversation and the glances and fancies of Mary and her mother as they passed, I forgot the chills in my back and became a man again. It's a good thing, I guess, for a shy man to keep his hands busy, but it's fatal to get them too closely engaged. And that's what I did; for having found, after many trials, a way by which I could get my middle finger into the gun; and having twisted the barrel around on it two or three times in triumph, I discovered, finally, that I couldn't get it out again. I made surreptitious efforts under cover of my other hand, and then violent efforts when David wasn't looking, but the finger stuck as though grown in place. And it nearly had, for it began to swell, and I found that I couldn't even turn the barrel around on it without wincing. Then the chills came back, and I lost all track of what anybody was saying and how everybody was looking. But I couldn't lose track of my hands; they seemed so big and awkward that the three-foot iron finger was no more than a proper complement of the others. It was all foolish, and there was no reason, of course, for concealment; but there was my natural shyness and the thought of how they would laugh and how Jim would joke at the notion of a man come a-courtin' with a handicap like that, and the longer I put off telling the more impossible telling became. Did you ever lie, young man?"

"I'm selling an encyclopedia for a living now," I said.

"Oh, that's different. That's just a point of view. We all have to live. I mean the old-fashioned lie—the kind you string together one after another into a rope of pure mendacity to pull out of a scrape with. You needn't confess; I'm talking in favor of 'em now—not morally, of course; morally they're bad, and in every other way they're foolish; but just as a mental exercise they've got the Calculus beaten hollow. One little lie diligently followed to the finish will afford more mental occupation than any other tongue trick I know of. As a remedy for shyness I recommend them—and I've tried everything. About the second story you're so busy planning the third that you forget everything else and begin to approach fluency of speech. But it's like keeping your hands busy—you get caught finally in your own tangle. That's what happened to me.

"Mrs. Elliot announced supper, and David got up. 'Come on, John,' he said heartily; 'you must be starved.'

"And I was; but I had other troubles as well. I turned red and white, like an alternating current in operation, so fast that they couldn't see the change. I stood up, holding the poker deftly with one hand—and the middle finger of the other. I hesitated and stammered and tried to tell them of the difficulty, but what I actually said was—'No, thank you; I've had supper already.'

"IT WASN'T much of a lie, you see, at the start, from any point of view; but its possibilities of development proved nothing short of marvelous. Of course they all turned to me in wonder, and asked 'Where?' and looked 'Where?' and began to believe, no doubt, that I had lost my mind.

"'I didn't think I would get here in time for supper,' I explained; 'so grandma put it up for me and I ate it on the road as I came along.'

"That was only the second; but it was much better, and I was already planning the third. I forgot my shyness; the chills were succeeded by a pleasant glow; and I talked like a platform lecturer. They pleaded; but I was firm. I wasn't hungry. (Three.) I was

(Four.) I would sit by the fire and (That proved to be the fifth.) And ed her head and said: 'Never mind, erdon evidently doesn't want to come had better leave him here until he's was all, but she turned without look- marched in and sat down at the table showed clearly how much more she had (The others followed, David and his disappointment and Jim with an wink and I slipped back into my seat helplessly at the colossal finger with had caught me in my folly. The longer I looked the madder I got; and finally I caught it with my free hand and gave a violent jerk and twist with my other that were bound in combination to produce results. My finger had to come out of the barrel or out of its socket—I don't think I cared which at the time. Luckily it elected to stick to its socket, but it paid for its choice by leaving most of its skin behind. I had to stuff my handkerchief in my mouth to keep from yelling with the pain. Then the blood began to flow, and I had to withdraw my handkerchief for a receptacle. When I looked again the finger was bleeding faster than ever and swelling faster than it was bleeding. It was twice the regulation size and picking up every minute.

"It must have been a quarter of an hour before the pain eased enough for me to take note of other things, and when it let up in my finger, it began in my stomach, which had had nothing to comfort it since noon and considerable exercise to support in the meantime. It got no consolation from the dining room. Every sound there told of healthy appetites at work, and every odor of their immediate field of employment. There wasn't much talk at first. They were busy, I presume; and my crazy conduct had put a damper on everything. About the time I began to take notice, however, they began to cheer up and to talk and laugh, which made matters worse for me. Jim, especially, began to comment on the goodness of everything on the table, and the rate at which it was disappearing, and the probable scarcity of food supplies thereafter as a consequence. For a time his mother tried to stop him, but it was useless; and soon they were all laughing at him, except Mary, who, I noticed, didn't laugh or talk much. And when she did speak her voice lacked something of its usual gentleness. Somehow that made me feel better. But it improved Jim also, and he joked more than ever.

"Thirty years afterward Jim joked himself into the nomination for Governor, and won out three consecutive times; and they began to talk of him for the Presidency. I voted for him, but I had to fight my conscience every time, and I was glad when they failed to nominate him for President. I think I'd have bolted. There's something lacking in a man with a perverted sense of humor like Jim's, and a man who's lacking in that way isn't fit to be President. You've known people like that, haven't you, young man?"

I started. "Oh, yes," I assured him—"lots. Where's Jim now?"

THE old man's eyes smiled. "Oh, Jim's still around," he said. You see, we both tired of farming about the same time and started making buggies. That was in '71. But he was an awful trial. He quit finally. If he hadn't, I suppose I should have had to.

"Well, I got desperate. I had to have something to eat. I was about to confess my sins and beg for the crumbs from the table when Jim's voice came out again. 'Ain't it lucky, pa,' he said, 'that a man in love can't eat? There wouldn't be enough if we had a hungry man come in, would there?'

"I vowed then I'd starve before I'd confess. But I didn't want to starve and (Continued on page 34)

The Tyranny of Beauty

Chapter V—Madame Takes a Husband

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

AS BEFORE, madame furnished on the installment plan as far as possible, and what she bought she paid as little for as she could. The one exception—the one point in which the new move differed from a repetition on a larger scale of her first—was in her private office—her suite.

Words fail me here! Madame had now three rooms—an outer for her secretaries, at first two, then presently four, young girls and a little girl page in white with a pink sash and bows; a middle room for plain business interviews and the seeing of employees when necessary, which wasn't often, because she now dealt only with managers and superintendents; and an innermost inner sanctuary, reserved for herself, her friends, and those customers and friends-in-making she wished particularly to impress.

This sanctum was a travesty on every known sort of room when she got through fitting it up—a scream of luxury without beauty, display without elegance, cost without comfort. It had a colonial mahogany mantel, minus a fireplace, glued to the wall, and a moose head above that; a stained-glass window with a saint; a life-sized plaster negro boy holding out a card receiver; a yellow tiger skin dragging gracefully off a red leather couch upon a pink Turkish rug; a mother-of-pearl inlaid chair for herself beside a roll-top desk; and—the remainder of the furniture was highly varnished quartered oak! This medley she had bought piecemeal from the department stores as various items took her fancy. In those days such a conglomeration did not jar her sensibilities—that was to come later when she reached her up-the-Hudson stage—she was now merely passing into her crass family-hotel stage.

Miss Beekman alone of all the employees had the entrée to this retreat, and to her fell the task of sorting the sheep from the goats among the customers who might be permitted either a private view of it in madame's absence, or a call during her august presence, if the visitor were one she wished to welcome personally.

I HAD long wondered precisely how my aunt had picked up so wide a circle of friends; she could be on the go with them the whole time out of business hours. But the circle was more apparent than real, I fancy—acquaintances used and cast aside when they seemed no longer good enough—though I soon perceived it was of constantly appreciating social value. However, the social value of her seclusion from sight and sound of the common herd soon began to bear fruit in another world than business: madame was now recognized as something of a personage. There she sat in her Paris gown with her diamonds, remote yet at the very heart of an enterprise that she made you feel was national and running neck and crop with millions, a crown of orders on her forehead, and a keyboard of electric bells within reach. For no matter who was ushered in, she would break into the middle of a conversation, ring a bell, give an order, dictate a letter regarding the filling of an order, or send for some head of a department and demand to be informed about an order. The order was always for at least a thousand dollars' worth of goods.

It was all staged for the best effect. She never rang me up direct, though my call bell was under her thumb, but rang her pink-and-white page and, with a brief "Excuse me," commanded: "Tell the head of the labbatories I'd like to speak to her a minute."

I appear in a big apron at the private door and madame lifts a letter from her desk, or any bit of paper if she'd mislaid the dummy. "Here's a rush order for ten gross Zulu and five gross Nature Tint—you got it in stock?"

"No, madame—we haven't it in stock to-day. I'm making it up, though."

"That ten gross for Omaha—transfer it to this order and let them wait a few days."

If she felt in the humor, she would go into a much longer byplay, telling me to send out a messenger and borrow from this parlor and that druggist until we'd made up enough to ship, wiring that we'd send the balance in five days. And the funny part was that she took it all quite seriously herself! She never forgot and did the same trick twice on the same visitor. That was where she was clever.

She was now precisely reversing the friend-patronage plan—she was beginning to use her business to further her social rise and progress and put her where her heart desired—into society with a large S.

MISS BEEKMAN and Miss Cryder—"Prowl and Pounce" my grandmother dubbed them—played an important rôle in my aunt's passage to the uptown-hotel stage. Beekman boosted for her pertinaciously with all the customers who might be said to have already reached that goal, but it was Miss Cryder, in her capacity of society reporter, who inoculated my aunt with the virus. Julia Cryder had a fine instinct for social weights and values, and she knew the ropes.

That she ever in so many words gave my aunt points I don't believe; rather, she supplied the inspiration and the glamour as a young freshman home for a Thanksgiving vacation supplies them to his little brother. Julia Cryder was glamoured with society—brooded above it, very remote, though very near, like an angel of the pen—and in her elderly youthfulness painted with shrewd insight and alluring colors the pleasures and palaces amid which it roamed. Indeed, I don't think she ever supposed my aunt would attempt to become part of *that* world!—or could if she tried: Miss Cryder was just big enough to perceive the barriers and the impossibilities; not big enough to see the side-door opportunities for a woman like Mme. Del Mar; not big enough to appreciate the solid substance that underlay her shows and shams,

the invincible determination, the steadiness of purpose, the power to make the world buy her goods—and then herself—on her own terms, or the marvelous upsight into human nature by which she'd put a cent's worth of perfumed pork fat into a pink jar and sold it for fifty cents; tied the jar with purple ribbon and sold it for a dollar. Now with her suite of offices she had put herself into the pink jar; it was only a question of the right shade of ribbon to sell her with society—gold?

ONE peculiarity of her character made it possible: she possessed absolute self-assurance without self-consciousness of the corroding kind; she was apparently incapable of the conception of ridicule directed against herself. That some of the customers whom Miss Beekman piloted with bated breath to view the queen of beauty sellers in her Irish lace gown spangled with diamonds sitting on an inlaid throne under a moose head over a glued-on mantel, dropped their cards in the plaster negro's pink shell for a jest and went away laughing in their sleeves, she never suspected and wouldn't have believed if they'd told her with their own lips. She usually invited them to sit down and have a glass of sherry and a few choice wafers, or some candied fruit and chocolates, of which she kept a store in a little private bar under the stand on top of which sat the plaster negro; and if this were accepted, it was followed by an invitation to lunch, perhaps to dinner and the theatre. But she never, never toadied! That was what saved her: she was utterly without servility, and her lack of self-con-

Digitized by Google

sciousness when laid on the social world's counter, sold for sincerity. Women might laugh their fill behind her back at her crudities, her vulgar displays, her misplaced elegancies, but under it all they respected her for her independence.

AND so, bit by bit, lunch by lunch, favor by favor, she bought a certain kind of social recognition that is for sale in New York—and nowhere else in the country probably—if one knows how to buy it without seeming to; made her place among women in a certain layer, a certain kind of social life—the noonday life of the big restaurants where men and women congregate in the open, shed the home ties, the family connections and traditions, and meet as simple personalities free of extraneous obligations except the obligation to return the favors in kind, in the Greater Bohemia of Greater New York. It is not the Bohemia of the night café—Bohemia that dreams and rails and falls at last by the wayside with nothing accomplished and leaves no mark on the world. It is Bohemia en casserole—the Bohemia of commercial success; of business women that have made their place and mark, and proved it by incomes that soar upward from five thousand a year. Milliners, dressmakers, modistes, importers of gowns and robes, or exclusive lingerie, decorators, designers, a few journalists and artists, editors, heads of business, but always employers of others; women verging toward middle life—few are under thirty—controlling establishments or offices that require a bookkeeper and a private secretary; handling intricate dealings and large enterprises with an air of mystery, power, and a shrewd insight into the mood and temper of the crowd, an uncanny foreknowledge of what the crowd will buy; these women without visible antecedents, standing and falling by their obvious achievements, make the Bohemia whose major chord is obligation, responsibility, success—success for which the clapping hands are—dollar bills! And to the idle rich, to middle-aged and elderly women, world-weary yet still protesting against encroaching age, defying its edicts with the help of milliner, modiste, beauty specialist, doctor, mental healer, the women of Greater Bohemia, the Mmes. Del Mar are both enlivening companions and moral tonics, bringing with them the atmosphere of vitality, the suggestion of substance, flavor, richness, fresh appetite for a dish en casserole steaming hot from the great commercial forces of the world.

MME. DEL MAR saw by instinct how to appeal to both the imagination and the respect of such women and made them serve her turn—to the benefit of both parties. If her first invitation were set aside, another followed, and yet another. After a few refusals, the courted dame found herself obliged either to come out with a reason, or forego the beauty that Miss Beekman, with all her arts and wiles, was creating upon her countenance.

"But why shouldn't I go?" she asked herself. "And who'll know, anyway?" Even if she met some of her society friends, how were they to tell that her elegantly gowned and gemmed hostess was not a countess to say the least?

She went. The lunch was admirable. Madame tipped the waiter a dollar. She had early learned the first lesson of Bohemia en casserole: spend in public what you save in private on your help and raw materials; and was now a welcome guest at twenty first-class restaurants. But if her snobbish guests flattered themselves that "nobody knew who she was," they were mistaken: a hundred waiters knew—she had seen to that by all sorts of tricks, such as having herself paged by a messenger from the establishment, or a phoned call during lunch—and under the influence of the recurrent dollar glibly gave her name to inquisitive guests, or called the attention of others—Hinterlanders who might be thankful for tips on the passing show—to "the great Mme. Del Mar, head of the largest beauty parlors in America, owner of Zulu Face Food, and the lady lunching with her is Mrs.

"Where's de madame? 'Cos' Mis' Vanderwater's downstairs wit her autermobile fer to take her out riding"

Vanderwater, one of the Four Hundred." With three years of this—the double life of the successful business woman, in which each life serves instead of draining the other—she had won among women of the idle classes a certain social recognition in restaurants that passed, in the class below, for social standing and prestige.

But if she used her business to glamour the social dames, she used her side-door connections with them to glamour the business! The great building fluttered to its core when her Mrs. Vanderwaters and Breckenridges appeared; for now, often to wile away an idle hour and pay off very privately an obligation for a lunch received, they sent upstairs to ask if madame wouldn't go for a spin on Riverside.

"Buttons"—a reed-shanked infant on a salary of four-fifty per—came scrambling up to the main parlors, loudly demanding of the bookkeeper: "Where's de madame? 'Cos' Mis' Vanderwater's downstairs wit her autermobile fer to take her out riding."

The bookkeeper communicated the question to Miss Beekman, who communicated it to the pink-and-white page, who sped away to regions mysterious and then sped back to communicate her reply in a loud whisper to Miss Beekman, who communicated it in a louder whisper to the bookkeeper, who communicated it in his natural voice—a loud one—to "Buttons," who used his reedy shanks to speed away with the glad news that "the madame would be down in a minute."

"No, madame—we haven't it in stock to-day. I'm making it up though." "That ten gross for Omaha—transfer it to this order and let them wait a few days"

AND then all of a sudden, when everything was moving along like a perfect machine whose sole function is to grind out a barrel of money a month with the regularity of clockwork, Oscar Willing appeared on the scene and introduced the incalculable element that brings the best-laid plans to naught in this world of ironies.

With our removal to the new building my world had both shrunk and enlarged: it had shrunk to these four sacred secrets of pork fat, beet juice, chalk, and mucilage, known to madame and me alone, over which I stood perpetual guard behind locked doors. A freight elevator brought up my "chief ingredient," as madame always called it now, when the employees had departed for the night, and alone in my private laboratory, which even the cleaner entered but once a month after I'd put away all evidences of the real materials, I and "our secret process" transmuted its value from fourteen cents to eighteen dollars a pound in fifty-pound lots in "our special apparatus"—a big can I designed myself, with a long wooden dasher at the end of my greasy hand. A practical chemist now took charge of all other preparations, did his own buying and managed his staff of filler girls; and the packing room was in charge of a forewoman and a shipping clerk, through whom all orders were cleared. In other words, I had become a mere cog in the works. But my world had enlarged with heavier responsibilities as acting head when my aunt was away, though she now very seldom went on the road, and her trips generally lasted only three or four days.

My world had also enlarged with a fifty-dollar salary. I had coolly asked for it, or rather, I had stated, "I shall have to get fifty dollars if I am to stay on—" and my aunt had quietly cut me short in my arguments and reasons with a "Very well. I'll speak to the bookkeeper."

I felt as if she'd hit me in the chest and couldn't say another word! You know how it is when for weeks you've worked out arguments and screwed up your courage for a fight and are met with a sudden unexpected concession—it takes the wind clean out of your sails! I'd meant to put all this—the new store, my heavier responsibilities, the increasing wealth—as a wedge for my demand for a partnership; at least to give her a very broad hint that I expected a share in the enormous profits I was creating. But I was silenced with the thump her silence gave me; she didn't even look a comment or a rebuke! Not till long after, through a chance word from her, did I know that she'd seen and forestalled the demand; that for years she'd been making concessions in the secret dread of just that moment's arrival when I'd ask for my just rights, she never knowing if the demand would take her before she was strong enough to snap her fingers in my face and tell me if I didn't like what she gave I might go.

And thus my golden opportunity slipped away on the tide. I waited for a more fitting moment to put my case and discuss it frankly, friend to friend. It never came and the incalculable element arrived.

It's easy for an outsider to ask: "Why didn't you put it up to her straight and hard, then set up for yourself and repeat her methods if she refused?"

We don't, we Lucys of the business world. For one thing, I could not then risk the loss of my salary—my sister was just entering college, and so long as I had enough—well, I had enough! But there was another reason that I've noticed in myself and in several cases besides mine: these women of Big Business—these Mmes. Del Mar—seem to exercise some subtle, sapping influence on the characters of those who surround them and make their Big Business possible—a sort of spiritual vampirism that slowly deprives the Lucys of the power to do the very thing—break loose and strike out in the world for themselves—that all the outward circumstances seem willing to permit. It may be only suggestion: the magnitude of an achievement that appalls when you think of yourself having to face her world on her terms and win her success—an achievement that measures you to yourself and tells you day and night, "You never could, my dear!"

MY FIRST intimation of her approaching marriage came one day when I was called to the office for the usual byplay of a large order and then introduced to a young man. I'd long since swallowed it that I was never to be introduced to any of the Vanderwaters and Breckenridges—the woman crowd; and though I was occasionally presented to a man, he was always a buyer and "the head of our labbatories" was only a part of the general exhibition to impress him with the magnitude of the business and therefore, by natural inference, with the superior quality of our goods.

Now, though I saw at a glance that Oscar Willing (Continued on page 32)

"Woods and Prairie Lands"

Chapter III of "A Son of the Middle Border"

A Personal History—By Hamlin Garland

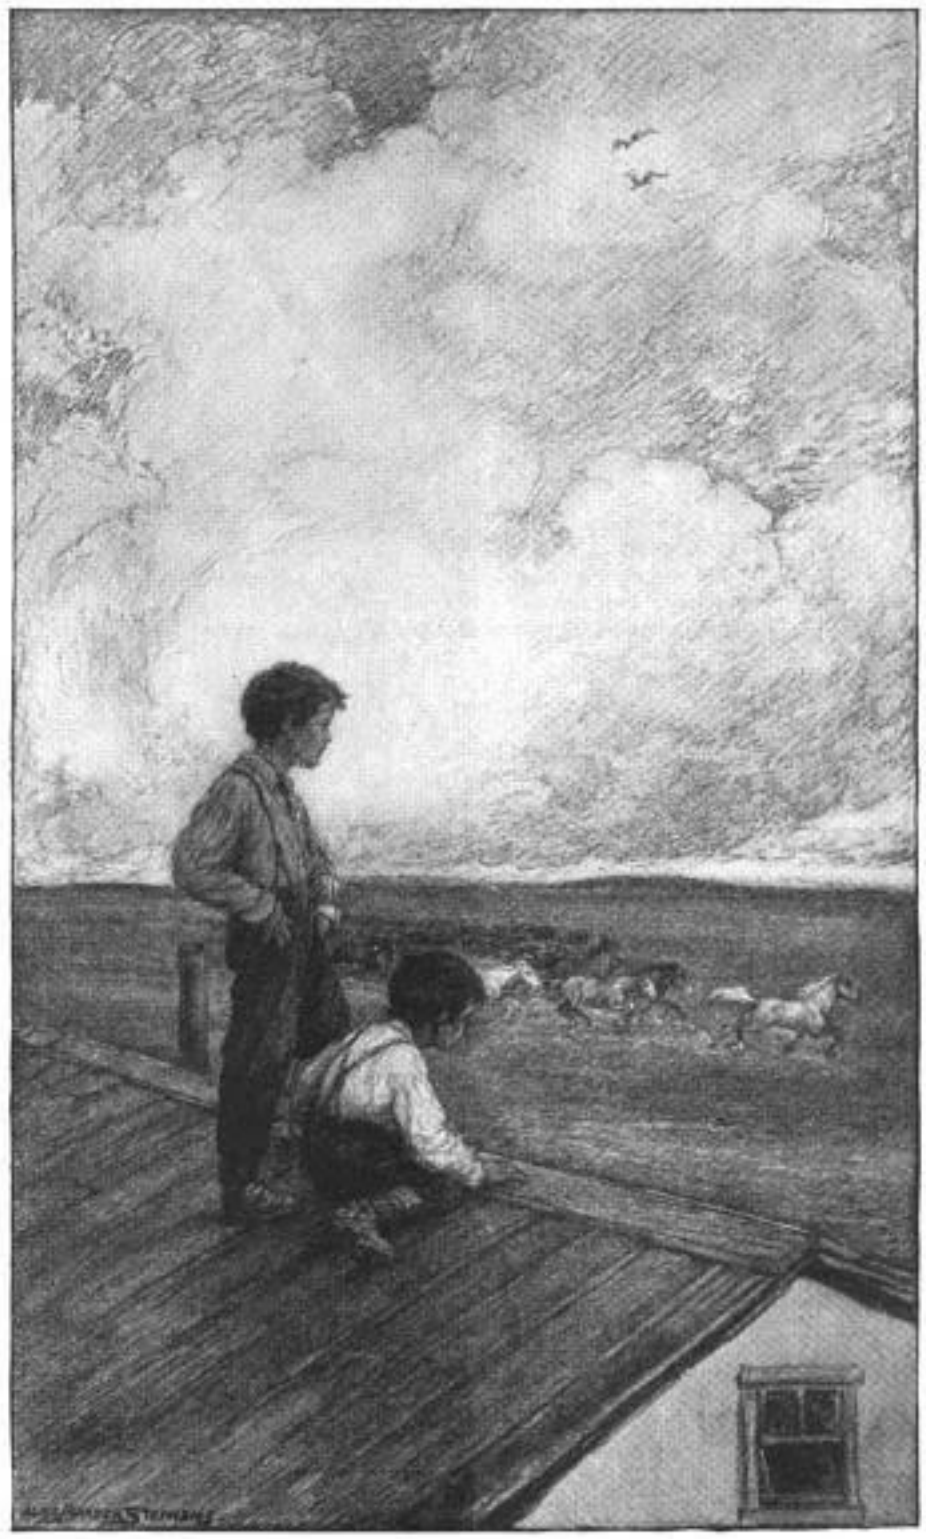
ILLUSTRATED BY ALICE BARBER STEPHENS

TO THOSE who are proud of the American pioneering spirit, but have forgotten all its hardships in the tide of modern progress and prosperity, this picture of Duncan Stewart's migration to a new country will recall the bittersweet memories of that heroic age in our national past.

IN SPITE of the "Song of Emigration," in spite of all the talk of "Hesper" and "Winneshiek," Stewart declares that he had no definite premonition of coming change—and that when the day of departure came he was as surprised and as unprepared as though it had all happened without warning.

So long as the kettle sang on the hearth and the clock ticked on its shelf, the idea of "moving" was pleasantly diverting, but when one raw February day he saw the old rosewood timepiece stuffed with rags laid on its back in a box, and the chairs and dishes packed into a big sleigh, he began to sense something very desolating and uncomfortable. "O'er the hills in legions, boys," did not rise to his lips at the moment—on the contrary, "The woods and prairie lands" of the song were of less account than the little cabin in which the family had been so happy.

AT LAST two great loads of bedding and furniture stood ready at the door, the stove (which had been cooling in the snow) was lifted in, and the time for saying good-by to the coulée home had come. The word was given, Duncan led the way with the bobsled, followed by his little herd of kine, while Belle and the children brought up the rear in a cutter drawn by old Josh, a flea-bit gray. It is probable that at the moment the master himself was sorry.



Lincoln writes of this: "A couple of hours' travel brought us to La Crosse, a great and wonderful city which stood on the bank of a wide expanse of snow-covered ice, in the midst of which a dark, swift, threatening current of water ran. Across this chasm, stretching from one ice field to another, lay a flexible, narrow bridge, over which my father led the way. There was something especially terrifying in the boiling rush of that sinister flood, and I shivered with terror as I passed it, having dimly in my mind stories of men who had been swept under to their death."

It was a long ride to the wife and mother, for she also was in terror of the bridge, but at last the ice was crossed, La Crescent was passed, and the movers entered a narrow, winding valley which came down from the west. All that was familiar was put behind: all that was strange and dark, all that was wonderful and unknown, spread out before the children as they climbed the slippery, slanting road.

"We lodged that night in Hokah, a little town in a deep valley. The hotel was near a river which flowed over its dam with resounding roar. Next day at noon we reached Caledonia, a town high on the snowy prairie. Caledonia! For years that word was a poem in my ear, part of a marvelous and epic march. Actually it consisted of a few frame houses and a grocery store. But no matter. Its name shall ring in this book like a peal of bells."

IT GREW colder as they rose, and that night, the night of the second day, they entered a long stretch of woods, and at last turned in toward a friendly light shining from a low house beneath great oaks. "As we drew near my father raised a signal shout, and a man in a long gray coat came out. 'Is that thee, friend Duncan?' he called, and my father replied, 'Yea, neighbor Barley, here we are!'"

Lincoln wondered at this sedate stranger whose manner of speech was so peculiar, and to his question the father replied: "Barley is a Quaker," an answer which explained nothing at that time. Being too sleepy to pursue the matter, or to remark upon anything connected with the house or the furniture, Lincoln followed his sister into the house, which had been warmed and lighted by good Mrs. Barley.

"From a low hill to the west a herd of horses suddenly broke, running swiftly, led by a beautiful sorrel horse with shining white mane"

"As soon as we had filled our stomachs with warm food we went to bed, and when we awoke the Quaker was gone, the stove was in its place, and the clock upon the mantel was ticking with calm acquiescence of the change. So far as we knew, mother was equally content."

This farm, which was situated near the village of Hesper, just where the broken wooded lands met the prairie, turned out to be a delightful place for boys. Broad-armed white oaks stood in the yard, and to the east and north a great forest and deep vales invited to exploration. The house was of logs and for that reason much more attractive to the children than to their mother. Lincoln says: "It was indeed low and cold, and the roof had holes in it. Of this I am quite certain, for one morning I awoke to find a miniature mountain of snow on the floor at my bedside. It was in truth, only a rude little frontier cabin, but it was perfectly satisfactory to me."

The children learned much in the way of woodcraft during the months which followed. Morning by morning the rabbits in countless numbers printed their telltale records in the snow. Quail and partridges nested beneath the down-drooping branches of the oaks, and the boys were soon able to distinguish and name most of the tracks made by the birds and small animals. They took never-failing delight in this study of the snow.

Lincoln himself says: "All my memories of this fine farm are of the fiber of poetry. The silence of the snowy aisles of the forest, the whirring flight of partridges, the impudent bark of squirrels, the quavering voice of owls and 'coons, the music of the winds in the high trees—all impressed themselves upon my mind as parts of a superb winter's symphony."

TO THE east, two miles away through the timber, stood the little village of Hesper, built and named by the "Friends" who had a meeting house not far off. The children saw very little of the Quakers, however, and never attended any of their services, but their closest neighbor was a gruff, loud-voiced old Norwegian whose children naturally became playmates of Hester and Lincoln. "From them we learned a great many things hitherto unknown, such as the fact that all Norwegians were woodsmen and ate from wooden plates and wooden bowls, wore wooden shoes, and lived on bean soup, which they call 'swaagen.' We found them as interesting in their way as the Chippewas. I think we imagined them a new kind of primitive race.

"Hester and I and one Lars Peterson gave a great deal of time to an attempt to train a yoke of young steers to draw our hand sled. I say 'attempt,' for it hardly got beyond a struggle to overcome the stubborn resentment of the beasts, who very properly objected to being forced into service before their time. Hester was eleven, I was nine, and Lars was about twelve, and we spent many strenuous hours in yoking and unyoking our yearling span. I believe we did haul several loads of firewood to the kitchen door. But at last Buck and Brin 'turned the yoke' and broke it—and that ended our teaming."

EARLY in the spring Duncan hired a couple of "raw" Norwegian immigrants to assist in clearing the land—"grubbing" it was called. Neither of these men could speak a word of English, and they slept in the granary—but they succeeded in communicating to the household a virulent run of smallpox.

The hired girl came down first. Several days passed before Mrs. Stewart realized what ailed the maid, but she discovered it at last, for she had been through an epidemic of this disease in Wisconsin, and knew its dread symptoms.

It was a fearsome disease in those days, much more fatal than now, and the young mother was quite naturally alarmed. With three unvaccinated children, a helpless handmaid to be nursed, and Duncan on the point of coming down with the contagion, surely it must have seemed to her as though the Lord had visited upon her more punishment than belonged to her. And to add the final touch, in the midst of her other afflictions, came the birth of her fourth child!

Lincoln realized something of the burden which had fallen upon his mother. "Young as I was I suffered with her. One night I was awakened from deep sleep by hearing her crying out in pain, beggingpiteously for help. I shuddered in my bed, apprehending in some intuitive way that she was passing through a struggle which could not be put aside. I went to sleep again at last, and when I woke, we had a little sister.

"I do not know what we would have done had not

Digitized by Google

a noble woman of the neighborhood volunteered to come and help us. She was not a friend, hardly an acquaintance, and yet she came to our pest-ridden home like an angel of mercy. Whether she still lives or not I cannot say, but I gladly acknowledge here the splendid heroism which brought Mary Briggs, a stranger, into our house at a time when other neighbors beat their horses into mad gallop in passing our gate."

THE older children having been vaccinated, escaped with what was called the "verylide," but Duncan was ill for several weeks. Fortunately he escaped (as they all did) without the dreadful pitting which usually follows this disease, and in a week or two the children had forgotten all about it.

As the seeding time came on, Lincoln began the use of firearms. Enormous flights of passenger pigeons, almost filling the sky, made it necessary to guard the new-sown grain, and though Lincoln was but nine years of age, Duncan put a double-barreled shotgun into his hands and set him to sentinel the fields.

"Nothing could have pleased me better," he says. "Proudly walking my rounds day by day, I watched the flocks as they circled in the brilliant sunlight, taking a shot at them now and again when they came near enough, feeling as duty bound and as martial as any soldier standing guard over a city. Up to this time I had not been allowed to carry a gun, although I had been the companion of Ben Green and Ellis Asher on their hunting expeditions. Now, with entire discretion over my weapon, I loaded it, capped it, and fired it, marching with sedate and manly tread, with little Owen at my heels serving as subordinate in his turn."

THE pigeons passed after a few days, but Lincoln's warlike duties continued, for the ground squirrels (called gophers by the settlers) were almost as destructive of the seed corn as the pigeons had been of the wheat.

Day after day he patrolled the edge of the field listening to the saucy whistle of the little rascals, tracking them to their burrows and shooting them as they lifted their heads above the ground. He had moments of being sorry for them, but the sight of one digging up the seed silenced the sentinel's complaining conscience.

"The schoolhouse of this district stood upon the prairie to the west, nearly two miles distant, and every day during May we trudged over the road, Hester carrying a small tin pail filled with lunch. At this school we came in contact with the Norwegians from the colony to the north; and a bitter feud arose between 'Yankees' and 'Norskies,' and when we met on the road, showers of sticks and stones filled the air, and our hearts burned with the fierce heat of tribal battle. These combats usually broke out the moment of parting and raged with true berserk frenzy so long as we were within stone's throw of one another. I don't think we had any personal animosity in this—but as tribes we were perfectly willing to commit murder. We were reliving the feudal wars of northern Europe.

"As I look back upon our year upon this farm," Lincoln further notes, "it all seems very beautiful. Even these tribal forays have charm. I am re-

"My mother, like nearly all her brothers and sister, could play the violin — or fiddle, as we called it — and I have many dear remembrances of her playing 'Napoleon's March,' 'Money Musk,' 'The Devil's Dream'"

enjoying days when the warm June sun, falling on radiant slopes of grass, lit the meadow phlox and tiger lilies into flaming torches of color. I think of blackberry thickets and wild grapes, and cherries and other delicious fruits and nuts growing in profusion throughout that forest to the north, which seemed endless and of enchanted solemnity. It was an exquisite mingling of wood and prairie land and we loved every day for what it brought. Each month had its wealth of delight, and we welcomed the thought of spending all our years in this ideal land of fulfillment."

BUT this was not to be. Duncan had not yet reached the land of his desire. One day there came into the house a man who gave to Lincoln a wider notion of the world. "I come," he said, "from across the ocean —from England." He was a kindly but rather formal middle-aged individual who tried his best to be pleasant, but Mrs. Stewart resented him for the reason that he brought to her table his own knife and fork, which were of silver, while hers were only of wood and steel. "Everybody ate with knives in those days, and as our boarder ceremoniously undid his little bundle of Sheffield cutlery we all stared in amazement. He also carried a revolver, for he had an idea that he was alone in a very savage country, and I am not at all sure but that he was right, for the northern woods at that time were full of horse thieves and counterfeiters.

"Mother resented this man still more when she found that he had persuaded father to sell our lovely farm on the edge of the splendid woods. To us it was the ideal toward which we had all aspired. We loved the trees and the old log house, and especially we loved the spring and the grove of plum trees which stood near it. But father, still restless and discontented, still dreaming of 'herds of deer and buffalo,' gave possession early in the spring and moved us to a rented farm some three miles to the westward."

No sooner were his crops in than Duncan again set out with team and canvas-covered wagon eager to explore for a third time the open country to the north and west. The woods and prairie of Winneshiek County did not satisfy him, although it seemed to Lincoln then, as it does now, the fulfillment of the vision and the song.

DURING that summer he traveled some hundreds of miles in Minnesota and Iowa, and upon his return in July announced that he had purchased a quarter section of patented land in Mitchell County, and that after harvest they would move again. "If my mother resented this third removal she made no comment which I can now recall. I suspect she went with less reluctance this time, for her friends and relatives in Neshonoc were also scattering. One sister had gone to Minnesota, and old Hugh and David and Delia were located in Osage, not far from Dry Run, the place which father had decided upon for our future home. A mighty spreading and shifting of settlement was going on all over the West, and I suppose mother accepted her part in the movement without murmuring.

"Our life on Looking Glass Prairie that summer was very pleasant. It appears to have been all sunshine and play as I reflect upon it. I recall a few days at school and many excursions into the woods. It would appear that we were in continual harvest of nuts and berries. We spent nearly every Saturday and Sunday in exploration of the countryside, devouring everything that grew—except toadstools. We gorged upon May apples till we were ill, and munched black cherries until we were drunken with their fumes. We clambered high trees to collect baskets of wild grapes which we could not use, and we garnered nuts like squirrels. We ate oak shoots, fern roots, leaves, bark, seed balls—everything!—not because we were hungry, but because we loved to experiment, and we came home only when in fear of punishment or in awe of the darkness. It was a glorious (Continued on page 26)

"Hour after hour we pushed westward, the heads of our tired horses hanging ever lower, and on my mother's face the shadow deepened, but my father's voice calling to his team lost nothing of its edge"

Pensive Ponderings

By George Fitch

ILLUSTRATED BY JOHN T. McCUTCHEON

The Airman

Feats the airman weaves his craft
Between the earth and dust, through which his fathers
Were cast
Crawled.
Whirling and tumbling, riding, unappalled,
The shrieking windstorm on his flimsy raft,
Gay as a bell- down the sunbeam's shaft
He slides and somersaults—then soars again
To chase the eagle, veer him from aloft
And float him, wondering, in his lone domain.
Long thus he frolics, making fearful jests
With gravitation, while we wights below,
We who once sneered with noses high askant,
Gauck upward, musing with deflated chests
On the wise fools who ever onward go;
On the fool wise men who have said: "You can't."

Natural History Lessons—the Boss

A BOSS is a man who is a municipal or national depository for votes.

Under our glorious Constitution each man has one vote. However, the Constitution says nothing about borrowing votes. Some men have the use of a million at election time.

Some people imagine that a boss is a cruel and tyrannical individual who takes the votes of the people and walks on their necks in return. He is nothing of the sort. He is a kind and affable creature who takes your vote and gives you more for it than you could possibly get in any other market.

No one is kinder than the boss is to the man whose vote he is carrying around in his vest pocket. However, this very kindness compels him to be distinctly brutal at times to the rest of mankind.

A boss is as hard on a city as a chauffeur is on an automobile when he is using it to haul his friends around by night. After a boss has been using the city for the convenience and happiness of his friends for a few years, the poor thing looks as if the dogs had been fighting over it.

A boss isn't a lender. He doesn't care where the people go if he can only be allowed to follow behind carrying their votes in a neatly sealed package. Sometimes bosses will even assist in great reforms, because if they didn't the people would take their votes back and cast them themselves.

Some bosses boss for the mere love of it. Others boss for the love of richly furnished homes and large bank accounts. After a boss has begun renting out the votes of his constituents to the highest bidder, it is very hard indeed to prevent him from becoming an obnoxious millionaire.

The boss's motto is: "Give the people what they want, but get a commission on it." When the bossed people of an American city want paved streets they can have them, but they cost twice as much as they do in other towns.

Sooner or later every boss gets to thinking of himself first and his vote lenders second. This is a sad mistake, for the men who lend him their votes are just as greedy as he is. About that time hard words are uttered and a heavy snow descends at Election Day.

After that the boss takes his millions and goes to Europe. This is very poor business on our part. His millions should be taken from him and he should be sent to Europe. Life in Europe without the millions would be a cruel and unusual punishment, and in consequence bossism would soon become unpopular.

American Pants Forever

THE Administration's daredevil plan of compelling American ambassadors to appear in foreign courts in plain and undemonstrative American pants instead of in the silk and gold lace masterpieces affected by foreign diplomats has apparently succeeded. At least, we are still at peace with all nations, and no American ambassador has as yet been pitched out of any palace head foremost because he did not harmonize with the general color scheme of the occasion. The great trouble with the wearing of objets d'art instead of trousers is that the wearer has to live up to them. This has caused untold embarrassment to American ambassadors in time past. They have accomplished the knee-pants and tassel-hung regalia of diplomacy without much trouble, but their conversation has of necessity remained essentially American, and in backing through the scenery when leaving the royal presence they have as a rule scored only about seven points out of a possible five hundred on form. They have been as badly handicapped as the baseball player would be if he were given a cricket bat and told to jump right in and score a few hundred in the noble British game.

The American ambassador comes from a plain unveneered country where the earnest young man who splits wood to-day is the diplomat who splits infinitives to-morrow, and where the nation's ruler, after he has passed his job on to another, goes back to private life and sustains existence with an average of only slightly over one fork per meal. We do not breed many exquisites in this country, and what we have we usually keep carefully quarantined on private yachts instead of allowing them to go and do light diplomacy for amusement through the influence of a wife's cousin's brother who has inherited the State Department. America being run by plain Americans, it seems fitting, therefore, that we should show our diplomatic goods in the most natural setting—a setting in which they can indulge in diplomacy unfettered by the fear that at some critical moment the irrepressible court sword will get between their legs and convulse all Europe with the sad consequences.

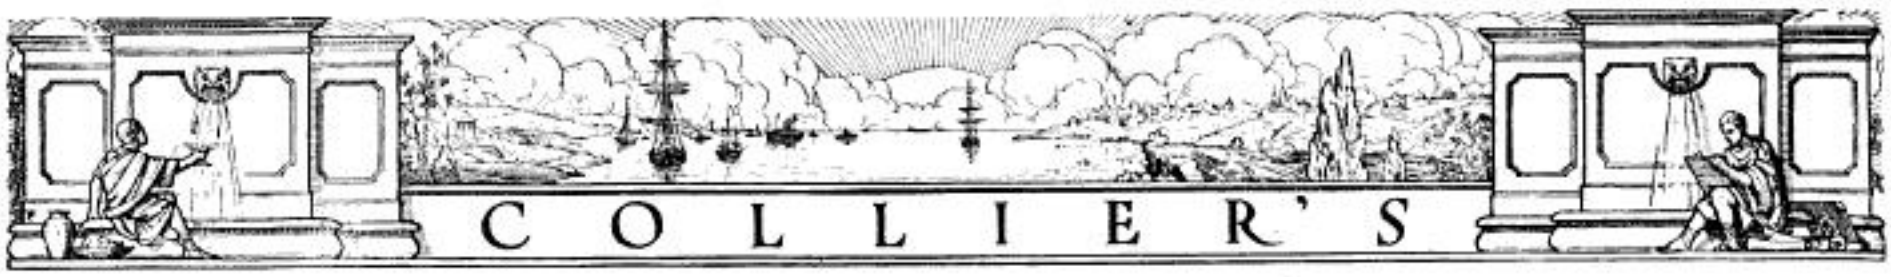
Moreover, the American ambassador who has to cope with the splendor of Europe unassisted by a court uniform will have to use his brain in the process. Too often in the past we have relied almost entirely upon the uniform, and it has sagged miserably under the responsibility.

The Hardy Mariner—New Series

JUST as it seemed that, for lack of more poles to discover and more atmosphere to cruise in, via aeroplane, man must soon become, for lack of an adventure, an obese and timid child of luxury, the motor boat comes along with enough possibilities before it to keep a thousand daredevils covered with thrills and gooseflesh for years to come.

These thrills will not be accomplished by trying to drive a motor boat two miles a minute. The racing motor boat is noisy and impressive to look at, but it is not perilous enough to interest a real adventurer. Getting flipped sideways from a mile-a-minute boat as it turns abruptly under a big wave is a damp and disconcerting process, but is not fatal enough to cause a second thought from an automobile or aeroplane racer. It is the common pedantic little thirty-six-foot cruiser with a twelve-horsepower, ten-mile-an-hour engine in which men will go with their hearts in their mouths and their bodies in the care of an overworked Providence to cross oceans and brave typhoons.

Already one of these little craft has crossed the Atlantic from Detroit and has visited St. Petersburg. Every year from two to half a dozen of them race from Philadelphia to Bermuda, climbing waves three times as high as they are and sliding from spray-crowned summits into watery cañons with a loop-the-loop motion which often mixes up the crew, the gasoline, the provisions, and the bilge water in a mournful mess on top of the engine.



Motor boats scarcely larger than lifeboats are promenading up and down the Atlantic Coast from Jamaica to Newfoundland. They are poking around Alaska with "Port of Seattle" painted on their low, square sterns. Desperate young gentlemen of leisure with an uncanny knowledge of the temperament of a gasoline engine are planning trips in these boats to all quarters of the globe and over all distances of wild and bumpy wastes of water. And thus adventure of the sort which lured the Norsemen to our shores and sent Columbus careening and staggering over the ocean in the ridiculous *Santa Maria* is once more with us.

(Concluded on page 25)

Mr. Wilson and the Congress

WHEN, on April 14, President WILSON ordered the Atlantic fleet to Tampico, his decisive action brought our relations with our unhappy neighbor to the breaking point. Mr. WILSON'S message to Congress on April 20, requesting the approval of Congress to enable him to "use the armed forces of the United States in such ways and to such an extent as may be necessary to obtain from General HUERTA and his adherents the fullest recognition of the rights and dignity of the United States, even amid the distressed conditions now unhappily prevailing in Mexico," served further to emphasize the crisis. Then came the long debate on the President's request for sanction to use our armed forces against the Mexican Federals. This was followed by the landing of marines and bluejackets and the battle in the streets of Vera Cruz preceding the taking of that town. These and subsequent events have entirely altered the relations between the executive and the legislative branches of our Government.

This session has had a curious history. It has been marked by unexpected developments and the injection of problems of overshadowing national importance. When Congress convened in December to conclude consideration and enactment of the currency law, it was expected that the chief business of the session would be the passage of antitrust legislation. The drafting of this legislation had hardly got under way before President WILSON asked for the repeal of the tolls-exemption provision of the Panama Canal Act. The tolls-repeal controversy drove the antitrust legislation into the background, and now that question, too, has been submerged in the flood of startling developments growing out of the events in Mexico. The antitrust legislation is lost to sight. There is no present thought that it will receive further consideration at this session. The fate of the tolls-repeal bill seems problematical. Only the day before the great fleet was ordered to Tampico, President WILSON published his inflexible determination to insist on Congress's enacting, before adjournment, not only antitrust legislation but rural-credits legislation, and reiterated the program announced to Congress in his special trust message of January 20. In the light of subsequent development this "inflexible" determination takes on a touch of the absurd.

The present chief point of interest to members of Congress is how the Mexican difficulty will affect the President's prestige and authority. If he comes through it successfully and with credit to himself and to the country, his dominion over Congress will be stronger than ever. If he does not succeed, his power inevitably will be decreased. In the beginning of the Mexican hostilities Congress was reluctant to follow the President. It moved slowly in giving him sanction to use our armed forces in Mexico. As a matter of fact, the marines and bluejackets had landed at Vera Cruz and begun fighting and some of them had been killed before Congress sent to the White House for signature the joint resolution "justifying" the employment of the land and naval forces against HUERTA or any other military chieftain in Mexico. In the flush of the events immediately following the adoption of the resolution there were men in both House and Senate who boasted that the President's authority and prestige had gone into eclipse; that his power was dissipated, and that, for the remainder of this session at least, Congress would be its own boss. These expressions represented an opinion rather than a state of facts. That the President and Congress will have to find a readjustment of relationship is, however, undeniably true. What the new relationship will be is a question that will have a direct bearing on the future course of the Administration.

Concerning the Marines

WE HAVE HEARD A GREAT DEAL about the man behind the gun in turret or fighting top, and much also about the brave lads who shovel the coal or stand in the front of the regiment's firing line, but recent events at Vera Cruz have shown that the amphibious branch of our service is no less to be counted upon in time of trial. "The marines were there," as the slang saying is. Their maneuvers throughout were precise, skillful, and effective. They walked into what is perhaps the most galling form of attack known, that of hidden enemies shooting from the buildings of a strange town, and held or gave their fire as ordered. Their quality is best noted when one contrasts this with the behavior of the militia in the Colorado strike riot. We have no doubt that the marines will lead also in the work of policing and quieting the famous old city by the blue waters of the Gulf, and in whatever comes after that. As KIPLING has said in his ballad of "Soldier an' Sailor Too"—"there isn't a job on the top o' the earth the beggar don't know, nor do." KIPLING was right about it. We are proud of the marines and don't mind saying so.

Our War in Colorado

THE TROUBLE IN MEXICO comes from the failure of our methods of conducting relations between nations. If war is waged, it will be done (on our side) according to the laws of war. The trouble in Colorado comes from the absolute failure of government there. That war—for it is war—has been conducted according to the practices of savagery. The alleged representatives of law and order have willfully destroyed property, have killed unarmed persons—including women and children—and have turned machine guns on whole families. This is anarchy, and every one of us is vitally interested in the establishment of something like justice and government among the autocrats and incendiaries, capitalistic or trades-union, who now ravage Colorado. The primary responsibility rests upon the mine owners, resident or absentee, including the much-abused Rockefeller interests. The strikers are described as being Greeks and other recent comers from southeastern Europe, and as having been shipped to Colorado by the labor agencies in Chicago, Kansas City, and elsewhere. It does not help in the least to point out that the strikers, too, have been unreasonable and violent and murderous. There can be no sympathy with the mine owners or their allies so long as they employ uncivilized methods in dealing with their men. The use of machine guns in strike breaking is, morally, about what poisoning wells is in international warfare, or the burning of one's prisoners in oil. The authorities out there should try to remember that Colorado is still in the United States.

Hint for Standpatters

WE ARE INDEBTED to a college paper, "The Pelican," for the aphorism:

Some people jump at conclusions; others are more leisurely in making their mistakes.

A Newspaper Found Out

HERE IS A RECIPE for discovering a great wave of public sentiment or of manufacturing it in case it doesn't exist. The quotation is a telegram dated Cincinnati, April 10, 1914, and addressed to a newspaper man of Elkhart, Ind.:

Please file early Friday evening 300 words showing unfavorable sentiment your section toward President WILSON'S stand on Panama canal tolls. Interview big business men and get them to say something hot. ENQUIRER.

The exceptional circumstance about this telegram is that it was sent to a correspondent who betrayed the trust placed in him by JOHN R. MCLEAN'S instructive journal. He made it public by relaying the message to Senator KERN, who read it in the Senate and had it inserted in the Congressional Record. Here is an exposition of the dishonorable methods of the proprietor of the Cincinnati "Enquirer" and Washington "Post" in his desperate fight (with HEARST for ally) against the President of the United States and leader of his party. Yet we suppose some people will still be influenced by things they read in the "Enquirer."

An American Artist

THREE MEN were asked what artist they considered most "typically American." The first replied: "FREDERIC REMINGTON." The second chose A. B. FROST. But the third shook his head. It may have been because battleships have been a favorite subject of conversation this last fortnight; anyway, "HENRY REUTERDAHL," said he. We feel a glow of pride in the realization that the best work of this trio has appeared in COLLIER'S. REMINGTON is dead, FROST paints the hills and rivers of Normandy—but REUTERDAHL is left and at the crest of the wave. REUTERDAHL loves the navy as the jockey does his mount. His seamen, on duty and off, are irrepressible cowboys of the brine. When the fleet made its short-notice start southward, REUTERDAHL was "on deck"—on the deck of the *North Dakota*, if you want details. In the paintings and drawings he has made and is making for COLLIER'S his battleships are unstaggered by the storm; his cruisers knife their way through heavy seas; his torpedo boats slue relentlessly through the chop; his lean destroyers careen onward in the smother. He pictures the sea, not as one of Nature's miracles, but as inspiration of one of man's most sacred passions—patriotism. Who shall say that HENRY REUTERDAHL is a shade less the American for having been born at Malmö, Sweden, instead of in Boston or Los Angeles?

THE NATIONAL WEEKLY

A Smug Critic

IN TYPICALLY PATRONIZING REMARKS ON A PLAY, the dramatic critic of the New York "Evening Post" concludes.

It may prove diverting to the unsophisticated theatregoers who abound in the city in the circus season.

Has it ever occurred to this complacent worthy that even the people who go to circuses may be—in appreciation of the good things of life and art, and in all-round intelligence—equal to himself?

We See the Circus

THE FACT IS, we ourselves like the circus. Last time we went we happened to sit just above the calliope, and that made us vibrate almost too tunefully with the thrilling show; this year we hope for better luck. The circus to-day has frills and fixings that hadn't been evolved in our boyhood—when circuses were at their best!—and yet it still amazes and delights. We still wait tensely for the bucking mule and the dressy negro who tries to ride it—lured on by the ringmaster's crisp yellow-back. Does he or does he not belong to the show—that colored gentleman with the big flower in his buttonhole and a smile that only broadens when he is restored to the soil? It is a question forever fresh, provocative of friendly argument with the boy in the next seat. We missed the vicious mule and the rock-bottom negro last time, but there were plenty of mid-air miracles and daring riding by cowboys and cowgirls and fair women in something less than evening dress, and even by a dwarf hailed as Italy's Greatest Comic Equestrian. It is the riding we love best; it is even better than the daring charioteers. The clowns—there is an army of them nowadays—seem to us more dynamic but less truly funny than they once were; but that, of course, we blame to our increasing years. The circus is more than ever international; out of the East come its weighty wrestlers and dexterous jujutsu men and improbable jugglers. And there is the same admirable master of ceremonies in the same brand-new silk hat, declaiming with the same resounding confidence the same polished periods about the next act—eternally superlative. Beautiful horses and clever elephants and dogs with a college education: we like them all infinitely better than modern comic opera—and so, we see by his Reminiscences, does Mr. Wu. We don't know the people of the circus personally, but we venture to believe them likable and philosophic—sane and sound and sure of themselves. They set the rest of us an example in their cheerful conquest of fear—their mastery of mind and muscle. We don't know how they stand on politics, but they seem to be hardy folk, they certainly earn whatever salary they draw, and the amusement they offer us is clean and very real.

Credit Where Credit Is Due

OUR WHOLE COUNTRY was shocked last month by a crazy attempt on the life of Mayor JOHN PURROY MITCHEL of New York City. The would-be assassin, in telling of his actions on the day of the shooting, said:

Then to-day I came downtown about ten o'clock. I took a glass of whisky and then a glass of beer on Park Row.

After examining the prisoner at Police Headquarters, District Attorney WHITMAN described him as follows:

He is a characteristic product of the lodging houses and the cheap-whisky bars. The smell of bad whisky was heavy on him this afternoon.

It may be, as the late King HUMBERT of Italy said, that being shot at occasionally is a risk of the trade for those who hold high office, but that this peril should be kept up in our country as an incidental product of the business of selling vile drink is a condition altogether intolerable. It will not be endured much longer.

Quoth the Buzzard, "Nevermore"

Drawn by F. G. Cooper

Town, Country, and Health

"IS IT," we queried in a recent editorial paragraph, "much easier to be good in the country than in the city?" and Mr. MACLEVY, a teacher of physical culture, in the kind of letter an editor delights to receive, answers our query in a decided affirmative:

For years [he says] I have conducted a gymnasium in the heart of New York and a health-building physical-culture plant in a Long Island rural community, and I have had abundant opportunity to compare the effects of city and country life on the health and morals of men. Health and morals—they come to pretty near being the same. The invalid may be a near-angel, and the strong, virile specimen of humanity a near-fiend, but they are the exceptions that prove the rule.

Most bad people are sick people, and most sick people are sick because they have neglected and disregarded the laws of right living, such as exercise, fresh air, deep breathing, plain and nutritious nourishment, regular hours, and more exercise. The city man can, if he wills, observe all those laws, and live a long, happy, useful, and moral life, but he is not so likely to do so as the man who spends at least a part of the time in the country. On the other hand, an exclusively bucolic existence occasionally tends to ignorance, bigotry, and narrowness of vision, and so may lead to ill health and viciousness.

Right gladly do we admit that most bad people are sick people—that health in its original meaning of *wholeness* is from the same stock as *wholesome* and *holiness*—that, in short, health and morals generally, though not always, go together. But, as our critic himself admits, "an exclusively bucolic existence occasionally tends to ignorance, bigotry, and narrowness of vision, and so may lead to ill health and viciousness." That was precisely our point in asking the question at the top of this paragraph. True, pure air and peace are better than vitiated air and ceaseless agitation. But the scant civilization of isolated regions, no less than the excessive civilization and artificiality of cities, may prove alike hostile to health, wholeness, and holiness. Is it not, therefore, after all a matter of the individual soul?

The Word in Season

BUT, presses our thoughtful critic,

if "salvation" is individual to-day just as it always has been, why, then, is COLLIER'S so bitter in its denunciation of the saloons? If "salvation" is "individual," why COLLIER'S long and earnest warfare against all the antisocial institutions and interests and forces that seek to drag humanity down?

Yes, "salvation" is indeed individual, a transformation in the mind, in the heart, in the soul of each of us, that makes us part company with all that is contrary to the inner unity within us. A health master, like our correspondent, might preach physical perfection long and faithfully, but until each of his hearers puts the teachings into practice within his own body, small, if any, results will be apparent. The teacher, however, may have broken the ground, and where before a man was sunken in ignorance, hopeless of change, he may have caught a word of hope that gives him an impulse to start upon another path. He decides on a sudden to live the life, and the preaching is abundantly justified. That is why we mean to go on in our denunciation of the saloon as a foe and a parasite of society, one that militates against wholesome living conditions; why we shall always continue our warfare against "all the antisocial institutions and interests and forces that seek to drag humanity down." For that way, we believe, lies our mission in the national life. And though we cannot, any more than the physical instructor, change human beings against their wills into hale, wholesome, healthy folk, yet, like him, we can in our humble degree endeavor to warn them of the pitfalls, to remove obstacles, to seek the truth, and to fight the enemies of progress. But in the end every pilgrim must engage his own Apollyon, and we can only wish him to emerge triumphantly from the valley, to find his pearls there and the words of life.

If it isn't an Eastman, it isn't a Kodak.

The Kodak Girl

Every trip that is worth taking, is worth a Kodak story. The city girl's trip to the country, the country girl's trip to the city, any girl's trip to the sea-shore or the mountains—in all of these are picture stories of the interesting places and the still more interesting people.

And picture taking with a Kodak or Brownie is very simple—and less expensive than you think.

Catalogue free at your dealer's or by mail.

EASTMAN KODAK COMPANY,

ROCHESTER, N. Y., *The Kodak City.*

With the Border Guard

(*Continued from page 11*)

to save themselves from wholesale slaughter at the hands of the amiable General Pancho Villa, waded the Rio Grande and cast themselves upon the bounty of our troops at Presidio, Tex. The customs officers seized the live stock which hadn't paid any duty, and as nobody had any money to pay duty the stock was sold. The refugees were ill, wounded, naked, and starving, and constituted themselves a public charge, for whose maintenance the sovereign State of Texas had made no appropriation. It was in fact a national calamity, so under instructions from the War Department Lieutenant Colonel Perkins chartered some special trains and went down to collect the visitors. He met them at Marfa with his doughboys.

I have the word of Private Scott that it was far from being a picnic excursion. Five thousand Mexicans went aboard those special trains and with them went starvation, smallpox, hopelessness, and dumb, animal-like despair; also their dogs. There isn't any duty on Mexican dogs (to quote the Twentieth, "more's the pity") and the soldiers couldn't keep them off the trains, although they tried hard enough. Dogs are unsanitary—Mexican dogs particularly—and in addition despise a gringo. A soldier can no more make friends with a Mexican dog than he can with his master. Private Scott says they don't like our smell! At any rate, there was a wild scramble of soldiers and dogs, and the dogs won. Why! Because—well—it takes a very mean man to kill a dog—particularly the dog of your guest. So the Twentieth complained most bitterly to Lieutenant Colonel Perkins, a most unwarlike person and reasonably fond of dogs.

"Load the dogs, too," he ordered, and cries of "Bueno! Viva comandante!" rent the air, testifying to the guests' approval of this dog-sparing Perkins, and away they went across the desert with the gallant Twentieth hanging out the windows and spread across the platforms; for, as Huck Finn would have expressed it, the interiors of those cars were pretty various, and many a brave soldier boy whose stomach had withstood the terrible assaults of slum and rancid sowbelly in the olden days, gave up his rations and added to the tumult with his dismal squawks! Not all beer and skittles this soldier business.

But if it was hard on the infantrymen, judge of its effect on the Hospital Corps, for there were wounded and sick in plenty and a señora gave birth to twins en route. One was still-born, poor little devil, but I am happy to report that, thanks to the Hospital Corps, the survivor and his mother are doing nicely at the moment of going to press. Obstetrics is, naturally enough, something in the nature of a brand-new deal in an army which has no camp followers, but if there is one characteristic in the enlisted man of the United States army that predominates above all others, it is his ability to adapt himself to any circumstance in that brief period of time colloquially designated as a pig's whisper.

The Increases of Captivity

YES, indeed. Five thousand Mexicans, more or less, forded the Rio Grande at Ojinaga, but I should judge, from a casual glance at Sergeant Kamme's statistics to date and my own observations as to crop conditions, that about seven thousand five hundred are going back! There is certainly a mighty busy season ahead of the Hospital Corps. When Chaplain Axton holds Sunday night services and the boys gather around the field organ to sing "Onward, Christian Soldiers"—well, that's all right; but if they start "Let Us Gather by the River" or "What Will the Harvest Be?" there's going to be a noticeable falling off in attendance of the pill brigade. There is such a thing as going too far!

Private Scott took me on a tour of the camp hospital. There was a pockmarked man dying of dropsy in one tent. He set up a weird groaning when we entered and ceased when we departed. Scott spoke sympathetically to him and elicited a wan smile in which there was all the unutterable pathos of a dog that has been beaten and desires to make friends with somebody. Manuel Oriza, a sublieutenant in the Fourth Cavalry, a Federal regular regiment, was dying of tuberculosis. They had made out his death certificate the day before, but still he hung on, and they had to change the date. We passed through the tents where the convalescent wounded were housed, and everywhere I noticed that Private Scott's entry caused a broad smile to replace the habitual scowl on every hombre's face.

Border officers do not care much for frills. This is Colonel R. H. R. Loughborough, Twentieth Infantry

Finally we came to the maternity tent. There were three new-made mothers there, but only two babies. Scott admitted, with something of the air of a sheep-killing dog, that he'd lost one baby!

The eldest baby present was three days old, and its mother was standing in the tent door as we approached. At sight of Scott she fled back to bed guiltily. He tried to reprove her for disobeying orders and made a failure of it. All three mothers smiled and laughed at his horrible soldier Spanish and said nice things to him, and the guilty mother, who had never heard of a maternity ward and couldn't understand why "el medico" forbade the running of foot races the day succeeding the travail of childbirth, reached out to stroke his hand. Poor Private Scott sighed.

"I can't keep them in bed," he complained, and picked up a small piece of dark progeny with as much pride and affection as if it had been his own. Good man, Scott. He is about twenty-seven years old and is pretty thin from hard work; I should judge he might weigh 125 pounds soaking wet. But it would be hard to find a better man for his job.

Five thousand Mexicans love him like a brother! He is in the army medical corps for the experience, for some day he is going to be a doctor. He is one of those rare souls endowed by nature to administer to suffering humanity by reason of his gentleness and sympathy—not the sympathy of empty words and gush, but of actual, smiling, tireless, patient service.

When children love a man, he's all right, and I noticed as we walked through every street in that vast camp the children followed and called cheerily to him; maidens came to their tent doors and smiled at him; hideous old women looked up from their washing or grinding of meal for the ubiquitous tortilla and awaited his salutation; men with stage-robber faces, who looked as if they would gladly have frisked a rattlesnake for 30 cents in Mexican money, bowed low with many a respectful "Bueno tarde, medico."

I looked back at a group of these fellows and a frightful creature in a monstrous peaked hat (he had been hit in the face by a piece of shrapnel and his nose was a total loss and no insurance) winked, nodded knowingly and jerked a dirty thumb at Private Scott. Since he spoke a universal language, I knew he said:

"Take it from a Mexican, there goes one white gringo!"

Fed and Clothed

WE came to a tent where an old private of Federal artillery was stripping a soup shank of its marrow. The

Digitized by Google

Scott he clasped one hand to his abdomen, pulled a face as if in pain, and swore by his patron saint that he was "muy enfermo." He had a statement in English and Spanish to that effect. He was seek—very seek in fact. He besought the medico for relief. He was so-little pill! I looked at the scoundrel and saw that he looked fit for a healthy race; that they have weak hearts and bad livers, and syphilis and tuberculosis is very prevalent. And they haven't any red corpuscles. Centuries of starvation or insufficient and improper food has impoverished their blood to such an extent that wounds heal stubbornly and suppurate a great deal.

Hated to School!

AND now shrill cries of juvenile rage resounded through the camp, and I beheld Lieutenant Palmer of the Twentieth with a firm grip on the nape of a youth of fourteen or fifteen, propelling his captive toward a large tent. I marveled much that an officer and a gentleman should thus maltreat the flower of Mexican youth, until I learned the reason. Lieutenant Palmer holds office in that reconcentrado camp. He is the superintendent of education and the terror of boys who play hooky. He was haling one such wretch before the maestro's tribunal now.

Yes, they have established an escuela (school) in that camp and every niño (child) of school age must present himself for instruction. They have a Mexican schoolmaster in charge, but the real power behind the throne is Palmer. It would appear to the casual observer that, between Lieutenants Palmer and Ahrends and Chaplain Axton, Mercado and his outcasts are going back to Mexico some day better mentally, physically, and morally than when they left bullet-swept Ojinaga.

Lieutenant A. E. Ahrends of the Twentieth is in charge of the sanitation and discipline of the camp. The results bear mute testimony to his ability. The death rate is nil. There has not been a single death from a disease contracted in that camp; there has not been a single murder or cutting affray, and that fact is very significant when one takes into consideration that here are 5,000 Mexicans, their wives and daughters; and the further fact that these people are the most sensitive, jealous, and easily irritated race on earth. With these people very slight issues are provocative of tragedies, but in camp at Fort Bliss they are as docile as an equal number of Americans. Perhaps there may be a reason for this in the fact that Lieutenant Ahrends is sole proprietor of the bull pen!

Once in the bull pen, a miscreant is forced to work all day, and to a peon hell hath no terrors like a day's work under the dynamic Ahrends.

The Coming of the 5,000

COLONEL LOUGHBOROUGH is proud of his regiment and his detachment of Hospital Corps for the manner in which they are handling this job. And well he might be, for here is a perfect organization from colonel to private, with no internal strife, petty jealousies, or striving for individual preferment or credit for clever innovations installed. Mr. Ahrends awoke one night from a deep dream of new communal latrines, and lo! he had solved a weighty problem—the problem of incinerating daily the contents of those latrines. With smallpox in camp the disposition of filth is indeed a problem, for the Hospital Corps has no monopoly on the army motto, to wit:

Count that day lost whose low descending sun
Finds smallpox in the camp—
and nothing done!

Imagine, if you can, the arrival of these 5,000 refugees at Fort Bliss. At two in the afternoon they detrained on the desert mesa beyond the reservation—primeval desert covered with sage and cactus, and, guarded by the Twentieth, marched to the camping site. Parenthetically I am informed that the arrival at the camping site would have been funny had it not been so pathetic. When the barefooted niños struck the cruel sand burrs the parade stopped; but not for long.

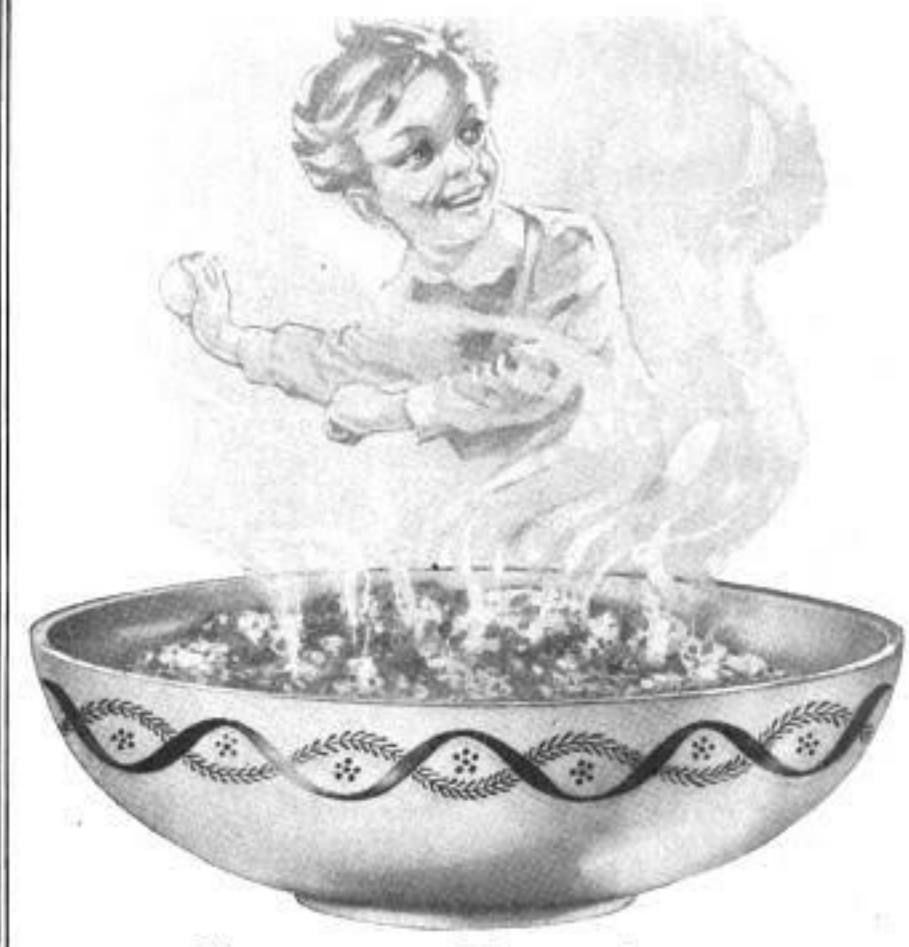
Away it went again, and every doughboy had a filthy little beggar on his back and another under his left arm! I wonder how many civilians, who look with ill-concealed disgust upon the man who wears his country's uniform, would stoop to carry a squawling brat that had been exposed to smallpox. Certainly not for fifteen dollars gold per month! The average civilian would decline to consider the weak physical condition of this rabble and would forthwith evolve the maxim: "Let every refugee carry his own children!"

By nightfall those 5,000 refugees were inside tents and outside of the first square meal since leaving Chihuahua! That night the details of the big job of caring for them were planned and the tasks assigned, and the following day this was what happened:

This Is What Wardship Means

FIVE THOUSAND Mexicans were vaccinated and received an injection of antityphoid serum. Sixty acres of desert was cleared of sage and cactus, irregular troops were segregated from the regular, the camp rearranged and streets laid out. A soldier of the Twentieth wrote rules and regulations in Spanish and they burgeoned forth on signs throughout the camp. Latrines were dug, an adobe brick factory was in full swing, forty huge messes, army fashion, had been established, and arrangements for a supply of fresh milk for the children and weak mothers had been made.

The next day, however, materials had arrived which enabled the soldiers of the Twentieth to do some real work. They ran a ten-foot hog-tight wire fence around that huge camp, with sentry towers in each corner. They piped a water supply into the camp. They built a huge communal bathhouse, with hot and cold water showers; they distributed soap and towels and established a school. The Congregational chaplain of the regiment, Mr. Axton, built an altar and arranged for religious services by a Catholic priest in the school tent on Sundays. The Hospital Corps battled with the smallpox patients and never lost a single case.



In the meantime other problems had presented themselves—the problem of clothing and feeding. "A piece of twisty rag . . . was all the field equipment many of the refugees could find," and this was January, and in Texas it is cold in January. The Associated Press and

Soldiering on the Rio Grande — K Troop men, Anapra, N. Mex.

10% More for Your Money

Quaker Oats is now put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

Serve Quaker In Big Dishes

If You Would Know Its Vim-Producing Power

Quaker Oats is the utmost in energy food. It should multiply vim, create bubbling vitality, make one "feel his oats."

But a little dish, once daily, doesn't go far enough. Active, growing children need three times what most children get.

Serve Quaker in big dishes. Make it the morning meal. Then you will know the fullness of its vim-producing power.

And millions of grown-ups need a month of such breakfasts—to put them at their best. Nobody doubts the energy that's there, but few folks get enough.

Quaker Oats

The Luscious Energy Food

Quaker Oats forms a luscious dish because it is made of just the rich, plump grains. It is made to tempt children to eat an abundance. And they will if you put it before them.

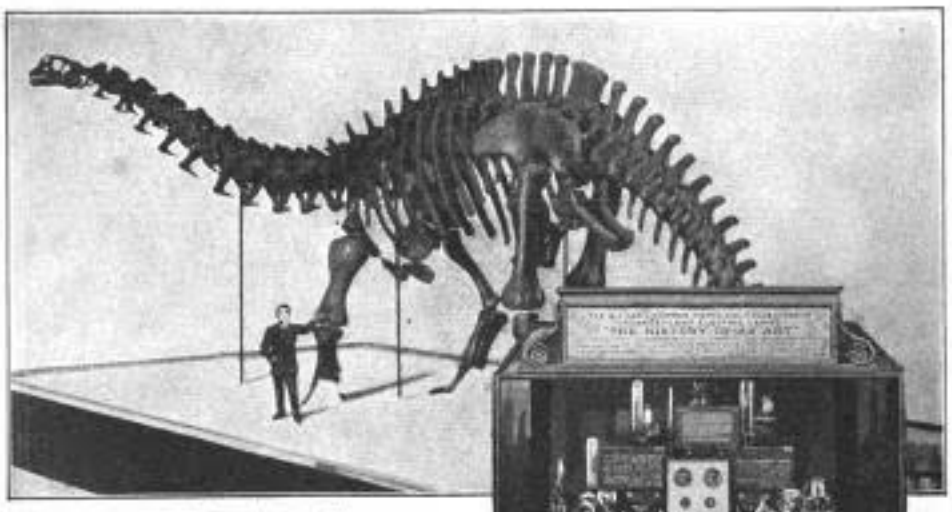
We pick out for Quaker just the cream of the oats. We get but ten pounds from a bushel. Yet Quaker Oats, with all this flavor and aroma, costs no extra price.

Bear this in mind—you who want children to get the full benefit. Get them the luscious flakes which have won the world to Quaker.

A hundred nations send here now to get delicious Quaker Oats. All because of this flavor, which has taught millions of children to love this food of foods.

It is always there, and always will be, when you order Quaker.

Serve Quaker Oats in large dishes. Small servings are not sufficient to show in full its vim-producing power.



10c and 25c per Package
Except in Far West and South

The large 25-cent package gives ten per cent more for the money

The Quaker Oats Company

Brontosaurus roamed the earth seven million years ago. He could not adapt himself to changed conditions. Nature scrapped him.

One of the cases in the William J. Hammer Historical Collection in New York, which exhibits the hundreds of lamps which were scrapped before MAZDA Service gave us the MAZDA lamp of today.

Evolution and the Scrap Heap

Talks about MAZDA No. 4

"Not the name of a thing but the mark of a Service."

ABOUT seven million years ago, more or less, a stupid, slow-moving lizard known to science as *brontosaurus* roamed the earth. He stood thirty feet high on his hind feet and was seventy feet long. He weighed over thirty tons. As he lumbered along, each of his ponderous feet left a track that occupied one square yard. No one knows why he became extinct. Perhaps the earth shrugged her shoulders one day, as it were; in other words, a cataclysm occurred. Dry land became water and oceans became dry land. *Brontosaurus* could not adapt himself to the change. Nature scrapped him.

This process of scrapping is what Darwin meant by "evolution," "natural selection," and the "survival of the fittest." It is a process that finds its counterpart in the scrap heap of human industry. There are mechanical fossils as well as fossil lizards. Look in the scrap heap of any industry and you will find them. The bigger that scrap heap is, the more marked has been the evolution which it represents, the more perfect is the product of the industry. If an industry has no scrap heap it is standing still; it is not evolving.

Comparing the spectra of two lights. MAZDA Service means the making of many such comparisons, tests, experiments and selections in order constantly to evolve better lamps. The aim is that MAZDA shall always be the mark of the furthest advance in incandescent lighting.

Next to agriculture and architecture the oldest of human industries is the art of lighting. Hence the scrap heap of light producers ought to be large. And it is. Think of the hairy, low-browed savage who rubbed two sticks together, built a fire and thus made the first artificial light thousands and thousands of years ago. Then think of the incandescent electric lamp. What an evolution! What a scrap heap has been piled up of beacons, rush lights, candles and oil lamps, each with a little subsidiary scrap heap of its own, representing the evolution of its particular type of light-producer!

When the incandescent electric lamp was invented the height of the scrap heap was more than doubled. In a few years, lamps which represented the illuminating methods of centuries were discarded. And the end is not yet. The height of the scrap heap is growing more rapidly than ever.

All the science of our time is epitomized in the incandescent lamp of today—the MAZDA lamp. If you knew its history you would know the history of modern science. Study its scrap heap and you learn how far the art of lighting has evolved, even in your own time.

At the very bottom of the heap you will find a lamp with a strip of graphite in a poor vacuum. Farther up are hundreds of lamps with platinum filaments; still further up lamps with filaments composed of the oxides of zirconium and titanium, and very near the present top, lamps with filaments of carbon, osmium, silicon compounds and tantalum. Then come many types of the metal filament lamp, including types of tungsten lamps.

All of them are as extinct as *brontosaurus*.

Let it not be supposed that the lamps of today marked MAZDA are the last word in incandescent electric lighting. Some day there will be other lamps, more efficient but still marked MAZDA.

They will be so marked because they evolved from the same unceasing systematic study and selection that gave us the MAZDA of today—a study and selection centered in the Research Laboratories of the General Electric Company at Schenectady and supplemented by learning from the leading experimental lamp laboratories of the world, what progress they have made in the same direction.

The results thus obtained are communicated to the General Electric Company's manufacturing centers at Cleveland and Harrison, and also to the other lamp manufacturing companies entitled to receive them. This scientific investigation and the communications of the results obtained constitute MAZDA Service. All the lamps made by the companies in accordance with this service are marked MAZDA.

A lamp marked MAZDA is always the product of a scientific evolution; whether you buy it today, tomorrow, or at any future time, it is selected from types devised after months, and even years of research; it is the one that has survived all tests, because it has been proved the fittest; it is a lamp that represents the latest commercial advance in illumination of its time.

4018 GENERAL ELECTRIC COMPANY

sundry newspaper correspondents carried an appeal for clothing for the women and children and the American public responded as usual. Rush shipments of old army blankets and an issue of obsolete fatigue clothes, campaign hats and shoes came from various United States arsenals for the men, a grand free distribution took place, and the clothing problem was solved. The "grub" question remained, however, notwithstanding the establishment of the forty army messes. It was discovered that these were not a success. Some ate the army ration, some starved, none liked it, and the camp on the whole languished gastronomically. Something had to be done—and quickly—and the officers of the Twentieth met at headquarters to consider the vital question: "What do you know about a Mexican?" Colonel Loughborough said a Mexican just naturally had to have chili peppers. What kind? "Fat ones—dried, dark red in color," said Lieutenant Colonel Perkins. "The motion's carried," declared the Colonel. "Nominations for beans are now in order, and the succulent little white army bean is barred for professionalism." "I nominate the pink Bayo bean," yelled Lieutenant Scott. "Carried," said the Colonel. "Move the withdrawal of bakers' bread and the substitution of the raw ingredients instead," shouted Chaplain Axton. "Tortilla wins at a million to one," replied the Colonel. "Move the abolition of forty army cooks," yelled Lieutenant Ahrends. (Loud cries of "Family life must prevail. Home cooking forever!" etc., etc.) And thus it went. When the meeting adjourned, it was unanimously decided to issue rations daily to the heads of families—meat, flour, lard, vegetables (principally onions, chilis, and beans), rice, sugar, ground coffee, salt, and pepper. Forthwith a census was taken, a system evolved, and the day was saved. Little adobe bake ovens appeared in the streets in front of each tent, fuel was distributed, and the happiest lot of Mexicans north of the Rio Grande settled down to enjoy life as they had never before enjoyed it. You can't make an American citizen out of a peon by feeding him the things he wots not of. If you persist a large portion of him will die on your hands.

A new American! He followed the visitors through the camp and saluted them when they went away

"Castor Oil for Two!"

CHAPLAIN AXTON has worked the credit of a chaplain and the Twentieth Infantry for all it is worth, and gone into business. He is the proprietor of the post exchange within the camp—Mexican trade a specialty. His business is run on a profit-sharing basis and goods are sold at a profit barely sufficient to keep the institution out of bankruptcy. He has built a little pine store and has American and Mexican soldiers running it. In the rear he has a carpenter shop, where Mexican carpenters make things for other Mexicans who can afford them.

While in this store my curiosity was aroused by the large amount of castor oil in four-ounce bottles. On the face of things it looked as if the Chaplain was "horning in" on the legitimate trade of Sergeant Kamme up at the dispensary; so I questioned the Chaplain and made a discovery that may be of interest to a large number of people. Next to a good jolt of fiery mescal a Mexican prefers five fingers of castor oil. Babies cry for it. Old and young save their pennies to buy castor oil and drink it standing at the counter. General Vasquez meets Colonel Gonzales at the counter of the post exchange, and Chaplain Axton, a sort of ecclesiastical bartender, inquires their pleasure as the General tosses a 'dobe dollar on the bar. "Castor oil," replies the General and turns to the Colonel: "Friend of my heart, thy pleasure!" "Oh, let her go double," says the Colonel carelessly, and the Chaplain uncorks two four-ounce bottles of castor oil and sets them out just as solemn as an owl!

One day a hombre just out of hospital, having heard of this delightful smooth drink of the so-funny Americano, came to the post exchange and allowed he'd invest in some castor oil. The busy American soldier clerk who waited on him just reached around in back to the castor-oil department without looking, set out a bottle with one hand, made change with the other, and sprang to wait on a senora who desired a bottle of Florida water. When he looked around again there stood Chaplain Axton gazing at the empty bottle the hombre had set down, and remarking to himself: "Well, a good soldier should never permit himself to be surprised, but preacher that I am, I *will* come within an eighth of an inch of being damned if that isn't the first hombre I ever saw tie into a bottle of laundry bluing!"

And if anybody thinks this is fiction for filler, he can write to the post exchange at Fort Bliss and find out for himself. Why, a couple of barrels of heavy automobile transmission oil or a carload of axle grease would last among some of these peons about as long as a celluloid dog chasing an asbestos cat through a garbage incinerator.

Sadness, Too

YES, there is a deal of human interest around Fort Bliss. Just before I left I saw a Hospital Corps man rush out of a tent, wave his arms, and cry aloud: "Dos hombres." No answer. Again! "Dos hombres!" Still no answer, so he dived into a tent and came forth with two Mexican gentlemen, whom he escorted into the tent from which he had emerged. I followed. Within the tent Acosto Cresenecio, late private of Caraveo's Brigade of Irregulars, lay on a stretcher covered with a cotton blanket. Acosto had just definitely severed his connection with the revolution by reason of septicemia over which he had no control, and the corps man was bending over him. When he went away with his dos hombres for a Government coffin, Acosto's wife planted two lighted tallow candles in the sand on each side of his head.

Our Economical Government

YES, there is much of pathos, much of humor, and much of hard work with the soldiers along the border. Officers and men are earning the pittance their country pays them, and from that pittance the cavalry has erected field stables for its mounts. The Government makes no appropriation for stables along the Rio Grande. It may be news to the gentlemen who battle over the army appropriation bill and the constantly increasing cost of maintaining our army that the item for cavalry mounts would be double what it is were it not for the vast pride which our soldiers have in the service.

From their own troop funds they have purchased lumber and erected stables wherever they are permanently in camp, in order that their mounts may not freeze on the picket line in winter or have their eyesight ruined on the burning desert sands in summer. They have erected their own mess halls and wherever there is a squadron or a battalion stationed there is a library and reading room and a post exchange. The bands go with headquarters, and at headquarter posts tri-weekly concerts add something to the meager joy of existence along the border. But from Brownsville, Tex., to Tia Juana, Cal., there are little detached bodies of cavalry and infantry encamped at lonely little hamlets or in the solitude of the brown dusty desert, with nothing but the sight of a distant train and a telegraph line to remind them of the great republic whose honor they are guarding. And it is upon these men that the burden falls heaviest, although it is all a hard, dirty, lonely job—and thankless, all along the line.

Personally, I have never heard the regular army man given a cheer or a kindly word until by whole battalions he began to come home in boxes.

The Reason for Goodyear Prices Lies in

Matchless Output

No-Rim-Cut tire prices have dropped fast and far. In 1913 the reductions totaled 28 per cent.

There results this curious situation:

These tires which were once the highest-priced now undersell 16 other makes. Some ask about as much for three tires as Goodyear asks for four.

The reason lies in Goodyear popularity.

We now turn out up to 10,000 pneumatic motor tires per day. And this mammoth output has revised all former factory costs.

Overhead cost has dropped 24 per cent.

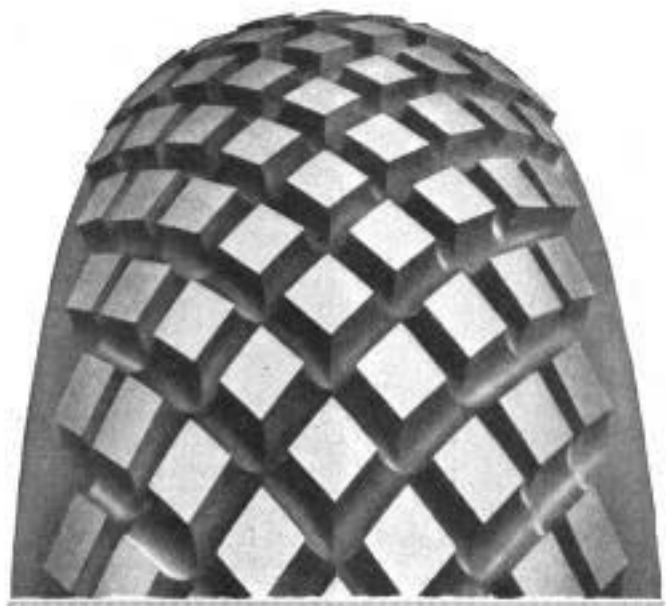
Labor cost per tire has lessened 25 per cent.

And our tremendous sales made possible last year an average profit of only 6½ per cent.

Yet These Four Extra Features

Bear in mind that No-Rim-Cut tires have won top place in Tiredom. But not by lower prices. In days of smaller output these tires cost one-fifth more than other standard tires.

They won on sheer merit—through mileage comparisons on hundreds of thousands of cars. They won because of these four exclusive features.



We ended rim-cutting by a method we control. It involves six flat bands of 126 braided piano wires in the tire base. A dozen other methods to accomplish this have ended in disaster.

We saved blow-outs—all the countless blow-outs due to wrinkled fabric. We do this by final-curing every tire on air-filled fabric tubes, under actual road conditions. This extra process costs us $450,000 yearly, but it saves our users millions.

We fought loose treads by creating in each tire, where this trouble occurs, hundreds of large rubber rivets. We have thus lessened this risk by 60 per cent.

We made an anti-skid which runs like a plain tread—a flat, smooth, regular tread. Yet a double-thick, tough and enduring tread which grasps wet roads with resistless grip. We call it the All-Weather tread.

In no other tire at any price do you find these costly features.

GOODYEAR
AKRON, OHIO

No-Rim-Cut Tires

With All-Weather Treads or Smooth

The Best Men Know

In No-Rim-Cut tires, in every way, we give you the best men know.

We have for years spent $100,000 yearly on research and experiment. We have built thousands of tires in our laboratory, to find some way to lower cost per mile. Now all our experts agree that it can't be done in any way known today.

It is easy to claim more mileage—easy to claim better tires. But thousands of actual tests have revealed no tire to fulfill such claims.

The Final Verdict

The final verdict seems to be that No-Rim-Cut tires give lowest cost per mile. Our tire sales last year were 11 times larger than in 1909. For the first four months of this fiscal year they increased 55 per cent over last year.

Can you see any reason for paying more for tires than the price of such tires as these? If not, go to dealers who supply you with No-Rim-Cut tires.

She's a Plain **Girl—** *Until She Smiles*

HUNDREDS read your smile-story every day. It is your personal revelation.

If free and unrestrained—showing fine and well-cared for teeth—you express health, refinement, high spirits. The smile that must be guarded because of neglected teeth cannot be otherwise than unfavorable in impression.

Charm—physical vigor—radiant cleanliness go hand in hand with

GOOD TEETHKEEPING

This is, semi-annual visits to your dentist and the night and morning use of

Dr. Lyon's PERFECT Tooth Powder

***Prepared for nearly half a century by a Doctor** of Dental Surgery*

Safe to use—cleanses by thorough polishing, the natural way, the acknowledged hygienic practice. Dr. Lyon's is a pure velvety powder, pleasant to use—efficacious in preventing decay and the formation of tartar. The *national* acceptance today of Dr. Lyon's is but the recognition of a dentifrice which has benefited three generations of users.

***What Dr. Lyon's does not do only your dentist** is competent to do.*

SOLD EVERYWHERE

Holeproof—the Hose for Now and *All Summer*

Buy six pairs of Holeproof Stockings or Socks this month and they'll last without holes for six months or longer.

If any of the six pairs fail within six months we will replace them with new hose free.

Thus you can depend on having good hose all summer and *fall*, without the trouble and bother of darning. Think of the convenience.

Wear them for tennis, golf, cross-country walking, or in the evening at dancing.

You will not wear them out. Yet they are trim, neat and stylish. For we guarantee the finest Holeproofs—as sheer as any hose on the market—just the same as the heavier weights.

The genuine Holeproofs are sold in your town. Write for dealers' names. We ship direct where no dealer is near, charges prepaid on receipt of remittance. Write for free book which tells all about Holeproofs.

Holeproof Hosiery Co.
Milwaukee, Wis.
Holeproof Hosiery Co. of Canada, Ltd., London, Canada
Holeproof Hosiery Co., 39 Church Alley, Liverpool, England

By invitation, member of Blue Leaders of the World Association

Holeproof Hosiery FOR MEN, WOMEN AND CHILDREN

$1.50 per box and up for six pairs of men's; $2.00 per box and up for six pairs of women's and children's; $2.00 per box for four pairs of infants'. Above boxes guaranteed six months. $1.00 per box for three pairs of children's, guaranteed three months. $2.00 per box for three pairs of men's silk Holeproof socks; $3.00 per box for three pairs of women's silk Holeproof stockings. Boxes of silk guaranteed three months.

Holeproof Silk Gloves FOR WOMEN

Write for the free book about Holeproof Silk Gloves, and ask for the name of the dealer who sells them. These are the durable, stylish gloves that every woman has wanted. Made in all sizes, lengths and colors.

Brickbats : & : Bouquets

COLLIER'S WEEKLY has for some time been agitating the temperance movement in a very effective way by calling attention to loathsome crimes that have been committed throughout the country by drink-crazed men. And this paper has not laid the responsibility of the crime upon the drink-controlled felon, but has placed it where it would seem it rightfully should be placed—upon the man who manufactures the stuff purposely to stir the beastly passions of men. We can commend the policy of the great National Weekly that is calling upon the people to look behind murder, rape, and other criminality to discern the man who is responsible for the product that has stirred up the passions of crime.

—Hollywood (Cal.) *Citizen.*

✚

A writer of COLLIER'S finds "a steady subsurface drift to the Progressive party." He must have dived deep.

—Rochester (N. Y.) *Chronicle.*

✚

ROBERTA, GA.

Seeing that you welcome brickbats and bouquets alike, I yield to the temptation of handing you a brickbat surrounded by a bouquet. As an opponent of vice and a fighter of evil you easily stand at the head of the list. Other publications seem to take you as their criterion to go by, therefore in your position as leader in the exposure of fraud you are under a tremendous responsibility. You are aware how few publications care to take the stand you do. The harvest, indeed, is great but the laborers few. In view of all this it seems to me you devote too much of your valuable space to short stories and higher athletics. Now I do not object to either—in fact, am fond of a good short story, and believe they have their place, but don't give them humanity's place in COLLIER'S WEEKLY.

L. J. LESUEUR, M. D.

✚

WALNUT CREEK, OHIO.

Is my knowledge of literature limited, or *is* "World's-End" the first story of its kind to appear in literature?

We have all read of Hardy's "Tess"—of Hall Caine's "Kate" and of Hawthorne's "Scarlet Letter"—but this story is unlike those. Here we have a girl who falls from virtue and another man marries her and loves her. This is a story of great strength and it contains good, and is far from being "puerile drool." We found it splendid. If there is any other serial or book written where a girl is given a fair chance after her fall, please tell us of it. How many of us would measure up to Owen, I wonder?

EDWARD ROWLAND.

✚

HOUSTON, TEX.

Apropos of "Polite Language from a Candid Friend" from Milwaukee in your issue of April 11, I wish to take issue with H. F. Washburne. When he states that he has asked between twenty and thirty, and he is surprised that any editor would inflict such a dose upon his readers, in our town I hear differently. The postman of this block will bear me witness when I say that all met him every Tuesday morning with the request: "Have you my COLLIER'S? I must read 'World's-End' before I do anything else." I do not wish to pose as a critic, but in this instance I feel justified.

MARY J. REILLY.

✚

"At the present moment," says Mark Sullivan in COLLIER'S, "the country has no conservative party." Mr. Sullivan talks like an echo of this paper. The political leadership of our day, no matter the party label, is fairly whipping itself to spring some new device for the salvation of society. Our hope and expectation is that it will presently wear itself out and let the country settle down to safe and sane practices.

—Waco (Tex.) *Times-Herald.*

✚

PITTSBURGH, PA.

Maxwell's articles on salesmanship are the best I have ever seen or read.

EDW. J. BEACKLEY, JR.

✚

PHŒNIX, ARIZ.

COLLIER'S is in error in ascribing the classical expression, "Where am I at"? to anyone by the name of Watson. The expression was given to the world by the Hon. M. W. Howard, a Populist Representative from Alabama in 1893. . . . Howard asserted that a fellow Representative, generally understood to have been Cobb of Georgia, had uttered the words during a maudlin speech in the House. The Representative from Georgia indignantly denied the charge, and its reiteration is probably to be found in Howard's book, "If Christ Came to Congress."

W. J. GHENT.

✚

I believe COLLIER'S prints the most vital fiction on the market to-day—clean fiction.

GARRARD HARRIS.

✚

FERTILE, MINN.

I like the attitude you take in regard to our professional calamity howlers. Only I think you are too mild.

R. C. NICHOLS.

✚

BLUE MOUND, KAS.

COLLIER'S is making one of those fights against national vices which few men or weeklies have the strength or manhood to make. My hope is that such papers as that of Mr. Capper and the Fort Scott "Tribune" will soon learn a lesson.

S. RIGBY.

✚

FORT SCOTT, KAS.

A friend of mine said to me the other day that Grantland Rice was one writer "who has grasped the real spirit of the twentieth century." Put his whole page in every week.

R. H. TIMMONS.

✚

Were it possible for such a thing to happen, COLLIER'S WEEKLY would take the place of President, Cabinet, Senate, and Congress, and run the affairs of the nation. Thinking people are often amused but never convinced by its attitude on national affairs. It deserves credit, however, for the stand it has taken on the liquor question.

—East Liverpool (Ohio) *Tribune.*

✚

COLLIER'S WEEKLY confesses that it has not missed a political prophecy in six years. The place for that run of luck was Monte Carlo.

—Columbia (S. C.) *State.*

✚

GREENWICH, CONN.

As I remember COLLIER'S from way back, there has been a most marked improvement not only in the editorials but in the fiction, which shows diversity of taste and discrimination—particularly in the new writers. I hope COLLIER'S will continue in its present fine, new, democratic way, and not degenerate into the tiresome complacency of certain so-called leading periodicals which do not lead—anywhere.

MARION DE VORE.

✚

EARLE, ARK.

I have been a subscriber off and on to COLLIER'S for years, and your recent articles by William Maxwell on "Retail Salesmanship" are among the best I have ever read. Every word is true to life and poor salesmanship is losing more for employers all the time.

J. C. MOORE.

✚

CAMDEN, N. J.

When some one offered Agassiz a lucrative lecture engagement, he replied: "I can't waste my time earning money!"

—COLLIER'S WEEKLY.

Does Secretary of State Bryan understand the Agassiz point of view?

✚

FORT GEORGE WRIGHT, WASH.

Was mighty glad at the way you shot it over on behalf of poor old Alaska. Yours is the gift of saying that we books may only think (occasionally).

I served in Alaska from 1902 to 1904, and what information I have of the country is based on cold, clammy facts. Among other things, I know that its agricultural possibilities are unlimited. My company had a truck garden within two degrees of the Arctic Circle, in which all the ordinary vegetables were grown in quantity sufficient to supply not only the company but most of the residents of the town who cared to buy from us. The only good bargain this country ever got in its numerous trips to the bargain counter is lying up there neglected (except by our predatory friends), and it is truly the national disgrace.

BENJAMIN H. POPE.

A million people use this pen

This is the fountain pen with the *built-in filler*. The Conklin is dependent upon nothing but an inkwell. It is the simplest of all fountain pens in both operation and construction. Just dip the pen in the nearest inkwell and press the "Crescent-Filler." That's all. The pen automatically *fills itself!* Four seconds from start to finish.

The "Crescent-Filler" is the natural and logical self-filling device—easy to get at, simple to operate.

Remember, too, the Conklin is the original and recognized leader of all self-filling fountain pens. It is the only self-filler proved by sixteen years' use and over a million satisfied users.

Sold by Stationers, Jewelers, Druggists, on 30 days' trial. Prices, $2.50, $3.00, $3.50, $4.00, $5.00 and up. Write for catalogue and two little books of pen wit — all free.

Pensive Ponderings

(Concluded from page 17)

The *Santa Maria* was big enough to hold a whole fleet of motor boats, and the old Viking ships were twice and three times their length. Of course the modern adventurer has the advantage of knowing that he will not sail off the edge of the world at some ungiven point deftly concealed from human knowledge; and he can look over his maps and pick out South America or Australia instead of aiming blindly at the horizon and trusting to luck to hit something solid before his provisions run out. Nevertheless, the sort of seamanship which takes a two-ton craft with a petulant and temperamental gasoline engine through a North Atlantic gale to foreign lands is the same sort which took Magellan around the world in a ship whose sailing master had to go to the masthead to see over the waves when the ocean freshened up a bit.

Motor boats are making boulevards of American rivers, and are so thick along the seacoast that the steamer captains complain of them as the automobilist does of hens.

In a few more years the high seas will be speckled with them, and the pale tourist, too proud to yell for a life preserver as his fifty-thousand-ton steamer reels in the gale, will look out upon a few white motor boats squatting on water plateaus and hillsides like Mother Carey's chickens and take heart again.

Scientific Inquiry

WITH aeroplanes competing for the honor of establishing a twenty-four-hour, two-thousand-mile, nonstop record, how long will it be until the Standard Oil Company establishes a gasoline station at the North and South Poles?

Those Giddy Young Nations

IN Great Britain a hundred thousand Ulstermen are parading with firearms which are likely to go off at any time with shocking results, while the Unionist party leaders and newspapers are egging them on and gleefully prophesying that the rebellion will ruin the Liberal party.

In France the wife of a Cabinet Minister has assassinated the editor of a leading newspaper of the opposition whose political arguments consisted of exposing the Minister's affairs with women. The trial of the murderess promises to be the social and political event of a decade and will have more effect upon the elections than ten thousand stump speeches.

In Germany the Emperor, who has to keep the Reichstag good-humored, is taking a firm stand against the ventilation of private citizens by army officers, and insists that said officers be reprimanded, or even spatted on the hand if necessary, while the Crown Prince, who is answerable to nothing but the laws of heredity, is giving three cheers by telegram every time an officer wipes his sword on the Constitution.

We have a few political troubles in this country now and then, but being a stable government and conservative in the extreme in our political methods, these foreign outbreaks naturally amaze and interest us. Still we used these methods, too, about a century ago when volunteer armies opposed the whisky tax; when Aaron Burr practiced statesmanship with a dueling pistol, and when any politician who didn't like a bill in Congress could go around and get South Carolina to threaten to secede if it was passed. So we cannot afford to be too scornful of these younger popular governments. They will achieve dignity in time.

Henry Ford's New House

RECENTLY we mentioned Henry Ford's modest Detroit home, which is viewed with awe by hundreds of visitors weekly. Now the newspapers say that Mr. Ford is to blow in a million on a new house. If Mr. Ford is really going to do this, it will be his first pedantic and conventional act in many years. However, it will probably be the most interesting home in America, if only for the fact that the help will get five dollars a day and that there will probably be a special garage for servants' automobiles in the rear.

Here's Ginger Ale That's Made of Ginger!

Clicquot Club
Pronounced Kleek-O
GINGER ALE

Some ginger ales haven't a trace of ginger or ginger extract in them. Clicquot Club is made of finest Jamaica ginger root. In addition, Clicquot is made of sugar instead of saccharin, of fruit juice instead of coal-tar flavors, of carbonated spring water instead of hydrant water doctored with soap bark until it will foam.

The splendid carbonate of Clicquot puts a life into the beverage comparable only to champagne. Clicquot is mildly laxative and is healthful for women and children.

Sold by Good Grocers and Druggists

If one glass is enough for your thirst we will send — for 4c postage — a patent self-clamping stopper (clever device) that will hold the second glass fresh for 48 hours.

Other Clicquot flavors: Birch Beer, Root Beer, Sarsaparilla, Lemon Sour and Orange Phosphate

THE CLICQUOT CLUB CO. Dept. B, Millis, Mass.

Are You Ætna-ized?

Five Thousand Dollars Cash

A man was accidentally killed in a train wreck. (It might have been you.) He was on his way home. He had earned a good salary, but had saved little, and his funeral used that little up. His widow and children were left, as they thought, penniless. In his desk, however, a "Folded Paper" was found, which he had obtained only a few months before. It was

An Ætna Accident Policy

It brought to that sorrowing and well-nigh penniless family a check for FIVE THOUSAND DOLLARS.

Thousands of accidents occur every day. It may happen that *your life* will be snuffed out; that *you* will suffer dangerous injury or the loss of hand, limb or eye.

Sometime your family may have use for the "Folded Paper" that means food, clothing and shelter to those you love. Ætna Accident Policies cost little and pay a generous weekly indemnity if you are kept from work by accidental injury.

Better To-day than Too Late

Fill out this coupon and mail to us to-day.

Ætna Life Insurance Co. (Drawer 1341), **Hartford, Conn.** Collier's

I have marked the kinds of insurance I wish to know about, Accident ☐ Health ☐ Disability ☐
I am under 60 years of age. My name, business address and occupation are written below.

Invest $500 In a $2,000 Selden Truck

It's Earnings Will Pay the Balance

The Selden Sales Plan enables any reliable firm to start using the Selden Truck upon the payment of $500, and pay the balance of the cost in monthly payments. Experience of Selden Users proves that the earnings of the truck itself meet these monthly payments.

The Selden Truck

is guaranteed to carry 3,000 lbs. Embodies the general principles of successful truck construction and is built of the best materials. Parts that bear the hardest strains are heat treated and in addition are larger and stronger than the best engineering practice requires.

Actual comparison with any truck of the same rated capacity will show that the Selden Frame, Axles, Springs, Wheels, Bearings, Bolts and Rivets are of larger dimensions than those of any other truck in its class.

Owners of Seldens find that this large factor of safety in the construction of the vital parts of the Selden Truck, by putting the service into the truck itself, saves in maintenance and repair and is the best guarantee of continuous economical performance.

Write today for Se.den literature and a leaflet on buying and operating Motor Trucks, written by an expert on truck installation.

We want dealers in unassigned territory who know how to sell commercial cars and who appreciate the business proposition offered in the Selden Truck plus the Selden Sales Plan.

Selden Truck Sales Co.
320 East Ave., Rochester, N.Y.

"Woods and Prairie Lands"

(Continued from page 16)

summer, and yet, of all my playmates, I retain the names and faces of only two or three. All others have faded from the tablets of my brain.

"I remember, however, of helping to shock grain at a cent a shock. Hester and I worked together and we took vast pride in the dollars thus earned. We spent it riotously in going to a circus which came wandering through the countryside in the good, old-fashioned way, drawn by horses and trailing a long procession of gorgeous chariots and wonderful animals. I don't suppose it was much of a circus as circuses go to-day, but it was marvelous to us then."

IT was late August or early September when Duncan again loaded his household goods into wagons and, with his small herd of cattle following, started westward for the fourth time, bound for the border line. "This journey has an unforgetable charm," notes Lincoln. "Each mile took us farther and farther into the unsettled land until, in the afternoon of the second day, we came to a prairie so wide that it stretched away to the sky without sign of man. It was covered with tall, dry grass, and when my father stopped his team and came back to us and said, 'Well, children, here we are on the big prairie.' I looked about me with awe, so endless seemed this world of ripened blue-joint and wild barley.

"Far away dim clumps of trees showed, but no dwelling; no living thing was to be seen, save the hawks lazily wheeling in the air. It filled me with fear as well as wonder. The wildness of this region appalled me. I felt for the first time the power of the unplowed primeval sod. It seemed that 'herds of deer and buffalo' might at any moment present themselves. But they did not, and my father had no rifle ready, boys—did not even carry his shotgun.

"HOUR after hour we pushed westward, the heads of our tired horses hanging ever lower, and on my mother's face the shadow deepened, but my father's voice calling to his team lost nothing of its edge. He was in his element. He loved this shelterless sweep of sod. This westward march delighted him. I think he would have gladly kept on until he reached the Rocky Mountains.

"Night came at last, and still we drove steadily into the twilight. Just at dusk we crossed a beautiful little stream and stopped to let the horses drink. Thereafter all is dim and vague to me. I remember nothing further until my mother called out sharply: 'Wake up, children! Here we are!'

"Struggling to our feet we looked about us. Nothing could be seen but the dim loom of a small house. On every side the darkness spread, silent and without boundary.

"Driving into the yard, father hastily unloaded one of the wagons and, taking mother and Hester and Jennie, drove away to spend the night with Uncle David (who had rented a farm near us), leaving Owen and me to camp as best we could with the hired man. We spread a rude bed on the floor, and in ten minutes were all asleep.

"THE sound of a clattering poker awakened me next morning, and when I opened the door and looked out I recognized that an entirely new universe had opened for me. I stood on a level prairie with no tree in sight. A mile away to the west cowered a small stone house. Immediately before us lay a half section of unfenced sod, and to the north, as far as I could see, the land billowed like a russet ocean, with only here and there a small cabin to fleck its lonely spread. I cannot say that I liked or disliked it. I merely marveled at it, and while I wandered about the yard the hired man cooked some corn-meal mush in a skillet, and this, with some butter and gingerbread, made up our first breakfast in Mitchell County.

"TOWARD the middle of the forenoon father and mother returned and the work of setting up the stove and getting up the furniture began. In a very little while the clock was again ticking resignedly on its shelf and the kettle singing on the stove. It appeared that they were getting used to change. Once more, for the sixth time, as a matter of record, my mother adjusted herself to a strange environment, comforted, no doubt, by the knowledge that her father and brother and sister Della were so near. Perhaps she also congratulated herself on the fact that she had not been carried beyond the Missouri River—and that her house was not 'surrounded by Indians who murder by night.'

"Let me tell you, a fool and his money are soon parted."

"Yes, of course, father, you've had more experience than I."

"An hour later just as Owen and I had clambered to the roof of the house, with intent to peer 'over the edge of the world,' something splendid happened. From a low hill to the west, a herd of horses suddenly broke, running swiftly, led by a beautiful sorrel horse with shining white mane. On they came, rushing down across the open sod which lay before the door. The leader ran with most beautiful and graceful action, easily outstretching all his fellows. Forward they swept, their long manes and tails floating in the wind like banners—on in a great curve around to the east. The thunder of their feet filled us with admiration. Surely, next to a herd of buffalo this platoon of colts was the most satisfactory evidence of the wildness of the land which bloomed beneath the sunset.

"Riding to intercept the herd the owner now appeared, mounted upon a horse which very evidently was the mate of the leader. He rode magnificently, and under him the lithe mare strove gallantly to overtake and head off the leader. All to no purpose! The halterless steeds of the plain defiantly laughed at their mate, bridled and saddled, and carrying the weight of a master. The platoon thundered across the sod, dropped into a ravine and disappeared from view. The plain had become our new domain, the horsemen our ideal."

"FOR a few days we had little to do but keep an eye upon our cattle from straying, and we used our leisure in becoming acquainted with the country roundabout. We had a couple of very gentle saddle horses and upon them we spent many happy hours of exploration.

"It burned deep into our memories, this wide, sunny, windy country. The sky was so big and the horizon line so low that the world was at once strange and majestic. The grasses and flowers were nearly all new to us. On the uplands the herbage was short and dry and the plants stiff and woody, but in the swales the wild oat shook its quivers of barbed and twisted arrows, and the crow's-foot, tall and willowy, bowed softly under the feet of the wind and everywhere in the lowlands as well as on the ridges the bleaching white antlers of monstrous elk lay scattered, testifying to 'the herds of deer and buffalo' which once fed there. We were only just too late to see them!"

Western Electric

YOU have seen this name on the telephone in your home and office, in hotels and other public places, and on cable reels along the streets and highways.

The universal use of these telephones and cable has given international prominence to their makers, the Western Electric Company.

In every Bell telephone—8,000,000 of them throughout the United States—you see the product of this company. Thousands more are used by other telephone companies and on private systems. Western Electric telephones are also standard on many of the foreign telephone lines.

But the scope of the Western Electric Company's activities goes even further.

The Western Electric Company furnishes equipment for every electrical need. Every article is protected by the prestige of the name and the guarantee of the maker.

Therefore, when you invest in a Western Electric vacuum cleaner, inter-phone, electric iron, toaster, warming pad, household motor, electric washing machine, or other Western Electric household helps, you may be assured that you have obtained the best procurable.

The booklet, "Western Electric Household Helps," describes all of these home utilities. A postal request, asking for booklet No. 167-C, will bring your copy.

Lyon & Healy
35-45 E. Adams St. CHICAGO

To the south the land was nearly all settled upon, and in that direction lay Osage, the county town, but to the north and west the unclaimed prairie rolled, the feeding ground of the cattle, the home of wolves and foxes and massasaugas. Beyond the highest ridges the boys were persuaded the buffalo could still be found.

THIS farm was only rented for a year in order that the new farm might be broken, and the house was a mere shell and needed reenforcing to make it habitable in winter. Therefore one day Duncan said: "Well, Lincoln, I guess you'll have to run a plow team this fall. I must wall up the house and we can't afford to hire a man to take the team." This seemed a very fine and manly commission for a lad of ten, and Lincoln drove his horses into the field one morning with manifest pride, there to crawl around and around his first "back furrow" which stretched from one side of the quarter section to the other.

But his pride and elation did not last. To plow for a few minutes was one thing—to plow like a man was another. It meant moving to and fro, hour after hour, day after day, with no one to talk to but the horses. It meant walking eight or nine miles in the forenoon and as many more in the afternoon, with less than an hour off at noon. It meant dragging the heavy implement around the corners, and it meant also many mishaps where thick stubble or wild buckwheat rolled up before the standard and threw the share completely out of the ground, making it necessary for him to jerk the plow backward for a new start.

Although strong and active, he was rather short, and to reach the plow handles he was obliged to lift his hands above his shoulders; and with the guiding lines crossed over his back and his worn straw hat bobbing just above the cross brace he was a comical figure, and the people on the roadway, looking across the field, laughed, but neighbor Benson said to Duncan: "That chap's too young to work like that," which pleased and flattered Lincoln greatly.

"No doubt facing the wind was excellent discipline," Lincoln writes, "but my heart was often bitter and rebellious. Father did not intend to be harsh or mean. He had always been a toiler, and it seemed natural and in order that his sons should do as he had done. He had been 'bound out' at nine and had lived on potatoes and salt, and corn bread and sour milk—hence he considered his sons very fortunate—and so we were.

"THERE were beautiful hours of respite on Sunday, with time to play or read. I usually read, devouring anything I could lay my hands upon—newspapers, whether old or new, or pasted on the wall or piled up in the garret. Anything in print was wonderful to me. We had very few books, but I borrowed 'Nurse and Spy: A Tale of the Rebellion'—and in some way obtained a book of sea travels called 'Cast Ashore.' This volume was torn in half so that I do not know to this day how those indomitable seamen reached home. We took the Toledo 'Blade' and the 'Tribune' and the county paper, and father kept up with all the political reports of the day."

Finally the day came when the ground rang like iron under the feet of the horses and the bitter wind, raw and gusty, swept out of the northwest, with spiteful spitting of snowflakes. Winter had come! The plow was brought in, cleaned and greased to prevent its rusting, while the horses munched their hay in well-earned holiday.

"That night, as we were all sitting around the lamp, father said: 'Well, Belle, I suppose we'll have to take these young ones down to town and fit 'em out for school.

"We hardly slept, so excited were we, and at breakfast next morning I could not eat. All talk concerned the wondrous expedition. Our only carriage at that time was the farm wagon, but it had two spring seats, one for father and mother and the baby, and one for Hester, Owen and myself, and as we neared the city, we had no sense of being poor, our feeling was merely one of awe.

"Osage was only a village of perhaps 1,200 inhabitants, but to me it was very imposing. Owen clung close to father as Hester did to mother. As we stumbled over nail kegs and whiffletrees our eyes devoured jars of candy and sought out red-top boots and buckskin mittens. When we spoke we whispered in awe, and we pointed out each shining wonder with cautious forefingers.

"EACH of us carried a candy marble in his cheek (as a chipmunk carries a nut) and we stood like hitching posts while the storekeeper with heavy hands placed caps on our heads. But the buying of boots was the crowning joy of the day—or would have been if father had not insisted on our taking those which were a size too large for us."

No one but a congressman wore shoes in those days. War fashions still dominated, and a sort of high-topped cavalry boot was all but universal, even for children. The ones I selected had red tops with a golden moon in the center, while Owen's taste ran to blue tops with a flag of gold. They all had a delicious, oily, *new* smell, and my heart glowed every time I looked at them. I was especially delighted to find that mine did not have copper toes. I considered copper toes fit only for babies like Owen. A youth who had plowed seventy acres of land couldn't reasonably be expected to wear children's boots!"

Getting pa to tell when he was a boy

Sketches from away back

Then there were books to be bought, a geography, a "Ray's Arithmetic" and a slate. "The books had a nice new smell also, and there was inexpressible charm in the smooth surface of the unmarked slates. I was eager to try my gayly decorated pencils upon them. At last with our new boots under the seat, where we could look at them or feel of them, with our slates and books clutched in our hands, we jolted home, dreaming of school and Thanksgiving.

"IT is strange, but I cannot recall how my mother looked at this time. Even my father's image is faint and vague—(I remember only his keen, terrifying eagle-gray eyes). But I can see every acre of our rented farm. I can tell exactly how our house looked. It was an unpainted cottage and stood bare on the plain beside a ravine. It had a lean-to kitchen and a sitting room, bedroom, and pantry below. As it grew too cold to use the summer kitchen we cooked, ate, and lived in the small room which occupied the entire front of the upright. It was, I suppose, sixteen feet square. Back of this was the pantry, a narrow closet, and a bedroom in which father, mother, and little Jennie slept. We older children nested in the unplastered attic which was warmed only by the stovepipe from the cookstove. Hence our toilets of a frosty morning were extremely simple. On very cold days we dressed on the way downstairs or beside the kitchen fire.

"OUR furniture was of the rudest sort and we had no pictures or portraits, only pictures from the newspapers to break the bare walls. However, this was the Middle Border, and nearly all our neighbors lived in the same fashion. Farms were new, houses were mere shanties, and money was scarce. 'War times' were only just fading away behind us. Our clothing was all cheap

Sincerity Clothes

The Label That *Insures.*

The *Sincerity* label in a garment is an assurance of the things you want and expect from a suit—expert designing, careful shrinking, expert hand labor in shape-building, and style security.

If you ask for **Sincerity Clothes** and insist upon seeing this label, you can do away with uncertainty and can know, in advance, that the suit will give you *clothes contentment.* It stands for good clothes insurance.

Almost every community has a *Sincerity* dealer. A post card to us brings his name and our booklet, "*Clothes Ideals.*"

Kuh, Nathan & Fischer Co.

Chicago

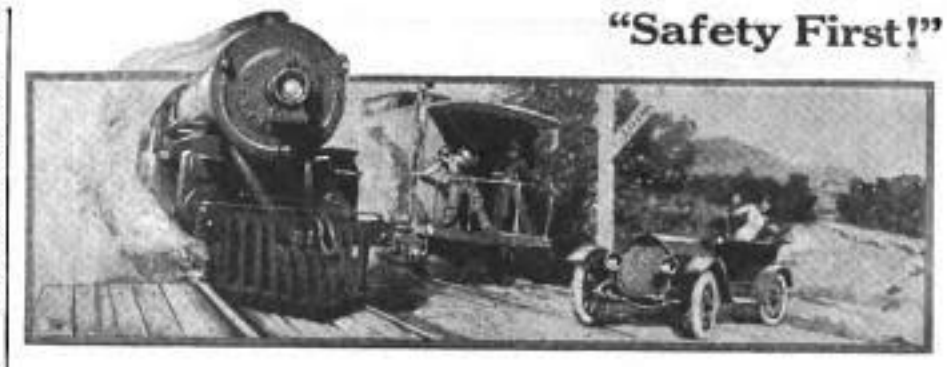
and handmade—mother-made. We boys wore 'cotton flannel' underclothing for the most part, and rough trousers over which we drew brown denim overalls in winter. Our coats were blouses of brown denim; we called them 'wamuses.' Father owned a buffalo overcoat (so much of the song's promise was redeemed) and we possessed two fine fur robes for use in the winter sleigh. But mother had only a cheap coat and shawl to keep her warm.

"NOT one of the boys of the prairie wore knickerbocker trousers. On the contrary, we all looked like miniature men with our long pantaloons, high-topped boots and suspenders. We all carried bandannas in our hip pockets like the hired man, and walked with stern and determined stride.

"My mother, like nearly all her brothers and sister, could play the violin—or fiddle, as we called it—and I have many dear remembrances of her playing 'Napoleon's March,' 'Money Musk,' 'The Devil's Dream,' and other simple tunes which made up her repertoire. It was very crude music, of course, but it added to the love and admiration in which we always held her. Once at a dance at neighbor Benson's house she accepted a violin with blushing embarrassed reluctance and was mightily cheered at the close of her performance. Afterward she and my father danced, which seemed a very wonderful performance to us, for to me they were 'old'—far past such frolicking, although father was but forty and mother thirty-one."

The schoolhouse which was the social center of Sun Prairie stood on the bare prairie about a mile to the southwest, and, like thousands of others in the West, at that time had not so much as a leaf to shade it in summer nor a branch to break the wind in winter. It was merely a square, boxlike structure, with three windows on each side and two doors in front. It was painted a glaring white on the outside and a drab within; at least, that was the original color, but the benches were greasy and hacked until all first intentions were obscured. A big box stove standing on long legs in a square yard of bricks, a wooden chair, and a rude table for the teacher completed the furniture.

The walls, where not converted into blackboards, were rough plastered, and the windows had no shades, and yet within it took place all the meetings, spelling schools, singing schools, and caucuses of the prairie.



"NOT one line of grace, not one touch of color softened its bare walls and harsh windows. Perhaps this very barrenness made the poetry of our school readers the more memorable—and threw over the face of Frances Beebe and Mary Abbie Gardner a lovelier halo." They were the "big girls"—seventeen or eighteen years old, the admiration and the terror of the teacher, a pale and studious young man."

With what fear, what excitement, Lincoln approached the door on that first day! All the scholars were strange to him, except John Gardner, Cyrus Benson, and Burton Beebe, and he was prepared for rough treatment. However, the experience was not so harsh as he had feared. True, Rangely Field threw him down and washed his face in snow, and Jack Short tripped him up once or twice, but he bore those indignities with such grace as he could command and soon made a place for himself among the boys. Of Burton, his seat mate, you will hear much throughout this chronicle.

"In spite of the intense cold we played open-air games all winter. 'Dog and deer,' 'dare goal,' and 'fox and geese" were our favorite diversions, and the wonder is that we did not all die of pneumonia, for we always came in at the end of recess wet with sweat and coughing so hard that study could not be resumed for several minutes.

"THERE was not much 'chivalry' in the school. On the contrary, it was dominated by two or three rough boys who took their tone from the hired men. To protect a woman, to sympathize with her, to shield her from indignity required a great deal of bravery, and few of us had this. Girls were for the most part set apart as a ridiculous, foolish tribe, to be preyed upon and abused. To shame them was a fine thing. How far I shared this ferocious attitude I can-

"Safety First!"

You flirt with disaster if you neglect brake lining. You *can* do without fancy "extras" on the car you drive—but for safety's sake you must have brake lining on which you can *depend.*

Brake lining must give uniform gripping power *clear through*—not merely on the outside. Then it remains reliable till worn paper-thin. Such is Thermoid.

Cut a strip of Thermoid open. Break open the ordinary. Compare their centers. You can *see* the difference in gripping power.

Hydraulic compression is the reason Thermoid has the most uniform gripping power. It explains why its density is fixed. Why it cannot be burned out—nor affected by oil, water, gasoline, dirt. Why it is used exclusively by so many makers of foremost cars, such as the Peerless, Lozier, White, American, Fiat, National, Marmon, etc.

Thermoid
HYDRAULIC COMPRESSED
Brake Lining - 100%

Thermoid represents 60% more labor and contains 50% more material, size for size, than the ordinary.

Our Guarantee: Thermoid will make good—*or we will.*

HAVOLINE OIL
"It Makes a Difference"

in Efficiency, Expense and Endurance *in your car* because:

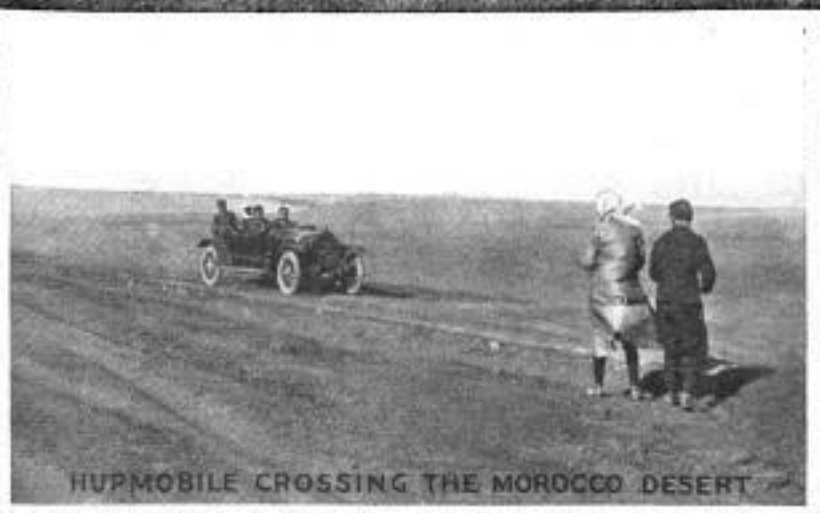
The Base—It is made only from one uniform base, crude oil of tested quality and sameness.

The Process—It is manufactured in a manner which leaves the *molecules of the oil entirely whole*, thereby preserving its life and increasing its lubricating value. It is entirely freed from floating carbon and impurities.

Result—A uniform oil, that forms an even lubricating "cushion" around the metal surfaces and prevents wear and tear upon them, retains its vitality yet is free from foreign substances. Leaves minimum carbon deposits. Reduces repair bills. Prolongs life of motor and increases its efficiency.

Buy the oil in the Blue Can. *2 Five Gal. Cans to the Case.*

Tell us your make and we'll tell you your grade.



If your dealer cannot supply you, get it from us direct.

Ask your garageman or write us direct for testimonials of Havoline users, owning your make of car.

Ysaye Picks This Violin

THE Gliers have been master violin makers since 1612. Pres. Thos. Jefferson, an ardent violin lover, gave Wilhelm August Glier an order to produce a fine violin for him. The superb spruce used in the Glier Violins comes from the beams and rafters of buildings 150 to 200 years old around the ancestral Glier home in Bohemia. Robert Glier uses a soft oil varnish from the same recipe used by the old masters, and extends the varnishing and drying-out process 3 to 5 years. Glier is without question the foremost living violin maker.

It's a Glier

No. 4568. A copy of a $10,000 Stradivarius of the golden period—true to the original in model, tone and appearance. The artistic Cremona varnish is soft and velvety in character, and of delicate reddish amber shade. Large, resonant tone, very flexible, rich and sonorous on G and D, clear and liquid on A and E. Perfectly even in all positions. Easy monthly payments; 6 days' free trial.

Order on approval from this advertisement. No risk. Money back instantly if not satisfied.

Price Only $100.00

But Ysaye Says:

"I admit I took the Glier Violin for a genuine old Lupot. Tell Mr. Robert Glier I will spread his fame in Europe as well as America."

not now say, but no doubt it affected me, for I had very little to do with my sister during school hours. She kept to her kind.

"Our school readers were almost the only counterchecks to our vulgarity, and I wish to acknowledge my deep obligation to Professor McGuffey, whoever he may have been, for in the pages of his readers I learned to know and to love the poems of Whittier, Bryant, Tennyson, Scott, Byron, and many another of the long line of noble English bards."

I WISH I could say that at this time Lincoln showed astonishing aptitude for literary composition, but I cannot. No, the most I can claim for him is that he loved to read—anything. He devoured stacks of the New York "Weekly" with its stories of noble life in England and hair-breadth escapes on the plains, a shrewd mixture, designed to meet the needs of the entire membership of a household. The joy he took in these tales is disgraceful. He began also to purchase and trade Boodle's Dime Novels, and boldly confesses that he also took an exquisite delight in Jack Harkaway. His tastes, as you see, ranged from Lady Gwendolen to Buckskin Bill.

"Through some agency now lost to me," he writes, "my father was brought to subscribe for 'The Hearth and Home,' or some such rural paper, and in this I read my first chronicle of everyday life. In the midst of my dreams of lords and ladies, queens and dukes, I found myself deeply concerned with backwoods farmers, spelling schools, protracted meetings and the like familiar homely things. This serial (which involved my sister and myself in many a spat as to who should read it first) was 'The Hoosier Schoolmaster,' by Edward Eggleston, and is one of the earliest successful attempts to put into fictional form the life of the Middle Border.

"To us Mandy and Bud Means, Ralph Hartsook, the teacher, Little Shocky, and sweet, patient Hannah were as real as Cyrus Benson and Daddy Fairburn. And yet they absorbed us! We could hardly wait for the next number of the paper, so concerned were we about Hannah and Ralph. We quoted old lady Means and we made bets on Bud in his fight with the villainous drover. I hardly knew where Indiana was in those days, but these people were near neighbors. The illustrations were dreadful, even in my eyes, but the artist *did* contrive to give a slight virginal charm to Hannah and a certain childish sweetness to Shocky, so I accepted the more than mortal ugliness of old man Means and his daughter Mirandy, who simpered over her book at us as she did at Ralph."

THIS book appears to have been a milestone in Lincoln's literary progress as it is in the development of distinctive Western fiction—and yet it did not displace his love for "Dick Derringer" and "The Mad, Mad Marriage."

"This winter was made memorable by a 'revival' which came some time after Christmas. It must have been late in the winter, for all dances and merry-making ended when it came. It silenced my mother's fiddle and subdued her glorious voice to a wail. A cloud of puritanical gloom shrouded every household, and youth and love became crimes. The preacher was one of the old-fashioned shouting, hysterical, ungrammatical, gasping sort, and in his exhortations lakes of burning brimstone and ages of endless torment abounded. Some of the figures of speech and violent gestures of the man linger in my mind, but I will not set them down on paper. They are too dreadful to perpetuate. One of these evangelists roared so that he could have been heard for half a mile.

"And yet we went—babes and all—and some of the roughest characters in the neighborhood became most repentant sinners—for a season. However, we all liked the singing, and joined most lustily in it. Even little Jennie learned to sing 'Heavenly Wings,' 'There is a Fountain Filled with Blood,' and 'Old Hundred.' As I look back at that crowded little schoolhouse, smothering hot and reeking with lamp smoke, the tragic intensity of the half-lit faces of the congregation, it seems like something visioned in another world. The preacher leaping, sweating, roaring till the windows rattled, the mothers with babes in their arms, the sweet faces of the girls, the immobile men, are merely figures in the phantasmagoria of disordered sleep.

"Spring came to us with wonderful beauty and significance after that long depressing winter, and when at the close of a warm day in late March we heard through the golden haze of sunset the mellow *boom, boom, boom!* of the prairie cock we thrilled with ecstasy of release, for this was the opening note of the springtime chorus. The kitchen door stood wide for the first time, and taking off our shoes we bounded and raced in a delirium of joy.

"Day by day the note of this herald of spring was taken up by other sentinels until at last the whole horizon was ringing with a morning symphony of rejoicing song. '*Boom, boom, boom!*' called the cocks, '*cutta, cutta, wah-ichoop—quaw, quaw!*' answered the hens as they fluttered and danced on the ridges. And mingled with their symphonic hymn ran the slender, sweet whistle of the brown little prairie lark!"

THE boys soon learned the habits of these "chickens" and studied them with deepest interest. They had regular "stamping grounds"—low hills beaten smooth by the pressure of their feet. Lincoln becomes quite lyrical at this point.

"As I close my eyes I can see them again," he writes, "leaping and strutting and fluttering. All the charm and mystery of seedtime comes back to me. I ache with the longing to recover it, to hold it, to preserve it imperishably in some form for my children. And yet it is probable that they are getting an equal joy, an equal exultation from the single lilac in our city backyard, or from a visit to 'the wooded island' in Jackson Park!"

The next installment, "The Passing of the Prairie," will appear in an early issue

NEW YORK U.S.A.

"Straight from the Shoulder"

(*Why Chalmers "Porosknit" Wins*)

Read this "straight from the shoulder" talk about underwear. Read why Chalmers "Porosknit" is so comfortable—so much for the money—why you should insist on the genuine.

Read of the IDEAL behind "Porosknit's" manufacture. Then judge if imitations will content you.

CHALMERS "Porosknit" has many imitations. But *who* can duplicate it? Who, indeed?

Who can duplicate "Porosknit" comfort, durability, quality of yarn, elasticity, lightness, *coolness!*

Underwear can be made to *look* something like Chalmers "Porosknit." That is, to hasty eyes—or careless.

But the "look" is all. None may match the genuine in the real features of "Porosknit" supremacy. None.

For this, there are basic, permanent reasons.

The Chalmers Ideal

The manufacture of "Porosknit" has become more than a mere business to its makers. It is a union of the Ideal and the Commercial.

We have been told that the yarn in "Porosknit" is *better* than it need be. Some say we are too "finicky." That we *could* use less costly combed yarn. That we could pocket thousands of extra dollars each year. That the yarn would still be good enough. That we *could* "get away with it."

True. We might. None might realize the difference but ourselves. *You* probably would see no change in Chalmers "Porosknit." Nor would dealers be likely to discover it.

The "Hidden" Quality

The same careful workmanship could be employed in finishing such less-good yarn—and "Porosknit" would still *look* about the same.

Yet—the durability—the *wear*—would suffer. Something would be lost in softness and elasticity.

So—we take no chances with durability—no risks with the established Chalmers "Porosknit" quality.

Such fine shades in superiority you cannot *see*. But they account for the inability to duplicate Chalmers "Porosknit." They explain the unfailing satisfaction. They mean unvarying comfort.

Such is the "hidden," *extra* quality in Chalmers "Porosknit," Guaranteed.

The yarn we use is the finest of long-fibre, combed.

Union Suit Comfort

Examine any genuine Chalmers "Porosknit" garment. Take a Union Suit, for instance. Turn it inside out. Notice how strongly all seams are reinforced—double-seamed throughout by cover seaming.

Note that there are no cumbersome flaps to gape open. Stretch the fabric. See the *extra* stitches surrounding each ventilating hole. These, with the lock-stitch, prevent unraveling.

The "stretch" in knit goods is entirely one way. But observe the triangular piece in the back of a Chalmers "Porosknit" Union Suit.

See how this piece of fabric is reversed. It runs opposite to the rest. This means full elasticity in the seat—up-and-down—as well as across. It *gives*—at every turn or bend, with no pull, no bulge, no draw.

There can be no "short-waisted" feeling—no "cutting in the crotch."

Chalmers "Porosknit" Union Suits *stay* buttoned while on. They do not gape between buttons.

Each has a comfortable Closed Crotch. It fits. It stays put.

Chalmers "Porosknit" is made in *all* styles—for man, for boy. Open in texture, and of absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air. Soft yarn eliminates irritation of the skin.

These features you can *see* and feel.

The extreme care in making, you cannot see—unless you come to Amsterdam. There, in a new mill, clean as a new pin, "Porosknit" is fashioned and sewn. The atmosphere is bright, clear, healthful. Hygiene at the maximum. Dirt at the minimum.

Countless patented machines knit the high-priced yarn into the celebrated fabric. Then each yard of fabric is aërated with hot, dry, pure air, for extra-cleanness' sake.

Other machines complete the finishing touches. Then, each garment is ironed individually before packing. See for yourself how pleasing the appearance in the box—at the dealer's.

Resinol Soap
protects the complexion

Do not imagine that Resinol Soap is only for sick skins. Effective as it is in the care of the many distressing conditions to which the complexion is subject, Resinol Soap is first of all a superbly pure toilet soap, with a rich cleansing lather that *protects* well skins from those very conditions. The Resinol balsams which it contains keep the skin soft, white and clear, the hair thick and lustrous, and the scalp free from dandruff.

The very rich pay as much as three dollars a cake for their toilet soap, but at twenty-five cents, Resinol Soap actually gives equal quality, plus antiseptic Resinol cleanliness. Sold by all druggists and dealers in toilet goods. For a guest-room size cake and miniature box of Resinol Ointment, write to Dept. 54-C, Resinol, Baltimore, Md.

For nineteen years, physicians have prescribed Resinol for the skin.

Resinol Shaving Stick also contains Resinol, making it most agreeable to men with tender faces. Trial on request.

The Tyranny of Beauty

(Continued from page 14)

was a different sort from the cut and run of business men who came there. I'd probably not have given him another thought if he'd not, to be specially agreeable I suppose, drawled out: "Your aunt tells me that—ah—you're the power behind the throne—the privy councillor—the high chancellor—the keeper of the State secrets and the seals."

"Your aunt!" So she'd already been telling him about me! What for, please goodness? She'd long since ceased mentioning our relationship to anybody in her set.

"No, I'm only the power behind the pink jar," I corrected.

"Ah! You must find it—so exciting."

"Wildly exciting—the most exciting life I know anything about." Which was very true.

"Really! And what do you do up there locked in with—the mysteries?" He washed me with a smile.

"I keep secrets."

THE smile stopped flowing. He wasn't quite sure whether I'd meant to snub him, or was timidly stating a fact; I suppose I didn't look much like a person who would dare snub anybody, let alone an Oscar Willing, so he turned on the smile again and gravely informed me: "That seems to disprove the old adage about a woman's not being able to keep a secret."

My aunt struck in: "We've disproved a whole lot of old adages in this establishment." and signaled me with her head and eyes to clear out before any more was said. But he laughed and kept on bantering me: "You've aroused my very worst suspicions! Some day I shall investigate your chamber of horrors. I shall knock at your door—"

"And knock in vain!"

"—and demand admittance—in the name of the law."

There was a mocking look in his face as he added those last words that set me thinking. My aunt told him she was ready for lunch, and without stopping to put on her veil, carried him off.

About the middle of the afternoon my aunt let herself in with her key. I was making a fifty-pound batch of cream.

"Making cream?" she remarked, looking into the can.

"Yes," said I shortly, asking myself why she appeared so hesitant, and if I'd take a scolding from her.

"That was Oscar Willing—a singer. He's studying here to go on the operatic stage. Society man in Duluth."

SHE paused, dipped the tip of a finger into the cream and rubbed it on the back of the other hand, and while engaged in this engrossing occupation brought out:

"Temme whatcha think of him."

I thought. "Good-looking young sissy," but didn't say so.

She gave me a sharp glance and went on examining the grease spot she was making on her hand while she said: "I hope he'll like you."

"It's nothing to me if he likes me or not," I flared.

"It is to me." She paused. "I'm going to marry him."

"Going — to — marry — him!" The dasher dropped out of my hands and I stopped creaming, letting the water drip in, regardless. "Why, he's years younger than you are, and—and—and—"

"You'll spoil that cream if you don't keep stirring."

Mechanically I went on, but stared at my aunt. This was a new aunt to me who stood there blushing and undecided what to say, openly courting my good opinion.

"He is younger—four years," she admitted reluctantly; and four years was all either of them ever did admit, though he was eight if a day. "And if he don't care, I don't see why I should raise objections."

"But a singer—and the business—"

"He'll have nothing to do with the business—set your mind at rest on that. I ain't marrying him to bring him here, and I'm glad you made him understand this room's closed to him—all foolishness for a man who knows nothing about business to be poking round in it—only makes trouble for everybody and does good to nobody, not even himself. He's a singer. If he fits himself for the stage properly, that ought to be enough. He'll have his hands full keeping up his end without trying to keep up mine."

"Then you're not going to retire?"

"Who, me? Who'd run the business?" She fairly snorted. "Retire when I'm dead. But I think it's time I married. All these women I go with have husbands — fam'ly connections — establishments—give receptions and dinners in their own homes—musicales—all that sort of thing. It counts in society. Fixed the way I am, I can't—can't entertain properly—you know what mamma is—can't bring anybody home except people like Beekman and little Cryder — see enough of them in business hours. I've come to the place where I gotta spread out more if I'm going to get on to where I want to get—gotta have more room—gotta have more privacy in the whole thing — exclusiveness. Exclusiveness counts — you don't get it at restaurants — anybody with the price in his pocket can sit at the next table with a demimondaine. You can't turn her out, long's she behaves herself. Winkie Wakefield spoke to me last night—after theatre supper at Mouquin's—second time she's done me that trick. Didja ever? I suppose she thinks because Beekman gives her a new face twice a week and moosoo a head of hair that don't belong to her by nature she knows the proprietor socially! Lucky it was only Oscar with me and he didn't know who she was."

The Prodigal's Return

"I wonder," said I, and stirred cream.

"Mrs. Breckenridge knew who she was the other time," continued madame without noticing my comment. "Asked why I had that kind coming to the parlors—it's why she takes her treatments at home. I can't help who comes—long's they're not diseased to show on the surface. No, I can't help who patronizes the parlors and thinks it gives her the right to claim acquaintance in public, but what can I do if I gotta entertain in public? Julia Cryder says it won't do—you can't be always entertaining society leaders simply by feeding them at hotels—they don't do it among themselves except for once in a while—and if you do, they soon begin to think you got no home to invite them to if you never show it."

She paused and flung at my silence: "You take it so queer—as if you never expected me to marry at all!"

"I never thought about it."

"Every woman needs something in her life. Of course there's gotta be changes, but I don't see but you'll be better off. You'll keep on living with mamma and looking after her the way you do now and I'll allow her a regular pay envelope, twenty a week, to run her flat with—that's a-plenty for her with her wants and tastes—if it ain't she can [illegible]

SOLD DIRECT TO USER

If the buyer of Loose Leaf Binders and Forms could have direct, expert service right in his own office, in analyzing his individual requirements, he could select from standard items, 90% of the things he needs.

BAKER-VAWTER

supplies this direct personal service

They have a representative in your locality. He will not only analyze your requirements so as to fit 90% of your needs with standard items, but will build the other 10% along standard lines. He will outline for your particular business, without charge, the very best of modern systems.

Ask to have a Baker-Vawter man call. Write us about your accounting problems—send samples of your forms, tell us quantity you buy—we will gladly help you.

Baker-Vawter systems are shipped direct from factory—not sold by stores.

It pays to investigate.

The snug "hug" of ideal heating

When neighbors drop in unexpectedly, or the dressmaker comes to demand a fitting, or when you yourself return from a long shopping trip, it is the one biggest feature of the home, immediately the threshold is crossed, to be instantly enveloped in the genial, cozy atmosphere of radiator heating. It has in it the snug hug of hospitality and home cheer—the heat which puts quick welcome into the home—the heat that wins such enthusiastic praises from everybody

AMERICAN & IDEAL RADIATORS BOILERS

Old-fashioned methods mean *heating by caprice*—hit or miss—you are at the mercy of winds which chill exposed rooms and also draw half the heat of the burning coal up the chimney. An IDEAL Boiler gives you *regulated* heating, whereby all but a small percentage of the heat made by the burning coal (needed to promote draft) is delivered to the rooms. Each receipted coal bill is evidence of satisfaction—a record of comfort and sane living.

AMERICAN Radiators are made in a multitude of sizes and forms—to go alongside open stairs; to fit into corners, curves and circles; between windows and under window seats; with brackets to hang upon the walls—off the floor; with special feet to prevent cutting carpet; with smoothest surface for decorating in any color or shade to match woodwork, wall coverings, furniture, etc.; thin radiators for narrow halls and bath rooms; with plate-warming ovens for dining-rooms; big radiators for storm vestibules; with high legs for cleaning thereunder; with ventilation bases so air of room may be changed 1 to 4 times per hour—and other splendid features which it would pay you big to know. Our book tells all about them (and all about IDEAL Boilers). You will need it to choose the models from. If you are suffering the cold ills and paying the big coal bills of faulty heating, write us—today's the best time—and enjoy for the rest of your days the snug, hugging hospitality of ideal warmth.

A No. 2-25-S IDEAL Boiler and 400 sq. ft. of 38 in. AMERICAN Radiators, costing owner $230 were used to heat this cottage. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which are extra, and vary according to climatic and other conditions.

my room—that ought to near pay the rent—furnished room on the corner. I shan't need the furniture—she and you can keep it—Oscar and I are going to live in a hotel and we'll have to furnish new. Going to get a regular interior decorator to do it throughout—only way to get the real thing, styles change so."

I stirred on without speaking and after a long pause in which she seemed to have forgotten me she added: "You might tell mamma—I likely shan't see her to-night—she'll be in bed when I get home."

MY aunt's marriage took place two years later, after a more protracted engagement than she'd evidently expected when she announced it. It turned out a poetic justice match—one of those balancings apportioned to the too successful. She was then thirty-seven—perhaps the youngest woman owner of a half-million-dollar business in New York. But this two years of waiting—which seemed to be due to the young man's dalliance with his art—stimulated rather than depressed her business activities. Instead of growing softer, she became harder. She bought up a thousand jars of Mme. Granville's cream—it was then making some headway in New York, though it was only a Hinterland preparation—a mixture of paraffin, beeswax, and mineral oil, as I think I've said—sold it at wholesale price and with each jar gave away one of Zulu and a card offering cash prizes of fifty and twenty-five dollars for the best reply in a hundred words telling why Zulu was better than Grecian Cream and practically drove Grecian off the New York market and back to the Hinterland where it belonged. When Mme. Granville threatened to bring suit for damages and slander and a few other things of this sort, Mme. Del Mar defied her. "Go ahead—it'll be the best advertisement you can give me. All I ask is the chance to expose you publicly—and I'll get it in court—prove that you don't sterilize and you're a malpractitioner in facial treatment. I got three cases of scalp itch contracted in your establishment and any number of skin removals that failed—they'll all witness for me, and then they'll bring damage suits for themselves. You take Grecian off the New York market—I won't have any pink-jar cream selling here." And Mme. Granville did it, and shortly after retired with her parlors to the wilds of Brooklyn.

THIS is but one illustration of half a dozen similar cases where she drove rivals out of the city. It was money—money—money—now, as it had never been before; she sucked it up insatiably, but still spent it like water, and her staff of demonstrators and the interior staff numbering sixty-five souls in dull seasons and eighty in time of rush, she drove relentlessly through their forewomen and managers with her everlasting war cry, "Get results."

"Miss Jones, the books show the manicure department has fallen twenty-seven in receipts since last quarter—nearly a dollar a day. You got more girls than you got work. Either build up the trade, or cut out a girl."

At the first rebuke, Miss Jones had called her girls together and put it to them; dull season; not their fault; but who should go? She suggested that none need go if they'd turn in their tips till the former level was reached; if not, draw lots and one loses her place. They decided to turn in tips the next quarter rather than lose so excellent a place.

"Miss Jackson, I see you added extra wages in the packing department—what's that for?"

"Why, madame, we were running so behind with the orders through the rush I had to take on extra help to get the goods out on time."

"Then why didn't you call on the girls you had for overtime? A girl that hasn't got my interests enough at heart to work an hour overtime on the rush, ain't worth her wages. Let her go and get somebody that knows which side her bread's buttered on."

"Miss Smith, the home-treatment department has fallen eighty-two dollars—what's the trouble?"

MISS SMITH explains that the women who take home treatments are mostly away for the summer; the slump can't be helped. If she dismisses any of her six specialists she may never get them again. It is a picked staff, hers—six women who can go night after night to a lady's home and be trusted not to notice half they see, flirt with the butler, or

"Well That's Fine!!"

THIS is an important factor with busy self-shavers, and many a missed car and lost train can be credited to a poor or indifferent Safety Razor. Facts upon Facts

furnish convincing evidence of METZ all 'round efficiency. U. S. Government engineers, employed at present on canal construction in eastern Washington, tested a number of makes to find the car that would travel the rough roads of that section; and they selected, and purchased, the METZ "22."

In the Australian "Reliability Trials," Sydney to Melbourne, a four days' contest, the METZ "22" made a perfect performance, scoring 600 points out of a possible 600. And here at home it won the Glidden Tour from Minneapolis to Glacier National Park, Mont., the three METZ cars being the ONLY cars that held *perfect scores* for the entire eight days of that contest.

The Gearless Car

COMPLETELY EQUIPPED
FULLY GUARANTEED

METZ "22"—$475

One of the big features of the METZ "22" is its gearless transmission. With no clutch to slip and no gears to strip, it does away entirely with gear trouble.

The METZ "22" is extremely economical in operation. It travels 28 to 32 miles on 1 gallon of gasoline, 100 miles on 1 pint of lubricating oil, and often does 10,000 miles on a single set of tires.

The METZ "22" climbs Prospect Hill, near Boston, *on the high speed*. This hill is nearly 1 mile long, with a grade of from 5 to 21 per cent.

The METZ "22" made a record non-stop run of 1,000 miles, Boston to Minneapolis, in 49h. 33m., without requiring a single adjustment to engine or any working part.

EQUIPMENT includes four-cylinder water-cooled motor, Bosch magneto, wind shield, top, 5 lamps, artillery wheels, best quality Goodrich clincher tires, horn, pump, tools, etc. Left-hand drive, center control, $475.00.

METZ "Speedster."—Wire wheels, individual seats, Prestolite tank, and other special features, $500.00.

New illustrated Catalog "C" now ready. We want a representative in every city and town; write for special terms.

An Independent Company with an independent selling policy

steal the spoons. No one knows better than madame their value to the business, or the loss in turning them off and getting—you don't know what. Three of them give treatments to popular actresses every night—rub them to sleep—and are often kept so late themselves they sleep on couches in the reception rooms and creep away in the morning before even the maids are down. This single treatment earned their day's wage; the three to five they'd given before it went into madame's pocket minus only the amount paid their forewoman who gave them their assignments to calls over the phone.

Madame twirled her rings and thought; then she directed: "Now you go to Miss Beekman and you and she work up some new line of home cures that should be given to some of those old women in addition to their facials. Tell her to talk with Miss Cryder and have her write it out, then get it printed—get it up like an extract from the paper—that style—sign a doctor's name to it. Make it tell how you can't expect to cure those dewlaps for them if they don't have the fat massaged off all over them at the same time—it's in their systems, that fat is—it creeps in from one place as fast as you take it off another. You gotta rid the system of it with medicated baths, vibratory treatment, and special prep'rations—gotta give them a special antiobesity treatment—tell her to call it that—if they got any hopes of getting it off their chins and their cheeks. That'll keep our girls busy through the dull season next time. It's a good idear for a booklet, too, now I think of it." And it was ere long a booklet.

Madame had discovered what few women do discover and the big business man always does—that it's easier to crack the whip than pull the load and much more filling to the pocket; and that the world is full of competent pullers only too thankful for the chance to pull so long as the whipster pays the wages and takes the risks of the business. And Mme. Del Mar, who thought no more now of taking a twenty thousand dollar risk than she thought of taking a cocktail at dinner, reaped her reward.

ONLY—the risks had all to be on future earnings?—never on present acquisitions; never on cash once in hand. That was her profound financial secret: keep what you've got and risk what you haven't! Barring her private office furnishings, our other fixtures bought on installments and the typewriters second hand, was worth possibly four thousand dollars; and our stock!—those ten thousand jars of Zulu Face Food banked in the show window under the sign, "Ten thousand dollars' worth of solid beauty" had in each one cent's worth of ingredients and—a secret.

The world is round, wise men declare,
And hung on nothing in the air.

I've often thought how that couplet from an old geography of my youth applied to our business at that time—a bubble, impressive, and glittering with gold, but "hung on nothing in the air." Such was the general situation when Oscar Willing came with his subtle, incalculable influence into our scheme of things;—a constitutional idler who couldn't earn an honest cent; a spender, a waster, a dreamer; harmless, to be sure, but with no more sense of money than a child—and proud of the fact, too.

(To be continued next week)

Mary Long-Ago

(Continued from page 15)

I began to cast about for other means of avoiding it. The pots and pans were on a little table by the sink, barely out of line from the other room, and, under cover of Jim's jokes and the laughter which followed them, I sneaked over and investigated them. But that was an economical age and they'd been well scraped. Then the pantry came within my range. The door was open just back of where I'd been sitting, and on one of the upper shelves was a row of pans. In front was a chair, which Mary had used to reach the milk for the supper table. It would be a light diet for a boy of my capacity, but it was better than starvation, so I stole across to reconnoiter. I didn't need the chair, but I was afraid to move it; so I knelt on it and reached over the back carefully and brought down one of the pans. As I expected, it was brimful of milk and thick cream, and I car-

Where Is the Pipe Smoker Who Won't Take a Chance?

Every man who smokes a pipe is forever engaged in a more or less happy quest for a better brand of smoking tobacco

That's one reason why there are so many different brands—so many different forms of "cut" and "slice" and "cube" and "twist" and "granulated" and "shredded" tobaccos—and most of these mixtures and blends are mighty good

You yourself probably think a lot of some fellow who smokes a brand that you can't learn to like at all, and he wonders why you buy the kind of tobacco that's in your coat pocket now.

We don't think for a minute, and never have thought, that Edgeworth Ready-Rubbed would please every pipe taste in the country, but the fact that of the many who try Edgeworth the majority cling to it makes us feel pretty good.

Edgeworth is Burley, the best Burley that is raised, and it comes in two forms—Sliced Plug, which is the original Edgeworth, and Ready-Rubbed, which means all ready to pack into your pipe.

Ready-Rubbed is so new that we are still introducing it—giving away decent-sized packages of it and inviting men to send for them.

It is gratifying to us to find that most pipe smokers are willing to give Edgeworth a chance—to try it out at our risk and judge it on its merits. And the number who decide that they want to keep on smoking Edgeworth is surprising until you have smoked a few pipefuls yourself and found out how satisfying it is.

Most any old smoker you know will tell you that Edgeworth is a very high-grade tobacco. Will you write us, give your address and your dealer's name and let us reciprocate by sending you a sample, free?

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin and $1.00 for humidor tin. Edgeworth Sliced Plug is 15c, 25c, 50c and $1.00. Sold practically everywhere, but mailed prepaid if your dealer cannot supply.

Write to Larus & Brother Co., 3 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

TO RETAIL TOBACCO MERCHANTS: If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen (10 cent size) carton by prepaid parcel post at same price you would pay jobber.

ONE KOH-I-NOOR PENCIL

easily outlasts six ordinary pencils and does far better work all the time. Buy them by the box! 17 Degrees.

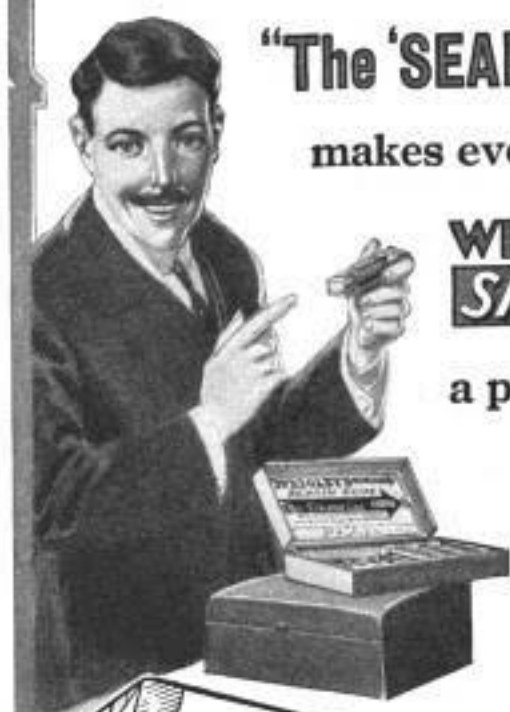
ried it on the shortest line from the shelf to my mouth and took the longest gulp that a single man probably ever compassed. It was next to sitting down before a barbecued steer to me, and even now I can feel that milk running down into my empty stomach. But the one swallow was all I got—inside. As I stopped for breath I heard something behind me and turned hastily, expecting to see Jim's grinning face at the door. It wasn't anything of the kind, but it made little difference—Jim and all the others were there within three seconds afterward. As a matter of fact, it was nothing but a big white tomcat that had been asleep on a chair in the corner; but when I turned, the pan slipped, and in attempting to steady it I caught it with my sore finger. It was like pressing an electric button to start a world's fair—so many things followed. The pan toppled over; its contents descended like a shower bath around me; the chair slipped out from under my knees, and the whole combination crashed to the floor, with the pan triumphantly bottom-up on my head. Under its dripping edge I saw the cat, with arched back, beginning to make wide circles of the kitchen. From the other room came the clamor of sudden silence, then ejaculations of dismay, and the rush of feet. I knocked the pan off my head, which rattled on the floor—the pan, I mean, though I think my head would have rattled just the same—and scrambled to my feet. The first thing that caught my eye was the gun barrel leaning against the wall, and I grabbed it as though about to repel a charge of Indians. Just then the cat passed me on its second lap, and, suddenly inspired, I followed it, brandishing the poker in one hand while wiping the milk from my face with the other. The handkerchief had fallen off, and the blood from my finger mingling with the milk must have given me a particularly agreeable appearance. Over in the corner the chair and the pan lay where they had fallen in a pool of milk, while the cat with every hair on end was winding dizzily around the room with me in mad and milky pursuit—this was the spectacle presented to the Elliots when they crowded through the doorway the composite picture of amazement and alarm. Their alarm endured but briefly, however. They must have thought me mad, but the scene was too much for them, and, again excepting Mary, they broke simultaneously into a storm of laughter. Jim's was a raging tornado. But Mary didn't laugh. Her look changed, but it changed to anger. It seemed that I had made an unfortunate selection in cats, I was chasing hers. She made a sudden dive in front of me, and as the feline came around again she caught it up in her arms and faced me defiantly.

"'Don't you dare strike my cat, John Weston,' she said—and I didn't. I came to a sudden stop and let the gun barrel slip to the floor.

"MRS. ELLIOT was the first to recover. She came toward me, her laughter changing to kindly seriousness. 'What in the world is the matter with you, John?' she asked.

"I had grown so earnest in the pursuit by this time that the question riled me. 'With me?' I said indignantly. 'There ain't anything the matter with me. It's that darned cat.'

"'Tom isn't a darned cat,' said Mary severely. 'He's just the nicest cat that ever lived. You ought to be ashamed of yourself.'



"'Hush, Mary,' said Mrs. Elliot. 'What did Tom do, John?'

"'Do?' I repeated. 'Why, he tried to jump on the pantry shelf after the milk—that's what he did; and when I tried to drive him away he tipped the pan over on me.'

"'Oh, I'm sorry,' said Mrs. Elliot; and she looked as though she believed me. She was a wonderful woman. Mary didn't. Mary looked scornful, and marched into the next room with the cat in her arms. I was so filled with righteous bitterness that I was glad to see them go. 'Tom never did anything of that kind before,' Mrs. Elliot went on; and then she caught sight of my finger. 'Mercy on us! Whatever's happened to your hand?'

"'Oh, it's nothing,' I said; 'the cat scratched it a little, that's all.'

"THAT was my supreme effort. I've never been able to surpass it. To have torn a finger the way mine was torn, that cat would have to have had turbine claws and had 'em all running at

FOR THE MAN WHO CARES

Prest-O-Lite
for Motorcycles

No Motorcycle is stronger than its weakest point

You wouldn't buy a machine whose engine would be useless the first time the motorcycle tipped over. At night, light is as important as power.

Any motorcycle lighting system depending upon a toy storage battery or delicate complicated apparatus may be destroyed by a knock or jolt which you wouldn't notice otherwise.

Prest-O-Lite is absolutely reliable

Safe, simple and sturdy, it has proved its worth in constant service for thousands of experienced riders.

The most convenient system, and the most economical. The operating expense is no greater than that of a carbide generator and only one-third to one-fifth that of electric light.

30-DAY FREE TRIAL You can prove all our claims for Prest-O-Lite by our 30-day trial plan. Before buying any other system, insist upon the same kind of a test.

Insist Upon It!

Any dealer who offers you a combination of equipment, including any other lighting system, will give you Prest-O-Lite instead, if you insist. And if you know the facts, you will insist. Tear off on the dotted line, write your name and address below and mail it for complete information about motorcycle lighting.

Prest-O-Lite is ideal for stereopticons

once. Even Mrs. Elliot looked surprised. 'How did Tom do that?' she asked.

"'When I tried to pull him off the shelf,' I explained, 'after he had spilled the milk. I suppose I frightened him,' I added magnanimously, as I heard Mary in the other room trying to soothe the beast; 'he wasn't to blame. But of course it made me mad, and I guess that's why I chased him.'

"'Let me see your hand,' she said; and I put it out reluctantly. 'My, that's awful! David, get the basin and a towel. Jim, stop your laughing and go upstairs and get the liniment and some clean rags out of my third bureau drawer. This must be attended to right away.'

"And then among them I was patched up and cleaned off and settled again in my chair. Mary came back, after secreting her pet somewhere out of reach of my wrath. She looked very dignified, and, for a time, took but a cool interest in my affairs. She got cloths and helped Jim clean up the floor. Then she picked up the gun barrel to restore it to its place. Something came off on her hand and she stopped to look. It was reddened with my finger's best blood. I saw her studying it before she got a cloth and wiped the barrel off carefully. Afterward she became suddenly interested in me and came and watched her mother bathing my finger in cold water. When she turned away, I saw her smile; and I knew that she had guessed everything and discovered what a liar I was. I thought, of course, she would tell the others, but she never did; and after a little she began to busy herself with the supper things, passing back and forth from the pantry to the dining room, and disappearing at once into some other part of the house. Later I learned what her travels meant.

"It was nine o'clock before the supper things were put away. Then, while the others sat down to talk, Mrs. Elliot heated flatirons and went off to iron the beds. 'I've left a big hot one in yours, John,' she said, when she came back. 'It's turning awful cold. I'm sorry, for one of your windows is broken. David has pasted it up with paper, but I am afraid you will feel it to-night. But there's plenty of bedclothes.'

"'It'll be good for the fever,' Jim suggested, with a wink.

"THEN Mrs. Elliot drove David and Jim off to bed. After they had gone she came over to say good night herself. She put her hand on my shoulder. 'Never mind, Jim,' she said; 'he's just a boy. When you get ready for bed, Mary will show you your room. Good night, John. You are growing to look very like your mother.' She bent over and kissed me then, and kissed Mary and smiled and went upstairs. She was one of God's best, young man. She made Jim Elliot Governor and almost made him President —and she was Mary's mother.

"And Mary and I sat there then by the fire, exactly as I had planned all afternoon that we should sit. But nothing else was as I had planned. I was sore and embarrassed and heartily ashamed of myself, and, more than that, I was hungry. I couldn't talk; and Mary realized it and couldn't, or wouldn't, talk much herself. I expected her to charge me with my crimes; she never even approached them. But plainly it was time to touch the subject that lay nearest my heart (if not my stomach), and I had sense enough to know it. So had Mary. It was she who suggested retiring.

"'You must be tired to-night,' she said, 'so I am going to send you to bed early.' She lighted a candle and led the way to a little room opening off the dining room and pushed the door open. The chill air came out with a rush.

"'I hope your hand will be better to-morrow,' she said, with a little smile that faded away into sweetness. 'I'm awfully sorry,' she added softly; 'it was all Jim's fault.' She nodded her head toward my room. 'You'll find something on your table, John; I hope you will like it.' And she said good night and left me.

"I went in and shut the door. The table by the bed was half covered with something under a napkin. I pulled the napkin off, and there, young man, was spread the biggest and finest supper that a hungry man ever looked upon. That was what Mary's travels had meant—and she had done it all for the meanest liar in Clarendon County.

"When I awoke, the first streaks of dawn were coming through the window. So was a forty-mile freezing wind. The paper pasted over the broken pane had blown partly off and was rattling noisily. I tried burying my head under the covers, but it was of no use, and finally I jumped out of bed, and, while my skin goose-fleshed and my teeth chattered, I tried to fasten the paper back in place. The only thing I accomplished was to pull it wholly off. I looked around for something to stuff in the hole, but the only thing I could find was my own trousers, and finally I pushed them into it until I succeeded in shutting the wind out. The hole was so big that it took the better part of the trousers to fill it, and I remember that about half of them, including the waistband and suspenders, bulged outside. The window was on the side of the house, however, and it didn't occur to me that they might be observed before it would be necessary to withdraw them for their regular function.

"I WENT back to sleep, but I don't think it was more than half an hour before I was awakened again. It was daylight, though there was no sun as yet. The wind was whirling through the window and my trousers were not in sight. I was so sleepy that for a moment the situation did not impress itself upon me. Then I sat up in bed wide-awake. My trousers were not on the floor under the window, nor were they anywhere in the room. Young man, did you ever have your only pair of trousers disappear?"

I never had.

"I hope you never will. It creates a situation full of unpleasant possibilities. It is utterly destructive of dignity. I defy any man to be dignified without his trousers. It is worse for a shy man. A shy man, more than any other, seems to need trousers. There's an awful lot of bashfulness in a shy man's legs. I think, if we could trace it back, we should find that a shy man invented trousers. So a shy man ought to be particularly careful in guarding them under all circumstances. He ought never to use them for utilitarian purposes like stuffing broken windows. That's my first 'Don't' now in my 'Rules for the Shy.'

"A high board fence extended to the barns and I vaulted this into the lot where the cow was breakfasting on my trousers"

The Orchid of Sweets

The rarity and costliness of orchids add to their fascination, but if they were as common as carnations their perfection of beauty would still make them the most prized of flowers.

Huyler's
Bonbons Chocolates

are the most prized of sweets, not because rarest, or costliest, but because of their perfection of flavor. If only a hundred boxes a day were made they would be priceless.

The luxury of Huyler's may be enjoyed no matter where you live, because Huyler's Bonbons and Chocolates and many other sweet things from Huyler's are sold by Huyler's sales agents (leading druggists everywhere) in the United States and Canada. If there should be no sales agent near you, write us.

Get this fact—the Speedaway Rowboat Motor that we are now offering at $50 is the same motor that has been selling at $70. It includes—

Built-in Reversible Magneto. Silent underwater exhaust. Self-locking tiller device. A real rudder. Disappearing crank handle. Water-cooled engine. The 2 cycle, 2 h. p. motor gives a speed of 8 to 10 miles per hour. The entire motor weighs only 50 lbs. and can be applied to any boat or canoe in a minute.

We have simply decided to sell this motor direct to you and give you the benefit of the $20 which has been going to the dealer.

Built-In Reversible Magneto

The price of the Speedaway with magneto built in is only $59—$9 over the price of the standard motor. This is an even more liberal offer than the standard motor at $50.

Don't buy on the strength of this advertisement, but send for our Engineering Specifications and investigate. You will find that the Speedaway is at least the equal of any motor in the market—and it sells at $20 less.

COLLIER'S
416 West Thirteenth Street, New York City

"I jumped out of bed and ran to the window. Then I breathed a sigh of relief. My trousers were lying on the ground only a few feet away. The situation was annoying, but did not appear serious. There was only one disquieting circumstance. One suspender was firmly entangled in the crooked left horn of an old red-and-white cow, which was nosing and chewing the garment in the apparent belief that it represented some new kind of fodder. But for a few minutes I had an unworthy suspicion that David Elliot never fed anything on his farm except when company was in the house.

"I DON'T know to this day whether my trousers fell out, or whether the cow, seeking protection from the cold under the lee of the house, accidentally or purposely caught her horn in the dangling suspenders, or whether there was something still more mysterious in the matter. I have a theory of my own, however. For fifty years I have been unable to convince myself that every living thing on David Elliot's farm, except his wife and daughter, had not conspired against my peace of mind on the occasion of that visit. I hold that that red-and-white cow was doing no more than fulfilling her assigned mission. Otherwise why should she have been out of her shed in the cold at that time of the morning? There was over an acre in that lot, yet there was no other living thing in it. The window was too high for her to have reached up deliberately and pulled my trousers out, but by standing on her hind legs she could have done it easily, and there is no doubt in my mind that this is what she did. Anyway, there were my best trousers, mussed, trampled on, and half chewed over, fulfilling no higher purpose than service as a cow's cud. It was humiliating.

"BUT there was only one thing to do. I dressed myself as far and as rapidly as possible. That is, I pulled on my socks and boots and put on my coat over my underclothes. My coat was blue and my drawers were red, and I must have looked like an intensified circus ringmaster. I tried to open the window then, intending to jump out, regain my trousers, and climb back before anyone was the wiser—but the window wouldn't budge. My mightiest efforts availed nothing. It must have been nailed from the outside; but whatever the cause it changed the situation seriously. It was after seven o'clock, and late, even for Sunday morning on the farm. The Elliots, if not already down, would soon be astir. I opened my door cautiously. There was nobody in sight, and I could hear no one moving above. Without waiting for anything further, I slipped through the kitchen, outdoors, and around the corner of the house. A high board fence extended from the other corner to the barns, and I vaulted this into the lot where the cow was breakfasting on my trousers. She saw me approaching and was disturbed. It may have been her conscience, or it may have been my red flannels, or it may have been that my trousers flapping about her face were beginning to annoy her. I think it was just a part of the general plan. Anyway, she began to move off, and the closer I got the faster she moved. When she came out from under the lee of the house, the wind caught the trousers and waved them over her head like loose canvas in a gale. That frightened her, and she broke into an ungainly trot and then into a still more ungainly gallop, and started around the acre lot with colors flying. It appeared my fate to pursue every domestic quadruped on David Elliot's farm before my visit ended; but for the time being there was nothing else to do but to fulfill my part, and I started after her. For the first two courses I gained materially. At the second turn she started, cowlike, for the corner, and I thought I had her. She doubled, and I doubled; then she doubled again, and I slipped on a clump of frozen grass and went down in a heap, while the cow, with a frightened bellow, dashed over me for the barn. I scrambled up and followed. The door of the cow shed was open and if she went in there my immediate troubles would be ended. That was her intention, I am satisfied, but as she reached the barn, the door opened suddenly and Jim Elliot came out. He had a milk pail in his hand and was no doubt looking for that particular cow. Perhaps it was a

Why you should be interested in Roofing

Wright Wire Company, Worcester, Mass. Buildings covered with Barrett Specification Roofs exclusively.

Barrett Specification Roofs

FREQUENTLY the building of a roof on a factory or warehouse, or any building, is regarded as merely incidental to the whole proposition.

Great care and thought is spent in deciding whether to use stone or concrete for the foundation. Even the choice of materials for the fence about the place gets its share of attention.

But with many owners of buildings the roof is only a roof and they take it as a matter of course that they must repair leaks every now and then.

Do you realize that this is the wrong viewpoint?

The roof is the most important part of the structure. If properly specified, you will be free from leaks and trouble and expense.

The Barrett Specification is the scientific standardization of an old established theory of roofing—one that has stood for years as the best in roofs—namely, a combination of coal tar pitch, tarred felt and gravel or slag.

If *you* want a really waterproof, fire-retardant roof covering that will last 20 years or more, be sure you get a Barrett Specification Roof.

Special Note

We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

The Turks Head Building Providence, R. I.
Architects, Howells & Stokes
Builders, Thompson-Starrett Co., New York.

Collier's Land and Sea Forces Ordered South

The threat of war created almost as much furor in magazine offices as it did at Washington. Two of the first four battleships to get under way carried Collier representatives; another representative, Jack London, hastened to join the troops in Texas, and two others joined the ships later. At the first intimation of trouble our own particular little land and sea forces were ordered south. Here are their names and their present locations:

Jack London is our war correspondent with Major General Wood and General Funston. His first article will appear in **next week's** issue.

Jimmy Hare, Collier's own war photographer, without whom there could not be a war, is with Rear Admiral Badger.

James B. Connolly, former sailor, famous war correspondent, writer of sea tales, is also with the fleet.

Arthur Ruhl, twice sent to Mexico by Collier's, authority on Central and South American problems, is at Vera Cruz.

Henry Reuterdahl, America's foremost naval artist, is aboard the battleship North Dakota.

Next Week—A New Baseball Story

War or no war, we begin a stirring baseball story called "The Double-Squeeze at Villa Borghese." It will be published in three parts. Henry Beach Needham, who wrote "The Jinx" and "Baseball and the Briton," is the author. We believe you will enjoy every line of "The Double-Squeeze at Villa Borghese": and it's only one of several features that make next week's issue big with interest.

Julian Street Bought This Lion

At least the Chicago reporters claim he did. They say that Street was a stranger in town, a long way from home, and so they sold him the lion in front of the Art Institute.

The two men to the left in the picture are Mr. Street and Mr. Morgan, the artist. They are having the time of their lives on this trip, "discovering the United States." Remember the first of their twelve articles, "Abroad at Home," starts May 23rd, only two weeks away.

Our Latest Book Triumph

We spoke two weeks ago about our books. One set of which we are particularly proud is the Lodge History of Nations, edited by Senator Henry Cabot Lodge. It is in twenty-five beautiful volumes; we have purchased the publication rights, and have issued it at a price that is astonishingly low.

As a matter of publicity we have printed a little booklet about the Lodge History. If you would like to know about an entirely new idea in history writing and reading, this booklet is well worth asking for. It's free—for you. No obligation, merely clip the coupon.

G. L. Patterson
General Manager

pet of his. Of course his appearance frightened her again, and she sheered off and started down the field. Jim looked the picture of amazement and immediately afterward the image of a raving maniac. I don't think I ever saw anyone laugh the way he laughed. My last view, until the next time around, showed him doubled up on the ground in the most remarkable convolutions. He must have recovered quickly, however, for his voice caught me. I think it was the only thing that could have caught me.

"'Go it, John!' he yelled. 'I bet on the cat last night, but I'll back you now against a cow.'

"I hadn't the breath for repartee at that range, with the wind against me; and I couldn't go back. On the next lap he was doubled up on the ground again, and I could have got him at a disadvantage, but I was too near the end of the race to quit. Halfway around again it ended in my favor. Old Red-and-White was growing tired; but she tried to double once more, and as she passed I grabbed one leg of the flying trousers and hung on until the suspenders broke and left the palm and the pants with me. And Jim cheered.

"JUST why I didn't stop and dress then no man will ever know. I suppose it was because of Jim. But instead, with my trousers firmly grasped under my arm I headed for the fence and without stopping to look vaulted it and continued toward the kitchen door. Then I came to a sudden halt. Midway between the house and the barn was Mary. I was too far from the fence to retreat, there was no place to hide, and I was too dumfounded to speak. Mary stopped too, probably for the same reasons, and she turned as red as I was—in the face. Then she glanced toward the house and barn in turn: but the barn, being nearest, won, and she picked up her skirts and cut for it. As soon as her back was turned I started for the house again. Just as I reached the steps David came out, and beyond him in the kitchen I could see Mrs. Elliot preparing breakfast. David stopped with a look of amazement which changed rapidly to amusement, and then, when he saw Mary disappearing in the barn, to something like anger. He was a large man, as I have said before. He looked larger than ever then. He started to speak, but I did not wait. My only thought was to get out of sight of everybody, to quit his detestable farm, and to go home. Clutching my trousers I turned once more and headed for the main highway. Over my shoulder I saw that David was following me. At any rate, I had succeeded at last in getting something to take the other end of the chase. My only route lay through the barnyard and outbuildings; but, supposing Mary safely under cover, I followed it without a qualm. Another board fence cut off the barnyard from the kitchen garden, and I reached and vaulted this before I paused again. Then I vaulted back. Mary had come out of the barn behind the fence and was on her way to the henhouses. David was approaching at a rapid walk. I looked at Mary beseechingly over the fence, expecting her to vanish into the barn again. Instead she came straight toward me and I got as close to the fence as possible. Failing trousers, even a board fence is not to be despised. Mary was red again. It may have been the prompting of modesty, the sting of the frosty air, or the strain of controlled laughter. I don't know, but I have always had a strong suspicion. But she was determined as well as flushed.

"'What is it, John?' she demanded. 'What is the matter with you?'

"Then I got mad. 'There ain't anything the matter with me,' I said. 'I'm just going home, that's all.'

"'Why?' she asked quickly.

"'I don't think your father wants me to stay,' I answered, measuring David's approach over my shoulder. 'But there's one thing I'm going to ask you before I go. I came here to ask it, and I'll be darned if I go away till I've done it. Everything I said last night, Mary, was a lie. I guess you know that, and I guess you know why. But what I want to know is—Will you marry me, Mary?'

"She turned white then"—the old man's voice softened wonderfully—"but she did not hesitate. Perhaps she was watching her father too. 'You great big bashful boy,' she said, 'of course I will.'

"And I didn't hesitate either. Before you could say 'Jack Robinson' twice, I had jumped over the fence, trousers and all, caught her in my arms and kissed her and was back on the other side. There are some things trousers can't control. 'Now you cut for the barn,' I directed, 'I've got something to say to your father.' And while she ran I turned to meet him.

"He came up, red in the face and angry. 'Now, look here, John Werdon,' he said, 'I want to know what all of this foolishness means?'

"I held up my hand to stop him. The gesture lost something of its dignity from the fact that I was still holding my trousers in that hand. 'It means just this, Mr. Elliot,' I said: 'I've just asked your daughter to marry me, and she's going to—that's what it means.'

"His mouth opened, and closed. Then he smiled. Then he laughed. 'All right, John,' he said finally; 'I guess Mary knows what she's about. But for heaven's sake, put on your pants—you'll catch your death of cold.'"

THE train slowed down for a station stop. My companion threw away his cigar, long forgotten, and stood up.

"I get off here," he said, shaking hands. "I've talked a good deal. You must forgive an old man."

I reassured him. But there was still one thing I wanted to know. "Of course," I began, "you married—"

"Mary?" he said very softly, when I paused. He shook his head. He waited before he spoke again. "She died just a year later—on the day we were to be married." He paused again, and when he spoke, his voice, quiet and gentle as always, still lacked, I thought, something of the tenderness which marked all his references to his boyhood's love. "I married later, of course. I have two fine boys. They're in the firm. We're making automobiles since people outgrew buggies. The boys made the change. Jim Elliot and I couldn't—we were too old. Jim retired last year. I'm stopping off here to spend Sunday with him."

Six Weeks to Build

It takes six weeks to build Reo the Fifth from the steel to the finished car. And it took 27 years to learn how.

The factory cost is one-fourth more than if built by some other standards. Yet the price this year is $1,175 equipped.

Note the result of this extra time, this extra care and cost. Go over the finished car. Then judge if you want your next car built like this.

For Experienced Motorists

Reo the Fifth is built for men who have learned their lessons about poorly-built cars. Men who have paid the extra upkeep, met the troubles and made the repairs.

It is for men who have seen cars grow noisy and old after a few months' use. Who have seen hidden flaws develop. Who have found some parts too weak for sudden shocks. And who know the annoyances due to makers' mistakes.

It is also for men who wish to escape those lessons. Men who want cars to stay new. Men who buy a car to keep, and want years of perfect service.

We who have built cars since the dawn of this industry, tell you that such cars must be built like this.

Reo Extremes

In Reo the Fifth, the chief materials are made to specifications based on 10,000-mile tests. All steel is made to formula, and each lot is analyzed twice.

In driving parts we ascertain the needed strength, then add 50 per cent as a margin of safety.

No chances are taken. One whole building in our factory group is devoted to tests and analyses.

We use in this car 15 roller bearings. We use 190 drop forgings to avoid risk of flaws.

We use a costly clutch so no clashing of gears will ever strain the transmission. All our gear-shifting is done with one small rod —by a three-inch movement of the hand.

Close-fitting parts are ground over and over—ground by special machines—to give utter exactness. Large tires are used to lessen cost of upkeep. Our electric starter is the best we know.

Radical Tests

Our gears are tested in a crushing machine for 75,000 pounds per tooth. Our springs are tested for 100,000 vibrations.

Each engine gets days of testing in unusual ways. Then each tested engine is taken apart and inspected.

In our slow process of building, countless tests and inspections are applied to every part of the car.

Then for years we have kept test cars on the road. We run them night and day at high speed on rough roads, to bring out any weakness. After 10,000 miles, these test cars are taken apart and inspected. And we require that vital parts, after all that rough service, shall show slight evidence of wear.

Each part in this car, each formula for material is based on those radical tests.

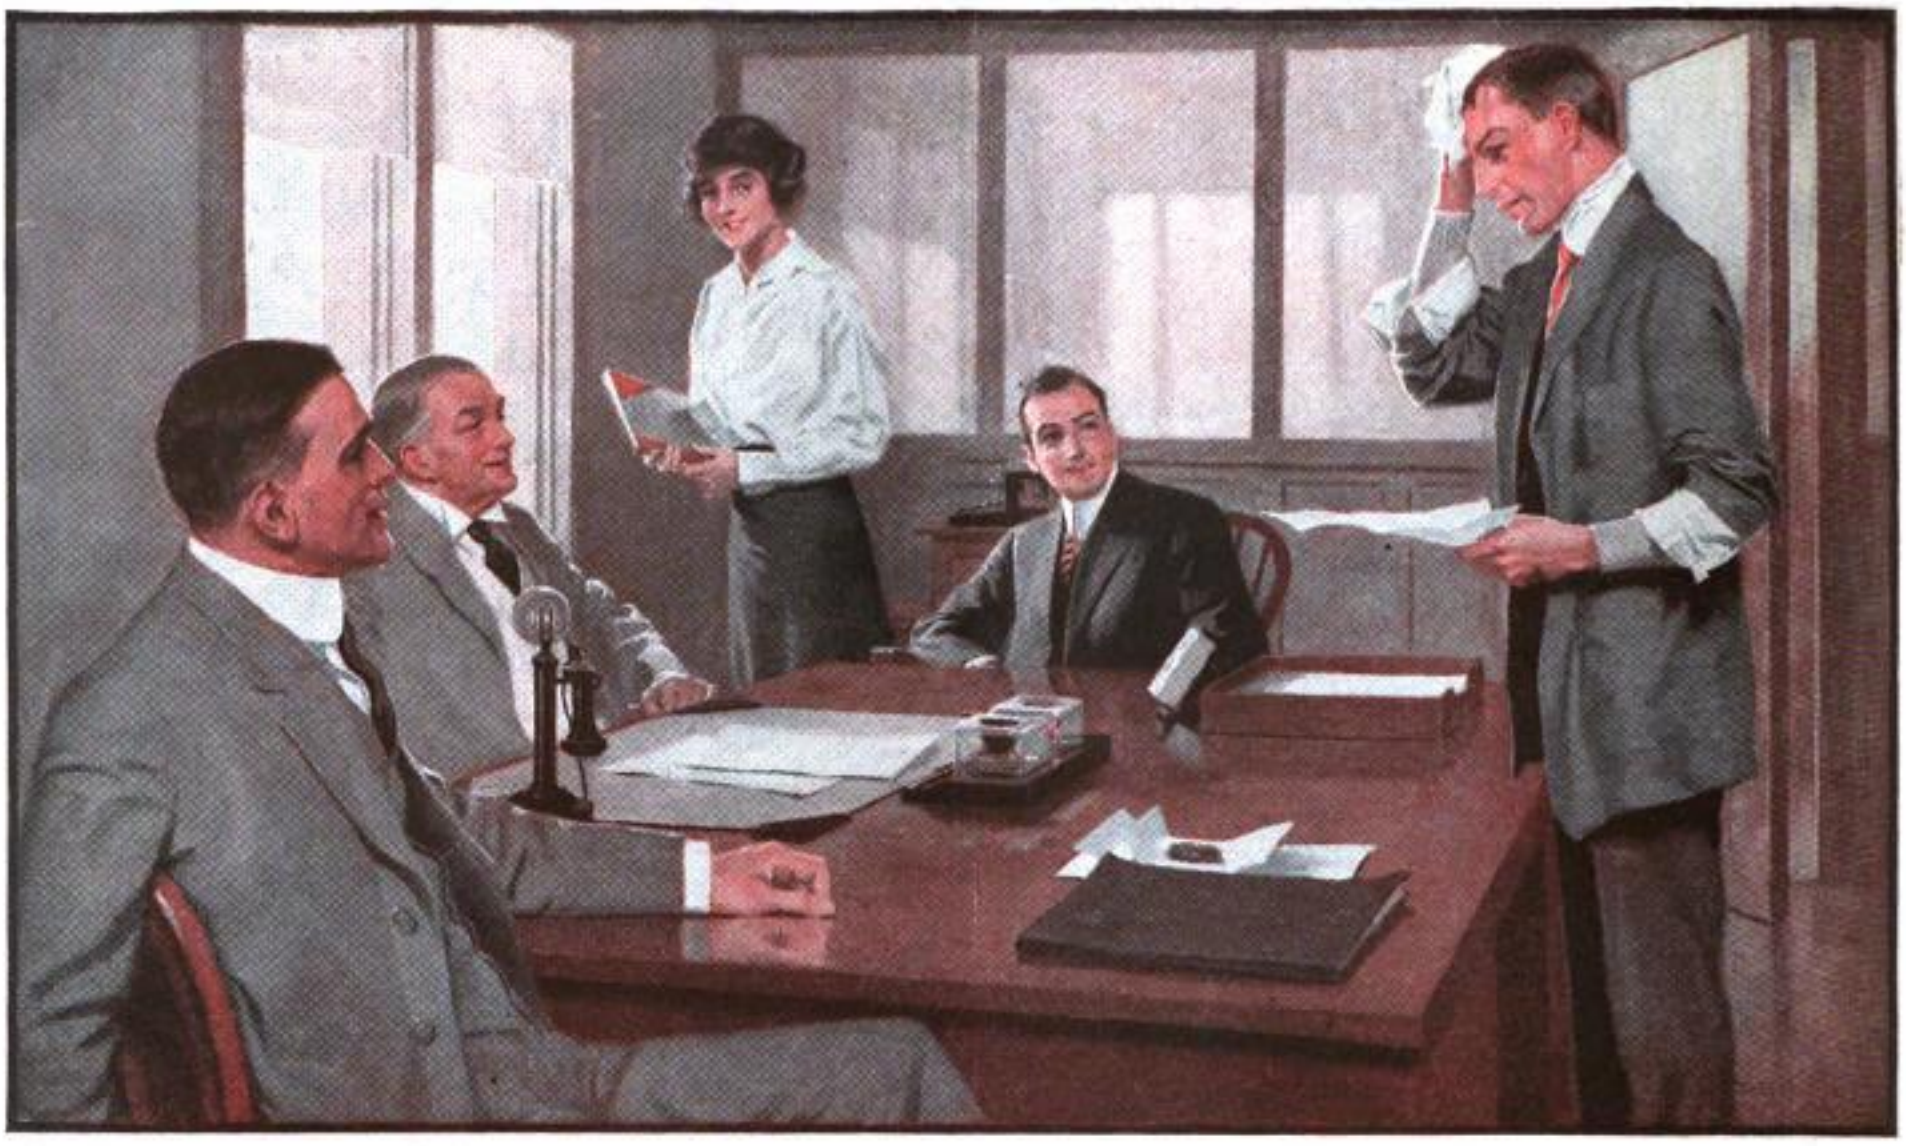
Lines and Finish

This year's model has the streamline body, the coming vogue. It has demountable rims, dimming searchlights, a new tire carrier, instruments set flush with the dash. The finish is perfect, the upholstery deep and covered with genuine leather. In beauty, comfort and perfect equipment it meets all the ideals of the time.

$220 Saved

Yet this year's model costs you $220 less than last year's model with electric equipment. The main reason is that all our special machinery has been charged against previous output. For years our whole output has been confined to this chassis, and the resulting saving is now taken from our price.

The demand for this car, at nearly all times, is far in excess of our output. At times it is five times our output. And that demand is growing all the time as men find this car out. This year's model has broken all of our sales records.



So you will be wise to make early decision if you want a car built like this.

Reo the Fifth is sold by a thousand dealers. Ask for our catalog and address of nearest showroom.

How Motor Cars Are Planned and Engineered

Designing and engineering a Timken-Detroit Axle into a particular motor car is a matter of many conferences of many men. Men who view the proposed car from widely different angles.

All have the *ideal* of the finished car and each contributes superior skill and experience on some particular part of the problem—a problem too big to be settled in one conference or by one mind.

All the diversity of highly specialized ability requisite to the designing and engineering of all the parts of a complete motor car has never yet been gathered in the organization of any one car-builder.

Every motor car builder—without a single exception—buys several of the fundamental component parts of his car from parts-making specialists.

Not one car-builder makes *all* the essential parts such as frame, wheels, springs, axles, bearings, radiator, motor, magneto, carburetor, starting and lighting system, steering gear, universal joints, transmission, body.

The Law of Limitations is the Cause

Human Limitations.—No one car-building organization has mastered all the intricacies of all the essential parts of the car. Every one of them relies upon the specialized knowledge, ability and experience of some parts-making organizations.

Capital Limitations.—If a single car-builder should attempt to design and manufacture every one of the component parts of the car by his own organization his investment in brains, buildings, land, machinery, tools, jigs, patterns, etc., would have to be so colossal as to be unwieldy and unprofitable.

Cost Limitations.—If it were granted that a single car-builder could get and retain the engineering skill needed to thoroughly cover each of the parts and could so divide his organization and concentrate the attention of individuals on the designing and manufacturing problems of each component part—the cost of that single car-builder's output of such parts as axles would, if those axles were as good as Timkens, be prohibitive.

Experience Limitations.—And there would still be lacking one of the greatest sources of progress toward the perfection of each part—broad, universal experience. For the part-specialist works in close relations with the builders of *several* cars, he constantly gains by *their* wide experience, *their* ideas and discoveries. Each, in his desire for the perfection of his car, helps in the perfection of every detail of the integral part.

Progressive car-builders realize that the designing of the complete unit car is work worthy of master engineering minds—a task severe enough even with the help of other minds that have specialized on unit parts and their interrelations with the other unit parts of the car.

Though car-builders vary in their decisions as to what parts they shall buy, yet all do buy several of the fundamental parts of their cars from component parts-makers. But not all avail themselves of that specialized engineering ability—nor are all parts-makers capable of giving it.

Some builders merely "shop" for parts, buying wherever they can buy cheapest. A few builders specify every detail of the parts they buy. Thus, while utilizing the physical investment and manufacturing ability of the parts-maker, they utterly ignore his broad experience which would help them co-ordinate that part with the rest of the car.

Engineering the Part Into the Car

The great majority of car-designers concede that the car's foundations—axles and bearings—can best be interdesigned with the car and manufactured by organizations that devote all their brains, energy, experience and capital to the production of axles and of bearings only.

And most of those designers whose aim is to produce cars that will give the greatest amount of satisfactory use-service depend on the makers of Timken-Detroit Axles and Timken Tapered Roller Bearings for co-operation in designing and making the right axles and bearings for their particular cars.

The names of those cars are printed in a booklet, "The Companies Timken Keeps," which states specifically where, in each model, the Timken Bearings and Axles are used.

This booklet and the two Timken Primers "On Axles" and "On Bearings" will be mailed free, postpaid on request to Department B-9, either Timken Company.

The Red Game of War

By Jack London

ILLUSTRATED BY ARTHUR E. BECHER

WAR and rumors of war. That, and naught else, was what was to be heard flying across the country from west to east along its southern border. Conductors, brakemen, porters, and the desert-dusty cattlemen who boarded the train at the last stop seemed unaware of anything else under the dome of heaven but war. And none so humble that he did not know how to conduct that war impending to the south: and none so reticent but that, on the slightest provocation, he would proceed to exposit just how that war should be conducted.

Of course, the passengers, having nothing to do, talked war all the time. It was difficult, speeding through the peaceful country, to realize that these well-tailored, well-mannered, courteous men—some of them even with spectacles—could be so easily divorced from their spectacles and clothes and become raw savages, as ferocious as their talk.

Up-to-Date Destruction

THE cool way in which they discussed battleships, submarines, aerial bombs, torpedoes, and all the rest of the wonderful up-to-date machine contrivances and devices for the abrupt and violent introduction of foreign substances into the bodies of their fellow mortals would have been peculiarly edifying to the contemplative mind of a philosopher. For, come to think of it, that is just what war is—the introduction of foreign substances into men's bodies with violent and disruptive intent.

The hunting animal so introduces claws and fangs. The savage so introduces arrowheads and spear points. We, in the clear white light of the full dawn of the twentieth century, so introduce pieces of iron which we propel enormous distances by virtue of our laboratory method of chemically mixing gunpowder. Also, we introduce pellets of lead, at high velocity, said pellets being cunningly jacketed with steel so that, while being still disruptive, they will not spread and be too disruptive.

So a concession must be made, after all, to the refining influence of civilization. Basically, the game is the same old red game of introducing the foreign substance. But to-day we at least introduce it according to certain set rules, agreements, and conventions. The intent, as of old, is to destroy the fellow creature who blocks our way of life or desire, but we do it with more technique and consideration.

Hearts in the Game

THE foregoing is not urged in the slightest spirit of sarcasm. What is, is beyond all peradventure. And the genus Homo is just precisely what he is—a highly intelligent animal with an amazing spiritual endowment that, on occasion, individually and collectively, functions in violent and destructive ways. War must be dreadfully human, else why did all those well-cultured, ethically trained men in the smoking room and observation car talk the way they did?

Far in the sands of western Texas our soldiers, who have been policing the border for the past two years, rode in to meet the train at every desert station in order to buy and eagerly read the newspapers for the latest war quotations. Where the heart is there the treasure is, and, to judge by the delight shown in their faces as they scanned the bull market in war stock, these soldier boys of ours certainly had their hearts in the game for which they were drilled and uniformed.

Yes, and it is a safe wager that in the heart of the last one of them, weary from long waiting, was the query "How long, O Lord, how long ere things break loose and we are started on our way?"

War and the rumors of war—there was no escaping: one breathed it, read it, heard it, dreamed it—yes, and ate it. For did not the primitive humor of the negro waiter in the dining car achieve the following sally: "Good morning, sah. Two nice scrambled Mexicans this morning, sah?"

We Are Still Warriors

SAID the Pullman conductor to me: "Lucky you're getting off at Houston. Big celebration to-day. Twelve thousand of our regulars are going to parade. San Jacinto Day, you know."

Verily it is so. We set aside holidays for the celebration of old wars and ancient battles. And we thrill, and get tickly sensations along the spine and moisten our eyes as we remember those old days and the deeds of our fathers. Not until we have evolved sufficiently to set aside days in honor of the inventions of industry and the discoveries of science will we cease going to war. In the meantime we are what we are, and it is most evident that we are still warriors.

But Houston was disappointed. The feet of war—or rather, the feet of twelve thousand of our young men—did not tramp along Houston's streets on San Jacinto Day. The feet of the young men were even then speeding south. The night before, Houston had seen them to bed in their wide-pitched camp. In the morning they were gone. Houston rubbed its eyes and stared at the great martial vacancy left on its landscape.

No finer meed of praise can be given to the evacuation of Houston, when the word came over the wire from Washington, than to state that it was equal to the celerity and dispatch of our American circuses in their palmiest days.

For Girls Will Weep

FROM Houston to Galveston, flying fast as electricity could drive, across the green flat land one caught the first far glimpse of long lines of moving, canvas-topped commissary wagons and marching columns.

In the electric car were three girls who looked as if they had been weeping. For ever girls will love a soldier and ever girls will weep when the war medicine is made and the young men go forth.

While many of the men marched, those of the Fifth Brigade, having been selected to lead the way to Mexico, were hurried to Galveston by train. One such train, a long one, we overtook and slowly passed. The windows were crowded with the bright, expectant faces. Just boys they were—a long, moving picture of live, laughing faces. Young fellows, that was all, just young fellows—all trim, fine-bodied huskies, smooth-shaven, boyish, bold, eager-eyed, efficient-looking, capable, adventurous, serving out their wanderlust of youth, as youth will do: for youth will be served, whether at Tampico or Vera Cruz, and youth is prone to like its service to be in foreign parts and oversea.

They were distinctively American faces, the great majority that laughed to us

Our soldiers, who have been policing the border for the past two years, rode in to meet the train at every desert station in order to read the newspapers for the latest war quotations

Digitized by Google

from the troop train. The percentage of blonds was high, and numbers of them were astonishingly blond. The brunets sparkled amid the blond types—ranged all the way from fairest yellow hair and palest blue eyes down through the richer tones to dark gray eyes and deep brown hair.

And as we passed that line of bright faces, first one girl, and then another, and, finally, the third, recognized her lover and was recognized. Greetings and love calls flew back and forth, until we drew ahead, whereupon the three girls dissolved in fresh tears. But I'll wager, just the same, no lucky young dog in that lucky Fifth Brigade, vanguard of the advance across the Gulf of Mexico, could have been persuaded by all the lovelorn lassies in the United States to stay behind, even though staying behind could be accomplished with honor. How was it that Laurence Hope voiced the plaint of the woman against the soldier lover? ". . . Desiring in my very arms the fiercer rapture of the fight."

And war rolled south on revolving wheels while the feet of the young men dangled and rested. Yes, and the iron-shod feet of War rested likewise, for car after car was loaded with army wagons and army mules.

Galveston was buzzing. Boys were crying extras, and fresher extras. The Hotel Galvez buzzed. Spurred officers came and went.

"Plenty of war talk in the village, eh?" queried the elevator boy.

Said the barber with impressive solemnity to the bootblack: "They's goin' to be somethin' doin' inside twenty-four hours—you listen to me."

Every porch in the city was a-clatter. Youth everywhere strained at home ties and duty in its desire to stampede to the nearest recruiting office. Old mothers who had lost sons and husbands in the Civil War days wept reminiscently in their rocking-chairs. And while the youngsters were eager to volunteer, the oldsters were sitting back, saying:

"Let the youngsters go. When the pinch comes'll be time enough for us. Hell, ain't it, how a fellow gets patriotic when any other country gets guy with ourn?"

One soldier: "Well, what are they waitin' for? We're ready, ain't we?"

Other soldier: "Been ready two years an' over."

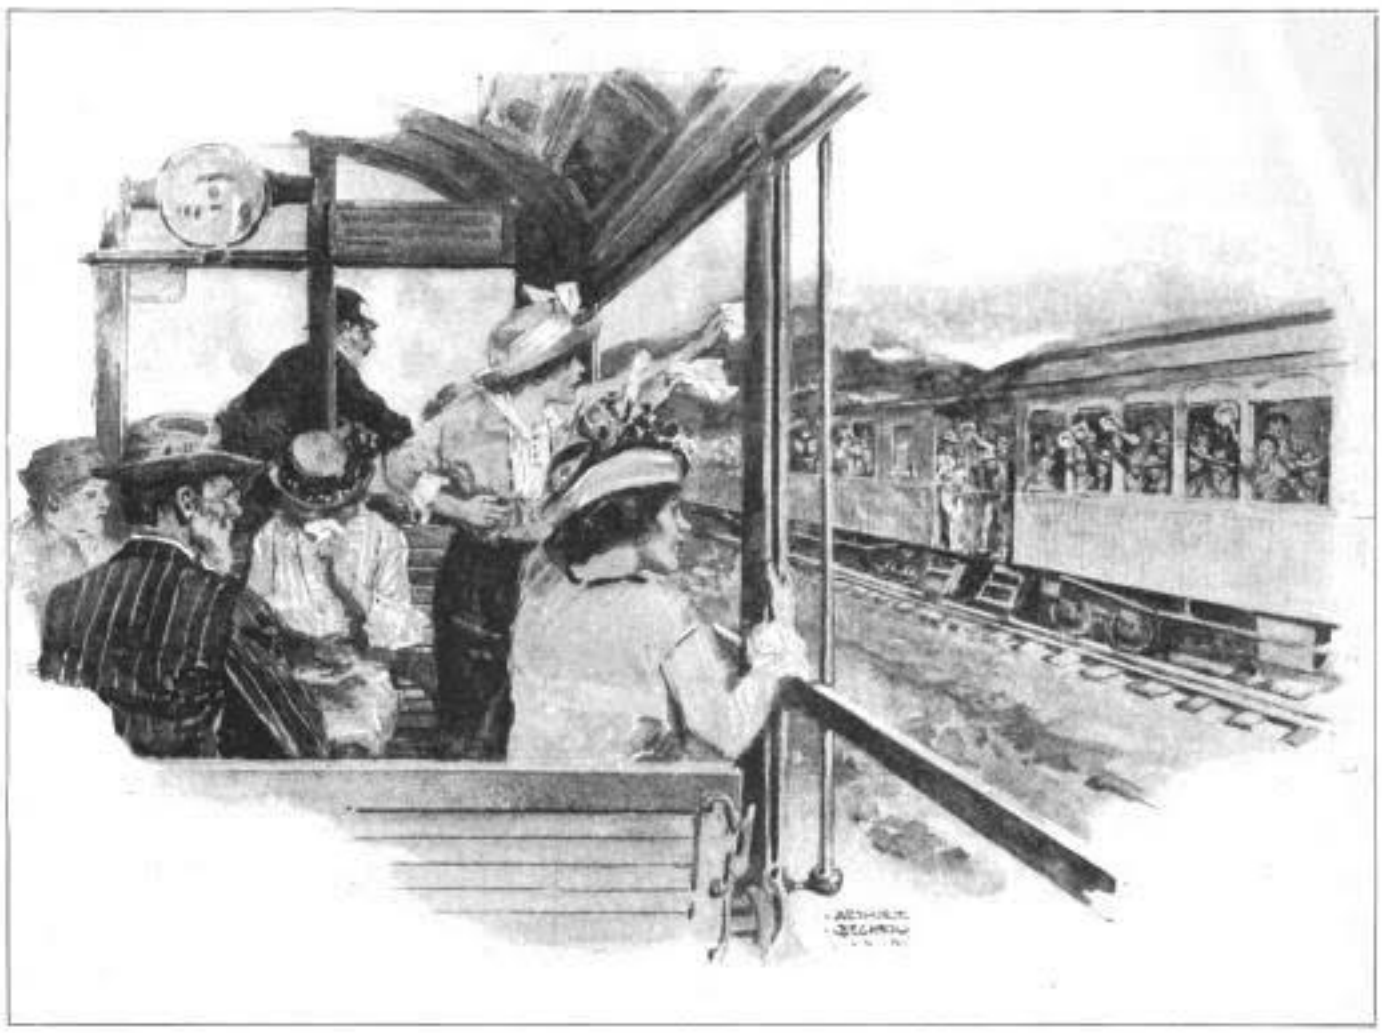
Not Holy War, but Adventure

AND both gaze yearningly out across the blue waters of the quiet Gulf and already see themselves upon it and steaming south for Tampico and Vera Cruz, or any other place so long as it is not this piping place of peace.

I remember the young men of Japan when they went out to war. Never did any generation of young men desire more madly to go out upon the red way. But they went almost hollily to encounter the White Giant of the North, and they little expected and less desired to return.

Now our young men taking the sea path south are going out differently. Primarily, it is adventure. As a matter of course they are patriotic, but they have no sense of any seriousness before them. They feel they face no giant enemy in the south. They tell over again the tale of the Alamo, and recite with glee how Sam Houston lambasted Santa Anna at San Jacinto. Why, what they won't do to the Mexicans is . . . and they discover that speech is a most frail and inadequate means of expression of young blood and rollicking spirit.

What Is Youth Without Danger?



OF COURSE, if one were to pin them down to it—these bright-blooded boys of ours whose feet itch to tread wider spaces and far places—they would admit that a few, a very few, are going to get hurt. But their next thought, which is scarce a thought but rather a blood count of emotion, would be: Aw, what's the use of youth and where's its wages if risks are not to be run in the high tide and heyday of life?

What Texas Could Do

A SORT of picnic, that's what, a sort of picnic . . . somewhat different, of course, from a Sunday-school picnic, and on a colossal scale, but still a picnic.

"A short campaign at the outside," say the youngsters.

But the oldsters shake their heads: "Look at the Civil War—called for three-months' volunteers. You know how long that fracas lasted. You never can tell

As we passed that line of bright faces, first one girl, and then another, recognized her lover and was recognized. Greetings and love calls flew back and forth

what you're goin' to do once you take holt. You can't leave go in a hurry."

A youngster: "Why, we could promenade through Mexico from end to end with twenty thousand men."

An oldster: "Yep, and take five hundred thousand men to police Mexico behind you while you promenaded on your way."

A young Texan of the Seventh Infantry: "Huh! Not if they was Texans. Why, I want to tell you we've threw the fear of—well, of Texas—into them so they ain't never forgot us. Say, d'ye know, I've heard more than one Mexican swear they could lick the whole United States if Texas was cut out of the scrap, an' d'ye know, I guess that's just about right."

"You mean . . . ?" I dared to query.

His words still ringing in his ears, he saw the trap his quick speech had led him into, and he laughed, disclaimed, and said: "I guess what I mean was cut out the whole United States and Texas could lick Mexico."

"Sure thing!" applauded the group; and the youngsters had the decision.

The Looming Figure of Huerta

A MINUTE later they were agreeing with the oldsters in one detail of managing the war, namely, that simultaneously with the movement on Tampico and Vera Cruz, the National Guards and Rangers should cross over and take possession of every Mexican border town and water hole clear to the Pacific.

"The first line of defense is the enemy's territory," was the unanimous judgment.

Little they reck, these younglings of our nation, of what is before them. Their feet are a-tingle to be out on the old red way of man. Colts and calves play in the pastures. Our young men must also play, must romp, must be doing something, either sowing their wildness of youth at home, or, preferably, fighting abroad, vindicating themselves, and the fighting machine of an army which they compose—and, deeper, unreasoned, and unguessed, vindicating the institutions which have molded them and which are woven into the fibers of them.

But always, over it all, back of this glorious dance of youth, one visions the group of the old ones at Washington, the wise ones, the graybeards.

And, over it all and back of it all, most significant and sinister of all, looms the tragic figure of the man known among men as Huerta. And a well-known man is he. This day they are chattering his name from London clubs and the war offices of world powers to the bazaars of India and the deep-matted, twilight rooms of the temples and tea houses of Nippon.

The current theory of Huerta's conduct in embroiling Mexico with the United States gives one pause to contemplate as amazing a situation as is conceivable in a particular man's affairs. Huerta, according to the classic Mexican custom established of very old, old time, has securely salted down in Europe 10,000,000 of pesos as a nest egg—or so runs the rumor on which is builded the theory. Huerta, it is said, was born a peon without a penny or a hope for two pennies all at one time to his heritage. Huerta, in the course of his dictatorship, by the devious ways long established of Mexican rulers, has accumulated and cached in Europe 10,000,000 of pesos extracted from the toil of his brother peons.

Madero saved Villa's life when Huerta desired to execute Villa. Huerta, by custom established of old time, contrived to have Madero shot to death without witnesses, while Madero was in the act of attempting to escape in the darkness of night from a guard of Huerta's soldiers. This, by the way—this attempting to escape on foot by prisoners—is also a custom of old time invariably never practiced by Mexican captives of Mexicans. Yet statistics would tend to show conclusively that it is quite generally practiced. Only—well, sometimes statistics just must be doubted.

Could the Dictator Escape?

VILLA, still the theory runs, remembering the murder of his benefactor, red of beak and claw from many victories, is advancing south upon the failing Huerta with the sworn intent of avenging Madero's death. This means taking the life of Huerta. Perhaps not exactly that. There is the possibility that Villa will merely take Huerta prisoner and that Huerta, some dark night, in an automobile, without witnesses, may inadvertently emulate Madero's feat with the same unfortunate and unforeseen end that Madero met. The how of Huerta's passing, if he falls into Villa's hands, is immaterial. The fact that he will pass is ordained.

So grows the picture and the theory of the tragedy of Huerta. Huerta, sometime peon, rules in Mexico. His ten millions reside in Europe. Death, in the form and visage of Villa, draws closer to him day by day from the north. Problem: how then may Huerta escape Villa and win to his treasure oversea? It is an interesting problem. To Huerta it is mighty interesting.

Might he not, the objection is sure to be raised, have escaped to the coast and away to Europe before ever the American flag was affronted at Tampico? Certainly not. Before he could have covered the distance between the palace and the railroad station he would have had a mob at his heels. The likelihood of getting away alive from the station would have been remote; and, even if successful in riding out his train from his capital a living man, the likelihood of his reaching Vera Cruz still alive, much less of embarking alive from Vera Cruz, would have been too remote for consideration.

At Dice With Fate

SO HUERTA remained in Mexico City with his problem. And, granting the theory, we get the picture of that desperate man in his high capital: ten millions of treasure awaiting him across the salt sea, ruler and prisoner in his great palace, playing the big game of life with death in the toss, Villa, who will kill him,

Digitized by Google

sure as fate, drawing nearer day by day from the north.

And Huerta plays the game. The gringo is civilized and a humanitarian within limits of technique. There is only one way for Huerta to escape. The gringo must come and get him. The gringo would never turn him over to the tender mercies of Villa. The gringo would see him safe out of the country and turn him loose to connect with his ten millions.

Very well. Isn't the gringo doing it? Hasn't the gringo already started to come and get him? Huerta was no idiot over the technique of formal saluting of a flag.

It is a pretty situation. Primitive, 'tis true, but splendid pictorially and dramatically.

Incidentally, it will be rather an expensive rescue of one man on the part of the United States. The price will run to hundreds of millions of money, while no one dare forecast how many of the lives of our young men will be paid—all for the saving of the miserable life of a man who is himself already really responsible for so many miserable deaths of other men.

But, correct or not, theory or fact, that mixed-blooded man is playing a big game of some sort there in his palace on the site of the ancient Aztec palace where Cortez long ago so magnificently played a freebooting game. Strange, also, is it to contemplate that in the veins of this mixed-blooded man run the strains of the blended races of Cortez and Montezuma.

Oh, well, not so long ago, and certainly a considerable time after Cortez and his captains were dead and dust, we, too, went a-freebooting, pilfered the owners of most of a continent of their land, and enunciated the working axiom that the only good Indian was a dead Indian. Yet there is a difference. We are reformed, and have developed quite a different and indisputably a better technique.

The Order Comes

THE last days at Galveston saw war glower red and redder. Extras appeared with increasing rapidity on the streets; and street boys, made giddy by such sudden wealth, took advantage of the excitement to sell any old paper as the very latest extra. The buzzards—for so are war correspondents named—began to gather. It is interesting to note that, within ten hours previous to the receipt from Washington of the order for the Fifth Brigade to embark, correspondents who had been on the way from New York and Chicago descended upon Galveston in a flock.

Scarcely had they arrived when the order came. The whisper invaded the dining room of the Hotel Galvez, but the news was received without excitement. Here and there an officer rose from the table and went out quietly to begin a night of unsleeping activity. That was about all.

In the ballroom the Fourth Infantry band continued to play and those officers danced who were not lucky enough to belong to the Fifth Brigade. Also, in the writing room every desk was occupied for a few minutes by young lieutenants getting off letters to the girls who just couldn't help loving a soldier at a distance.

In the misty gray of early morning the columns of marching soldiers in their dull olive drab had the seeming of long, lean torpedo-boat destroyers. They were not individuals to the eye, but war projectiles. Upon coming closer they showed a goodly, sturdy lot of trim, well-set fellows, clean and fit, marching as veterans march.

Off for Vera Cruz

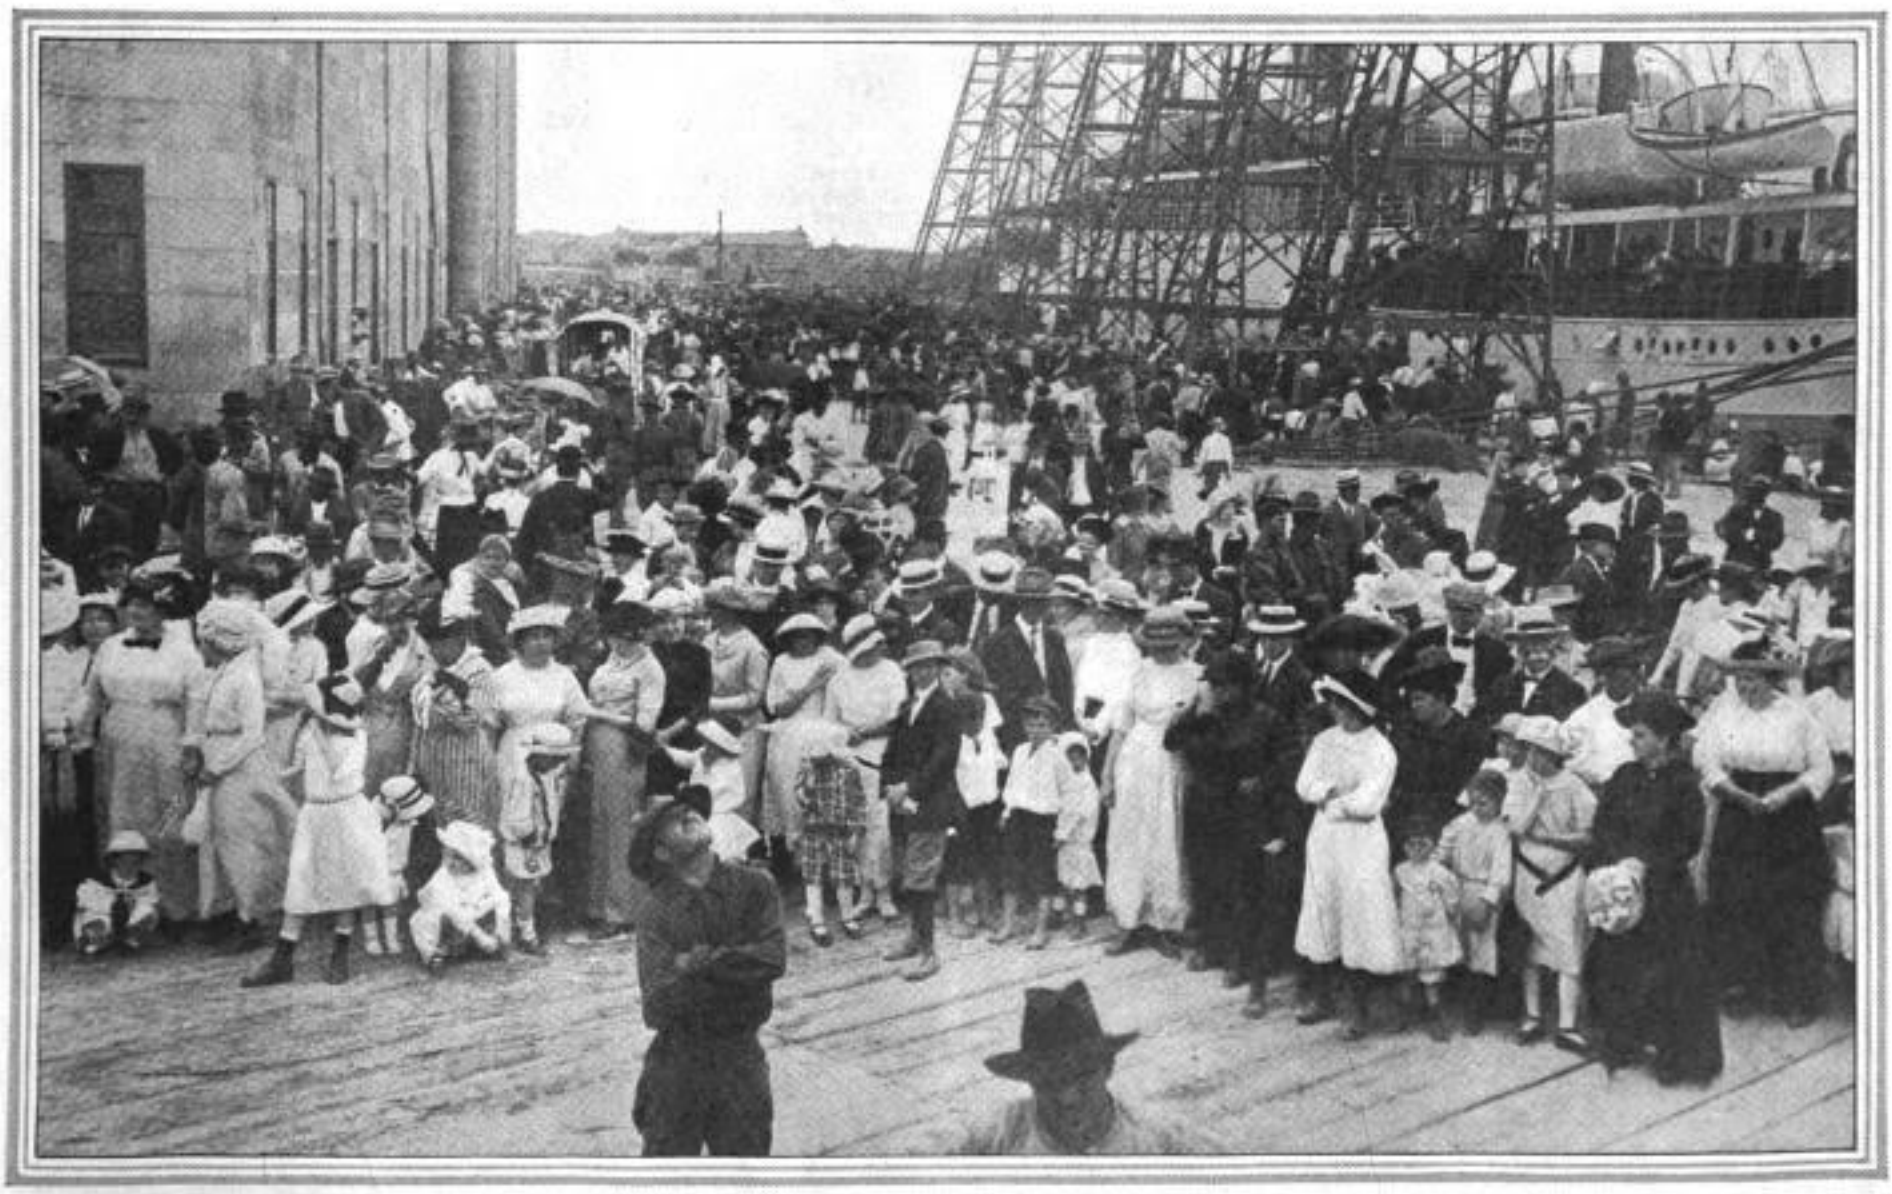
THE twenty thousand spectators that flooded the transport docks did not seem to be at all in the way. There was no confusion, no shouting of orders. So quiet and orderly did the embarking of three thousand men with all their necessary gear proceed that one almost wondered if any orders were being issued.

Army wagons, buckboards, motor cars, and reluctant mules streamed steadily on board. It seemed that near the whole city was pouring into four transports without crowding them.

One pathetic note was the soldiers' dogs. Now it must be understood that soldiers' dogs are different from other dogs. They always accumulate about the fixed camps where the men remain for months. They are very wise. They know unerringly an officer from a soldier. They know enough never to presume or to intrude on an officer. Where officers walk they never walk.

They recognize that an officer's tent and the vicinity of an officer's tent are taboo, and never are they guilty of drinking from an officer's water bucket. And they—soldiers' dogs of the Fifth Brigade—were bound for Mexico along with their masters. They crept demurely up the gangway in the thick of the lines of ascending soldiers, and when detected by a vigilant officer at the head of the gangway, they obeyed, as soldier's dogs should, and marched back down the gangway. And when so detected they betrayed no recognition of their masters, for no soldier can recognize his dog—so heinous a circumstance is attempted stowaway. Nor did they whine or complain or voice a bark. They disappeared, these soldiers' dogs, and further deponent sayeth not, save that these same dogs ran down the gangway at Vera Cruz.

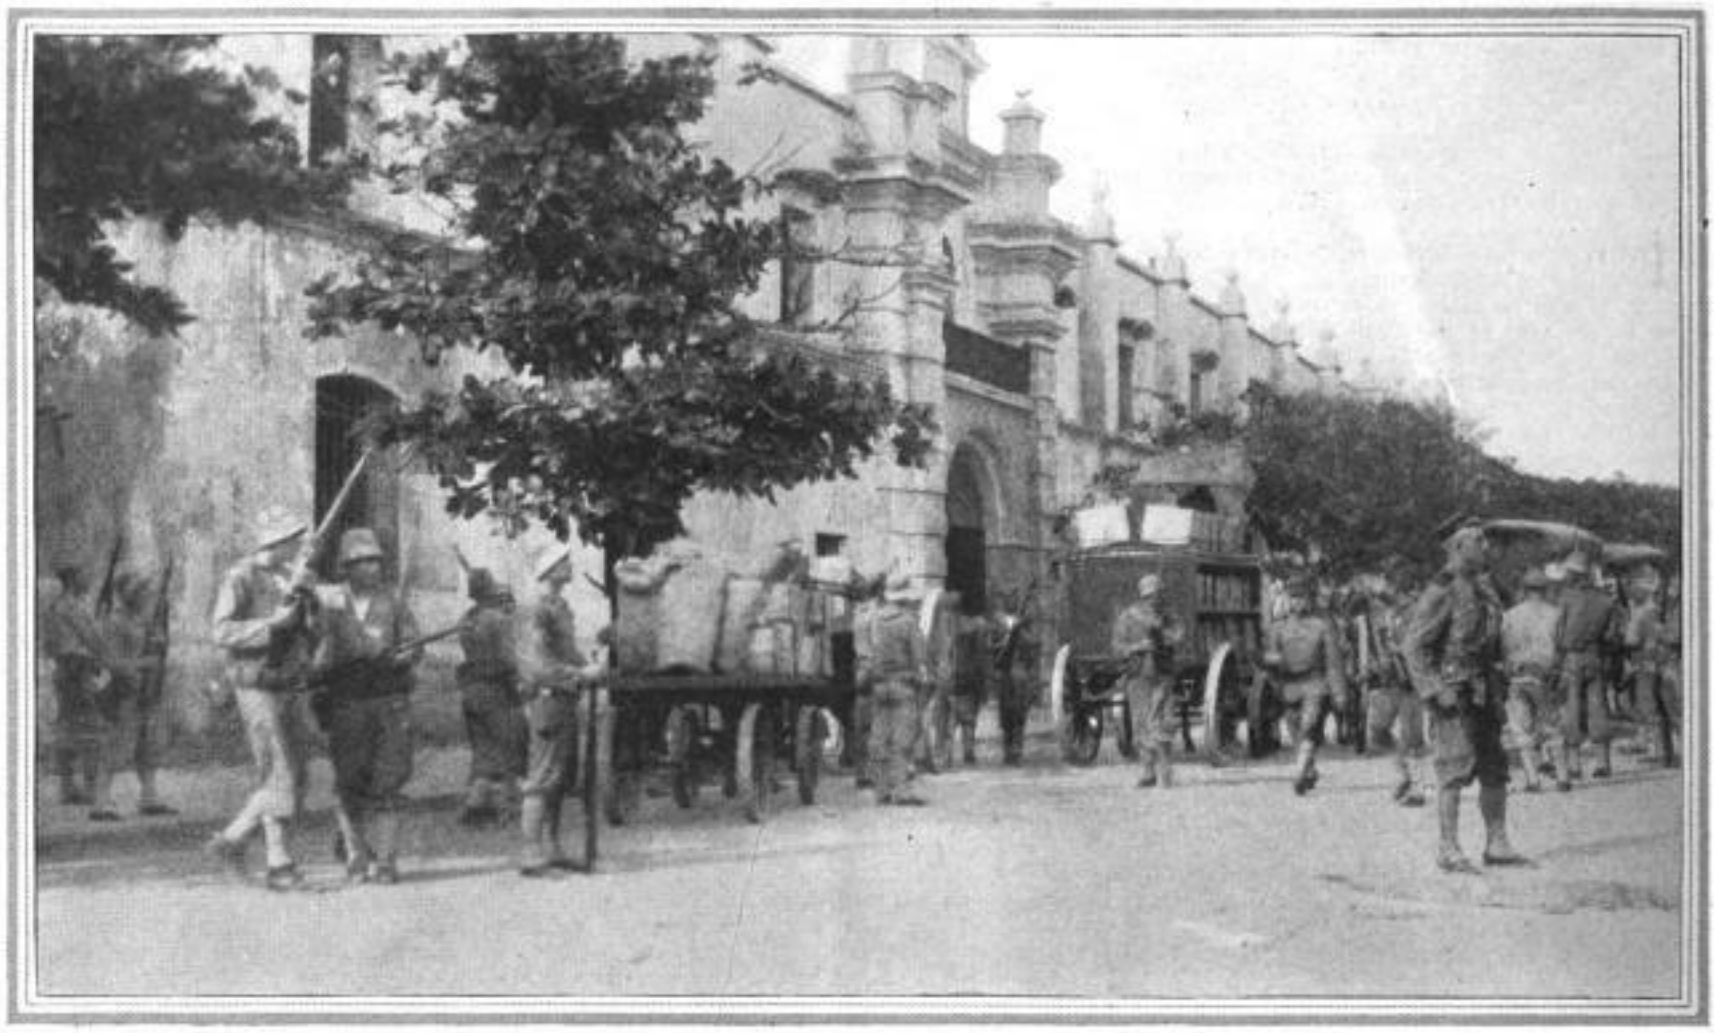
It may be nice to be an army woman in time of peace, but in war it is not so nice. Have our army women learned the control that plays so large a part in their husbands' business? Everything was quiet with them: there were no scenes, no violent sobbings, no hysteria. There were heavy eyes and moist eyes, last words, and yet again last words after, and that was all.



In short, in this act of saying farewell to their men folks the army women were splendid. Some I saw acceding to their husbands' wishes—saying a last good-by and departing before the whistles of the transports blew. One in particular I noted—a captain's wife. He led her down the gangway to the wharf and kissed her a long good-by, after which he returned on board. Then, her lips trembling, she turned and went straight down the dock to the shore. Not once did she turn her head and look back. A color sergeant, his wet-eyed wife beside him, held a very young baby in his arms. For a long time he gazed down on the tiny mite of life and said nothing. A young lieutenant hung about his mother, pressed the last lingering kiss on her lips, and, hand lingering in hand and loath to sever, he bowed his head in old-time gallantry and kissed her hand.

On the Face of the Waters

HIGH in the Gulf of Mexico, the lights of Galveston astern, the four transports, massed with lights from stem to stern, are being formed into a square, two abreast, under direction of destroyers that glide like a long row of shadows out of the gloom: that give orders through megaphones, and that glide away into the gloom, talking across the sea to one another in the medium of chimes of lights—red lights and white that flash and disappear in blinding lucidity on the short signal masts. Up above in the wireless room of the transport the words of the war men back at Galveston are being snatched out of the air.



Day on the Gulf of Mexico! All is peace under an azure sky. The sapphire sea is scarcely rippled by the trade wind gently blowing, and across this placid sea steam the white transports—soldier-loaded—with an ominous destroyer convoying on either flank, while a third destroyer scouts ahead.

A blur of smoke rises on the horizon and we know that the battleship *Louisiana* has come up from Vera Cruz to meet us. We know while all that is visible of her is the blur of smoke, for her name and errand have long since been snatched out of the air by wizards' apprentices at work in the wireless room.

"The twenty thousand spectators that flood d the transport docks [at Galveston] did not seem to be at all in the way. There was no confusion, no shouting of orders. So quiet and orderly did the embarking of three thousand men with all their necessary gear proceed that one almost wondered if any orders were being issued. Army wagons, buckboards, motor cars, and reluctant mules streamed steadily on board. It seemed that near the whole city was pouring into four transports without crowding them"

The "Rebuke with Flames of Fire" at Vera Cruz

Bluejackets landing. They did it as calmly and quickly as if they had been on drill at a navy yard back home

Photographs by JAMES H. HARE, Collier's Staff Photographer

TECHNICALLY, the capture of Vera Cruz by our marines and bluejackets was a rebuke, not an act of war. It was, none the less, reprisal of the sort described in Isaiah—a "rebuke with flames of fire." The United States gave seventeen lives to administer it; the losses of the Mexican Federals were well above 200. What the fighting was like is described in graphic fashion by James H. Hare's snapshots reproduced upon this page. The destruction the firing caused and the police work of the victors are described in other Hare photographs on the two pages that follow.

It seems a good deal like war times again to receive a dozen rolls of films from Jimmy Hare and with them such characteristic notes as:

A little sniping going on from housetops answered by our rapid-fire guns. I heard the old "ping" of the bullets whistling around us. An order was given to keep to the sidewalk near the houses and not walk in the roadway. Just as I managed to get into a room in the hotel, first night, soldiers rushed up on the roof. Three Mexicans were killed there. . . . Quite a little sniping all night, answered by our rapid-fire guns and a ugly.

The snapshot above—a typical one—shows how our men in the streets repelled the attacks of Mexican "snipers."

Marching noncombatants to safety. The Americans used extraordinary care in handling peaceful citizens and refugees

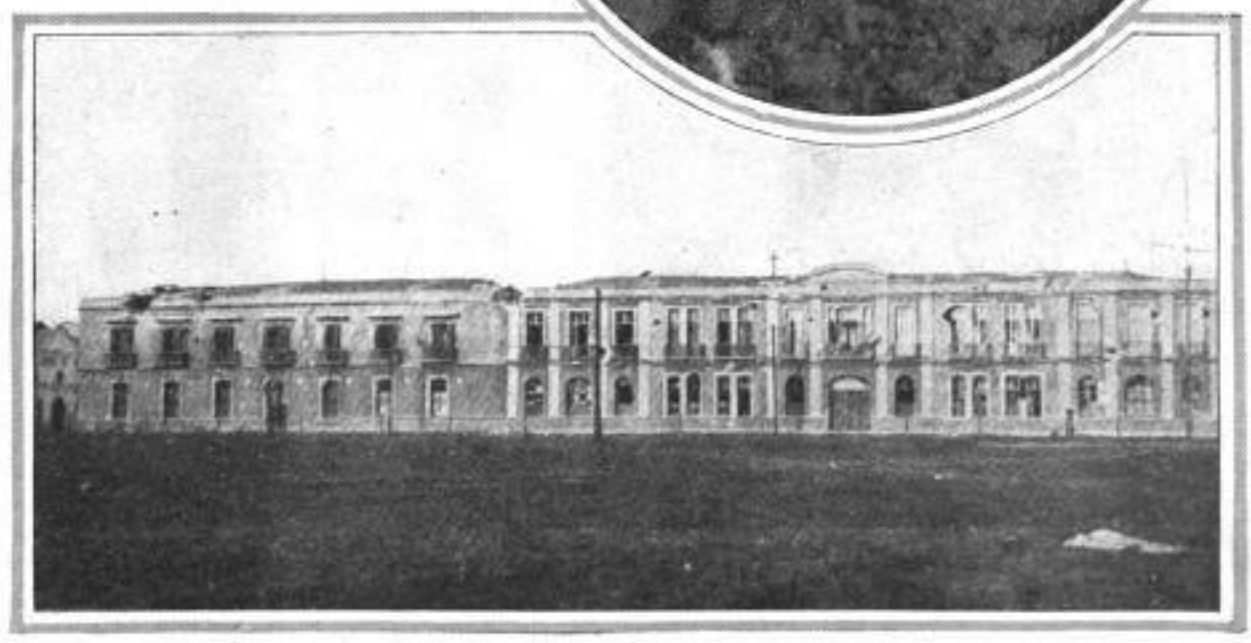
Mexicans bringing one of their wounded into San Sebastian Hospital. It is estimated that nearly two hundred Mexicans were killed and that as many more were wounded

Some Grim Evidence of Yankee Marksmanship



THE capture of Vera Cruz demanded of our sailors and marines a high degree of courage, for they were commanded not to shoot until fired upon. Bravery among our fighting men is a matter of course, however, so it was not courage that became the "feature" of the fight so much as the deadly precision with which the men on shore and the gunners on the ships struck their targets. Bluejackets silenced sharpshooters in the Benito Juarez tower with five 3-inch shells. The *Prairie* wrecked a market house with fifteen 3-inch shells and drove a squad of Mexicans out of the Custom House with a few shots. The *Prairie*, the *Chester*, and the *San Francisco* routed a large force of "snipers" in the Naval Academy. Every shell took effect. The *San Francisco* shot through the windows, taking them one by one.

How Riotous Vera Cruz Was Policed

THE task of restoring order in Vera Cruz, the story of which is told in Mr Hare's pictures on this page, was as big a job for the marines and bluejackets as the skirmish fighting. The quick departure of General Maas rendered discipline impossible among the natives, and saloons were looted and scores of Mexicans became so intoxicated that they were dangerous alike to both citizens and foreigners. The policing of the city was made still more difficult by the fact that the Americans were strangers in the city and could not understand the language. Our men arrested 500 persons for sharpshooting and confiscated 11,000 firearms.

The burning of an oil building. The Americans did some good detective work in an effort to find the incendiary

The Young Draft to the Front

By James B. Connolly

ILLUSTRATED BY WALTER J. ENRIGHT

THE call to war comes more suddenly now than in olden days. We were assembled in an office in the Navy Yard, waiting word of the ship which was to hurry one of us at least on to Mexican waters, when a tall, slim chap made his entrance.

"Does that gunboat going to Tampico stop off at Hampton Roads on the way down?" he asked, and dropped what we all recognized as a moving-picture machine in a leather-bound box as he asked it.

"She does not," answered the ranking naval authority present without pause.

"Then *good* night," said the newcomer, both hands in the air. "I was to be married a week from to-morrow, but now—good *night!*"

He stared through the window and out toward where the ocean lay. "They telegraphed me she would stop in at Hampton Roads, and my relief would come aboard there and pick me up. But I guess they were kiddin' me." He reshouldered the heavy, black box. "I guess I'll send a night message home." He walked toward the door.

"I think if I was to be married in a week I'd be married," said some one then.

The moving-picture man wasn't too far away to hear. "Maybe you would," he retorted—"but suppose they were countin' on you? And supposing if you didn't have a job you couldn't get married at all, next week or any other week; and your job was to go to Mexico, maybe too you'd go the same as me—'specially if you'd been told you mightn't have to go the whole route. When d'y' expect that ship in?"

"Well, we did expect her in the harbor at daybreak this morning and every hour since then, and it's now, you see, the middle of the afternoon and she's still outside in a thick o' fog, reporting progress from time to time by wireless."

"Then she won't be in right away?"

"She won't be in now before late to-night, then she'll have to stop there to take on a draft for the fleet at Vera Cruz."

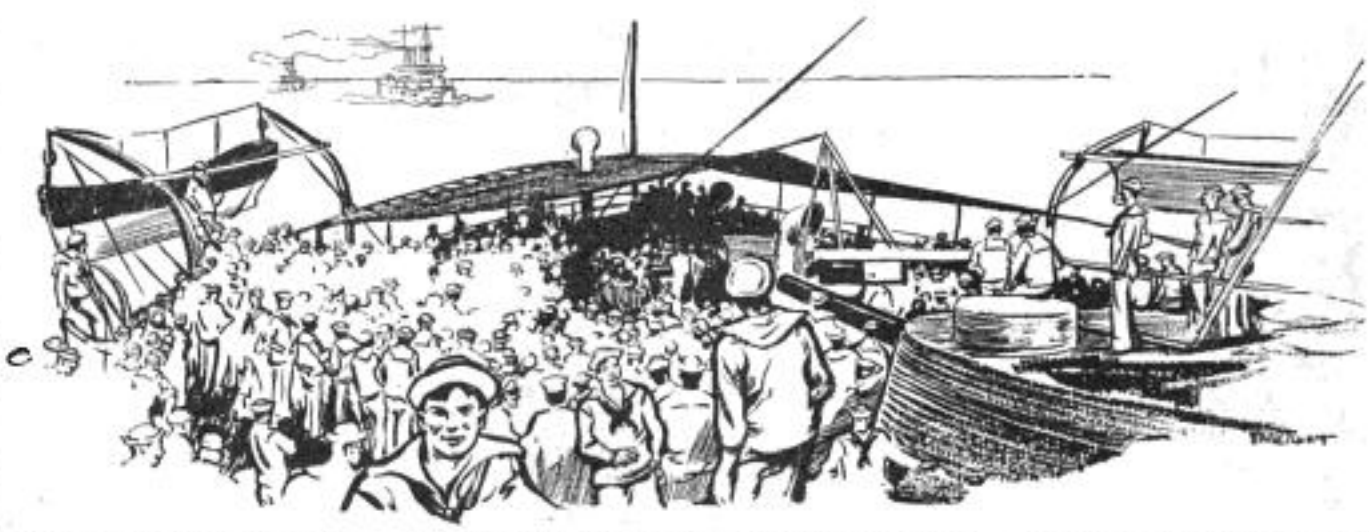
Everyone to His Calling

SUCH being the case, the "movie" man and I exchanged a few reminiscences leisurely—moving-picture operators move around the world as suddenly and in about as many different directions as most people these days, and so the chat was not without human interest. And then we adjourned to a little hotel outside the reservation, where was a cannel-coal grate fire in the lobby burning briskly. At the hotel, those first through supper commandeered the wide-bottomed chairs and anchored themselves securely in front of the inspiring blaze, and from there gave out their views. They were for war and against it. Some thought it a queer thing to go to war about—not saluting the flag; but most of them were for it, and for hanging "Hurter" or "Viller," or whoever was most to blame down there, up by the thumbs and letting him know what was what.

Only one man seemed to have anything new on the subject. He laid hold of a breath of silence to say: "The only criticism I got to make o' the Mexicans is they ain't Christians. They can't be and cremate their soldiers killed in battle—right on the battle field, so I hear."

"And why not? In a hundred years we'll all be handled that way."

The free-spoken man raised a wistful protest to that. "Don't say that, brother. If you was in my business, you'd never say it."



"And what's your business?"

"Undertaking." And he got up to pull from his vest pocket a packet of business cards.

The Reactionary

RIGHT here a tall, bony man with spectacles and a cane and a limp as he walked toward the door piped up: "That's it, not a derned man taking sides in this thing but what's got some pigs to market. One o' you don't like the color o' their skins, and another wants to sell 'em coffins. And's for *you*"—he aimed his cane at the movie man—"you're willin' to see 'em mowed down in rows so you c'n be gettin' your pictures o' the dead an' dyin'." Bang went the door behind him.

"Jee-gooks!" said the movie man, "and all I said was ten or twelve words of explanation of how the machine worked, an' naturally a word or two of hope for a little action after we got there. He must be a Republican and again' Wilson, ain't he?"

"He's all right"—it was the hotel clerk now speaking from behind the grill—"he lives over here on the hill in a house where his folks lived before him for a thousand years, I guess. He's against anything an' everything, right or wrong, that he thinks will make people too proud if they get it. He's all right. A few like him in the neighborhood don't hurt nobody."

Aboard

EVERYBODY concerned may or may not have pigs to sell, but the further business of a war reporter is to record what happened. The movie man and I went back to the navy yard and, it being now near midnight and one ship being in and at anchor outside, we were taken out to her in a stout, gray steam launch of which the grimy little crew, while good-natured, looked as if a few hours' sleep would not do them a bit of harm.

We climbed aboard our storm-tossed warship by way of a sea ladder—our baggage being hoisted up after us on the end of a rope—and presented our credentials to the officer of the deck, who wore an ensign's stripe and looked as if he had not shaved for three days nor slept for three nights, which he had not, as we learned later.

The ensign passed our credentials on to the captain, who had retired but was not yet asleep; and the captain must have passed the word to look after us, for in a few minutes an officer in a pair of dungaree trousers and a sea-going blouse with a lieutenant's stripes came along and dug out a couple of mess boys and roused up the doctor, and the doctor broke out a couple of hospital stewards from their snug bunks, and up came blankets and sheets from the sick bay, and out from a couple of staterooms in the wardroom country came a lot of sea-soaked furniture, and by and by in we went.

The Young Jackies

EVERYBODY was sleepy and weary and worn, but good-natured. They had had a hard time of it outside—a big gale of wind and a high sea running and a thick fog, and in the middle of it their whistle went out of commission; and with your whistle out of commission you have to be careful. They might have gone along hooked up, if it was on the wide ocean, with a busted whistle, but not in a heavily traveled highway—not unless you wanted to pick up some passenger steamer on your bowsprit, and nobody wanted to do that—they had nothing against any passengers.

Anything else? They want a drink aboard, outside of the medicine chest—if there was—

But nobody wanted a drink.

"No? Then good night."

"Good night," and two commissioned officers, two petty officers, first class, and two undistinguished men attendants (except for their color) turned gratefully in for the night.

We turned in also, but not for as many hours' slumber as we thought.

After what seemed a very brief interval we awoke to a commotion. Through the air port a cheerful sun was streaming—the first bright natural light for three days and nights; and the sky was of the color it should be, with only a few little white clouds racing before the west wind across it; and a further look disclosed that little jumping green sea which means fair weather inshore.

The commotion was proceeding from a tender alongside; from the tender a stream of bluejackets was upstreaming, with every bluejacket his hammock roll ashoulder; and every bluejacket agile and alert, with eyes aloft, and back of every pair of eyes, it was plain to see, lay the hope of high adventure to come.

And to a bosun's mate's shrill piping they lay aft on the port gangway, and the officer of the deck looked them over, and the captain looked them over, and the bosun's mate looked them over, and the bosun's mate most critically of all, and blew his high piping call and roared his husky commands again, and down the spar-deck gangway they trooped and stowed their long rolls in the hammock nettings under the ship's wide midship rail; and then they all stood by for the breakfast call, and when the call came down the hatchways they poured like wolves, and

Digitized by Google

came up on deck more leisurely then to search sea and sky for what it had to offer them. Before them was Mexico, and who could say what else?

And then, to the bosun's piping, up came the anchor, and a flag fluttered above the ramparts of a fort ashore, and down from our stern jackstaff came our ensign, and then we turned on our heel and passed out to sea. She was a crowded little cruiser between decks, what with her own complement and the new draft, when she put out to sea. They were mostly young fellows, the new draft. They average young enough anyway, our navy lads, but they looked younger than the average, hardly out of their first six months' training stage at the naval station. Most of them had never before stood on the deck of a ship at sea. But no matter that, they would soon enough learn to stand their watch and train their gun, topside, or oil her engine bearings and pass coal, it might be, away down by the double bottoms.

School Keeps On

THEY enjoyed themselves. It was fine weather leaving and fine weather for nigh a week following, except for one night when she pitched a bit under a head sea, and one morning when she rolled with the sea rolling up under her quarter. She was a pretty fair roller when she got going, but only a few were discommoded; and it was soon over with; and, once you leave your seasick period behind you, life at sea certainly does take on a good color.

The little cruiser had been rushed away from the Boston yard before she could have a lot of needful things done to her. It is always that way in war time. In the judgment of her officers she looked like one of those tramp steamers four months out from some Asiatic port, and they got the new draft to work at cleaning her.

Of course the regular ship's crew took a turn at cleaning ship, too, but this was work that was an old story to them, whereas it would be a great chance for the new draft to learn; and the regular ship's crew set about enthusiastically to allow the new draft to learn. When a man-of-warsman's crew set about to clean ship they make a thorough job of it. There may be housewives ashore who think they know what a clean house is, but they only think so. They should view the inspiring action of forty lusty young fellows pushing holystones along the deck, and forty more driving squeegees behind them, and before and behind them another one hundred and fifty or so scattering sand or playing the hose or rushing big bushy mops. It was not a tableau of heroic war,

but when they were done she was a picture to view, with her brass work shining like a jeweler's window; and as for her white deck looking up at you under the afternoon sun—why, you felt as if you ought to put on kid gloves before you laid even your finger tips to her brass rails, and to get into a pair of felt slippers before setting your toes on her deck.

The new draft learned that, war or no war, all the old regulations were in force and some new ones. There was the school period, for instance. Who'd ever think that out to sea, on your way to war, you'd have to be going to school too? But they took it, as they took the rest of it, as part of the game—pinning their faith always to the hope of the surely more stirring better things to come.

Of course, what every hopeful one of them was looking forward to, wishing no harm to anybody, but hoping always for the best, was to be put ashore at some good little port in Mexico and he and his mates started on their march over the king's highroad to Mexico City, dragging their guns after them as bluejackets always did in all the wars they ever read about.

They are not quite sure just what it is that Huerta and Villa are having an argument about, and mostly they don't care; but they do know that they are both Mexicans, and why worry about the details so long as, by and by, they can have a swipe at them? They all look on Huerta, however, as the most hopeful possibility. Their only fear is that he won't hold out till they get there.

The Lights of Hatteras

A GROUP of them were talking it over on the second night out. It was after supper and before hammock call—that delightful hour when you can smoke in peace while the gorgeous sun is setting inshore. Only a few stars were as yet in sight, and what wind there was was suggestive of the warm tropics ahead of them. A couple over by the engine-room gratings were plunking out a few of the very latest tango tunes on a guitar and mandolin, and ahead of them the watch aloft had hailed the lights of Hatteras. Said the speaker of the group: "Wouldn't you like to been old Hurter's Prime Minister, or whoever he is that advises him, when President Wilson's ultimatterm come in? I would. And d'y' know what I'd 'a' said to him if I was standin' by? I'd 'a' slipped him another ball o' brandy and I'd 'a' said: 'Don't let them big loafers from the United States put anything over you, old top. Have another one with me'—they say he likes his grog, the old boy. And (*Concluded on page 29*)

"Soldiers and Sailors, Too"

By James F. J. Archibald and Berton Braley

If you want to join on as a U. S. marine
You've got to get used to the water,
You've got to be smart and you've got to be clean
And ready for drill or for slaughter.
They will give you the hook if you don't learn to cook,
And, out where the sharpshooters hover,
You've got to learn not to stand up and be shot,
But to wriggle around under cover.
In civilized places or tropical scenes
You mustn't be careless or nervous,
But tend to the work of the U. S. marines,
The Oldest Branch of the Service!

ILLUSTRATED BY H. L. DRUCKLIEB

DOWN in the corner of an almost forgotten cemetery in the swamp lands of Georgia there is a grave marked with a stone telling the casual visitor that Captain Williams of the United States Marine Corps "died of eight grievous wounds." Captain Williams was leading a skirmish party against hostile Indians. That grave was dug almost a century ago, but the memory of his deeds still lives in the Marine Corps, and it is the memory of such deeds that makes it easier for the men at Vera Cruz to give the inevitable little hitch at their hat brims, duck their heads, and run forward into a rain of lead.

The Gallant Record

THEIR service is the least known to the great forgetting public, although their deeds have thrilled every generation. How many of you remember that the first battle of the American navy was fought and won entirely by the marines? Of their work in the battles under John Paul Jones, or of the story of the marines raising the American flag in Tripoli? How many of you remember that it was the Marine Corps that was first in the City of Mexico when we captured it before, and that a party of marines, officers and men, captured Chapultepec? Have you forgotten their fights in Japan in 1863, in Formosa, in Korea, in Egypt, and in China, or their work at Bull Run; or, coming down to these latter days, how much do you remember of the fight at Guantanamo, where that gallant little band held our skirmish line in Cuba against 6,000 Spaniards? And Bill Antony of the *Maine*—do you remember his report to Sigsbee?

They are a tight little squad, these "leathernecks"; there are a few lacking to make up an even 10,000, but they make up in loyalty and quiet efficiency what they lack in numbers and noise. Over 5,000 of that small band are already in Mexico, standing the brunt of the work, and more are on the way. There was a day, between wars, when all they had to do was to shoo the intruders away from the gangway or the admiral's door, but times 'board ship are different nowadays. To-day their duties are many and varied; on shipboard they are sailors and on land they are soldiers.

"We pushed him under the gate"

Just think of this: There are 4,300 of that squad who can hit a Mexican five times in twenty seconds at varying distances of from four to six city blocks. Besides this there are about 700 "expert riflemen" who would hit a running man at ten city blocks in the same fashion. One of the writers has seen their teams beat the best of Europe and Asia, and in actual warfare he has seen these same marines shooting as calmly and deliberately and with as little excitement as any Boer who ever pressed a trigger-finger.

"Some people have got the impression," said Sergeant Smith, United States Marine Corps, "that we're supernumeraries—kind of ornamental decorations around a ship. They ought to try our trick for a while. The recruiting officer calls us 'Soldiers of the Sea'—and that's moderately accurate. On board we act as police, we man the secondary batteries, we guard the ship in port, we help coal when it's necessary, and we do our share of the general work of the ship—everywhere except the fireroom. Here's what the book says about us:

"'The marines form the military branch of the navy, and serve both at sea and on land. They are trained very much as soldiers of the army. They are instructed and drilled in the duties of infantry, field artillery, and machine-gun companies, and in preparation for their

buds, knot and splice ropes, scale
intrenchments, build and keep sand-
fenerally maintain themselves in the
up are instructed in the various meth-
ods of landing and transporting heavy
ordnance, and of mounting and knocking down artillery!

"That's the general outlines of our job — with *nothing* to do till to-morrow.' First into a scrap and last out of it. Scouts and advance guard in time of war, police and clean-up corps in time of peace, making the Boxer behave, teaching the Spigotty to use disinfectant, and holding the Gu-gu still while he's vaccinated. It's a gay life!

"But it don't seem exactly right to me for the recruiting office to advertise this as an 'adventurous career,' because it ain't. Of course a marine knocks around a little, but about all he does is to skirmish a bit now and then. Take me, for instance. I've seen quite a lot of service and I've been around the world aplenty, but with the exception of a few engagements with Filipinos, some fighting down in Cuba, and a few pot shots in Panama during the revolution, I never was what you might call in battle, except during the Boxer uprising in China in 1900. That was real interesting. All the way from Tientsin to Peking the Chinks were popping at us and we were popping at them, and the shrapnel shells were going 'Chuh! Chuh! Chuh!' over our heads—shrapnel before it bursts sounds just like a freight engine puffing—and there were troops of every nation under the sun, almost, marching and deploying and yelling and fighting."

John Quick stood up in that rain of shells and rifle fire and with a red bandanna handkerchief signaled "Cease firing!"

Kelly at the Peking Gate

THE Sergeant chuckled reminiscently.

"I wonder if you ever heard how we got into the Forbidden City in Peking? Well, that was rather funny. Mine was D Company, Captain Long, and we were the first foreigners ever to enter that part of Peking. We didn't have any artillery to batter down the gate with, and we were puzzled how to make an entrance until 'Wreck' Kelly—we called him that because he was so thin—threw off his haversack and coat and tried to crawl under where the gate swung a few inches off the ground. He couldn't quite make it, so he yelled: 'Hey, come here and shove!' and we pushed him under the gate. He skinned his face and his arms and blame near tore the shirt off his back, but he got through, lifted the heavy bar off the gate, and in we come. We didn't think much about it at the time, but later on Kelly said: 'Gee, boys, suppose there'd been a Chink on the other side of that gate!'"

But the marines are always taking chances like that. They fight behind cover when possible; they conduct themselves cautiously and intelligently in battle, running no undue risks—ordinarily. But now and then they display the mad, reckless sort of bravery which is just short of folly and which sometimes makes the impossible come true. At Guantanamo, in the Spanish War, for example, that famous troop of marines which formed the landing party would have been wiped out except that the Spaniards, outnumbering them two or three to one, waited for them to land their supplies, planning on capturing both supplies and marines. But when the supplies were landed and they made their attack, they found a fully entrenched camp—from which came a deadly fire of Lee-Metfords. It was also at Guantanamo that the *Dolphin*, during an engagement, mistaking a company of marines for Spaniards, began shelling them. Whereupon John Quick, a noncommissioned officer, stood up in that rain of shells and of Spanish rifle fire and signaled 'Cease firing' to the *Dolphin* with a red bandanna handkerchief. His clothes were almost shot off him, but he escaped injury.

Although the Marine Corps is a part of the navy and therefore under the direct orders of the Secretary of the Navy, they can be and frequently have been used by the War Department. They are also a great stand-by of the State Department, for it does not constitute an act of war to land an armed body of marines to guard a consulate, legation, or embassy.

It is doubtful if there is a more versatile body in any service of any country. Not long ago, while one of the writers was watching the drill of a battalion of marines with Colonel C. H. Lauchheimer, who is now the Adjutant and Inspector of the Corps, he offered to lay a wager that the onlooker could not name a task in mechanics, literature, art, music, business, or sport that could not be performed by one of the men in line, and it wasn't a very long line either. That was apparently a very sporty wager, but it wasn't taken. The said onlooker had seen those same men in the field before, running railroads, telegraph lines, steamships, and typewriters. He has seen them playing baseball in Shanghai and Tokyo, and he has seen them mushing dog sleds in Alaska. It's a sort of tradition in the Marine Corps to be able to master any situation that arises.

The technical term for the work expected of the Marine Corps is "advance base work," and in plain words that simply means that wherever there is to be a fight they must get ashore someway and stay there somehow against all odds until the machinery of the Government has unwound enough red tape and bought enough gunpowder and rented enough ships to allow a main body of troops to reenforce them.

In Each Row at the Start of It

TO TRAIN the marines for this form of work they have maintained a training station at League Island, Philadelphia, for about seven years for practice in the skirmish work of the nation. At League Island, in addition to the usual routine duty of these sea soldiers, which includes infantry and artillery drill, they have been thoroughly drilled in the actual loading and unloading of transports. They have loaded the transports *Dixie* and *Prairie* so often that they have almost worn out the hardtack and ammunition boxes. But they have mastered the art (for it is an art) of placing a six months' supply for a thousand men in the right place in the shortest space of time. Events of the past few weeks have shown that they were drilled like expectant fire horses, and when the alarm was sounded they were in harness and in the lead as usual. During the last seven winters the same training has been carried on at Guantanamo, that beautiful harbor wrested from the Spaniards in time of war and christened into our national family with a baptismal blood of these same marines.

Only twenty-four hours' notice from the Secretary of the Navy is needed to put a fully equipped regiment on board a transport with all the "advance base supplies" for a thousand men for six months. That means that when the marines have landed the army must come along and get all of the glory within six months or else the marines will have to go on and take their supplies from the enemy. When they land they take with them, just as they did at Vera Cruz, sufficient wireless apparatus to keep them in communication with the ships, and sufficient artillery, including three-inch and five-inch guns, for a semipermanent fortification. They take ashore and operate searchlights and electrical apparatus. In fact, they must form a self-supporting fortress to repel all comers from either land or sea until the arrival of the main force.

For once you are truly a U. S. marine
You get in each row at the start of it,
And then, while the bullets are grazing your bean
You land in the thick and the heart of it.
From the pine to the palm you're a preacher of calm,
The brawlers turn pale when you sight 'em,
And if they don't cease when you say to them "Peace!"
You simply jump in and you fight 'em.
Yes, when you can't check 'em by peaceable means,
And while they're still ugly and nervous,
You teach 'em the might of the U. S. marines,
The Oldest Branch of the Service!

"'Oldest branch of the service' is right," Sergeant Smith observed. "The marines were organized in 1798 and they've been fighting more or less steady ever since. I've forgotten how many wars and battles they've been in, to say nothing of riots and brawls in various parts of the world, where they've had to mix in to bring about law and order. As the song has it—

"'They've fought with Tripolitan pirates,
They've hauled the English a few,
They bowed the proud necks of the Spanish and Mex,
And they've walloped the Chinaman, too.
They've reasoned with Zulu and Malay,
They've fought in our own Civil War,
And they've had a few scraps with the brown little Japs,
And with Gu-gus way out in Samar.'

"It must have been a grand thing to be with the marines in the early days. Plenty of action then—now it's pretty dull."

The Sergeant sighed for the glory of the past and the quietude of the present. Then he puffed slowly on his pipe and drifted into a story of the march of the marines under Waller through Samar, to the relief of a beleaguered and famished garrison, so weak from starvation that they couldn't brush the leeches from their limbs; a story of guerilla fighting in a tropic jungle, where men had fairly to cut their way, where the days were full of battle and the nights were full of insects.

"The 'Gu-gus,' that's what we called the insurrectos, used to plant lantakas — bamboo cannon wound with rope —along the trail, and while they weren't highly civilized artillery," the Sergeant said, "they were inconvenient things to go off at you, being full of lead and slugs and glass and stuff like that. If they went off at all, they were sure to bust something, even if it was only themselves."

The insurrectos were ready to roll huge rocks down the bluff

The Lost Are Found

HE TOLD how, during this march, the troop came upon a seemingly impregnable fortress on the bank of a swift river. The insurrectos were at the top of a two-hundred-foot bluff, and they had huge rocks ready to roll down upon the invaders if they tried to storm the fort or to go past the fort via the river.

"We intended to get past," the Sergeant remarked, "but we were squatted

The Double-Squeeze at Villa Borghese

Part I—Win Shute's Disappearance

By Henry Beach Needham

ILLUSTRATED BY ARTHUR WILLIAM BROWN

DOWNSTAIRS, in the visitors' room of the University Hospital, smelling iodoform, Tris Ford, manager of the Giant-killers, waited uneasily. Upstairs, reposeful as befitted the true scientist, the resident bacteriologist squinted through his microscope. Before this revealing instrument, on a hanging drop slide, was a liquid globule of bouillon taken from a culture of typhoid bacilli.

Keenly the disease detective observed the care-free bacteria in their native sports. Some of the wrigglers indulged in a continuous round of somersaults. Others tore through space and looped the loop as though riding invisible monoplanes. Those more socially inclined tangoed in pairs. But not one bacillus was static. All were in turmoil. The culture was "good."

With almost cruel cunning the bacillian expert precipitated a tiny quantity of blood solution into a minute amount of the culture, and deftly transferred the combination drop to a fresh slide.

The base of the solution used was the blood of Bill Dart, pitching mainstay of the Giant-killers.

CURIOUSLY the resident bacteriologist awaited results. In five minutes there was to be noted a gradual quiescence in the movements of the wrigglers. They ceased their mad pranks and settled down as if overtaken with languor. One by one the bacilli became absolutely static, curling up in groups and going to sleep in a conglomerate mass, like so many young pups. In a quarter of an hour there was not a sign of life. The bacteriologist had brought his experiment to a successful conclusion.

An interne came to Tris Ford and reported. The manager of the Giant-killers got a dose of heavy language, in which emphasis was laid on "Widal reaction" and "positive." There was something assertively final about the surprisingly intelligible medical term "positive."

"You mean he's got it?" asked Ford.

The interne majestically inclined his head. "There is not a shadow of a doubt. A positive reaction—typhoid."

"A light or a mild case? — suppose you can't tell."

"Not with certainty, of course. But the bacteriologist informed me that the behavior of the bacilli after the mixture of the blood solution and the culture would indicate a pronounced type of typhoid. Probably a severe case."

"Poor Bill," said Tris, half to himself. Then in a tone of authority he addressed the interne: "Everything is to be done to make Mr. Dart comfortable and to get him well. Don't try to save a nickel. Our club will stand it. I'll call again soon. Good day."

Walking to the trolley, Tris Ford came to three important conclusions:

First—To count Bill Dart out for the entire season (not a fortnight old) and recast his campaign without taking his most valued pitcher into account.

Second—To write to the Surgeon General, United States Army, and learn all about the inoculation of officers and enlisted men as a preventive of typhoid fever.

Third—To go in search of Barney Larkin, who was touted as the greatest left-hander outside the breastworks of organized baseball.

Like the manager in the war game, Tris Ford believed in preparedness. He was almost invariably forearmed. But he wasn't prepared for the trick played him by a criminally negligent Southern city which harbored a water supply devoted to the propagation of typhoid bacilli. Otherwise he wouldn't have thought for one moment of hitching up with two yards and fifteen stone of human trouble, even though said trouble did boast a phenomenal fast ball and beautiful control—"control" not of the man, but of the ball.

NOT one of the other fifteen major-league managers would have undertaken the job of handling Barney Larkin. Two had tried. It was Parke of Pittsburgh who discovered Larkin. For fully twenty-four hours after Larkin pitched his first big league game, shutting out Cincinnati, Parke boasted of his find. Then abruptly he ceased to boast; and after two weeks, replete with excitement for the Pirates, the eccentric performer was given his unconditional release. When the parting was over, Parke made this statement:

"I've seen some grand port siders and some bad actors' in my day, but Barney Larkin's got 'em all beat. Curving a ball and crooking his elbow seem to be born in him. Reminds me of a famous Irishman who boasted he could fight a duel and drink a bowl of punch between thrusts. And the more he drank the harder he fought. So with Barney. He can pitch shut-out ball between drinks. The more hard liquor he puts away the faster his ball and the better his control. I'm not joking—drinking actually improved his pitching. But it didn't have the same effect on other players with our club—there was the devil to pay. No more Barneys for me."

Undismayed by the judgment of Parke, the manager of the Cincinnatis grabbed Larkin, bragging: "Observe me—I can handle any player who isn't actually bughouse."

Baldoon observed. It wasn't altogether what Barney Larkin did, although that was "a-plenty." It was what he did to the Cincinnati team. When they next appeared in the East, one of the sporting writers said that nothing so disorganized had come out of Ohio since Coxey's army. Gladly the "load of wild oats," as Barney had come to be called, was given his unconditional release.

He was now officially designated a "free agent." But where had his freedom taken him?

THERE was a sure way to trace Barney Larkin. He loved the spot light; no near-statesman or Thespian of the chorus sought the bright white light more persistently. Barney was either in the newspapers or seeking to break into print. Most generally he found the scribes in a receptive frame of mind. Barney Larkin was to the sporting writers what Harry Thaw was to the sob artists—good for a column any dull day. And the story, nine times out of nine, got on to the wire and traveled over the country.

Tris Ford sent out an "S. O. S." to Barney Larkin, the sporting editor of the "North Star" acting as transmitter. The scribe wrote a story about Barney, rehearsing his exploits with horsehide and highball, and winding up with the query:

"Has anyone seen Barney? Is he far from the madding crowds of fans, bumping along on the water wagon, or is he mixing up drinks and pitching with his old-time abandon and ne'er-failing skill? We repeat—has anyone seen Barney Larkin?"

Back came the answer: "Barney is in our midst." It came from Punxsutawney, State of Pennsylvania.

The rest was merely the correspondence of diplomacy, at which *Tris*tram Carling*ford* was a lineal descendant of Charles Maurice Talleyrand. The culmination was a telegram from Larkin, sent collect, reading:

"Come on and get me."

The manager of the Giant-killers took the first train for Punxsutawney, which is a borough most inconveniently located northeast of the Smoky City. He took with him a corpulent roll of yellow bills. Tris Ford knew that he must buy Larkin's release—not from the outlaw club, but from the tradesmen of Punxsutawney.

On the dot a triumphant procession moved ceremoniously into the presence of the chief of the Giant-killers. Tris Ford laughed. He couldn't help it

UP Center Street and down the shady side, Ford and Barney tramped, making more calls than the letter carrier. There were the clothier, the shoe-store man, the haberdasher, the laundry, the barber, every bar in town, and both hotels to pay, and the express company. Barney owed the express company for transportation charges on a bulldog shipped in by it. The one thing that saved the enterprise from complete insolvency was the departure of the daily train for Pittsburgh at one o'clock in the afternoon.

Tris Ford did not leave Punxsutawney altogether in a cheerful attitude of mind, notwithstanding he had captured his quarry, for the directors of the outlaw club came to the train in a body and thanked the big league manager because he was taking Barney out of town. Even to the man of iron nerve this was disquieting.

In the manner told was Barney Larkin brought to

ball yard. His first appearance, nota-
pitching inaugurals, was an unalloyed
which club was then going strong,
down without a hit. But twenty-
but, and of these Barney struck
commented upon to this day. In
with two out and that demon batsman,
Salmon," at bat, Barney walked
stand, stopped, and then motioned
grand home. "All over!" he insisted.
the crowd to go

THE fans roared in delight—and roared louder still when he struck the champion batter out. From that moment Barney Larkin was the idol of the fans. There were times, many times, when he caused Bill Dart, who was fighting disease and death in the hospital, to be forgotten by the heartless rooter. The eccentric left-hander was keeping the Giant-killers in the hunt for the pennant.

Also, he was keeping Tris Ford awake nights. No such prize problem in manhandling had been put up to Ford in the twenty years of his management. Unerringly Tris had sized up Barney Larkin. The manager knew that whenever Barney was pitching airtight ball—mowing 'em down—it was necessary to keep an eye on him about eighteen hours out of the twenty-four: "going good," he was most inclined to give rein to his bad habits. But when he was in a slump he was not difficult to handle. This was infrequent, for he was continually leading the other pitchers in the number of games pitched and in games won.

Early in his association with Barney Larkin, the manager of the Giant-killers decided, first of all, that he must let the unruly pitcher believe he was fooling his boss. Every excuse must be accepted as the ungilded truth; otherwise Barney would have to be disciplined, and that would mean in a short time his release. Usually Tris Ford was "wise." But there was that episode in St. Louis, which illuminates Barney's character, wherein Tris was fooled completely.

It was on the Giant-killers' second trip West. Barney was given an afternoon off. He went at once to a saloon near the ball park and started in by negotiating a loan of five dollars from the proprietor. After the money had gone into drink for himself and his hobo admirers, he struck the proprietor for five dollars more.

The saloon keeper hesitated. As security for the loan Barney offered to "hang up" the gold watch fob which admiring fans had presented to him in appreciation of his mighty pitching. Giving it to the proprietor, Barney made this proposition:

"You let me have the five, which will make ten I owe you and I'll make Tris believe I've lost my fob. Then he'll advertise for it and offer a reward of ten dollars."

BARNEY got the second five and without delay it passed over the bar to the proprietor in exchange for more liquor. Then the wild performer wandered back to the grounds. Tris Ford heard that he was outside, and, as he thought he needed a rescue pitcher to save the game, he sent for Barney. Barney came without protest and entered the clubhouse to dress. But the tide of battle (*Continued on page 32*)

The Tyranny of Beauty

Chapter VI—The Oscar Willings

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

OSCAR WILLING'S ignorance of money seemed to be the basis of his claim to the artistic temperament, which temperament he set before my aunt as something superior, more delicate and refined, more desirable than any other known temperament—and he made her believe it. She was certainly fond of him, even though she did not love him deeply—that side of her nature had largely withered in the fierce heat of dollar getting. But she was proud of him and revered his taste and judgment—proud of his appearance, proud of his family.

For my part, all I could see in the artistic temperament was a willingness to live off his wife, drain her purse to the limit, and be himself in return. "I must be myself"—he could utter that excuse in a way to administer a rebuke to his accuser. I never saw anything leave madame so at a loss for answer as those few words.

DID he love her? No—at least not in the beginning; later, when he'd won a certain feminine mastery through learning her weaknesses and playing upon them, and as the mother of his two children, he came to something that passed for love between them. He adored the children and they him. Poor touds!—they needed a mother sadly enough—their own had presented each at birth with a trained nurse of estimable character and credentials and had then gone about her legitimate business, so why grudge it to them that their father was—a lady! No—but he liked her, found her good company, and admired her robust ability. She'd glamoured him as she'd glamoured the women with the stimulating atmosphere of a world mysterious to his world—and the vitality of great undertakings successfully put through—a world plaudditing its heroines with hundreds of thousands of dollar bills; but in that two years of ill-explained lingering at the threshold, could he have found another woman his age with fifty thousand a year—or even twenty-five—would he have married Maggie McNulty? As Mme. Del Mar that rose smelled but little sweeter to his snobbish nose. One of the first things he did shortly after they were married was to squander fifteen hundred dollars on a ring and come running to her office to get the money. I was there, discussing a plan for increasing our output, when he came bursting in on us, only to have her scold him soundly for not asking her permission and then telling him she couldn't afford it.

"But, Margaret darling, this ring is so very, very beautiful—it gives me such *joy* in my heart! And you know I thought you'd love to buy it for me! But if you feel that way I'll take it back and explain. And yet—why not let me save somewhere else? That would do it!" and he kissed her—right before my modest, maiden eyes.

SHE paid the fifteen hundred. What he saved on later was never revealed to me, probably because he never saved.

He'd scarcely noticed me during the interview, but turned to me with his mocking smile as he was going out: "Still keeping secrets? Beware, fair lady, lest I become jealous of thy power with my wife!"

"I'd take it as a compliment."

"Are compliments so rare in my wife's establishment as that? I *thought* you manufactured them for the trade."

"We do—it's why *they're* as rare to us as fresh eggs to the farmer's wife: all sold to the city folks soon as the hens lay them. She's thankful if she can get enough—salt pork."

He gave a furtive look about the place as far as he could see it and then whispered: "Well, Miss Lucy—we're on the rocks"

HE GAVE me a quick glance through narrowed lids to see if I were slurring him with the comparison, bowed and went off. His wife followed him to the door and he kissed her effusively, but when she'd closed it on him she stood for some time looking out of the window, her face away from me. She sighed as she turned back: "He doesn't mean anything by the way he does, but isn't it hard to make a man understand his place with regard to his wife's end of the business without hurting his feelings so he turns into a bundle of moods! . . . Yes, we'll have to increase the Zulu output from now on—the business ain't bringing in all I want it to. A mechanical stirrer's gotta come sooner or later—turn out three hundred pounds in one lot—"

"Well, but we've been all over that—you can't get the results—it won't cream the same, and that's all there is to it."

"The Blank Drug Company uses one for all their creams—"

"Which don't compare with ours!"

"But the fool women don't know the difference! . . . Well, look into it, Lucy. You'd ought to be glad—it'll save you three-quarters of your time for something else. But suit yourself. We gotta have an extra ten gross a week from now on—produce it any way you please—I'll sell it.

Her face wore a vague expression as she spoke the last, and I knew that her mind had reverted to her husband. I saw that she, too, would learn what it meant to feel brittle inside—to dread lest some substance of the spirit be shattered with a blow. For the first and only time in my life I pitied her.

A NEW chapter of the matrimonial breaking-in process followed immediately on the heels of the ring incident. Oscar Willing came tripping merrily into the office next morning to see the whole establishment—which he'd not yet done—and his wife, too much taken by surprise to put him off, showed him over—a thing, I believe, she'd had no intention of doing. She had even then discovered that Oscar was one of the men who cut their coats according to their cloth, and she didn't mean to let him see how much cloth there was to cut: she was doing some coat cutting on her own account and preparing to do more for the coming dynasty of Willings.

She thus had no chance to warn me, and my first intimation of his presence was her voice, rather louder than usual, outside my door: "But I haven't my key with me"; and his: "Well, knock. Lucy may be in there."

I held my breath and never moved a finger. It seemed as if I heard her mind say to my mind: "Lucy, don't open this door." Aloud she replied: "I know she's out buying—this is her day."

He knocked—a sharp, heavy-fisted blow.

Poised in my hand was a graduated flask of beet juice. I jumped at the sound of his blow on the door and dropped my juice with a crash and a smash and a splash all over everything.

"She is there!" he gloated, and knocked again. I'd given myself away, and at the same time I knew she was now at a loss how to keep him out without seeming to, but as there was no use trying to conceal my presence, I opened the door on a crack and looked through. "May we peep in?" he asked in his soft, ingratiating way. My aunt's face, a little behind him, was one large "No."

"Well, not to-day," said I sweetly. "Even the boss of the works wouldn't be allowed to enter and see what I've just done."

"Is it so dreadful?"

"Unspeakably awful—a crime against commerce."

"How exciting! So you commit crimes in your den! Now you really must let us in."

"Never!" I retorted.

HE APPEALED from me to my aunt with a look that asked: "Will you let this chit flout me—and you the owner and I your husband?" And I shall never forget the picture they made standing there—he dressed in a new suit of rough brown cloth; very becoming, too, with a black brocade Ascot, held together by a splendid pearl and diamond pin she'd given him; she—much shorter than he—in purple silk with an Irish lace coat over it; his face a mixture of childish curiosity, pique, and determination to get

Digitized by Google

what he wanted then and there, or howl for it till he did and make a fuss his mamma'd not forget in a hurry; hers a mixture of pride in the possession of so elegant a being and determination that he'd never see inside that room, no matter what she had to do to keep him out.

"Don't bother the girl now," she urged, putting her hand in his. I saw her rings flash as she did it—thousands of dollars' worth.

"But, Margaret darling, this ring is so very, very beautiful—it gives me such joy in my heart!"

"But, my darling, I want to see in—she's roused my curiosity. Have I no rights?"

My aunt shot me one look. "Don't bother her now—she's met with an accident; she doesn't want us to see." Her tone was peremptory.

"Oh, I'll protect her from my wife's fury—she needn't fear when I am by. And I want to see in."

She shot me another look that said: "Close that door, quick!" and at the same moment he put out his hand and pushed it. On my side I pushed back and pushed harder. The lock clicked. I heard her say: "Come away, Oscar, and don't bother her. She has absolute right in this room—even I don't dare to come in without her permission."

IT WAS the last time he ever went through the establishment, and I knew it would be. She might be his wife, but she'd been a business woman more than ten years before she was a wife, and when it came to an actual show-down of wills, a man like Oscar Willing had no chance against her. She came back an hour later, partly through curiosity to know what had happened, but mainly to make it clear to me then and there that I was never in future to admit my Uncle Oscar. She'd supposed that my barring him out had been due, not to my discretion, but to my accident of the moment previous.

"Well, you acted with more gumption than I gave you credit for," she patronized when I explained. "But he probably won't bother you again; I gotta make him understand sooner or later—and it might as well be soon as late—that I can't have any man messing round in the business; I don't care who he is, husband or brother—it ain't what I married him for. I can't take my time telling him the whys and wherefores of all we do here—and don't do; he'd never understand it in the world if I did—and there's no sense in giving a man the chance to pass remarks on a woman for what he don't understand."

THE incident set my mind at rest on one score—my aunt would never tell him our trade secrets. A man might tell his wife under similar circumstances, but a woman wouldn't be a woman who'd do it.

This idea that a woman can't keep a secret is simply a fiction worked up by men to cover their own Babbling Bessism. A secret to a woman is first a possession, then an obsession, finally part of her anatomy: if she parted with it she'd never feel the same again. Secretiveness is a female instinct.

What a combination of characters and personalities we were! Yet I will say this for Miss Cryder—if she'd had a sheltered life, a little love, a little easy money to spread out with—she'd have been a lady; but Beekman—nothing in the heavens or the earth or the waters under the earth could have made her anything but a lady's maid. And as a lady's maid—Zuluized—oh, very much pink-jarred!—she got her final innings and—crushed me!

But I'm running ahead of my story, and story writers say it's bad art—as it's bad business—to give away your secrets till the last minute. If I were doing a detective story that might apply; but I'm telling the romance of a million-dollar business—a huge balloon of success sailing along over the commercial world and dripping barrels of money—conceived by one woman, brought to perfection by four—my aunt and I at either end, Henrietta Beekman and Julia Cryder in the middle, as it were—and no outsider can understand the final dénouement except by seeing how these four women worked it out together. Inevitably, with Oscar Willing outside the barrel sucking through a straw in the bunghole. All I say is: God help the average business woman if that's to be her fate in matrimony!

IF, through the first four years of marriage, during which she bore two children, my aunt's fuming activities of the preceding periods had lulled to a point where we jogged along and she seemed content to hold the business about at the level to which she'd forced it when she married, meanwhile hailing out the profits by the bucketful, she'd nevertheless made long strides toward social recognition and leadership. With a handsome husband—a singer and reputed society man from one of the best families in Duluth—an establishment boasting the ownership of one of those "surprise cooks" who serve the honest egg-on-toast mattresses, whipped-cream feather beds, lettuce counterpanes and tomato pillow cases—she became a hostess—a bright shade different from an entertainer and treater at big hotels. "Exclusiveness paid—more in New York than anywhere else," she frequently observed.

At last Julia Cryder, engineering things for the Oscar Willings, came into her own. She was very careful always to call them "the Oscar Willings," thus pronouncing them man and wife and accenting the hoss on which Society with a large S invariably rests, with the man uppermost; and she ignored as far as possible the "madame" side of their lives. Through her they were now getting their names in the society column with notices of the various functions they gave at their magnificent apartment at their hotel. Miss Cryder attended most of the functions in the simple capacity of guest—she said it would "never do to let *that* class of people suspect they were watched by a reporter, and the best cook in the city couldn't bring them back once they knew it for certain: press notices with that class were supposed to be given out by the private secretary, not spied out by a newspaper."

I noticed that Julia fattened up quite wonderfully in a very short time.

THE first I knew of madame in the rôle of society leader was one day when she came to the laboratory with a newspaper—a paper opened and folded to exhibit one column and a half-inch paragraph heavily marked in blue pencil.

"Take that home and show it to mamma, Lucy—it may interest her," said my aunt in a casual way, laying the paper down and glancing round the room. "How are things getting on? All right, I see. That's good. Make me up an extra five gross of Zulu this week and five of Nature Tint—I guess five'll do it. I'm going to put a demonstrator on a horse and buggy route in central New York—she's got the outfit and thinks she can dispose of the goods to the farmers' wives. It don't look any too good to me, but I'll stake her for it and let her distribute booklets. I don't see our stock move at the dollar level among farmers' wives—don't see it any way I look at it. Move at the quarter level—plenty of it—and I may put out a one-half jar at a quarter just for that trade. No money in trial sizes—just to excite the territory. Take it off and make them buy it at a dollar soon's they really want it. . . . Well, don't forget—five—and take the paper home to mamma and give her my love. Tell her I'll be round in a day or two."

The marked paragraph was the notice of a reception by the Willings, and among those present were several Vanderwaters and Breckenridges. A good many more papers with marked paragraphs thus found their way into my den, and I noticed that the list of Vanderwaters and their tribe steadily grew; yet all the while there was one fly in the ointment: the "baritone singer" had not arrived. How much voice Oscar had—or might have had but for a too rich wife—I don't know, art being out of my line; but he had kept on with his studies faithfully, dreaming of musical conquests, of concert tours, of grand opera, and of glory and crowning in that world of "the real things of the spirit" he was always burbling about to his wife, and she dreamed with him. "At last I'm really living," she told me once in a moment of expansion. "Think of being the wife of a famous singer!" That was just after he got a church choir appointment as a volunteer on no salary.

AND with that he stuck. No manager would arrange a concert tour, no impresario would give him even a hearing. He said it was professional jealousy and because he wouldn't stoop to the tricks of some who got in; and Julia Cryder said it was a shame, and that no professional jealousy should keep him from his hearing before a New York audience; she and his wife would see that he got the hearing he deserved after all his years of self-sacrificing devotion to art for art's sake.

So he got it—and probably all he deserved. My aunt hired Beethoven Hall and Miss Cryder arranged the song recital. Tickets were given away by the bushel to all the Willings' friends and the friends of their friends; also to the entire staff of the establishment, who were ordered to be present and encore every number. Miss Beekman managed this end of it, delicately hinting the hand work required for the occasion by telling the help when she gave out the tickets: "You know if we can't appreciate all the songs—and he's very classy, they say—we can please the madame by clapping to break the roof, and it won't hurt us any with her."

I was at some distance from my aunt, who sat in the front row with a phalanx of her society friends, a huge plume rising from her coiffure that M. Perriot in honor of the great event had gone to her own home to perfect, but I could see the diamonds rising and falling upon her bosom with her excitement and with the delighted agitation aroused in it presently as the encores boomed forth from the gallery, led by "Buttons," hoping to increase a meager salary through artistic zeal.

PERSONALLY I thought the concert fine—but then I'm no judge anyway—I like a piano or organ; and the paid-for press notices were flattering and predicted a "great future for the new baritone heard for the first time in a song recital at Beethoven Hall."

The unpaid press was silent—a circumstance that troubled my aunt not at all: her husband had made his début before a New York audience—"the papers had recognized him—and you couldn't go back of that," she said. He had professionally arrived and she with him.

That evening, I believe, marked the acme of her life to date—her man had made good in her eyes and she had been fearing in the secret chamber of her heart that he might after all fail her here. She dropped a hint of it next *(Continued on page 37)*

I heard her say: "Come away, Oscar, and don't bother her. She has absolute right in this room—even I don't dare to come in without her permission"

Sonnets on Most Anything

THE EARLY SPRING HEN

When the blithe gard'ner hath the hopeful seed
Dropped in the ground and covered it with care,
Then comes the hen with rapt, envisioned air.
Though empires perish, her young brood must feed.
Soon to the heavens with appalling speed
Clouds, rocks, and dust in horrid fountains fly,
And chasms gawn us with maternal greed
She burrows on until earth's ribs are nigh.
Sing me no shovel with its steamy cry,
Tearing Culebra's quivering flanks in twain.
What need these tooting mastodons to buy
Were we to tackle such a job again?
A few soft seeds, a Plymouth Rock or two—
With tools like these, how swiftly we'd go through!

Hardships of the King Business

THOSE envious people who imagine that being a king is one round of luxury and comfort in these days of great personal liberty when every king is entitled to die with his boots off are sadly mistaken. Especially is this true with William of Wied, who has gone down into Albania to install a system of royalty in that brand-new country.

William has been brought up in some luxury and knows a good thing when he sees it. He didn't see it when he reached his royal palace at Durazzo. To begin with, it was an old, second-hand palace which hadn't been used for the purpose for many years. His faithful subjects had done their best to furnish it in a hurry, but their attempts had been sketchy. There were ash barrels in the throne room, and the royal banqueting hall looked like a sample room in a Southern hotel. Worse than all this, the palace had an extensive system of intramural rat holes, which carry a large traffic.

Doubtless all this discomfort will pass away in the next generation, but in the meanwhile our bosom does not swell with longing when we think of William hunting for a brick to use in lieu of an andiron on a cold Albanian morning, stuffing one corner of the royal ermine into a broken window in the library while trying to write a letter with a rusty pen and sticking his scepter into a rat hole in the royal bedroom at night to discourage audiences with the oldest inhabitants. For us a modern Illinois home with steam heat, storm windows, and a good, hard-working, capacious cat with very little to do!

Let Us So Live—

THAT our enemies will say: "Personally, he's all right."

That nonpartisan combinations will keep pestering us to run for office.

That people who know us well will try to mention the fact modestly.

That when we sicken, our relatives who have had to live with us will be as alarmed as our friends who have merely played with us.

That our death will be harder on our community than on our creditors.

That the recording angel will have to put down no black mark against the person who writes our obituary.

That our great-grandchildren will mention us among their most brilliant accomplishments.

The Terrible Ice-Cream Habit

NOTHING indicates the approach of hot weather more accurately in America than the awakening of the ice-cream appetite. This craving, which hibernates in the cold months, rousing only in a feeble manner to nibble a slice of ice cream at a banquet now and then, comes forth each spring with the first perspiration and takes undisputed possession of the land.

Eating ice cream is one of the greatest of American pastimes. Incidentally it is one of the greatest American vices, according to European ideas.

Residents of Europe look placidly upon the attempt of Americans to drink up all the alcohol which can

be made, even with the distilleries working nights; but when they see an American girl getting outside of a quart of ice cream, washed down with ice water, they shudder with fear and wait around for the coroner to arrive.

They believe that the American digestion has been gradually frozen out by ice cream and other cold delicacies, and that the American nation will become extinct or go into cold storage within a few years. It is useless

to tell the European that the death rate in this country is decreasing, and that doctors have had to invent appendicitis and adenoids in order to live. The European always makes up his own statistics regarding America, and nothing can shake his belief that this land is full of frozen girls stuffed with ice cream and hung with icicles.

Americans who quarrel with citizens of Latin Europe are invited to fight duels with pistols and swords. However, they should, in the interests of peace, challenge their enemies to eat a gallon of ice cream. This would kill the dueling business in no time.

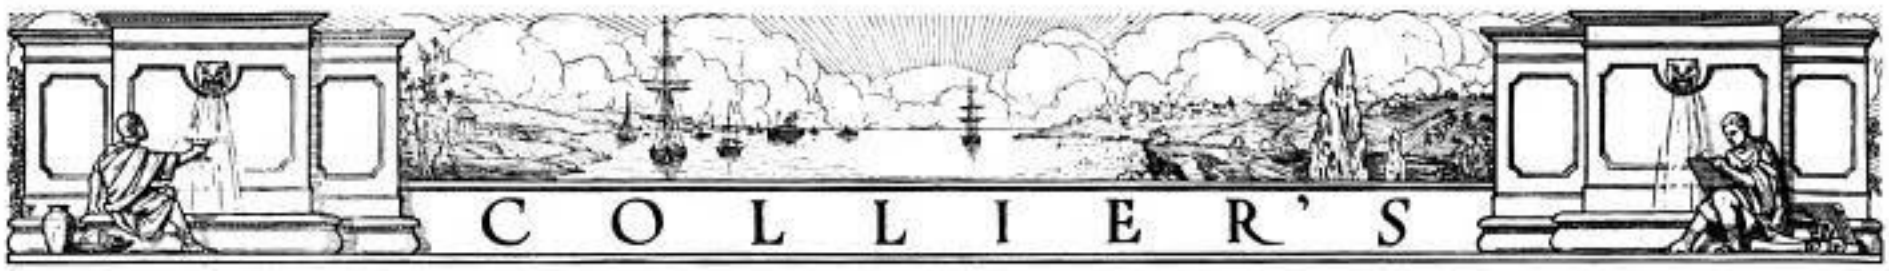
Ice cream has become a habit in this country, just as bread and butter and beefsteak have, and the ill effects are just about as noticeable. In fact, ice cream has cured more dyspepsia than patent medicine has. In thirty years it has advanced from a delicacy to a necessity, and the ice-cream factory has almost as many stories as the bread factory. Ice cream is sold in summer in as many places as are cigars, and is rapidly getting ahead of the cigar business because no one has yet thought of loading cigars into a gold and red wagon with sleigh bells on it and hauling them through the residence districts on a hot summer night.

Why Do We Hunt New Flats?

THE annual restlessness which afflicts the flat dwellers of this land is now over. Hundreds of thousands of families have expended hideous exertions in finding new dwelling places. Expense, toil, worry, and disaster have reigned for a month, and the result is that these families have finally changed places with each other and are at peace again.

The restlessness of the flat dweller is a national mystery. Why does he go forth inevitably in the spring to find another flat and to insert his family and furniture therein? As likely as not, it is the flat which he abandoned five years ago. Since then he has occupied four other flats, each a vast improvement over its predecessor; and he is now delighted with the new flat which he left in disgust five years ago. He has spent hundreds of dollars in arriving at this stage of happiness, but he will abandon the flat again next year and flit on in a moving van as large as a small chapel.

We falter, appalled at the task of discovering the flat dweller's purpose until we consider the strangely similar restlessness of the sick man who lies on one side until he can't stand it any longer and then, with the assistance of his devoted family, is turned over on the other side. The change is a delightful relief, although a few hours before he couldn't endure to lie on that side a minute longer.



Three flights of stairs is a welcome change from an elevator which declines to elevate—likewise an elevator which sometimes runs is a great improvement over three flights of stairs which are 1,897 feet high at 11 p. m. Such facts as these explain the greatness of moving day in the cities.

Where Is the Mississippi Going?

WHILE we are busily celebrating the completion of the Panama Canal with everything from international expositions to explosions in the Democratic party, it would be well to pause and inquire of the Mississippi River what its intentions are respecting the great new waterway.

Those cautious Americans who have kept an eye upon the Mississippi River will not ask for explanations. They are plainly visible as the traveler passes down the peerless Daddy of Waters in an ocean steamship bound for Colon. Long before the Gulf is reached it has become only too (*Concluded on page 29*)

The Operating Facts as to Mexico

IN SPITE OF THE ASSURED OMNISCIENCE of these anti-Wilson journalists, it must be insisted that they have no mortgage on the facts. The whole lesson of history is that the relations between nations are complex and difficult and dark, and tend to become more so when pride and ambition are roused by the prospect of war. In such cases it takes years for the historians to sort out the factors so as to be able to give a reasonably clear account of what happened and why. Anyone who bases his judgment of international matters upon a calm assumption that the news is all in print every day is often utterly wrong. It is a most significant thing that the Senate of the United States tried to use the canal-tolls question as a lever to pry out full information on foreign affairs. The President of this country and his advisers are the only ones who have even fairly complete information on all phases of the Mexican situation and its international complications. Peace or war is very largely the President's responsibility, and this will always be the case as long as there is a ship of state and a pilot. Our hope lies in WOODROW WILSON'S ability and character, not in the shallow clamor of would-be advisers. The strength of our position, physically, is that we are in full control on the border and along the coasts. Invasion and a war of conquest cannot be forced upon us, and we must not forget it.

Some Men—and Hearst

WE REFERRED RECENTLY to the experience of Mr. MCLEAN of the Cincinnati "Enquirer" in attempting to create anti-Wilson sentiment in Ohio. HEARST has just tried the same thing in a baser way and got an even harder jolt. In the early fighting at Vera Cruz one of our marines, an eighteen-year-old Georgia boy named RANDOLPH SUMMERLIN, was killed. Whereupon HEARST'S Atlanta "Georgian" tried to turn its own sneaking profit out of the tragedy by wiring its correspondent at Willacoochee as follows:

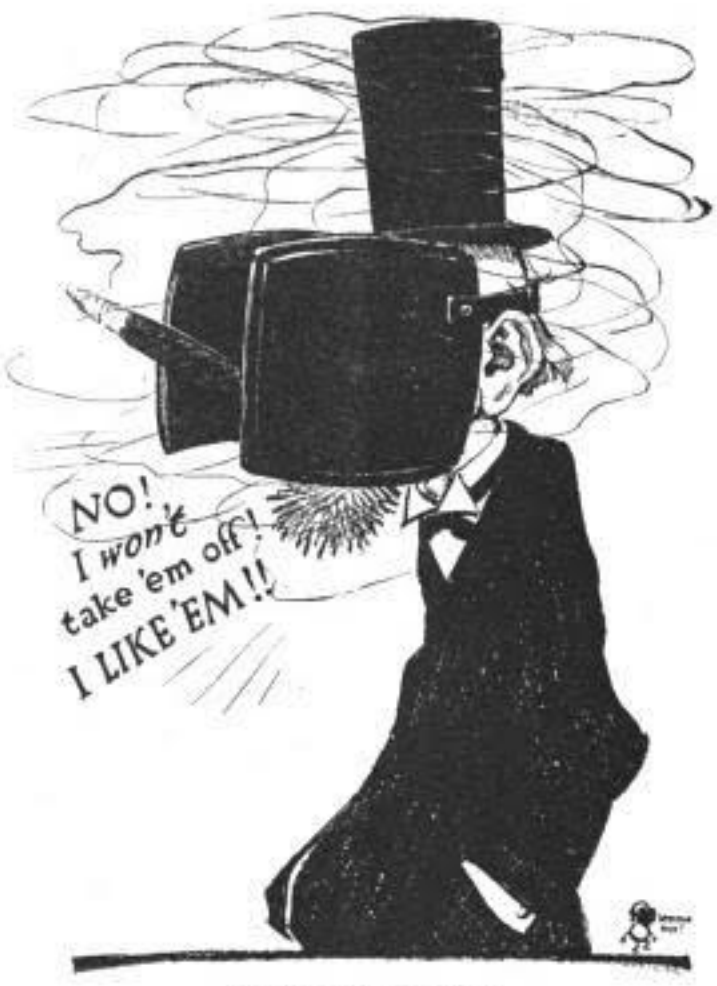
> Please interview SUMMERLIN'S father on uselessness of sacrifice. If United States is now to accept mediation, does he not think it outrageous to have to send boys to be killed, and the Government decide fighting is wrong? Please send good statement.

HEARST'S employee forgot that he was sending this stuff to men of Georgia. Here's the answer he got:

> Referring to telegrams to GEORGE W. MELTON, beg to say my brother, RANDOLPH SUMMERLIN, was killed at Vera Cruz in defense of our country's honor. We favor President WILSON and the Democratic Administration, and RANDOLPH has four brothers and a father who are ready and willing to make the same sacrifice if called upon. We think the Wilson policy is absolutely right. L. W. SUMMERLIN.

And the local paper chimed in with this telegram to the Atlanta "Journal" (not a Hearst paper):

> R. F. SUMMERLIN, father, and L. W. SUMMERLIN, brother of RANDOLPH SUMMERLIN, killed at Vera Cruz, take the "Georgian's" request as a gross insult, not only to his relatives and friends, but to the entire country. If we could not be loyal to our country, would move out. WILLACOOCHEE "RECORD."



HEARST had better stick to the safe old policy of *manufacturing* any necessary "good statements." It would be less hard on his self-esteem.

Justice in Colorado

THE COAL AND IRON COMPANIES which operate in the war district of Colorado are controlled by men supposed to be among the wealthiest and most enlightened in this country. We have heard for years of their gifts to science, to education, and to religion. They have built sanitary houses for workmen, furnished free entertainment and medical advice, and all that. Why then this hell of slaughter and destruction? Because they have left out the one essential thing: human justice. You do not supervise a remote mining camp by officially issuing "strict instructions" for company storekeepers and camp marshals and superintendents who despise their men. You will not pacify Trinidad, Colo., by writing elegant essays in New York City on "matters of principle." JOHN RUSKIN, in the fortieth paragraph of his lecture on "Work," speaks of

> that motto of the poor halfway Mahometan: "One hour in the execution of justice is worth seventy years of prayer."

The Rockefeller and other great mining interests must learn this by heart and put it into action before peace can come to Colorado.

The Standpatter

Jimmy Hare

A GROUP OF WAR CORRESPONDENTS was gathered at League Island, in Philadelphia, recently. Rain was pouring, and the jackies were laying in stores against their dash for Vera Cruz. "Where," asked one of the scribes, gazing searchingly about him—"where is JIMMY HARE?" The *Morro Castle* was loading, and there, too, correspondents were arriving. "This," said one of them, "cannot be a war; JIMMY HARE is not here." But JIMMY HARE was already aboard the *Louisiana*. The orders for his embarkation were late in coming, so JIMMY, this grizzled veteran youth, who has been JIMMY in affection, not in disrespect, through nearly a dozen wars and broils, took a flying leap into the last launch to leave shore, and said: "I am going anyhow." In Vera Cruz JIMMY landed immediately and went ten miles beyond the city to meet the train that brought in Mr. O'SHAUGHNESSY, thus getting the first photographs. We thrill and delight in KIPLING'S war correspondents, DICK, THE NILGHAI, CASSAVETTI, and TORPENHOW. But JIMMY HARE, who moves about this office so cheerily when he is at home, has lived enough amid war and excitement to outfit a dozen novelists—for JIMMY HARE is always at the front.

Picayunity

THE NEW YORK "SUN" has asked several Governors what they think of mediation as proposed by Argentina, Brazil, and Chile. The Governor of Florida comments as follows:

> Coming from small South American republics, we should turn it down.

Considering that there are only eleven words in this sentence, it is, we believe, the stupidest ever written. What on earth have those countries' sizes to do with the proposition? And does the Governor of Florida think we are all fools that we can apply the word "small" to the three greatest republics south of us? In area, not less than in bigness of future, the "A, B, C powers" are worthy of high respect. Anyone who feels as Governor TRAMMELL does about this matter would do well to purchase a copy of an entertaining book published by Charles Scribner's Sons, "The Other Americans: Cities, Countries, and Especially People of South America," by Mr. ARTHUR RUHL. The price is only $2, Governor.

Family Repartee

WHEN ALLIES FALL OUT they usually revile each other, as witness CROKER'S dicta on MURPHY, but the stinging bitterness of this item from the "Wall Street Journal" (of all papers) is well-nigh unique:

> Ex-Speaker CANNON says he "can't understand" why New York papers support the Administration on canal tolls. If he could he might have held his job.

To Mr. Oliver Morosco and Other Managers

ONE REASON why modern drama can so rarely be classified as literature is that playwrights and managers won't give it a fighting chance. What we mean is illustrated by this theatrical jotting:

> J. HARTLEY MANNERS will expand his one-act play, "Happiness," into a three-act comedy for the use of LAURETTE TAYLOR.

Now we have no wish to be bigoted, and we believe that AUGUSTUS THOMAS'S fine play, "The Witching Hour," grew out of a one-act piece. But this is exceptional. The one-act play is of one distinct genre, the long piece of quite another. Yet theatrical managers forget this.

Digitized by Google

If the managers of to-day had been the publishers of yesterday, the world might have read these edifying announcements:

Rudyard Kipling will expand his short story, "The Brushwood Boy," into a 300-page novel.

Robert Louis Stevenson is at present engaged in remodeling his "Lodging for the Night" into a romance of François Villon and the days of Louis XI.

Readers of Edgar Allan Poe's "Black Cat" will be interested to learn that he has completed his novel on the same theme.

O. Henry's "Unfinished Story" will be finished in novel form in time for the holiday trade.

We are pleased to inform the public that three of Bret Harte's most popular stories will in the course of time form a trilogy of novels describing every side of the days of '49.

Owing to the solicitations of many readers, John Keats has consented to expand his sonnet, "On First Looking into Chapman's Homer," into an epic dealing with the discovery of the Pacific. It will be ready in time for the opening of the Panama Canal.

The average managerial mind pursues this kind of logic: "If it's a good one-act play, in three acts it'll be three times as good." They also argue that since a certain actor has made money for them in one sort of part, he ought to be kept playing similar parts by the same author.

Names and Ways

WE NOTE in the papers this sort of thing:

"The fundamental difficulty with our present university organization is that it is undemocratic," said Professor J. McKeen Cattell of Columbia University in addressing the association on "Democracy in University and College Administration."

It was old Senator Nesmith of Oregon who said, apropos of some blue-blooded Boston financiers, that the only man parting his name in the middle for whom he (Nesmith) had ever cared a continental was E. Pluribus Unum.

The Saloon and Taxation

IT IS OFTEN ASSERTED that saloon taxes are essential in paying our governmental bills. The fact is that the saloon wastes time, incapacitates people for work, turns into liquor production money which should have been saved and invested, and, above all, is a main factor in creating the social cancer of crime. The commission that has exhaustively studied drunkenness in Massachusetts lately presented its report to the State Legislature and stated: "*At least one-third of all crime* (aside from public drunkenness) *is directly occasioned by the use of alcohol.* Massachusetts prison statistics show that *96 per cent of all criminals in our prisons in 1912 were intemperate by habit.*" The saloon stands in the same relation to the community as the gambler who fleeces a harvest hand and then lends him a dollar so he can get to his next job. That dollar is not benevolent or necessary; neither are saloon taxes.

Feditorially Speaking

WE OBSERVE that the Federal Leaguers of Pittsburgh have been dubbed the Smokefeds. Would it be impolite to call the Federals of Chicago the Porkfeds? And for St. Louis surely the word to connote "pep" as well as civic symbolism would be Hopfed. Too bad the Federals haven't a team in Boston. Yes—Beanfed is the word.

A Gift Well Placed

THE GIFT of arresting and holding the attention of large masses of men is not so widespread as to be commonplace. Only too often, however, it falls into the hands of the charlatan. But Elijah P. Brown's "Life of Billy Sunday," recently published, brings home the singular chance by which that rare talent fell into the hands of a spiritually conscious man. William Ashley Sunday can beat at their own game the spellbinder and the quack, but his object, so far from being quackery, is the highest known to mankind. He falls on one knee and thumps the pulpit boards with his fist, breaks ten blameless vases to show how the Commandments are shattered by our sins, and reads man's miserable faults of character in a stream of vernacular that an angry drummer might envy. His offenses against taste (secular or sectarian) are glaring and habitual—but in hearing him thousands and tens of thousands of frail mortals have left vice and drink and wickedness behind them, and have returned to upright lives. A man of no saintly pretensions, he has surpassed many a canonized saint in accomplishment, and, though of small learning, he has spoken with the tongue of the learned to how many that were weary! All who have come under his spell and all who haven't should read Elijah P. Brown's "The Real Billy Sunday."

An Echo from the Dim Past

WE CAME UPON this bit of thankfulness the other day in a yellowed old newspaper, crackling and blurred with age:

Turkeys sell at 6 cents a pound; chickens, 4 cents; rabbits, 5 cents apiece; partridge, 50 cents a dozen; butter, 15 cents per pound; eggs, 15 cents per dozen; lard, 8 cents, and sausage, 8 cents. Thank God for plenty to eat, drink, and wear, even if dollars are scarce.

It was printed in the initial issue of the Palmyra (Mo.) "Spectator" in 1897—a date which many now living can remember.

The Cleanly Press

WHILE MOST OF THE NEWSPAPERS, the country over, were piling column upon column in narrating the last experiences of four notorious young criminals in the death house, the Providence (R. I.) "Evening Bulletin" limited itself to a couple of stickfuls of matter-of-fact prose. The "Bulletin's" editorial policy in this regard is stated thus briefly:

The "Evening Bulletin" gives to its readers only the essential details of this last act in a tragedy of corruption and bloodshed. The sordid and sickening elements of an execution are always the same, always disgusting, and never of any value for any moral purpose.

It is surprising how few newspapers realize what a good case may be made for journalistic decency. We know of no newspaper anywhere which is so consistent in minimizing the unessentials of depravity and degradation as the "Christian Science Monitor" of Boston.

Green and Growing Things

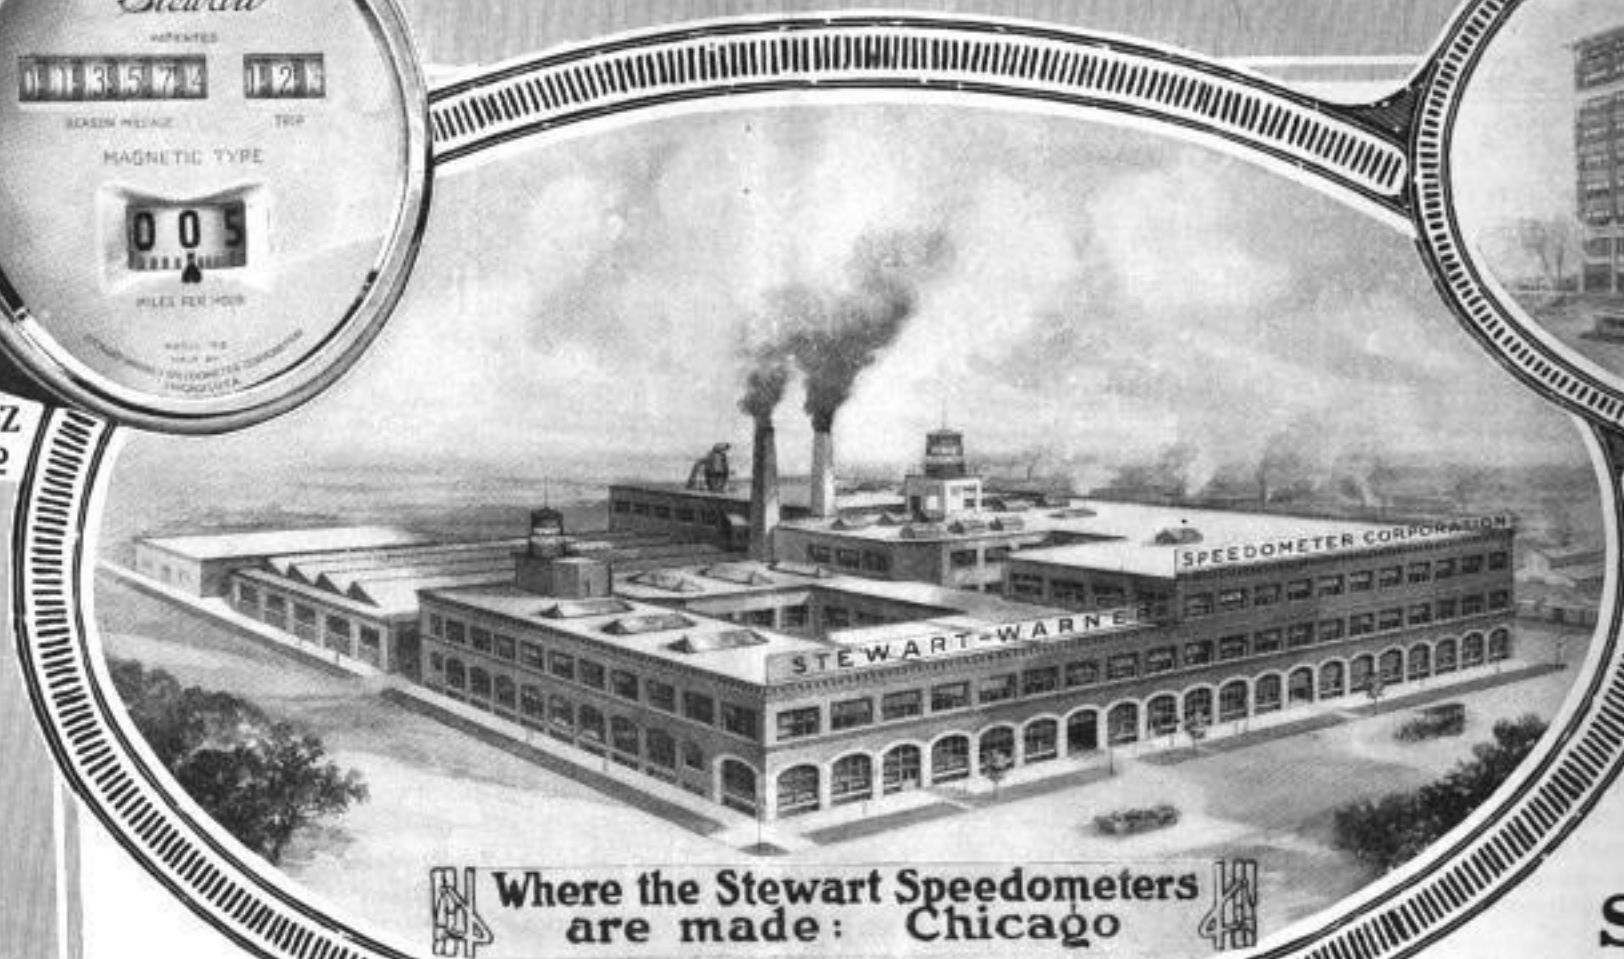
IN A RECENT ISSUE we referred to Charles Dana Gibson as "one of the kings of black and white." A frivolous correspondent notes that this establishes a clear line of distinction between the artist and James J. Jeffries, the subject of his sketch—the latter being a king of white only. Thus it is that spring invades the mind.

Pride

CAN WE HAVE TOO MUCH PRIDE? Of vanity, yes—but pride and vanity are words often confused—and it is vanity that it is so easy for us to overdo. Pride is built on realities—vanity on appearances. Pride and vanity are as unlike, in essence, as wild rumor and proved fact, pedantry of the schools and wisdom of life. Charles Eliot Norton, the college professor who edited the letters of several friends, Carlyle and Lowell among them, is the subject of two volumes entitled "Letters—With Biographical Comment," and we can think of no American who more perfectly illustrates what pride is at its purest. Old Andrews Norton, his son's theologic parent, was in the habit of writing Polonius-like letters to him at the beginnings of prolonged separations—as when the younger man set out for India as supercargo in 1849. The boy was not yet twenty-two, and his father wrote:

You leave behind you also an unsullied reputation and the belief among all who know you that you have more than the common powers of serving others. These are not things to make one vain. On the contrary, their true tendency is to produce that deep sense of responsibility—of what we owe to God, to our friends, and to our fellow men—which is wholly inconsistent with presumption and vanity.

Norton did not disappoint his father's hopes—or his friends'. Seldom has there lived a man whose life was so rich in inspiration for others—from Patrick McCarthy, the Cambridge cowherd whom he taught at the first night school established in New England (McCarthy later became a lawyer and was elected Mayor of Providence), to the hundreds and thousands of Harvard students who found him a true gentleman as well as an instructor, and, on lonely Christmases spent many miles from home, a generous-hearted host. Norton's spirit was far more potent than his limited achievement; his personality pervaded his work, but was not exhausted thereby. One forgets about the man's reputation in remembering his character. Without vanity, he was a man of pride. One imagines him reciting with appreciation a stanza of his friend Clough's writing:



> Then welcome, Pride! and I shall find
> In thee a power to lift the mind
> This low and groveling joy above—
> 'Tis but the proud can truly love.

Norton was a product of the older America, in which (so we descendants like to think) duty counted for more than "success," and there was leisure enough for friendship even between fathers and sons. We refuse to believe, however, that the home life which gave us Norton is wholly a thing of the past—or we should take less pride in our America.

Pickups of Sport

By Grantland Rice

The Lion Returns

BADLY clawed by the Eagle in the first international mêlée, when Gold overwhelmed Covey, the Lion made it 50-50 when the Oxford relay team conquered America's best in the Philadelphia carnival.

The great Jackson's victory was established by only an eyelash, but the point is that England took back home a cup and evened up the year's international count.

Four international events—golf, polo, tennis, and yachting—still remain, and, to establish the edge, America must now win three of the four, a fairly active summer's work. Unless Travers, Ouimet, or Evans can win at Sandwich, England will soon have the astounding percentage of .667, to say nothing of at least two perfectly good silver mugs. Who is the prophet that suggested the idea of there being "nothing new under the sun"?

There seems little doubt that the Lion also will turn if trodden upon often enough.

Half Shots

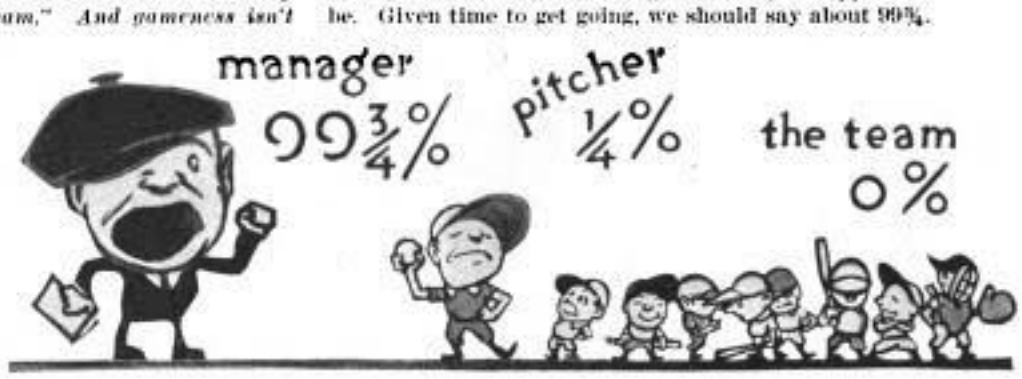
TOO *much good luck to-day is a poor training camp for to-morrow's schedule.*

Hard luck may be tough on the short sprint, but it's the only real trainer for the Marathon route.

As Colonel John Tratcwood Moore observes: "Only the game fish swims upstream." And gameness isn't developed by drifting with the current.

The Early Pace

ANY contender who has ever entered a long grinding race knows the strain of setting pace. Part of this strain is purely physical—arising from too great a call upon reserve force. And part of it is psychological—the worry of not knowing just what to run against—and then the break when some contender unexpectedly flashes by.



The strain of the early pace is true of ball clubs—as well as of runners—despite the fact that a game won in April is worth as much as one won in September.

In 1905 Cleveland was 113 points beyond the field in mid-June, but the pace told heavily, injuries came and she cracked—finishing far out of it.

In 1911 Detroit captured eighteen of the first twenty games and by June was twelve full battles beyond Philadelphia. But the early pace again told later on—and when the Tigers finally blew, they blew with an indigo vengeance.

In 1912 the Giants started off at top speed. By July Fourth they were sixteen games ahead, outclassing the field. But even with a veteran, pennant-winning organization driven ruthlessly by John McGraw, they broke wide open and by late August were only four games to the good.

Last season Philadelphia and Brooklyn in the National League were the ones to start at full speed—and both were soon lost in the flag mists on ahead. But by mid-August Brooklyn was submerged in the second division and Philadelphia was ten games behind New York. Both clubs had been overworked, especially the early winning pitchers, and the stamina wasn't there to carry the full distance. Baseball history is replete with the records of those who started fast—and finished badly winded; of those who started late and finished far in front. The strain, physical and mental, of playing 154 consecutive ball games is abnormal. April and May furnish no indication of its blighting power, but after June only the elect can survive—only the organization that is finely equipped with reserve force—that hasn't overplayed its strength in the first six weeks as the Reds and White Sox did in 1912.

After the Game

INTO the Darkness—one by one—
The Troop must go;
But whether to face a greater sun
And a rarer glow;
Or whether into the night we creep
Where shadows stay and the dark is deep
With never a dawn to end our sleep,
We may not know.

Into the Darkness—under the sod—
Where no light gleams;
And the rest is left to the Great White God
Of the hills and streams;
And many will look to a pathway steep
That leads to Heaven—where none may weep—
And many will thank God for the sleep
That knows no dreams.

The Managerial Per Cent

THREE managers—McGraw, Chance, and Clarke—have won every pennant set up in the National League for the last thirteen years.

Chance has passed to another league—and the pennant campaign of 1914 already looks to be a death grapple between Clarke and McGraw—with no one else close.

Yet there are those who desire to know what percentage of a ball club's strength a manager happens to be. Given time to get going, we should say about 99¾.

Francis, Jerry, and Chick

MAY *your drives sail straight and your mashies true,*
Out after the golfing crown;
And when you are on in a well-played "two,"
Here's hoping your putts go down.

It was putting that lifted Travers up
And Ouimet to his renown;
The answer comes at the foot of the cup—
Here's hoping your putts go down.

Frederick Clifford Clarke

IN VIEW of the extended praise that has been handed Messrs. Mack and McGraw of late seasons, the sudden spring dash of the Pittsburgh Pirates recalls the fact that another great manager has been somewhat overlooked in these drifting days.

Frederick Clifford Clarke, Pirate-in-chief, is out after another sprig of laurel with his made-over club, and his past record shows that Clarke is no man to be overlooked. In fourteen seasons up to the present start, Clarke has won 1,279 ball games and lost but 801 for a grand average of .614.

He has had four firsts, five seconds, three thirds, and one fourth. And it is something of an achievement, as such things go, never to have finished in the second division, or below third place but once.

In nine out of fourteen seasons Clarke has run 1—2, which is consistent enough to be fairly well thought of.

Clarke is a great leader, one of the game's greatest, and the 1914 duel developing between him and McGraw should bring about a spicy campaign.

To add to the general interest of a battle between these two old rivals, each has a great veteran lieutenant on guard—Wagner and Mathewson, who are still in the thick of the firing.

Another Call

IT IS reported that three members of Yale's track team have been injured while indulging in the tango.

We have repeatedly, in these dispatches, called on the committee in charge to debrutalize the dance—just as football was debrutalized some years ago. But so far our warning has been in vain.

How many more of the "flower of our young manhood" are to be wrecked by the combination strangle hold, high dive, and double flip before these needed reforms are put through? Are we to become a race of twisted shins and mangled insteps?

The Duffer's Invictus

(Awarding an easy half to Mr. Henley)

OUT *of the blight that covers me*
In every trap from hole to hole,
I thank whatever gods there be
For what is left me of my soul.

In the fell clutch of grip and stance
Oft have I winced and wept aloud,
And from the bally kicks of chance
My nerve is broken and I'm cowed.

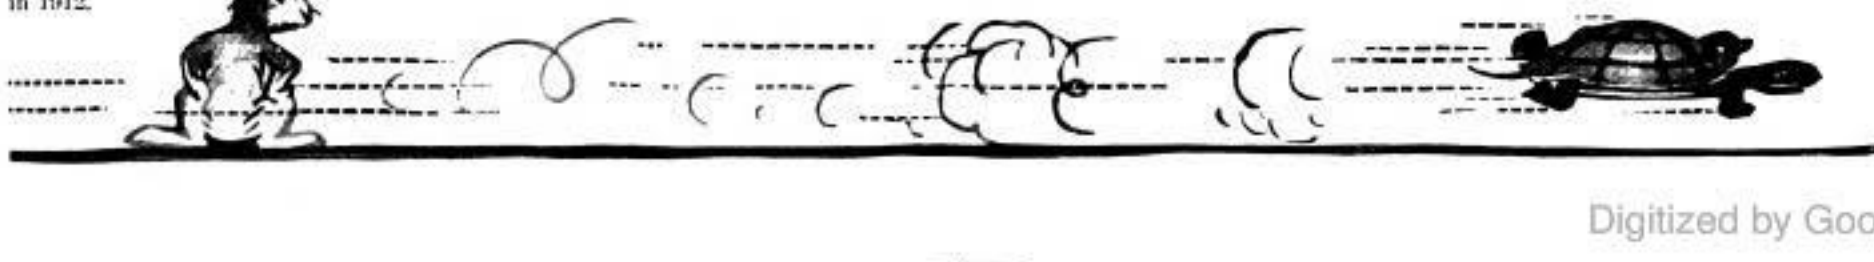
From valley sweep to bunkered hill,
With aching breast and eyes aflame,
Each club I swing against the pill
Finds, and shall find, me off my game.

It matters not how bunkers mount,
How angry rivals rave and roar,
I am the captain of my count—
I am the master of my score.

"The Last Stand"

AN ARDENT poet, writing in "Punch," characterizes golf as England's "Last Stand" in the field of sport.

But he predicts at the finish that "The gods shall fasten the oleaster to the blade of a British cleek."



If the British cleek can remain bedecked with the victorious oleaster after the sun has sunk on Sandwich on the 23d of May, it is likely to stay there for some time.

If America is to repeat the triumph of Travis in 1904, 1914 is the year. For on this occasion she has dispatched the flower of her golfing flock—Ouimet, Travers, and Evans—aided and abetted by others of lesser rank, to take the last sportive stronghold of the Lion.

If these are repulsed, we don't see just what anyone can do about it for some time to come. But it's a tough assignment—as good as Ouimet, Travers, and Evans are—for in an 18-hole match a few slips mean defeat—and England is full of almost unknowns who are likely to shoot a 72 or a 75 at a moment's notice. The odds are a trifle too steep—and yet nothing like as steep as they were against Ouimet last fall.

It's merely a gamble after all. Travers, Evans, and Herreshoff, trying it in other years, were stopped hard and early, while Schmidt, rated far below them at home, carried England's champion to the last green in the semifinal round.

Still, here's a hunch. Things happen in decades. And it was ten years ago over the same course, Sandwich, that Travis won the British title and came near jarring England into the surf of her own seas.

Abroad at Home

In Next Week's COLLIER'S

"I CANNOT say we have visited Milwaukee and Minneapolis and discovered their shame. You see we haven't been concerned with shame." This is the way Julian Street begins a letter to the editor telling about his travels with Wallace Morgan and the series of articles he is writing under the title "Abroad at Home"—beginning next week. But Mr. Street's letter is better than anything we can say about it:

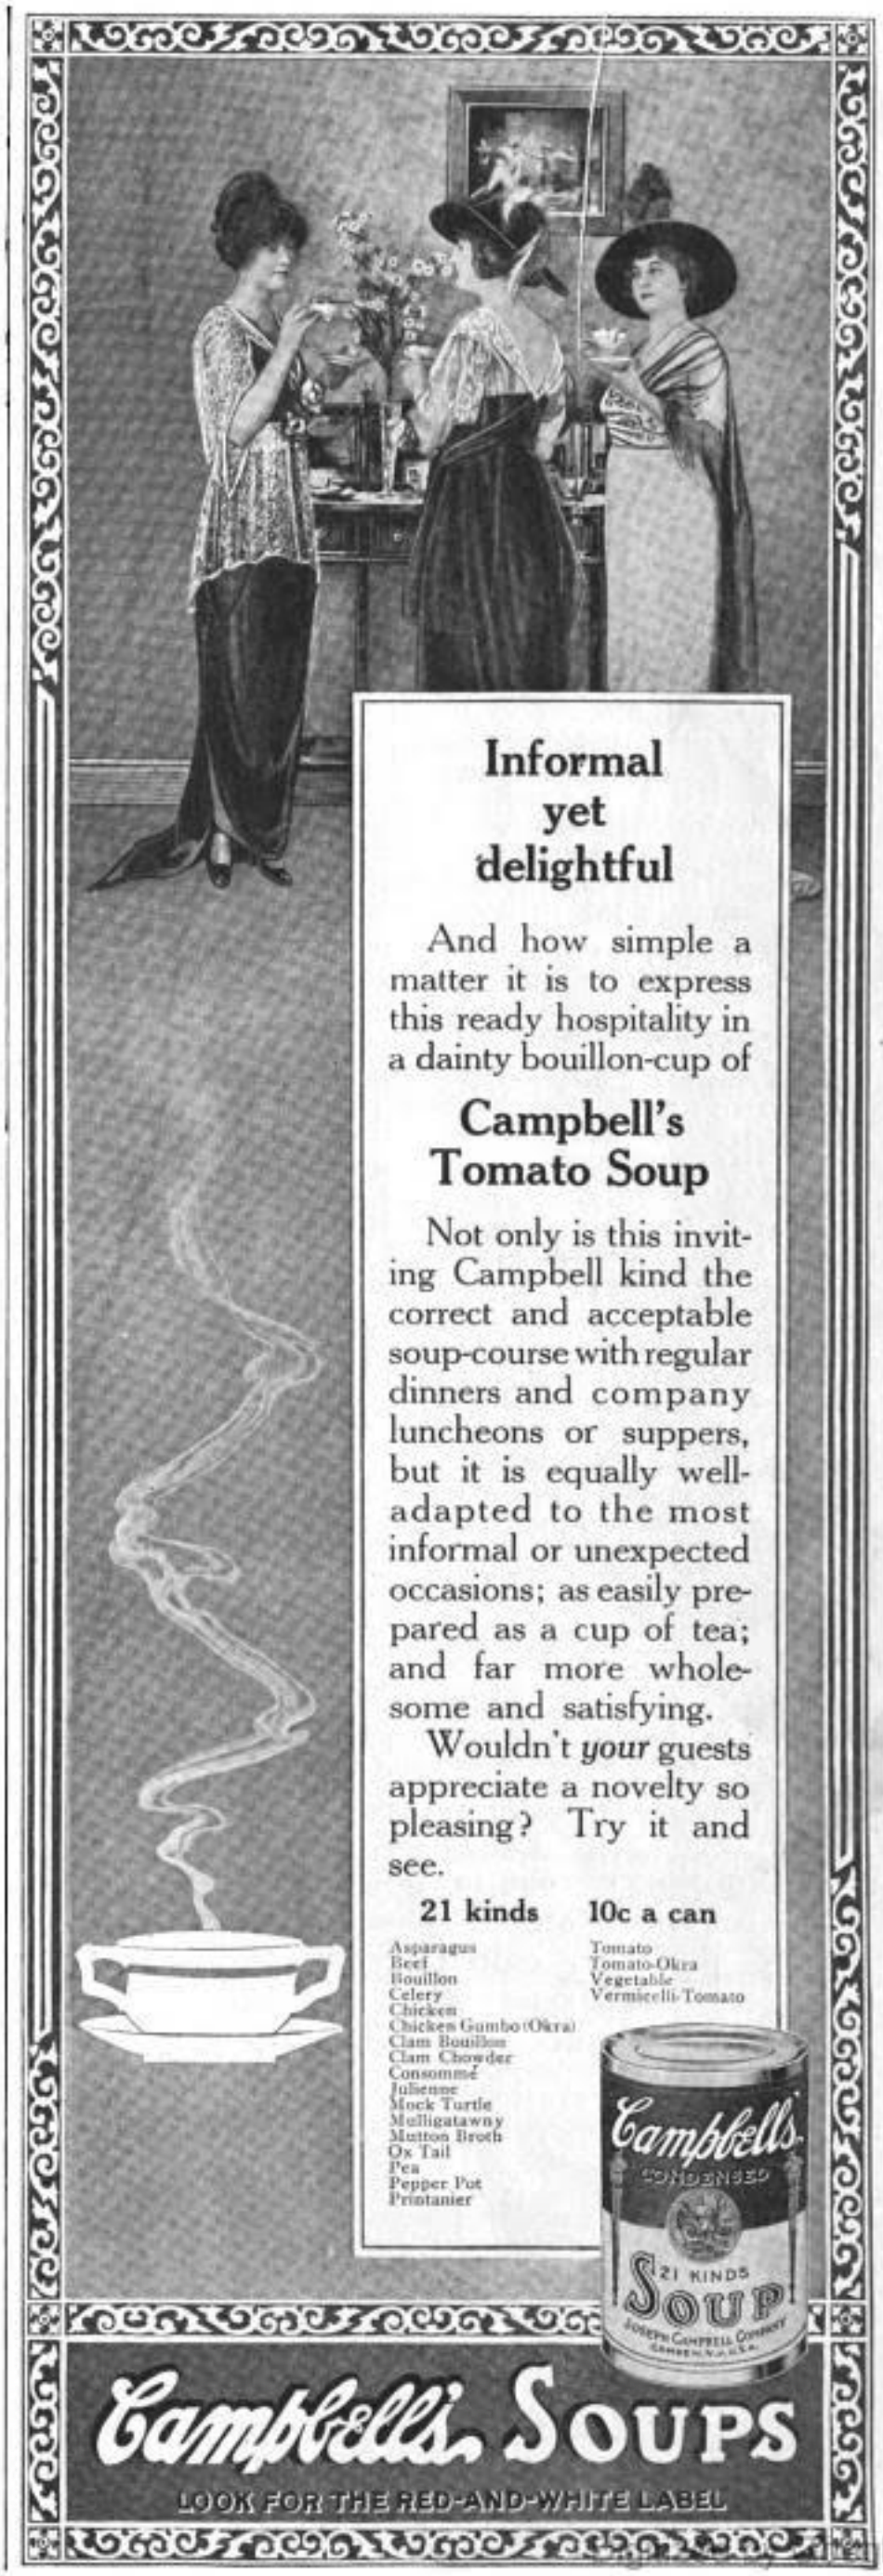
All over the country, when we have appeared, we have found that people assumed that we were gumshoeing around, looking for trouble, or else that we were going to write the kind of article which begins something like this: "Buffalo is a city situated on Lake Erie. . . ." Chambers of Commerce have deluged us with figures about the growth and development of "our fair city," including the dimensions of the new post office and the capacity of the recently erected bottling works. Reformers have invited us to dinner and pumped us full of "uplift."

We have explained and begged and pleaded, but we have seldom been able to convince them that we were mere cheerful travelers in search of adventure. And I have got so tired of explaining and denying that I have found it expedient, in general, to give the "booster" and the "reformer" the slip, or, where I haven't been able to slip him, to hire assassins to make away with him. (You will find charges for these services listed on my expense account.)

Reform? I detest it. It is the most inartistic thing we do. And it is my casual observation that reformers have done injustices almost, if not quite, as great as have been done by those they attacked.

Take, for instance, Mr. "Hinky Dink" Kenna, the famous First Ward Alderman of Chicago, or again Mr. Joseph Smith, head of the Mormon Church.

Mr. "Hinky Dink" Kenna is an exceedingly agreeable and intelligent little Irishman who does not talk that "dese" and "dose" and "dis here" sort of dialect for which he has been made famous by his biographers.



As for the Mormons, I think they are among the most moral people I have ever met. I met one old couple whom—in spite of the fact that there was another wife lurking in the background—I should like to borrow for a grandfather and grandmother for my children. They were as sweet and fine an old pair as I have ever seen. And to hear President Joseph Smith and one of the Mrs. Joseph Smiths indulging in a genial competition with Councilor Penrose as to whether Mr. Smith or Mr. Penrose had gone furthest in peopling the earth—that was delightful and instructive and beautifully domestic. (Penrose won: he had 115 children and grandchildren, while Smith was five or ten behind. But Penrose is older. He is eighty-two. . . . "You just give us time," said Mrs. Smith.)

We have interviewed all kinds of interesting people—known and unknown—famous and infamous. And we have omitted all kinds of people who assured us they were interesting.

In Detroit we spent an interesting morning with Mr. Henry Freer, the art authority, and another with Mr. Henry Ford, the automobile authority. Mr. Freer expressed something like scorn for the automobile (symbol of modern commercialism), and Mr. Ford said: "I wouldn't give five cents for all the art in the world." I think we really "got" Henry Ford. In Minneapolis we rode in a private car with an old gentleman who had been pursued for a week by Indians within a few miles of the enormous family hotel in which he now resides. They killed his companion—and with an arrow! Nothing I have seen has given me a sharper mental snapshot of the amazing growth of the United States.

On the banks of the Mississippi we played poker with a group of carefully selected colonels; we visited Mark Twain's boyhood home at Hannibal and the famous cave; at Excelsior Springs we called on Frank James, the seventy-one-year-old brother of Jesse James. Instead of looking like a bank robber, Frank James looks like the president of a country bank. He is one of the most shockingly respectable old gentlemen I ever saw. He quotes Shakespeare and the Bible, and talks ethics and morality like a Baptist parson. All that is needed to make Frank James complete is music by Sir Arthur Sullivan.

But what is "Abroad at Home" going to be? According to Julian Street, it isn't only about people; it is just the story of some of the impressions, experiences, and adventures Mr. Morgan and he have had in traveling across the northerly belt of the United States. They have had a better time than any one in COLLIER'S these last three months. They have seen 10,000 men tearing down a mountain with steam shovels to smelt it into copper. They have seen the Barbary Coast and the new Chinatown in San Francisco. "We are," say they, "amazed and dazed and tired and delighted. We have tried to keep our eyes open—and our minds." They have seen the beginnings of the Panama-Pacific Exposition, a wonderful drawing by Jules Guérin made into a superb reality. They have found out how wonderful a continent can be, and if these articles and pictures of Messrs. Street and Morgan only make a few thousand Americans a little *better acquainted with* one another their effort will have been worth while.

"Oh! I always use plenty of oil!"

Does that insure correct lubrication?

NO!

A low-*quality* or wrong-*bodied* oil, no matter how freely it is used, can never do the work of the correct lubricant.

"Plenty" of too-*light* oil often leads to loss of compression and escape of explosion. This means loss of power and unnecessary consumption of gasoline.

"Plenty" of too-*heavy* oil will often fail to distribute properly through your feed system. Excessive friction, burnt bearings and carbon trouble will result.

"Plenty" of low-*quality* oil simply means plenty of imperfect protection for the moving parts.

The absolute necessity for oil whose "*body*" is correct for his motor and whose *quality* will show maximum lubricating efficiency is entirely overlooked by the motorist who says:

"Oh! I always use plenty of oil."

By guess-work and luck you may *sometimes* get oil for your motor which is correct in "*body*," and efficient in "*quality*." You *should* be using such oil *continuously*.

You can be sure of it by using the grade of Gargoyle Mobiloils specified for your car in the Lubricating Chart on the right.

Make a note of the grade specified for your car. Then make sure that you get it. If your car is not mentioned, send for our complete Lubricating Chart.

This standard guide to correct lubrication was prepared after a careful analysis of every make and model of car. It represents the professional advice of the world-leaders in scientific lubrication—the Vacuum Oil Company.

On request we will mail a pamphlet on the Construction, Operation and Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores and others who supply lubricants.

It is safest to buy in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

Mobiloils

A grade for each type of motor

VACUUM OIL CO., Rochester, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

DOMESTIC BRANCHES: Detroit, Philadelphia, Boston, Indianapolis, New York, Minneapolis, Chicago, Pittsburgh

A Real Country-Life School

By EWING GALLOWAY

BACK in 1902 a number of farmers in the vicinity of Concord village in Knox County, Tennessee, got tired of seeing their children given training that started them toward business or professional careers in towns or cities, and made up their minds to establish, if possible, a school that would fit boys and girls for life in their own community. Book learning was all right—the more the better—but scholarship in literature and the sciences was not enough. They wanted their boys trained in practical agriculture and horticulture, and their daughters in rural domestic science.

Famous Educators Help

THEY talked the matter over among themselves, and when they got ready to devise definite plans they called in such men as Charles W. Dabney, then president of the University of Tennessee and now president of the University of Cincinnati; Philander P. Claxton, at that time professor of education at the University of Tennessee, now United States Commissioner of Education; J. D. Eggleston, who afterward became president of the Virginia Polytechnic Institute, and Wallace Buttrick, executive secretary of the General Education Board, New York City. When the plans were agreed upon Mr. Eggleston made a personal canvass of the district and helped some of the local citizens raise $5,000 by subscription, which amount was doubled by a donation from the General Education Board. The University of Tennessee was interested in the success of the institution, because it wanted to be instrumental in establishing a school that might serve as a model for rural communities throughout the South and be an object lesson to students at the university who intended to become teachers.

An incorporated district board of trustees bought a farm of twelve acres near the intersection of two pikes a mile and a half from Concord, and built a wooden house of six rooms and an assembly hall. They converted the old building which stood near by into a cottage for the principal, and erected a good barn to be used by the school. The institution, known as the Farragut School, was to be a combination primary and high school. The courses of study provided for were similar to those in the usual country school of this size, with modifications to suit the particular needs of the community. The school was opened in February, 1904, and its equipment was gradually improved. Many people of the community looked upon it as an experiment at the start, but it wasn't long before all their doubts about its success were changed to certainties.

Inspired by Fire Loss

THEIR loyalty was proved when, in March, 1906, the building and all the fixtures were destroyed by fire.

The destruction of the building made the patrons more ambitious than ever. They found temporary quarters for the school, collected the insurance money, which amounted to $3,500, raised a substantial sum by subscription, borrowed $4,500, and erected a two-story brick building with basement at a cost of $12,000. A water system and other modern equipments ran the total cost up to $17,000.

Equipments Are of the Best

BESIDES the usual classrooms, there are rooms for household economics and manual training, and a large laboratory for physics, chemistry, botany, and agriculture. The home economics room is equipped with a large range, three tables, a modern kitchen cabinet, a dining table, a fireless cooker, and all the necessary dishes and utensils. There is also a sewing machine, and the room is used by the girls' sewing classes. The manual-training room is the kind you would find in an up-to-date city school. The boys and girls have separate lunch rooms, which also serve as playrooms when the weather is bad.

The school has a $3,000 water system which is supplied from a spring by means of a double-acting ram propelled by the current of a creek. There are two large tanks in the attic of the building and water is piped as far as the principal's residence and a public drinking fountain and a watering trough for horses on the pike. Each of the main floors has two drinking fountains and there is one in each of the lunch rooms. The laboratory and kitchen are equipped with sinks and in the basement there are modern shower baths. Tanks connected with the furnace supply hot water the year round. The building is drained by a sewer which empties into the creek at a safe distance.

The school recently leased eight acres of land adjoining its own tract. The school lot is divided into two equal parts. The six acres about the buildings are used as playgrounds, the other six for farm and garden demonstration purposes. The rented ground is used to grow the larger field products. The school has an up-to-date poultry yard and keeps a fine thoroughbred mare for breeding purposes. A janitor and farm laborer is hired by the year.

Diversification Is the Idea

ALL the agricultural work is purely demonstrative. The school follows experiments made by State officials and the Department of Agriculture. The demonstrations are made on small plats, and the principal, Adams Phillips, who is a Bachelor of Agricultural Science, lays special emphasis upon soil fertilization and crop rotation. He believes that one of the remedies for poor agriculture in most of the country is diversification, and teaches Farragut boys accordingly.

Both boys and girls are taught vegetable gardening. The girls take great pride in garden cultivation and in canning. Some of them have won valuable prizes in the last two or three years.

The primary department now has about 150 pupils and the high school about 90. The tuition is free to resident pupils; those from outside the county pay $3 a month. The course in agriculture is not compulsory, but 90 per cent of the high-school pupils take it. The girls substitute domestic science for part of the agricultural work.

Streets of Gold

Being Further Chronicles of Ireland's Legacy Town

Another Thoroughly Original Article by Our Tyrone County Correspondent

W. J. KELLY

MY previous article in COLLIER'S showed that Coalisland—virtually a part of America, though really a bright, cheery, homely little spot in the land of the shamrock—was different—supremely and most happily different—for many, many sound reasons from—from, from—just from any place perhaps in the whole wide, wide world. In article No. 1 it was seen that Coalisland—owned practically by residents of the United States—was Ireland's legacy town, and that the legacies came mainly from America. The purpose of the present article is further to show the pleasant uniqueness of the charming Irish village.

The Market

COALISLAND'S market ways, like all its other ways, are entirely Coalisland's own. The town imitates no other town, and no other town imitates it. Coalisland is a first-class business spot, but is only a market town, in the agricultural sense of the word, from September 1 to May 1.

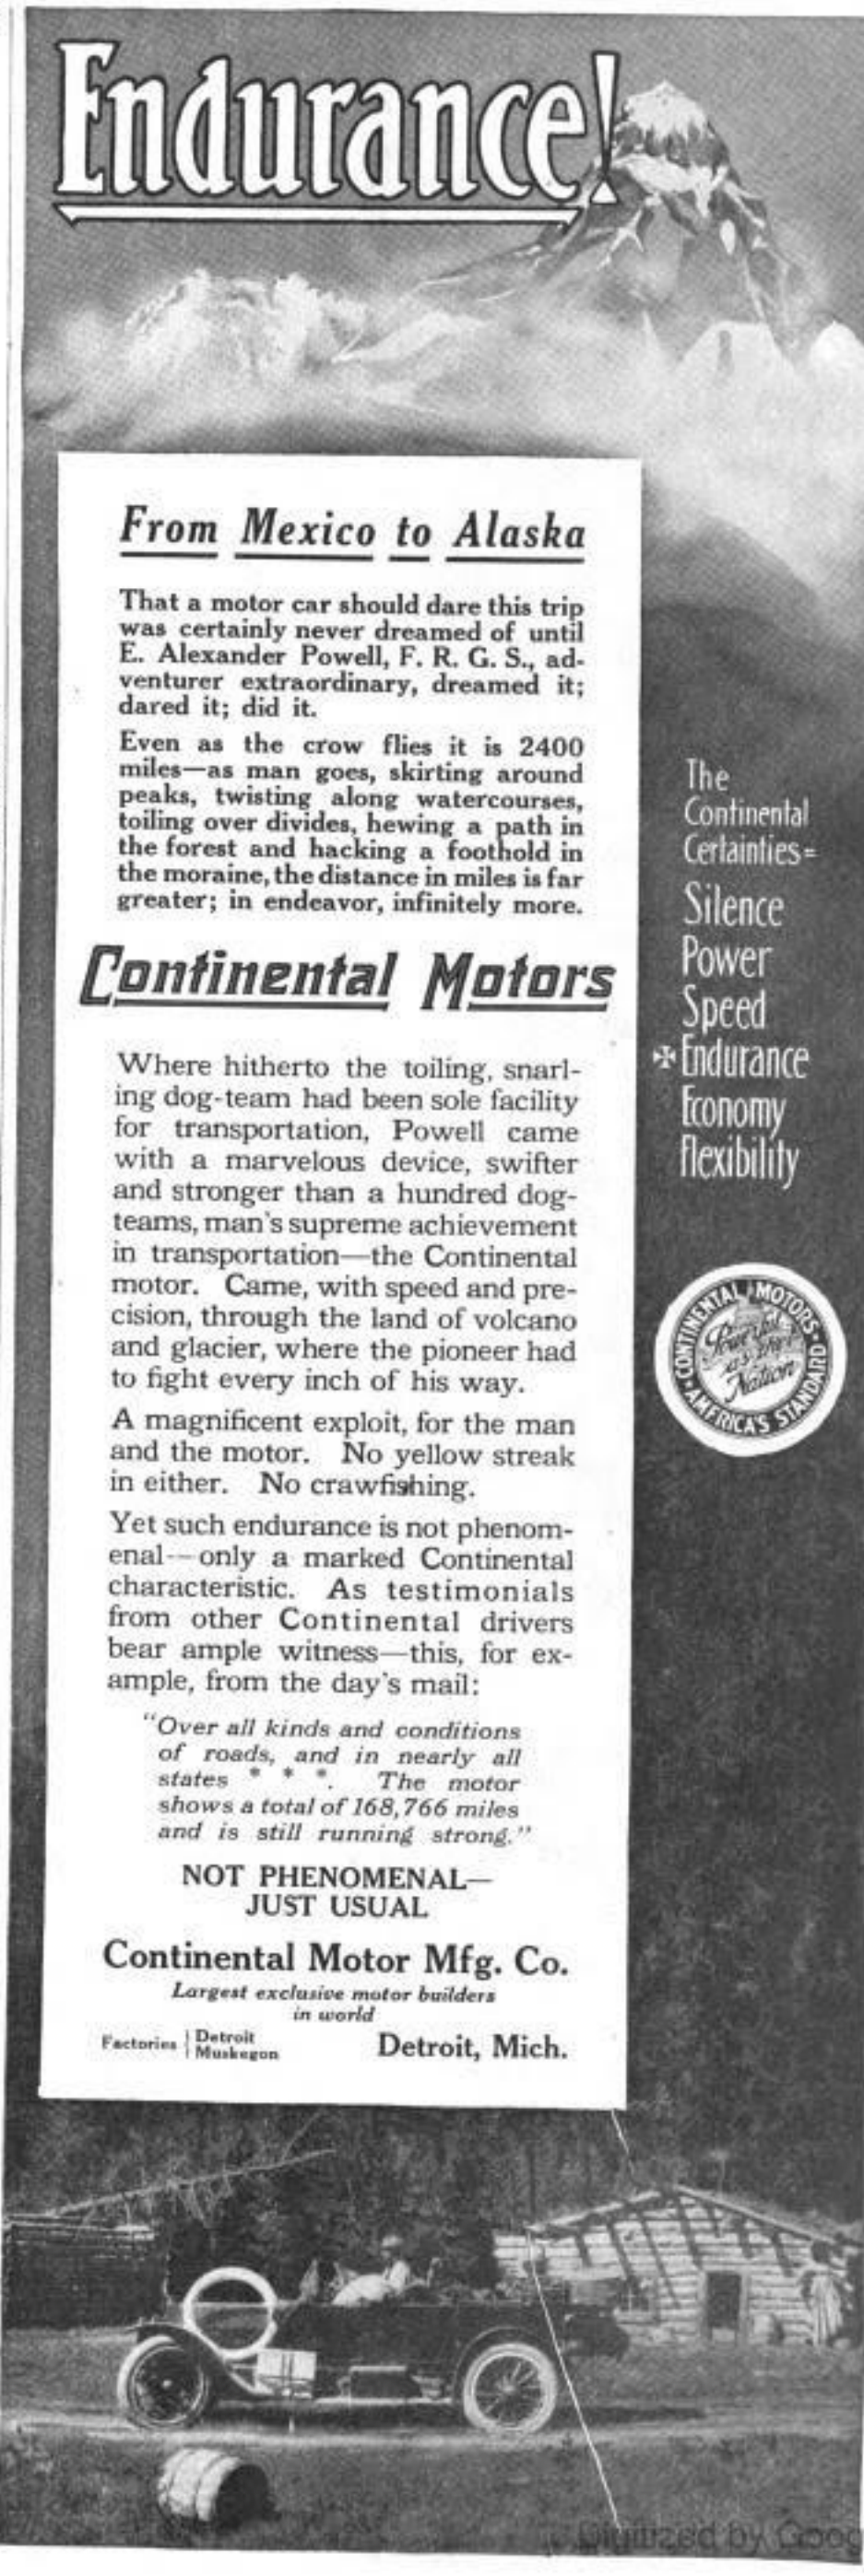
Mondays, Tuesdays, and Fridays are put down as the market days of the season, but any day does, Sunday excepted. There are no set hours either for the market. It begins at any hour and ends at any hour—up to bedtime. People who come later than this and find everybody in bed have only to awaken the weighmaster, or if they do not know where the weighmaster lives they can awaken the house nearest. That house, any house, is only too glad to show them: everybody in the town and district is more civil and obliging than another. Their stuff, then—whether it be corn, wheat, grass seed, turnips, hay, straw, potatoes, or whatever else—they leave in the market house in the care of the weighmaster, where it is kept entirely free of charge until the next or whatever day they wish to return to sell it.

Where is the town that can boast of a like homely, obliging business method?

Signboards

THE next bit of out-of-the-ordinaryism is in regard to signboards. Signboards, as a very general rule, are a sure guide to who lives in the house over which they are placed. Not so in Coalisland. The name affixed to a door head in Coalisland may be that of a person long since dead; or removed to another part of the town; or perhaps away clean out of the country altogether. About the latest case in point is that of the Cooperative Society, which removed two years ago to larger premises. The scene in town has often since been a laughable one. The shop the society left was for a long time unoccupied. It bore the society's name nevertheless. Quite a little crowd of wholesale traveling salesmen and others would almost daily wait in the immediate vicinity until the employees should return, as they thought, from their meals. Funny people laughed from a distance. By and by the house was taken over by a new tenant. The new tenant did not mind to enlighten the public anything. He just let the signboard remain as it was. Confusion remained, too.

Instances of the kind occur quite frequently all over the town; and the fun they create! If one wanted to know for a certainty where anyone lived in Coalisland, one's safest plan would be to inquire.



Well Liked

GET another town loved so by its residents! Everybody that comes to Coalisland likes it and would do anything in common fairness rather than leave it. Men even marry to get staying on. Women are often as weak and imitate the men folk for a like temporal reward. Showmen, ballad singers, itinerant musicians, and all grades of the moving fraternity like the town, too, and pay it many a visit. In fact, they feel quite at home in it. They have no other right either. They are all made welcome and get a share of whatever is going. Sometimes, however, but seldom, these people endeavor to stay too long. Coalisland won't have all that. Comers and goers must be treated alike. The first to come must be the first to go, and so on. The best of order is thuswise maintained, and adequate room and fair hospitality provided for the "people of the road" that are coming in. When members of the class refuse to go then they are chased. Not long ago a circus, for instance, was told to leave. They would not. Then force was resorted to. The circus mounted their horses and fought the people with drawn sabers. The battle lasted a whole night. The police ultimately succeeded in restoring order, but the circus were obliged to do as the people had at first directed them—namely, go. At present there are in the little town a hobbyhorse and swingboat party, four carriages of gypsies, a picture-show lot, a circus, a menagerie, also eighteen female tramps or hoboes, who have just marched in in a body—these all in addition to the usual crowds of the ordinary moving-on-hardly-noticed class of roadsters.

Letter "M"

ANOTHER feature, as odd as it is simple, has to do with the letter "M." "M" is a ruling power in Coalisland. Those whose surnames begin with "M" need not be afraid to come here. If they do not get on, the chances are the fault is their own. Luck is beyond doubt on the side of the "M" people. The following instances prove the statement conclusively:

The Catholic faith has been preached here the past quarter of a century by Fathers McShane, McArdle, McNeece, and McKee. Fathers McWilliams, McOscar, and McBrien preach the same religion in Clonoe parish, which largely forms Coalisland town. The Rev. Mr. McKay is the Presbyterian minister, and the Rev. Mr. Monk was the late local Episcopalian minister. The head of the police force is Sergeant McElhenny. The clerk of the Union for the district is Mr. McGuffin. Mr. McGuire is town clerk, and Dr. Marmion is the town's visiting surgeon, while Mr. McGartland is the newly elected district civil bill officer. Miss Magaharan is head nurse in the district infirmary. Recently appointed school-teachers are Mr. McGrath, Miss McGrath, and Miss Murray. Those who

Just Call, and He'll Bring Van Camp's

Our chefs, Mrs. Housewife, are trained to please men. For many years, in many countries, they have catered to particular men.

You may like better your home-baked Beans—because they are yours, and baked as your mother baked them. But the men folks don't. They flock to the places which serve Van Camp's. Find a restaurant or lunch room famed for Baked Beans and you'll find that our chefs have baked them.

Take this cue in serving summer meals. Learn how the men folks welcome this dish at home. Then, when luncheon or dinner seems burdensome to you, call on our chefs. Serve a ready-cooked meal of Van Camp's.

You never meet men who don't like Van Camp's. And never a man who likes other Baked Beans better.

VAN CAMP'S
PORK & BEANS BAKED WITH TOMATO SAUCE

Also Baked Without the Sauce

10, 15 and 20 Cents Per Can

Van Camp's is distinct and unique. It consists of pork and beans and tomato sauce, but it is like nothing else ever made from these things.

The beans are picked out by analysis. The tomatoes are specially grown. Our chefs have perfected a remarkable sauce, which they bake into the beans.

Live steam does the baking without touching the beans. Thus the Beans come out mellow, uncrisped and unbroken—mealy, zestful morsels.

One of the great summer comforts is a pantry stocked with Van Camp's. Also one of the great summer luxuries. The dish is a delicacy, and will bring you, we think, to want other things we cook.

316

preceded them were Mr. Mallon, Mrs. Mallon, and Miss McClune. Miss McMahon has just been chosen for the assistant postmistresship, and Mr. McNally as a postman. Mr. McMullan is railway station master and Mr. McBurnett is the local law clerk.

"M" holds the butchering trade, which is filled exclusively by Messrs. Morrison, McMahon, and McGlade. The various insurance companies are represented by Messrs. Marsh, McEvoy, and McManus. The publicans are Messrs. Murphy, Mulholland, and Morrison. The grocery trade is carried on by Messrs. McCudden, McDaniel, Marsh, Morrison, McGuire, McConomy, McGartland. Restaurant keeper is Mrs. McCudden. Messrs. McGinty and McDaniel are in the drapery business. The only baker is Mr. McGartland. Funeral undertakers and general posters are Messrs. Morrison and Murphy. Painter and glazier is Mr. Meldrum. Building contractors are Messrs. McKeown, Martin, and Morgan. The district billposters are Messrs. Mullan. The district summons server is Mr. McClernon and the village blacksmith is Mr. McManus. Boot and shoe makers are Messrs. McGrath and Mallon. The Catholic Church sextonship has been held for dear knows how long by the families McGladrigan and McStravock.

The successive managers of the Cooperative Society were Messrs. McReynolds and Mullan. The Committee of Management of the same society at present are Messrs. McKeown, McCrum, McEvoy, McLernon, and Montgomery. Mr. W. J. Montgomery, now of New York, was the first president.

Those who have fallen into the fattest legacies in the district may be found in the "M's." These are Mr. McCluskey and Mr. McParland, both millionaires through recent windfalls from America.

There is another good thing about Coalisland—its connection with the flood of Noah. Fine oak trees are growing all over the district from acorns found in Montiagh Moss, which is a township of Coalisland. The acorns are unearthed in the turf-cutting operations, which last from April to September. It is held that these acorns, with the trees that bore them, were swept to the bogs by the great destroying floods. What favors and strengthens the opinion, too, is the fact that acorns are discoverable only in those localities of the bog where there is oak timber also hidden.

Very valuable information not to be found in books, however costly, is quite safely inferable herefrom—that bogs—Irish bogs—have been made to act after the manner of Noah's Ark and preserved for the present period productive relics of the terrible world-wide catastrophe of 3,900 years ago—2,000 years before the birth of Christ; and further than that, namely, as the seed of the oak found is ripe, that the flood of Noah must have occurred in the autumn or winter season. Coalisland is worth studying.

Another strange story to be told about Coalisland is in regard to its streets and roads. A lot of road material raised from local quarries is of beautiful gold and silver color, the same as the sample herewith submitted the editors. The streets covered with these stones look like streets of gold, particularly in the sunshine, and even more so after rain or a shower, when, by their brilliancy, they actually seem to dance before the sun. The appearance of the streets is then quite suggestive of Coalisland as Ireland's legacy town. Yes, and of more, namely, of how beautiful must be the purely golden walks of Paradise, and so force one to regulate one's life that one's eternal home may be the land of inconceivable beauty.

No wonder Coalisland is, and always has been, entirely unconnected with serious wrong.

Colyums and Colyumists

By W. B. BLAKE

"WHAT is a 'colyum'?" People have put this question to us since COLLIER'S inquired some time ago: "Who writes the best 'colyum' in any daily paper in this country?"—and proceeded to name B. L. T. of the Chicago "Tribune" and F. P. A. of the New York "Tribune" as crack colyum conductors. "Is there a third?" COLLIER'S inquired. "If so, do let us hear, for we'd like to rush in a subscription."

Now, if you don't know what a "colyum" is, and how it differs from an ordinary column, we advise you to subscribe to one of the newspapers just named—whichever is published nearest your home town. The only trouble is, in case you don't like humor, you may not stand for these "colyums."

The replies to the question, "Is there a third?" have rained in on us from every second post office in the U. S. A. From Pasadena, Cal., N. P. Spofford post-cards the praises of Henry James—not the James what Maisie knew, but him of the Los Angeles "Tribune." Folks in Los Angeles chant laudations of the verse by E. A. Brinsted in the "Express"—verses full of the life of the wide Western plains, and of visions of the desert, and of figures of big-hearted men and heroic women. Yet colyumists do not live by verse alone. From Minneapolis "C. F. A." writes his opinion that "Quentin's Corner" in the Minneapolis "Tribune" is equal to the Chicago "Line, type." That is only one of the boosts for Quentin—who deserves all the nice things said of her daily pome and bunch of cheery anecdotes. "Quentin" is the only lady in the colyum game whose name comes tripping to our pen; it is Miss Clara Chapline Thomas. "I suggest that you familiarize yourself with the column by 'The Optimist' (Leigh Mitchell Hodges) in the Philadelphia 'North American,'" writes N. H. Converse. "The Optimist" is an uplifter; very different, and very refreshing too, is the learned Philip H..le, who (when he has written the dramatic and musical criticism for his paper) does the Boston "Herald's" "As the World Wags." This is bookish waggery—yes, and gastronomic lore. When some one writes in to ask why and wherefore he wags, "the object of this column," he explains, "is to provide a waste pipe for the intellect of the leisure class, to disseminate useful misinformation and useless information, and, incidentally, to raise the moral tone of the community." "P. M. P." (Paul M. Paine) of the Syracuse (N. Y.) "Post-Standard" deserves the praise he wins by his meditations and babblings o' green fields. One of our correspondents names Newton Newkirk of the Boston "Post" as conductor of the oldest "colyum" in the country—and adds: "But, unlike many things from Boston, it has improved with age." Frank M. O'Brien's column in the New York "Press" is a much more purely recent invention. "A wireless 'In the Air'" (again we quote) "ought to reach you from Leonard H. Robbins of the Newark (N. J.) 'News.'" Then there's "Bix" of the Nebraska "State Journal" (A. L. Bixby). But James Melvin Lee, director of the Department of Journalism in New York University, writes to remind us that "it's bully good stuff COLLIER'S is printing these days from the pen of George Fitch—but no better than he used to put daily in his column in the Peoria 'Herald Transcript.'" That column of Fitch's ran for six years; and, as he himself boasts: "I never quite got fired."

Is there a third?

Well, perhaps no one unmistakable, inevitable third—but there are keen colyumists, some of whom are as affectionately regarded by their public as ever F. P. A. or B. L. T. by theirs. "Judd Mortimer Lewis of the Houston (Tex.) 'Post' is the par-excellence man when it

Wilson Bro's
Athletic Union Suit

Licensed Under the Klosed-Krotch Patents

AN undergarment for active men keen for comfort. Fitted with the patented closed crotch which is permanently closed and does not depend upon buttons to keep it closed. No edges or buttons between the legs. No gap or bunch-up. Always orderly and smooth. Separate opening front and rear. *Wilson Bro's* Athletic Union Suit is the only one of its kind that can be made with this exclusive patented comfort feature.

Made of imported and domestic woven fabrics. Expertly cut, fashioned and tailored with the same care and skill that have distinguished *Wilson Bro's* goods since the firm was established in 1863—a period of 50 years.

This convenient, comfortable garment is ready for you *now* at your furnisher's—$1.00 and up—sleeveless and half-sleeves, knee length and three-quarter length. Boys' sizes, 50 cents and up.

Other furnishings bearing the *Wilson Bro's* mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc., each line measuring up to the exceptional standard of merit which this house has ever maintained.

All Wilson Bro's Specialties should be at your furnisher's. If he cannot supply your particular need, he can get it for you on short notice.

Look for this Label

Wilson Bro's
Open-Mesh Union Suit

Licensed Under Klosed-Krotch Patents

The only open-mesh union suit that can be made with the same patented closed crotch as is used in *Wilson Bro's* Athletic Union Suit. Airy and absorbent, well fitting and elastic. Long sleeves, half sleeves and sleeveless; ankle, three-quarter and knee lengths. $1 a garment and up for men—50 cents for boys.

Wilson Bro's
Combinette Shirt

Licensed Under Klosed-Krotch Patents

Combination of outing shirt and drawers with the same patented closed crotch that distinguishes *Wilson Bro's* Athletic Union Suit. Can't hike out of your trousers. Always hangs smooth. Allows absolute freedom in swinging a racquet or club. Soft attached collars or without. Half or full sleeves. $1.50 and up.

Wilson Bro's
Combinette Pajama

Licensed Under Klosed-Krotch Patents

A one-piece pajama. A brand-new idea that eliminates the drawstring—no bind at the waist. Neat and dignified. Convenient and comfortable all over. Has same patented closed crotch as *Wilson Bro's* Athletic Union Suit.

$1.50 up, in a variety of cosy materials.

Wilson Bro's Chicago

Why so many cars equip with EDISON MAZDAS

is easily understood when you add to the unrivalled experience of manufacturing over 500 million EDISON lamps our years of close cooperation with lighting system makers and that world-wide research—"MAZDA Service."

EDISON MAZDA
Automobile Lamps

are so nearly ideal in efficiency and sturdiness that more than 40 leading cars equip with these reliable lamps and owners everywhere use them for renewals on cars, motor boats and motorcycles.

You get these lamps wherever you see an EDISON Agency or Service Station sign displayed. You can get a complete set packed in this handy little lamp-chest. And by keeping this chest always filled with the new EDISON MAZDAS, you protect yourself against emergencies and insure maximum lighting system efficiency.

Be sure the MAZDA lamps you buy bear the name EDISON

EDISON LAMP WORKS

comes to making a fellow really enjoy reading 'comebacks' and original stuff," writes A. Kent Watson, a newspaper man of Orange, Tex. That up-to-date and essentially low-brow joker, "Luke McLuke," on the Cincinnati "Enquirer" ("Bits of Byplay" he calls his column), is about as popular with the traveling public and the scissors journalists as Philander Johnson of the Washington "Star." Some one else praises C. A. Blakesley's "Starbeams" in the Kansas City "Star," and still another Charles L. Edson's column in the New York "Evening Mail," while William Marion Reedy of "Reedy's Mirror" puts in a word for Tubman K. Hedrick of the Chicago "News," P. H. Collier of the St. Louis "Globe-Democrat," and Clark McAdams of the St. Louis "Post-Dispatch." By the way, anyone whose job it is to run a colyum has our advice to read what Reedy writes about this colyum craze. His pointed words of caution are characteristic in their good humor. Reedy knows the difference between a mere "column" of clipped jokes and tabloid editorials and a real "colyum."

"Take care, mum, the soup's terrible hot: Oi very near scalded me thumb off"

The names of numerous excellent editorial writers and old-line impersonal jokesmiths have been proposed for that third place in the galaxy. If you ask us, what are the colyumists themselves? we will make reply in the language of Oliver Wendell Holmes:

> "Some think they are crusaders sent
> From some infernal clime
> To pluck the eyes of Sentiment
> And dock the tail of Rime,
> To crack the voice of melody
> And break the legs of Time"—

whereas others of us think the colyumist rather that "guide, philosopher, *but* friend" (which is the way F. P. A. once dedicated a book of verse to B. L. T.) who cheers us over breakfast table or on subway journey with quips and cranks and irresponsible jestings, satire and common sense, and comments on the passing show—city or country, art, literature, and baseball: the humorist who lends to the editorial page a sense of personality that is, in its jolly way, better than the big bowwow editorials from which it furnishes relief—cosmic or comic.

There is, of course, a difference between the metropolitan colyumist and his rival of the back-home press. Somewhere between the two falls "C. C. B.," author of the Detroit "News" "After Thoughts." Personally we enjoy the pungent earthy flavor of Fred Heiskell's "All Over Arkansas" in the Little Rock "Arkansas Gazette"—much of which is quoted matter. Something of the colyumist's methods is suggested in the comment of the Piggott (Ark.) "Banner": "'The All Over Arkansas' man can afford to be funny when the other squirrel heads furnish the dope. However, we don't begrudge him his job. The man who takes it upon his shoulders to squeeze the juice out of the hundred or more rags (one among which ours is often found) that go into the "Gazette" office each week, deserves all the honor his fellows can bestow upon him." And the "All Over Arkansas" man replies good-naturedly: "There are about 300 of them each week, and, taking them by and large, they rank as well as any 300 country newspapers printed in this glorious country of ours."

But—to repeat—"Is there a third?"

"Just look over your exchange table," advises the Owensboro (Ky.) "Messenger." "Bert Leston Taylor of the Chicago 'Tribune' and Franklin P. Adams of the New York 'Tribune' [Franklin *Padams* is C. L. Edson's name for him] are great column conductors. They are, however, of one pattern. . . . Sam Kiser writes in the Chicago 'Record-Herald' every day a column quite as good as the one Bert Taylor writes in the 'Tribune'—not quite so clever, but with a humanness that reaches more people out in the little towns and country places. The same is true of Don Marquis on the New York 'Evening Sun' [Bravo! say we]. Out in the smaller cities there are column conductors as good if not better than any of the four. Old Frank L. Stanton has written 'Just from Georgia' in the Atlanta 'Constitution' since Taylor and Adams and Kiser and Marquis were in their cradles. Edgar A. Guest on the Detroit 'Free Press'—men and women will know by heart his 'It takes a heap of livin' in a house to make it home' when the world has forgotten every word written in 'The Conning Tower' and 'A Line o' Type or Two.'"

The beauty of the colyum is in a high degree evanescent. Its effect is cumulative. You enjoy John D. Wells's "Grave to Gay" column in the Buffalo "Evening News" not merely because it contains good lines to-day, but because you enjoyed yesterday's column. Then much depends upon the way the various items in a column are built up one upon the other; often it is the transitions or the comic absence of them that counts. Many of the colyumist's best laughs are raised by his quotations from exchanges — as when B. L. T. lifts a want "ad": "NIGHT ENGINEER—To Take Care of high-pressure boiler about 45 years old." "The Occupational Zero" is Mr. Taylor's heading for this important item. Pried out of its proper position on the "Tribune" page, the humor of the "ad" is only moderate. It's team work that counts. But here is a letter from Hargrave A. Long:

We in Cleveland rise in tolerant indignation that you should not know of our beloved "Philosopher of Folly" when you ask if there be a THIRD to rank with "B. L. T." and "F. P. A." of the Chicago and New York "Tribunes."

The "colyum" that the "Philosopher of Folly" writes, in the opinion of the readers of the Cleveland "Plain Dealer," is far superior even to those admirable tidbits collected by B. L. T. and F. P. A. Our "Philosopher" has cleverness and wit, charity, tolerance, and discriminating taste that has gone far in building up for him a loyal following that seeks his "colyum" first thing each week-day morning.

Just picture, too, the uniqueness of assembling some fifteen of his volunteer assistants at a "Contributors' Club" banquet—as our "Philosopher" did on St. Valentine's night. Pegasus McNutt, Scripsit, Margheritone, Ino, De Embie, Chester Q. MacDuff, Secra Bonna, K. R. B., and many others graced the festal board.

His name, do you ask? Ted Robinson. A Hoosier, of course.

To paraphrase—"Taylor, Adams, and Robinson, but the greatest of these is Ted."

A good letter—though we're sorry it leaves out W. R. Rose of the same staff as Ted Robinson—Rose's "Plain Deals." But "A Man from Home" writes even more briefly than Mr. Long:

Yes, there is a third.

Harry M. Lynch of the Kokomo "Daily Tribune": Kokomo, Ind., Howard County, U. S. A. Why, but for this here Lynch, Bert L. Taylor would be a tailor and Adams just a common Adam. Now come on and subscribe. Taylor and Adams done it long ago.

Shall we confess? We didn't know Mr. Lynch's work till we got this letter from his enthusiastic admirer—but we know it now. Moreover, we have exchanged greetings with him—and just on the strength of the letter he has written us we are inclined to give him and his Kokomo (Ind.) "Tribune" a Hall of Fame seat alongside the "Tribunes" of Chicago and New York and their Adams and Taylor. Here is Mr. Lynch's letter:

Mine is a small town stuff local, topical piffle. The man (I assume it was a man) who nominated me to wear Adams's and Taylor's custoff shoes has pulled a better joke than I could evolve in a month.

I am not insensible at the distinction of being mentioned even incidentally in big-league company. You had never heard of me and how should you know? But I read my own stuff every day. It has the pale virtue of being my own, but it has nothing else.

And at that I sometimes suspect myself. With your permission—

> When Taylor writes his bloomin' Line,
> His japes and jibes and wheezes pert,
> A heartfelt gratitude is mine—
> I grab the shears and steal from Bert.
>
> And when Frank Adams pulls a MOT
> I have no sinful pride—not me.
> I snitch it, and with head bowed low
> Return due thanks to Franklin P.
>
> Therefore our names are linked, we three
> (Oh, flattering heartstrings, peace; be still),
> Though they have never heard of me,
> I manage on the stuff they spill.

Reeling off mile after mile of the boundless out-of-doors on an

Indian Motocycle

Out into the open! A constantly changing panorama of life and unusual sights. Great driving power under you. Unlimited distances at your command.

You are the master whether throttled down to a walking pace in congested traffic or taking a clearaway road at sixty miles an hour. Comfort is yours—road shocks and vibrations absorbed by the Cradle Spring Frame.

There's a snap and relish to motorcyle riding unlike any other travel. It's a new sport—a fine one—a national one. Today the Indian tribe numbers over 100,000.

1914 Indians have 38 betterments, and full Electric Equipment. A 32-page book illustrated, describes this year's Indians in full—shows all models, describes mechanical perfections in detail and puts you motorcycle wise. To read it is to become a qualified judge of motorcycles. Sent on request.

"The Children's Hour"

The best hour of the day for the little folks is when mother shares around a package of those toothsome confections—Necco or Hub Wafers. Little faces brighten up in anticipation—older folks are contented, because they know the kiddies can *safely* enjoy themselves, for these little "disks of delight" are guaranteed pure and fresh.

Necco Wafers
Glazed Paper Wrapper

Hub Wafers
Transparent Paper Wrapper

are made of the purest ingredients in America's largest, cleanest, brightest, airiest candy factory. Made in nine tasty flavors and protected from the dust and dirt by the familiar sanitary wrapper.

Look for the "Necco Seal" on every package—the synonym of confection perfection.

Makers of "Necco Sweets"

Wagging World

(Concluded from page 17)

apparent that the Mississippi River is bound for Colon itself. In fact, geologists, who profess to have known the Mississippi when it was a mere infant instead of a parent, claim that it has proceeded upward of five hundred miles along its journey in the last few million years, and that it is now pushing its famous delta southward faster than ever, owing to the assistance of the Government engineers who have confined the river in narrow, swift channels, thus compelling it to dump its silt far out in the Gulf. In due time, unless some violent change in its present policy is made, the Mississippi will have pushed southward between Honduras and Cuba, into the Caribbean Sea, and on to Venezuela, and the Panama Canal will be merely a surface wound in the swollen and shapeless isthmus. Time was when the mouth of the Mississippi was at Cairo, Ill., and the Western mountains were twice their present height. We of the much-advertised human race, who are boasting about cutting a slot through Culebra Hill and running a ribbon of water across the isthmus, are painfully unappreciative of the force which has been painfully lugging the mountains of Montana thousands of miles to the Gulf and dumping them into it without the aid of steam shovels or Congressional appropriations.

EACH year the Mississippi adds upward of a square mile to Louisiana at the expense of the hills of the Northwest and the cornfields of Missouri and Iowa. Some day Louisiana will be larger than Texas, the Cuban boundary line on the west will be a barbed-wire fence, and all South America will watch the relentless approach of the United States flag at the end of the Mississippi jetties with caustic remarks about the Monroe Doctrine and its sinister ulterior purpose.

There are many who live but for today and insist on letting to-morrow grow up by itself. But to those of us who would rather worry about to-morrow than take any great interest in the present the above condition is highly recommended. It will happen before our coal is exhausted, before the sun becomes subject to light frosts, and before the eugenists put love and marriage out of fashion.

The Young Draft

(Concluded from page 12)

I'd signal the chief palace mess attendant to mix up a couple more with plenty of ice in case he might be feelin' downhearted. 'An' go to it, old scout,' I'd say, and I bet the first thing you know he'd bounce up out of his mahogany chair and pass the word for his high admiral, and to him he'd say: 'Blow 'em out the water!' And soon's he did, in we'd go, and then 'Good *night*, Mister Hurter, there'll be somethin' doing for us all here, you betcher.'"

Dreams of the Road to Mexico City

OF course there is no recruit green enough to take the Mexican navy seriously, but when they say: "D'y' s'pose there's anybody else behind this old Hurter that makes him so stubborn?" and, of course, if there is—if it is only Huerta and Villa who will get together, and so forge a united Mexico—why, then, who knows, the dream of their lives might come true and they yet haul their deck guns over the king's highroad to Mexico City.

And after the bosun's pipe and his seagoing growling voice had called them to stand by their hammocks, they stood by and presently disposed themselves about the deck wherever, in the increasing summer warmth, they could find a more comfortable sleeping spot; and while the mandolin and guitar artists were thrumming away, they lay there and listened, and talked while they listened, of their high hopes for Mexico.

And the little cruiser steamed on, and when every day's run was charted on the ship's bulletin board the new draft were right there to see how she was getting on. Every day was a day nearer. Four days, three days, two days—oh, it wasn't so far away now. Ho! for the beach when they struck there, and ho! for Mexico City and the long haul over the king's highroad then.

It is wonderful to be a young bluejacket in war time!

For the Superb Residence Or the Simplest Cottage

for professional decorating or home "tinkering", Ripolin Enamel Paint gives the utmost beauty of effect at the lowest square-foot cost per year.

This is because Ripolin never loses its flawless surface or purity of color. You escape the trouble and expense of re-painting—simple cleaning is all that is needed.

Send For This Tin

which shows the clear, soft tones of Ripolin Enamel Paint. Bend this strip—make any test to prove to yourself that Ripolin is so elastic and tenacious that it cannot peel, flake or blister. This strip will show you why Ripolin retains its freshness year after year without repainting, but merely cleaning.

Made in Holland by the old Dutch hand process, Ripolin is the most satisfactory enamel paint that money can buy—either in that brilliant high gloss like glass, or in a beautiful eggshell finish, or absolutely flat. Any tint desired may be obtained by mixing pure color ground in oil with white Ripolin. Its ease of application, enormous covering capacity, and extreme durability make it the most economical as well. A gallon will cover from 500 to 700 square feet depending upon the surface. Your painter or decorator will tell you the quantity needed.

NOTE SEAL ON EVERY CAN

Let us send you a book showing residences, exclusive clubs and palatial hotels finished with Ripolin. With it we will send the Ripolin coated strip of tin mentioned above. Also name of the Ripolin dealer in your territory.

"Smile at Miles"

Too late!

You are a success, aren't you?
Your time is worth money, isn't it?

Can you afford to gamble with punctures—missing important engagements: losing by one such occurrence the cost of puncture-proof insurance for a year?

Play safe! Here is a tire that will protect you against punctures and lost time—*against the high expense for inner tubes that punctures invariably cause.*

Lee PUNCTURE-PROOF OR MONEY BACK Pneumatic Tires

must prove absolutely puncture-proof—or you get back every cent you paid for puncture-proof insurance.

Back of that statement stands an absolute guarantee.

Shall we send a copy of the Guarantee, and Pamphlet D, with full details on construction and owners' reports of service?

Stop taking chances. Write today for this free booklet.

Lee Tire & Rubber Co.
Conshohocken, Pa.

Sold in all leading cities. Look up "Lee Tires" in your 'phone book

Note This Construction

Not a troublesome outside cover to kill resiliency—not an inner case to be attached.

3200 steel discs imbedded *in* the tread.

Each disc good for a smile—and far more than a mile.

Every disc a guarantee against puncture.

Discs overlap without touching. Imbedded in rubber with fabric between layers—free from all danger of heating or tearing loose.

Made, like all other Lee tires, of the perfected

"Vanadium" Rubber

which so materially increases resiliency and mileage.

Furnished either in regular tread, or with the effective Lee

"ZIG-ZAG" Non-Skid Tread

"Master of Slippery Situations"

Ask the dealer to show you this sturdier, more efficient non-skid (note cross-section).

"Soldiers and Sailors, Too"

(*Concluded from page 13*)

near the foot of the fortress waiting to hear news of a company of marines which had been lost. Suddenly *bang, bang, bang!* we heard the guns going up at the top of the bluff, and we recognized the sound of the Springfields. It was the lost squad. We joined 'em. I don't know how we got up there, but we did. The lost squad had been wandering around looking for a way back to us; they'd happened on a trail which led directly to the rear of that fort, so they took the trail—and the fort.

"The official reports had it that the whole thing had been planned, but the boys in the lost company weren't told about it if it was. They were almost as much surprised as the insurrectos."

He Couldn't Resist

A GRAY old noncom, walking briskly past the barracks, nodded at Sergeant Smith. "That's Dad," whispered the Sergeant, "the oldest man in the garrison. He was on the *Oregon* when she fought at Santiago and he's been in action in about a hundred other places. Hello, Dad, going to Mexico?"

Dad stopped a moment, his foot on the step.

"Joe," he said, "when this here war talk began I says to myself: 'Dad, you've had twenty-nine years of it—next year you retire. You don't want any more action in yours.' And I just plain prayed for peace—or at least I prayed they wouldn't send me down there."

"So you don't want to go, eh?"

"I didn't at first, but say, when the news began to get real lively at Vera Cruz and Tampico, I could feel the old fever coming over me, and now, like a derned old fool, I'm hoping and praying they'll send me with the next detachment. Heard anything?"

"Nope, but I have hopes, too."

Twenty-nine years in the service—twenty-nine years of drill and discipline, of skirmishing, fighting, and policing in Cuba, Porto Rico, Panama, the Philippines, Nicaragua, China, Hawaii, and Japan—more than a quarter of a century spent in serving the flag of his country in peace and in war under many skies, away from his home, his wife, and his family, yet the old man was ready for active service again! Spirit of the marines? That's it.

The Marine Corps is the best drilled, the most efficiently trained, and the most perfectly uniformed body in our active service. That is no insult to the other branches of the service. There are many units in the other arms which are nearly perfect in those qualities; the only difference is that the Marine Corps is a little better. There are many reasons for this, but I think the main reasons are that the officers are closer to their men, looking out for their welfare, that they are not everlastingly changing their uniform and equipment the way the army is, and especially that they are taught that cleanliness of mind and uniform is the first requisite.

It is the all-round work of fighting and working on ship and ashore that makes the Marine Corps what it is today. It may not be long before the fickle public forget the story of how Dan Haggerty of the Marines died at Vera Cruz the other day. He was just a private, and the report of his death didn't take many words in the navy cipher book, just "27860 killed in action, April 21, 1914." In the Navy Department some one will take down his envelope and close his military record card with a rubber stamp, "*Dead*," but it will be a long time before his example is forgotten.

The Spirit of Dan Haggerty

IT was a hot moment for those on shore, one of those uncertain moments that you never know and never can realize until you have experienced it yourself. To show your head is almost certain death. A message had to go to the ship, and an officer called for a volunteer—a dozen answered, but Dan Haggerty got his chance. He grabbed the flag and jumped up on top of the works. His message was only half finished when a bullet found its mark, and he fell back dead, still clutching the flag. He never finished that message to the ship, but as long as our flag waves Dan Haggerty will not have signaled in vain.

Right in Your Neighborhood You will Find a Ford Car Equipped with a K-W MASTER VIBRATOR

Ask the Owner what its doing for him every day

YOU will find him enthusiastic about his K-W, and he can tell you better than we of the economy, reliability and efficiency of the K-W Master Vibrator.

The K-W Master Vibrator contains a large, powerful condenser of proper capacity and exceptionally large, solid, platinum iridium contact points—a combination that insures a hot spark.

Over 90,000 Master Vibrator users have learned the value of this hot spark.

K-W Master Vibrators are sold by reliable dealers everywhere.

$15 with regular kick switch
$16 with Yale Autolock switch

You can attach one to your Ford in a few minutes without making any changes in your car.

Be sure you get a K-W. Look for the trade mark and the serial guarantee number. They protect you against imitations. If your dealer cannot supply you, we will send one direct, postpaid on receipt of price.

Sensitive Soul

"Mary, your new maid's red hair simply won't do with this blue wall paper."
"It's hard to get anyone, Herbert! Couldn't we redecorate?"

A Big "Scoop"

THE foreign newspaper correspondents in Mexico City heard of the landing of marines at Vera Cruz almost by the time the first of our whaleboats bumped its nose against the wharf, and there was a desperate effort to get the news past Huerta's censors. Nothing that looked like a war telegram was allowed to go over the wires to the Vera Cruz cable office, which was still in the hands of Mexicans, and all the correspondents but one were in despair. The one who did not lose hope was William G. Shepherd of the United Press. Shepherd went to the censor's with this harmless-looking message: "United Press, New York. Films forwarded in Vera Cruz."

The censors could see no war news in the dispatch, and let it pass. It was relayed via Galveston and reached New York at 3:10 in the afternoon. The United Press editors referred to a cipher code that Shepherd had sent in several months before and found this:

"Our troops have entered Mexico," will read: "Films forwarded."

"Films forwarded in Vera Cruz" meant, of course, that the American forces had landed there. The dispatch was immediately flashed to all newspapers with United Press service, which reached their readers with it before the other papers knew what had happened. It was a big "scoop" for the United Press, and Shepherd became a hero in newspaper circles.

Every time you see a clerk footing bills you can now say:

"There is a man wasting time.

"Whose fault?"

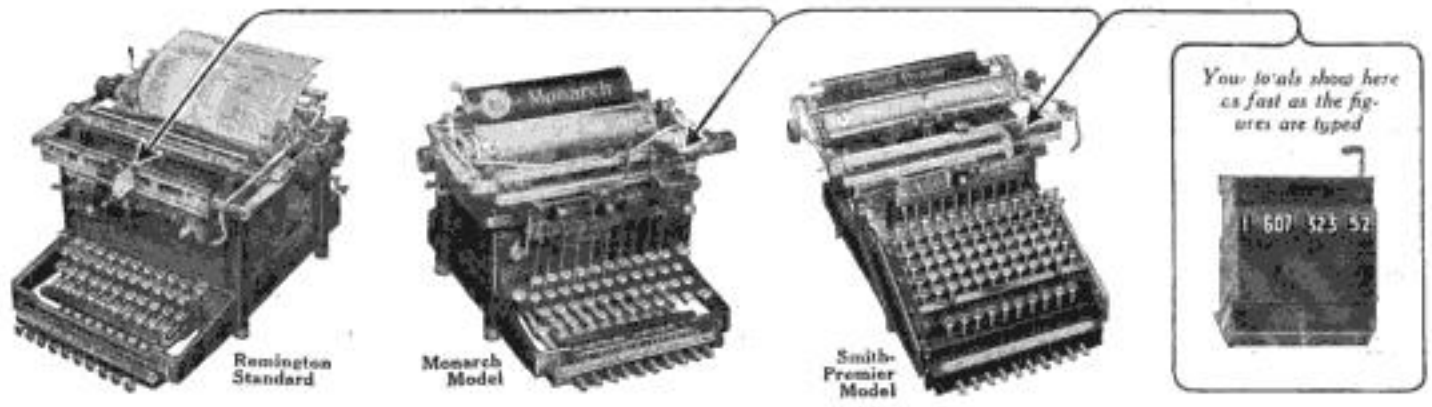
The Remington Adding and Subtracting Typewriter—a complete correspondence typewriter—automatically totals bills and statements *while it types them.*

Not a moment is wasted on footing or proving.

This machine saves 20% to 70% of the time spent on billing.

It is now used by banks, offices and stores, large and small, everywhere.

Sooner or later the adding and subtracting typewriter will be saving time in every live billing department.



When the machine is needed for ordinary letter-writing your stenographer merely touches a lever. Instantly—*automatically*—it is made ready for correspondence work.

REMINGTON
Adding and Subtracting
TYPEWRITER

Whether or not you now see the direct applicability of the Remington Adding and Subtracting Typewriter to your particular business, it will pay you to send for our new illustrated folder—"The Story of a Day's Work."

A few words to your stenographer *now* will put you in the way to receive a copy of this really valuable folder by return mail; will enable you to investigate—*conveniently and without cost*—the saving efficiency of this machine of composite usefulness to every employer of clerical or stenographic help.

Delayed investigation simply means prolonged time-waste and error-risk. So while the matter is in your mind send *today* for "The Story of a Day's Work" and learn how profit-reducing elements may be eliminated from your business.

The Pro-phy-lac-tic Tooth Brush

A clean tooth never decays—the Pro-phy-lac-tic keeps teeth clean

The Double-Squeeze at Villa Borghese

(*Continued from page 15*)

turned in the Giant-killers' favor, and the left-hander was not called upon.

Shortly before the game ended, Barney Larkin came upon the field, all excitement. He rushed up to the Giant-killers' bench, exclaiming that he had lost his gold watch fob. After the last man was out Barney had twenty willing baseball workers and both umpires raking the field for the fob that the saloon keeper was holding for a reward!

According to Barney's prophecy, Tris Ford, kind-hearted soul, advertised for the "lost" keepsake. Waiting in Chicago when the Giant-killers arrived was a telegram, charges collect, which read: "Fob found. Send on ten-dollar reward."

BUT it wasn't Barney's escapades that troubled the manager so much as the effect his raw behavior might have on the morale of the team. This, too, despite the acknowledged reputation enjoyed by the Giant-killers *sans* Larkin of being the cleanest and most gentlemanly bunch of ball players in the country.

The club was proud of such a reputation. This was what worried Tris Ford. He felt no anxiety lest Barney corrupt the team. What the manager expected was a call-down from his own men. Perhaps something like this:

"Look a-here, Tris! We care something for our good name if you don't. If one rotten apple will spoil the whole barrel, it's a sure thing one rounder like Barney Larkin will ruin our reputation for decency and gentlemanly conduct. Barney leaves a red trail all over the circuit, and we're getting tired of it. If you think there's nothing to our profession except winning ball games, why we'll try something else. And this goes!"

No, Tris Ford didn't want to have to answer back to unanswerable talk like that. Neither did he care to part company with Barney Larkin just yet—not while the temperamental twirler was holding the Giant-killers to the fore of the championship race and incidentally proving himself the best drawing card in the American League. If the team could be brought to look upon Barney as a weak brother—somebody without the pale of the Giant-killers' society—and would tolerate him for the worth of his pitching arm, the club might contrive to scale the heights and win another pennant. It was for the boys themselves to decide. Tris would have it out with them through their natural leader, Win Shute.

IT has been intimated elsewhere that a good story hangs about the discovery and capture of James Winton Shute—"Win" to his team mates as to his college intimates. Suffice it that he was captain of the varsity nine at the big university, and so devoted was he to the national pastime that he was eager to cut short his collegiate training at the end of his junior year and join the Giant-killers. But Tris Ford wouldn't listen to it. He insisted that James Winton finish his education; and ever after, when Shute considered his bachelor of arts degree with pride and satisfaction, he never failed to thank Tris Ford for his part in the capture of it. Ford alone could have kept the budding ball player in college.

Two years after graduation Shute was a regular on the Giant-killers' team, playing second base. He was batting well over .300 and covering second as though he had invented the position and was continually improving his invention. He had earned the sobriquet of the "pepper box," for the obvious reason that he infused life and go into the club. He was in the game every minute, playing always for the team, never for himself.

AND—his lips had never known the taste of liquor, as Ira Landis oratorically said one time at a public banquet; neither did the great second sucker smoke. No wonder Tris Ford looked upon him as a model ball player and sought his counsel. James Winton Shute sat at the manager's right at the meetings of the Strategy Board.

Events hastened Tris Ford's consultation with Win Shute about Barney. First of all, Shute was suffering the tortures of Job with a nasty boil on his groin—the one spot where such an affliction can most harass an active ball player. Tris Ford, sympathetic to a fault, had told Win to stay out of the game.

"With the team in a batting slump, the pitching staff wabbly, and a lead of less than two games? Not on your life, Tris! You may get the umpire to order me off the field, but I'll not quit for anybody else—get that?"

This gingery dialogue took place in Chicago. Three days later Barney Larkin failed to show up the afternoon he was down to pitch. Hawk, who didn't have the stuff, tried to fill the southpaw's shoes, and the Giant-killers were beaten—trounced three games out of four in the series.

Getting back from the grounds, the team found Barney in the hotel lobby, mixing it up with the hotel porter, a friendly soul, who had tried to lure the "full" pitcher into the privacy of his own room. At sight of Tris Ford, Barney sobered up temporarily and lurched into the elevator—and heavily against Win Shute.

"Barney, you're not worth a damn to anybody but the undertaker!"

It was the much-advertised last bale of straw. Barney's kicking over the traces and upsetting the chariot of victory in such a crisis was too much for James Winton Shute. He spoke his mind:

"If Ford doesn't tie a can to you tomorrow, the so-called hundred-thousand-dollar infield will look like a plugged nickel. Barney, you're not worth a damn to anybody but the undertaker—and he'd be taking a long chance, for I don't know who'd give up a dollar to bury you. You're nothing but an ordinary bum."

THERE was a split second when it appeared likely that Barney would strike Shute. Tris Ford, who had crowded into the elevator unseen at the last moment, scenting trouble, contrived to worm his way in front of Barney. He gripped the pitcher's wrists and held them like a vise. The danger was averted. But that evening after dinner, when Shute was sitting in his room reading, the manager came to him and unbosomed himself. Together they discussed Barney's peculiar case from every possible viewpoint.

"You put him in his right class—a bum," began Tris.

"But I oughtn't have said it," admitted Win.

"Never mind about that—you were justified in saying 'most anything—you playing for the club when you should be in bed."

"Cut that out, Tris. I want the pennant—want to get into the World Series money again—you know it."

"So do we all of us," agreed Ford.

WASHINGTON, D. C.

"And there'll be no pennant this season if we can Barney Larkin—that's a cinch." Tris Ford suppressed a sigh of pure relief. He now ventured to remark:

"If you boys want me to let Barney go, why—he goes! You won't have to say the word twice. It's up to you."

"We can't win without him—you appreciate that, Tris. He's a weakling, and we've got to get along with him somehow or other."

JAMES WINTON SHUTE exercised his gray matter for a brief space of time; then his face brightened, and he proposed:

"Have a scheme—why not appoint a keeper for Barney?"

"A keeper?" Tris smiled, but shook his head.

"Some one to look after him—never leave him a minute, 'cept when he's snoring," elaborated Shute.

"'Fraid he wouldn't stand for it," argued Tris; "and if he did, in a week he'd lead his keeper astray."

Win laughed. "But you don't quite get me. Barney mustn't be wise to this keeper, and the keeper must be firewater proof."

"I got you—but where'd you find the man?"

"Right in our squad—Steadman—young giant left-hander we have."

"But I'm going to send him to the minors, to keep the squad down to twenty-five men." This was the league's rule—from May 15 to August 15.

"You *were* going to," corrected Shute with a grin; "but on second guess you've decided to keep him here to learn the pitching art from Barney Larkin—greatest left-hander of his generation."

TRIS FORD flashed his smile of understanding. Then he asked:

"Why do you pick Steadman for the job of keeper?"

"Because he doesn't drink a drop, because in a scuffle he's heavy and strong enough to take care of Barney and put him to sleep, because Barney likes him, and because they have a great common bond."

"A common bond?" Tris looked incredulous.

"Sure—they're both disciples of Isaak Walton."

"You mean—"

"They'll fish all day, both of them, without getting a single bite, and go home happy at night."

"Say, I'll stock a trout pond near the ball park and build Barney a bungalow on the shore," said Tris.

Player and manager laughed with the fervor of a couple of kids.

"I'll revise my list and hold on to Steadman," promised Ford.

"If you say so," said Win, "I'll coach the youngster in his new position. Next to Barney, he likes me better, I think, than any man on the club."

"Next to Barney?" questioned Tris.

"Yes; I don't fish."

AND thus, to the surprise of the catching force, was Earnest Steadman retained with the Giant-killers. Two men only, Tris Ford and Win Shute, shared Steadman's secret that he was officially the weakling's keeper. Steadman stuck to Barney Larkin closer than a brother. "Damon and Piscatorius," Shute had dubbed the pair. And, kept fairly well in leash, Barney Larkin was a big factor in the winning of many a ball game.

Before the season was embalmed in the official baseball guide, Tris Ford exhibited the first signs of age. Long, lean, and immobile, never batting an eye in the most trying situations, he had been wont to follow the game from the dugout. A fiction there was that he signaled with his score card; but otherwise he was as impassive as the copperhead on a penny—until the home stretch of this nerve-breaking season. Then, as the scribes put it, he began to act like an ordinary, flesh-and-blood human being. He moved uneasily upon the bench, sometimes signaled brazenly to a player, and was occasionally known to give vent to disappointment or disgust by actually slapping his knee in public. He was not the same Tris Ford—not by an obstreperous nervous system.

BUT who, save a block of lignum-vitæ, wouldn't have allowed his deep concern to be occasionally seen? From the middle of August, when the Western clubs made their last journey East, the Giant-killers were scheduled, week after week, to "blow"—that is, to drop back in the race. This disaster threatened many times. Once the team was two full games behind the Red Sox, then leaders; but

Gone Ahead!

There is no mystery about it. Those who outstrip you in the race for success and its rewards and honors, do so because they are *better equipped.*

If your steps lag; if you tire easily; if exertion which should be a pleasure is a distress, your stamina, endurance and efficiency are low—and that means failure.

Don't lag behind. Wear O'Sullivan's Heels of new, live rubber on your shoes.

They will give a sprightly, buoyant ease to your step.

They will enable you to walk far without fatigue. They will benefit your health and increase your vigor and efficiency by relieving you of the shock and strain caused by pounding along on hard leather heels.

Have O'Sullivan's Heels attached to your shoes when you buy them—on the shoes you work in, walk in, play in or dance in.

O'Sullivan's Heels cost but 50 cents a pair, attached. All shoemakers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35 cents and a tracing of your heel, and we will mail you a pair. O'Sullivan Rubber Co., 131 Hudson St., New York.

lowly Washington surprised the President, the Vice President, Senators, and Congressmen by beating the Speed Boys four straight, and thus taking second place. Collaterally, the Senators helped the Giant-killers back into first position.

Came the very last week of the season with more excitement than the nation's fans had ever experienced. The pennants in both major leagues were in doubt! The Giants, expected to "repeat" and again participate in the World Series, were to engage in a cutthroat struggle with the Phillies. If New York broke even, the championship banner would again float from the Giants' stadium. But if the Phillies won three out of four, then Father Penn would carry off the flag. This series opened on Tuesday.

In the American the Giant-killers had to keep ahead to win. A game and a half separated Tris Ford's charges from the Chicago White Sox. Here, however, there was no rival clash. The two clubs had met for the last time, and honors were even. Washington must beat the Giant-killers and Chicago must win from Detroit in order to bring one end of the World Series into Lakeville. These two "deciding" combats began a day later.

THE fan's diary had these entries:

Tuesday night—Phillies and New York tie in the National.

Wednesday night—Giant-killers still a game and a half ahead in the American; New York leading in the National.

Thursday before dinner—teams tied again in the National; but a half game between Giant-killers and White Sox in the American.

Friday night—Phillies win the pennant!

On the same day, the Giant-killers, with Barney Larkin on the rubber, defeated the Senators, while the White Sox were whitewashing the Tigers. No change in their respective standing—two leading American League teams but half a game apart.

Immediately after the third game, Tris Ford took Barney Larkin into his private office and talked to him as a father to his wild son. He rallied every ounce of manliness, of sentiment, of fighting blood there was in the eccentric left-hander. He told him he must face Washington again the next day—and bring home the bacon. The pennant was at stake!

"You will be a hero if you win," urged Ford, "pointed out by everybody as the man who pitched the Giant-killers to another championship. But if you lose, why—you will be nobody."

Meanwhile, James Winton Shute was giving orders to Earnest Steadman, just as the Secretary of the Treasury would have directed the Chief of the Secret Service.

"You mustn't lose sight of Barney one instant! If he insists on drinking, start a row, and get locked up—the both of you. We'll bail you out, but only in time to get from City Hall to the park in a taxi. See!"

Earnest Steadman slowly nodded his head. "I have been every place but in jail with Barney." The keeper was a man of few words.

THAT night Tris Ford slept badly. Being younger and having done a big man's work out o' doors, Win Shute slept like a babe—the kind of kid you read about. Naturally Tris awoke with a feeling of depression, as if the Giant-killers weren't going to get the day's breaks. But Shute jumped out of bed singing. "To-day we win the bunting!" Which goes to prove that premonitions are closely allied to the "morning after."

At two o'clock that fateful afternoon, when the last man left the locker room for the field, Barney Larkin and Earnest Steadman had not reported at the park. For an hour, by order of Tris Ford, President Benn's limousine had been rushing about like a hack on election day, searching everywhere for the missing pair. In the business office the club's secretary had the telephone directory before him, open at Saloons and Cafés, and one after another the proprietors were called, beginning with Aiello, Michele, and ending with Zbytniewski, Julian. Neither Michele nor Julian, not to mention the rum purveyors occupying the more intermediate portions of the alphabetical directory, had seen the erratic Barney or his slow-going convoy.

ON another telephone, Win Shute, marring the oak furniture with his spikes, was calling the various police stations. He remembered his final instructions to Steadman and was looking for results. But Larkin was not behind the bars—not

THIS advertisement of LESLIE'S is addressed to Mr. John Willys, of the

but is equally applicable to any manufacturer of a good automobile who is interested in economical advertising.

There is really quite as much difference in men and women as in any other investment.

But—broadly speaking—publishers make little distinction in the value of readers. In all publications which you would use you have to pay just about the same price, per thousand readers.

Leslie's circulation is guaranteed. Leslie's advertising rate is based on this guaranteed circulation. It costs you no more, per thousand readers, to advertise the Willys-Overland to Leslie's readers than in any other high grade publication of general circulation.

Leslie's should carry your advertising because we offer at the same price you pay for *any* circulation, a class of readers above the average and an opportunity to tell your story without an extravagant use of space.

Leslie's readers may be judged by Leslie's itself and by our circulation methods.

Leslie's editor believes in good business, big or little, and this editorial tone naturally attracts substantial business men.

Our subscriptions are secured by direct representation. Our prizes do not go to salesmen who secure the largest number of subscribers but to those who secure the largest number rated in Dun's or Bradstreet's. Last month 24% of all new subscribers were rated.

This subscription method, in connection with our editorial appeal insures circulation above the average. And we know that these readers have a motor interest coupled with the ability to buy.

Leslie's readers write to Leslie's for information.

With the advent of the automobile so many inquiries were received that it was necessary to establish a motor department in charge of an expert. This department has grown until we are now acting as confidential adviser on the expenditure of hundreds of thousands of dollars. And we know that Leslie's readers have a motor interest and an ability to buy. And so we know that Leslie's is a way to reach them and to find them responsive.

In addition you may put your message before them without an extravagant outlay in space. The comparatively small volume of advertising which Leslie's carries makes it possible to secure the attention of every reader with less space than in any other publication I can think of. For instance, fifteen thousand odd dollars will buy twelve pages, one a month, which would practically dominate the publication. Can you think of any other publication, of the value of Leslie's, where fifteen thousand dollars would mean domination?

F. W. Gleason
General Manager.

yet. As a place of last resort, John Benn suggested that some one telephone the morgue. Some one did. "No one answering the description!"

"He's made his get-away," said Tris Ford; "there's nothing to that." The game was played with Cummins and Arrow in the points. Washington won.

Tris Ford left the grounds with a face as long as a rainy spell in April. But Win Shute was cheerful. An hour later he telephoned the manager:

"White Sox lose! Pennant's ours. Hoo-ray!"

"I know it—but what d'you s'pose has become of Barney?" were Ford's words. Already his quick mind was looking ahead—to the big battle for the World's emblem.

"He'll show up to-morrow—stop worrying and hug yourself to-night, Tris," counseled Shute.

"Well, I appreciate your grand work, Win—on and *off* the field," said Tris.

Next morning before ten o'clock, his eye bright, his complexion clear, his step elastic, Barney Larkin turned up at the Park. He grinned as he remarked:

"We won the flag, sure enough; am I right?"

"Where you been?" growled John Benn, son of the club's president.

"Up State," answered Barney, unconcernedly.

"What the devil you been doing?"

"Fishing."

"Fishing—this time of year?"

"Didn't catch nothing."

"You'll catch something when Tris sets eyes on you."

"Mebbe."

BARNEY took the most comfortable chair in the room, bit off a generous chew of tobacco, then picked up last night's pink extra, and began laboriously to spell out the "Flashes from the Diamond."

Elsewhere, Earnest Steadman was explaining to his mentor, James Winton Shute. It appeared that Barney had developed a robust thirst, which would not be denied. Lacking confidence in the jail as a haven, the worried keeper, drawing heavily on his meager imagination, had faked the story of a marvelous trout pond up-State. In the crisis he conjured up such a remarkable picture of the pond, which was "lousy with trout," as he expressed it, that Barney was seized with a sudden determination to go thither.

"I tried to make him wait until the pennant was cinched," explained Steadman, "but he said he always pitched better ball on a bellyful of trout. Thought I planned it to get back in time for yesterday's game."

"But I thought this was a phony pond?" said Shute.

"It was—the one I told Barney about. But I hunted up the nearest one in the summer tour book of the Pennsy."

"Why didn't you get back?" demanded Win.

"Because Barney wouldn't come until he had one bite—kept putting off starting until, he says, 'one speckled beauty rises to my fly.' None riz."

"You must have picked a fine pond," said Shute.

"I did. They's an intake there from a cum-a-bear cheese factory and it's killed all the fish."

WHEN Win Shute talked with Tris Ford over the telephone about the disappearance, reappearance and "fool explanation," Tris replied:

"Well, we've won the pennant and they're here. What we got to figure on now is so's it won't happen again. Want to talk over the World Series with you."

There was an entirely new element in the approaching blue-ribbon event. Of course the Giant-killers to a man wanted to win. It meant perhaps fifteen hundred dollars more money in each player's jeans. It meant, also, to continue to be known and pointed out as World Champions. And the club owners were out to win—keen to win. First and foremost for the glory of it. Then for the prestige it would give the Giant-killers all over the league circuit—rather, which they would continue to enjoy another season. There was a third reason, a very important reason.

NOT once before in the thirty-five years of the club's existence had the Phillies won a pennant. Yet within ten years pennant winning had become something of a habit with the Giant-killers. Naturally, therefore, they had the call on the patronage of Father Penn's home town, having commanded popular favor

WHIRLPOOL SANITARY DISHWASHER
FOR FAMILY USE

Thoroughly washes china, glassware, silver and kitchenware in a few minutes of easy operation.

Dries and sterilizes china.

Hands never touch water.

Large numbers are being sold in the

JOHN WANAMAKER STORE
Philadelphia

and the Wanamaker circular says of it:

"At last—a successful dishwashing machine for the home."

"It makes dishwashing a pleasant task."

"The well-known objections to previous types have all been overcome in this machine."

Average family size
$15.00

Information furnished regarding larger sizes.

If not obtainable in your locality, The Whirlpool will be sent prepaid upon receipt of price.

All machines strictly guaranteed or money refunded.

The Whirlpool is self-cleansing and absolutely sanitary. Washes finest china and glassware with no danger of breakage, using a dishpan full of water for washing, and another for rinsing. Durably built of stamped metal; no pump; small in size, and especially adaptable to limited space. Beautifully finished in baked enamel. Refined and ornamental.

Appeals strongly to high class **dealers** and **agents.** Will be shipped to responsible agents, prepaid, upon receipt of price. Returnable at our expense, after ten days' examination. Regular discount allowed thereon when agency is established. Shipped in cartons 18x22 inches, weight 23 pounds.

for a number of seasons. This popularity was now in jeopardy. If the Phillies demonstrated that they were the better team, then the fans would turn to the new kings of baseball the next season. For the fan dearly loves a winner.

On form—relying on the weak brother, Barney Larkin—the Giant-killers looked to have a shade the best of the argument. This being so, why were the Phillies the favorites in the betting? Even money was at first the rule. But over in New York the gamblers soon had the odds hammered down until the Nationals were favorites at 10 to 6.

Gambling Tris Ford abhorred, regarding it as the ever-present menace to the integrity of the national game; and if he thought a man, however prominent or important, was seeking a line on the Giant-killers as a guide in betting, Tris would shut up like a steel trap. It wasn't the betting itself, but the information behind the odds that troubled him.

IT did not surprise him—why, he did not know—when he received a letter, special delivery, from the sporting editor of one of the New York papers. The man who wrote it loved fair play and clean sport, and looked upon Tris Ford as the apostle of the one and the exponent of the other. The letter read:

In this town the gamblers are plunging on the Phillies. Regardless of form your club is being forced down steadily in the betting. Jake Stinger and other big gamblers don't look upon this betting proposition as a "game of chance," not they. Gambling to them on such a scale means a sure thing. It is no secret on the inside. They say you have only one pitcher who can stop the Phillies, now at the top of their batting, and that is Barney Larkin. They boast that they have got him.

Take this for what it's worth. You doubtless know Larkin—but I know Stinger's crowd. They are betting on a sure thing or else somebody is fooling them most awfully. Anyhow, look out. Good luck.

AFTER reading this letter to Win Shute, Tris Ford observed: "There's something behind those long odds—I've thought so right along."

"You don't think they could bribe Barney?—with all his vices he wouldn't sell out, would he?" asked Win, rather anxiously.

"Not for one minute," said Tris, positively. "Money means nothing to him—leastwise, a great deal of money. I keep his coin for him—deal it out in small bits. I find he's as pleased over a two-dollar bill as he is over a five. And a tenner looks to him like Rockefeller's dividends for a whole day!

"The money end of it don't worry me," Tris repeated.

"Then what is bothering you?"

The manager of the Giant-killers hesitated, his expression becoming abnormally serious. "I don't know that I ought to speak of it even—it might get the idea started, if it hasn't already."

"What idea?" almost snapped Win Shute. "What's on your chest? If it's something threatening, we ought to plan to beat it. Tell me!"

Tris showed his anxiety in his face.

"Kidnaping!—that's what I'm afraid of," he whispered to Win Shute.

"Kidnaping Barney Larkin? They'd have to bind and gag his giant keeper first."

"Oh, they'd manage that if they set out to try," said Tris gloomily.

JAMES WINTON SHUTE fell back on his gray matter. Then came the beam of dawning solution.

"We'll put some one to watch the keeper that watches the victim," he said.

"Who?"

"The best detective we can get in the city, with two strong-arm boys for a bodyguard." And they did. Unknown to Barney Larkin, his piscatorial friend, Earnest Steadman, sat in front of his bedroom door, keeping watch. Unknown to Larkin and Steadman, downstairs the cleverest detective in the city kept vigil, reinforced by two able diamonds in the rough, very rough.

In his home, not three blocks away, Tris Ford tossed on the bed, unable to sleep. He had a vague feeling of impending disaster.

The day of the first game of the World Series, all Philadelphia's own, was clear and mild, built to order by the gods for the American Olympian. There were crowds of hilarious people, parades, music, and speculation—both idle talk and money talk. The odds closed 10 to 6 on the Phillies. If rumor was right, this was portentous.

Tris Ford deserted his private office shortly after high noon and went to the locker room—an unheard-of proceeding for him. Then he waited round impatiently. On the dot, as the clock pointed to 12.30, a triumphal procession moved ceremoniously into the presence of the chief of the Giant-killers.

At its head was Barney Larkin, a smile upon his boyish face and a cocky look in his eye that brought joy and comfort to the manager. Close behind was Earnest Steadman, also smiling. Next came an inconspicuous citizen, easily mistaken for a prosperous traveling man—the clever detective. Bringing up the rear were two low-browed fellows—either pugilists in ordinary or highly efficient piano shifters.

Tris Ford laughed. He couldn't help it.

Although the team, with one exception, was not a party to the deep, dark secret, the players plainly shared the relief which Tris Ford experienced at sight of Barney Larkin. They sang as they put on their uniforms, and one would have supposed, to look in upon them, that they were preparing for morning practice in the training season, instead of getting ready to fight for the highest honors of the town—and the popularity of the home town.

WILD tumult broke loose at sight of the Giant-killers, answering the yell which had gone up on the appearance of the Phillies. There were the usual preliminaries—all before the camera. There was snappy practice by the Nationals. Then the Giant-killers took the field, to limber up and get their grip on the ball and sure fire into their throws.

"Hit 'er out!"

An acute-sighted fan jumped up in his place back of first, and ignoring the shouts of "Down in front!" scanned the playing field from a point near second base to the Giant-killers' bench, much as an anxious mother would look for her lost child. Then in agonized accents he demanded of space:

"Where's Win Shute?"

Eyes by the thousand traveled to the edge of the clay-base path in right. There an uneasy substitute was trying his hardest to accomplish the impossible—fill the spiked shoes of the king of second basemen.

What on the terrestrial ball did it mean? Was Tris Ford crazy?

TARDILY, fifteen minutes after the hour set for the game to begin, the official announcer raised his megaphone and sing-songed the opposing batteries. The fans howled with delight when they heard that Barney Larkin was to pitch for the Giant-killers, although they knew it of course. But when the announcer added that Pervis was to "play second base in place of Shute," the fans gave loud vent to their disapproval. "What's the matter—Win Shute hurt?" they shrieked.

Around the vast assemblage, starting in the press box, flying through the grand stand, leaping to the pavilions, reaching at last to the bleachers, sped the answer:

"He's disappeared!"

Gloom, impenetrable gloom, settled down upon a majority of the great throng—those who had come to help the Giant-killers win. Their quick minds were recalling what the rival manager, John Muggins, had given out after the Giant-killers downed New York. They remembered every word of it:

"I want to go on record as saying that Shute is the greatest ball player in the world. He wins more games for his club than any other man on the diamond to-day—and winning games is what counts in baseball. He was directly responsible for two of the games which his team won from us, and was there all the time in the other two victories. In defensive work he was easily the king-pin, breaking up our defense and making sensational plays around second base. The record shows that he led his own team in the attack. I say again—Shute is the greatest ball player in the world. With him no major-league team would be weak—without him the best team would be seriously crippled."

Seriously crippled!

OVER in New York, a few feet away from the ticker which was announcing the beginning of play, Jake Stinger and his friends were already celebrating.

Part II of this three-part story will appear next week

Mr. Motorist

Here's a point you may have missed

The greatest power loss with which motorists contend is due to leaky, cheaply built spark plugs—compression leaks through or the charge is only partly ignited.

A cheap plug must be poor; a poor plug always causes power loss, over-heating and costly damage to engine and car.

Bosch Plugs

were designed so that the right plug could be had, so that power losses, over-heating and other ignition troubles could be eliminated and so that the full power always could be obtained.

Bosch Plugs are right and act right. Proof of this fact is in the showing made by Bosch Products in the recent Vanderbilt Cup and Grand Prize Races. Both winners and EVERY car to finish used Bosch Plugs; also the Bosch Magneto. This was a gruelling test—more heat was present, more oil was used and greater speed was evident than you ever would require—but Bosch Plugs stood it—because they are As Good As Bosch Magnetos. Try a set in your car—the same plugs as used by the racers.

$1.00 Each in U. S. from any dealer, or from Bosch Service Stations or Branches.

"Locating the Spark Plug" tells what you ought to know about plugs—it's free.

BOSCH MAGNETO COMPANY
222 West 46th Street, New York, N. Y.
199 Service Stations in U. S. and Canada to serve you.

The House of
Collier

wants to appoint a Junior Salesman in each city.

BOYS

will find this work congenial and profitable, and in addition to encouraging the ability to sell, we are offering premiums, such as books, baseball bats, baseball suits, etc.

PARENTS

too, should encourage their boys to be thrifty and self-reliant. Ask for our plan.

By James Freeman Clarke and other Unitarian Literature FREE. Address "Associate Department," 25 Beacon St., Boston.

The Tyranny of Beauty

(Continued from page 16)

day when she brought the marked papers to me to take home to her mother, showing real disappointment that she'd not witnessed the triumph. But my grandmother was then too feeble to go anywhere in the evening except to prayer meeting in a little church half a block away, even though my aunt had offered to send the car.

"Mamma always seemed to feel he'd never get there," said my aunt, "and after last night I'll always be glad I stuck to it that he would—all he needed was the chance professional jealousy was keeping him out of. And wasn't he splendid standing up there before that big audience—and the way they clapped! Splendid! Worth all it cost. Well, you heard it all—temme whatcha think."

"Oh, I think he's harmless," said I.

MY aunt felt she was getting her money's worth out of it all. In private life she was Mrs. Willing, but always Mme. Del Mar to the business world; yet she managed to let the light of one name bring out the luster of the other: in the beauty parlors she now posed before us as a society dame, merely dropping round to look after things; in the salon as the thunderously successful business woman, merely taking a little relaxation between two days of strenuous commercialism and success. Both equally were poses—the "pink jar and purple ribbon"—the one to the other; but the result was a slowly gathering prestige of a quite new order, a slowly accumulating power in herself, and a rapidly accelerating recklessness in squandering money.

Was Oscar Willing harmless? Well, under the tutelage of a sweetly parasitic husband, Mme. Del Mar had learned the aristocratic art of spending wholesale. And then before we knew it we were on the rocks!

The knowledge that we were facing a crash came to me more as a shock than a surprise. Little things had dropped here and there for a couple of years showing madame was at times pushed for ready money; she was finding motor cars, receptions, dinners, theatre parties, opera boxes, and subscriptions to this, that, and the other, a very different matter from the hotel entertaining she'd done formerly, to say nothing of the upkeep of a husband whose mere pocket money was a hundred dollars a week as against the upkeep of an aged mother, who received a weekly pay envelope with twenty dollars from the bookkeeper and never so much as hinted for another penny. Flowers alone—an item my aunt never considered in her bachelor days—now ran up immense bills as part of her lavish entertainment, and were even ordered for the parlors and her private office.

It was, in fact, a long overdue bill for flowers that she'd forwarded from Denver to the bookkeeper that brought the true state of affairs to my attention.

LOOKING much disturbed, he called me to his gilded cage one morning while I was making my inspection rounds and asked if I could suggest any means of meeting it—he hadn't the money on hand. "I don't know what the madame's thinking about these days, Miss Lucy—no business could stand up under the strain. Ten gross of Zulu gone for a bank of 'azaleas' and a 'centerpiece of roses'—then coming back on me for it! She knows as well as I do that I transfer all the balance to her account every month—I keep nothing back but what we've got to use in the business. This was due to come out of her funds, not ours. . . . It's the fourth time in a year she's drawn on me this way. . . . I suppose I ought to say something—give the hint that we'll be getting in trouble if it keeps on, but you see. . . . Well, a man in my position don't like to call a woman to account for the way she spends her own money and conducts her own business. . . . If she was to take offense at me . . ."

HE shook his head in bewildered weariness as if he'd been thinking things over a long time and still hadn't told me all that bothered him; then he suggested: "I thought you might speak to her—you being her niece and having more influence with her than anybody else."

"*I* have influence?"

"Why, yes. You're the only person whose say seems to carry with her. I don't know why, but it seems to the rest of us she's afraid of you in some way."

I WAS too astonished to reply, and perhaps because of my silence he added an explanation: "Maybe it's because you're so silent always—she's afraid of what you're thinking and doesn't dare ask, but knows she'll not find out if she don't ask. It catches most people—silence does—but there's always times when it's wiser to break it."

"I'll think it over," said I.

"There isn't much time to think it over—she's got to be told pretty soon if—if it's to do her any good."

His eyes were fixed on the bill and he dog-eared a corner nervously.

"Just precisely what do you mean?" I demanded, suddenly suspicious that he was keeping back something serious or perhaps trying to reveal it.

He gave a furtive look about the place as far as he could see it and then whispered: "Well, Miss Lucy—we're on the rocks." But the words were hardly out of his mouth before his face changed, paled as if with fright, and in a still lower whisper he begged: "But for God's sake don't let Miss Beekman suspect I've told you."

Beekman came up under full sail to where I stood, and I had time to see the questioning look she shot at the man as she greeted me: "Good morning, Miss Lucy—another hot day! I hope the madame's enjoying herself in the Colorado mountains. What do you hear from her?—letter to-day? I had a souvenir postal. Says the baby's doing fine."

All this and a good deal more of the same was, I could see, merely the excuse to examine my face and see what I'd been discussing with the bookkeeper—if she could; and I flatter myself she couldn't.

I asked myself could it be true that we were on the rocks? And then asked myself how we could help being—with a man like my Uncle Oscar?

TO do him this small justice, however, there were other causes than his extravagance and the large establishment my aunt was keeping up under his stimulating influence. Her second child was born in June, and she'd been out of her office for some time before and all the time after; her trip to Denver and a higher altitude being for her health, though she had attended to some business out there at the same time and placed several large orders. Then the heat that summer had been frightful all over the country—people simply would not come for treatments; would not take the trouble to use beauty preparations. Even the hair department had fallen behind—little monsieur was in despair over the way the women refused to bundle up their heads in other people's hair when their own was almost more than they could carry around. Thus every department had suffered. For eight weeks the parlors had been running at a loss—though I did not know it, that matter resting between the bookkeeper and the general superintendent, Miss Beekman.

Wages were paid that were not earned; rent was paid that was not earned. The trade sales of Zulu to the world at large—money that madame considered had nothing to do with the establishment—were drawn on first—without, of course, consulting either her or me—then money was borrowed from the bank to meet the interior expenses, and creditors had been asked for time on bills for containers and raw materials.

MADAME herself had come down for the last time at the end of May, and all seemed clear ahead then for a prosperous season; by the time the pinch declared itself she couldn't be consulted. The head bookkeeper and Miss Beekman carried the whole of this responsibility between them from then on until the first of September. Needless to remark, neither one had the intelligence or force necessary. My being kept in the dark as to the real inwardness of the situation was a piece of stratagem on Miss Beekman's part—her first assertion of herself as my aunt's representative.

I have no illusions about my brilliance as a business woman, though I still think

Now a Loose-Leaf Device and Form for Every Purpose

If you have a Loose-Leaf Device or Form problem of any conceivable nature, you can get its accurate, quick solution only in the I-P line of 1700 items. Don't waste time looking elsewhere—don't waste money on high-priced system experts and costly special-made Devices and Forms. Address Robert Chapman Company, Grand St. & Morgan Ave., Brooklyn, N. Y.

We Want Real Salesmen To Sell A Number Of well-known specialties marketed for many years through grocery and drug trade, widely established, permanent demand, heavy consumer advertising; on liberal straight commission; territory your own selection; active cooperation. If ambitious to build business of your own, write quick particulars your selling experience and references. Sales Organization, 18 East 41st St., New York City.

Bright Aggressive Solicitor Wanted In Each town to sell income insurance to men and women. Policy costing $50 a year pays $2000 for accidental death—$25 a week sickness or injury. $5 a year buys policy paying $2000 accidental death—$15 a week injury or sickness. Holland Casualty Co., 1345 Insurance Exchange, Chicago.

Wanted: Hustlers To Take Orders For Made- to-measure high grade men's tailored suits from $9.00 to $23.00. You can make good money. Elegant large book outfit free. Experience unnecessary. No pocket folder affair. Splendid opportunity to make money. Handy Dandy Line, Dept. A, Sangamon St., Chicago.

Salesmen Wanted Residing In Or Making Small towns. Take orders on our special plan allowing return of unsold goods. Makes quick easy sales, $4.00 commission on each order. Write for pocket outfit today. Caufield Mfg. Co., 208 Sigel St., Chicago.

Parcel Post Means Many Railway Mail Clerks needed. Commence $75.00 month. Examinations everywhere. Sample questions and schedule of places, free. Franklin Institute, Dept. F 116, Rochester, N. Y.

Agents Wanted

At Last—A Compressed Air Clothes Washer: cleans tub of clothes in 3 min. Washday now a pleasure. Women grab it at $1.50. Price to agents 50 cents. Wendell Washer Co., 232 Oak St., Leipsic, O.

Can You Do What Others Are Doing? A Large manufacturer wants reliable workers established everywhere. Guaranteed hosiery sold only through agents. Liberal terms. J. Parker Mills, 730 Chestnut St., Phila., Pa.

Agents To Take Orders For Visiting And Busi- ness Cards of Distinction. Sell at sight. Large Profits; Complete Outfit Free. The Forman Printery, 95-W Bank Street, Waterbury, Conn.

Agents Hurry—Something New. Sanitary Tele- phone device. Millions will be sold. Steel Corporation bought 1200. Sells itself. Splendid profit. Write today for territory. Photodate Co., 550 Nasby Bldg., Toledo, O.

that had I known the situation earlier I could at least have stopped a few of the main leaks; as it was, I sat in the private office on the mother-of-pearl throne under the moose head asking if all this work of years was to be swept away—if that was what it meant when the financial manager said: "We're on the rocks." What would it mean to my grandmother and me—to my sister in college? And to all these people who were dependent on the establishment for their daily bread? And above all, what would it mean to the woman who'd created it all and hung it—"on nothing in the air"?

Blood after all is thicker than water, and in my apprehension for her some of my early affection came back, enhancing the loyalty that had never wavered, and I forgot Oscar Willing.

PRESENTLY I was back in the parlors. Miss Beekman leaned an elbow on the window ledge of the bookkeeper's cage in the attitude of one on guard and earnestly discussed something with him in a low voice. I fiddled about the show cases on a false pretext of listing stock, then went away to await a better opportunity. I was afraid to send for him to come to the office. An hour later I was back, and, seeing the lady engaged with a customer, strode boldly to his desk, only to be met with a look more frightened than before and the same words: "For God's sake don't let Miss Beekman know I told you—don't let her suspect you know—"

"I've got to know. Are we in debt?"

"Not to any great extent."

He seemed trying to evade me, but I followed him up with a sharp: "Then what did you mean by saying we were on the rocks?"

"We have no credit."

He might as well have told me we had no parlors, no business, no Zulu, expecting me to believe him! And by those words I was sure he was concealing a dreadful revelation. Perhaps he'd been embezzling the funds himself. Perhaps Oscar Willing—perhaps forty things. My head was in a whirl.

No credit, indeed! We with a half-million-dollar business!—we, who'd always paid our bills, not on time, but at the time—paid cash. Why, we were known as "the spot-cash house"!

I DON'T suppose I was any more ignorant of what constitutes credit in the financial world than the next thousand women you'll meet on the street—I thought if you were turning over half a million a year and had always honestly paid every cent you owed and nobody could bring up a debt against you, you could walk into your bank and borrow ten or fifty thousand dollars on a note as easily as you could order a roasting chicken from your butcher and have it charged.

In our opinion, based on thousands of tests, Goodyear No-Rim-Cut Tires mark the present-day limit in low cost per mile

Extra Prices

Today the chief question among tire buyers is this:

Is any tire, for any reason, worth more than Goodyear prices?

It comes up now because No-Rim-Cut tire prices dropped 28 per cent last year. And now 16 makes sell at higher prices—some up to one-half higher.

Expert Evidence

Above are the signatures of 40 men in our Department of Research and Experiment, most of them technical graduates.

For years this Department has been trying to lower cost per mile. Its efforts have cost us $100,000 per year.

It has built thousands of experimental tires, to try out every conceivable formula, method, process and material. These tires have been worn out under metered mileage. Rival tires, in the same way, have been compared with our own.

Now all these men say that No-Rim-Cut tires mark the present-day limit in low cost per mile.

Excel in Four Ways

Then No-Rim-Cut tires absolutely prevent rim-cutting in a way which we control.

They save the countless blow-outs due to wrinkled fabric. This because we final-cure on air-filled fabric tubes, under actual road conditions. This one extra process—the "On-Air Cure"—adds to our tire cost $450,000 yearly, and no one else employs it.

They combat loose treads—lessen the risk by 60 per cent—by a patent method which we alone employ.

And these tires alone have the All-Weather tread—tough, double-thick and enduring. A flat, smooth tread on dry roads—a resistless grip on wet.

GOODYEAR
AKRON, OHIO

No-Rim-Cut Tires
With All-Weather Treads or Smooth

In these four ways No-Rim-Cut tires excel every other tire.

The Users' Verdict

What users think is shown by what users buy. Goodyear tires, in the test of time, have out-distanced every rival. On sheer mileage records, on millions of tires, they have jumped from bottom place to the top.

The demand is now increasing faster than ever. So far this year our tire sales exceed last year by 55 per cent. And now we are making up to 10,000 motor tires daily to keep up with the trend toward Goodyears.

Goodyear prices are due to big output, to efficiency and to modest profit. Our profit last year averaged 6½ per cent. Multiplied output has cut overhead 24 per cent. It has cut labor cost per tire 25 per cent.

Those are the reasons for Goodyear prices. It is not that others make better tires.

THE HAND AND EYE CAN ONLY APPROXIMATE THE CORRECTNESS OF THINGS. FOR PRECISION IN MANUfacturing certain standards are adopted, which are gauged by instruments that give an absolute check on the required dimensions.

Unfailing maintenance of the highest standard of accuracy is essential in the building of high grade motor cars, as their smoothness of operation and endurance in use depend upon it.

In the making of Hyatt Roller Bearings the component parts are ground and then tested with specially constructed gauges that measure to one ten-thousandth of an inch.

These gauges in turn are constantly checked up with master gauges to obviate any possibility of variation.

This extreme nicety of fit results in long life and quiet operation to a thoroughly dependable product. "Hyatt Quiet Bearings."

Studebaker

SEVEN PASSENGER

SIX

$1575

Full Floating Rear Axle
Electrically Started
Electrically Lighted

This Car Against Any Car—Let Us Prove It

With every sense alert, try, as you ride in the Studebaker SIX, to imagine some one particular in which its riding qualities might be improved.

Try to recall some previous ride in a heavier, costlier car, which seemed to you, then, the uttermost in luxury.

Superfluous weight does, sometimes, make for steadiness, there's no doubt about that—see, now, how this light, strong car attains the same identical result in steadiness and roadability with none of the disadvantages of excess weight.

Take the wheel and see if you ever felt that you had at your command a greater flood of pent-up flexible power.

Test out that flexibility—see how instantaneously obedient this docile engine actually is to the touch of your finger-tips.

Put it through its paces—face it with obstacles and difficulties—and see if it does not respond in every case like the thoroughbred it is.

Demonstration—demonstration against any car, and every car—demonstration drastic down to the smallest detail—that's what Studebaker asks, without fear, from you, for this splendid Studebaker SIX.

Descriptive Data

Studebaker FOUR and SIX motors are cast enbloc. They are of the modern long-stroke type, giving the highest possible efficiency in power and gallon-mileage.

Each Studebaker car has a full complement of adjustable Timken roller bearings—a pre-eminent anti-friction device.

Built complete in the vast Studebaker shops, each Studebaker unit fits with perfect alignment into the synchronized Studebaker chassis. Even the tops and the Jiffy curtains of Studebaker cars are built by Studebaker workmen.

Other points of excellence included in each Studebaker FOUR or SIX—

Full floating rear axle; the Studebaker-Wagner electrical system; gasoline tank in cowl with direct line to dash-adjusted carburetor; enclosed valves, quiet and retaining accurate adjustment; running boards clear of all equipment; extra rim, mounted at the rear; special quality electric lamps; electrically lighted dash equipment with lubrication sight feed, battery tell-tale and Stewart-Warner magnetic speedometer.

"FOREWARD:" Here is a Kuppenheimer feature—the Foreward model exclusive and original with us—one of the most notable achievements in the clothing business in a dozen years. Designed to fit perfectly that large percentage of men—62% to be exact—who have a tendency to lean slightly forward. Not necessarily stoop shouldered but who carry the head and neck slightly forward.

You perhaps know by experience how a regular coat "kicks out" in the back, or pulls away from the neck, does not hug closely and fit accurately. The Foreward model does away with this difficulty entirely. It is based on exact data, gathered over a period of four years in over 3000 good clothing stores. This model does not differ from any of the other Kuppenheimer Clothes in fashion.

MEN: we want you to take particular note of this FOREWARD model, because it is typical of the things we are doing to raise the efficiency level of the clothing business.

Two years ago we stated our belief that more could be done than anybody was doing toward certain niceties of fit and tailoring that would still further increase your satisfaction in a good suit of clothes.

With tailoring shops, equipments and methods the most progressive, the most scientific in the world, we are working toward this definite end—that more men can go into the store, pick out a suit they like, put it on, and wear it—without the change of a button.

We wish you would do us the courtesy, and yourself the service, of calling on the Kuppenheimer dealer in your community. Ask to see the Foreward model, or some of the other models in your size, and especially adapted to your type of figure.

Our book, "Styles for Men," mailed on request

American Ramblings, Observations, and Adventures

By Julian Street

Chapter I—Stepping Westward

Illustrated by Wallace Morgan

"What, you are stepping westward?"—"Yea."
—'Twould be a wildish destiny
If we, who thus together roam
In a strange land and far from home,
Were in this place the guests of Chance:
Yet who would stop, or fear to advance,
Though home or shelter he had none,
With such a sky to lead him on?
—Wordsworth.

FOR some time I have desired to travel over the United States—to ramble and observe and seek adventure here, at home, not as a tourist with a short vacation and a round-trip ticket, but as a kind of privateer with a roving commission. The more I have contemplated the possibility the more it has engaged me. For we Americans, though we are the most restless race in the world, with the possible exception of the Bedouins, almost never permit ourselves to travel either at home or abroad, as the "guests of Chance." We always go from one place to another with a definite purpose. We never amble. On the boat, going to Europe, we talk of leisurely trips away from the "beaten track," but we never take them. After we land we rush about obsessed by "sights," seeing with the eyes of guides and thinking the "canned" thoughts of guidebooks.

In order to accomplish such a trip as I had thought of I was even willing to write about it afterward. Therefore I went to see a publisher and suggested that he send me out upon my travels.

I argued that Englishmen from Dickens to Arnold Bennett had "done" America; likewise Frenchmen and Germans. And we have traveled over there and written about them. But Americans who travel at home to write (or, as in my case, write to travel) almost always go in search of some specific thing: to find corruption and expose it, to visit certain places and describe them in detail, or to catch, exclusively, the comic side. For my part, I did not wish to go in search of anything specific. I merely wished to take things as they might come. And—speaking of taking things—I wished, above all else, to take a good companion, and I had him all picked out: a man whose drawings I admire almost as much as I admire his disposition; the one being who might endure my presence for some months, sharing with me his joys and sorrows and collars and cigars, and yet remain on speaking terms with me.

The publisher agreed to all. Then I told my New York friends that I was going.

They were incredulous. That is the New York attitude of mind. Your "typical New Yorker" really thinks that any man who leaves Manhattan Island for any destination other than Europe or Palm Beach must be either a fool who leaves voluntarily or a criminal who is taken off by force. For the picturesque criminal he may be sorry, but for the fool he has scant pity.

Repeating the Emotions of Columbus

AT A FAREWELL party which they gave us on the night before we left, one of my friends spoke, in an emotional moment, of accompanying us as far as Buffalo. He spoke of it as one might speak of going up to Baffin Land to see a friend off for the Pole.

I welcomed the proposal and assured him of safe conduct to that point in the "interior." I even showed him Buffalo upon the map. But the sight of that wide-flung chart of the United States seemed only to alarm him. After regarding it with a solemn and uneasy eye, he shook his head and spoke long and seriously upon his responsibilities as a family man—of his duty to his wife and his limousine and his elevator boys.

It was midnight when farewells were said and my companion and I returned to our respective homes to pack. There were many things to be put into trunks and bags. A clock struck three as my weary head struck the pillow. I closed my eyes. Then when, as it seemed to me, I was barely dozing off, there came a knocking at my bedroom door.

"What is it?"

"Six o'clock," replied the voice of our trusty Hannah.

As I arose I knew the feelings of a man condemned to death who hears the warden's voice in the chilly dawn: "Come! It is the fatal hour!"

When, fifteen minutes later, doubting Hannah (who knows my habits in these early morning matters) knocked again, I was moving about my room, my hands full of hairbrushes and toothbrushes and clothes brushes and shaving brushes; my head full of railroad trains, and hills, and plains and valleys, and snow-capped mountain peaks, and smoking cities and smoking cars, and people I had never seen.

The breakfast table, shining with electric light, had a night-time aspect which made eggs and coffee seem bizarre. I do not like to breakfast by electric light, and I had done so seldom until then; but since that time I have done it often—sometimes to catch the early morning train, sometimes to catch the early morning man.

Beside my plate I found a telegram. I ripped the envelope and read this final punctuation-markless message from a literary friend:

you are going to discover the united states
dont be afraid to say so

That is an awful thing to tell a man in the very early morning before breakfast. In my mind I answered with the cry: "But I *am* afraid to say so!"

And now, months later, I am still afraid to say so, because, despite a certain truth the statement may contain, it seems to me to sound ridiculous and ponderous, and solemn with an asinine solemnity. It spoiled my last meal at home—that well-meant telegram.

I had not swallowed my second cup of coffee when, from her switchboard, a dozen floors below, the operator telephoned to say my taxi had arrived. I left the table, said good-by to those I should miss most of all, took up my suit case and departed.

We made believe we wanted to go out and smoke. As we left our seats she made believe she did not know that we were going

The Taxicab Caravel

BESIDE the curb there stood an unhappy-looking taxicab shivering as with malaria, but the driver showed a face of brazen cheerfulness which, considering the hour and the circumstances, seemed almost indecent. I could not bear his smile. Hastily I blotted him from view beneath a pile of baggage.

With a jerk we started. Few other vehicles disputed our right to the whole width of Seventy-second Street as we skimmed eastward. . . . Farewell, O Central Park! . . . Farewell, O Plaza! . . . And you, Fifth Avenue, empty, gray, deserted now; so soon to flash with fascinating traffic. . . . Farewell! Farewell!

Presently, in that cavern in which vehicles stop beneath the overhanging cliffs of the Grand Central Station, we drew up. A dusky redcap took my baggage. I alighted and, passing through glass doors, gazed down on the vast concourse. Far up in the

Digitized by Google

lofty spaces of the room there seemed to hang a haze, through which—from that amazing and audacious ceiling, painted like the heavens—there twinkled, feebly, morning stars of gold. Through three arched windows, towering to the height of six-story buildings, the eastern light streamed softly, combining with the spaciousness around me and the blue above to fill me with a curious sense of paradox: a feeling that I was indoors yet out of doors.

The glass dials of the four-faced clock, crowning the information bureau at the center of the concourse, glowed with electric light, yellow and sickly by contrast with the day which poured in through those windows. . . . Such stupendous windows! Gargantuan spider webs whose threads were massive bars of steel. . . . And suddenly I saw the spider! He emerged from one side, passed nimbly through the center of the web, disappeared, emerged again, crossed the second web and the third in the same way, and was gone—a two-legged spider, walking importantly and carrying papers in his hand. Then another spider came, and still another, each black against the light, each on a different level. For those windows are, in reality, more than windows. They are double walls of glass, supporting floors of glass—layer upon layer of crystal corridor, suspended in the air as by genii out of the Arabian Nights. And through these corridors pass clerks, who never dream that they are princes in the modern kind of fairy tale.

Kinds of Grandeur

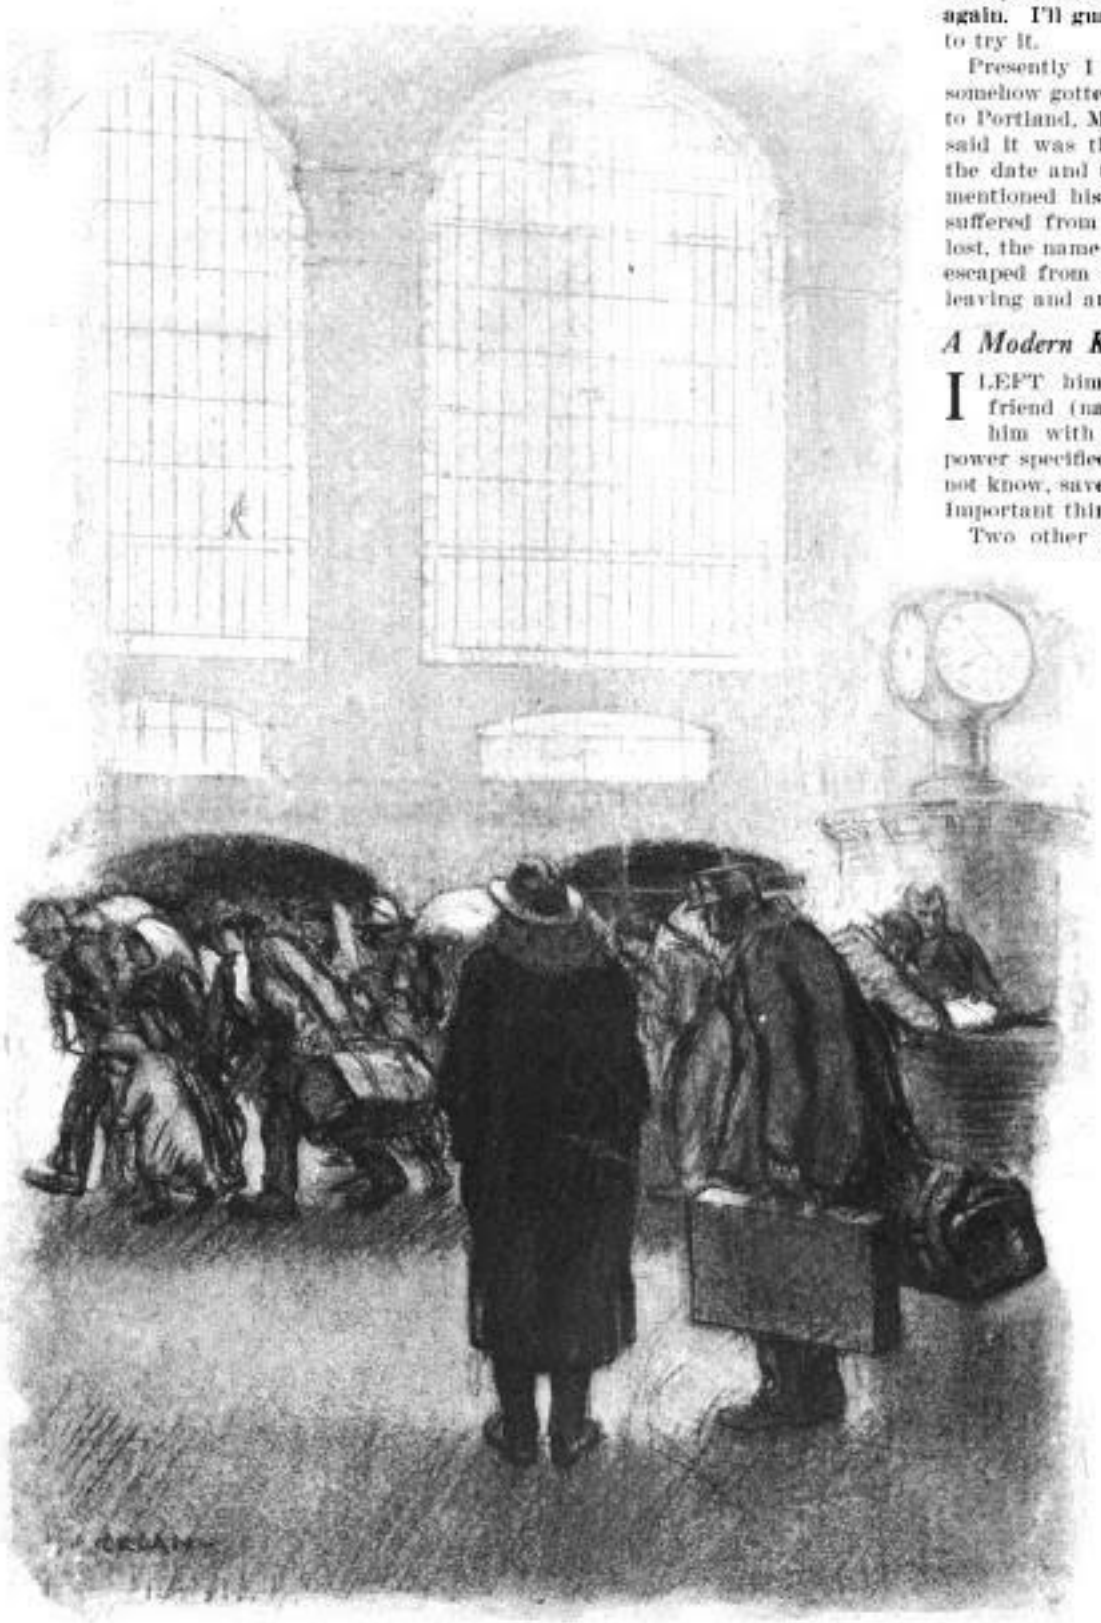
AS YET the torrent of commuters had not begun to pour through the vast place. The floor lay bare and tawny like the bed of some dry river waiting for the melting of the mountain snows. Across the river bed there came a herd of cattle—Italian immigrants, dark-eyed, dumb, patient, uncomprehending. Two weeks ago they had left Naples, with plumed Vesuvius looming to the left; yesterday they had come to Ellis Island; last night they had slept on station benches: to-day they were departing: to-morrow or the next day they would reach their destination in the West. . . . Suddenly there came to me from nowhere, and with a poignancy that seemed to make it new, the platitudinous thought that life is at once the commonest and strangest of experiences. . . . What scenes these dark, pathetic people had passed through—were passing through! Why did they not look up in wonderment? Why were their bovine eyes gazing blankly ahead of them at nothing? What had dazed them so? The bigness of the world? . . . But, after all, why should they understand? What American can understand Italian railway stations? They have always seemed to me to express a sort of mild insanity. But the Grand Central terminal I fancy I do understand. It seems to me to be much more than a successful station. In its stupefying size, its brilliant utilitarianism, and, most of all, in its mildly vulgar grandeur, it seems to me to express, exactly, the city to which it is a gate. That is something every terminal should do unless, as in the case of the Pennsylvania terminal in New York, it expresses something finer. The Grand Central Station *is* New York; but that classic marvel over there on Seventh Avenue is more: it is something for New York to live up to.

The Man from Grand Rapids

WHEN I had bought my ticket and moved along to count my change there came up to the ticket window a big man in a big ulster who asked in a big voice for a ticket to Grand Rapids. As he stood there I was conscious of a most un-New York-like wish to say to him: "After a while I'm going to Grand Rapids, too!" . . . And I think that, had I said it, he would have told me that Grand Rapids was "*some town*" and asked me to come in and see him when I got there—"at the plant." I think he would have said.

As I crossed the marble floor to take the train I caught sight of my traveling companion leaning rigidly against the wall beside the gate. He did not see me. Reaching his side, I greeted him.

He showed no signs of life. I felt as though I had addressed a waxwork figure.



"Good morning," I repeated, calling him by name.

"I've just finished packing," he said. "I never got to bed at all."

A Superstition Exploded

JUST then a most attractive person put in an appearance. She was followed by a redcap carrying a lovely little Russia-leather bag. A few years before I should have called a bag like that a dressing case, but watching that young woman as she tripped along with steps restricted by the slimness of her narrow satin skirt, it occurred to me that modes in baggage may have changed like those in woman's dress and that her little leather case might be a modern kind of wardrobe trunk.

My companion took no notice of this agitating presence. "Look!" I whispered. "She is going, too."

What scenes these dark, pathetic people had passed through—were passing through! Why did they not look up in wonderment?

Stiffly he turned his head. "The pretty girl," he remarked, with sad philosophy, "is always in the other car. That's life."

"No," I demurred. "It's only early morning stuff."

And I was right, for presently, in the parlor car, we found our seats across the aisle from hers.

Before the train moved out a boy came through with books and magazines, proclaiming loudly the "last call for reading matter."

I think the radiant being believed him, for she bought a magazine—a magazine of pretty girls and piffle: just the sort we knew she'd buy. As for my companion and me, we made no purchases, not crediting the statement that it was really the "last call." But I am impelled to add that having later visited certain bookstores of Buffalo, Cleveland, and Detroit, I now see truth in what the boy said.

The Intimate Fat Man

FOR a time my companion and I sat and tried to make believe we didn't know that some one was across the aisle. And she sat there and played with pages and made believe she didn't know we made believe. When that had gone on for a time and our train was slipping silently along beside the Hudson, we felt we couldn't stand it any longer, so we made believe we wanted to go out and smoke. And as we left our seats she made believe she didn't know that we were going.

Four men were seated in the smoking room. Two were discussing the merits of flannel versus linen mesh for winter underwear. The gentleman who favored linen mesh was a fat, prosperous-looking person, whose gold-rimmed spectacles reflected flying lights from out of doors. . . . "If you'll wear linen," he declared with deep conviction—"and it wants to be a union suit, too—you'll never go back to shirt and drawers again. I'll guarantee that!" The other promised to try it.

Presently I noticed that the first speaker had somehow gotten all the way from linen union suits to Portland, Me., on a hot Sunday afternoon. He said it was the hottest day last year, and gave the date and temperatures at certain hours. He mentioned his wife's weight, details of how she suffered from the heat, the amount of flesh she lost, the name of the steamer on which they finally escaped from Portland to New York, the time of leaving and arrival, and many other little things.

A Modern King Cophetua

I LEFT him on the dock in New York. A friend (name and occupation given) had met him with a touring car (make and horsepower specified). What happened after that I do not know, save that it was nothing of importance. Important things don't happen to a man like that.

Two other men of somewhat Oriental aspect were seated on the leather sofa talking the unintelligible jargon of the factory. But, presently, emerged an anecdote.

"I was going through our sorting room a while back," said the one nearest the window, "and I happened to take notice of one of the girls. I hadn't seen her before. She was a new hand—a mighty pretty girl, with a nice, round figure and a fine head of hair. She kept herself neater than most of them girls do. I says to myself: 'Why, if you was to take that girl and dress her up and give her a little education you wouldn't be ashamed to take her anywheres.' Well, I went over to her table and I says: 'Look at here, little girl; you got a fine head of hair and you'd ought to take care of it. Why don't you wear a cap in here in all this dust?' It tickled her to death to be noticed like that. And, sure enough, she did get a cap. I says to her: 'That's the dope, little girl. Take care of your looks. You'll only be young and pretty like this once, you know.' So one thing led to another, and one day, a while later, she come up to the office to see about her time slip or something, and I jollied her a little. I seen she was a pretty smart kid at that, so—" At that point he lowered his voice to a whisper, and leaned over so that his thick, smiling lips were close to his companion's ear. The motion of the train caused their hat brims to interfere. Disturbed by this, the raconteur removed his derby. . . . His head was absolutely bald.

Corporal Modesty

WELL, I am not sure that I should have liked to hear the rest. I shifted my attention back to the apostle of the linen union suit, who had talked on, unremittingly. His conversation had, at least, the merit of entire frankness. He was a man with nothing to conceal.

"Yes, sir!" I heard him declare, "every time you get on to a railroad train you take your life in your hands. That's a positive fact. I was reading it up just the other day. We had almost sixteen thousand accidents to trains in this country last year. A hundred and thirty-nine passengers killed and between nine and ten thousand injured. That's not counting employees,

Digitized by Google

either—just passengers like us." He emphasized his statements by waving a fat forefinger beneath the listener's nose, and I noticed that the latter seemed to wish to draw his head back out of range, as though in momentary fear of a collision.

For my part, I did not care for these statistics. They were not pleasant to the ears of one on the first leg of a long railroad journey. I rose, aimed the end of my cigar at the convenient nickel-plated receptacle provided for that purpose by the thoughtful Pullman Company, missed it, and retired from the smoking room. Or, rather, I emerged and went to luncheon.

Our charming neighbor of the parlor car was already in the diner. She finished luncheon before we did and, passing by our table as she left, held her chin well up and kept her eyes ahead with a precision almost military—almost, but not quite. Try as she would, she was unable to control a slight but infinitely gratifying flicker of the eyelids in which nature triumphed over training and femininity defeated feministic theory.

A little later, on our way back to the smoking room, we saw her seated, as before, behind the sheltering ramparts of her magazine. This time it pleased our fancy to take the austere military cue from her. So we filed by in step, as stiff as any guardsmen on parade before a princess seated on a green plush throne. Resolutely she kept her eyes upon the page. We might have thought she had not noticed us at all but for a single sign. She uncrossed her knees as we passed by.

An Old Story

IN THE smoking room we entered into conversation with a young man who was sitting by the window. He proved to be a civil engineer from Buffalo. He had lived in Buffalo eight years, he said, without having visited Niagara Falls. ("I've been meaning to go, but I've kept putting it off.") But in New York he had taken time to go to Bedloe Island and ascend the Statue of Liberty. ("It's awfully hot in there.") Though my companion and myself had lived in New York for many years, neither of us had been to Bedloe Island. But both of us had visited the Falls. The absurd humanness of this was amusing to us all; to my companion and me it was encouraging as well, for it seemed to give us ground for hope that, in our visits to strange places, we might see things which the people living in those places fail to see.

Concerning a Minx and Her Smile

WHEN, after finishing our smoke, we went back to our seats, the being across the way began to make believe to read again. But now and then, when some one passed, she would look up and make believe she wished to see who it might be. And always, after doing so, she let her eyes trail casually in our direction ere they sought the page again. And always we were thankful.

As the train slowed down for Rochester we saw her rise and get into her "slinky" little coat. The porter came and took her Russia-leather bag. Meanwhile we hoped she would be generous enough to look once more before she left the car. . . . Only once more!

But she would not. I think she had a feeling that frivolity should cease at Rochester; for Rochester, we somehow sensed, was home to her. At all events she simply turned and undulated from the car.

That was too much! Enough of make-believe! With one accord we swung our chairs to face the window. As she appeared upon the platform our noses almost touched the windowpane and our eyes sent forth forlorn appeals. She knew that we were there, yet she walked by without so much as glancing at us.

We saw a lean old man trot up to her, throw one arm about her shoulders, and kiss her warmly on the cheek. Her father—there was no mistaking that. They stood there for a moment on the platform talking eagerly; and as they talked they turned a little bit, so that we saw her smiling up at him.

Then, to our infinite delight, we noticed that her eyes were slipping, slipping. First they slipped down to her father's necktie. Then sidewise to his shoulder, where they fluttered for an instant, while she tried to get them under control. But they weren't the kind of eyes which are amenable. They got away from her and, with a sudden leap, flashed up at us across her father's shoulder! . . . The minx! She even flung a smile! It was just a little smile—not one of her best—merely the fragment of a smile, not good enough for father, but too good to throw away. . . .

Well—it was not thrown away. For it told us that she knew our lives had been made brighter by her presence—and that she didn't mind a bit.

Men, Women, and Cities

RUSHING on toward Buffalo as night was falling, my companion and I discussed the fellow travelers who had most engaged our notice: the young engineer from Buffalo, keen and alive, with a quick eye for the funny side of things; the hairless amorist; the genial bore, whose wife (we told ourselves) got very tired of him sometimes, but loved him just because he was so good; the pretty girl who couldn't make her eyes behave because she was a pretty girl. We guessed what kind of house each one

The gentleman who favored linen mesh was a fat, prosperous-looking person, whose gold-rimmed spectacles reflected flying lights from out of doors

resided in, the kind of furniture they had, the kind of pictures on the walls, the kind of books they read—or didn't read. And I believe that we guessed right. Did we not even know what sort of underwear encased the ample figure of the man with the amazing memory for unessential things? And, while touching on this somewhat delicate subject, were we not aware that if the alluring being who left the train and us at Rochester possessed that once so necessary garment called a petticoat, that petticoat was hanging in her closet?

All this I mention because the thought occurred to me then (and it has kept recurring since) that places, no less than persons, have characters and traits and habits of their own. Just as there are colorless people there are colorless communities. There are communities which are strong, self-confident, aggressive; others lazy and inert. There are cities which are cultivated; others which crave "culture" but take "culturine" (like some one drinking from the wrong bottle); and still others almost unaware, as yet, that esthetic things exist. Some cities seem to fairly smile at you; others are glum and worried like sick men or men with business troubles. And there are dowdy cities, and fashionable cities—resembling one another as fashionable women often do. Some cities seem to have an active sense of duty, others not. And almost all cities, like almost all people, seem to be capable alike of baseness and nobility. Some cities are rich and proud like self-made millionaires; others, by comparison, are poor. But let me digress here to say that, though I have heard mention of "hard times" at certain points along my way, I don't believe our modern generation knows what hard times really are. To most Americans the term appears to signify that life is hard indeed on him who has no motor car or who goes without champagne at dinner.

Undulating Fashion

CITIES even have their costumes. Collars, for example, tend to become lower toward the Mississippi River, and black string ties appear. Missouri likes black suits—older men in the smaller towns seem to be in a perpetual state of mourning, like those Breton women whose men are so often drowned at sea that they never take the trouble to remove their black.

Western watch chains incline to massiveness, and are more likely than not to have dangling from them large golden emblems with mysterious devices. Likewise the Western buttonhole is almost sure to bloom with the insignia of some secret order.

Many Western men wear diamond rings—pieces of jewelry which the East allots to ladies or to gamblers and vulgarians. When I inquired about this I heard a piece of interesting lore. I was informed that the diamond ring was something more than an adornment to the Western man; that it was, in reality, the survival of a fashion which originated for the most practical of reasons. A diamond is not only convenient to carry but it may readily be converted into cash. So, in the wilder Western days, men got into the way of wearing diamond rings as a means of raising funds for gambling on short notice, or for making a quick get-away from the scene of some affray.

Hats and Hearts

WHETHER they are entirely aware of it or not, the well-dressed men of Eastern cities are, in the matter of costume, dominated, to a large extent, by London. The English mode, however, does not reach far West. In Chicago it grows feeble; in St. Louis it is practically nonexistent. Clothing in the West is all American. Take, for example, coats. The prevailing style, at the moment, in London and in the Eastern cities of this country happens to run to a snugness of fit amounting to actual tightness. Little does this disturb the Western man. His coat is loose and broad across the shoulders. And let me add that I believe his vision is "cut" broader, too. Westerners, far more than Easterners, it seems to me, sense the United States—the size of it and what it really is. Time and again, in talking with them, it has come to me that their eyes are focused for a longer range; that, looking off toward the horizon, they see a thousand miles of farms stretched out before them or a thousand miles of mountain peaks.

And even as coats and comprehension seem to widen in the West, so hats and hearts grow softer. The derby plays an unimportant part. In Chicago, to be sure, it makes a feeble effort for supremacy, but west of there it dies an ignominious death beneath an avalanche of soft felt hats. Felt hats around Chicago seem, however, to lack the full-blown Western opulence. Compared with hats in the real Middle West, they are stingy little headpieces. When we were in Chicago that city seemed to be the center of a section in which a peculiar style of hat was prominent—a blue felt with a velvet band. But that, of course, was merely a passing fashion. Not so the hats a little farther west. The Mississippi River marks the beginning of the big black hat belt. The big black hat is passionately adored in Missouri and Kansas. It never changes; never goes out of fashion. And it may be further noted that many of these somber, monumental, soft black hats, with their high crowns and wide-spread brims, have been sent from these two Western States to Washington, D. C.

I Reserve Rights

AT KANSAS CITY there begins another hat belt. The Missouri hat remains, but its supremacy begins to be disputed by an even larger hat, of similar shape but different color. The big black, tan or putty-color hat begins to show at Kansas City. Also one sees, now and again, upon the streets a cowboy hat with a flat brim. When I mentioned that to a Kansas City man he didn't seem to like it. With passionate vehemence he declared that cowboy hats were never known to adorn the heads of Kansas City men—that they only came to Kansas City on the heads of itinerant cattlemen. Well, that is doubtless true. But I did not say the Mayor of Kansas City wore one. I only said I saw such hats upon the street. And—however they got there, and wherever they came from—those hats looked good to me!

But where am I? It would appear that, from the train which was bearing me to Buffalo, I have made a standing broad jump all the way across the Mississippi. That shows you how the West can lead one on!

My contacts with many places and persons I shall mention in the following chapters have, of necessity, been brief. I have hardly (*Concluded on page 24*)

Our Army and Navy in Peaceful Action

By Jack London

Photographs by JAMES H. HARE, Collier's Staff Photographer

DAYBREAK on a glassy sea and startled flying fish are struggling to fly in the absence of wind. Seaward the destroyers, like cardboard silhouettes, pass across the blood-red orb of the sun just clearing the horizon.

Ahead still steams our convoying battleship, the *Louisiana*. Astern, in line at half speed, steam our three sister transports. Coastward are the blinking lighthouse, a long blur of land that with growing day resolves itself into a breakwater, a low shore, a towered city, and a harbor of many battleships. So many battleships are there that they have spilled out of the crowded harbor until several times as many are in the open roadstead. And there are naval supply ships, hospital ships, a wireless ship, and colliers.

And overhead, to give the last touch of modern war to the scene, a naval hydroplane burrs like some gigantic June bug through the gray of day.

Here, where Cortez burned his ships long centuries gone, and where Scott bombarded and took the city two generations ago, lie Uncle Sam's warships with every man on his toes. Yes, and every soldier gazing eagerly ashore from crowded transports is on his toes.

All is peaceful, yet the feeling one gets of the many ships, the burring flying machines, and the thousands of men is that of being on tiptoe to begin.

On Tiptoe for Excitement

ASHORE all is as peaceful and as markedly on its toes as is the sea. Everywhere marines and bluejackets are cooking breakfast. From the roof of the Terminal Hotel sailors are wigwagging. Sailor aids of sailor officers gallop back and forth on commandeered Mexican horses, and commandeered automobiles dash by with officers on the seats and armed sailors standing on the running boards.

American women, quite like American women at home, with never an earmark of being refugees from the interior of Mexico, are breakfasting on the cool arcaded sidewalks of hotels bordering the Plaza. Overhead whirl huge electric fans along the lines of the tables where our women breakfast so composedly and sailor sentries pace back and forth. Sentries are everywhere. So are the newsboys with their eternal extras. Through the confusion of bootblacks, flower sellers, and picture post-card peddlers stride naval and marine officers in duck and khaki, and from the hips of all of them big revolvers and automatics swing in leather holsters. Down the street, in the thick of mule carts and mounted sailors, pass bareheaded Mexican women returning from market with big fish unwrapped and glistening in the sun.

In the Hotel Diligencia's bedroom where I write these lines under lofty, gold-edged beams, there is a spatter of fresh bullet holes on the blue wall. In the lace-patterned mosquito canopy over my bed is a line of irregular rents which, folded as they were originally, show the path of a single bullet. The glass of the French windows that open on the balcony is perforated by many bullets. The wrecked door shows how our sailors entered behind the butts of their rifles in the course of the street fighting and house cleaning. From the fretted balcony one can see the ruins of plate glass and mirrors in the shops and hotels fronting the street and plaza.

Feats of Sailor Ingenuity

MEXICAN officers seem to have notions different from ours in the matter of prosecuting war. When the landing of our forces was imminent, General Maas, who was the Federal commander at Vera Cruz, released the criminal portion of the prisoners confined in the fortress of San Juan de Ulloa. These were the hard cases, the murderers and robbers and men guilty of violent and terrible crimes. The politicals General Maas was very careful not to release. And when our forces did land, General Maas fled for the hinterland before the fighting began, having first instructed his soldiers to shift for themselves. While the released prisoners did take some part in the street fighting and housetop sniping, in the main they devoted themselves to pillage. Hard cash was what they went after, as for instance the smashed safes in Mr. Tansey's office at the Pierce Oil Refinery attest. Falling back before our men, these convicts terrorized the country people, looting everything of value and not refraining from attacking the women. So merciless were they that the outraged peons captured and summarily executed two of them who had lingered behind their fellows.

Vera Cruz looked on in silent wonder. After an army of bluejackets and an army of marines, it now beheld the largest force of all—4,000 infantrymen under General Funston

Yes, there is a decided evolution in technique of war as practiced by modern soldiers. Our fighting ships are ten and fifteen million-dollar electrical, chemical, and mechanical laboratories, and they are manned by scientists and mechanicians. They had the street cleaners out ere the bodies were picked up. In a matter of several hours they repaired and ran the two scrapped locomotives which the Federals had thought too worthless to run out. And while this was going on other sailors were rigging short wireless masts on top of a day coach and equipping the car with a complete wireless apparatus.

The ice plant of Vera Cruz had broken down, and Vera Cruz without ice was a condition not to be tolerated, so by afternoon the sailors had repaired the plant, and the sick and wounded as well as all the rest of the city had its ice again. When four knocked-down automobiles were discovered, volunteers were called for and in less than three hours the cars were assembled and were being driven about the city on military business by the jackies who had assembled them. As civilians remarked, our sailors are able to practice all trades and professions under the sun with the sole exception of wet-nursing. Even so, I have seen them carrying Mexican babies for tired mothers across the stretch of railroad which the Federals destroyed.

And the way our sailors drove and rode horses, mules, and burros was even more wonderful than their other achievements. They came off our ships sailors; they will return soldiers.

Navigating a Mexican Horse

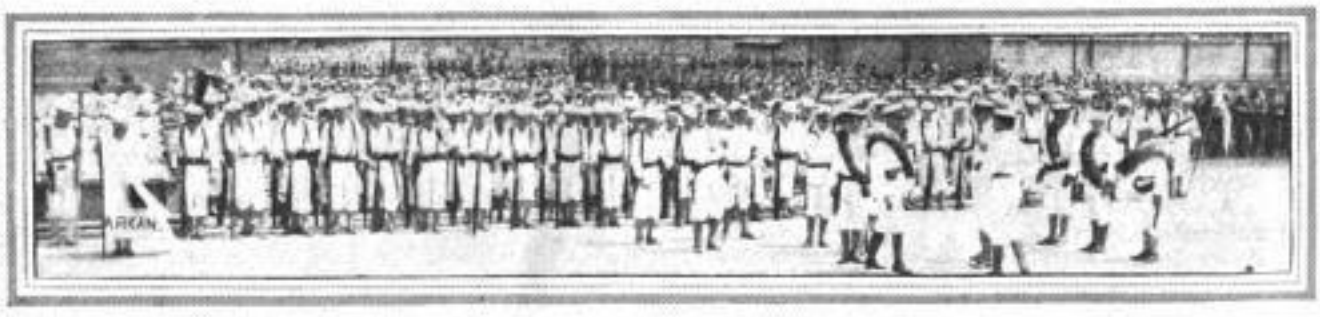
THEY tell of one young sailor who mounted a commandeered horse in a lull in the fighting. He had not minded the fighting, but it was with somewhat of the spirit one embarks on a forlorn hope that he got his legs astride the animal. "Well," he said as he settled himself in the saddle, "commence."

"What do I do now?" asked another jacky, mounting at the Plaza.

"Go ahead half speed," was the advice. "Keep your helm amidships to the corner, then starboard your helm and proceed under forced draft."

It is true that, when under forced draft, the jackies hold on inelegantly by main strength of gripping legs; but the point is that they do hold on. I have looked in vain to see one of them separated from his mount. One misadventure only have I witnessed; and then the sailor, at a dead gallop, abruptly put his helm hard over at a sharp corner and capsized his four-legged craft. When the band struck up "The Star-Spangled Banner" at Admiral Fletcher's flag raising, a marine, mounted on a Mexican horse, took its ear and turned it forward. "Listen to that, hombre," said the marine; "that's real music. It's American music."

On the *Arkansas* occurred an incident which serves to show to what extent our men were on their toes prior to landing. Lieutenant Commander Keating of the *Arkansas* battalion had selected the best and strongest of his men for shore work. The men who were not selected were sad and sore. At the last there remained but one man more to select, and two of the youngsters urged what was considered equal claims of health, strength, and record. How to decide between them was beyond the Lieutenant Commander. The boys themselves suggested the way. They put on boxing gloves and fought for it. Those who saw the battle aver that it was the hottest bout between amateurs they had ever witnessed. At the end of four rounds it was a draw and Lieutenant Commander Keating was more perplexed than ever. His final solution of the problem was the only way it could be fairly solved. He took both lads. Later he reported that, as in everything else, they had played equally splendid parts in shore fighting and shore work.



Incredible Marksmanship

ONLY very brave men or fools without any knowledge of modern shell fire could have first upon our sailors and marines from the Naval School. Broadside on, at close range, lay the *Chester*. When the first shots were fired upon our men, the *Chester* went into action for a hot five minutes. Had the taxpayer at home witnessed the way those upper story windows were put out by the *Chester*'s shells, he would never again grudge the money spent of recent years in target practice. Onlookers say that it reminded them of Buffalo Bill's exhibitions of rifle shooting.

The outside of the Naval School was little damaged. Inside it was a vast wreck. Practically every shell entered by way of the windows and exploded inside. When I visited the building, which is a huge affair, many buzzards were appropriately perched on the broken parapets. Inside, through burst floors, rent ceilings, and masses of fallen masonry, one could trace the flight of the shells through massive partitions to the spots where they had exploded.

There was all the

Admiral Fletcher's bluejackets on parade in the Custom House Plaza, Vera Cruz

Digitized by Google

evidence of the hot five minutes. In the big patio were great heaps of fallen cement balustrades from second-story balconies. Some of the shells went clear through the building, crossed the patio, and burst in the rear rooms. Many years had been consumed in the construction, equipping, and organizing of that building, and in five minutes it was to all intents and purposes destroyed. Such is the efficiency of twentieth century war machinery. Laboratories furnished with most delicate and expensive instruments were knocked into cocked hats by single shells.

One lecture room was filled with beautiful models of ships. One model, of a full-rigged ship, twenty-five feet in length, with skysail yards and all sails set, precise in every minutest detail aloft and alow, was undamaged save for a rent in her mainsail from a fragment of shell. Other and smaller models, shattered and dismasted, covered the floor with all the destruction of an armada. On a blackboard was scrawled "Captured by the U. S. S. *New Hampshire*, April 22, 1914."

In other lecture rooms, on blackboards alongside academic problems of war as demonstrated by Mexican cadets, were chalked records of boys from the *Utah*, the *San Francisco*, and the *Arkansas*.

Bloodstained cots and pillows showed that more than roof beams and masonry had been shattered. Through knee-deep riffraff of discarded uniforms, sketches, maps, and examination papers, chucked and strutted one live thing left from the bombardment—a trim Mexican rooster that bore all the marks of a fighting cock.

But it was in the second story that the worst devastation was wrought. Roofs, floors, and walls were perforated and smashed to chaos. "Mind your foot," was the constant cry as one trod gingerly over débris and wove in and out among yawning holes.

The touch of the eternal feminine was not missing. My lady's boudoir seemed to have received the severest fire. Fourteen shell holes punctured the walls, the ceiling had partly fallen in, a great hole gaped in the floor, and one shell had burst directly on the brass bed. The floor was hillocked with masses of masonry and broken furniture, and all about were scattered pretties and fripperies of the lady—empty jewel cases, powder puffs, silver-mounted brushes. Most conspicuous of all was a pair of red, high-heeled Spanish slippers.

Aboard the Rescue Train

DOWN in the railroad station, where I boarded the rescue train that runs out each day to the Federal lines, our sailors and marines were cooking, washing clothes, and teaching the Mexican youth how to pitch baseball. All along the track, until the country was reached, our men were encamped and performing sentry duty.

A guard of bluejackets, under the command of Lieutenant Fletcher of the *Florida*, manned the train. The engine was run by our enlisted men, who had repaired it, as was also the wireless by the men who had installed it. Even the porter of the Pullman car was an unmistakable American negro.

Two miles beyond our last outpost we came to the break where the Federals had torn up two miles of track, burning the ties and carrying the rails away with them. Here, also, was a blockhouse of advanced Federal outposts.

Under a white Turkish towel, carried by a sailor, Lieutenant Fletcher met and conferred with the Mexican Lieutenant in charge. The latter was small, stupid-tired, and a greatly embarrassed sort of man. The contrast between the two Lieutenants was striking. The Mexican Lieutenant strove to add inches to himself by standing on top of a steel rail. But in vain. The American still towered above him. The American was—well, American. Little of Mexican or of Spanish was in the other. It was patent that he was mostly Indian. Even more of Indian was in the ragged, leather-sandaled soldiers under him. They were short, squat, patient-eyed, long-enduring as the way of the peon has been even in the long centuries preceding Cortez, when Aztec and Toltec enslaved him to burden bearing.

The Oxlike Peon Soldier

ONE could not help being sorry for these sorry soldier Indians, who slouched awkwardly about while our Lieutenant scanned the far track across the break in the hope of some sign of our countrymen fleeing from the capital. Sorry soldier Indians they truly were. When I thought of our own fine boys of the fleet and the army back in Vera Cruz, it seemed to me that it would not be war, but murder. What chance could such lowly, oxlike creatures, untrained themselves and without properly trained officers, have against our highly equipped, capably led young men? These soldiers of the peon type are merely descendants of the millions of stupid ones who could not withstand the several hundred ragamuffins of Cortez and who passed stupidly from the harsh slavery of the Montezumas to the no less harsh slavery of the Spaniards and of the later Mexicans.

But Even Peons Can Hurl Death

AND yet one must not forget that each one of these sorry soldiers bore a modern rifle, the cartridges for which, loaded with smokeless powder, are capable of propelling a bullet to kill at a mile's distance and farther, and, at closer range, to perforate the bodies of two or three men. Also, each of these sorry soldiers, at command, by the mere crooking of index fingers, could release far-flighted messengers of death. Also, the mark of the cross, rightly applied to the steel-jacketed nose of the bullet, can turn that bullet into a dumdum that makes a small hole on entering a man's body and a hole the size of a soup plate on leaving. It requires no intelligence thus to notch a bullet. Even a peon can do it.

War is a silly thing for a rational, civilized man to contemplate. To settle matters of right and justice by means of introducing into human bodies foreign substances that tear them to pieces is no less silly than ducking elderly ladies of eccentric behavior to find out whether or not they are witches. But—and there you are—what is the rational man to do when those about him persist in settling matters at issue by violent means?

Even Peace Lovers Must Be Prepared

I AM a rational man. I firmly believe in arbitrament by police magistrates and civil courts. Nevertheless, on occasion, I find myself in contact with men who are prone, say, to rob me of my purse, and who elect to do it by violent and disruptive means. So, on such occasions, I am compelled to carry an automatic in order to dispute with such men my path in life which they are blocking and ambuscading. Personally, and for a lazy man, carrying a big automatic is a confounded nuisance. I hope for the day to come when it will not be necessary for any man to carry an automatic. But in the meantime, preferring to be a live dog rather than a dead lion, I keep thin oil on my pistol and try it out once in a while to make sure that it is working.

As it is with rational men to-day so it is with nations. The dream of a world police force and of a world court of arbitration will some day be realized. But that day is not to-day. What is is. And to cope with what is, it behooves nations to keep thin oil on their war machinery and know how to handle it.

Texas was long notorious as a gun-fighting State. To-day it is against the law for a man to carry a revolver in Texas. Times do change. But there is always the time between times. As one regarded the Mexican Lieutenant with his peon soldiers, it was patent that the old order still obtained, and that each peon was equipped with sufficient cartridges to destroy the rationality of a hundred men like me.

Refugees from Mexico City. Jack London's phrase for what they had escaped is: "the perils of the mob-ridden interior"

The Man He Could Lick

AND we stood there under our white Turkish towel, surrounded by armed men, and quested across a stretch of ruined railroad for the sight of some of our own men, women, and children making their way down to the coast from mobs that looted, plundered, and cried death to them.

"I've found him at last," said a friend, a Texas civilian and ex-roughrider.

All the way out on the train he had been lining himself up against one and another of the husky, broad-shouldered sailor boys and lamenting that he could not find a man he could lick. Now he gazed with satisfaction at the little Mexican Lieutenant and muttered in my ear: "I just wish it was up to him and me to settle this whole war. Take him on on any terms—bite, gouge, or anything up to locking us, stripped, in a dark room."

The Goal of the Refugees

A TRAIN appeared in the distance between green walls of jungle. Through our glasses we could make out parasols and sunshades that advertised women of our race who had escaped the perils of the mob-ridden interior.

Permission was reluctantly accorded us, and we advanced a mile along the destroyed track to meet our countrymen. Glad as we were to see them, their gladness at seeing white men from the coast was almost pathetic. For three days and nights they had not had their clothes off nor lain in a bed, nor had they ever been certain of their lives during that time.

It seems the Mexican officers have a very simple and very clever technique of waging war on civilians of the United States. The officers themselves rob civilians of revolvers. This enables the next mob of death-shouting Mexicans to put words into deeds without the slightest risk of being hurt. Of course the Mexican army cannot be held responsible for all the actions and the murders committed by such mobs. Also, officers are richer by the number of weapons they accumulate from fleeing Americans.

By the time our refugees reached the train and saw the American uniform they were stating that it was the finest thing they had ever seen in their lives. As the train backed into Vera Cruz the landscape continued to grow more beautiful, for it was covered everywhere with sailors and marines on sentry duty or in camp. But the sight of the inner and outer harbors filled with our warships was the finishing stroke.

Ashore all is as peaceful and as markedly on its toes as is the sea. . . . Sailor sentries pass back and forth. Sentries are everywhere

Experiences at Mexican Hands

SAID one of the refugees, a doctor: "I just wish the fellows at Washington who are running things could have had our experience. It would change their views on diplomacy and on army and navy appropriation bills. I tell you, if they had been robbed and mobbed and thrown into jail along with their wives and children, and heard the roar going up all about them of 'Muerto los gringos!' and then, finally, got down the country as we have, with their tongues hanging out, and seen these warships and bluejackets—I tell you they couldn't get back to the States quick enough to start working for a larger army and navy."

The views of American residents of Mexico should be of value at the present time, and I shall repeat them without comment to show how blows the wind with those whose personal interests are vitally involved.

"Somehow," said one of them, "we don't enjoy seeing the United States call on the A B C class in Spanish and Portuguese to help her out of this mess."

Another declared: "This waiting and watching, our Fabian offensiveness, is (*Continued on page* 26)

WHETHER THE FORMAL RAISING OF OUR FLAG OVER VERA CRUZ *on April 27 will mean much or little to this country and Mexico in the future, it furnished a patriotic thrill for the Americans present. It was a particularly auspicious event for Admiral Fletcher and the naval officers and men under his command, for it marked the completion of their work in the city. Two battalions of marines and two battalions of bluejackets were lined up in the Plaza. Massed bands played "The Star-Spangled Banner," the officers saluted, the warships each fired twenty-one guns, and all American civilians cheered. Captain F. S. Delano and Major J. H. Quick of the Marines, Ensign E. O. McDonell, and Quartermaster Edward Jeffs, the first men to land on April 21, hoisted the flag over the Terminal Hotel, Admiral Fletcher's headquarters. Mr. Hare's snapshot was taken as the marines and the bluejackets were retiring to their quarters to make ready for the landing of General Funston's men next day. The army did not take full charge of the city until April 30*

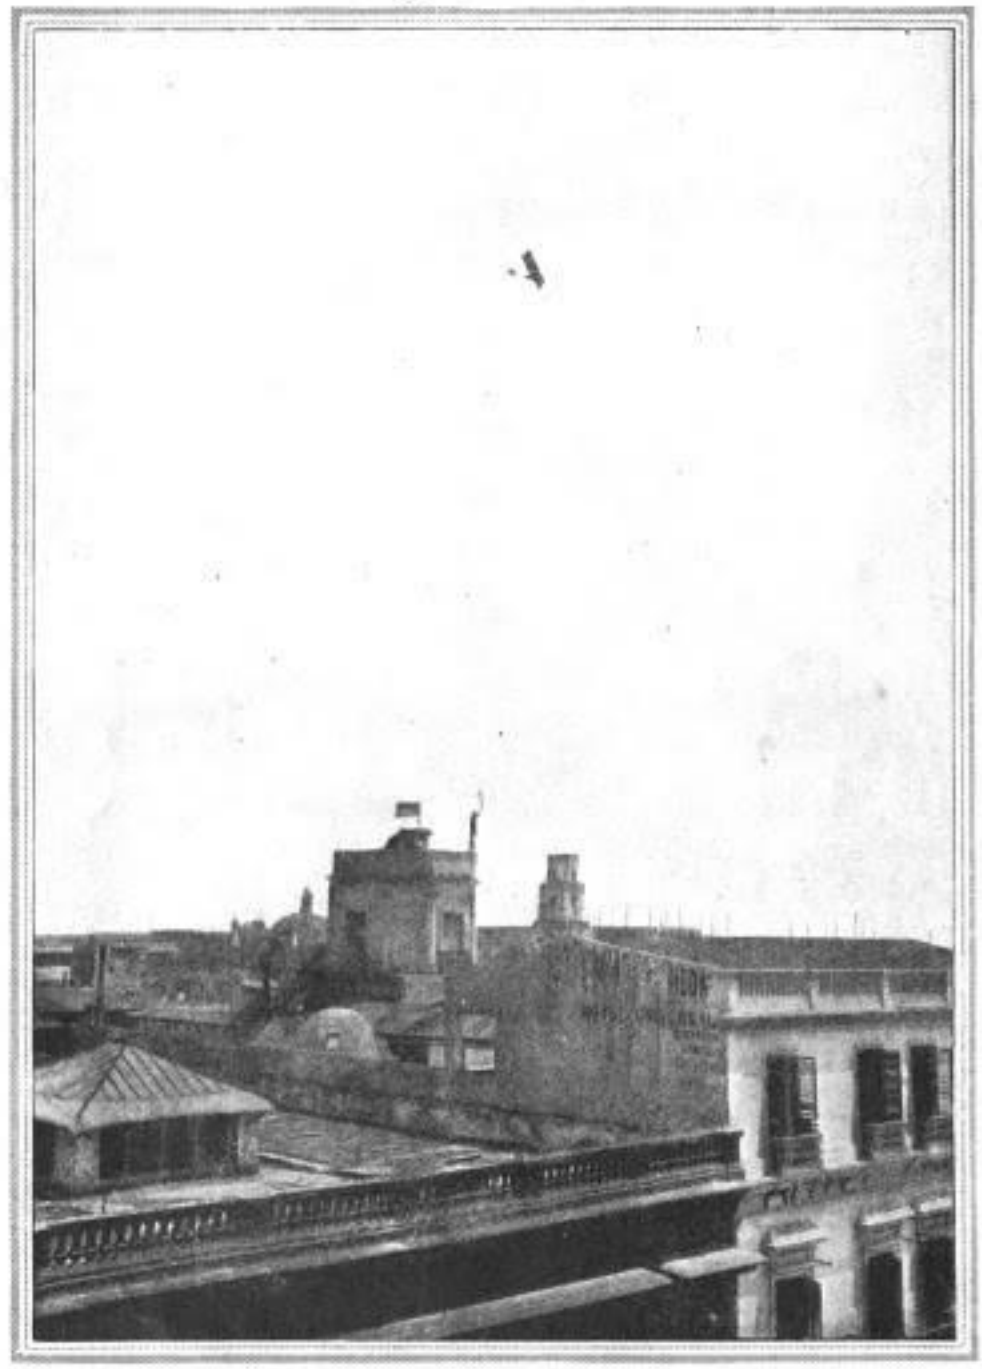
Guarding the pumping station, 8 miles out, which was fired upon by General Maas's men on May 3

A marine "wigwagging" a message back to army headquarters from an outpost 4 miles from Vera Cruz



Giving Mexican Jailbirds a Job

THE TIME-SERVING *Mexican prisoners in jail at Vera Cruz at the time our forces took the city from General Maas wondered if they were going to be taken out and shot by the invaders. But their minds were soon relieved. After releasing 300 political prisoners, Admiral Fletcher had all the ordinary offenders put to work cleaning up the city. Mr. Hare's photograph above shows some of them being marched to work. The Americans began a sanitary crusade as soon as order was restored in the city. The three men shown in the circle are Vera Cruz prisoners returning unguarded to their jail lodgings after a day's toil*

Under the white flags near Vera Cruz. Charge d'Affaires Nelson O'Shaughnessy, the man with the Fedora hat, is just in front of the rear flag, and leading are General Ramon Corona (left) and Captain Harry McL. Huse, Admiral Fletcher's chief of staff

O'Shaughnessy's Exit from Mexico City

IT WAS easy for Nelson O'Shaughnessy, our Chargé d'Affaires, to get to Vera Cruz when given his passports. Huerta, who likes him personally, gave him all necessary protection during the journey, which is described in Mr. Hare's snapshots on this page. Nobody was even permitted to hiss him as he left the capital. Fifty picked infantrymen under General Corona accompanied the diplomat and his party as far as Tejeria, near Vera Cruz.

The Double-Squeeze at Villa Borghese

Part II—At Sea

By Henry Beach Needham

ILLUSTRATED BY ARTHUR WILLIAM BROWN

AN UNSHAVEN, dishevcled young man, hatless but otherwise completely dressed down to his shoes, turned over on the bed, opened his sticky eyes, then closed and dug his fists into them to dissipate the heaviness of the lids. He tried vainly to moisten his parched lips with his swollen tongue.

His nose itched tormentingly, and he rubbed it vigorously with the back of his hand.

As consciousness returned, haltingly and with brief lapses into stupor, his brain and the senses of taste, smell, and sight began to correlate, slowly but accurately—due to the native resilience of an unabused constitution.

A peculiar taste in his mouth he couldn't label. To one whose lips had "never known the taste of liquor" it was indescribable—indescribably bad, nauseating.

But the smell that rose from some part of his clothing he recognized. It was the repellent odor that exuded from a saloon when the rubber-tired doors swung open. It was stale liquor! And it had been spilled on *his* clothes. Following this loathsome discovery, he raised his hand toward his nose and again he was startled to get another whiff of stale liquor. A shudder of disgust passed through him. He now took a second invoice of the taste in his mouth and classified it as "dark brown." But not yet could he bring his logy mentality to take up the trail from effect back to cause.

HIS bed next attracted his attention. It was narrow—much like a shelf with a wooden side to prevent one's falling out. Looking up he saw above him what, judging from the woven-wire springs, was another narrow bed. The furnishings of the apartment or cell, whatever it was, all tethered to something permanent, were at first unfamiliar to him. It was the aperture admitting the light that helped him to fix the room and its location. This round opening to the outside world was a bull's-eye of thick glass. And as he stared through the circular window on to grayness—nothing more—there came a loud thump, instantly followed by a stinging sound, as if minute pebbles had been thrown against the glass fiercely. Then water ran off, leaving the bull's-eye flecked with drops.

His mind bridged the gap between present predicament and past experience. He recalled the Giant-killers' trip to Cuba after they had worsted the Cubs—the days on the high and low seas. He knew now. He was aboard ship!

Secure in this conclusion, he brought himself to a sitting posture on the edge of the berth. In an upright position he found that he was inclined to dizziness. But he fought it off, got to his feet, and, letting down the washbasin, soused his head in cold water—all the water the tank contained. This revived him wonderfully.

"How can I get you to stop the ship?" The captain smiled. "If you pressed me for an answer, I would have to say that you couldn't"

HE LOOKED about the stateroom more carefully. There was a suit case of real leather on the bunk under the porthole. He was positive that he had never seen it before. Turning it round, he found on the end, in black lettering, the inscription:

S. W. JAMES, New York.

"S.-W.-Ja-m-es?" he questioned. He recalled all the Jameses he had ever heard of—there weren't many—from Bill James, the Yankee pitcher, who had struck him out twice in one game, to Jesse and Henry James. There was no "S. W." in the list.

Mechanically he tried the bag to see if it was locked. It opened, displaying a complete assortment of linen and underclothing. There were shirts, collars, handkerchiefs, stockings, brush, and comb—everything necessary, with the suit he had on, to enable him to make a respectable appearance. The things had been carefully selected and they were all new. But there wasn't a scrap of writing to identify their owner.

This turned his attention to his own means of identification. Putting his hand in his pocket, he drew out four envelopes. Three of them were addressed to S. W. James, Hotel Longacre, New York City. Two of the envelopes contained bills—one an "account rendered" from a liquor dealer for $67.25; the other a bill for cigars and cigarettes amounting to $23.50. The third was a letter from the steamship agents of the Hamburg Line, reading:

DEAR SIR: *We have booked you for passage from New York to Naples on the S. S. Colonia, sailing from pier foot of West Thirteenth Street, N. R. We have assigned to you Cabin C 39, on the saloon deck, and have arranged that you are to have it entirely to yourself.*

We beg to call your attention to the fact that, owing to the tide on the day of departure, the Colonia will sail at one o'clock in the morning, October 7.

"I do believe that's true." For emphasis she rested her hand for a moment on his sleeve. Her touch gave him an odd thrill

THE fourth envelope inclosed a ticket calling for one first-class passage, New York to Naples, on the steamship *Colonia*, and made out to S. W. James. There was nothing else in the pockets of his coat.

His gold watch was ticking in the pocket of his vest. Attached to it was a narrow black silk ribbon—the useful portion of a watch fob. But the ornamental part of the fob—the solid gold baseball, surmounted by two tiny crossed bats of platinum, emblematic of the World's Championship—that was missing.

Robbed! was his first thought, and he searched in his trousers' pocket for the cash which he had with him—less than ten dollars. He found a roll of yellow-backed bills. Five hundred dollars!

In any sudden lapse into unconsciousness the first faculty to give way is the memory—that is, the mental process of storing facts and impressions ceases. So, also, in returning consciousness the memory has a trick oftentimes of beginning where it left off or of seizing upon some one thing in particular to locate its bearings. The sight of the five hundred dollars immediately brought to mind what had happened before the long, dreamless sleep just ended on the ship. This money—or five hundred dollars just like it—was lying on a table in a suite of rooms in the Belmont-Stratworth Hotel. He was about to come into possession of it—all for signing a contract to report the World Series on behalf of the Transcontinental Newspaper Syndicate, Metropolitan Tower, New York City.

HE SAT down again upon the berth to puzzle it out, beginning with the letter from the syndicate—it was on engraved stationery, he remembered. The secretary, Walter Noble, gave him as references three well-known New Yorkers. But the letter had come, special delivery, on Sunday—the day after the championship was cinched—and reply was requested by telegraph on Monday. Anyhow, what need was there of references, he had argued, when he couldn't lose! For he was to receive five hundred dollars on the signing of the contract and two hundred dollars every day he turned in a story. No, he couldn't lose, and he could make thirteen hundred dollars at least—nineteen hundred dollars at most. Yes, he had looked upon it as "very easy" money and had kept his own counsel, not even confiding in Tris Ford, because of the reports in the newspapers that the National Commission was to prohibit the players from writing for the papers; certainly all those who hadn't contracts.

There was a day's delay in Noble's coming over, he recalled. The secretary of the Transcontinental Syndicate had come—he rubbed his head in bewilderment. When was it? How long had he slept? Yesterday—it must have happened yesterday—last night!

He remembered that he had gone to the Belmont-Stratworth, and the clerk at the desk knew him—had seen him play. He could repeat his words: "Mr. Noble is expecting you—go right up to Suite 1142." He had gone right up, had been admitted to the parlor of a suite, and had met a nice young fellow, obviously a gentleman, who greeted him cordially. This Mr. Noble not only knew baseball and ball players, but they had friends in common. So they had enjoyed a very nice chat—all before the contract was produced.

THE contract—it had the name of the Transcontinental Newspaper Syndicate printed in, he was sure. He had read it very carefully, and the terms were precisely what had been offered him. While he was reading it, he remembered, Mr. Noble had taken from his bill case without any flourish five

Digitized by Google

hundred dollars. He could remember seeing the money lying on the table, the bills folded over once.

The bills in his hand now were folded once!

BUT something was going wrong with his memory. It had been spinning the tale of events without effort, but suddenly it had begun to flag. He had to prod it. What was it Mr. Noble had said? Oh, yes—"I'm going to have a drink. What'll you have?" He had declined, of course, because he didn't drink. And then? Mr. Noble had said, walking over to the telephone: "Wise man—wish I didn't," and had added: "I'll order you a soft drink."

The drink—what was it? For some reason he was very uncertain on that score. Slowly he began to form a mental image of it—a brown bottle—it was in a silver holder, because the bottom was round. Of course—ginger ale!—it came in such bottles. He remembered, too, it was imported ginger ale, not so sweet as American. Yes—the first taste had been almost bitter. And then?

Blackness! He could recall nothing, try his best, until he woke up on the ship.

It didn't accord with any experience he knew at all well—of course not with any he had ever gone through himself. He couldn't believe that he had taken an alcoholic drink by mistake unless it had been very thoroughly disguised. The odor from his clothes tended to prove that he had, but his reason told him otherwise. Nothing remained, therefore, but to conclude that he had been given a knock-out!

AS THE only bit of documentary evidence in his possession, the letter from the steamship company seemed to impel his attention. He read it over again, and the last sentence, in its full significance, made him start.

"The *Colonia* will sail at one o'clock in the morning, October 7."

October 7! There was a feeling of depression at the pit of his stomach. It was not due to seasickness. The heartbreaking realization of his situation had come at last. With the Giant-killers fighting for the victory that meant everything to players, manager, and club owners, the team's second baseman, regarded by many as "the king-pin of the defense, the leader of the offense," was far from the scene of combat, probably bound for Naples! Even though there certainly had been no malice prepense on his part, he was a deserter, nothing better, for the World Series was to start this day!

HE LOOKED at his watch. Twelve o'clock, noon! In thirty minutes the team, every man of the squad, was expected to report at the ball park. In thirty minutes! Where was he now? James Winton Shute rang the bell to find out.

The steward came promptly, a smile that was both knowing and respectful upon his face. He spoke with marked cordiality.

"Mr. James—good morning, sir. 'Ope you are feeling better, sir."

"My name is Shute—good morning."

"Mr. Shute—very well, sir." The steward puckered his lips.

"Where are we now?"

"About one hundred and fifty miles out, sir."

"Out?—you mean from land?"

"From New York, sir."

"I've got to get off! Where's the captain? He'll have to stop the boat!"

The steward placed a soothing hand upon the passenger's shoulder. "I 'ud lie down if I were you, sir, and rest a little more—get your sea legs on, Mr. James."

Without taking notice of the persistent error in nomenclature, Win Shute announced: "I'm going to see the captain. Where is he?"

"On the bridge, sir."

"Take me to him!" His inflection compelled obedience.

Once in a championship game Win Shute had worked the pitcher for a free pass to first, had stolen second and then third, and when the pitcher was winding up had raced home, hooking his leg over the plate and eluding the catcher who tried to put the ball on him. This is the only explanation that can be offered why and how "Mr. S. W. James" succeeded in getting to the captain on the bridge. The governor general of the ship was so surprised that he didn't ask the determined-looking young man how he had managed it. "Captain, my name is Shute—mostly called Win Shute."

THE captain nodded, but without a glimmer of understanding.

"You've probably heard of the World Series—championship of the big leagues?"

"American baseball?"

"Yes—games to decide the best ball team in the world," explained Win eagerly.

"What of it?" was the captain's rejoinder.

"This," said Shute, pausing for emphasis: "I'm the second baseman, heavy hitter, and leading base runner on one of the teams—the Giant-killers, folks call us."

"What of that?" varied the captain. His tone was not unkind, but he showed a wretched lack of interest.

"First game's to-day—in two hours."

"I take it you are not going to play." There was amusement in the captain's eyes.

"Not play? I've got to play!" *(Continued on page 28)*

The Tyranny of Beauty

Chapter VII—On the Rocks

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

I WAS at last discovering that credit is something you lay up as you go along by paying—in thirty days; that you've got to build it when you don't need it, or you don't have it when you do; and that you practically destroy it by paying—spot cash!

Did madame ask credit on that first lot of pink jars? Who knew Maggie McNulty of Jones Street, Columbus, enough to give her credit? She sent the money when she sent the order. She kept on sending money with her orders. Did I ask credit when I bought a quart of Jersey beets to transmute into $84 worth of essence of Persian roses from the garden of a prince? Well—forgive a slight vulgarity—I think I'd see myself! I handed the grocer 15 cents and carried the bag to the laboratory under my cloak. Or did I charge ten pounds of bolted chalk at 2 cents a pound that, dyed pink with 1 cent's worth of dye, yielded 640 boxes of "germ-proof mineral face powder guaranteed not to ferment with perspiration"? Our ingredients were all of the same financial class, therefore our charge accounts for raw materials were, and always had been, too trivial to mention. And thus, because we were *so* honest, paying scrupulously as we went along, rumor whispered we were "spot-cash people because we had to be": the dealers wouldn't trust us for a 2-cent pound of chalk!

EXQUISITE irony! The "pink jar and purple ribbon" methods, by which we could enhance a penny's worth of filler to a dollar's worth of value in the commercial world, were exactly reversed in the financial world—turned our business upside down and showed it—a pink jar with a penny's worth of credit inside!

But I had no inkling of all this as I stood before the bookkeeper's cage and surveyed his stricken face. Poor, worried man!—I read "Guilt" upon his forehead, and "Forgery" in his hand!

"Please talk to me some other time," he implored in a tragic whisper, his eyes on the distance back of me. Then I saw him take his elbow, shove a ledger off onto the floor and dive after it.

Miss Beekman scudded up at the same moment. "Any news from the madame in the morning's mail?"

"No." I turned my back and scudded off in the opposite direction. But what was I to do? It was the 27th of August. My aunt was due at the office not later than the first. She might even then be on the train; probably was. How was I to reach her and what was I to communicate if I did reach her? What did I actually know about the finances of the business? Nothing—except that a man who affirmed we "had no credit" said we were "on the rocks."

Monsieur received an impudent retort to the effect that this time next week he'd have nobody to reprimand for anything

Those were exciting days for humble, silent Lucy—manufacturer—keeper of the secrets—responsible head—sub rosa partner—nobody! Twenty-four hours later my one friend in the place—little M. Perriot—unearthed the plot to run off with the works and steal the business root and branch, bud, blossom, and fruit!

BEFORE I found the chance to see the bookkeeper alone I realized that, no matter what I learned of our straits, I could do nothing effective until my aunt came home, and my prying—or seeming to pry—into his responsibilities might stir up more trouble than it would help, while even she herself could do nothing until the expert accountant had reported on the books. He, after all, was the person to tell her when her business was on the rocks and why—not one as much outside her financial dealings and confidence as myself. So I was prepared to sit tight, and tighter still when little M. Perriot came rushing to the house next evening with the news that Miss Beekman was about to walk off with our whole business on her own shoulders.

"Nevaire do I trus' zat woman," he cried. "Her character—it is portray in her coiffure—*false!*"

SHE had some capital—about $6,000—partly from the sale of her former beauty parlor and a little money left her, but mostly from the savings of ten odd years with us and very large tips, so she had a cash string to her bow in case of a break, and she was playing her cards for a partnership with my aunt. Failing of that, Beekman—"formerly superintendent of the Del Mar Beauty Parlors"—was ready to set up for herself: it was a question, apparently, of which way the cat jumped. To this end, she'd not merely made herself solid with the trade—a glorified lady's maid for anybody—but she had made herself solid with the help. Since madame's marriage, no one was ever discharged with Beekman's consent—she made that evident all along the line, even down to the porter. It was not only Beekman who engaged the operators and gave them the chance to earn their daily bread and a large lot of treacle tips, but she was continually beholden to as she stood between them and the furies of madame, whom the rest of them seldom saw and knew little or nothing about now, and whom she had painted to their imaginations as a cross between a commercial Minerva and a bumblebee: a woman brilliant, literary, irascible, despotic, incalculable, rewarding her favorites, crushing her enemies, a Moloch to be admired and feared by all, and placated by just one—Miss Beekman; that is, Miss B. had capitalized the general mystery of the establishment and turned it to her own account. An accident, a mistake, a loss—it was Beekman who covered it up and hid it from their tyrant of the magnificent private offices.

It was in pursuance of her policy of being the one true friend that she kept us on at full pay through the summer when the help wasn't earning half its wages—and knew it. And she took care that they knew it and made it appear in the nature of a personal gift on her part for not laying them off, though it was clear philanthropy on the part of the house.

And on that coming first day of September, the entire operating staff: the chemist who got up all the side lines and declared he knew our secrets and could produce a better cream than I; the packing depart-

Digitized by Google

ment; part of the hair-goods department; the outside salesman; most, if not all of the New York demonstrators, and probably the whole clerical staff, were ready to follow Beekman out, and Beekman was ready to say: "A partnership, madame, or we leave." It was neat!

Whether the bookkeeper was involved in the scheme I never learned—it was one of those matters wiser ignored. I fancy he was trying to "run with the hare and go with the hounds." From what he said, I'm sure he knew what was going on, yet loyalty, responsibility, and policy prompted him to a partial revelation of the difficulties of which Beekman was about to take advantage; and I'm equally sure he'd not have given her away to me. Which didn't matter. Next morning monsieur, reprimanding a shampoo young lady for being late, received an impudent retort to the effect that this time next week he'd have nobody to reprimand for anything and followed up the clue, first by quizzing her, then some of the others, until he'd run the outlines of the plot to earth and seen how widely the establishment was involved. With that in hand he marched straight to Miss Beekman, told her he was thinking of setting up for himself, and hearing she was about to do the same, he'd like to rent a whole floor of her and move his department bodily out, so please let bygones be bygones between them. That is, he made her the same proposition she knew he'd made once to madame.

MISS BEEKMAN fell into the trap and forgave him everything, only too delighted at the thought of getting rid of a floor so advantageously and securing so powerful an ally and weapon at the same time in her own scheme, but she explained the situation to him—nothing was decided yet, and if the madame would agree to a partnership, of course Miss Beekman would stay; if she wouldn't—well she was bound to better herself—she was the beauty business since madame's marriage, and she'd decided it was about time for her to have her just reward.

"And of course your aunt gives zat woman no partnership!" he cried. "She laughs in her face wis not so much as to listen to a why, and Mees Beekman gets one big mad and walks out and it will be to start all over wis zis business for little Mees Lucy and her so brilliant aunt." I suggested that when it came to the point perhaps the others wouldn't go; but he felt very sure they would.

"Mon Dieu—mon Dieu!" he wailed, almost pulling his mustache out by its beautiful waxed ends. "To sink zat a woman wis nossing in her head for big beesness can convince my little fools dat are so clever wis zeir fingers she can pay zem more wages zan ze madame herself, and in a few weeks—*pouf!* It is too much—I cannot do it'—a few weeks more—*pouf!* 'Still too much—we mus' cut down'—ze dull season—*pouf!*—all is over!

"And I sink of your poor aunt—zis to come upon her so inopportune—to begin all over at ze opening of ze season wis a powerful rival. She mus' lose ze season building up her staff and meanwhile her rival takes all her trade. She is ruined—ruined. Mees Lucy is ruined. I am ruined. All who stay wis her are ruined. All who leave her will be ruined so soon as one lousy season is over! Mon Dieu, Mees Lucy, you and I mus' save her, but how?"

HOW indeed, we two against so many? He walked the floor, then brought out the bright suggestion that I start west at once and meet my aunt somewhere along the route and warn her.

But something loud as the voice of conscience urged me: "Don't tattle! Don't raise false alarms. Leave her free to meet the situation precisely as it is presented to her."

Early on the morning of the first, my aunt breezed in, ruddy of cheek, sparkling of eye, robust, a human dynamo ready for action. She had reached home late the night before and had telephoned down at opening hour to expect her, so the great establishment was first a-flutter, then a-thrill, and a-jerk as if with electricity, when she got inside the building. I was in the parlors making my daily inspection as "Buttons," privately instructed by Miss Beekman, came racing up to warn her that the madame's auto had just drawn up at the curb and she was in it.

"Well, hello, everybody!" she called out with unwonted affability as "Buttons" now solemnly flung the parlor doors wide for her. "Well, Lucy, you're looking fine." She hesitated, then delivered a kiss on my cheek. "How's mamma? She oughtn been out in Col'raydo with us this summer—done her worlds of good. It's simply grand."

I felt like observing that my grandmother hadn't been invited, but there was no time, even if I'd let myself go to that extent, for my aunt was rushing through like a baby cyclone, firing off critical glances and questions as she went, and leaving a trail of gaping mouths behind, and by the time she'd reached the sacred sanctuary of the private office, she had given fifteen orders and accumulated the expert accountant's report for the last quarter and the one before, which she'd never seen. The bookkeeper had thought it expedient to send for him to go over the books ahead of time, and the old gentleman was there awaiting her arrival. Then her office swallowed both of them and a hush fell and the whole establishment was on tiptoe. I waited, as one waits to hear the result of a terrible operation. But with that revelation, sprung on her all unawares, we began to discover the stuff the woman had bred into her bones!

M. Perriot came rushing to the house next evening. "Nevaire do I trus' zat woman," he cried. "Her character—it is portray in her coiffure—false!"

Two hours later my call bell summoned me to her presence and I found her walking the floor in such excitement as I'd never seen her in before. Both men were with her—the bookkeeper looking haggard and gray, shrunk into his chair; the accountant, irritable and blustery.

"Did you know about this, Lucy?" she cried, shaking a bunch of rumpled papers at me.

"Know about what, Aunt Maggie?"

"This—all this—the condition of the business—$7,000 in debt?"

"I know nothing about the financial end of the business—as you must know by this time."

"I've already told you, madam, that nobody in the establishment has been told—" (he gave me an appealing look that begged me not to reveal the words he'd let drop a few days before). "Your niece could do nothing—she's not the financial head—the bank wouldn't take her note—"

"Who supposed it would? I'm trying to find out why I wasn't told—why I wasn't called home—"

"You gave written orders on that, Aunt Maggie," I put in.

"What of it! You, Lucy—my own flesh and blood. . . . Well, you'd have had the gumption to call me home, orders or no orders—that's what I'm driving at—why weren't you told?"

SHE flung the question direct into my face, repeating: "Why weren't you *told?*" But without waiting for an answer I couldn't seem to think up, she rushed on: "Never heard anything in my life to equal what these men have told me to-day—never saw such management—debt's bad enough, but a debt's soon mended by a going concern like mine—can't meet this week's pay roll—can't get money from the bank—and why? Why, Lucy, why? Because we haven't any *credit!* No credit—no credit! The Del Mar Beauty Business—no credit! Why, my God—it would make a horse laugh—me that never owed man or woman a dollar in my life—"

I saw the two men exchange glances as if one said to the other: "We might as well give it up," then another look in my direction as if they said: "We might try to make her understand—"

"Why, looka the business I'm doing—half a million a year—and you two men can sit there and temme I got no credit? Lucy, do you understand it? Sounds perfectly crazy to me."

"But I've already explained that, madam, over and over—you've got nothing to show for it—"

"I got *the business* to show for it—got the books to show—"

"—no collateral—no real estate—no property, except personal, and your diamonds—"

"Glad you remembered to mention them—you been talking 's if you considered me a pauper—a woman who's got $80,000 worth of diamonds has got something to fall back on—buy a loaf of bread for a day or two."

"With all these hundreds of thousands pouring in," he repeated, "there's nothing to show for it—no capital invested in the business—no stocks and bonds in other business—and the banks naturally ask what becomes of all that money—"

"Spent, of course—same as men spend their money," she interjected.

"—and they say if she can't hold on to her own money—keep enough on hand to meet a little emergency like $1,000 or so—what'll become of my money?"

"Well, I'll see that it's kept after this—so don't let that worry you," she conceded with one of her disarming smiles. "The mother of this business has got home, and there'll be some changes — this don't happen again."

"It oughtn't to have happened now, madam," the accountant told her quietly. He was an old man and had watched her books and her growth from the start, and I think he was one of the few people in the world who had sincere interest in her and her concerns. "I'm trying to point out the causes—all the causes—but I know if I can't make *you* understand to-day, I'll never be able to and I'm not equal to strains such as you put on me." He gave her one of *his* disarming smiles. "You didn't see the last report—it was on my mind to have a serious talk with you then—"

"The Del Mar Beauty Business—no credit! Why—it would make a horse laugh—me that never owed man or woman a dollar in my life—"

"Well, there'll be no more babies breaking into the business—so set your mind at rest—I've had my last. Pity the men can't be made to have every other one—I tell Mr. Willing he ought to had them both by rights—seeing I keep up both the establishment and him."

The accountant forced a laugh, but used it to seize on her reference to her husband and tell her: "But that's one of the causes of all this—the business won't provide for a husband at the rate you're providing for him and keeping him up—it can't. He's costing you more than a wife's—and

(Continued on page 23)

COMMENT ON POLITICS

IN THE lull that came with the promise of mediation the thought and talk of Washington turned from war to the political atmosphere of the country. Four hundred and thirty-five—the entire membership—of the Lower House will be elected anew next November. To the great majority of these the days of travail are now on, for the primaries, which in many cases are fully as decisive as the November elections, are being held in many States already and will be completed in most States during June, July, and August. The problem is: Will these primaries and elections result in a manner unfriendly to the Democrats? The make-up of the House at present is as follows:

Democrats	291
Republicans	124
Progressive Republicans	6
Progressives	13
Independent	1
Total	435

It will be noticed that the Democrats have more than two to one of the entire membership of the House. Will they be able to keep this preponderous majority? Assuredly not. But how much will they lose? Will the loss in November be so great as to put them in a minority? And who will gain most by the Democratic losses, the Republicans or the Progressives? Opposition leaders, even in private conversation where ostentatious boasting is not called for by any political expediency, claim that the Democrats will lose the House. To any less temperamental observer this seems absurd. It would be conceivable, of course, if the opposition to the Democrats were united, but it is not united and will not be. In every Congressional district in the United States, except possibly a few Democratic strongholds in the South, there will be a Republican and a Progressive running against the Democrat. Even so, the Democrats are sure to lose a large number of the seats they now hold. Whether their loss will be large enough to amount to a vote of lack of confidence in the Democratic party is a question whose answer will not appear until November.

An Important Element

THE leaders of the Progressive party in New York State and throughout the nation are unanimous and enthusiastic in the hope that they can persuade Mr. Roosevelt to run for Governor on the Progressive ticket in New York this fall. Whether Mr. Roosevelt himself is willing will probably be known soon after his arrival in the United States. If this should happen, it would give great vitality to the Progressive campaign throughout the nation and would have an important bearing on the future of national politics.

A Bad Record

IF THE opponents of the Democrats at the Congressional elections next November are wise, they will focus their campaign on the record which the Democrats have made for gross extravagance. The

Comment on a famous hunter's departure from South America:

"Come on out, fellows; he's gone"

Cartoon by F. G. Cooper

course of the Democrats in regard to "pork" has been thoroughly vicious. One of the important slogans upon which the Democrats came into power was "economy."

The Democratic Record

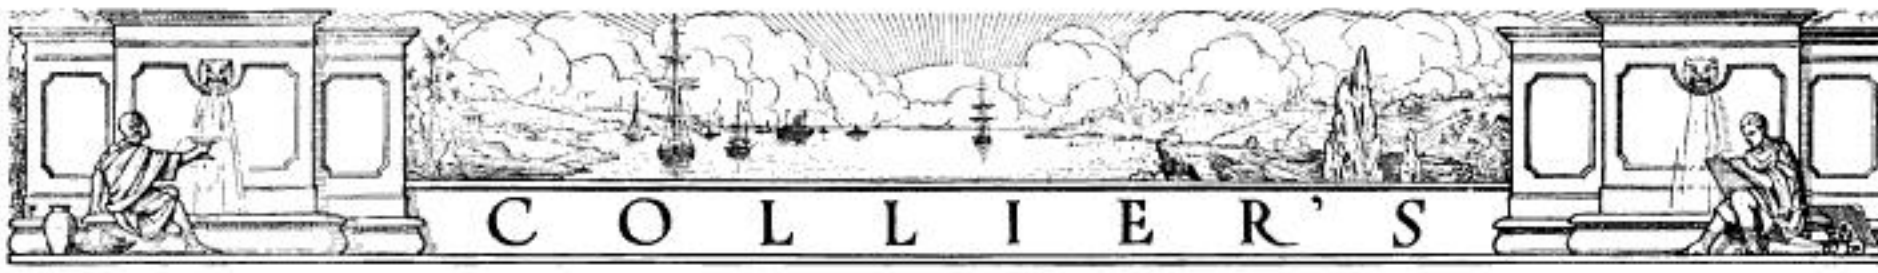
THE Democrats "point with pride" to a large number of achievements. Only two stand out in a way that is likely to appeal to the people's imagination at election time: the tariff and the currency bills. The Democrats can hardly be credited with any very important quality of heroic courage for the tariff. The demand for a reduced tariff had been emphasized in practically every election since 1909. Historians will be likely to say that the real credit for informing the public about the tariff, and bringing about tariff revision, belongs more nearly to the Insurgents who broke away from the Republican party in the spring of 1909. And it is well known that in making up the currency bill the Democrats profited greatly by the work of the Republicans, who began work on this subject immediately after the panic of 1907. If the Democratic Congress had more time, or if it had made better use of the time it has had, it might be able to make a showing of legislation due to itself alone. Indeed, persons familiar with the Administration's future legislative program have great confidence in it, and hope the Democrats will hold at least a slight majority in Congress, to give it a fair test. Against the Democrats is the very obvious muddle they have made so far of antitrust legislation, and their record with respect to our foreign affairs. The attitude of the country toward the Administration's conduct of the Mexican crisis may fairly be described as restrained disquiet.

The House of Humorists

THE House is much more simple and human and naive than the Senate. The other day it had under consideration a resolution providing for the printing of 60,000 copies of a public health report entitled "The Care of the Baby." The cost of the printing was $291, and it led to this instructive colloquy, which also shows the quality of humor that appeals to the House:

MR. MOORE—May I ask the gentleman, who has children of his own, as I have, whether it would not be worth $291 if only the life of one child was saved through the distribution of the 60,000 pamphlets?

MR. BARNHART—Most assuredly.



MR. FITZGERALD—I want to say that I have more children than the gentleman from Pennsylvania and the gentleman from Indiana put together.

MR. BARNHART—I am not a boastful man. [Laughter.]

MR. MOORE—So far as the "gentleman from Pennsylvania" is concerned, he does not acknowledge that the gentleman from New York is a rival in that matter at all, and never did acknowledge it. But having passed through several periods of "watchful waiting" [laughter], long midnight hours, as it were, he knows that if there had been at his service some of these pamphlets he might have been spared a great deal of time and saved a great deal of rest. In the interest of the fathers and mothers of this land, the gentleman from Pennsylvania ventures to think it is mighty small business to raise the question of economy on the expenditure of $291 in a matter that is of so much concern to the health of the children and the happiness of the home.

MR. FITZGERALD—Let me say that if this expenditure would save the gentleman from Pennsylvania long hours of patient waiting and midnight walking the floors, and would enable the gentleman to take on some flesh, I would not object. [Laughter.]

The Unending Problem of Immigration

THE BEGINNINGS of this present civilization in our United States were founded by European immigrants in the seventeenth century, and immigrants have been coming here ever since. Every age has wrangled over this matter of the newcomers, from the early persecutions of the Quakers to the latest proposal to exclude Armenians. The immigrant usually represents the positive side of the argument—he has fixed on a plan, has worked and saved money, has cut loose from old associations, and put his plan into effect. The immigrant's critic leans rather toward prejudice—he doesn't like the fellow's race or language or religion, and (especially) the way he sometimes succeeds. Meanwhile the economic forces which control the situation continue impersonally in effect. The United States has vast resources, especially of freedom, initiative, and intelligence. Therefore it is full of people who tend to better their condition and to minimize their families, and others who come in willing to start at the foot of the ladder have plenty of room to do so. Furthermore, we live in a period of constant economic change, and those eager to take whatever chance offers are fairly sure of some success. Thus our progress has gone thundering on to an industrial development which is probably the most active and efficient the world has ever known. Our business enterprise relies to an amazing degree upon the willingness of the newcomer to go anywhere, and to work hard and effectually at anything which offers him a chance to get along and get ahead. The power of this movement can be judged by its reflex action in breaking up big estates and raising the price of land in the backward districts of Italy and Austria. There are those able to argue that the foreign laborer injures us by "sending his money out of the country," but this silly jingoism would stop all foreign travel and trade. He does not send the work he has done "out of the country."

Immigration and American Life

BUT WHAT HAS BEEN THE EFFECT on general conditions here? The economic service of the immigrant may be unquestionable, but has he not lowered our standard of living? Those advancing this argument usually ignore history and assume a sort of "Golden Age" of pure Americanism, which ended when the immigrant came. This is a mere fairy story. The facts are that most of our cities have always been squalid and unsanitary over large areas. We are only now beginning to see how to run them. Rural life, in large part, has always been hard and dreary; we are now taking up the problem of how to vitalize and enrich it. Our politics were infested by privilege and incompetence from the very beginning; wherever there was plunder there were grafters. We are now learning better methods. There never was time, somehow, to work out the problems of social justice: the drink evil, the commerce in vice, pure food, child labor, fair wages and hours, efficient and enjoyable living conditions, and all the rest of it. The immigrants themselves have suffered most from our failure to administer justice in all these things, and it must be remembered that our present standards as to them have been developed in an age of highly active immigration. The United States is now committed to the cause of social justice and will work out the problem. In that great task we have need of all the energy, good will, and idealism that can be attracted hither. The problem is one of selection, not of exclusion: of national well-being, not of racial or other prejudices. We do not want failures or criminals, but we do want the active and hopeful. Any scheme of regulation that proposes to shut people out on some other basis is, primarily, a denial of the forces that have made our country great. It is on this level that our immigration policy must be determined.

A Cossack College President

EX-PRESIDENT TAFT is quoted in advertisements as having dubbed Marietta College "one of the model small colleges of the country." Was that before or after GEORGE WHEELER HINMAN became its president? HINMAN turned to this academic job after it had ceased to be profitable for him to go on editing the "Inter Ocean" of Chicago as spokesman for the Lorimer interests. While HINMAN is in charge there can be nothing model about Marietta except its subserviency to the influences that make for political medievalism, intellectual reaction, and academic slavery. The little Ohio college is passing through a crisis at this time. If its trustees do not at once correct the policy of repression upon which they seem to have entered, if they do not throw off the influences for which HINMAN stands to-day and has stood ever since he served as tool of CHARLES T. YERKES and the traction interests, Marietta College will soon be a model of nothing better than a deserted village—sans poetry. Marietta's crisis has been emphasized for the general public through the resignation of the head of the department of political science, Professor ANSON MORSE, a doctor of philosophy of Princeton University. We have read Professor MORSE's doctoral dissertation; its subject is "The Federal Party in Massachusetts in the Year 1800," and the thesis itself is neither better nor worse than most documents of its kind. Whether President GEORGE WHEELER HINMAN has read Professor MORSE's thesis we don't know; but apparently the professor's resignation (after six years' service) was not forced on account of his writings, but because of his political faith. President GEORGE WHEELER HINMAN, advocate of LORIMER and Lorimerism, is a "conservative"; Professor MORSE is a member of the Progressive party; they call it incompatibility in the divorce courts. Now, HINMAN has a right to his opinion in political matters—in spite of his editorial advocacy of LORIMER, the Illinoisome, and his work as a Lorimer agent at the State capital. The point is that MORSE has a right to his opinion, too. Moreover, it is preposterous that HINMAN, servant of YERKES and of LORIMER, should ever have been chosen to instruct young men or head a college faculty. Think of this man HINMAN giving four compulsory courses in American government!

The New Policeman

WE ARE WEARY of the brutal bluecoat of the magazines, and are obliged to Mr. HENRY BRUÈRE, Chamberlain of New York City, for a statement of what an intelligent town ought to do with the "cops":

> The most important social department in the city government is the Police Department. The city employs 10,000 men to protect its life and property and to deal with conditions which are intolerable in a civilized community.
>
> I suggest that instead of having the police mere watchmen to guard against lawlessness, the police should be expected to observe and report upon every condition in their neighborhoods, concerning which the city should take some form of action. They should be the eyes, ears, and feeling fingers of the city government, to learn where conditions exist about which the city should do something to reduce crime and to minimize unfortunate conditions which lead people to crime.
>
> The police are still largely governed by the traditions of 1850. We need new ideals of police work.

It is interesting to note that Mayor MITCHEL of New York has appointed a Police Commissioner (ARTHUR WOODS) whose character and training are a guarantee that this new theory will guide him. "Golden Rule" JONES had this ideal for Toledo. What city will be next?

A Willing Correction

IT APPEARS that we have made the mistake of believing in the accuracy of a news dispatch sent out from Pittsburgh some weeks ago. We reprinted it with some comments thereon, which, because of an error in the dispatch, involve an unkindness to a good man now dead, and to his relatives. The matter will probably be set right so far as we can do so by stating that Mr. JACOB FRIDAY, who left a will cutting off any beneficiary who directly or indirectly engages in the liquor business, was not himself a liquor dealer but made his money as a government contractor. We shall try not to lapse again into assuming that news dispatches from Pittsburgh report facts accurately.

Poverty and Riches

A HEADLINE in the New York "Tribune" is diverting. It is one of those that top the account of the wedding in which our richest young man played the rôle of bridegroom:

> STAATSBURG HOME GAY WITH GUESTS AND BLOSSOMS WITHIN AND HAPPY VILLAGE FOLK WITHOUT

Happy without what?

Where Young Men Succeed

THE SECRETARY OF THE HARVARD LAW SCHOOL contributes to the "Harvard Graduates' Magazine" an article, "How Young Law School Graduates Succeed," and includes some enlightening statistics. From his Table of Average Earnings we cull these figures—representing annual earnings for eight years after graduation:

Cities of less than 100,000..	783	1,210	1,736	2,001	2,552	3,290	3,950	3,550
New York	720	1,243	1,918	2,261	3,109	3,457	3,834	4,210

Figures can lie, of course, but there is nothing to suggest that the writer wants those figures to lie. If statistics prove anything, these statistics prove that, generally speaking, the young law-school gradu-

Digitized by Google

THE NATIONAL WEEKLY

ate who goes to New York is not likely to go ahead very much faster than it is possible for him to do in his home town. Moreover, living—especially living for lawyers—is much higher in New York. The temptation to sell out is greater and the opportunities for public service are perhaps rather less.

The Hen at Home

BACK TO NATURE, cries the nerve-exhausted brain worker, the doctor seeking to stamp out the diseases of civilization, and now the poultry breeder, who finds his stock weakened and subject to disease through artificial hatching and brooding. Yet those three words are not all of it. Back to Nature, perhaps, but a Nature very much assisted by civilization. The old farmhouse is fitted with modern comforts and conveniences, scattered homesteads must have telephones and rural delivery, and the hen, called upon to produce the next generation, is offered every assistance within a human's gift. Her owner has come to trust her with his finest eggs from which to hatch his breeding stock. He toils with infinite care over hygrometers and thermometers in his big hatcheries. But he does not leave the hen absolutely to her instincts. He shelters her from her enemies and from the weather. He sets her table with the care we use in modifying the modern baby's milk, and with the same gratifying results—the survival of many more individuals than Nature, unassisted, could possibly achieve. Certainly the knowledge of the process of incubation is instinctive. But even here practice is valuable, for an old hen will hatch much better than a young pullet. Caution in youngsters is without doubt taught, for chicks hatched in an incubator are perfectly fearless—and as cheeky as certain modern schoolgirls. Some chicks hatched and raised by a turkey hen were as wild as wood things and even learned "to freeze" in the long grass, like young turkeys.

A Portrait

WHEN HE CAN'T GET front seats at the theatre he growls about box-office discrimination; when he can he decides not to take them after all—for the show can't be a good one, or they would have been gone long ago. We all know the complete pessimist. He is almost as depressing as the professional optimist.

Men and Verses

READING the latter-day poets, one is struck by the thought that there is plenty of room for a "masculine movement"—at least in literature. Here we have a young Englishman, W. H. DAVIES, whose poetry is described by reviewers as "the melody of a man's voice singing for the pleasure of singing," and this is offered in proof:

> Those glowing eyes, those smiling lips,
> I have lived now to prove
> Were not for me, were not for me,
> But came of her self-love.
> Yet, like a cow for acorns that
> Have made it suffer pain,
> So, though her charms are poisonous,
> I moan for them again.

A good deal could be said for this stanza, but the main point is the philosophy that underlies it. Apparently the singer is unable to tolerate the fact that the young woman has a life of her own, that she does not risk all on the poet's fidelity. Yet, so complaining, he can neither win nor lose, he can only whimper about it! The same situation was dealt with in quite another fashion by a man of about the same age, JAMES GRAHAM, Marquis of Montrose, at some time in the first half of the seventeenth century. His final stanza sums the thing up:

> But if thou wilt prove faithful then,
> And constant of thy word,
> I'll make thee glorious by my pen
> And famous by my sword;
> I'll serve thee in such noble ways
> Was never heard before:
> I'll crown and deck thee all with bays,
> And love thee more and more.

These famous lines are the words of a man—one who, in his own phrase, "dares put it to the touch, to gain or lose it all." It is notable that he does not talk of sex conquest nor yet of body-beauty, but of faithfulness and constancy. MONTROSE did his part, possessed his soul, and stood by the event. That is what a man does. That is why MONTROSE'S verse endures while Mr. DAVIES and a number of others are "living English poets" only in the sense that they are not yet dead.

The Best Biographies

IN HIS PLEASANT VOLUME, entitled "A Bookman's Letters," Sir W. ROBERTSON NICOLL classifies the six best biographies, in order of merit, as follows:

> BOSWELL'S "Johnson," LOCKHART'S "Life of Scott," Mrs. GASKELL'S "Life of Charlotte Brontë," TREVELYAN'S "Macaulay," FROUDE'S "Carlyle," MORLEY'S "Life of Gladstone."

Biography is almost the most interesting reading of all when one is over forty years old. How many of the half dozen have you read, in what order would you arrange them in the list, and what changes or additions would you make? Of very recent American autobiographies, by the way, one of the most delightful is BRAND WHITLOCK'S "Forty Years of It."

The New Freedom

IT IS A NOTABLE SIGN OF THE TIMES that the Joint Rules Committee has decided to bar coaches from the side lines during football games. The young men of our universities and colleges are to do their own playing. Thus liberty triumphs on still another field. We hope that, eventually, it may become possible for these collegians to do some of their own thinking. Getting a degree is not always the same as getting educated.

For Antisuffragists

IN NEW YORK, Commissioner of Correction DAVIS has ruled that prisoners may smoke their pipes if they so wish. At which Dr. PEASE has vehemently protested. The unknowing might conclude that Commissioner DAVIS is a broad-minded man. Broad minded is right, but Miss precedes her name. Of course Dr. PEASE is a woman, you surmise. Well, no; the first name happens to be CHARLES, but on the subject of tobacco we shan't attempt to prove he isn't a bit of an old woman.

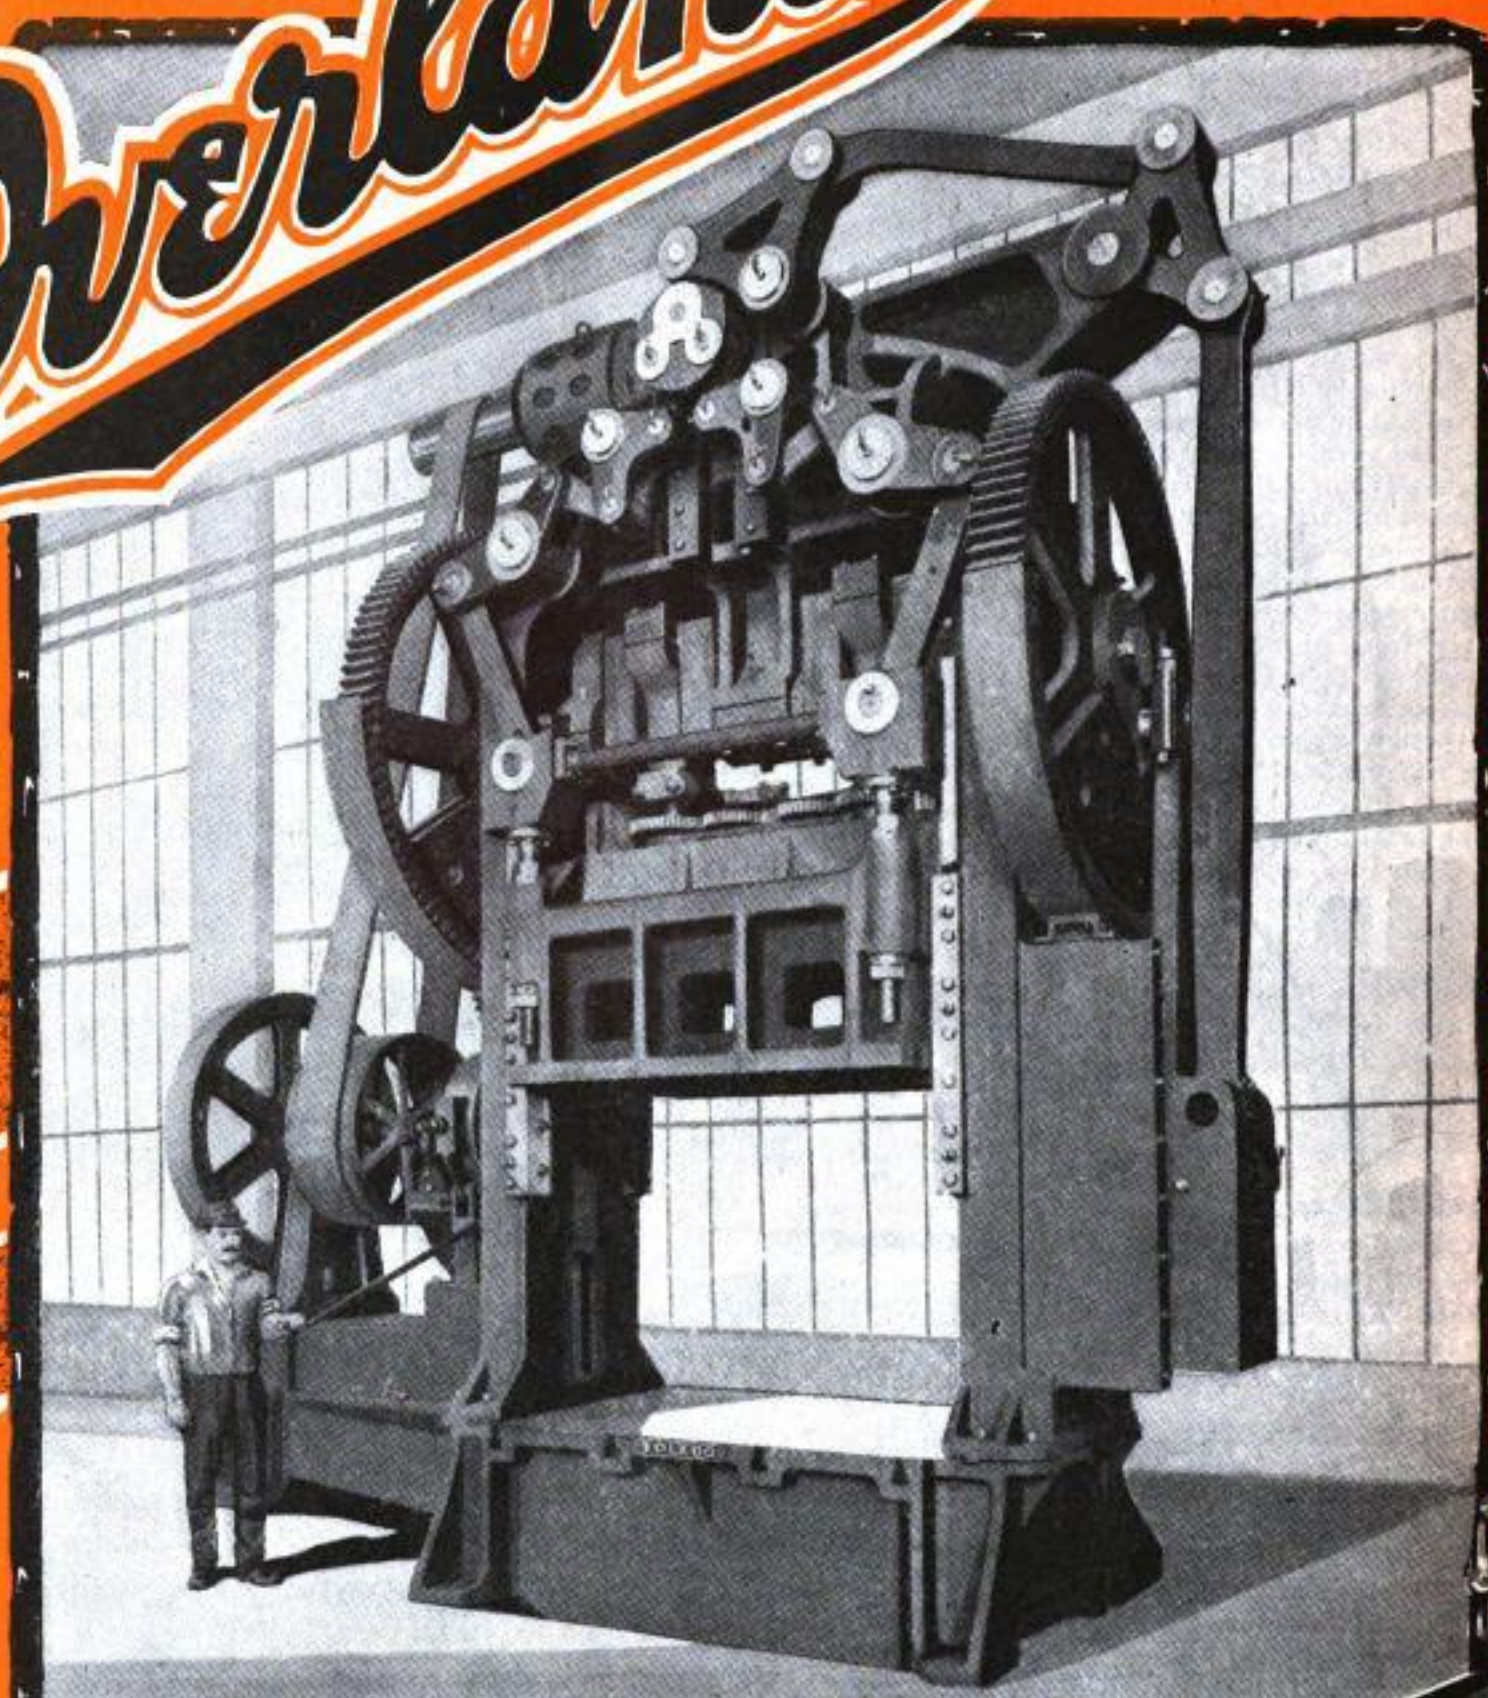
"Not a Bad Man"

IN ROMAIN ROLLAND'S remarkable novel, "Jean-Christophe," one finds this account of the hero's father:

> He was not a bad man, but a half-good man, which is perhaps worse—weak, without spring, without moral strength; but, for the rest, in his own opinion, a good father, a good son, a good husband, a good man—and perhaps he was good, if to be so it is enough to possess an easy kindness, which is quickly touched, and that animal affection by which a man loves his kin as a part of himself. It cannot even be said that he was very egotistic; he had not personality enough for that. He was nothing. They are a terrible thing in life, these people who are nothing. Like a dead weight thrown into the air, they fall, and must fall; and in their fall they drag with them everything they have.

The world is full of people who are nothing—people who drift with the tide instead of stemming the current. The purpose of education, as opposed to mere windy instruction, is to teach the young to swim.

Gold



WHAT IS this lifeless thing men so industriously take to their firesides? This thing of beauty to which we compare our sunsets? This precious metal for which men, leaving home and friends, race across continents and brave the melting tropics or the frozen north? This element upon which our civilization has founded its system of exchange? Just what is, after all, the true character of GOLD in this ironic little drama of ours, called Civilization? In view of all that has been said by his friends, from the time of AARON onward, it is good to know that gold will shortly speak for itself—for himself, rather—in a drama symbolical of world meanings. At St. Louis, the last four days in May, GOLD will actually appear on the stage, though by no means on a pedestal. Not GOLD the hero, but GOLD revealed, through the art of PERCY MACKAYE, as the arch enemy of our youthful civilization. But let GOLD speak for himself—as he will on the boards:

> GOLD . . . I am the element, earthborn, to be master and maker of men.

GOLD'S supremacy is disputed, of course, by the youthful crusader SAINT LOUIS, who is fighting for the cause of a more socialized civilization; and yet at the call of GOLD there will stand revealed his offspring and allies: the WAR DEMON and his cohorts; POVERTY, the mother of SHAME; the twins, VICE and PLAGUE; DUMBNESS and DESPAIR, and the brooding son REBELLION. No pretty picture, this group of misery; yet the poet's gloomy vision yields truth for the multitude. The moral is spoken by GOLD himself: Misery walks after when Gold is master and maker of men.

Overland

Economy—Efficiency—Quality

IT is impossible to judge an automobile by price comparison or its appearance. The best time to judge is after six months' or a year's use. It is then, and then only, that its real merits or defects are apparent.

The material in the Overland, its design and its manufacture, throughout, are such as to fully justify its undoubted and unparalleled reputation for economy, dependability and durability.

We are able to make the extremely low price of $950 because of the enormous quantities which we produce. The picture on the left shows one piece of machinery which brings down the original cost to the buyer. It is known as a toggle press—the only one of its size and capacity in the world. It was especially designed and constructed for stamping out Overland bodies and fenders. It is the largest and most effective cost reducing apparatus in the automobile industry. This machine turns out two complete fenders every minute. In two minutes it furnishes the four fenders necessary for each car. This machine produces in one minute *six times* as many fenders as any other press now in existence. The average manufacturer doesn't produce enough cars to use even the next smaller similar machine. So the method he must employ takes fifty minutes to do what this machine can do for us in one minute. This is merely one item to show you the economy of producing cars in lots of fifty thousand, as we do.

The material in the Overland is of the highest standard. The workmanship is no better in any car, no matter what the price, and it cannot be better. The Overland price is simply and solely the result of enormous production. It is secondary to Overland quality.

Friction is what causes wear and consumes power in machinery of any kind, whether it be a watch or a thrashing machine. Therefore, every device known to mechanics is brought to bear to eliminate friction in the Overland car. To that end, every part that coordinates with another part—such as pistons, bearings, shafts, gears, etc.,—is machined and ground to one one-thousandth part of an inch, has a mirror finish, is tested, inspected and retested, until it is as perfect as human ingenuity and the finest machinery can make it.

In precision, fineness in fit and thoroughness in testing and inspecting, no car selling at or near our price exceeds the Overland. That accounts for the long life and economy of the Overland.

That is precisely why, while cars may appear on the surface to look as good, and may in a demonstration seem to act as good, they do not and cannot compare with the Overland after, say, a year's use.

When you buy an Overland you not only make a very material saving on the first cost, but, what is far more worth considering, on the second cost—that is to say, the cost of operation and maintenance.

It is a fact, of which any Overland dealer can furnish you ample proof, that this car, because of its design, the materials in it, and our care and precision in manufacture, does "stand up" and is absolutely economical and efficient.

Please address Dept. 6.

The Willys-Overland Company, Toledo, Ohio

Manufacturers of the famous Overland Delivery Wagons, Garford and Willys-Utility Trucks. Full information on request.

Electric head, side, tail and dash lights
Storage battery

Some folks sez th' state o' matrimony causes th' most happiness. I sez not quite—for thar's th' State o' Kentucky whar VELVET comes from.

Velvet Joe

IN one way Kentucky's got a sort of monopoly on happiness.

There are beautiful women, and fast horses, and even a fair article in the way of—lemonade, let's say—in other states, but you can't grow the "VELVET" Burley except in the Blue Grass Country. That's pretty much the same as saying that, without old "Kaintuck," many a pipe smoker would lose the big slice of happiness and contentment he now gets out of his VELVET tobacco.

Kentucky Burley is the *one* supremely mild tobacco with enough flavor, when properly cured, to make a real pipe smoke. Nobody ever questions *that*.

5c Bags
10c Tins
One Pound
Glass Humidors

VELVET, the Smoothest Smoking Tobacco, is *Burley de Luxe*, which is mellowed by more than 2 years' ageing into a pipe smoke, with a real aged-in-the-wood smoothness that tastes even better than it sounds. Just try one tin of VELVET—to-day.

Uplift via the Kitchen

By ELIZABETH KELLY LAHINES

"BETTER homes make better workmen," ventured the efficiency experts.

A coal corporation undertook to test the theory. Mrs. Anna R. Scott of Philadelphia was sent into the camps of West Virginia to revolutionize kitchens. The work she accomplished justified the principles of the theorists. Long ago it was maintained that the road to a man's heart lay surely, though somewhat tortuously, via his stomach: but a discovery of this "commercial age" is that the same route leads also to brain and brawn.

For weeks Mrs. Scott worked with the wives of miners at Tams and MacAlpin, couching in the simplest language the chemistry of food and pleading for a revision of the culinary code. With the limited assortment of utensils of which the average camp kitchen boasts, Mrs. Scott undertook to do and to teach scientific cooking with a view to conserving at one time the energies of the overburdened housewife and the underfed breadwinner.

From the College of Necessity

THE trail that Mrs. Scott is blazing will be followed in a short time by hundreds of young women. For just as soon as they can be trained, the department of the Young Women's Christian Association, which concerns itself with industrial education, will present a broad field of opportunity. Corporations in the East and in the West are ready to make the test.

To begin with, Mrs. Scott is not handicapped by a degree from a school of domestic science. She turns aside the anticipated accusation of captiousness by announcing in introducing herself that she is a graduate of the college of necessity, which is unchartered. Teachers of the household arts have labored among the wives of workmen under the fostering eye of various welfare organizations, but the attitude of those whom they sought to benefit has been militant. Women of mature years resented the suggestions of domestic theorists. They hugged their old methods to their breasts and with such politeness as they could muster dismissed the well-meaning intruders.

But it is a different sort of task to which Mrs. Scott has set herself.

"My work," she says, "is chiefly among those young wives and mothers who have gone from factory to home without the rudiments of domestic education. They do things the hardest way and the way that is least conducive to the proper nourishment of their husbands and children. The schools to-day provide a course in domestic science for the girls after they have reached the sixth grade. They give them one lesson a week, and just as soon as the compulsory education law gives these girls licenses to leave the schoolroom they are working in a store or factory. Then at sixteen years or so they marry, and without any practical experience, without any domestic education beyond the making of cream puffs and pickles, they assume the most serious responsibility of a woman's life. It is for such as these that the new work is planned."

To show those specializing in domestic science at Teachers College of Columbia University just what her field of activity is, Mrs. Scott cooked and served a dinner recently in the model kitchen in the Speyer school. With fine scorn she put aside the casserole that had been left for her and the spatula that gleamed from the whitest of kitchen tables.

"Those are not things that you will find in the kitchens in which I am working now," she laughingly said. "A spatula costs but thirty cents, but it is a luxury in the camps, and a casserole can be found on sale often for a dime—'only two to a customer'—but it's an extravagance in the eyes of a great many housewives. Now we will just fix up this dinner for father, mother, and the two hungry boys who have played hard since school, and we will do it at cost of not over fifty cents."

The Fifty-Cent Dinner

TO be accurate, the dinner which Mrs. Scott prepared after these few preliminary remarks cost just forty-eight cents, and it consisted of soup, meat pie, two vegetables, and a dessert. There was a sufficient quantity for six even with the appetites to which Mrs. Scott was hypothetically catering. Then, so that the esthetic souls of those who watched her might not be offended at the homely wholesomeness of the repast, she made a few criss-crosses of paprika and did a little garnishing with parsley.

It took just two hours to prepare and serve the dinner. All of the supplies were purchased in the neighborhood of the Speyer school in Harlem.

Mrs. Scott did the marketing, accompanied by Miss Marguerite Jordan, a young woman who was doing volunteer uplift work in the Tams district when Mrs. Scott went there in January with her new ideas. Miss Jordan was promptly impressed with the practical side of the welfare campaign and joined forces with Mrs. Scott.

Prices in the particular neighborhood selected by Mrs. Scott for her experiment are about the average charged in communities consisting largely of workingmen and their families. Neck of beef, the cheapest and toughest cut that could be selected for the lesson, was bought at eighteen cents a pound. So, for twenty-seven cents Mrs. Scott bought a pound and a half of the meat. For five cents she secured a quart of potatoes, and five cents covered the cost of carrots and onions. A bunch of parsley was one cent, bananas two cents, and in the estimate which Mrs. Scott itemized during the evening she listed the flour at two cents, the baking powder at one cent, the milk at one cent, an egg at two cents, and shortening at two cents.

Proper Feeding the First Need of the Worker

THE meat, after a thorough washing, went into two quarts of boiling water, and after cooking for an hour five cups of stock were taken from it for the soup. A crust with scant shortening was prepared and into it was put the meat with a few carrots, onions, and potatoes

Digitized by Google

which had been boiled with it. A side dish of stewed carrots, German style, was cooked, and rice was added to the soup stock. Banana puffs made with one egg was the dessert.

Then Mrs. Scott mixed a luncheon dish for "next day," a meat substitute. With rice, hard-boiled eggs, and sautéd onions she covered a platter, then garnishing it with parsley, explained that it served the dual purpose of being good substantial food and looking pretty.

The Experiment Station

IT was in the mill district of Philadelphia that Mrs. Scott gained her knowledge as an economical and efficient cook. From keeping house for two with one servant to keeping house for 550 with thirty servants has run the gamut of her experience. At Kensington, where her apartment hotel was located, she touched very closely the lives of the workmen. She was called upon to help usher their babies into the world and to lay the little half-starved bodies to rest. She saw men doing trying physical labor on a diet that failed utterly to give them the necessary nourishment. This observation was the inspiration for her first step in welfare work. She equipped, at her own expense, a kitchen where the mothers and daughters of the workmen could learn food values and their conservation.

"Employers of manual labor," Mrs. Scott says, "are back of the movement for better homes. One corporation of which I know opened a restaurant for its men, and at an actual cost of twenty-six cents served meals for which a charge of fifteen cents was made. After the system was established and various economies were discovered, the cost was reduced to seventeen cents, which, it would seem, would entail a loss of two cents to the firm on every dinner served. But it is not so. Those employers claim that they have made money on their venture already because of the increased efficiency of their workmen. Now, instead of spending their fifteen cents for three beers and whatever free lunch they can get on the side, these men buy with that same amount of money soup, a choice of three meats, two vegetables, a choice of three desserts, and hot coffee or tea. They go back to their work well nourished and with their heads clear.

"The industrial world is awakening to the importance of the proper feeding of the worker."

The Tyranny of Beauty

(*Continued from page 16*)

you don't even get your stockings darned in return. Something's got to go—if not to-day, then a month from to-day, or a year from to-day—if you can hold out another year at this speed. It don't matter about the date—the thing is bound to fall if you don't begin an immediate policy of retrenchment all along the line. Retrench at home first—you can't talk sixty-horse cars this winter; then retrench in the business—"

"Retrench at home!" she blazed. "It's a pity with a half million dollar business if I can't have a new car when we need it!"

He was silent and looked at me. She went on: "I can't understand it — I simply cannot. Business increasing all the time—this dull season and all, and me being away four months — I don't mean that — I'll soon make that up—and you telling me that profits are falling all the time—profits falling and I gotta retrench." She looked at him almost as if she thought he had had something to do with the papers he'd handed in.

The Way to a Woman's Heart

He rose at that. "Well, I've explained it all to you—or tried to, madam—on several previous occasions: it's the law of diminishing returns. Your business is growing, but at the same time it's costing you more and more to grow it in proportion to what you get out of it. That is because it costs more in proportion to get the small trade than the big. If you'll look on—page four, I think it is—you'll see that introduction costs in the small towns—and that's practically all you have left to conquer with Zulu—eat up all the sales your demonstrators make across the counter. That wasn't true in the large cities—your demonstrations always left you with a profit. Why, I remember the time when you did your own demonstrating that you'd clean up from $150 to $300, and come home with your pocket bulging. Look at that table—those four demonstrators in Minnesota this summer have left you to the good just $18!"

"I placed some pretty big orders myself out in Col'raydo," she couldn't resist bonsting to him. "Lucy'll tell you—she had to ship twice."

"Yes, but your expenses! You and a husband, two children, two nurses, a lady's maid, and a valet! Why, madam, you spent all Colorado will earn for you in a year from now! — spent more than the whole country west of the Mississippi did earn for you while you were out there having a good time!"

This was the first I'd heard of the valet, though I knew she had had a lady's maid for some time before the last child was born—that was the excuse for the maid; nor did I know there was a butler until Mr. Winston hurried on. "As for your living in New York the way you are — your automobiles and chauffeur and butler and maids — why you're eating and drinking and automobiling and Parisgowning all that the rest of the country earns for you with the whole line of goods and the business thrown in! You're trying to compete with Goulds and Vanderbilts and Astors and Rockefellers and other people that are living on their incomes—"

"And ain't I living on my income?" she demanded. "If I choose to enjoy life a little as I go along—only life I got—only live once— Why, you talk most as if you thought I was robbing a bank, or running in debts I couldn't meet. I've lived on my income—that's one thing you can't throw up to me, anyhow."

"But you haven't! You've lived on your *earnings*—your potential capital—money that ought to be turning into capital and earning income for you. These people that you're imitating don't have to lift a finger—their money comes in just the same—yours doesn't. How long do you think this business would

Smooth Riding *on* Rough Roads

That enviable pleasure of comfortable motoring—regardless of how rough the roads or how fast you drive—is yours, made possible by

TRADE K-W MARK **K-W Road Smoothers**

NAME COPYRIGHTED

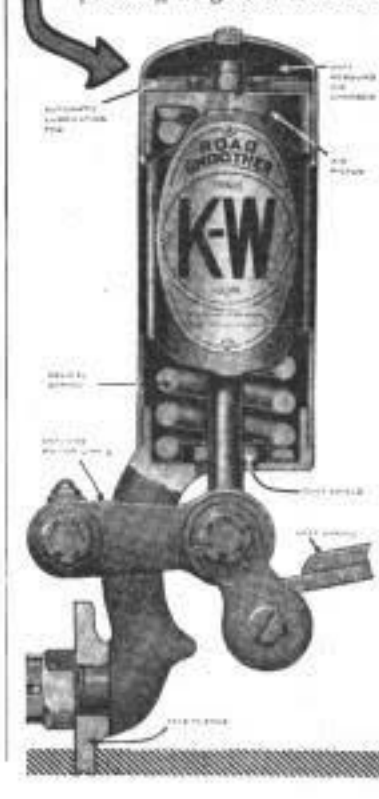
Quickly applied to your Ford Car

THEY take the roughness out of the road and eliminate the pitching, swaying and vibration that racks and shortens the life of your car. K-W Road Smoothers seem to level off the high places and fill up the low places. Wherever you ride the bumps and jolts are gone—*ironed out* by the K-W Road Smoothers. They give you *big, heavy car comfort,* combined with *light-weight car advantages.*

What K-W Road Smoothers Do

They save tire bills by keeping the wheels on the road where they belong.

They add to the life of your car by stopping vibration.



They add greatly to your safety by making the car wheels cling to the road.

They save gasoline bills because the weight of the car doesn't have to be lifted out of every hole and over every hump in the road. It is only the wheels that follow the contour of the road's surface. The body and its load of passengers travels along on the level, ***"just like floating through the air."***

The "anti-rebound air chamber" prevents the rebound of the spring. It is an essential feature and found ***only*** in the K-W Road Smoothers.

The "anti-side-motion links" of the K-W Road Smoothers prevent side rocking and swaying when turning corners, and greatly reduces any tendency to skid.

There are no wearing parts or friction surfaces, consequently no oiling or packing in grease is necessary. No attention required after installation.

K-W Quality Throughout

K-W Road Smoothers are built of the very best materials obtainable. We use no cheap castings but instead, high-grade, heat-treated drop forgings. Our springs are made of electric smelted chrome, Vanadium steel—the most expensive spring steel that money will buy. They will not bend—they will not break—they will not lose their easy riding qualities because K-W quality is built into them all the way through.

$25 SET OF FOUR ONE FOR EACH WHEEL

The principle is right—the design is right—the workmanship is right—and the price is right.

K-W Road Smoothers are sold by reliable dealers everywhere. If your dealer cannot supply you, we will send a set direct to you on receipt of price. Don't confuse these with ordinary shock absorbers. Write for free booklet—"Taking out the Bumps." We will gladly send it on request.

Drink a Foaming Beaker of

Clicquot Club

Pronounced Kleek-O

GINGER ALE

Let this sparkling beverage spray its little, cold, carbonic needles about your nose. Swallow it and feel your thirst vanish and your dry throat give thanks for the glorious wetting.

Clicquot Club Ginger Ale is a real ginger ale beverage of real character. The water is from the famous Clicquot Springs, the carbonation is high and the resultant effervescence delightful. The sugar is specially refined and the ginger is the best Jamaica import. Each bottle holds two full glasses.

Sold by Good Grocers and Druggists

THE CLICQUOT CLUB CO., Dept. B, Millis, Mass.

New York Office, The Clicquot Club Co., 100 Hudson St.
Chicago Office, 356 North Michigan Avenue
Western Office, Maritime Building, Seattle, Washington

last without you and what would it be worth as a paying proposition? Three months more of this vacation, and you'd have been in the hands of a receiver."

SHE looked at him wide-eyed and began to pace the floor again; he too was walking, and spoke fast and excitedly as if he felt himself in some way responsible for her future yet knew that this was his last appeal, and if he failed he meant to let her go.

"But all you seem able to grasp is a temporary patching—how quick you can get this hole plugged up and a few leaks stopped and then go right on spreading out bigger than ever—but I'm trying to show you the principles of the thing. You can't go on blowing up the business balloon indefinitely—it either gets so thin it bursts, or it strikes the law of diminishing returns and becomes—bible-bound. It's only a question now of a very little time before it's going to cost you more to capture new territory than the territory will return in years. The very profits that you're advertising broadcast by your style of living are going to attract a dozen rivals to the field to get those profits away from you."

She stopped in front of him looking into his face as if she were at last beginning to understand the significance of all he'd been saying and he suddenly brought his hand down on her shoulder.

"Mme. Del Mar, I used to think you were a 'big man' in business—one of the biggest men I ever certified books for—but I'm beginning to think you've had your head so turned by success that you can't see a truth when it's staring you in the face. If you can't see now—to-day—that you're up against *laws*—and laws that you can't change—if you can't meet them by retrenchment—those laws will strike you off your high perch, then grind the meat off your bones and fling you on to the commercial discard."

Without waiting for a word he bowed and left the room, the bookkeeper bolting out unceremoniously at the same time.

Madame sank into her chair and gazed motionless at the report still in her hand and I looked at her in silence.

The silly little expensive clock on the glued-to-the-wall mantel began to strike.

My aunt counted the strokes, but glanced over her shoulder to make sure.

"Twelve! Didja ever!" she cried. "A whole half day wasted in a scolding to temme I gotta retrench!—temme something's gotta go—I gotta cut down—gotta wear my last winter's clo'es—now ain't that like a man! Always take it outa the woman first! These old men—that's all they see in business—get in a tight place—*retrench*. What's he know about the public, anyhow? He ain't a salesman—he ain't a captain of industry. He knows the figgers and thinks that's the market.

"I TELL you something's gotta *come*—that's how to talk! It's always come before—it'll come again. The world ain't dead—I ain't dead—hear him talk you'd think he thought so. Increase the business—thing is to find out *how*; get the new territory if it does cost all the introduction earnings, and *wait* for it to pay. I gotta have money two years from now—the new territory'll be bringing it in.

"I gotta get a bigger staff and push more goods, that's all. He think I'm going to let his ole law of diminishing returns put me outa business? Huh! How's anything start? Starts on the big market and goes till the law catches up with it. Well, then—all you gotta do is find something new that'll skim the cream off the trade; then get something else new, and keep on.

"You'd think after all the years he's watched my business he'd have learned that everything new's got the big territory in front of it and the territory's there, same as it ever was, and more'n there ever was before. I see that out in Col'raydo. But these men don't know how to sell goods. What I gotta do is put the demonstrators on the new things and make them sell Zulu at the same time. . . . You looked into that mechanical mixer yet? You better do it soon's you can."

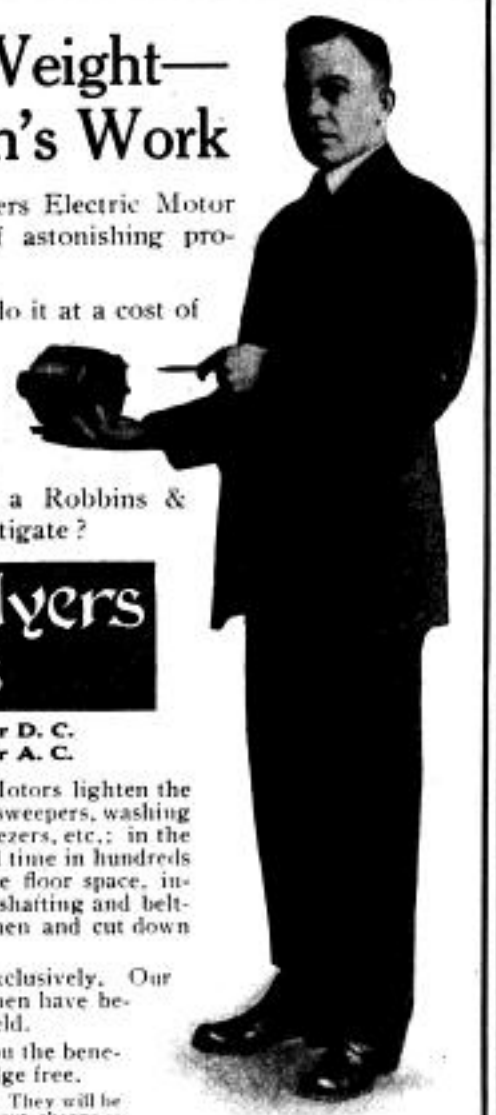
SHE pushed a button and the little pink-and-white page appeared—a thin, anemic child who wore twelve-size uniform and claimed fourteen years as her portion of an ill-paid world. Madame nodded pleasantly at her and ordered: "Mamie — Sally — Jennie — gemme Miss Beekman right away. And page Miss Cryder and see if she's in the building."

(To be continued next week)

Abroad at Home

(Concluded from page 7)

more than glimpsed them as I glimpsed those fellow travelers on the train. Therefore I shall merely try to give you some impressions, from a sort of mental sketchbook, of the things which I have seen and done and heard. There is one point in particular about that sketchbook: in it I have reserved the right to set down only what I pleased. It has been hard to do that sometimes. People have pulled me this way and that, telling me what to see and what not to see, what to write and what to leave out. I have been urged, for instance, to write about the varied industries of Cleveland, the parks of Milwaukee, and the enormous red apples of Louisiana, Mo. I may come to the apples later on, for I ate a number of them and enjoyed them; but the varied industries of Cleveland and the Milwaukee parks I did not eat.



I claim the further right to ignore, when I desire to, the most important things, or to dwell with loving pen upon the unimportant. Indeed, I reserve all rights—even to the right to be perverse. Thus I shall mention things which people told me not to mention: the droll Detroit Art Museum; the comic chimney rising from the center of a Grand Rapids park; horrendous scenes in the Chicago stockyards; the grotesque placing of a statue before the splendid capitol of Minnesota; the Free Bridge, standing useless over the river at St. Louis for want of an approach; the "wettest block"—a block full of saloons, which marks the dead line between "wet" Kansas City, Mo., and "dry" Kansas City, Kas. I never heard about that block until a stranger wrote and told me not to mention it.

As for statistics, though I have been loaded with them to the point of purchasing another trunk, I intend to use them as sparingly as possible. And every time I use them I shall groan.

(Next week—Buffalo)

An Infant in Weight—But Does a Man's Work

In this little Robbins & Myers Electric Motor there is potential power of astonishing productivity.

It will do a man's work, and do it at a cost of but a few cents a day. Its uses are countless. If you operate any machine or device by foot or hand-power you can do it without labor, and do it at less cost, quicker and better with a Robbins & Myers Motor. Why not investigate?

Robbins & Myers Motors

1-60 to 15 Horsepower D. C.
1-60 to 1 Horsepower A. C.

In the home Robbins & Myers Motors lighten the housewife's labor by running suction sweepers, washing machines, silver buffers, ice-cream freezers, etc.; in the shop or store they save drudgery and time in hundreds of tasks; in the factory they conserve floor space, increase output, eliminate cumbersome shafting and belting, increase the efficiency of workmen and cut down manufacturing cost.

We build small motors and fans exclusively. Our factory is systematized for it. Our men have become specialists in the small motor field.

And these men are ready to give you the benefit of 18 years of training and knowledge free.

Write them about your power-problems. They will be glad to consult with you, without charge or obligation. Address "Engineering Board."

Write for Booklet, "Doing the World's Work"

An interesting brochure on the economy and efficiency of the small motor in the home, office, store, shop. Shows scores of ways in which you can use it.

HUDSON Six-40
$1750

Now Supplied with a 5-Passenger as well as a 6-Passenger Body

The Car to Measure By

The verdict seems to be that this LIGHT HUDSON Six-40 meets the present-day ideals. It has won an amazing welcome. These are standards undreamed of a short time ago. But the evidence is that future cars are going to be measured by them.

Even years ago designers began to suggest that motor cars had almost reached perfection. The boast of some leaders, from season to season, was "No essential changes."

Yet all standard cars then were heavy. All Sixes cost $3,000 or over. Fuel consumption, for the power developed, was at its highest point. The body lines were broken at the dash. A hundred features in this new HUDSON Six-40 were entirely unthought-of then.

Hudson Engineers Kept at Work

It was then—when other engineering corps were being cut down—that the HUDSON corps was increased to 48. And then—when others began to be satisfied—Howard E. Coffin, our chief engineer, told us he had only begun.

About the same time, European engineers began to experiment with small-bore motors in Sixes. And they found a way to reduce operative cost from 30 to 40 per cent.

Now all men can see that some of the greatest advances in motor car history are among these men's recent achievements.

Now This New Hudson Weighs 2,980 Lbs.

Now comes a new HUDSON which completely upsets nearly all the standards of even two years ago.

By skilful engineering the weight has been cut to 2,980 pounds, with no sacrifice of strength. That for a car with 123-inch wheelbase and two tonneau seats.

Compare that with like cars whose makers failed to work along these lines. You will find here a saving of 450 to 1,200 pounds—or the weight of from three to eight extra adults.

Operative cost has been immensely reduced by this lightness and this new-type motor. Cars of this capacity, built along the old lines, consumed from 30 to 50 per cent more fuel.

And the price has been brought down to $1,750—a record price for a quality Six. A price below cars of any type, comparable in class and capacity.

Other New Standards

The awkward dash angle has been wiped out by this beautiful streamline body. All hinges have been concealed. The speedometer gear is concealed.

The "One-Man" top has been adopted, with quick-adjusting curtains. The left-side drive has come, the dimming search-lights, the disappearing tonneau seats.

To save the old overload on the rear tires, the gasoline tank has been put in the dash. Extra tires are carried ahead of the front door.

These, and scores of other changes, have fairly revolutionized last year's ideals in cars.

Measure Others by It

These are the coming standards. These seeming innovations will soon be essentials, like the new-born electric starter. Men are coming to Sixes. They are coming to lightness. They are coming to reasonable prices, to lower operative cost. And they are going to demand the beauty and equipment which you find in this HUDSON Six-40.

The wise thing to do, in buying this year, is to measure other cars by this. If we are right, then cars which cling to old-time standards are bound to depreciate fast.

And we are right. Motor car buyers have fairly flocked to this car. There has not been a day since this car came out, when we weren't weeks behind on orders. We have built many popular models, but never a model which was half the sensation of the HUDSON Six-40 of this year.

Car like picture, with extra tonneau seats, $1,750 f. o. b. Detroit. Five-passenger body, same price. Standard Roadster, same price. Convertible Roadster, with lined leather top and windows that drop into doors—a luxurious enclosed car for rough weather, but an open roadster in fair weather—$1,950.

Our Larger Six-54

On the same lines we build the new HUDSON Six-54. The design and equipment are almost identical with the car pictured here. But the wheelbase is 135 inches, the engine more powerful, and the price is $2,250.

HUDSON MOTOR CAR COMPANY, 7879 Jefferson Ave., Detroit, Mich.

a whole lot easier at Washington than at Vera Cruz. Besides, I can't help worrying over what the Mexicans have done or are doing to my wolfhound. That dog—why, sir, just standing on her four legs, she could reach her head over and take anything from the center of this breakfast table."

"How are the people at home feeling now?" inquired a refugee. "They got us into this mess. Are they going to get us out of it?"

Refugee Criticism of Policy

THE thorough agreement of all American residents is that the present crisis was brought on by the policy of our Government, and that the only way out is to go on through. The taking of Vera Cruz by the naval forces of the United States precipitated the bad feeling against Americans that has been fermenting during the past several years, and if the United States should recede from its present position, it will forever be impossible for Americans again to live in Mexico.

As one man, a twenty-year resident, said: "I've lived here ever since I was man-grown. I know what I am talking about. Humpty Dumpty has had a great fall. Chile, Brazil, and Argentina can never put him together again. Only our army and our navy can put us Americans back again and insure us a fair deal. And when I speak of ourselves I mean the people who have made Mexico what it is to-day, or, rather, what it was the other day before the Tampico flag incident. More than any other country—than all other countries added together—have we put in the capital, the brains, and the technical skill; we've supplied the mechanical engineers, the mining engineers, the agricultural chemists, and the scientific farmers. By virtue of what we have done in Mexico we have a right here, and we should be protected in that right, especially since our Government by its own action has endangered that right."

"Just Turn Texas Loose"

SAID a man of action, his State obvious by his remark: "Never mind the rest of the United States. Just turn Texas loose and we'll lick them to a frazzled finish."

"Huh!" from another man of action. "Send a single man upcountry with a big bag of money and the whole thing could be settled out of hand."

Another long dweller in the land: "I've lived in Oaxaca fifteen years, and I make the statement, founded on personal knowledge, that 80 per cent of the middle class and educated Mexicans throughout Oaxaca would hail intervention by the United States. They are tired of this era of continual revolution."

A mining engineer: "My people represent millions invested in development. We are not afraid of the next step the United States may take. What we are afraid of is that she may not take any step."

A locomotive engineer: "Well, our country has got us in bad. It's up to her to get us out good."

A marine guarding a sand hill: "This is a hell of a war."

Our Diplomatic Utterances

A BUSINESS man from the City of Mexico: "They have insulted me, broken windows of my home, and looted my store. Also they have robbed me of my automobile; on the way down to Vera Cruz a Mexican officer took my revolver away from me. At the present moment I have two hundred pesos and the clothes I stand up in, and my country is talking compromise."

Another business man: "For years the United States has been watching and waiting. Now it has made one step into Mexico, imperiled all our lives, caused us incalculable losses of property and personal possessions, and is hesitating whether to withdraw from that one step or not."

A university man: "I thought I understood the English language. I find now that I don't. My brain is fuzzy with trying to get ordinary sense out of our diplomatic utterances."

An officer of marines: "We've lost many times as many sailors as were lost in the Spanish-American War, and yet this is not war. We have merely occupied a customhouse and courteously taken the government of Vera Cruz out of the hands of Mexican officials."

A staff officer of the Second Division: "It is not a question with me of the merits or demerits of the affair. I am the servant of my country. It spent a whole lot of money training me. When it says advance, I advance; when it says retreat, I retreat. Nevertheless, I remember that my old father was always fond of quoting Davy Crockett's 'Be sure you are right and then go ahead.' Well, we've come ahead from Galveston to Vera Cruz. And here we stop. What's the matter? Did the United States go ahead and then find out that it was not right?"

Digitized by Google

Another officer: "It wasn't the flag incident at Tampico; it was the sum of many incidents preceding the flag incident."

A lawyer: "But, as a jury decided long ago in England, two hundred blackbirds do not make a black horse."

"And twenty thousand looted refugee Americans plus a thousand insults to our nation make a sum no larger than the smallest of the parts, and therefore no casus belli," was the retort of a fellow lawyer.

"Whisper!" says an American farmer from Cordova. "Within a week look to see Huerta in Vera Cruz, safely on board a foreign warship, and headed for Europe."

Again is limned the lurid picture of that Indian dictator in his high city—with Villa threatening death from the North, with Zapata unpacified in the South, with a great treasure cached in Europe—trying to solve the desperate problem of how to get from his high city to the sea coast and to Europe.

Speaks up a refugee: "I came out of Mexico City two days ago. Huerta was then sandbagging the palace."

"Against American shells?" queries the latest newspaper man from the United States.

"No," answers the refugee. "Nor against Villa. He is sandbagging the palace to withstand attacks from the populace!"

"Mexico Arms!"

By CHARLES PHELPS CUSHING : : : Decoration by H. L. Drucklieb

NEW ORLEANS, this April Sunday evening, breathed deep of the June-like air and smiled contentedly. In Boston spring overcoats had not yet been put away and steam heat still sizzled in the apartment-house radiators; but New Orleans was promenading Canal Street in summery white duck and flannel. Straw hats were too numerous to count.

Though ten streams of traffic flowed between Canal Street's banks of shop fronts, they coursed so quietly in the broad avenue that the street seemed almost tranquil. A dull silver of moonlight was the tone over all; where the arc lights cast their circles of radiance the silver took on a bluish polish of steel. Uptown the glow from shop windows added a note of dusty gold. At the foot of the long street a river steamer chugged away from the wharf, her yellow lights glittering on the water and her moonlit decks marble white. A picture of peace!

IN the daytime Canal Street is as hazardous a ground to cross afoot as New York City's notorious Broadway; first, a countermarching parade of pedestrians to pass on the sidewalk, then a river of vehicles, four endless processions of street cars, and a second stream of trucks and motors before you reach the other curb and step into the ranks that countermarch upon another sidewalk.

At night the currents run in the same courses, but without the daytime's surge and swiftness. The rattle of truck wheels dies, the harrowing tattoo of steel riveters is stilled, the crossing cops' whistles seem to lose their shrillness and turn musical. . . .

A Sunday night, joyously peaceful. The ferry bells no longer sounded like impatient warnings to hurry. The yellow lights of the shops lured me back uptown from the river front. Past a railway station where through an iron gateway I caught a glimpse of straw-hatted travelers comfortably settled to watch the sights from the observation platform of a limited train. . . . Everywhere Sunday quiet and contentment. Past cigar stores doing business as usual inside, but showing a Sabbath reverence by keeping the front shades pulled down. Past tanned planters under wide-brimmed Panama hats, and young swells in the latest from Fifth Avenue, twirling walking sticks. Soldiers and sailors. Old-fashioned young women wearing Janice Meredith curls, and elderly show girls with bare necks and slit skirts. Taxis streaming along among old-time victorias; stiff-backed negro coachmen crowned with high silk hats. A muted rumble, broken with the toots of the crossing cops.

"In all this land," I was thinking, "no scene more joyously peaceful."

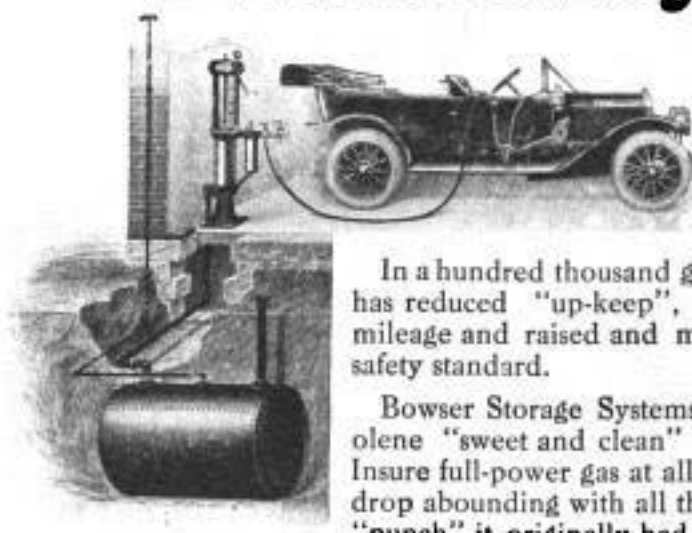
YOU have heard a stage hand rumble a piece of sheet iron? Slowly and faintly at first, then in a crescendo to deafening thunder? So came the bawl of newsboys that peaceful Sunday evening as they poured from around the corner into Canal Street with arms full of extras. They ran with their shirt collars open and their hair flying. They croaked and screamed. The sidewalk paraders broke ranks and ran into the streets to meet them; nickels clinked; the venders darted on again. Policemen looked over soldiers' shoulders. Strollers halted under arc lights and in the glare of shop windows to read, or walked on slowly, reading and bumping into other pedestrians and the awning posts. For a minute or two the city seemed to hold its breath as it scanned the screaming headline:

"MEXICO ARMS!"

On the front page the surly face of Huerta, half-breed peon exalted to power by the sword—a face sodden and heavy, with sottish eyes and greedy lips—looked out beside the bent head of our scholar President. Two admirals of our fleet below them. On another page the slit eyes and animal grin of Pancho Villa. . . .

ONE incident of that night will live in my memory forever: In the yellow radiance of a shop window a tanned, square-shouldered man in a dark civilian suit, but with the mark of the military in all his bearing, was reading an extra. His wife and a little boy in a sailor suit listened. At last he folded the paper and slid it into his coat pocket. There was a painful pause. Then the woman questioned: "It means—"

He nodded twice in answer, slowly, almost solemnly.



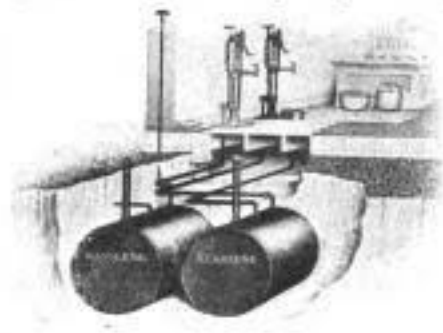
When the little boy caught querulously at his mother's skirts she gathered him into her arms, kissed him, and the tears ran down her cheeks.

I had seen the clock set back ten thousand years. Somewhere ranks were forming, drums and trumpets sounding, arms a-clatter again for bloodshed.

How Bowser Saves Gasolene and Oils

Safety=Saving=Efficiency

In The Garage

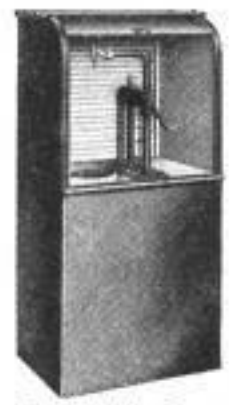


In a hundred thousand garages Bowser has reduced "up-keep", has increased mileage and raised and maintained the safety standard.

Bowser Storage Systems keep the gasolene "sweet and clean" underground. Insure full-power gas at all times—every drop abounding with all the "kick" and "punch" it originally had. No more lost motion lugging gasolene the "old way." No more lost car-motion "chugging" along on weakened gasolene.

BOWSER ESTABLISHED 1885 Oil Storage Systems

In a Bowser underground tank the gasolene is kept at an even temperature of about 57°. No loss through evaporation. No fire danger from shuffling feet. Pipes and pumps gasolene any distance to the garage. Measures the gasolene as pumped. No loss, waste or theft. All sizes from 65 to 500 gallons or more capacity. Easily installed.



Also lubricating oil outfits and portable units for the commercial garage. Save oil. Increase Efficiency.

In The Store

For Stores and Factories

Bowser also makes upwards of five hundred different systems for storing, handling and conserving oil products in stores and factories—from simple kerosene, paint oil, etc., outfits to Individual and Centralized storage, filtering and circulating systems for Power Plants. Each has its own particular use, based on twenty-nine years of Bowser experience in the economical storing and handling of oils.

In The Factory

Let Bowser Help You

Whatever your oil storage problems, put them up to Bowser. Probably Bowser can show you just how and where you can save oil money. That's part of Bowser Service. It costs nothing to find out. There will be no obligation. Act today, whether you're a garage owner, merchant or manufacturer.

Use the Coupon NOW.

"Well Put"

This label on every garment

Putting the Shot

IT has been said that Chalmers "Porosknit" Guaranteed is "imitated widely, duplicated never." Well put. You buy by this label.

Underwear may be made to *look* something like Chalmers "Porosknit." But none can give the genuine "Porosknit" comfort, durability, quality of yarn, elasticity, lightness, *coolness!* None—now, and we doubt if ever

Protect yourself. Buy right. Look for the label.

Chalmers "Porosknit" is made in *all* styles—for man, for boy. Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air. The yarn's softness eliminates irritation of the skin.

The **Union Suits** are particularly comfortable. They cannot "cut in the crotch." There is full elasticity in the seat. It gives. There can be no pull, no bulge, no draw.

Insist that the actual label be shown you—sewn on the garment. For none can duplicate genuine Chalmers "Porosknit."

HAVOLINE OIL
"It Makes a Difference"

on LAND and SEA

OUR Marine Oil is to the life of your Motor Boat what our Motor Oil is to the life of your Car. Each oil is made only from *one uniform, base crude* of tested quality and lubricativeness. It is manufactured by a special process which preserves the molecules of the oil and consequently its lubricating value. Thus while the molecules are thoroughly filtered of free carbon and impurities, they nevertheless hold their potency and life.

By forming an even film of oil between the metal parts, Havoline preserves the life of the Motor and increases its efficiency. This lubricating oil "cushion" eases the contact between parts and leaves the least carbon deposit upon them, because it burns up evenly and cleanly. Frictional losses are thus minimized.

Sold on Land at the Garage, General Store or Grocery selling Auto supplies

Sold on Sea at the Motor Boat Club or on the Float

If your dealer cannot supply you, get it from us direct.

NEW YORK

The Double-Squeeze at Villa Borghese

(Continued from page 15)

The captain looked at him searchingly, shook his head, and turned his eyes to the sea.

"Captain, you don't appreciate what this means—not to me alone, but to our club and to the fans of our city. Why, it's the biggest event of the year. I *got* to be there."

THERE was another scrutinizing look from the master of the vessel, who said nothing.

"How can I get you to stop the ship?"

The captain smiled. "If you pressed me for an answer, I would have to say that you couldn't get me to stop the ship."

"For whom would you stop her?"

"The officers of the line," replied the captain, smiling amiably.

"Very well, then," said Win quietly, "you'll get orders from the Humbard Line to stop her. See you later, captain."

The steward, in the expectant attitude of a curious person anticipating trouble, was surprised when "Mr. James," who wanted to be called Mr. Shute, returned from his encounter with the captain in perfect composure, though a trifle hurried. He plucked the steward by the arm and again spoke authoritatively:

"Now take me to the wireless operator — and what's his name?"

"Mr. Mansel—Jerrold Mansel. You may 'ave 'eard of 'im, sir."

"Mansel? Not Jed Mansel, the man who saved the steamship *Regent?*"

"Yes, sir, the hoperator who saved the *Regent*. 'E's not the regular 'wireless' on this ship—our regular's sick, and Mansel is making the voyage for 'im, sir."

The quarters of the wireless operator were temporarily unoccupied, however. The "Hero of the *Regent*" was not at his post of duty.

"'E might be at luncheon, sir, or shaving for luncheon," volunteered the steward; "or 'e might be taking 'is exercise."

"We've got to find him *quick*," insisted Shute.

The sight of the $500 immediately brought to mind what had happened before the long dreamless sleep

THEY didn't. It was after much searching that they came upon the operator.

Jed Mansel was seated in an inconspicuous corner of the library, engaged in what seemed to be an intimate conversation with an uncommonly pretty girl. After pointing him out, the steward made a hasty retreat. Win Shute didn't lose a moment's time.

"Pardon me for butting in—but are you the wireless operator of the ship?"

Mansel scowled and nodded impatiently.

"I want to send a message, please."

"I'll be in my room on the boat deck in about fifteen minutes." And Jed Mansel turned to the pretty girl.

"Fifteen minutes won't do," said Shute positively. "I must get it right off—it's very important."

Mansel was inclined to put up an argument, but a certain look in the eye of James Winton Shute—that or something else—caused him to think better of it.

"An S. O. S. from duty, Miss Riley. May I hope to see you after luncheon?"

"You may hope," she replied half jestingly, and began to select a book.

JED MANSEL laid the course, but Win Shute set the pace.

This was the wireless message which was given to the operator of the steamship *Colonia* to transmit to the nearest station in the United States:

TRIS FORD, *Philadelphia:*

Was probably drugged last night and carried aboard steamship Colonia, Humbard Line. We are one hundred fifty miles out New York, bound Naples. Have officers line wireless captain to stop ship and you send fast boat for me. Well and able to play. SHUTE.

"How long will it take you to get that off?" inquired Win.

"Can't say—no telling how long it'll take to raise 'em."

"I'll wait," said Shute.

"Hope you don't expect to land in time for to-day's game?" joked Jed Mansel.

WIN SHUTE didn't smile. He came back strong: "You speed up that machine so there'll be no delay starting that relief ship. To-day won't decide the series. There's a ball game to-morrow—just as important."

It was an hour before the wireless operator reported that the message had been transmitted to the shore. He then announced that he was going to lunch.

"But how about the reply? Who'll be here to receive it?"

"It'll be two hours at least before we get an answer," said Mansel. "If you'll pardon me, you'd better get something to eat, too. You can't play ball on an empty stomach, you know," he added, jestingly.

An hour later Jed Mansel returned and found the persistent passenger waiting at his cabin door. Slowly a half hour passed.

"Can't you raise 'em?" asked Win impatiently.

"Here comes something," said the operator encouragingly. After much clicking, Mansel shook his head. "Sorry, but it's not for you."

He was an endlessly long time receiving and transcribing the message. Then he summoned a deck steward and told him to find Miss Riley and give her the Marconigram.

"Repeat my message," ordered Shute, "word for word. Here's for both." He paid the operator in gold.

Four times that afternoon the wireless operator repeated, at twenty-five cents a word, including the address and signature, the message to Tris Ford. But there was no reply. Win was getting desperate, and showed it, when the operator remarked:

"Here's something—mebbe this is it."

Win braced up. But after a bit of the metallic chattering, Mansel again shook his head. "Not for you—for the captain."

"For the captain?" Win's tone was eager. "That's the stuff!" He was thinking of orders from the officers of the line.

THE operator transcribed the message, put it in an envelope, and went off to deliver it himself. When he came back he confided the information: "I'm going to send a message from the captain—about you." That was all, but it raised the wavering spirits of the young man who would not leave the upper deck.

There was another tedious delay. Finally, along about five o'clock, there were the auditory evidences of the approach of a winged message. Then further delay while the wireless operator played his important part in the space-conquering trick.

"Sorry, but it's not for you. For the captain again," he volunteered.

The fourth annual 500-mile International Sweepstakes race will be held on the famous Indianapolis Motor Speedway May 30th.

An Invitation—and a Profit

To see this 500-mile race you must come to Indiana. Why not come a few days ahead of time and make a tour of the state and visit Indiana's automobile and accessory factories? Or, plan to remain a few days after the race. It will pay you.

The race is worth coming to see—about 90,000 people came last year and more are expected this year. Thrilling and spectacular as the race is, of greater importance to you, is the romantic story of the growth and success of the automobile industry in Indiana.

We have a little book we want to send to you free—write for it today. Let any one of Indiana's motor car or accessory companies know when you will arrive and they will meet you at the train. Visit our factories. See Indiana-made cars *made right* in Indiana. Meet the men responsible. Learn about our high quality and excellent service. Are you familiar with our superior shipping facilities? Do you realize how instant, and adequate our service really is? This concerns the car owner as well as automobile dealers.

Indiana-made cars have proven their superiority in every line of automobile activity, in racing, in touring, in hill climbing, in commercial work, in daily routine and in being thoroughly uptodate in refinements as well as being fundamentally correct mechanically. The name of "Indiana" is to motor cars the world's best guarantee of actual worth.

Accept this "family" invitation and visit the Indiana automobile and accessory companies at the time of the 500-mile race. It is decidedly to your advantage to do so. Mix business with pleasure. Make your trip here pay dividends. All the Indiana factories welcome you. Write them now and let them know exactly what train you will arrive upon.

THE COCA-COLA CO.
ATLANTA, GA.

Whenever you see an Arrow think of Coca-Cola.

"Might be just as good," said Win, "perhaps better."

The operator didn't reply. He went away to deliver the message and was gone "ages." Returning, he informed the "good waiter" that the captain would like to see him.

WIN SHUTE was off to the bridge as he might have started for second. High ran his hopes. He could almost feel the ship slowing down!

The captain invited him into the chart room and closed the door. Without a word he handed him a Marconigram, which ran:

CAPTAIN, *S. S. Colonia:*

Must be some mistake. Our player Shute here in game to-day. TRIS FORD.

After reading it over a second time to make sure, the captain's visitor, shaking his head doggedly, spoke in no uncertain voice:

"The *mistake* is in *this message*. Tris Ford *never* sent it."

"Why not?" asked the captain indulgently.

"Why not?—it shows on its face why not. It says I was in the game to-day. And I'm on this ship!"

"Sit down," said the captain, who paused until his invitation had been accepted, Mr. James—"

"My name isn't James—it's Shute."

"Well, then, Mr. Shute, if you prefer it," said the captain, wishing to humor his guest, "I have made a careful inquiry about you. Your room steward reports, and the quartermaster on duty at the gangway confirms it, that you came aboard intoxicated—I may say, were *brought* aboard *drunk*."

"It's a lie! Was never drunk in my life—never took a drop of liquor in my life. What happened, I was given a knock-out!—brought aboard drugged."

THE captain appeared puzzled, then continued: "I hardly think so, Mr. James—"

"Shute!"

"—Mr. Shute. The ship's doctor examined you, at the request of your friends, after you were assisted aboard. He reports that he found you in an advanced state of intoxication. Your friends said that you had been celebrating unwisely before sailing."

"I tell you it's a lie!"

"Mr. Shute, if you are not inclined to take my view of this unfortunate circumstance, you will have to be sent where you will be looked after. Not infrequently, I regret to say, young full-blooded fellows like yourself, and occasionally older birds, come aboard with so much extra baggage that a good night's rest does not set them up. They have what is popularly called a 'hang-over.' Sometimes they are quarrelsome, sometimes—out of their heads. Once in a while a fellow comes powerful near having the d. t.'s. But the steward in charge of the hospital knows how to take care of them—he's an old hand at it. You will find him quite capable, I assure you."

"Me? What d'you mean?"

"I mean that if you don't stop your nonsense and behave yourself, I will order you to the hospital. Good morning."

WIN SHUTE had never been put out of a game in his life. He eyed the "umpire" of the high seas critically and turned to go. But, like the average ball player, he couldn't leave the "field" without the last word.

"Captain, you've got me—I acknowledge that. And I'm not going to make any trouble for you—not while you're managing the ship. But once we strike dry land I promise you I'll start a brand of trouble that will bring up on this boat. I've been drugged—I repeat it. And there's been the dirtiest kind of a frame-up against me. What's more, that message you hold in your hand is a pure fake. Either the man who sent it *or the man who received it* is a crook—take your choice!"

Before the captain of the *Colonia* could reply, S. W. James, or, as he demanded to be called, J. W. Shute, was gone.

QUICK thinking was a portion of his business in life. In less than the distance from home to first base he had definitely outlined his plan of action. Of course he would give the head man of the ship no cause to resort to war measures: that would be silly—worse than kicking yourself out of a big game which you might help to win. No, sir-ee! He would stand for "James"—he would *be* S. W. James. Quietly, but none the less decisively, he would devote himself to an unemotional consideration of his highly exasperating plight. He would see if past devotion to the stories of the Great Detective had taught him anything worth while regarding inferences and deductions from a limited array of facts. For the next nine days, or until the ship touched at Gibraltar, he would do nothing else!

"Here Comes the Dog Catcher"
Sketches from Awayback

On land James Winton Shute would have kept steadfastly to his resolve. The lure of Chestnut Street at the shopping hour on a bright morning would not have deflected him from his charted course. But he was to find it different on shipboard. He was to discover something revolutionary about a sea voyage, something that jars one loose and cuts one off completely from ordinary life. The great white trail which fetches up at the stern of the ship leads away from everyday existence, lengthening the space back to the confines of duty and custom and habit as one nautical mile is tossed high on another.

For the first time in Win Shute's experience the pleasing shape of a girl bending to the wind, skirts taut like a sail close-hauled, tousled wavy brown hair brushing her animated face, Irish blue eyes bright and beaming, cheeks aglow with the delight of living, suddenly swept into his ken, and away went the restraints of an orderly, carefully planned scheme of life.

"Gee, what a swell girl!" he muttered. Then: "Why's she with that crook?"

It was Miss Riley, and she was attended by Jerrold Mansel, the wireless operator. More to the point, they were having a jolly time together.

MISS RILEY and her mother, Mrs. Daniel Riley, occupied Suite A 9 and 15 on the upper promenade deck, listing at $700 for the voyage to Naples. It was the finest suite on the ship.

There was, however, nothing undemocratic about Miss Riley. Although she was the most fascinating person on the ship, she didn't let that bother her. Her mother was a subdued, almost timid, woman past middle age, who had a habit of fading into the furniture and becoming a stationary part of her surroundings. She was easily the best listener on the boat. Her daughter was devoted to her, and Mrs. Riley plainly showed that her interest was restricted to her "Girlie," as she called her daughter.

Necessarily, first impressions prevail largely at sea. Unless a person is preceded aboard ship by a reputation with a wide circulation, he is known and estimated by what appears to his fellow voyagers. Nothing was known about Mrs. and Miss Riley. But they occupied the most costly rooms on the ship, and, although they dressed simply, it was that simplicity for which tailors and modistes

WHIRLPOOL
SANITARY
DISHWASHER

Thoroughly washes china, glassware, silver and kitchenware in a few minutes of easy operation.

Dries and sterilizes china.

Hands never touch water.

Large numbers are being sold in the

JOHN WANAMAKER STORE
Philadelphia

and the Wanamaker circular says of it:

"At last—a successful dish-washing machine for the home."

"It makes dishwashing a pleasant task."

"The well-known objections to previous types have all been overcome in this machine."

The Whirlpool is self-cleansing and absolutely sanitary. Washes finest china and glassware with no danger of breakage, using a dishpan full of water for washing and another for rinsing. Durably built of stamped metal; no pump; small in size, and especially adaptable to limited space. Beautifully finished in baked enamel. Refined and ornamental.

Average family size **$15.00**

Information furnished regarding larger sizes. All machines strictly guaranteed.

If not obtainable in your locality, The Whirlpool will be sent prepaid upon receipt of price.

Appeals strongly to high class **dealers and agents.** Will be shipped to responsible agents, prepaid, upon receipt of price. Returnable at our expense, after ten days' examination. Regular discount allowed thereon when agency is established. Shipped in cartons 18x22 inches, weight 23 pounds.

HERSHEY-SEXTON COMPANY
Manufacturers
1221 Filbert Street, Philadelphia, Pa.

charge the highest prices. "Wealthy people," was the ship's verdict.

Miss Riley's beauty, which, of course, endeared her to the masculine element, for some reason did not detract from her favor with the women. They liked her because she never failed to "notice" them. "She's nice to everyone" was another general observation. Finally, and this was perhaps the real test, she was considerate of the servants. The deck steward hovered about Mrs. Riley continually, simply because Miss Riley was too active to require much of his service. The room steward so fortunate as to look after A 9 and 15 was in constant argument with the pantryman on account of his raids for delicacies. It was within reason to say of her: "Gee, she's a swell girl."

WIN SHUTE was not one of those who worshiped from afar. Just as in baseball he was in the game every minute, so in this new game he played it assiduously. The day of his interview with the captain he had performed a slight favor for Mrs. Riley, the ubiquitous steward being off duty. This led to an introduction to "my daughter," and that resulted in the transformation of the voyage. From the first he got on swimmingly with Miss Riley. They seemed to "perform in the points," as he put it, "like a veteran battery."

"What's a battery?" asked Miss Riley.

Win Shute was amazed, but he cheerfully explained: "Pitcher and catcher. Aren't you a baseball fan?"

"I never saw a game in my life," she confessed.

"You've got something coming to you," said Win.

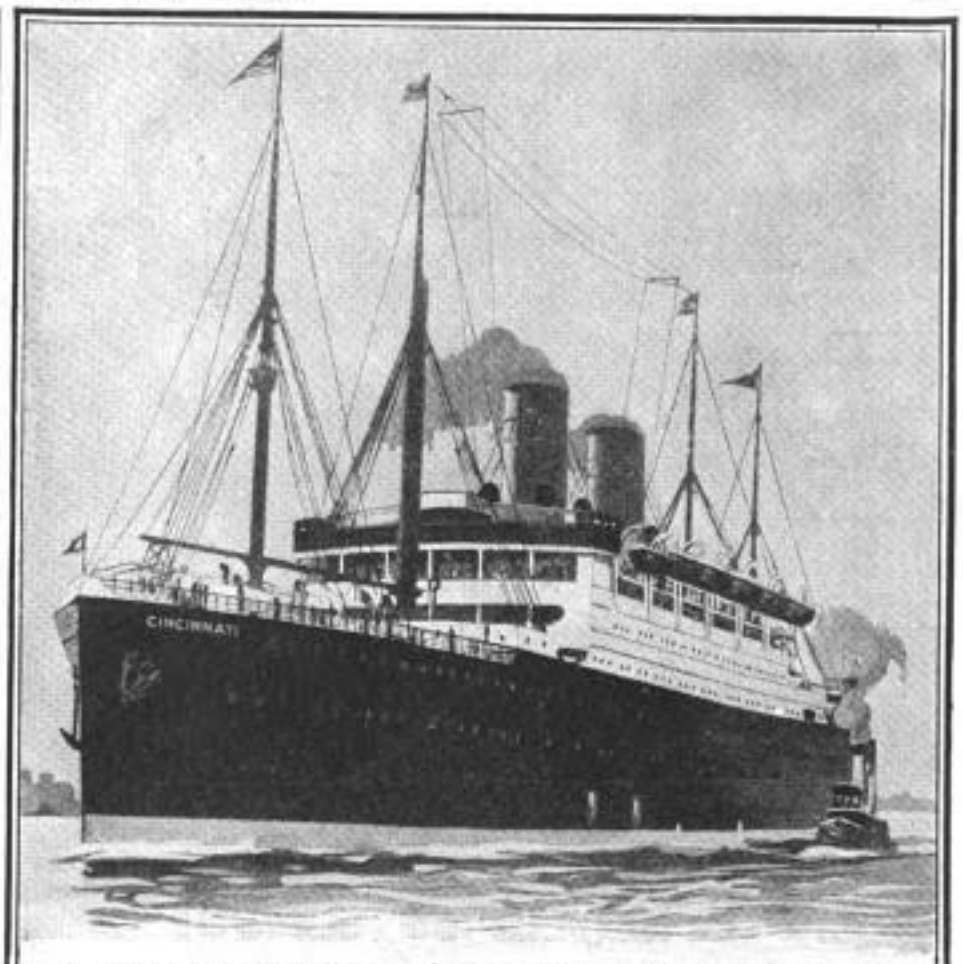
"You can't get me excited about any game to watch. I'm devoted to tennis and golf, and I played hockey and basket ball at school. But I *played*—I didn't merely look on. A baseball fan must be the laziest sort of human being: he runs away from his business and then he hasn't the energy or the get-up to play. He sits idly by as other persons exert themselves. It's too vicarious for me."

"Too what?" asked Winn, who was far from joyous over the turn of the discussion.

"Vicarious—letting a substitute play for you."

"I never let a substitute play for me if I can help it," boasted Win. Then he pulled himself up short and shifted the conversation to astronomy. He had flunked it at college.

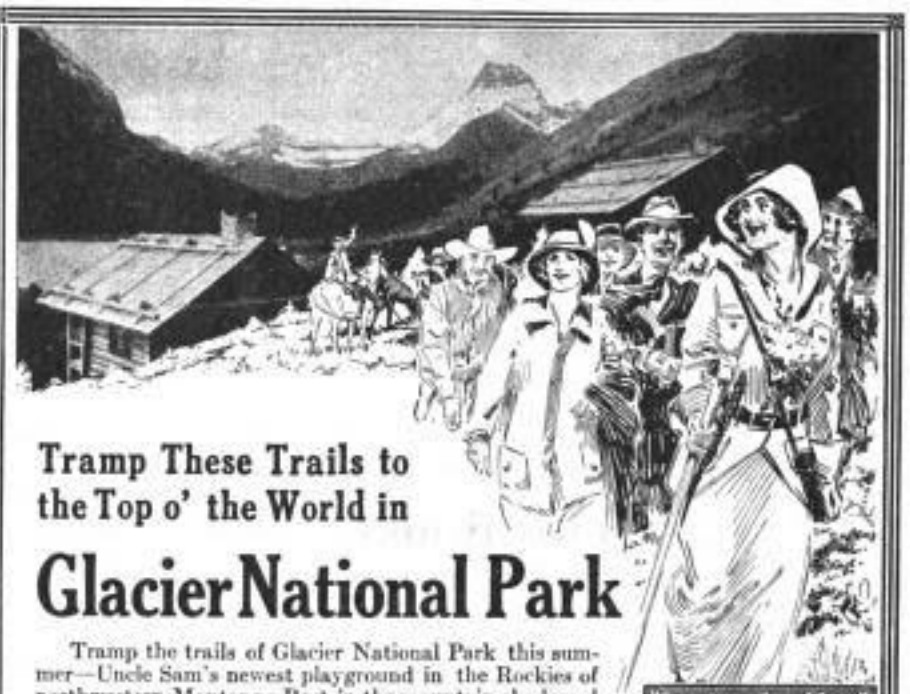
It was a decided shock to him that Miss Riley didn't care for the national game.



IF anything were needed to enhance Miss Riley's charm, it was the mystery that developed about or enveloped her the third day out. Win Shute heard of it from his room steward, who had picked it up from the waiter at the purser's table. The purser was the agent of publicity, and it was surmised that he had gleaned his intelligence from the captain. Anyhow, it was a matter that the captain and the purser would naturally talk over.

Via wireless had come an inquiry to the captain of the *Colonia* about a passenger. The inquiry was from the United States Government—so much was known. It concerned a young woman who was traveling with her mother. She was described in the general terms of strikingly handsome and clever. From this the descriptions varied according to the whim or imagination of the person repeating the morsel of gossip. The nub of the tale was that the young woman was a fugitive from justice!

Nothing could have been invented by the wit of man so to whet the curiosity of a seagoing bunch of lively-minded people as this—that among their number was a person passing as a lady who was in reality fleeing from the clutches of the law. Indeed, one might be talking to her this very minute!



IMMEDIATELY a new ship's game was started—find the fugitive. The search was carried on by a process of elimination. First the sailing list was combed for a mother and daughter. It turned out, unfortunately, that in the first cabin there were exactly twenty-one pairs of mothers and daughters. As to whether these twenty-one mothered maidens were handsome and clever, opinions differed markedly. Some of the daughters were good-looking but undeniably dull; others were clever but plain. Not half a dozen could come within range of the specifications.

When the consensus of opinion was about to pounce upon Miss Riley, who

Tramp These Trails to the Top o' the World in

Glacier National Park

Tramp the trails of Glacier National Park this summer—Uncle Sam's newest playground in the Rockies of northwestern Montana. Rest in the mountain-shadowed valleys by cool, glacial streams. Fish for the ever-present mountain trout. Climb to the top of the world—dizzy heights studded with diamond-dazzling glaciers. A panorama of inspiring grandeur—lakes, rivers, canyons, pine laden valleys—lies at your feet.

By day, lofty mountain tops beckon; by night, the soothing scent of the pines woos you to refreshing sleep.

Walk through the Park at a cost of $1 to $5 per day. Spend as much time as you desire. Travel, if you prefer, by automobile, horseback, stage or launch. The new and enlarged Glacier Park Hotel offers every modern convenience. American plan $3 to $5 per day.

Conquer Skiddy Pavements

Immune from Oil Damage

Make Greatest Mileages

PENNSYLVANIA
Oilproof
VACUUM CUP TIRES

GUARANTEED not to skid on wet or greasy pavements, else returnable at full purchase price after a reasonable trial.

GUARANTEED to be immune to the rubber destroying effects of oil in any form.

GUARANTEED to give a minimum of 4,500 miles actual service—their average service being greatly in excess of this figure. *Give yourself the benefit of V. C. Safety and Service.*

Pennsylvania Rubber Co., Jeannette, Pa.

New York, Chicago, Cleveland, Boston, Pittsburg, San Francisco, Los Angeles, Detroit, St. Paul, Minneapolis, Omaha, Kansas City, Mo., Seattle, Dallas, Atlanta

An Independent Company with an independent selling policy.

headed the list of "suspects," another bit of information leaked out. The woman wanted was a *stenographer*. Here the search for the guilty one began all over. Miss Riley was wealthy—her ship accommodations and her dress denoted that—so it must be some one else. But after considering the qualifications of other possibilities for hours on end, Mistress Consensus again hovered about Miss Riley. Thus the first cabin divided itself into two camps—the partisans of Miss Riley and those of "the field." But paradoxically, in this instance, partisan meant enemy.

The ship got hectic about it, and because of it Win Shute got into trouble.

HE was watching the poker game in the smoking room—"playing vicariously," he expressed it—when the loose-jointed conversation switched to the unsolved mystery of the ship—the identity of the fugitive from justice. Eventually there was an argument over the demerits of Miss Riley.

Win Shute was angry at mention of her name. To him it was contemptible that it should be dragged in and bandied about over booze and poker chips. His reason prompted him to get out before he heard anything which he would be compelled to resent, but he decided that that would be deserting a lady in distress. So he remained and bottled up his rising wrath.

Two men—one an ordinarily decent chap who had taken a little too much, and the other a cynical, self-contained man, the best poker player at the table—brought the unmanly discussion to a precipitate conclusion. There had been many references to Miss Riley, most of them complimentary in nature, and the decent but tanked-up chap had proved her champion. As a clincher he asked:

"That girl has the finest rooms on the boat. Does that look like she is a stenographer?"

"Oh, look, Kitty; he's got a illustrated arm!"

THE cynical man answered:

"If she is the steneg. of one of them Pittsburgh millionaires, it's the kind of a suite you'd expect to find her in. Get me?"

There was a coarse laugh, which changed in the middle into an expression of concern. What happened was swift.

Win Shute said something in the gambler's ear and neatly slapped his face. The gambler, raging, jumped to his feet, scattering glasses and chips, which went clattering to the floor, and made a vicious pass at the interloper. With the celerity of dodging a wild pitch, Win Shute avoided the first, and, catching the gambler off his balance, floored him with a pretty uppercut. Then the gambler, blind with rage, seized a whisky bottle from the wreckage. But before he could use it his arms were pinioned from behind. And Shute was pushed out of the smoking room.

As the loss in rum and glassware, generously estimated, was made good, and as the smoking-room steward was properly rewarded for his future reticence, the episode did not come officially before the captain. But unofficially, through the human wireless system, the story went all over the ship. In its travel it became embellished with the ship's doctor's account, based on personal observation, of "that James's arrival on the ship—dead drunk.

THE story did get to Miss Riley in expurgated form. An uncomplimentary remark had been made about her—"Oh, nothing of any consequence—bless your heart, no!"—and "James" had thought himself called upon to defend her with his fists. Idiotic boy! But then—"You know, my dear, he's a terrible drinker. Yes, indeed, he was brought aboard the night we sailed so drunk that two men had to carry him—two men; the doctor saw them!"

WIN SHUTE, in his wholesome and innocent view of things, believed that the unfortunate affair in the smoking room would be hushed up. Having liberally rewarded the steward for the trouble that had been caused him, and thinking that "those present" would treat the episode from the standpoint of the least said the quickest forgotten, Win went about in high spirits, as if nothing had happened—headed straight for Miss Riley.

They were getting on famously. Together they had won many of the events in the sports, and at ship's tennis, which required agility and a sure, quick grip on the elusive ropen rings, they were in the finals to be played that morning. Miss Riley couldn't have avoided seeing him had she been so minded. They won, and were proclaimed champions of the sea—at least of that part of it dominated by the steamship *Colonia*.

It had been a hard-fought match, in which physical condition played not a small part. Miss Riley rather amused Win as they were resting in steamer chairs on the boat deck by saying:

"You seem to be pretty fit."

"Fit?" His tone had in it a shade of sarcasm. "I'm always fit—always ready to jump in and play—anything."

"Always?" She looked at him quizzically.

He was blind as a bat. "You bet—in season and out of season."

"You must have a splendid constitution."

"I have—but I don't abuse it. I want to *last*." This had a queer meaning, he saw too late, but he didn't try to explain.

To his surprise she said, quite impulsively: "I do believe that's true." And for emphasis she rested her hand for a moment on his sleeve. Her touch gave him an odd thrill. It was as good as delivering a hit with a man on second, which struck him queer! Not once did he consider the reputation as a hard drinker borne by "S. W. James."

MISS RILEY got up to go to her stateroom, and then, as if under the spell of impulsiveness, added quite shyly:

"It was good of you to take my part in the smoking room."

"You didn't hear?" asked Shute, his face horror-stricken.

"Oh, I didn't hear verbatim what was said about me," she explained, her tone a little hard. "But I can imagine. Men are such brutes—most men. And I wanted you to know that I—I liked what you did, no matter what others say about it. I must go now."

She slipped away, leaving Win happy and angry, turnabout: happy at her unexpected tender of gratitude, angry at the man who had blabbed. But happiness soon took the ascendancy. In his limited experience he hadn't much to compare it with, except breaking into the majors the very summer he graduated from college. This, on second thought, seemed a most unhappy comparison, as Miss Riley didn't care for baseball.

Then she could never care for a professional ball player! He hadn't thought of it before, but now, for some imperative reason that he didn't try to analyze, the idea forced itself upon him. If she couldn't care, what then?

"WE land at Gibraltar to-morrow." Win Shute heard a passing remark, and suddenly it dawned on him that the day he once had looked forward

No Plates—No Films
NEW CAMERA JUST OUT

Here at last—the very camera You want. No experience needed to operate. Amazing invention. Finished pictures made on the spot in a minute's time.

The "Mandel-ette"

A one minute camera. Eliminates films, plates and dark room. No fuss or trouble. Pictures made at small cost. Great discovery. For your vacation, at home or all occasions, you can't afford to be without a "Mandel-ette."

SPECIAL MONEY BACK OFFER

As makers and inventors, we want everybody to own a "Mandel-ette" Camera. We sell direct to you at rock bottom price. Order from this ad; make pictures with the camera, and if it does not do all we claim, we refund your money.

This wonderful camera takes pictures DIRECT ON POST CARDS without films, plates, printing or dark room. Camera weighs about 24 ounces and measures about 4 x 4 1-2 x 6 in., size of pictures, 2 1-2 x 3 1-2 in. Loads in daylight with 16 to 50 cards at one time—no dark room necessary. Universal focus lens produces sharp pictures at all distances. Perfect working shutter. Combined "3-in-1" Developer eliminates any other solution. Pictures develop automatically in less than a minute—can't over develop. Plain instructions with each outfit enable you to begin making pictures the very hour the outfit arrives. SEND FOR OUTFIT TODAY.

$5.00 COMPLETE OUTFIT

(50c extra by parcel post)

Outfit includes camera and supplies to make 24 pictures. Good tripod, $1.00 additional. Extra cards, 25c a pkg of 16. Don't wait—ORDER NOW.

Free Book Write for it. Learn about this method of picture taking—its many advantages and big saving. You can make money too, selling these one minute pictures. Order the outfit—or write for the free book—NOW.

Announcing

1915'S "SIX" SENSATION!

Now We Make the Announcement of a Great New Milestone in Motor Car Values! An Automobile Wholly Designed by a Famous European Engineer—a Car Whose Leading Features Will Dominate at the Paris, France, Automobile Show This Fall—the Most Beautiful Stream-Line Body the Industry Has Known and one of the Most Economical Cars Engineers Have Conceived.

A NEW automobile epoch is crystallized in the wonderful new Lewis "Six" which we now announce—a remarkable 6-cylinder, 6-passenger car of 135-inch wheel base, luxuriously finished and upholstered—bristling with myriad new luxuries and conveniences that $3000 car buyers a year hence will be offered—at $1600! The history-making car of 1915 is the

New LEWIS "Six"

Monarch of the "Sixes"

AT the 4-cylinder price you are now entitled to the Monarch of "Sixes" with all its delightful new driving sensations, the velvety riding qualities of the long wheel base, the amazing beauty of the true European stream-line body, the extra capacity of the 6-passenger car, the comfort of **divided** seats over exceptionally wide underhung springs and countless other features.

The Masterpiece of a Famous European Designer

THE new Lewis is M. Petard's masterpiece. M. Petard was formerly with such famous cars as the Fiat, Italia, Daracq, Unic. His is the first American car wholly designed by a chief engineer who first hand has had the wonderful European practice that all American engineers superficially copy.

The Lewis is the first American car wholly designed by M. Petard.

He has placed the new Lewis in front of every American car because of the first hand European advancements he applied. We are two years ahead with many features—why wait until 1916 and 1917 for them in other cars?

You buy no experiment when your choice is a Lewis. The Lewis is produced by men who have been building cars since the very inception of the automobile industry. The president of the L. P. C. Company is William Mitchell Lewis.

Eighteen to Nineteen Three-fifths Miles to the Gallon

THIS is the most economical "Six" the motor world knows. Road tests showed 18 to 19 3-5 miles to the gallon of gasoline. A record few 4-cylinder cars equal. Thus we eliminated the last drawback to the six, for our motor is the small bore type, 3½ inches, while the stroke is 6 inches. This strikes the limit in conserving gasoline. The power and stamina of the car are wonderful. There are few hills in America that will make you shift to second gear.

We furnish 1 horsepower to every 51.5 pounds of weight—other cars average 1 horsepower for **75 to 90 pounds** of weight.

Features

- 135-inch Wheel Base
- 6 cylinder tests: 18 to 19 3-5 miles to gallon
- Monobloc Motor: bore 3 1-2 in.; stroke 6 in.
- 6-passenger Pure Stream-Line Body
- Paneled Fenders
- Light Weight—3250 lbs.
- Cowl Dash
- Self-Cranking System
- Electric Lighted; Electric Horn
- Simplicity—Approximately 1200 Fewer Parts
- Big Tires—36x4; Demountable Rims
- Wide 22-inch Doors
- Left Drive; Center Control
- Underhung Rear Springs; Wonderfully Easy Riding
- Roomiest Body Built
- Silk Mohair Tops; Jiffy Curtains; Nickel Trimmings.

Utter Simplicity—1200 Fewer Parts

THIS is the simplest "Six" yet created. It has 1200 fewer parts than the average "Six"—and this simplicity guarantees an upkeep cost practically **nil.** The simplest motor yet built is the Lewis—unscrewing a few bolts allows access to the cylinders. There is no such thing as "tearing down" a Lewis motor. Throughout the car you will find a notable absence of braces, wires, rods that in average cars offset incorrect design. There is none of this engineering bric-a-brac to get out of order in the Lewis.

The Distinctive Lewis Radiator Marks the Monarch of the Sixes.

Nothing Missing from This Wonderful Car

THIS wonderful automobile value is all the more remarkable because there is nothing missing that could better the car. The divided front and rear seats, the highest grade leather upholstery, the superlative excellence of the finish, all mark it the sensational value of the year in elegance and appointments. It carries the air of a $5,000 car—there is nothing lacking in equipment that twice the price can buy!

Get the New Catalog—See the Car Today

GO see this remarkable car—the world's greatest motor car value—at the nearest Lewis dealer's. **It is on exhibit now.** But first write for our new catalog, a fascinating recital of how this car came to be created and the complete story. This book marks a new milestone in motor car design—you should not miss it—write today to

Your address on a postal brings it.

Plan *now* for your vacation.

REDUCED RATES FOR SUMMER CRUISES

JAMAICA, HAVANA, PANAMA CANAL, CENTRAL AMERICA, COLOMBIAN PORTS

—cooler in summer than New York—official temperature records prove this.

Cruises of 18 and 22 days. Take advantage of low rates to visit the tropics. Hotel rates, carriage hire, souvenirs are much lower now than in winter.

Luxurious comfort on Great White Fleet Ships, extra large staterooms, delicious cuisine, many baths. Make the ship your hotel while in port.

UNITED FRUIT CO. STEAMSHIP SERVICE

17 Battery Pl., N. Y. Long Wharf, Boston 630 Common St., New Orleans

to most keenly, but which he had almost forgotten, was at hand. At last he could move against his enemies! Now he could establish his identity!

BUT something held him back. Miss Riley wasn't fond of baseball! She had come to like "Mr. James," but would she, a "real swell," ever look with favor upon Win Shute, professional ball player? He shook his head gloomily.

Looking upon the much-advertised rock next day, he wasn't at all impatient to leave the ship.

"Going ashore?" inquired a voice at his side. It was Jed Mansel, the wireless operator.

"S'pose so," answered Shute without show of enthusiasm.

"Better not if you don't want to get skinned," warned Mansel. "Those brigands could skin a Bowery pawnbroker."

"Want to stretch my legs," returned Shute.

"Why not join me? I know the spot and the ways of the native holdup artists. I'll act as guide if you say so—glad to."

Never before had Jerrold Mansel offered to do him a favor. Their only contact after the first day's consultation over the wireless messages had come in rivalry over Miss Riley's time. Now the hero of the *Regent* was brimful of friendliness. Win Shute's suspicions, already sufficiently aroused regarding Mansel, were considerably augmented by this urgent invitation. But he smiled as he might have done in facing a pitcher who had something "on" him.

"Thank you—I've no time for sightseeing. I have some business to attend to here."

WIN SHUTE was off the ship among the very first—before the wireless operator; he saw to that. He hired a conveyance and ordered the driver to make tracks for the cable office.

"If you get there before anybody from the ship I'll give you double fare!" promised Shute—and he had to.

He wrote out a long message to Tris Ford, explaining in detail what had happened to him and how he had done his best to communicate by wireless, and he stood over the operator while he sent it. Then he asked how long it would take to get an answer.

"From two to six hours," was the reply.

"I'll wait," announced Shute.

"But don't you want to see the fortifications?" asked the operator. "You will have ample time."

"I want to see nothing except the reply to that message," replied Shute, sitting down and making himself comfortable for a long wait. "On second guess, I do want to see something else," he added. "Have you any newspapers—newspapers printed in English?"

THE operator pointed to a file of the Paris edition of the New York "Dispatch." Shute grabbed it and began to run his eye over the last paper of the file. There was nothing on the first page—nothing but foreign stuff. Buried away on an inside page was a brief cable dispatch headed:

BASEBALL CHAMPIONSHIP

"The Philadelphia Nationals won"—Win Shute's heart sank—"the so-called world's baseball championship to-day, defeating the American League champions 1 to 0, and taking the series, four games to three. The contest between the two professional leagues is restricted to America, and the high-sounding phrase, 'world's championship,' is nothing but an advertising dodge to increase the attendance. However, the trick worked, for it is estimated that 235,000 people paid to see the games. At present America is baseball crazy. But your correspondent believes that it is a phase of American life that will pass."

Win Shute threw down the paper in deep disgust. "And over here they call that an American newspaper! I see I'm going to like this Europe," he concluded.

After six hours of waiting, the operator handed him a cable dispatch. It read:

Ford touring West, traveling to-day. Cable your next address. Do you need money?

It was signed by the club's secretary.

HE cabled back word to address him care of the American consul at Naples. He did not ask for money. And he went back to the ship in no hilarious frame of mind. His team had lost the world's

Speedaway Detachable Rowboat Motor

Complete with the following extras:

Noiseless underwater exhaust. Disappearing crank handle. Self-locking tiller device. A real rudder. Propeller protected thoroughly against injury from hitting obstructions and against clogging with weeds.

$50

Net Direct to You

For $50—direct to you—you now get the same motor, identical in every respect, that we have been selling for $70.

You can see how it is. If you were to buy your eggs direct from the farmer you'd get them much cheaper than you do from the grocer, wouldn't you?

We, the manufacturers, are selling this $70 motor direct to you, the purchaser, and giving you the benefit of the $20 Dealer's profit.

Built-In Reversible Magneto

The Speedaway is now furnished with magneto built in at $59. At this price it is an even more liberal offer than the standard motor at $50.

This is the most unusual boat motor offer ever made. Take advantage of it! Write for our Engineering Specifications and let us show you the points which make the Speedaway one of the best of the $70 motors—and then send in your order for that same motor for $50.

Speedaway Boat Motor Co.

FOR THE MAN WHO CARES

There's a Starrett Hack Saw for Every Job

Perhaps you have a little job at home of sawing a piece of pipe or brass tubing. Well, there is a Starrett hack saw blade and frame just the thing for the home owner, and the outfit doesn't cost much, either.

Or maybe you have a job in your shop of cutting a lot of steel shafting on a power machine? If so, there is a Starrett blade well suited for that work, too.

Every style of Starrett saw is well tested in our huge factory so we know that the number and set of the teeth and the temper of our special tungsten steel are just suited to the particular work for which they were intended. Starrett hack saws are as good as Starrett Tools; the World's Standards for Precision. You can buy Starrett Tools and hack saws at any good hardware store.

Send for our new, free, 320-page catalog No. 20 S. S. showing the styles you need, and their prices.

championship—the plot against him had been thoroughly successful! And he was no nearer spotting his enemies than he was before going ashore. And Miss Riley didn't care for baseball! This seemed to cap the climax. Strange how values change in a voyage across the Atlantic.

Aboard ship he ran upon the ship's doctor and the wireless operator in close confab. Win Shute was not curious until he caught the doctor's words:

"The Giant-killers lost, I see by the 'Dispatch,' and you won. I'll pay you when we get paid off."

"My tip was pretty good," admitted Jed Mansel. "I made quite a killing. Cleaned up two thousand dollars."

"Two thousand!" repeated the doctor. "You *were* lucky."

"Not lucky—wise," corrected Mansel, winking slyly. "I knew that one of the Giant-killers' best men couldn't play."

WIN SHUTE was certain! The wireless operator *was* a crook. He was a party to the devilish conspiracy that had drugged and put him away on the ship!

Rage such as he had never felt in all his life consumed him. He could not curb his desire to hurl himself upon Mansel and beat him to insensibility. But as he was on his toes to spring, a restraining hand was laid upon his arm.

It was Miss Riley. "May I speak to you, please?"

Reluctantly and none too cordially, Win Shute turned from his enemy. He and Miss Riley walked along the deck until they were out of hearing of everybody.

"I looked for you before the passengers went ashore," she said.

"Guess I was the first one to land," Win explained.

"You see," she went on, then faltered—"you see—I wanted to ask a favor of you." She stopped.

THE ship's mystery unaccountably flashed across Win's mind! But he didn't pause a second in replying:

"Sure! Ask something hard. Wish I could do a real big favor for you."

"You can. I have a queer feeling that something is going to happen. It's perfectly silly, of course, but—but if something should, will you look after mother? She is so devoted to me and so dependent on me that I don't know what she—" Again she faltered.

"I sure will—and look after you, too," answered Win.

"That's so good of you. But don't trouble about me. It's mother I'm worried about." Then with a look of unconcealed admiration she concluded:

"But I feel better now. It seemed to me that you were the only one on the ship that I could go to—the only one I wanted to trust my mother to."

Notwithstanding the bitter disappointment of the day, Win Shute went into dinner that night with a heart as buoyant as a toy balloon. He was planning a walk and a talk by southern moonlight with Miss Riley.

But all evening she paced the deck in earnest conversation with Jerrold Mansel.

Win Shute was unable to explain it. Did he suspect Miss Riley? Not for a fleeting second would he admit it to himself! He dropped off to peaceful slumber that night satisfied beyond cavil that she was the finest girl in the world—new or old.

A LESS healthy-minded person than James Winton Shute, a less trustful nature, would have worked himself into a state of both irritation and doubt over Miss Riley's growing intimacy with the wireless operator. Every day she walked with Jerrold Mansel, and there was a conspicuous attentiveness on his part, coupled with an authoritative way of commanding her comfort, that indicated to a close observer how well the hero of the *Regent* believed he stood with the most attractive woman on the ship. Evidently he looked upon himself as Miss Riley's preferred companion, if not as a suitor whose advances were far from distasteful.

Win Shute figured out to his own satisfaction why things were thus. He knew that Miss Riley was receiving wireless messages—he had seen Mansel hand her more than one—and Shute decided that the operator was taking this means to keep in touch with her. Whereas a steward would carry Marconigrams to other passengers, Jed Mansel invariably delivered Miss Riley's messages himself. Naturally this attention would be recognized by an appreciative person like Miss Riley.

IT means bigger, better, cleaner business. It is the inspiring insignia of 140 clubs, with a membership of over 10,000 earnest men. Learn what the Associated Advertising Clubs of America are doing for honesty in business; for more systematic, scientific and successful methods of distribution, advertising and salesmanship. Attend the Tenth Annual Convention of the A. A. C. of A.

TORONTO
JUNE 21-25, 1914

Interesting Program

The program for this great convention is comprehensive and diversified, covering every phase of modern merchandising. The sessions will be addressed by able, successful men; open meetings, devoted to a wide range of special topics, will give everybody a chance to ask questions and hear his own problems discussed by the men who have met and solved them.

Edward Mott Woolley

the famous writer on business topics, has made a study of the A. A. C. of A. and their work, as well as of the plans for the Toronto Convention. He has embodied the result in a little book, "The Story of Toronto". This book paints a graphic, inspiring picture of what this great movement signifies.

It will be sent free to all business men asking for it on their business stationery — together with detailed facts as to the convention program and rates for accommodations

The booklet was printed to give away. Your copy is wrapped up and ready to mail; no obligation; merely clip the coupon now.

Further, Win Shute made generous allowance for Jerrold Mansel's advantages in the game of "fooling the ladies." He was good-looking—rather the dashing officer type, so much admired by young women at sea. Added to this, he was a real hero. His heroism was unquestioned, and he was in the habit of making the most of it. Therefore, Win Shute thought that Miss Riley was entitled to indulge her womanlike partiality for heroes, in common with every other female passenger. But it did make him jealous.

THAT Jerrold Mansel was downright crooked, there wasn't much doubt. But Win had to admit that his proof was far from conclusive. Tris Ford's wireless was a fake—but there was the possibility of faking somewhere along the line of transmission. Mansel had bet heavily against the Giant-killers—but so had thousands of other persons. The operator's remark about the player who would be missed from the line-up was strong circumstantial evidence against him—and still it could have been a "second guess"; he might have heard after the series that one of the best men had been out of the game. Certainly there wasn't enough solid proof to warrant Win Shute in denouncing the wireless operator.

And if he did—if he warned Miss Riley against Jerrold Mansel—it would involve a disclosure of the fact that he, James Winton Shute, was a professional baseball player. He wasn't ready to make that admission. The fact that the finest girl didn't care a hang for the national pastime constituted a mighty serious problem. It wasn't pleasant to continue to masquerade as "Mr. James," but it was an incognito enforced. So things were permitted to drift. Drifting seemed to accord with the dreamy atmosphere of the Mediterranean.

WIN SHUTE insisted that Lake Erie, as he had seen it on the boat from Detroit to Cleveland, was "exactly as blue."

"Steel blue—cold," argued Miss Riley, "but no turquoise tints. If Lake Erie separated Florida from Georgia, instead of Ohio from Ontario, then you might get a bit of the same coloring. But as it is, there's nothing like it—according to Baedeker—except the Ionian Sea from Taormina."

"Where's that?" asked Win irreverently.

"The most beautiful place in Sicily."

"Sicily? Not for mine," said Win. "They tried out a Sicilian once on the Pirates—"

He saw Miss Riley's look of perplexity, and remembered that she wasn't a fan.

"I was talking baseball," Win confessed.

"Here—facing the storied land of the Alhambra?" she mocked. "You foolish youngster, You'll be talking of baseball in the gardens of the Villa Borghese."

"Rome?"

"The Eternal City."

"I've got you!" exclaimed Win excitedly. "The Chicagos and the All-Americas played there—in the Villa Borghese—in eighty-nine!"

"Baseball?" Miss Riley couldn't believe it.

"Our national game," emphasized Win, "and say—the King of Italy stayed till the last man was out in the ninth!"

IT was moonlight on the Mediterranean, the last night but one of Win Shute's long voyage to Naples from unconsciousness. He had started out to act the part of a "trusty"—to do nothing against the captain's authority, but secretly to work toward one end, namely, the circumvention of his enemies. After a fortnight at sea, although he was naturally interested in his own case, he had lost much of his violent anger against those who had forced him to become a passenger on the ship. For if they hadn't—if he had remained at home—he would not have met the finest girl! As Tris Ford would have said: "There ain't nothing to that."

It was early, scarcely dark, but with a full moon, and together they were on the lookout for the first sight of Genoa. They had arrived at that important stage in their acquaintance when the original discovery was to be made of front names.

"You've never told me your name," he urged.

"Mother always calls me 'Girlie,'" she responded, half in fun.

"I know—but I never was strong for

is the best tobacco we Pattersons ever made

We've blended many brands of smoking tobaccos—some of the most popular tobaccos now on the market were originated by the Pattersons.

But all of these brands have to take their hats off to "Whip."

They are good tobaccos and have solaced millions of men, but their biggest value is that they have made "Whip" possible.

They have been stepping stones for "Whip," that have led to this finest of all smoking tobaccos.

The refinements we have brought into the production of "Whip" make it a delight to every smoker. They glorify the pipe with new degrees of pleasure.

First of all, "Whip" is the mildest smoking tobacco ever produced. It is so mild and gentle that you can smoke it all during your waking hours without "feeling it."

And "Whip" is so deliciously fragrant, so tasty, so cool and refreshing that you will want to keep the old pipe purring all day long.

So free of bite and burn, that there isn't a sore tongue in a carload. We Pattersons originated smoking tobaccos without the bite years ago, and in "Whip" the "no bite" process is brought to a state of perfection.

OUNCE TIN FREE

A postal card bearing your name and address and the name of your dealer, will bring you a full 1-oz. can free.

"Whip" is put up in one-ounce tins at 5c., two-ounce tins at 10c; also in handsome Pottery Patented Self-Moistening Pound Humidors.

M. C. Patterson
Pres't.

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Queed"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and, we believe, a little better than many 2-oz. 10c. tobaccos.

COLORADO

The Beautiful and Economical Place for Your Vacation

Do you know that the mountain people are proverbially strong and sturdy? Why? The Rocky mountains are always healthful. The dry, high altitudes are a-tingle with vital forces. If you're spent and worn; if your mind is sluggish; if your ideas come slow; if you're jaded, tired and draggy—it's time to cut the traces of your tasks and strike out for Colorado.

The journey means one night on the cars from Chicago or St. Louis—and such a trip! Great, commodious steel sleepers, beautiful dining cars, valet, barber and music on the Rock Island Lines' "Rocky Mountain Limited," daily from Chicago.

We maintain Travel Bureaus in all important cities. Our representatives are travel experts, who will help you plan a wonderful and an economical vacation, give you full information about hotels, camps, ranches, boarding places, and look after every detail of your trip.

Write today to L. M. Allen, Rock Island Lines, Room 722 LaSalle Station, Chicago

Low fares June 1 to September 30.

pet names—in public, I mean. Tell me your real name."

She was plainly embarrassed. It was a perfectly justifiable question, and there was no reason, which he could see, why she should hesitate. Yet she did.

"I'm not going to use it—till you want me to."

"Oh, it's not that—not that at all. I'd be glad to have you call me—Imogen. It's Imogen."

"Imogen Riley," repeated Win. "Say, that's some name. If I'd named you myself, I'd have called you—Imogen."

"Mother will be glad." And she laughed.

"Now, what's *your* name?" she asked.

It was his turn to be "fussed" and to hesitate. "My middle name's Winton—most everybody calls me Win."

"I suppose because you always *do*."

"Till now I have."

She edged away a trifle.

"Winton James is an excellent name," she declared. "I don't believe I would have it anything else."

HE kicked the rail with his toe. It was an impatient kick. Masquerader!

"Look!"

She pointed to the lights, myriads of lights, bobbing on the shipping in the harbor and stretching high up to the summits of Monte Peraldo, where they lost their identity in the winking stars.

"Genoa!" he exclaimed.

"—the Superb," she completed.

"But to-morrow we go to Naples, and then—" Win regarded Imogen wistfully.

"Don't let's speak of to-morrow," she hastened to say.

"No," he agreed. "We have to-night—all to ourselves."

"Yes," she whispered.

But they didn't.

As the *Colonia* was warped in to the dock, olive-skinned officers, most of them with black mustachios, swarmed about the head of the pier. In their dress and cocky bearing they closely resembled soldiery. And they formed a guard about each gangway before anyone was permitted to land.

Other officers came aboard immediately, and the word soon flew around the decks, started by some prattling petty officer of the ship, that the "boarders" were connected with the secret service of Italy. This resurrected the ship's mystery, and tongues began to wag and heads turn in excitement over the imminent disclosure of the fugitive's identity. At length was circulated the information that the officers were seeking a young woman who was wanted by both the Italian and the United States Governments. Finally came the name—a Miss Leonard.

HEARING it, Imogen trembled and clutched Win Shute by the arm.

"What's the matter?" he asked, staring into her terrified face. "It's—it's Leonard."

"My name's Leonard—Imogen Leonard. Forgive me!"

Safety + Quickness

"Safety First" must ever be the watchword in firearms. But safety must *not* be secured at the sacrifice of *quick action*, for in a mix-up you don't always have time to think.

The Colt Automatic Pistol *combines* the most *dependable* kind of safety —*automatic safety*—with *instant* firing.

When your Colt is cocked ready for action the automatic safety device in the Grip slightly protrudes —see illustration. The pistol cannot be fired until the Grip Safety is pressed in and this is *automatically* done the *instant* you purposely pull the trigger.

You cannot conceive how the Colt can possibly be discharged accidentally, because you can't conceive how the trigger can be pulled and the Grip Safety compressed *at the same instant* except it is done *purposely*.

So much for safety. Can you think of a quicker acting pistol than the Colt? In emergency, you don't have to bother or think about the COLT GRIP SAFETY—it takes care of itself and YOU.

Demand "Safety First." Demand quick action also, which really means "Buy the Colt."

Don't be stalled off a Colt if you want the best pistol —it costs you no more. Write for Catalog 14.

Where Do Your Profits Go?

ENGAGE an expert accountant. Instruct him to mathematically analyze the various reasons, causes and forces that take the profits out of your business and you will probably be dumfounded at the enormous amount of money and time that is literally eaten up by the old time method of hauling merchandise with horses.

In contrast to this get in touch with some of the various concerns using Willys Utility Trucks (we will supply any number of names)—and what do you find?

In a word you find that those who use Willys Utility Trucks are enjoying a much greater volume of business at a greatly reduced cost of getting it.

And the increase in business was effected after Willys Utility Trucks were put in operation.

Every operator of Willys Utility Trucks *saves* what every operator of horses is daily *losing*.

The Willys Utility Truck is the great modern remedy for any concern that is hampered with too much overhead and too little business. Their adoption starts the income on the increase and the outgo on the decrease.

Why Willys Utility Trucks in preference to others?

—because their purchase cost is from 15% to 50% less than other similar trucks.

—because they cost less to maintain.

—because their operating costs are less; that is, the cost per delivery or pick up stop is less; in most cases more ground or a greater mileage can be covered.

—because the chassis, that is the mechanical construction, of this truck is perfectly sound and fundamentally correct.

—because it is built to stand the wear and tear of ordinary every day use.

—because the most prominent merchants and manufacturers—men who have the means to exhaustively investigate before they purchase—have bought this truck in preference to all others.

—because behind this truck is one of the largest and strongest organizations in the world.

We suggest that you send for our plans, reasons, costs, special body book, means of disposing of your horse equipment and all the necessary information which we will gladly supply and which will show you exactly how to reduce your present high cost of doing business with horses.

All information is gratis and very instructive. Write today. Address Dept. 153.

Look up our dealer in your town.

Four
No-Rim-Cut Tires for the Price of Three
of Some of Goodyear's Rivals

Dropped 28% Last Year

The price has dropped fast in late years on Goodyear No-Rim-Cut tires. The 1913 reductions totaled 28 per cent. Part was due to lower rubber, part to multiplying output, part to new equipment, part to lower profit.

Last year's sales were 11 times larger than in 1909. The first four months of this fiscal year show a further gain of 55 per cent. Making and selling costs have dropped immensely with this multiplied production. And we pared our average profit last year down to 6½ per cent.

Now 16 makes of tires are selling above No-Rim-Cut prices. Some nearly one-half higher. And several makers charge for **three** tires more than we charge for **four.**

Yet No-Rim-Cut tires retain every advantage—every costly feature—which made them once cost one-fifth more than other standard tires.

Why They Cost More

No-Rim-Cut tires were once the high-priced tires because of these four exclusive features. And they are still exclusive. No one else employs them.

The No-Rim-Cut feature, which we control, has ended rim-cutting completely. But it involves in each tire base six flat bands of 126 braided piano wires.

Our "On Air" cure saves the countless blowouts due to wrinkled fabric. But it compels us to final-cure the tires on air-filled fabric tubes, under actual road conditions. And this adds to our tire cost $450,000 per year.

Our rubber rivets have reduced by 60 per cent the risk of tread separation. Hundreds of these rivets are formed in each tire—before vulcanization—at the point where loose treads occur. The simple right to use this method cost us $50,000.

Our All-Weather tread combines a smooth tread with the best anti-skid. It is flat, smooth and regular. It is double-thick and tough. And in every direction it offers wet roads sharp-edged, resistless grips.

No other tire at any price embodies these costly features. So No-Rim-Cut tires at least excel in these four major savings.

No Greater Mileage

We also give you in No-Rim-Cut tires the present-day limit in low cost per mile. We have long spent $100,000 yearly in our efforts to better these tires. Thousands of tires have been built in our laboratory in thousands of different ways. And all have been put to the mileage test. Many rival tires have been compared with our own. We have proved in these ways that better tires are not made than Goodyear No-Rim-Cut tires.

Get Quantity Price

There are, of course, low prices due to lowered quality. But most men know in these days that skimped tires are not cheap.

Get the utmost in a tire, but get that utmost at the price which quantity makes possible. Get the saving which you help create. You will get that always in the Goodyear—the largest-selling tire.

GOODYEAR
AKRON, OHIO

No-Rim-Cut Tires

With All-Weather Treads or Smooth

We don't give exclusive agencies. So any dealer, if you ask him, can supply you Goodyear tires. And the users of three million Goodyears have found that it pays to get them.

When Beauty Was Sacred

Seven vestal virgins tended the ever-burning sacred flame of Vesta in ancient Rome.

Absolute cleanliness was one of their religious obligations. Their house, which was maintained by the state, contained baths of surpassing beauty and luxury.

A most important feature of the toilet, as well as of every great Roman household, was the use of fine oils—apparently palm and olive.

The utter luxury of the Roman bath is today enjoyed by the more than two million women who use Palmolive Soap. In this delightful form, palm and olive oils are most perfectly blended.

Those who use Palmolive daily find there is nothing else quite like it for cleansing, soothing and nourishing even the tenderest skin. It leaves the skin smooth, firm and white and protected against irritation.

Palm and Olive Oils alone give Palmolive its delicate color. Naught else is needed. The natural delightful fragrance is a veritable breath from the Orient. And the price is only 15c a cake.

Palmolive

In hard water or soft, hot water or cold, Palmolive lathers freely and quickly. It imparts a smooth, clear complexion, and adds that touch of charm unknown to any other soap. It is very hard—does not waste.

Palmolive Shampoo
—the Olive Oil Shampoo—makes the hair lustrous and healthy, and is excellent for the scalp. It rinses out easily and leaves the hair soft and tractable. Price 50 cents.

Palmolive Cream cleanses the pores of the skin and adds a delightful touch after the use of Palmolive Soap. Price 50 cents.

Threefold Sample Offer—Liberal cake of Palmolive, bottle of Shampoo and tube of Cream, packed in neat sample package, all mailed on receipt of five two-cent stamps.

Mexico's Army and Ours

By Jack London

Photographs by JAMES H. HARE, Collier's Staff Photographer

MANY officers and men have I shaken hands with in the brief days since this wave of war rolled south and broke on the shore of Mexico, and no officer nor man have I found who was immune to a certain infection. This infection, however, might be described in surgical jargon as "beneficent." On the face of it every mother's son of them has told me something that cannot possibly be true. Only one out of all of them could have told the truth, and it is beyond my powers of discernment to pick out this man. But I have yet to meet an officer of soldiers or marines who has not only solemnly assured me but with glistening eyes of enthusiasm has averred that his regiment or battalion, officers and men, for discipline and efficiency, is the finest in the entire army of the United States. Furthermore, each one disclaims any personal prejudice in the matter, and usually concludes with the statement that it is generally conceded in army circles that his regiment or battalion is the finest. I wonder if such esprit de corps exists in the Mexican army. What our army and navy is was splendidly demonstrated when our bluejackets marched aboard their ships before our drawn-up soldiers while Admiral Fletcher transferred the command of Vera Cruz to General Funston. Boys they were, all boys, the flower of the young men of our land, and they marched with the clacking rhythm of "boots, boots" on the pavement along the broad lane formed by the regulars on one side presenting arms and on the other side cheering American civilians. It was a joy to see the faces that tried not to smile with pleasure over the applause for work well done, and to catch the involuntary sideward glances of boyish eyes not yet quite disciplined to the level impassive look of war.

The soldiers' legs move more mechanically than the sailors', more like clockwork legs. . . It is prettier to watch the sailors marching with all the swaying elasticity of their bodies, and yet one receives the impression that, when it comes to the long killing hiking, the soldiers would easily outwalk their comrades of the sea

These thousands of sailors marched straight down the dock end and disappeared. The effect was uncanny. What was becoming of them? The smokestacks of a couple of tugs showed at the dock end, and that was all. And yet the river of men flowed on and on, sailors and marines, officers, bands, hospital squads, and moving banners, sun-tanned men of the *Arkansas*, the *Florida*, the *Utah*, the *San Francisco*, the *New Hampshire*, the *South Carolina*, the *Vermont*, the *Chester*, and the *New Jersey*, all without hitch or halt, and disappeared. It reminded one of the tank of the New York Hippodrome, when the long lines of stage soldiers march down into the water, knee-high, hip-high, shoulder-high, then heads under and are gone.

But out at the dock end, besides the tugs, was a flotilla of launches and cutters that received those thousands as fast as they arrived and carried them at a single trip to the battleships lying in the inner and outer harbors.

Two Types of "Gringo" Fighting Men

OUR soldiers and sailors are markedly different in type. It must be curious how this happens to be so. Do land life and sea life make the difference? Or does one common type of man elect the sea and another common type elect the land? The sailors are shorter, broader shouldered, thicker set. The soldiers are taller, leaner, longer legged. Their faces are leaner, their lips thinner. They seem to the eye tougher, stringier, sterner. The sailors' faces seem broader across the cheek bones. Their lips seem fuller, their bodies more rounded.

Most notable is the difference when they are grouped into marching masses. The sailors have a swinging, springing, elastic stride. The soldiers' legs move more mechanically, more like clockwork legs, with a very tiny minimum of waste motion. It is prettier to watch the sailors marching with all the swaying elasticity of their bodies, and yet one receives the impression that, when it comes to the long killing hiking, the soldiers would easily outwalk their comrades of the sea. A great throng of Mexicans, numbers of them without doubt having sniped our sailors during the first days, looked on this display of what manner of men we send to war. The haste and advertisement with which they doffed their hats to the Stars and Stripes were absurd and laughable.

One cannot but imagine what the situation would be like were it reversed—were Vera Cruz populated by Americans and in the possession of a Mexican army. First of all, our jefe politico, or mayor, would have been taken out and shot against a wall. Against walls all over the city our soldiers and civilians would have been lined up and shot. Our jails would have been emptied of criminals, who would be made soldiers and looters. No American's life would be safe, especially if he were known to possess any money. Law, save for harshest military law, such as has been meted out by conquerors since the human world began, would have ceased. So would all business have ceased. He who possessed food would hide it, and there would be hungry women and children.

Quite the contrary has been our occupation of Vera Cruz. To the amazement of the Mexicans, there was no general slaughter against blank walls. Instead of turning the prisoners loose, their numbers were added to. Every riotous and disorderly citizen, every sneak thief and petty offender, was marched to the city prison the moment he displayed activity. The American conquerors bid for the old order that had obtained in the city, and began the bidding by putting the petty offenders to sweeping the streets.

No property was confiscated. Anything commandeered for the use of the army was paid for, and well paid for. Men who owned horses, mules, carts, and automobiles competed with one another to have their property commandeered. The graft which all business men suffered at the hands of their own officials immediately ceased. Never in their lives had their property been so safe and so profitable. Incidentally, the diseases that stalk at the heels of war did not stalk. On the contrary, Vera Cruz was cleaned and disinfected as it had never been in all its history.

The Various Benefits of Being Conquered

IN SHORT, American occupation gave Vera Cruz a bull market in health, order, and business. Mexican paper money appreciated. Prices rose. Profits soared.

Verily, the Vera Cruzans will long remember this being conquered by the Americans, and yearn for the blissful day when the Americans will conquer them again. They would not mind thus being conquered to the end of time.

An exciting sight was the cleaning up of the Naval School, which had been so disorganized the first day by the five minutes of shell fire from the *Chester*. Immediately the city had been turned over to the army by the navy, the first battalion of the Fourth Infantry and Fourth Field Artillery descended upon the Naval School. In a trice every window was vomiting forth the débris that clogged the interior. And then was fought the second battle of the Naval School. Thousands of poor Mexicans—men, women, and children—surrounded the building and battled over the old shoes, shattered furniture, and discarded clothes. It was the women who fought fiercest and most vociferously, and, to the accompaniment of much hair pulling, many a pair of linen trousers had its legs ir-

The whole appearance of the Americans bespeaks efficiency

revocably separated. They struggled and squabbled and ran hither and thither like ants about a honey-pot. For once war was kind to them, and, instead of being looted, they were themselves tasting the joys of looting. And alas! I saw the ruined pretties rain down amid the mortar dust from my lady's boudoir and the two red, high-heeled Spanish slippers borne off in opposite directions by gleeful Indian women.

Fighting Qualities of the Peon

As I write this, beneath my window, with a great clattering of hoofs on the asphalt, is passing a long column of mountain batteries, all carried on the backs of our big Government mules. And as I look down at our sun-bronzed troopers in their olive drab, my mind reverts to the review the other day of our soldiers and sailors. Surely, if the peon soldiers of Mexico could all have been brought down to witness what manner of soldiers and equipment was ours, there would have been such a rush for the brush that ten years would not have seen the last of them dug out of their hiding places.

And yet this is not fair. The peon soldier is not a coward. Stupid he well is, just as he is illy trained and sillily officered; but he is too much of a fatalist as well as a savage to be grossly afraid of death. The peon bends to the mailed fist of power, but never breaks. Like the fellah of Egypt, he patiently endures through the centuries and watches his rulers come and go.

Changes of government mean to the peon merely changes of the everlasting master. His harsh treatment and poorly rewarded toil are ever the same, unchanging as the sun and seasons. He has little to lose and less to gain. He is born to an unlovely place in life. It is the will of God, the law of existence.

With rare exceptions he does not dream that there may be a social order wherein can be no masters of the sort he knows. He has always been a slave. He was a slave to the Toltecs and Aztecs, to the Spaniards, and to the Mexicans descended from the Aztecs and the Spaniards. It must not be concluded that there is no hope for him in the future. He is what he is to-day, and what he has been for so long, because he has been made so by a cruel and ruthless selection.

The Elimination of the Spirited

If A breeder should stock his farm with the swiftest race horses obtainable, and employ a method of selection whereby only the slowest and clumsiest horses were bred, it would not be many generations before he would have a breed of very slow and very clumsy horses. Life is plastic and varies in all directions. Occasionally this breeder would find a beautiful, swift colt born on his farm. Since kind begets kind, he would eliminate such a colt and perpetuate only the slow and clumsy.

Now this is just the sort of selection that has been applied to the peon for many centuries. Whenever a peon of dream and passion and vision and spirit was born he was eliminated. His masters wanted lowly, docile, stupid slaves, and resented such a variation. Soon or late the spirit of such a peon manifested itself and the peon was shot or flogged to death. He did not beget. His kind perished with him whenever he appeared.

But life is plastic and can be molded by selection into diverse forms. The horse breeder can reverse his method of selection, and from slow and clumsy sires and dams breed up a strain of horses beautiful and swift. And so with the peon. For the present generation of him there is little hope. But for the future generations a social selection that will put a premium of living on dream and passion and vision and spirit will develop an entirely different type of peon.

A Soldier Against His Will

But we must not make the mistake of straying after far goals. The time is now. We live now. Our problem, the world problem, the peon problem, is now. The peon we must consider is the peon as he is now—the selected burden bearer of the centuries. He has never heard of economic principles, nor a square deal. Nor has he thrilled, save vaguely, to the call of freedom—in which event freedom has meant license, and, as robber and bandit, he has treated the weak and defenseless in precisely the same way he has been accustomed to being treated.

I was through a Mexican barracks. It was like a jail. All the windows were barred. They had to be barred so that the conscript peon soldiers might not escape. Most of them do not like to be soldiers. They are compelled to be. All over Mexico they gather the peons into the jails and force them to become soldiers. Sometimes they are arrested for petty infractions of the law. A peon seeks to gladden his sad existence by drinking a few cents' worth of half-spoiled pulque. The maggots of intoxication begin to crawl in his brain, and he is happy in that for a space he has forgotten himself in God knows what dim drunken imaginings. Then the long arm of his ruler reaches out through the medium of many minions, and the peon, sober with an aching head, finds himself in jail waiting the next draft to the army. Often enough he does not have to commit any petty infraction. He is railroaded to the front just the same.

He does not know whom he fights for, for what, or why. He accepts it as the system of life. It is a very sad world, but it is the only world he knows. This is why he is not altogether a coward in battle. Also it is why, in the midst of battle or afterward, he so frequently changes sides. He is not fighting for any principle, for any reward. It is a sad world, in which witless, humble men are just forced to fight, to kill, and to be killed. The merits of either banner are equal, or, rather, so far as he is concerned, there are no merits to either banner.

He prays to God in some dim, dumb way, and vaguely imagines when he has been expedited from this sad world by a machete slash or bayonet thrust or high-velocity steel-jacketed bullet that all will be made square in that other world where God rules and where taskmasters are not.

Yet, deep down in the true ribs of him, there is a vein of raw savagery in the peon. Of old he delighted in human sacrifice. To-day he delights in the not always skilled butchery of bulls in the game introduced by his late Spanish masters. He likes cock-fighting with curved steel spurs that slash to the heart of life and cast a crimson splash upon the dull gray of living.

His Fatalism

And still the peon is not exposited. There is another side to him. He is a born gambler, as well as fatalist, and he is not averse to taking a chance: though his own life be the stake, he plays against another's life. How else can be explained his nervy conduct, deserted by his officers, in defending Vera Cruz against our landing forces?

Now I am not altogether a coward. I have even been guilty on occasion of taking a chance. And yet I am frank to say that I would not dream of taking a chance on the flat roofs of Vera Cruz against thousands of American soldiers and a fleet of battleships with an effective range of five thousand yards.

But this was the very chance many a peon soldier took. He sniped our men from the roofs in the fond hope that he could kill a man and escape being killed himself. Also, he was stupid in that he did not realize how little chance he had. Nevertheless, and on top of it all, he was not afraid.

They say that he and his fellows even dared to crawl unwounded, amid the wounded, into the hospital cots under the Red Cross, and to draw blankets over themselves and their Mausers, and to crawl out occasionally to the roofs for another shot at our sailors. When it became too hot for them they hid among the wounded again. Now this is a deed too risky for my nerve or for the nerve of any intelligent man. But I insist that these Mexican soldiers were stupid enough voluntarily to take the chance. From this another conclusion may be drawn, namely, that the sorry soldier of Mexico is not altogther amiable and is prone to be nasty and dangerous to the American boys who have crossed the sea to take "peaceable" possession of a customhouse.

I saw the leg of a peon soldier amputated. It was a perfectly good leg, all except for a few inches of bone near the thigh which had been shattered to countless fragments by a wobbling, high-velocity American bullet. And as I gazed at that leg, limp yet with life, being carried out of the operating room, and realized that this was what men did to men in the twentieth century after Christ, I found myself in accord of sentiment with the peon: it is a sad world, a sad world!

An Example of Swift Destruction

It is a sad world wherein the millions of the stupid lowly are compelled to toil and moil at the making of all manner of commodities that can be and are on occasion destroyed in an instant by the hot breath of war. I have just come back from the vast Cuartel, or Barracks, of Vera Cruz. Such a destruction of the labor of men! Bales upon bales and mountains of bales of clothing, of uniforms of wool, of linen, of cotton, disrupted, torn to pieces, scattered about, infected by possible diseases that compel a final cleansing by fire. Huge squad rooms, knee-deep in the litter of things the toil of men has made—hats, caps, shirts, modern leather shoes and rude sandals of the sort worn on the north Mediterranean half a thousand years before the days of Julius Cæsar; saddles and saddle bags, spurs, bridles, and bits; entrenching tools, scattered contents of soldiers' ditty boxes, canteens and mess kits of tin, serapes from the north, mats from the hot countries, meals partly eaten, half-cooked messes of food in the kitchen pots, smashed Mausers, cymbals and tubes, drums and cornets of a brass band that had departed abruptly and bandless.

In the matter of a few minutes the feet of war had trod under foot and passed on. Those who fled had fled hastily, leaving their last-issued rations behind. Those who pursued had paused but long enough to fire a myriad shots and race on. The empty bandoliers marked the trail of the American sailors and marines. In the stables were the officers' automobiles and carromatas with seats for grooms behind. But there were no horses, and the automobiles had been smashed. Thousands of hours' toil of men's hands had been annihilated.

The streets of Vera Cruz teem with beggars. Our soldiers are pestered by the starving, ragged poor. A thousand meals cluttered the Cuartel, already mildewed and being eaten by cockroaches and stray cats; woven cloth and manufactured footgear sufficient for ten thousand poor were destined for the flames. I agree with the peon: It is a sad world. It is also a funny world.

The peon soldier is not a coward. Stupid he well is, just as he is illy trained and sillily officered; but he is too much of a fatalist as well as a savage to be grossly afraid of death

A Square Deal?

The query inevitably rises: How is the peon to get a square deal? And who will give him a square deal? By square deal is not meant the Utopian ideal dreamed of a far future, but the measure of fair treatment that is possible here and now in civilized nations. The men of the civilized nations are only frail, fallible, human men, with all the weaknesses common to human men just in the process of emerging from barbarism. Nevertheless, with such men a squarer

• • •

Digitized by Google

deal obtains than does obtain in savagery. The much-mixed descendants of the Spaniards and Aztecs can scarcely be called civilized. They have had over four centuries of rule in Mexico, and they have done anything but build a civilization. What measure of civilization they do possess is exotic. It has been introduced by north Europeans and Americans, and by north Europeans and Americans has it been maintained. The peon of to-day, under Mexican rule, is no better off than he was under Aztec rule. It is to be doubted that he is as well off. On the face of it, his much-mixed breed of rulers cannot give him the square deal that is possible to be given by more intelligent and humane rulers—that is given to-day by such rulers in other countries of the world.

Motes and Beams

THIS is the problem to-day for the big brother to the nations of the New World. Oh, make no mistake! The big brother's hands are not clean, nor is his history immaculate. But his hands are as clean and his history is as immaculate as are the hands and histories of the other nations in the thick of transition from barbarism and savagery. He even has societies for the prevention of cruelty to animals, the members of which very frequently interfere between a horse and its owner, and hale the owner to court for punishment.

The mixed-breed rulers of Mexico seem incapable of treating the peon with the measure of fairness that is possible in the world to-day and that is practiced in the world to-day. The Mexican peon residing in the United States at the present time—and there are many thousands of him—is far better treated than are his brothers south of the border.

Never mind what his legal status may be or is alleged to be. The fact is, the peon of Mexico, so far as liberty and a share in the happiness produced by his toil is concerned, is as much a slave as he ever was. He is so much property to his rulers, who work him, not with treatment equal to that accorded a horse, but with harsher and far less considerate treatment.

Of course the owner of a horse, when arrested by an agent of a humane society, indignantly protests that the horse is his property. But a wider social vision is growing in the foremost nations that property rights are a social responsibility, and that society can and must interfere between the owner and his mismanaged property. But somehow the old order is hard to change. There is a narcotic magic in phrases and precedents. It is an established right for society to step in between a man and his horse, but it is still abhorrent for a nation to step in between a handful of rulers and their millions of mismanaged and ill-treated subjects. Yet such interference is logically the duty of the United States as the big brother of the countries of the New World. Nevertheless, the United States did so step in when it went to war with Spain over the ill treatment of the Cubans. But it required the blowing up of the *Maine* to precipitate its action.

Then was fought the second battle of the Naval School. Thousands of poor Mexicans—men, women, and children—surrounded the building and battled over the old shoes, shattered furniture, and discarded clothes. . . They struggled and squabbled and ran hither and thither like ants about a honey-pot. For once war was kind to them, and, instead of being looted, they were themselves tasting the joys of looting

Big Brother's Job

AND here in Mexico the United States has stepped in, still dominated by narcotic precedent, on the immediate pretext of a failure in formal courtesy about a flag. But why not have done with fooling? Why not toss the old drugs overboard and consider the matter clear-eyed? The exotic civilization introduced by America and Europe is being destroyed by the madness of a handful of rulers who do not know how to rule, who have never successfully ruled, and whose orgies at ruling have been and are similar to those indulged in by drunken miners sowing the floors of barrooms with their fortunate gold dust.

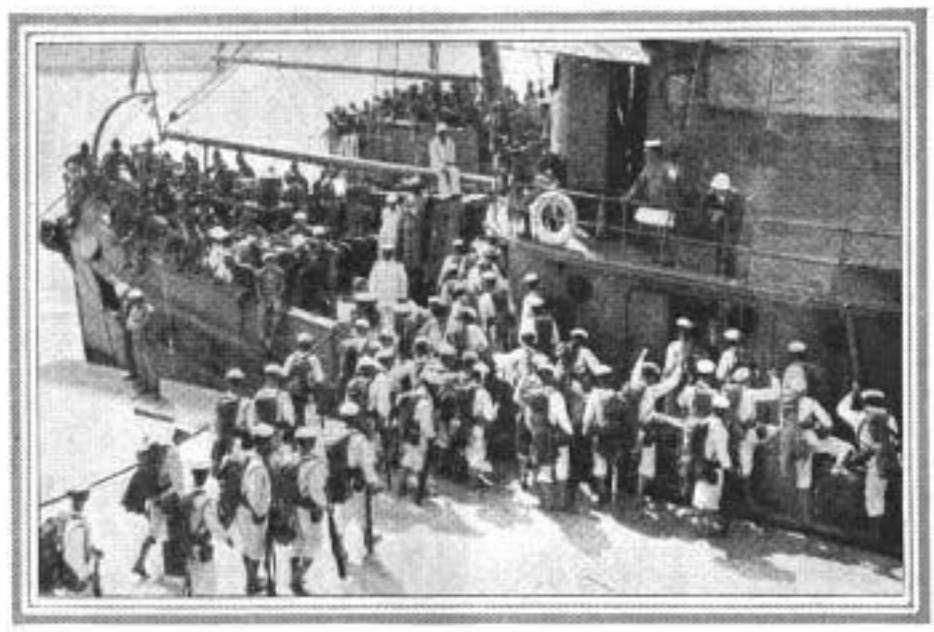
The big brother can police, organize, and manage Mexico. The so-called leaders of Mexico cannot. And the lives and happiness of a few million peons, as well as of many millions yet to be born, are at stake.

The policeman stops a man from beating his wife. The humane officer stops a man from beating his horse. May not a powerful and self-alleged enlightened nation stop a handful of inefficient and incapable rulers from making a shambles and a desert of a fair land wherein are all the natural resources for a high and happy civilization?

The Unfinished Drama

By Arthur Ruhl

Photographs by JAMES H. HARE, Collier's Staff Photographer



AS I NEARED the harbor of Vera Cruz and the western horizon gradually dissolved into sand hills, white walls, and a line of ships, I thought of the last time I had come through the blue Gulf to the selfsame port. It was just such another morning as this—indigo water, the soft humid smell of the tropics, the peaks of the Mexican mountains rising above the haze. And the ill-fated Francisco Madero, in the full flight of his tragic career, was landing from the south.

He had come up from Yucatan—it was in the last days before the election—bringing with him the young journalist, Pino Suarez, whom he insisted, in spite of opposition in the north, on making his vice president. Their little Mexican gunboat tied up to her dock as our Ward Liner came to hers, and a shouting crowd—the roustabouts and cargadores of a seaport town, that brown, downtrodden mass which Madero dreamed of lifting—was there to greet him. There were "Vivas!" and band music, hundreds of little homemade skyrockets whizzed upward and burst in the bright tropical sunshine, and that night Madero talked hard work, thrift, and temperance to the wild cheers of men who climbed on each other's shoulders and flung up quivering hands at the prophet they fancied was going to bring them millennium.

We Supply What Madero Lacked

GONE was that dream—tarnished, broken down bit by bit, crushed, at last, by the brute force of a world which demands that dreamers shall have the strength—and good luck—to turn their visions into concrete fact.

And here was coming all that that unhappy man lacked—strength and clear-eyed efficiency, officers and men and 12-inch guns, all the beautiful, highly organized strength of these great gray fighting ships. What was ahead of us nobody knew—we were rushing to join the fleet. For days and nights the air had crackled with radios—then the sudden shift from Tampico to Vera Cruz; then, the night before, the news that Admiral Fletcher had landed and the quiet order to "expedite."

The men who had taken Vera Cruz, dusty and sunburned now, came marching back to their ships, . . . with as little confusion and delay as if they had marched straight off the wharves on some sort of invisible bridge

Decks and awnings black with cinders, stokers throwing in their last ounce of strength, the whole great steel fabric quivering with speed, the big dreadnought plowed through the warm Gulf water and raised land at breakfast time. Across the still sea now came the occasional thud of shell fire and the rattle of machine guns. As we slowed down to our anchorage a large open launch put-putted close under our quarter. The young bluejacket at her tiller looked up as if what he was doing were the most usual thing in the world—bringing the fleet its first dead. On a few boards amidships, four bodies, with faces covered, lay stiffly, side by side, in the bright sunshine. Our young sailormen, fresh from Middle Western farms many of them, in service kits and talking as if war were a picnic, went quiet as they looked over the rail. It was evidently not a picnic they had come to, at any rate.

When Resistance Meant Death

FROM the fire-control turret forward we had picked up through the glass a long yellowish façade near the water front, and a swarm of khaki-covered men moving backward and forward in front of it. The long building was the Naval School, just smashed by the shells from the *Prairie*, *Chester*, and *San Francisco*, and the little specks moving in front of it the sailors and marines who had stood up against the stiffest fire of the two days' fighting. Marching across the open space between the sea wall and the school, it was not until they were under its windows that the whole front blazed fire. It was not a pleasant ambush to walk into, and the spirit with which the landing party met its surprise was as admirable as the neatness with which the ships' gunners planted shells through the roof and along the upper story, to explode inside and wreck the building without hitting their own men.

No less remarkable was the behavior of those who chose to shut themselves up in such a place and open fire. It was like shutting one's self in the Aquarium on the sea wall in New York, and firing on a landing party from a fleet of battleships anchored between the Battery and the Statue of Liberty. They faced not only an overwhelming force but looked straight into

Digitized by Google

the guns of anchored battleships, a salvo from any one of which could have blown their building to bits.

Everywhere in the ruined dormitories were picture post cards and letters—bits of handwriting, all the more eloquent now that one did not know the fate of those to whom they were written. On the floor of one room, apparently that of an officer or instructor, were scores of letters addressed to the same woman—while she was still "Señorita," later when she had become his wife. "Little adored one," they began, and told, for instance, of a trip to San Francisco, "where everybody was curious to see a Mexican ship of war"; of the church at a little west coast port, "tiny but very comfortable and unusually clean, as if it were intended only for official affairs"; of the "tristeza" he had felt the day before, which "your letter tranquilized a little," yet "in the late afternoon the same profound sadness returned again, and very early, without lighting the lamp, I shut myself in my stateroom."

Another, from Guaymas, addressed to Mexico City, asked if she really wanted to keep quarreling. It was he, to be sure, who quarreled with her, yet was not she, too, a little to blame? He did not want to do something he would be sorry for, but to "care for her much, much more even than now." "Write me—it isn't too much to ask," and then an "Adios!" and the assurance that he loved her "con toda el corazon."

Glimpses like these, of how those who lived here had thought and felt, stared up at one from heaps of rubbish and plaster. Schoolboys, graduates, or convicts just out of jail, whoever they were, faced a fleet, and deserve to be remembered by their countrymen with the cadets who defended Chapultepec in '47.

A City's Fear

IT WAS afternoon before we could get ashore and the heavy fighting was over. The average Vera Cruzaño no doubt expected that the town would be sacked, and was surprised when the outrageous stories of violence which the papers in the capital were already printing never came true. It was partly this misconception which made a peaceful occupation of a customhouse—a simple enough proceeding, doubtless, as viewed from Washington—so ironical a command. People asked breathlessly if the fleet were going to bombard the city that afternoon. One old woman begged me to permit her to go into the artillery barracks for her husband's *petate*—the rush mat which is the lower class Mexican's usual bed. We tramped upstairs and through a long room littered with Federal uniforms, guns and equipment, and out of scores like it she picked a ragged old mat and hurried away rejoicing.

People were trying to get into their houses, do a thousand little necessary things, and puzzled bluejackets under orders, and with nerves strung up to the breaking point by the knowledge that they might at any time be shot from ambush, were stopping them. One very respectable-looking old gentleman with his grown son was trying to get from the street corner to his house a few doors away. The sentry would not let them by, and, searching the old man, found two bottles in his inside pocket. They were medicine, he said, for his daughter, frightened to death by the firing, but the conscientious young bluejacket, thinking, doubtless, they were poison, hurled them to the pavement.

One broke. The son, stooping excitedly to pick up the other to show that it contained only ether, contrived to throw the contents in his eyes. Howling with pain, he dashed round in a circle, the old gentleman raised despairing arms, women peeping through barred windows began to wring their hands. I finally got both father and son to their house, where the son, pointing out each in turn, explained that they were all really and truly the same family—this his wife, this his mother, this his "padre politico," and so on.

I took off my hat, but they would not hear of such condescension and insisted I keep it on. I explained that it was hot and I preferred it off—no, I must "cover myself"—and the old gentleman proceeded to do it for me. It was all very quaint and amusing—yet not so amusing either. A few moments later the battalion from our ship marched up Independencia Street, and almost at the very corner of the old gentleman and his ether bottle, Boswell, chief gunner's mate, was killed by a shot from a doorway as they marched by.

Liberation of the Prisoners

ONE afternoon, into this already wildly varied scene, a door suddenly opened on the Middle Ages. It was the door to a prison, the old fortress of San Juan de Ulloa, on an island in the harbor. Built in the sixteenth century, with walls six feet thick, interior moats and unlighted dungeons slimy with seepage, it has long been one of the hideous relics of these tropical waters. Madero was going a part of what is most significant in Mexico to-day, was a gang of a hundred or more of prisoners raked in from one of the southern provinces to serve as food for cannon in the Federal army.

We unlocked one set of heavy iron bars, passed through a room or two built in the solid masonry, and entered a vaulted chamber, thirty feet by fifteen perhaps, in which these men were confined. There was neither light nor air except what drifted in from the passage behind us and through a small hole in the vaulted ceiling, perhaps a foot square. The room was like a cave, and so dark that the light from overhead fell in a dusty searchlight beam—no stage manager ever concocted a thing more creepy.

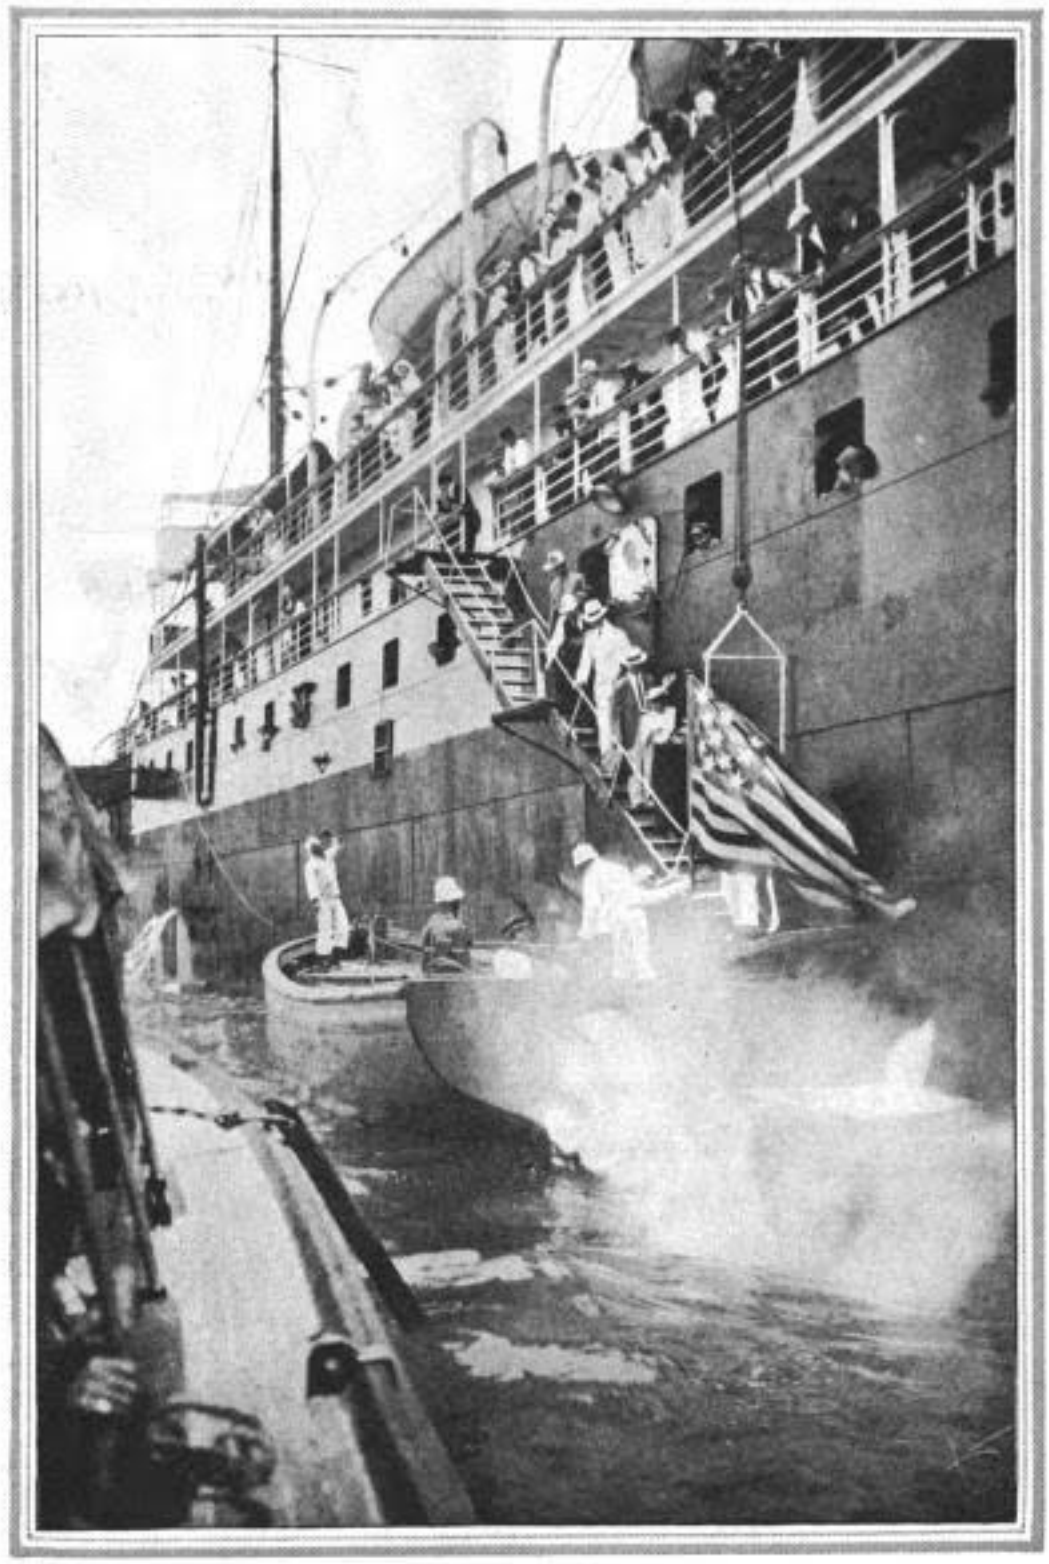
The men, filthy and in rags, scrambled to their feet, and whether or not at some word or sign from the Mexican keeper, arranged themselves in a line, facing us, their peaked straw hats in hand. A more abject row of faces, with less of the light and life of ordinary humanity left in them, it would be hard to imagine—hard, at least, if one had not seen faces very like them in the gangs of enganchos on sugar and tobacco plantations in the Mexican "hot country."

We asked several of the most intelligent looking what they had done to be put in prison.

"*Nada, señor! Nada, patron!*" ("Nothing!") they answered, and explained that they had been dragged from their homes in the south and brought north on a steamer. They were all *campesinos*, ordinary country folk. The young captain told them to have patience, they would be fed, and the admiral would attend to their cases as soon as possible. They listened with their almost expressionless, dull, animal stare, and a faltering murmur of thanks went along the line as we passed out.

Medievalism

THE air in this hole was bad enough, but that in another, still more crowded, where prisoners under criminal sentence were herded, was worse. The warm acrid stench of the place was all but unbearable. Yet here men were living, doubtless in the past have gone on living for years, while bands played in scores of Mexican plazas, bugles blared their *dianas* over the matador's death thrust, and the vivid, charming Mexican life went on under its blazing sunlight and bright plateau moons.

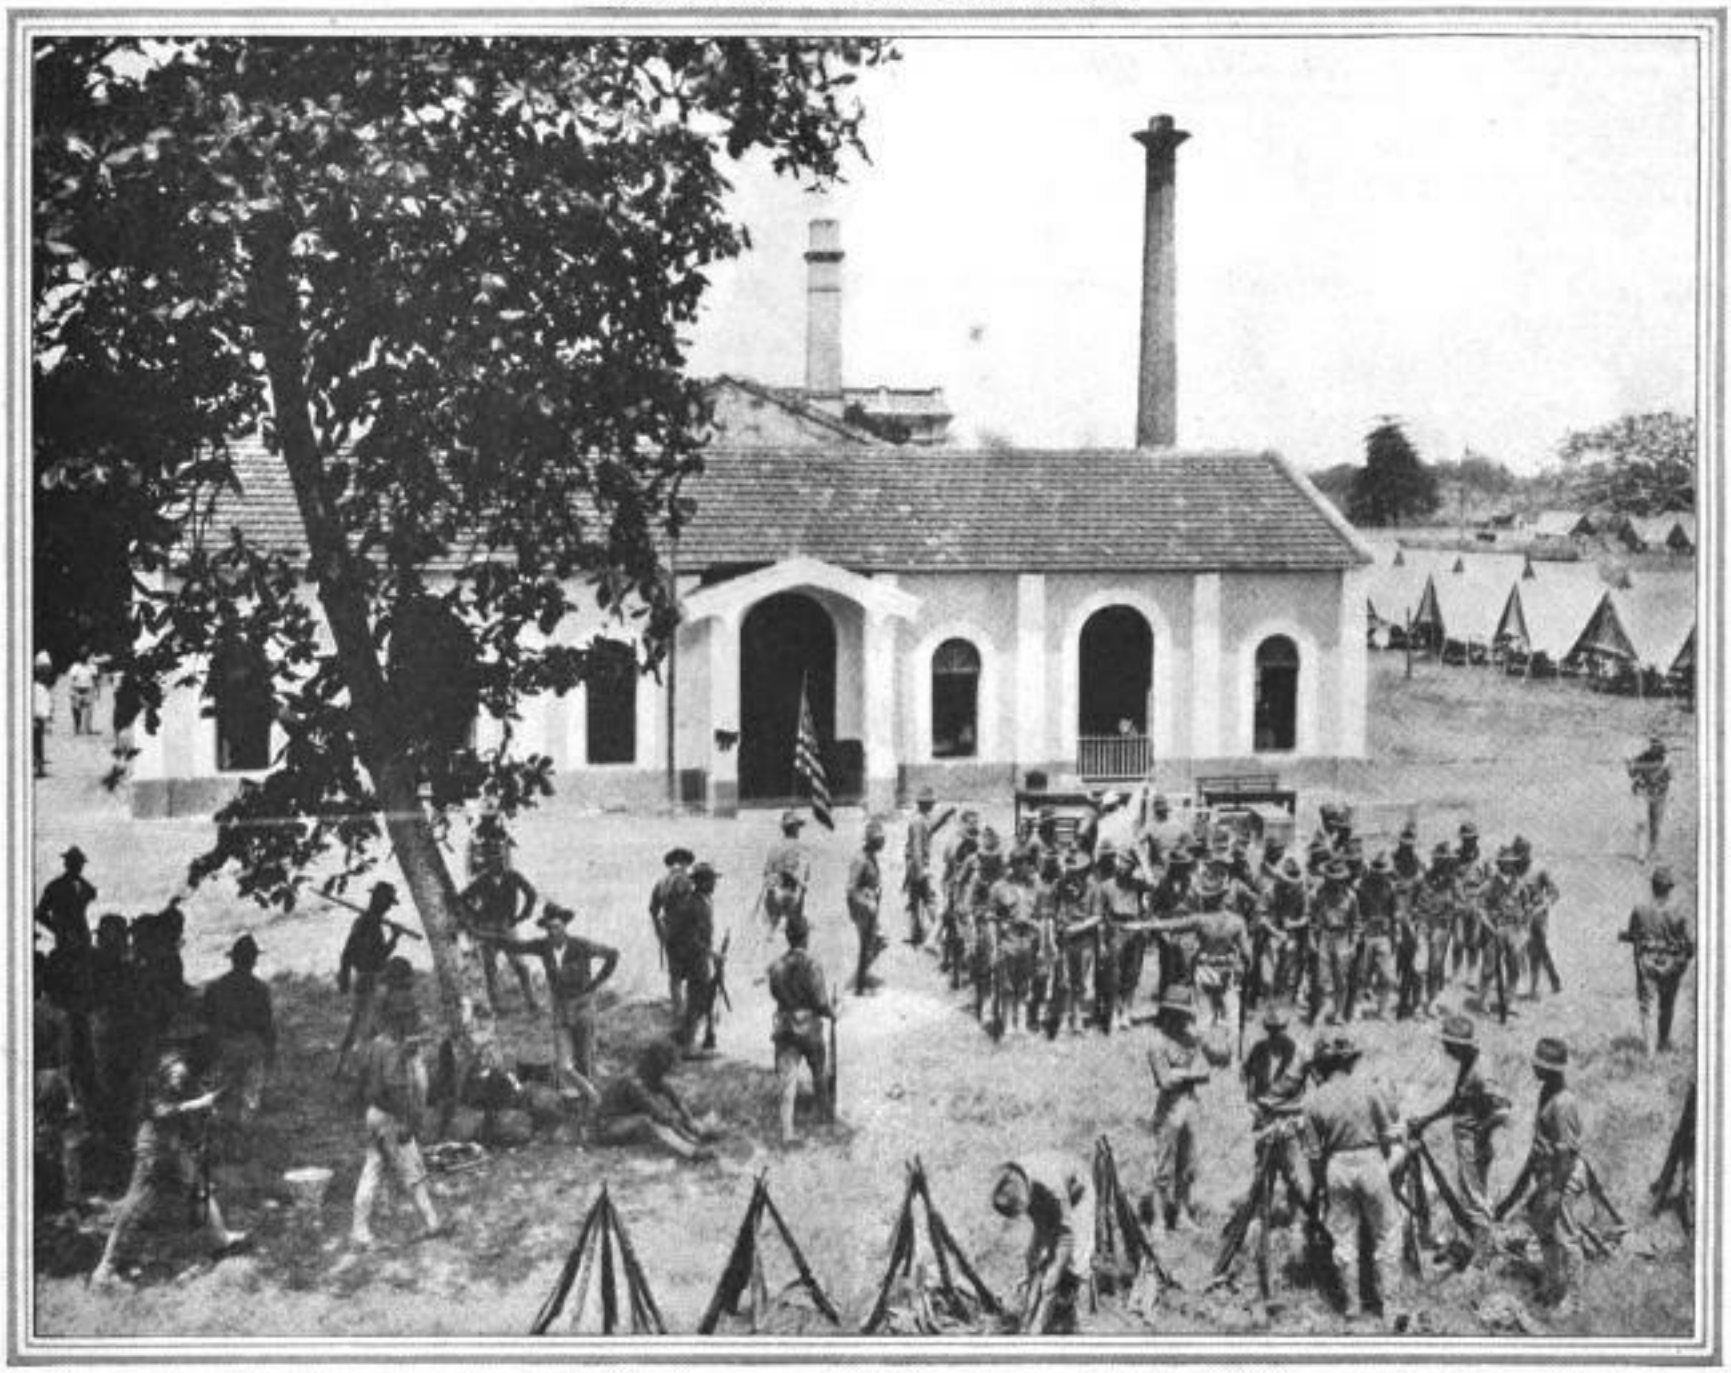


This last chamber, which also had a hole for light in the roof, opened into still another tunnel barred and black as ink—dungeons which must have been kept for punishment of the last resort.

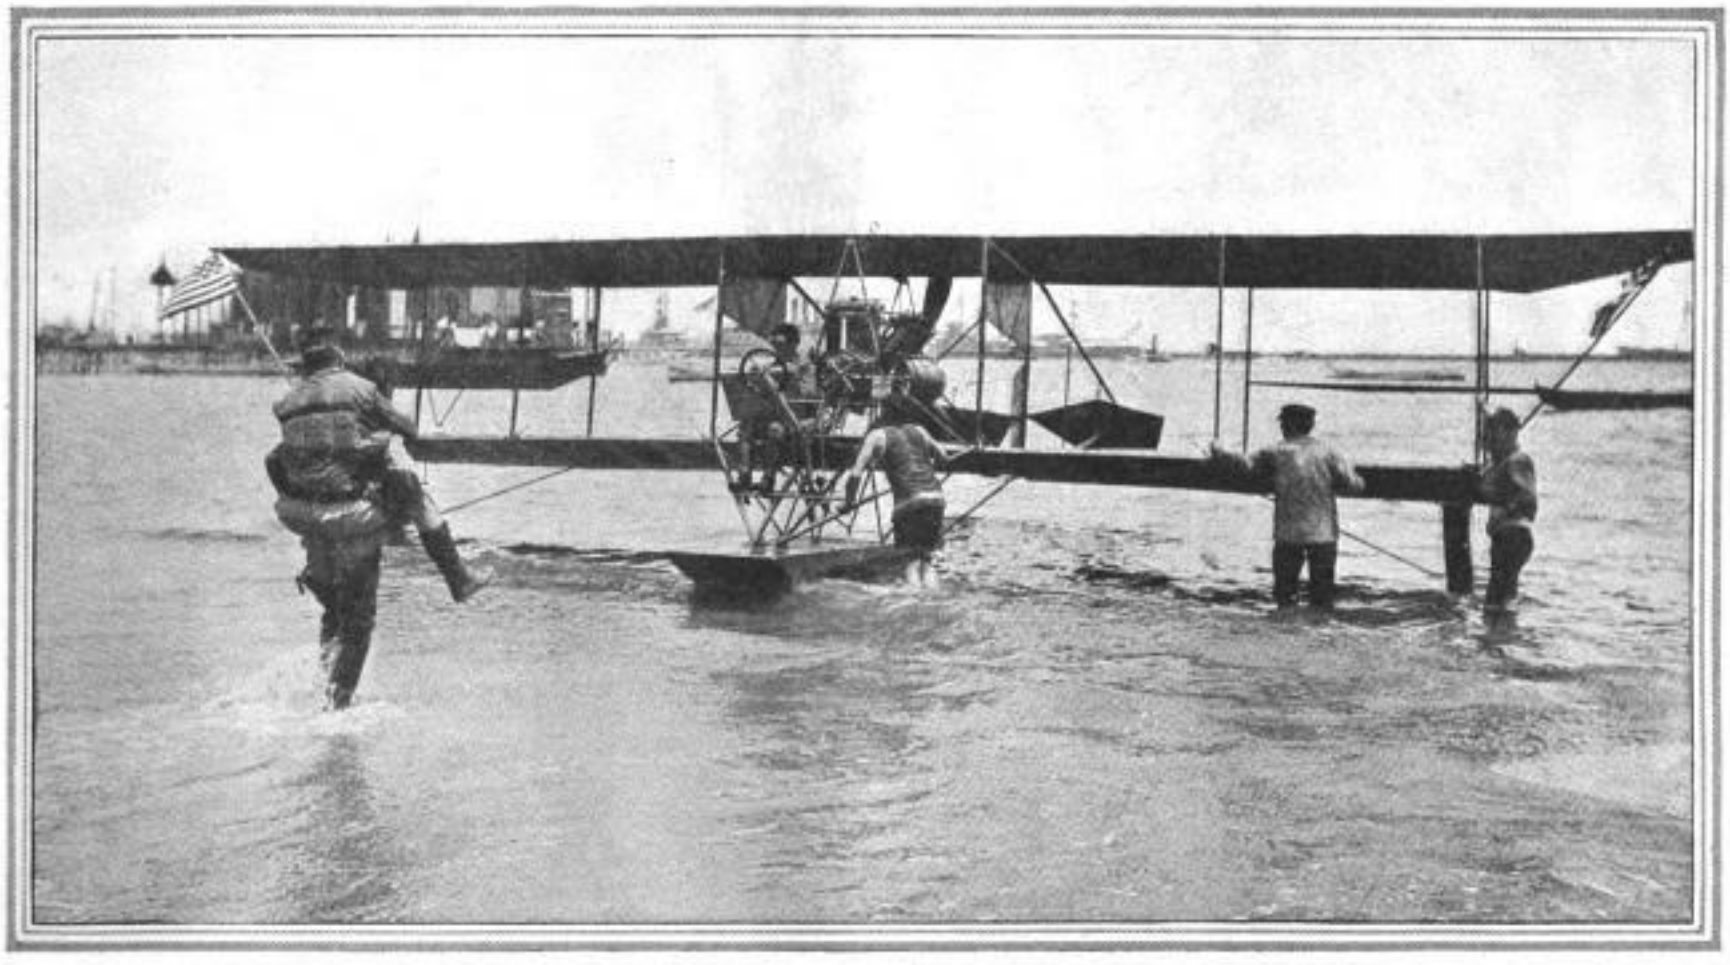
We came out into the daylight and a breath of the outdoors, and while at lunch with the young captain, on navy corned beef, bread, and coffee, a petition came in from the men caught for the army. They could scarcely have written it themselves, but here it was, at any rate, done in a fine pencil hand on long foolscap and addressed to "El Almirante de Escuadra Norte Americana."

They apologized for the pencil, and went on in ornate Spanish—like something that might have been sent to a viceroy three centuries ago—to say they were all natives of San Juan Bautista in the State of Tabasco, whence they had been dragged to the "gloomy dungeons of this historic castle—those dungeons sad as the recondite sorrows of their deserted families, who, on those far-off Tabascan shores, daily wept their absence, ignorant of where they were or what might be their fate."

They were all released next day, yet without money, food, or the ability to get to those "far-off Tabascan shores" without being caught for the army again, they were almost as helpless as before. I saw them that evening, in front of headquarters, hats in hand, asking a young ensign to give them work or orders and say where they might go.



Where they finally drifted I know not, but it was characteristic of the quaint clashing of different centuries that went on daily, that before these medieval serfs were forgotten in the swift procession of new happenings they should be marched up Independencia by a band of yellow-journal photographers, and, patient and respectful as (*Continued on page 22*)



Refugees transferred from the Government transport ship Hancock to the Monterey preparatory to leaving for the United States. Those on the companionway have turned to look back as the last passenger disembarks. "There were business men leaving the work of years, without knowing whether they could ever return to it. . . . And then there were those who . . . came in worn and dusty from a week's slow progress under guard in crowded day coaches. . . . They were typical American prairie farmers —lean, sunbaked, patient, quizzical, with tired-looking wives"

FIELD HEADQUARTERS OF FUNSTON'S MEN *at the pumping station at El Tejar, nine miles out of Vera Cruz. Five hundred Mexicans approached the station the afternoon of May 2 and demanded that our guard of 240 marines surrender. Major John H. Russell, the American officer in command, curtly refused and called to Vera Cruz by wireless for more men. General Funston hastily reenforced him with 960 men. The Mexicans retired, firing a few shots, which were answered by the Americans. Huerta's men had no intention of fighting. They evidently hoped to frighten the Americans away and shut off the city's water supply*

THE FIRST BRANCH OF THE SERVICE TO RESPOND *to Major Russell's signal for help was the aviation corps. Our snapshot was taken as Lieutenant Patrick Bellinger was about to start from Vera Cruz harbor for the pumping station. To keep his shoes dry he is riding pickaback to the machine. Lieutenant Lamont, already seated, is scanning a map of Vera Cruz and surrounding country. Soon after his arrival in Mexico General Funston ordered the aviators to make daily flights as far as San Francisco railroad bridge, 25 miles out, to find out whether the Mexicans were making any attempt to destroy it*

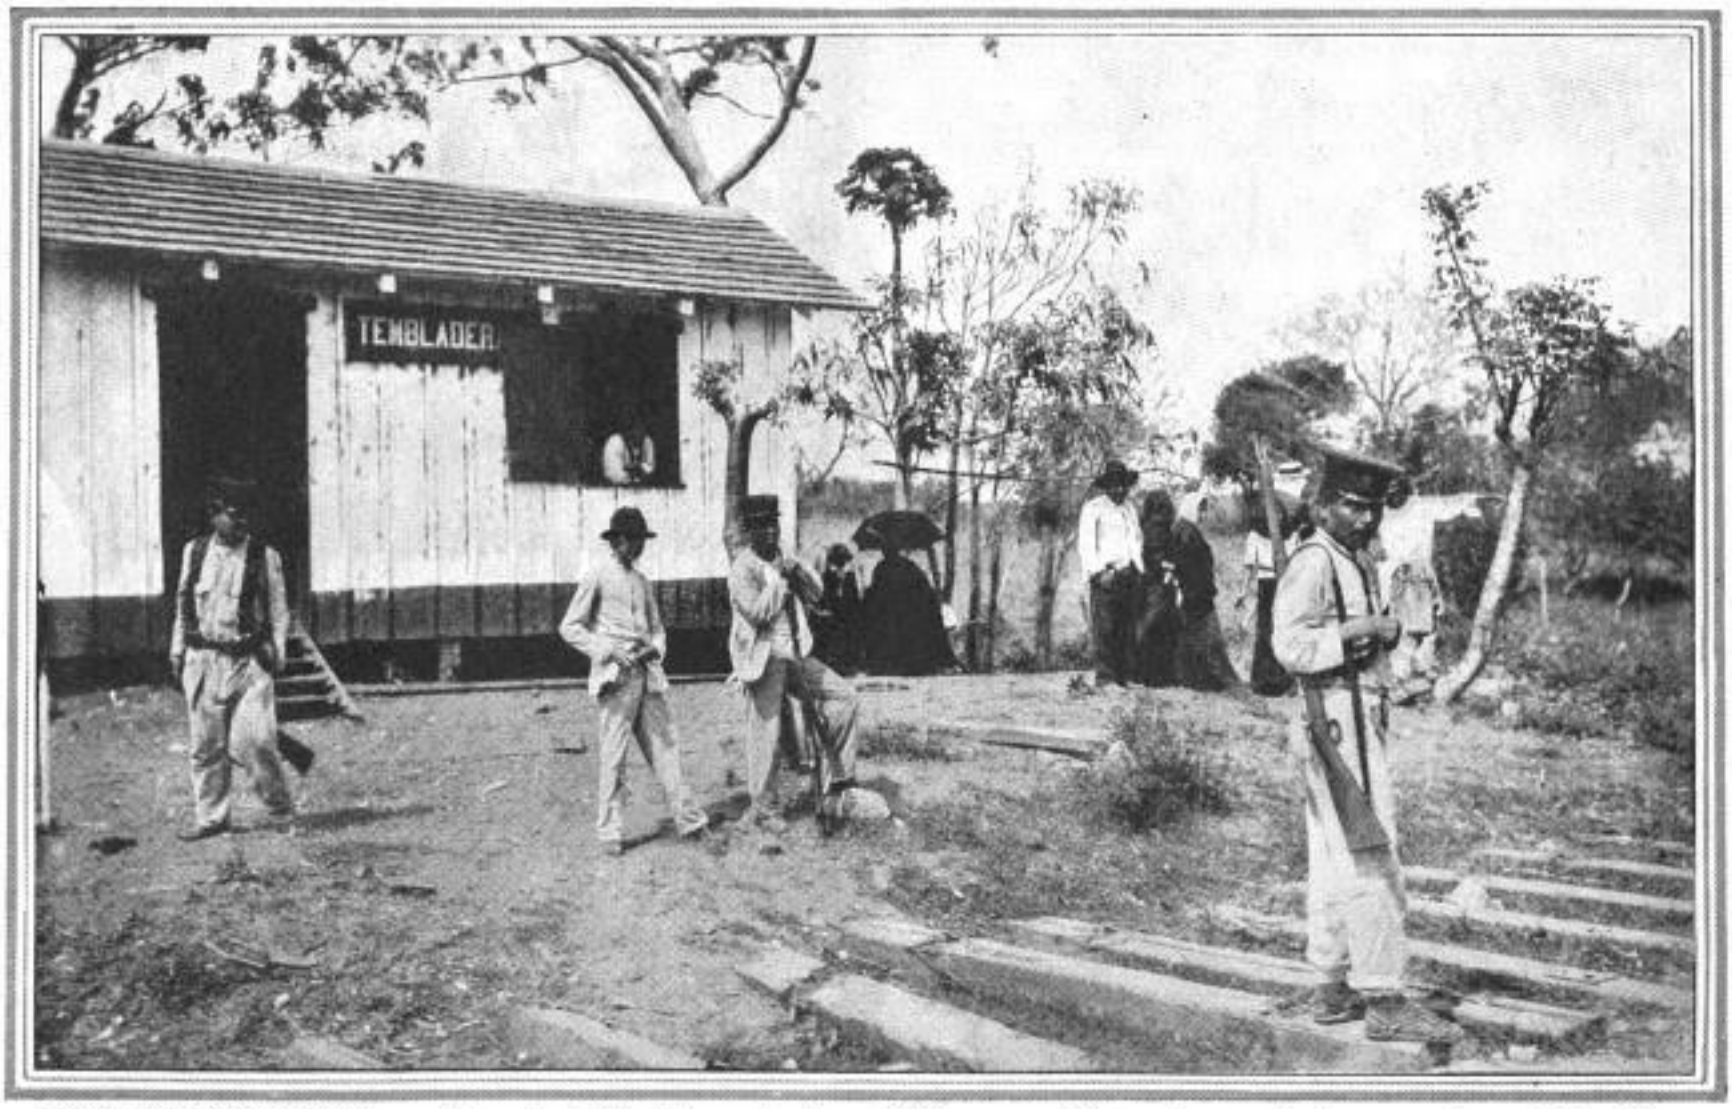
Sniping with a Camera Along the Picket Lines



THE FOURTH U. S. INFANTRY, *under Col. Robert C. Van Vliet, returning to camp after a hurry call for reenforcements at the Vera Cruz pumping station*

Photographs by
JAMES H. HARE,
Collier's Staff Photographer

THE THREE MEN IN THE FOREGROUND *of Mr. Hare's photograph are sabering grass and weeds—clearing the way for their comrades with spades. When some of General Maas's men threatened the marines guarding the Vera Cruz pumping station, one of the first things the Americans did was to prepare for battle. Digging trenches was one of the first tasks, and our men went at it with as much vim as characterized their seizure of the city. The Americans dug trenches at strategic points all along their lines. They planned to use rifles, machine guns, and field pieces to repel attack*

INSIDE THE MEXICAN LINES *at a village outpost of Tembladera, where James H. Hare, our staff photographer, several other correspondents, and five of General Funston's soldiers had an odd adventure. While exploring the country around El Tejar they suddenly found themselves confronted by Mexican soldiers. The Americans pretended to take the incident as a matter of course, treating the Mexicans with all possible indifference. The Huertistas offered no violence. They reluctantly consented to be photographed, and then directed their unexpected and unwelcome visitors back to the route from which they had strayed*

American Ramblings, Observations, and Adventures

By Julian Street

Chapter II—Buffalo

Illustrated by Wallace Morgan

ALIGHTING from the train at Buffalo, I was reminded of my earlier reflection that railway stations should express their cities. In Buffalo the thought is painful. If that city was, in fact, expressed by its present railway stations, people would not get off there voluntarily; they would have to be put off. And yet, from what I have been told, the curious and particularly ugly relic which is the New York Central Station there, to-day, does tell a certain story of the city. Buffalo has long been torn by factional quarrels—among them a protracted fight as to the location of a modern station for the New York Central Lines. The East Side wants it; the West Side wants it. Neither has it. The old station still stands—at least it was standing when I left Buffalo, for I was very careful not to bump it with my suit case.

This difference of opinion between the East Side and the West with regard to the placing of a station is, I am informed, quite typical of Buffalo. Socially, commercially religiously, politically, they disagree. The dividing line between them, geographically, is not, as might be supposed, Division Street. (That, by the way, is a peculiarity of highways called "Division Street" in most cities—they seldom divide anything more important than one row of buildings from another.) The real street of division is called Main.

No Magic in That Name

MAIN STREET! . . . How many American towns and cities have used that name, and what a stupid name it is! It is as characterless as a number, and it lacks the number's one excuse for being. If names like Tenth Street or Eleventh Avenue fail to kindle the imagination they do not fail, at all events, to help the stranger find his way—although it should be added that strangers do, somehow, manage to find their way about in London, Paris, and even Boston, where the modern American system of numbering streets and avenues is not in vogue. But I am not agitating against the numbering of streets. Indeed, I fear I rather believe in it, as I believe in certain other dull but useful things like work and government reports. What I am crying out about is the stupid naming of such streets as carry names. Why do we have so many Main Streets? Do you think we lack imagination? Then look at the names of Western towns and Pullman cars! . . . The thing is an enigma.

Main Street is not only a bad name for a thoroughfare; the quality which it implies is unfortunate. And that quality may be seen in Main Street, Buffalo. On an exaggerated scale that street *is* like the Main Street of a little town, for the business district, the retail shopping district, all the city's activities string along on either side. It is bad for a city to grow in that elongated way just as it is bad for a human being. To either it imparts a kind of gawky awkwardness.

Features Are All It Lacks

THE development of Main Street, Buffalo, has been natural. That is just the trouble; it has been too natural. Originally it was the Iroquois trail; later the route followed by the stages coming from the East. So it has grown up from log-cabin days. It is a fine, broad street; all that it lacks is "features." It runs along its wide, monotonous way until it stops in the squalid surroundings of the river. And if the river did not happen to be there to stop it, it would go on and on developing, indefinitely, and uninterestingly, in that direction as well as in the other.

The thing which Buffalo lacks physically is a recognizable center; a point at which a stranger would stop, as he stops in Piccadilly Circus or the Place de l'Opéra, and say to himself with absolute assurance: "Now I am at the very heart of the city." Every city ought to have a center, and every center ought to signify in its spaciousness, its arrangement and its architecture, a city's dignity. Buffalo is, unfortunately, far from being alone in her need of such a thing. Where Buffalo is most at fault is that she does not even seem to be thinking of municipal distinction. And very many other cities are. Cleveland is already attaining it in a manner which will be magnificent; Chicago has long planned and is slowly executing; Denver has work upon a splendid municipal center well under way; so has San Francisco; St. Louis, Milwaukee, and Grand Rapids have plans for excellent municipal improvements.

Even St. Paul is waking up and widening an important business street.

I was prepared to take the field against all comers, not only in favor of simplicity, but in favor of anything and everything which was favored by my hostess

A Wave of Good Taste

EVERYONE knows that what is called "a wave of reform" has swept across the country, but not everyone seems to know that there is also surging over the United States a "wave" of improved public taste. I shall write of this later. Suffice it now to say that it manifests itself in countless forms: in municipal improvements of the kind of which the Cleveland center is, perhaps, the best example in the country; in architecture of all classes; in household furniture and decoration; in the tendency of art museums to realize that modern American paintings are the finest modern paintings obtainable in the world to-day; in the tendency of private art collectors not to buy quite so much rubbish as they have bought in the past; in the Panama-Pacific Exposition, which will be the most beautiful exposition anybody ever saw; and in innumerable other ways. Indeed, public taste in the United States has, in the last ten years, taken a leap forward which the mind of to-day cannot hope to measure. The advance is nothing less than marvelous, and it is reflected, I think, in every branch of art excepting one: the literary art, which has in our day, and in our country, reached an abysmal depth of degradation.

Only an Earthquake Is Needed

WITH Cleveland so near at hand as an example, and so many other American cities thinking about civic beauty, Buffalo ought soon to begin to rub her eyes, look about, and cast up her accounts. Perhaps her trouble is that she is a little bit too prosperous with an olden-time prosperity; a little bit too somnolent and satisfied. There is plenty to eat; business is not so bad; there are good clubs, and there is a delightful social life and a more than ordinary degree of cultivation. Furthermore, there may be a new station for the New York Central some day, for it is a fact that there are now some street cars which actually *cross* Main Street, instead of stopping at the Rubicon and making passengers get out, cross on foot and take the other car on the other side! That, in itself, is a startling state of things. Evidently all that is needed now is an earthquake.

The Timidity of Millions

I HAVE remarked before that cities, like people, have habits. Just as Detroit has the automobile habit, Pittsburgh the steel habit, Erie, Pa., the boiler habit, Grand Rapids the furniture habit, and Louisville the (if one may say so) whisky habit, Buffalo had in earlier times the transportation habit. The first fortunes made in Buffalo came originally from the old Central Wharf, where toll was taken of the passing commerce. Hand in hand with shipping came that business known by the unpleasant name of "jobbing." From the opening of the Erie Canal until the late seventies, jobbing flourished in Buffalo, but of recent years her jobbing territory has diminished as competition with surrounding centers has increased.

The early profits from docks and shipping were considerable. The business was easy and involved comparatively small investment and but little risk. So when, with the introduction of through bills of lading, this business dwindled, it was hard for Buffalo to readjust herself to more daring ventures, such as manufacturing. "For," as a Buffalo man remarked to me, "there is only one thing more timid than a million dollars, and that is two million." It was the same gentleman, I think, who, in comparing the Buffalo of to-day with the Buffalo of other days, called my attention to the fact that not one man in the city is a director of a steam railroad company.

From her geographical position with regard to ore, limestone, and coal it would seem that Buffalo might well become a great iron and steel city like Cleveland, but for some reason her ventures in this direction have been unfortunate. One steel company in which Buffalo money was invested, failed; another has been struggling along for some years and has not so far proved profitable. Some Buffalonians made money in a land boom a dozen or so years since; then came the panic, and the boom burst with a loud report right in Buffalo's face.

Back of most of this trouble there seems to have been a streak of real ill luck.

Digitized by Google

There is a great deal of money in Buffalo, but it is wary money—financial wariness seems to be another Buffalo habit. And there are other cities with the same characteristic. You can tell them because, when you begin to ask about various enterprises, people will say: "No, we haven't this and we haven't that, but this is a safe town in times of financial panic." That is what they say in Buffalo; they also say it in St. Louis and St. Paul. But if they say it in Chicago, or Minneapolis, or Kansas City, or in those lively cities of the Pacific slope, I did not hear them.

Those cities are not worrying about financial panics which may come some day, but are busy with the things which are.

On the Quality of Cities

IF YOU ask a Buffalo man what is the matter with his city, he will, very likely, sit down with great solemnity and try to tell you, and even call a friend to help him, so as to be sure that nothing is overlooked. He may tell you that the city lacks one great big dominating man to lead it into action; or that there has been, until recently, lack of cooperation between the banks; or that there are ninety or a hundred thousand Poles in the city and only about the same number of people springing from what may be called "old American stock." Or he may tell you something else.

If, upon the other hand, you ask a Minneapolis man that question, what will he do? He will look at you pityingly and think you are demented. Then he will tell you very positively that there is nothing the matter with Minneapolis, but that there is something definitely the matter with anyone who thinks there is! Yes, indeed! If you want to find out what is the matter with Minneapolis, it is still necessary to go for information to St. Paul. As you proceed westward, such a question becomes increasingly dangerous.

Ask a Kansas City man what is wrong with his town and he will probably attack you; and as for Los Angeles—! Such a question in Los Angeles would mean the calling out of the National Guard, the Chamber of Commerce, the Rotary Club, and all the "boosters" (which is to say the entire population of the city); the declaring of martial law, a trial by summary court-martial, and your immediate execution. The manner of your execution would depend upon the phrasing of your question. If you had asked: "Is there anything wrong with Los Angeles?" they'd probably be content with selling you a city lot and then hanging you; but if you said: "What *is* wrong with Los Angeles?" they would burn you at the stake.

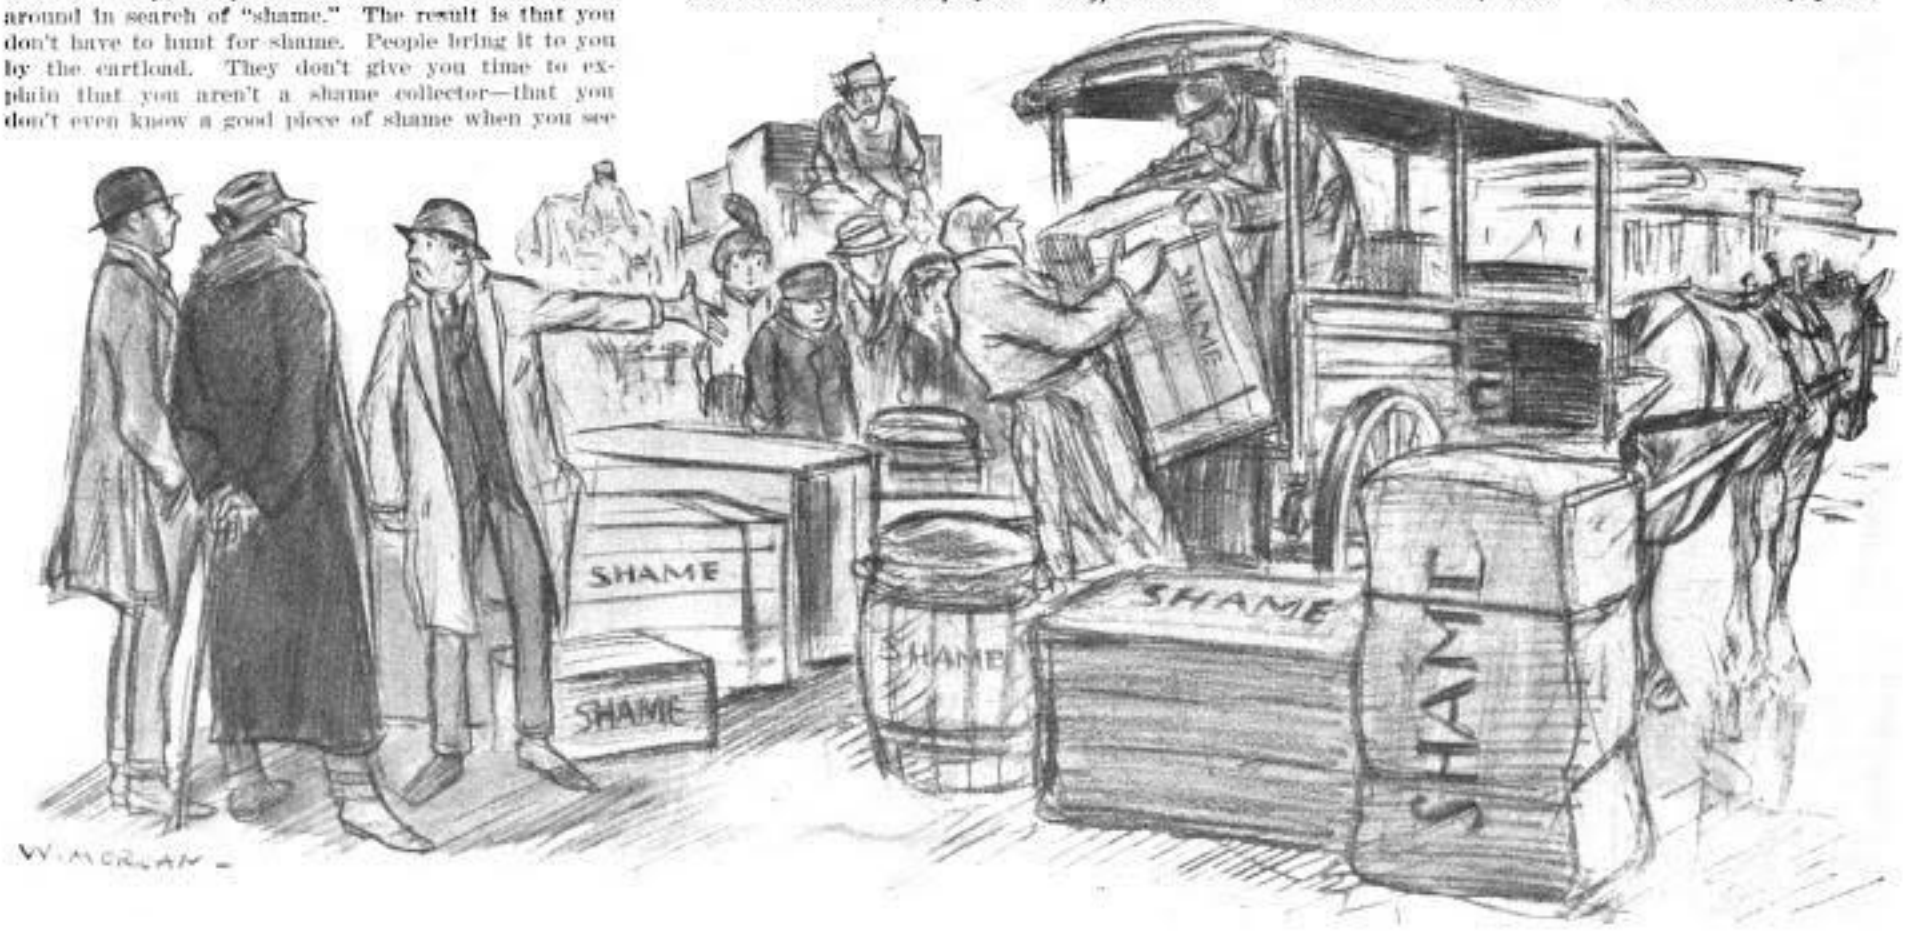
The Ingrained Habit of Muckraking

AT THIS juncture I find myself oppressed with the idea that I haven't done Buffalo justice. Also, I am annoyed to discover that I have written a great deal about business. When I write about business I am almost certain to be wrong. I dislike business very much—almost as much as I dislike politics—and the idea of infringing upon the field of friends of mine like Lincoln Steffens, Ray Stannard Baker, Miss Tarbell, Samuel Hopkins Adams, Will Irwin, and others, is extremely distasteful to me. But here is the trouble: so many writers have run a-muckraking that, nowadays, when a writer appears in any American city, everyone assumes that he is scouting around in search of "shame." The result is that you don't have to hunt for shame. People bring it to you by the cartload. They don't give you time to explain that you aren't a shame collector—that you don't even know a good piece of shame when you see it—they just drive up, dump it at your door, and go back to get another load.

We made excuses to go downstairs and wash our hands in the public wash room, just for the pleasure of doing so without fear of being attacked by a swarthy brigand with a brush

The "Shame" of the City Dumped at Our Door

MY COMPANION and I were new at the game in Buffalo. As the loads of shame began to arrive, we had a feeling that something was going wrong with our trip. We had come in search of cheerful adventure, and here we were barricaded in by great bulwarks of shame. In a few hours there was enough shame around us to have lasted all the reformers and muckrakers I know a whole month. We couldn't see over the top of it. It hypnotized us. We began to think that probably shame *was* what we wanted, after all. Everyone we met assumed it was what we wanted, and when enough people assume a certain thing about you it is very difficult to buck against them. By the second day we had ceased to be human and had begun to act like muckrakers. We became solemn, silent, mysterious. We would pick up a piece of shame, examine it, say "*Ha!*" and stick it in our pockets. When some white-faced Buffalonian would drive up with another load of shame I would go up to him, wave my finger under his nose and, trying to look as much like Steffens as I could, say in a sepulchral voice: "Come! Out with it! What are you holding back? Tell me all! Who tore up the missing will?" Then that poor, honest, terrified Buffalonian would gasp and try to tell me all, between his chattering teeth. And when he had told me all I would continue to glare at him horribly, and ask for more. Then he would begin making up stories, inventing the most frightful and shocking lies so as not to disappoint me. I would print some of them here, but I have forgotten them. That is the trouble with the amateur muckraker or reformer. His mind isn't trained to his work. He is constantly allowing it to be diverted by some pleasant thing.



In a few hours there was enough shame around us to have lasted all the reformers and muckrakers I know a whole month. We couldn't see over the top of it. It hypnotized us

For instance, some one pointed out to me that the water front of the city, along the Niagara River, was so taken up by the railroads that the public does not get the benefit of that water life which adds so much to the charm of Cleveland and Detroit. That situation struck me as making an excellent piece of muck to rake. Isn't it always the open season so far as railroads are concerned? I ought to have kept my mind on that, but in my childlike way I let myself go ambling off through the parks. I found the parks delightful, and in one of them I came upon a beautiful Greek temple, built of marble and containing a collection of paintings of which any city should be proud. Now that is a disconcerting sort of thing to find when you have just abandoned yourself to the idea of becoming a muckraker! How can you muckrake a gallery like that? It can't be done!

Why Is an Art Dealer

WITH the possible exception of the Chicago Art Institute my companion and I did not see, upon our entire journey, any gallery of art in which such good judgment had been shown in the selection of paintings as in the Albright Gallery in Buffalo. Though the Chicago Art Institute is much the larger and richer museum, and though its collection is more comprehensive, its modern art is far more heterogeneous than that of Buffalo. One admires that Albright Gallery not only for the paintings which hang upon its walls, but also for those which do not hang there. Judgment has been shown not only in selecting paintings but (one concludes) in rejecting gifts. I do not know that the Albright Gallery has rejected gifts, but I do know that the Metropolitan Museum of Art in New York and the Chicago Art Institute have, at times, failed to reject gifts which should have been rejected. Almost all museums fail in that respect in their early days. When a rich man offers a bad painting, or a roomful of bad paintings, the museum is afraid to say "No," because rich men must be propitiated. That has been the curse of art museums; they have to depend on rich men for support. And rich men, however generous they may be, and however much they may be interested in art, are, for the most part, lacking in any true and deep understanding of it. That is one trouble with being rich—it doesn't give you time to be much of anything else. If rich men really did *know* art, there would not be so many art dealers, and so many art dealers would not be going to expensive tailors and riding in expensive limousines.

Those who control the Albright Gallery have been wise enough to specialize in modern American painting. They have not been impressed as so many Americans still are impressed (Continued on page 24)

A Rally on the Colors

By Rose Kidd Beere

ILLUSTRATED BY S. J. WOOLF

"QUARTERS" had blown at the California barracks on the Rio Pasig.

But lights still burned brightly among the trees in the Plaza of the First Reserve Hospital, where night brought no cessation of work among stewards and doctors as the sick and wounded were brought in by launch or ambulance following the advance of the American lines toward the north.

For an hour, however, the wards had been quiet; only now and then corridors faintly echoed to the footfalls of some belated visitor or hurrying orderly.

In the Botanical Gardens across the street firefly trees gleamed against the darkness, and blossoms of the "Dame de Noche," that open only with the twilight, threw their heavy perfume to the breeze. The yelping dogs in the great Aroseros Market had been silenced. No sound was heard within the long tent ward, save now and then a groan from behind the ghostly mosquito nets that hid the rows of bandaged forms. The men on night duty moved about silently in the dim light of lanterns, hung midway of the long aisle, that cast their faint glow on the canvas.

The Government nurse had gone at six o'clock.

THE Red Cross nurse tucked the netting about her cot, and with a sigh of relief sank to rest after seventeen hours of continuous duty.

"Maybe I can get my accouterments off and turn into a real bed to-morrow night in my own quarters, if some of these poor boys are better. If I ever do," she soliloquized, "I'll never get up."

"Ben South Dakota," "Artillery," and "Pennsylvania" called "good night" to her across the aisle and settled to their long hours of pain, broken only by fitful snatches of oblivion.

The First Reserve Hospital in Manila was asleep.

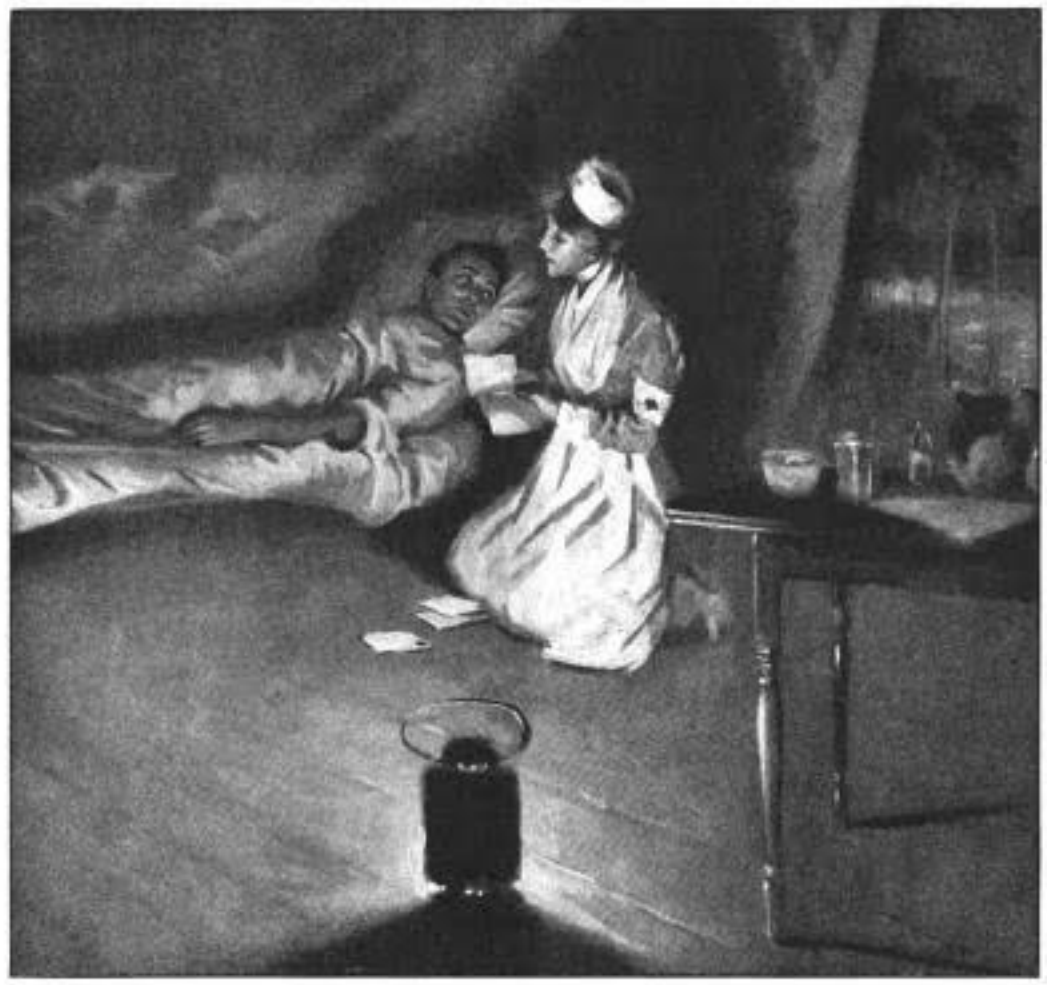
Suddenly the hush of the summer night was broken by the sharp whistle of the hospital launch from the landing; lights awoke in the operating room, the men on night duty became alert, and soldiers passed to and fro at a quick pace in obedience to orders given in low tones.

To "Ben South Dakota," "Artillery," and "Pennsylvania" the whistle of the launch meant news, another fight, another victory, and more glory for the flag. To the volunteer nurse it meant meeting fresh pain and suffering and need of her help. Exhausted by her long day's work, under no obligation to do more, yet at that sound she sat up on the side of her cot. She wondered how many were hurt, and whether the hospital corps was adequate.

"Do you know anything of the fight?" called "Artillery" from under his netting to a passing soldier.

"Yes," came the reply. "The scrap was up beyond Marilao early this morning. Twelve dead, eighty-five wounded. The 'Utah Short Line' has been since noon making the seventy miles. The Gu-gus have kept the track torn up. They are bringing the wounded in now."

The nurse sat listening in the darkness to further fragmentary details which little by little floated in from other passers-by.



She realized what it all meant.

She saw the launch come alongside the little landing, and the long procession of wounded, mostly young boys, some on foot, some carried on litters, take its way toward the operating rooms. She saw those on the stretchers quietly laid in rows under the ylang-ylang trees, many with "Urgent" cards attached, and the others, able to help themselves, dusty, bandaged, weary, hungry, and thirsty, silently range themselves along the walls and on the floors of the corridors, each patiently waiting his turn to be cared for.

SHE knew they had been without food all day, possibly since the night before; she knew the kitchens were closed and the cooks gone and that there would be nothing for them to eat unless she prepared it.

But, in utter weariness of body and spirit, she could not bring herself to the tasks usual to such emergencies. It would require two hours of hard work in her little Red Cross diet kitchen to prepare coffee and distribute it to so many.

"'Ben South Dakota,' do you really think I ought to get up and go out there to help?"

She placed the lantern on the floor and knelt close to the pillow that her voice might not reach the others, and slowly read

"Ben South Dakota" loved his country, and had followed her flag 10,000 miles over the sea. And now, shot through the jaw, he ate through a quill and talked by signs and kicks. One kick on his cot was "no," and two were "yes," a logical arrangement, for in a government hospital "no" is needed oftener than "yes." His head bandaged like an Arab sheik, his efforts at conversation were limited, but he promptly gave the signal neither expected nor desired—two kicks on the foot of his cot.

"'Artillery,' what do you say?"

"Artillery" was an Indiana boy who had got a Mauser through both knees, and had to lie on his back all day and all night; but the cheerfulness of his eighteen years had never deserted him, and his handsome young face was an inspiration to his neighbors. "Well, I know you are awful tired, ma'am, so I don't like to vote according to my views," he said.

"Now fancy you two youngsters telling me my duty," the nurse expostulated. "Nobody here does his duty, why should I? You all eat everything you can get, when your duty is to stick to slops; you sneak cigarettes, you bribe Pancho to bring you beer, you think that because you may be going to die you are privileged characters. I'll have none of your advice. 'Pennsylvania,' what do you say?"

THE soldier addressed was not a boy as were the other two, but an educated man of the mature age of twenty-five or twenty-six.

"Well," he said slowly, "when I think of the way you have gone up and down these wards since early dawn, I want to say: 'No, go to sleep,' but when I recall the night I was brought in, and I remember how that coffee tasted when you lifted my head and poured it down my throat as I lay out there under the trees, and then think of those poor devils coming in, in the same fix I was, I can't say it—I can't, ma'am, much as I want to for your sake. We all know you'll go anyhow, no matter what we say, so what's the use of putting us on record against the boys?"

"Me to the coffee boilers," sighed the nurse.

A half hour later she knelt by a litter in the dim light under the ylang-ylangs, a tin cup in her hand. Noticing the "Urgent" card fastened to a man's blouse, she paused before lifting his head.

"Can you take some coffee, my boy?"

"Yes," came in a far-away voice.

"Where were you wounded? Can you tell me about it?"

"Over the heart. This morning about daylight. I had to be carried twelve miles by the Chink bearers, and the train has been a long time getting in from the lines."

"Yes, I know. I'll get you to one of the surgeons right away. They are running six tables, and it will not be much of a wait now."

"Don't let them probe, will you?" he begged faintly. "I can't stand it." She felt his pulse, so weak and intermittent she marveled that he could speak at all.

"Oh, this will warm you up nicely, and you'll have all kinds of nerve when you need it," she said cheerily, tipping the cup as he slowly drained it.

On the table under the powerful light that searched out the tiniest arteries and nerves, when the stiffened clothing was cut away and the wound cleaned, only a little red spot in the left breast showed where the bullet had gone on its deadly mission.

When he was bandaged, the surgeon said to the record man standing with ready pencil: "Wound of entrance, fifth intercostal, three inches left of median line. No exit. Hot-water bottles and a quarter of a grain."

The volunteer nurse understood the significance of the brief order. It meant to keep the patient warm and to ease his pain with an opiate until the end came. And the Colorado boy was borne away to the ward where she could look after him for his few remaining hours, his cot across the aisle from "Pennsylvania," next to "Artillery," with "Ben South Dakota" at his feet.

TWO days passed and, to every one's surprise, "Colorado" did not succumb to the first shock and loss of blood. Then he said grimly that it seemed worth while to watch for symptoms of poisoning from the brass-coated bullet that might be lurking in his interior department. But another two days saw no change for the worse, and hope began to dawn.

"I'm still bidding myself good morning," he whispered to the nurse as she drew aside his netting on her early rounds a week later. "And I think I have located the bullet. A fellow hates to die until he knows the truth about himself."

But a month crept by, and "Colorado" did not die. The first shock over, the clean little bullet hole healed, and it looked as though he had a chance. Then malaria seized him and he grew weaker, more emaciated day by day, until at last only the shadow of a man lay under the netting, uncomplaining, indifferent, fretful only when compelled to take medicine or nourishment.

"Why can't you let me go in comfort?" he murmured querulously. "I don't want to eat; I only want to be let alone."

The nurse was in despair. Tact, persuasion, artifice, were unavailing. "Colorado's" energy was at an ebb, his vitality sapped till all power of resistance was gone; he was tired of the struggle.

As the Government nurse was going off duty one evening at sunset she said: "Your boy in the last tent will not be here to-morrow when I come; he has failed fast to-day."

"It's a case of giving up. He has had such a long pull he is worn out," was the reply.

A transport had arrived that morning from home. At dark the mail orderly came from regimental headquarters with letters for those in the hospital. There were three for "Colorado" from his wife. The nurse told him of them, hoping to rouse him. "In the morning," he said, pitifully weak; "I'm too tired to-night."

"Even for letters from home?" she asked.

"Yes," and he turned away with closed eyes.

AFRAID to quicken his heartbeat through irritation, she slipped the letters, usually so eagerly welcomed, under his pillow. But she went about her preparations for the night very thoughtfully. There might be something in the letters to awaken a new desire to live, a stimulus that would arouse him from his lethargy, could he be persuaded to hear them. And if he should die before morning she would regret not having been more insistent. As she bent over to arrange the netting, he reached for her hand, saying: "I will not

The Tyranny of Beauty

Chapter VIII—Madame Del Mar's Napoleonism

By Jane Bunker

ILLUSTRATED BY MAY WILSON PRESTON

BEEKMAN! I'd totally forgotten the conspiracy. A glance at my aunt's face showed her still unconscious of it, and I thanked my stars I'd held my tongue. The woman herself came in with a look at me that said: "If you've been talking about me, you'll be sorry!" Her manner was at once defiant and cowed.

Madame motioned her to a chair and boomed at her: "What I can't understand is how you let things run behind here the way you did. This beauty business ain't a charity organization for the hired help—"

"Pardon me, madame, but I acted under your orders."

"How's that—my orders?"

"The last time you were down to the office before the baby came I suggested the summer might be dull—it was getting warm then—you mentioned it yourself, don't you remember? And you said just what you said before about the home-treatment staff—we must carry the help through the dull season—picked operators like them—got their own trade; comes to them regular. And you know how much that counts with these old women. You spoke of it yourself, though it was my idea to lay off some of the manicures and two or three facials for the summer. But you said not. I didn't dare disobey your orders and I've had none since."

MADAME considered this statement in puzzled silence for a moment, trying to recall words on that occasion which I knew she'd never said, and Miss Beekman seized the pause to add instantaingly: "Your word is law to me, madame—always has been—as you know—and you surely can't blame me for following it to the letter."

"Oh, very well—very well," said madame vaguely, looking at the papers in her hand.

"And, madame, it's been a hard summer here in the East—you may not have thought it out there in Colorado—a terrible summer for us as had to stay in the city, but I've stuck to my post and all the time worried to death the way things were going and no one to advise me what to do. If it had been for anybody in the world but you, I'd have resigned sooner than take the responsibility and go through the heat. But after I had your positive orders, I thought—"

"Oh, very well—very well," madame cut her short. "I don't seem to remember the words now—a good many things have happened since May—a woman can't have babies and business at the same time—business is bound to suffer—I found that out good and plenty this time if I didn't with the first. But there'll be no more babies—so you needn't worry on that score—and I ain't come home from a pleasant summer to blame a faithful servant. If you had my orders, you had them; and if you stuck by the ship, you done all could be expected of a saint."

SHE smiled one of those disarming smiles and I could see Miss Beekman fairly eating out of her hand. She stammered: "It's nice to feel yourself appreciated by your—superiors."

"You can't accuse me of not appreciating your good points, but what I don't see is why you people—some of you here—didn't push one of the other preparations. You say you saw the trade wouldn't put on fat—Mr. Winston says you told him that yestiddy when you talked with him—but when the trade won't put fat on, then's the time to help them take it *off*.

"You'd think even a man could see that. So why didn't you push the antiobesity treatments—and the pills and soap both? Here was the whole country laying up fat it didn't want—you had all that treatment we worked out with the imitation press clippings Miss Cryder and the newspaper artist got up—you had that imported soap. Oughta put that right on the market—twenty thousand dollars right here in New York waiting to be picked up off the counter through those hot months. What I'm driving at is why some of you didn't do it?"

"Nobody had the authority, madame, to develop a new line like that." Miss Beekman had at the moment the queerest expression—as if she'd suddenly seen the one crack in the wall through which she could have crept into the partnership and—saw the crack close up before her eyes. "I—I thought of it," she lied glibly, "and I worked off a little on that idea with some of our fat regulars and a few Hinterlanders; but, madame, I had no authority for a sales campaign. Miss Lucy was the only person here who could have given orders for it, and she did not—so far as I am aware."

"PITY you didn't take the authority—seeing how much you got already and the condition I was in for weeks before and after the baby came," observed madame dryly, ignoring the reference to me; and Miss Beekman turned yellow under her dye. "Well, it can't be helped now—no use crying over spilt milk and spilt trade. There'll be hot days yet—September always is—and those fatties coming home from the seashore, where they've been gorging their stummicks all summer, 'll want to get put in shape for the winter. Need a little taken off myself."

"Oh, no—you never looked so splendid!" interjected Beekman, squirming in her chair. "Don't take off a pound. You're simply queenly."

"You think so?" beamed madame.

"Oh, madame! And in that Paquin gown! Ain't she, Miss Lucy?"

But madame had no inclination to palter with the question of her own beauty—she had too much at stake in other women's beauty at the moment. She rang up the little jag and ordered her: "Sally—Mamie—Sadie—"

"Muriel," whispered the anemic child, frightened half out of her small wits. It was the first time she'd seen the Great One on her throne.

"Oh, Muriel! Well, run to the *salon* and gemme a cake of that antiobesity soap—that imported consignment we got last winter."

"Yes, ma'am." Muriel flew off and flew back, bearing a large, apple-green package, which she breathlessly deposited on madame's hand.

"Green? Green! Why is this green?" she demanded, and Miss Beekman told her "because it came that way from the other side."

"Well, here's one reason why that stock didn't move

Thus died the Beekman conspiracy, stillborn, entombed, and sunk to oblivion in broiled squabs and turtle soup

—*green*. Oughta been rewrapped in pink with one of our own labels. Order the stock-room forewoman to have it all changed—make it appear to be our own make. I'd forgotten about this—meant to have it changed—shows you can't have babies and business at the same time. . . And marked a *dollar!* How ever did you expect this sort of thing to move at a dollar? Oughta been marked two or two-fifty."

Miss Beekman protested that if it wouldn't move at a dollar, how could it move at two, and my aunt stared at her several seconds before telling her blandly: "Beekman, I sometimes think you got the intellect of a hen. You'll never make a business woman—if that's your aim—so put that idear outa your head. After all the years I've had you in training you still don't know the first rule of pricing goods on the value to the customer: When you're selling farmers' wives, double the size and halve the cost; when you're selling the Four Hundred, halve the size and double the cost.

"You ever see farmers' wives buying antiobesity soap? You ever see one buy one cake? No—because they don't; therefore, you don't play their trade—there ain't any to play. Yet just looka this size! Laundry! Any lady seeing it would take it for a bar of washing soap if the price on it don't convince her it ain't. I think I see a society woman paying a dollar a bar for this in a green wrapper! How much we got on hand of it? . . . Near the whole ten gross?—twelve hundred cakes in the stock room? My Lord! You been asleep all summer that you let this stand on the shelves—"

I THINK I never saw a sicker face than Miss Beekman's. She opened her mouth to defend herself, but the words died away in her throat. Instead, tears sprang to her eyes.

"Well, I suppose you can't help it if you got no intellect—people are born the way they are—so don't take on," soothed madame, who hated tears. "The thing is now to pull outa the hole we're in. You turn to and do your share and we'll let bygones be bygones on this summer—I ain't going to punish you because I had a baby—that's what it amounts to. We still got this stock and I can sell it if you can't—and I gotta sell it in thirty days to take up my notes. I suppose Mr. Winston dropped some hint to you on how the parlors have run behind—but let that go—it's nothing if we pull out; and if we move this stock at three dollars—and I *see* it moving at three—and then get out a proper shape and size cake of our own to do the work. . . . Here, Sadie—Sally— What you say your name is?"

"Muriel, please."

"Go tell one of my secretaries to come here with her book. You didn't find Miss Cryder? Tell the girl at the phone to call her paper and see if she's there—I want her to get some litterchure in a hurry—a new scientific booklet on our 'Beauty and Health Course.' Then tell the chemist I want him. Run, now—that's all. . . . We'll get this antiobesity business settled first and then go on to the next thing. Zulu puts the fat on—soap takes it off."

During the lull waiting for the chemist she unwrapped the cake and we watched her in breathless silence. What Miss Beekman was thinking I don't know—misery of soul sat upon her brow; but to me it seemed as if fortunes hung in the balance of those seconds

Digitized by Google

while madame ran her thumb under the seal and turned the naked cake of green soap into her hand, holding it at different angles, hefting it for weight, and then experimentally rubbing it on her left wrist to see how her right hand held it for the purpose.

"The color ain't bad," she announced, nodding to the chemist and motioning him to take a chair. I saw a look pass between him and Miss Beekman that asked: "Has anything been said yet?" to which she replied with a quick frown and a barely perceptible shake of the head; all lost on madame, who was going on: "But the rest of it's built wrong for first-class trade. Oughta be half as large—oblong—curved at the edges—curved in the middle, likely—I can't tell just how it oughta be till I see some dummies. It don't hold right—it don't smell right. Take a note of that, Mr. Pusey—make it smell right."

"ARE we going in for soap manufacture?" he inquired sourly. Madame paid him thirty a week and he felt she already asked much too much of him. Miss Beekman had offered him forty—which was better than nothing—though he knew his scientific attainments deserved a hundred.

"Not common soap—antiobesity. Getta bar of castile and whittle me out some dummies the first thing—so big—so thick—so long, about"—she showed him on her fingers—"ten at least of the different shapes and styles. Round the edges. I'll give you my decision before I go and you can order the molds made to fit the cake I see right for the trade. . . . Dull pink, suède-finish paper—that's all it needs in the wrapper—and the right price—once we got it built proper size and shape. . . . Green—this is a good color, so copy it—green and dull pink—reminds me of apple blossoms. Apple Blossom Soap! (Gotta get a catchy name, too.) Apple Blossom Soap. . . . Apple—blos—som. . . . I don't seem to hear that name called for across the counter. . . . But out in Col'raydo you hear nothing but apples—all the craze for the health—raise them by the ton—saw a place where they talk of starting an apple cure—wanted me to put money in it—lots of money in apples now while the craze lasts—they say they're healthy—the apple acid does it. . . . Apple Acid! *Apple Acid Antiobesity Soap!* That's it! That name'll sell it! Use the apple craze to float it on! . . .

"Here, Bessie, take down some notes for Miss Cryder to work up into the litterchure for our new Apple Acid Soap. . . . Everybody knows by experience that apples are the most nourishing of all foods because the most common. . . . Wait—cross that out—common ain't the right word—nothing common about this new soap. Because the most perfect in form and color. Also the wholesomest, and the reason is because of the apple acid. Apple acid tones up the system, aids digestion, keeps the blood pure, and assists in the elimination of superfluous fat, thus keeping the body in its perfect natural shape of beauty. When, however, through overeating, the fat is deposited in and under the skin, it is outa reach of the apple acid which circulates in the blood after having been eaten by the stummick, and such fat can only be removed by external applications.

"Apple acid is nature's own remedy, and Apple Acid Soap—a companion to our famous Zulu Skin Food and made from the same pure oils and fats that has made Zulu famous—supplies apple acid to the skin in the exact right proportions that have been determined by the experiments of—

"Put a note in here, Bessie, to say she's to go to some doctor, and find out if there's been any experiments and gettum if there has. If not, ask him about what they'd be if there had been—the figgers, I mean—or something that'll sound right. Sign a Scotch doctor's name to this medical opinion—we've had so many of these made-in-Germany names the public's getting sick of them. . . . Make a few things here on our own account, I guess!

"WHERE was I? Oh, yes—exact right proportions for dissolving the fat once it's deposited in the skin. Apple acid is the one safe and sane dissolver of human fat, and the fact that nature has provided it in abundance by covering our glorious land with apple orchards whose blossoms perfume the balmy breezes of spring. . . . Well, no matter about that—just put down a note for her to work up about the orchards—no need of me spending time on it. And there ought to be a good color print for the frontispiece—lots of pink in it—but I guess that'll have to go over to the second edition of the booklet. Still, there's gotta be some illustrations to the first edition, so tell her to get that newspaper artist who did the scientific drawings for our booklet on the hot-milk (*Continued on page* 26)

The Double-Squeeze at Villa Borghese

Part III—The Sporting Ambassador

By Henry Beach Needham

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"She'll never care for me a second when she knows I'm a professional ball player"

WIN SHUTE had been jolted at Genoa. Another but more agreeable surprise awaited him at Naples. After the *Colonia*, having cut a white lane across the cobalt Bay of Naples, was maneuvering to dock, he saw on the wharf, scanning every face looking down from the big black ship—Tris Ford.

Ashore it's customary for an accommodation train to be sidetracked for an express—for one person to leave after a friend and beat him to their common destination. But when in sea travel no other ship overtakes and passes you, it is curious, almost preternatural, to have a friend you had left at home greet you on your steamer's arrival in a foreign port. This experience was all the more inexplicable to Win Shute because of scheduled intervening events. He knew, from the cable dispatch in the un-American newspaper which he had read at Gibraltar, that the World Series went to seven games before the Giant-killers were beaten. With Sunday interrupting, this involved eight days—eight days after his boat had sailed from New York. The cablegram from the club secretary informed him of the manager's absence from the city, but the idea that Tris Ford was on his way to Europe hadn't suggested itself to the "shanghaied" ball player.

AS WIN SHUTE learned afterward, the manager of the Giant-killers had kept his objective a secret from every living soul save his wife. Even the club officials supposed, for several days, that the manager had slipped quietly out of the city to rest after the hardest-fought diamond battle in the records of the national game. The secretary had been told to reply to any cablegram from Win Shute in one way: to say that Tris Ford was out of town, and to urge the second baseman to remain on board until the ship called at Naples, where he would be met by the American consul. The big series ended on Tuesday, and at 1 a. m. next morning Tris Ford, under the *nom de mer* of Anson Jones, had sailed on the *Laurentania*. The following Monday morning he landed at Fishguard, boarded the special train for Dover, crossed the cantankerous Channel, and arrived in Paris in the afternoon. Ford left the Gare de Lyon at ten o'clock that night, and after a night, a day, and a second night on the train de luxe arrived in Rome early Tuesday morning. (The *Colonia* wasn't due at Naples until the next day.) He was at the palace leased by the Hon. John Bismer, American Ambassador to Italy, before that Chicago millionaire had finished his uncontinental breakfast of fruit, oatmeal, ham and eggs, and coffee, eaten to the accompanying perusal of the London "Daily Mail."

THE Ambassador was expecting *Tris*tram Carling*ford*. John Bismer's boss, the President of the United States, was a thirty-third-degree fan; also, the White House staff were fans down to the clerk who addressed the social invitations; and when the assistance of Washington had been solicited in the hunt for the king of second basemen and the pursuit of his kidnapers, all other Government business, foreign and domestic, was shunted into second place. President Bancroft of the American League afterward observed that not for naught had he been distributing annual passes in Morocco leather cases to the executive branch of the Government.

So if Ambassador Bismer succeeded in rendering valuable service in the search and capture, he would be certain of more official favor even than when he secured the contracts for two Chinese battleships for Yankee shipbuilders—his one real diplomatic triumph. Which explains why he was more than cordial in his greeting of the manager of the Giant-killers.

As in all of the pourparlers of diplomacy, the interview between John Bismer and Tris Ford was some time arriving at the main point. Ford had to play over the World Series for the Ambassador's benefit before he could get down to the business at hand.

"What a heartbreaking finish!" exclaimed the Ambassador—"deciding game—score 1 to 0 against you—men on second and third—nobody out—and you mean to tell me you couldn't squeeze a run across the plate?"

TRIS FORD was literal-minded when talking baseball. He took it that the Ambassador used *squeeze* in the technical sense—that he meant to ask why the "squeeze play" hadn't been attempted.

"You'd naturally think we'd 'a' tried the squeeze, now wouldn't you?" said Ford. "It was a great chance for it—for our double-squeeze, in fact."

"You got me," confessed the Ambassador. "What on earth's the 'double-squeeze'? Must have come in since I put on velvet pants."

John Bismer laughed at his own joke on the diplomatic service, as did Tris Ford.

"It's this way," explained Ford. "You have a man on second and a man on third, and nobody out, we'll say."

"Just the situation in the seventh game of the World Series," emphasized the Ambassador.

TRIS FORD nodded and went on: "You also have a man at bat who is a natural bunter. Well, the batter signals to the base runner on third—hitches up his trousers, or some such ordinary signal as that. Then when the pitcher begins to wind up, the man on third breaks for the plate—comes sailing into what looks like a sure put-out. But the batsman reaches out and taps the ball—if you pull off the play—and the man scores! You see—a ball knocked to pitcher, or halfway even, will be enough to 'squeeze' the man across the plate because he's got such a long start."

"I see!" exclaimed the Ambassador, his eyes shining like the orbs of an American boy. "But what about the double-squeeze?"

"I'm just coming to that," said Ford, smiling. "Taking the same play—when the man on third starts for home, the runner on second legs it to third. But he doesn't stop—keeps right on running, and—well, somehow or other the pitcher—or it might be the catcher, if it was a short bunt—seeing that the first man is bound to score and fearing he won't get any put-out, throws the ball to first to head off the batter. And—the second man scores!"

"Couldn't the pitcher get the second man at the plate?" asked the Ambassador excitedly.

Digitized by Google

"Sure he could," grinned Ford; "why—the second-base runner isn't more than halfway home when the pitcher fields the ball."

"Then why in Sam Hill doesn't the galoot throw to the plate?"

"You tell me," said Ford. "That's the queer part of it. Of course the crowd is yelling like maniacs; the man scoring first is upsetting, and the desire to get at least one man on the play, overwhelming—all that, I suppose. Anyhow, we tried the play seven times last season and got away with it all but once. That time the batter failed to connect with the ball, and the first man was an easy out."

"I'm sorry — very sorry — that you didn't hit the ball," she assured him

"NOW you've explained it so a woman or a foreigner could understand, tell me why you didn't try it at the crisis of the world's championship."

"Because the man at bat couldn't bunt—and we didn't have a sure bunter to substitute. The man who would have batted had he been in the game is the best in the country at pulling the squeeze," added Tris Ford sadly.

"You don't mean—"

"Win Shute—yes, I do," finished Ford.

"And if he'd been in the game, you'd have won it?"

"Nine chances out of ten we would."

"So losing Shute lost you the World Series?"

"Lost us the world's championship—there ain't nothing to that."

"The skunks!" exclaimed the Ambassador. "Those kidnapers ought to be strung up!"

"Ought to be," agreed Ford. "But, as far as I'm concerned, all I want is to put the chief crook in stripes—Jake Stinger, the New York gambler."

"You've got some of the gang, I understand, from Washington."

"Yes—the Secret Service men got hold of a fellow who squealed."

"How'd they work the dirty trick?"

"They faked up a newspaper syndicate—'Transcontinental'—headquarters New York, engraved stationery," recounted Tris Ford, "and offered Shute big money to report the World Series. Naturally he accepted, so they sent a man to Phillie to arrange details. He was supposed to arrive the day before the series opened, but was actually there a week earlier—at our best hotel, spending money, paying his checks with cash, and scattering coin in tips until he was solid with all the hotel people. Called himself 'Walter Noble'—nerve of it!"

"Who gave him away?" interjected the Ambassador.

"Why—they had to have a double for their victim—some one to masquerade as Shute. That's where they fell down—picked the wrong man. The 'dummy' couldn't stand prosperity. After he left the hotel with his pockets full of money, he started in to make a night of it—kept the taxi and blew in most of his money, then got in a row with the taxi driver over the fare. 'Twasn't so hard to trace him after that. He 'gave up' to the Secret Service men."

"HOW'D they manage with Shute?"

"Something like this," explained Ford: "The dummy came to see Noble in the afternoon, and the two of them kept ordering drinks right along—probably throwing most of the stuff away. When Shute called on Noble in the evening he was shown into the parlor of Noble's suite—the dummy was in the bedroom, keeping dead quiet. Well, the crook—that's Noble—gave Shute a knockout in ginger ale—Win Shute never took a drink in his life; but they tell me ginger ale disguises that knockout powder better'n any beverage. Moment he began to pass away and lose consciousness, the dummy put on Shute's hat and overcoat, went downstairs, and was sent away by the doorman in the taxi ordered 'for Mr. Shute.' Just before Shute became helpless—when he was able to stagger, but too dazed to know anything—the porter was called. Noble told him that his friend—Shute now passed for the dummy—must be helped down and put into his automobile, as Noble was leaving town. Thinking it was the case of a 'drunk,' the porter—probably well feed—willingly helped Noble to carry his victim down and put him in the machine.

"There was a doctor in the touring car—we got him, too; he's a sure-enough crook," continued Ford. "The doctor watched Shute every second of the ride to New York, keeping his hypodermic handy. But the lad didn't rouse before they got him to the *Colonia's* pier. Then they woke him up a little by slapping his face, so they could carry him aboard as if he was drunk—lots of young bloods are carried aboard steamers that way, I understand. They spilled liquor on his clothes and face, then called the ship's doctor—you know the ability of the average ship's doctor! Told him that Shute—who was booked as S. W. Jones—had been celebrating before sailing! The doctor looked him over and said: 'He's all seas over, all right.'"

"But weren't they afraid he might come to before the ship sailed?"

"THEY took care of that. After the ship's doctor had gone, the doctor crook gave him a hypodermic—enough morphine to keep him asleep till noon the next day, when the ship would be away out to sea. A liberal tip to the room steward, who didn't suspect anything wrong, and the greatest second baseman in baseball was shanghaied!"

"All for the purpose of making a killing?" asked the Ambassador.

"The biggest killing the gamblers have made in years," said Ford. "Jake Stinger and his crowd are supposed to have cleaned up several hundred thousand dollars."

"But you've got him now—Jake Stinger!"

"That's the trouble—we haven't," admitted Ford. "Not one of the crooks caught so far will admit Stinger had anything to do with it. They're being paid big money, no doubt, to protect him."

"Then how do you know that he's mixed up in it?"

"We know that the fellow calling himself Walter Noble has done dirty work for Stinger before. He would probably go to the penitentiary for Stinger—for money."

"Then you're up against it?"

"Yes—unless we're right in the way we size up the case. You see," continued Ford, "the crooks had to do more than put Shute aboard that ship and keep him unconscious until she was out at sea. When he came to and realized where he was he'd naturally send a wireless to me. If it went through, why—I'd try to rescue him. Say—I'd have chartered the fastest motor boat and overtaken him if necessary! The crooks guessed that. So what would they naturally do?"

"Try to buy the wireless operator!" answered the wily diplomat.

"They did better'n that, we figure. They made sure of their man and then put him on the boat—got him installed as the Marconi operator for the voyage."

"You don't tell me! Who'd they get?"

"You'd never guess. He's popularly regarded as a hero—the hero of the *Regent*."

"Wireless operator who saved the steamship *Regent?*" The Ambassador was astonished.

Tris Ford nodded. "Jerrold Mansel."

"British subject, isn't he?"

"Believe he is. Does that complicate matters?"

"Somewhat. But we'll try to manage it," the Ambassador assured Tris Ford.

"If you don't mind I'll give you our position in regard to Jerrold Mansel."

"Certainly—go ahead," said the Ambassador.

"We have no desire to prosecute Mansel—*provided* we can get from him proof which will convict the 'man higher up.' We aren't bothering with the *fools.*

"Anyhow, that man Mansel saved many lives—protected women and children—when the *Regent* was sinking. That deed shouldn't be forgotten—and we ain't going to forget it. We look upon Mansel as the victim of other men's greed. First, a greedy theatrical manager tempted him to commercialize his heroism—then cast him aside when he was no longer a box-office attraction. Mansel was broke, got to drinking, and had no job. He was just ripe for Jake Stinger to pluck."

THE Ambassador nodded vigorously. "So if Mansel will confess—and name the man higher up—"

"We're satisfied," finished Ford. "We're after Jake Stinger. And it ain't just for revenge. The only menace to the integrity of baseball is gambling—and I want to hit the gamblers a crack that they won't forget. Say—putting Jake Stinger in stripes means as much to me as putting a trust magnate in jail means to the President! Understand, he's got his heart set on it."

The Ambassador smiled—but gave no sign. After a diplomatic pause he continued the conversation: "We ought to be able to bring Jerrold Mansel to time, somehow. He could be detained on the landing of the *Colonia* to-morrow and paroled in the custody of the British Ambassador. Then it could all be fixed up diplomatically—quietly. I'll see Sir George Claughton at once."

Tris Ford looked puzzled.

"The British Ambassador to Italy," explained John Bismer. "Great cricketer in his day—he'll take a keen interest in this case."

"Tell him if he'll help us out with Mansel, I'll acknowledge that American baseball came from English cricket!"

"You're a born diplomat," was the Ambassador's compliment.

"That's strange—for I happen to be an Irishman."

Tris Ford thought it a good joke.

Win Shute bowled Tris Ford over with his effusiveness. "How are you, old boy? Tickled pink to see you! Le'me introduce you to Mrs. Leonard"

IF WIN SHUTE marveled at sight of Tris Ford waiting on the quay at Naples, the manager of the Giant-killers returned the compliment and opened his mouth in astonishment. For James Winton Shute, quite evidently in the best of health, did not disembark alone!

On his arm, glancing up at him in perfect trust, was a timid, sweet-faced woman of middle age, whose wistful eyes confessed that she had been weeping. She was treated with a kind of gallant deference enjoyed only by the mother of a particularly attractive daughter.

Win Shute bowled Tris Ford over with his effusiveness. "How are you, old boy? Tickled pink to see you! Le'me introduce you to Mrs. Leonard—Mrs. Leonard, Mr. Carlingford—isn't this sky some blue!"—all before Tris Ford could get in a word. Incidentally, Win Shute had never said "Carlingford" on any other occasion. Pulling the manager aside, while Mrs. Leonard obsediently (*Continued on page* 30)

COMMENT ON CONGRESS

IT MAY help to understand the Mexican muddle if we consider two possible points of view. The first—and this is the best conceivable presentation of the attitude which President Wilson took at the beginning and has maintained: Revolutions in Latin America are commonly financed and instigated by persons who expect to make money by getting mining, oil, or other kinds of concessions and franchises from the successful revolutionists. If a way could be found to prevent these concessionaires from reaping the fruits of their efforts, it would discourage revolutions. Finally, if the United States should adopt a policy of refusing to recognize governments like Huerta's, founded on revolutions, it would result in a financial embargo and would deprive the financial supporters of revolutions from reaping the results of their speculation.

The Anti-Wilson Point of View

THE second way of looking at our relations in Latin America is to say that all we want there is a measurable amount of law and order such as will give reasonable security to the lives and property of Americans and of Europeans to the degree in which the Monroe Doctrine makes us responsible for Europeans. This includes the view that the internal affairs of Latin-American countries are their own concern; that we will not inquire into the way in which a government has been established and indeed will inquire into nothing beyond the maintenance of order. This second view is the one taken by persons who have any familiarity with international law or diplomacy. Practically every person of this description in Washington was shocked by President Wilson's refusal to recognize Huerta, and predicted from the beginning that no good could come of it. President Wilson's point of view was a marked advance in idealism. If it should be successful, it would more or less establish him in history as a statesman. Of course, from a practical point of view, there were and are many objections to it.

The Worst Result of Wilson's Policy

FROM the point of view of the present writer, the chief objection to his course is this: Here in the United States we are just in the middle of a very intricate political situation resulting from an intelligent attempt to carry out experiments in idealism which we have just attempted on our own account. Whether we shall be successful in this earnest attempt of our own is not yet certain. It is just the moment when we are in the midst of a delicate stage in this process that President Wilson chooses for implanting some idealism on Mexico, more or less against Mexico's will. If this attempt of his should result in our intervention in Mexico, it would postpone indefinitely the program of domestic legislation in which we were engaged. Indeed, that postponement has already happened. It might have been better to recognize Huerta as a strong man capable of maintaining in Mexico the same amount of law and order that has existed there for a long time, leaving us free to go forward with our own affairs. Aside from conceding that President Wilson took the first step with the best intentions, it is necessary to say that the complications which followed have not been handled with the highest efficiency.

What Wilson Should Do

ONE clear responsibility is laid upon President Wilson. If the efforts at mediation fail, if we have to go into Mexico with an armed force, the President must take the whole country fully into his confidence with respect to what he has done and has sought to do in Mexico since his Administration began. There has been no disposition to force his hand. Mr. Wilson's reticence on public affairs has been one of the marked features of his Administration. He has had public confidence and public support to a notable degree in his handling of the Mexican problem. This confidence has manifested itself in an extraordinary patience. The President has no ground for the complaint he voiced at the ceremonies in honor of the bluejackets killed at Vera Cruz. That plaintive, querulous note had no justification. The President, if he could only realize it, has been much favored by popular sentiment. His ways have never been obstructed or criticized to their hurt in Congress or out of it. In effect, he has had a free hand. If anything in the whole business is clear, it is that, whatever the outcome, the whole responsibility, the whole credit, or the whole discredit attaches to the person of Woodrow Wilson. It is proper that it should. At the very beginning of the enterprise, when there were manifestations of restlessness in Congress and of partisan debate, President Wilson asked that discussion in both branches of Congress be withheld. This request was made to the whole membership, regardless of party, and was granted. Congress refrained, virtually without exception, from criticizing or questioning the acts of the Executive. But if conflict comes, it is the right of the country to know all the facts; whether the business has been managed well or badly; whether the call to arms is justifiable or unjustifiable.

Wilson's Sole Responsibility

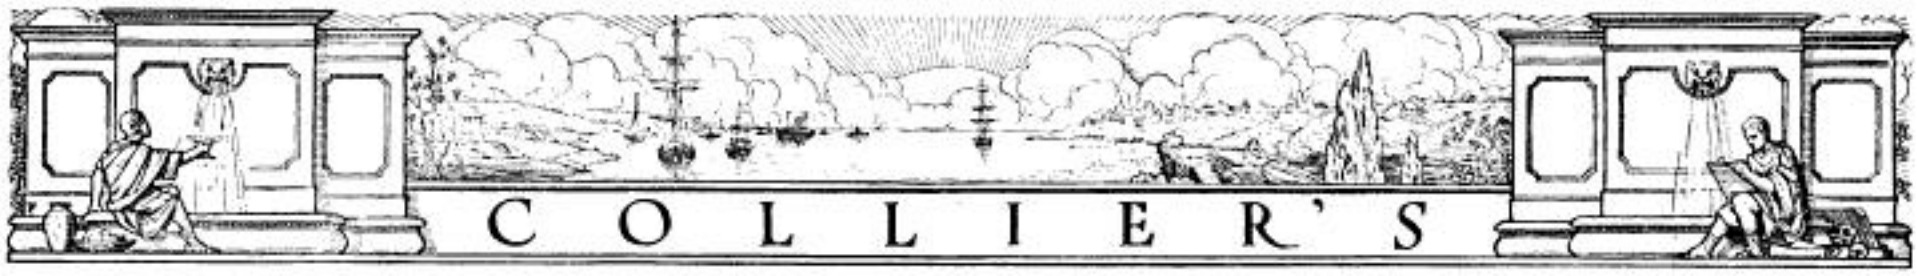
TWICE Congress has complained of the President because he asked its cooperation without giving his full confidence. The first time was when he asked in a message for the repeal of the tolls-exemption provision of the Panama Canal Act. That message had an unhappy effect. Members of Congress found it vague and unsatisfactory. They thought the President should lay his cards on the table. The second time complaint was heard was when Mr. Wilson asked Congress to justify him in using the armed forces of the United States against Huerta to compel reparation for the flag incident at Tampico. Comment heard in Congress at that time was that the President had not presented adequate reasons for employing the army and navy in Mexico. There was a debate that would have been longer had not decision been rushed by events at Vera Cruz. President Wilson was fully aware of the complaints in both instances. He will be well advised if he takes them to heart, and if it becomes necessary to send troops to Mexico City and put an army of occupation in the country, to tell the people at home who have supported him so loyally and with so complete a faith a plain, straightforward tale of the whole negotiations, step by step, from the beginning. A decent respect for the opinions of mankind includes, in this instance, if there shall be failure to prevent intervention, a complete account of the unavailing efforts, so that the country may determine whether they were wise or unwise. Mr. Wilson cannot do less than that.

Hogs, Congressmen, and Babies

THE House Appropriations Committee has recommended that the budget of the Federal Children's Bureau be cut from $164,640 to $25,640; also that $165,000 be spent on free seeds for constituents; also that $400,000 be spent to stamp out hog cholera. When your Representative is up for reelection this fall, ask him how he stands on these matters and what his theory is as to spending our money for these three objects, respectively. The House Appropriations Committee is at least seventy years behind the times.

After the Season Opens

FROM some remarks by Senator Porter J. McCumber of North Dakota as reported in the Congressional Record:



> If it is possible that the Chair can look over and see three or four Senators here, and a Senator desires to take the afternoon, while the rest, or 90 per cent, of the Senate is at the ball game, and there is no method by which you can call the Senate back into the chamber—if there is a rule that will prohibit us from obtaining any relief under those circumstances, I really want that rule pointed out.

HOW SENATORS AND CONGRESSMEN VOTED

FOUR hundred and thirty-five Congressional vacancies and thirty-one Senatorial vacancies will be filled at the primaries this summer and the election next November. In the great majority of cases the present incumbents are candidates for reelecton. The best basis for determining whether they should be elected is, to a large extent, the way they have voted upon important measures. Collier's Washington Bureau will provide the record of the votes of any Senator or Congressman on every important roll call since March 4, 1909. This service is entirely free of charge. Give the name of the Congressman or Senator whose record you wish and address

COLLIER'S WASHINGTON BUREAU,

Conscience and Controversy

THERE WAS AN UNHAPPY TOUCH in the speech which President WILSON delivered in honor of the eighteen sailors and marines killed at Vera Cruz. Starting out to give tribute and praise to these young men, and sympathy to their relatives, he ended by including himself in both the praise and the sympathy:

> I never went into battle, but I fancy that there are some things just as hard to do as to go under fire. I fancy it is just as hard to do your duty when men are sneering at you as when they are shooting at you.

President WILSON must have been seriously preoccupied with other affairs when he failed to see the rather repellent violation of taste in including himself with the objects of his formal speech of tribute. It is as if President LINCOLN, in the wonderful little letter which he wrote to Mrs. BIXBY about the death of her sons in war, had gone on to say: "But I, too, am just as brave as your sons were and just as much entitled to sympathy as you are." President WILSON went on into a very obvious example of one of the less pleasing of human traits—self-pity. "When they shoot at you," he said, "they can only take your natural life. When they sneer at you they can wound your heart." And then he used phrases which he apparently meant to be a description of himself:

> Men who are brave enough, steadfast enough, steady in their principles enough to go about their duty with regard to their fellow men, no matter whether they are hissed or cheered. . . . The cheers of a moment are not what a man ought to think about, but the verdict of his conscience and of the consciences of mankind, so when I look at you I feel as though I also and we all were enlisted men.

Mr. WILSON talks about his conscience as if it were of some superior variety. Senators and Congressmen who differ from him, and from us, on the Mexican imbroglio have just as good consciences. It isn't a matter of conscience; it is a matter of finding out the best way.

Our Mexican Problem

HUERTA'S HOUSE OF SAND is crumbling day by day. The capture of Tampico gave the Constitutionalists an important port on the Gulf of Mexico, completed their conquest of the north, drove HUERTA'S defense back on the line of Mexico City, and deprived him of important sources of revenue. There are no signs that any foreign power is coming to his aid, and the fall of his régime seems to involve little more than arranging an exit which will be safe and not too disgraceful. Now the work of reconstruction must begin. If the United States, acting as the first friend of the Constitutionalists, can supply the plans and practical methods for such a system of public instruction as has been put into force in the Philippine Islands, then Mexican civilization may in time be made over and faced toward the future. It is essential, however, that the old merciless exploitation of the peons be stopped. This will involve some such purchase and redistribution of the land as has been accomplished in Ireland and New Zealand. The concessionaire problem is one of great diplomatic delicacy, but may be approached by means of a just franchise-tax policy and rigid requirements as to conditions of employment. These measures will not appease the blood-and-iron fanatics, but the United States can do more for Mexico by carrying them to successful establishment than by leaving a trail of death and glory from Chihuahua to Campeche. Tyrannies rise only to fall, and the life of a nation must be based on justice. Is our idealism equal to the task?

Inspiration

ANOTHER THIRTIETH OF MAY COMES. Whether it be called Decoration Day or Memorial Day, it is an occasion at once grave and inspiring. The mission of the day has intensified with the gradual oozing away of all the rancor that once lay behind it. Under the blurring of the years, May 30 has become less a tribute to individual achievement and memory and more a consecration to that love of country which transcends all thoughts of self. The issues of the old conflict have long been forespent; what remains is the ardent sincerity of the men who fought, whatever the color of their uniforms. Yet many a veteran who dons his faded uniform and the cap with its tarnished acorns realizes that his place may be empty a twelvemonth hence, when those still hale move along dusty roads to the village cemetery with its sky-pointing flags. In their passing is a certain pathos, but inspiration also, for the spirit that burned in their veins will not become extinct. Behind them in the procession of the day tramp their sturdy sons; still farther behind, carrying flowers, come their grandchildren. One flag is above them all. A single, passionate patriotism animates them all alike.

It Is Up to Marietta

WHOSE BRILLIANT MIND conceived the plan of bringing GEORGE WHEELER HINMAN to Marietta to serve as college president? That this servant of YERKES and HINES and LORIMER should ever have been chosen to instruct young men or head a college faculty is more than preposterous. HINMAN in charge of youth with its idealism and aspirations; HINMAN as guide of character and guardian of good citizenship! It would all be uncommonly comic were it not grave indeed that this one-time "Inter Ocean" editor should be administering academic justice. We are not surprised that such acts of repression as have been committed at Marietta have been made in the name of the trustees and the dean and that HINMAN hugs the background when he is not lecturing upon the perils of the Republic. But think of this man HINMAN giving four compulsory courses in American government! We hope that the young men of Marietta College will not stop short at protesting against an academic reign of terror. We do not know personally Professor MORSE—HINMAN'S first victim—nor do we care what his politics is, or how he wears his hair; that a professor should be forced out of his position because he teaches economics which the college president does not accept is (we are trying hard to speak judicially) intolerable and, to-day, almost unthinkable. It makes it all the harder when a HINMAN is the tyrant before whom Marietta must bow down or resign. MORSE is gone now and, so far as we know, welcomes his release; it is up to the students to find means of procuring the unconditional reinstatement of their fellows, editors of the college monthly—one of whom has been suspended, the other expelled, for daring to criticize the college administration. Discipline in colleges, as in the world at large, is relative. Cossack methods are peculiarly out of place in an American college in 1914. What do the students and alumni of Marietta College think about HINMAN'S work as editor of the late lamented Chicago "Inter-Ocean"? Do they propose to let him finish wrecking Marietta too—all in the name of "college loyalty" and "this representative Republic"?

Correcting an Error

IT SEEMS that some of the friends of darkness in Oregon have misunderstood us. They have construed our recent criticism of an example of poor English composed and printed by students of the University of Oregon into an attack on the institution itself. Nothing could be more false or more silly. Oregon has needed the service of a great State university for years, and is now only beginning to give the support in money and enthusiasm which other and more enlightened States gave their universities years ago. If Oregon is to be a great commonwealth, this progress must go on. We are sure it will.

Why We Like F. P. A.

WE REFERRED some time ago to our enjoyment of the "colyum" which FRANKLIN P. ADAMS runs in the New York "Tribune." Here's the reason—when the howling over Mexico was at its yellowest, F. P. A. came forward with this ray of sunshine:

BRIGHT SAFFRON SHEETS

After "Bright College Years"

Bright saffron sheets of crime and strife,
The wildest of our hectic life,
How many, many times a day
Ye have your 96-point say!
The papers come, the papers go,
The circulations wane and grow—
This be your slogan, an ye burst:
"For God, for Country, and for Hearst!"

In Mexico when troubles rise,
Who is the wisest of the wise?
Who gleams like Henry of Navarre?
Who but our hero, Willie R.!
What benefits the human race?
War, WAR!—all o'er the well-known place.
War—though the order seem reversed—
"For God, for Country, and for Hearst!"

We like this combination of horse sense, fact, satire, and wisdom. It springs from a rarer talent than most folks realize.

As to Panama

THE RICHMOND (VA.) "TIMES-DISPATCH" rises to remark (apropos of the noisy and noisome free-tolls issue) that "a ship subsidy by any other name costs as much." It smells exactly the same, too.

Digitized by Google

THE NATIONAL WEEKLY

Is the Price Worth Paying?

SINCE 1902 New York City has had a Domestic Relations Bureau, with a court attached. Last year 4,000 cases were dealt with, more than half of them without recourse to the court. The superintendent of the bureau, Mrs. IDA T. USHAW, tells a reporter of the New York "Evening Sun" that drink is responsible for more of the cases than any one other cause. Her remarks are to the point:

There are other troubles—infidelity, incompatibility, no economic sense, inability to prepare for emergencies, and lack of knowledge of how to manage a home. These are all important elements in the discontent which is breaking up so many families. *But drink is by far the most frequent, and, in this country at least, it is the man who drinks much oftener than it is the woman.*

Mrs. USHAW concedes that men sometimes take to drink because of wives' shortcomings. She does not claim innate superiority for her own sex. The fact remains that, but for drink, there would probably be less than half as many divorces and separations. In Chicago drunkenness is responsible for 46 per cent of the cases tried in the Court of Domestic Relations; in Brooklyn the percentage is 45.8. We never, even in our most somber moments, have any doubt of the remarkable experiment in self-government now in progress on this continent. But of all the things that disturb us occasionally, none is so menacing as the phenomenon that, with all the facts about alcohol before us, we continue to permit unscrupulous men to exploit it.

Latin-Americans and Yankees

THE FLOOD OF FICTION—novels and short stories—inspired by our Mexican mix-up will probably soon arrive. But we doubt whether any of it will have more appositeness and quality than RICHARD HARDING DAVIS'S "Soldiers of Fortune," published way back in 1897. That was concerned not with Mexico, but with the imaginary republic of Olancho, yet we know of no more timely study in contrasts between ebullient, go-as-you-please Latin America and well-focused Yankee alertness. The novel has bits which seem written of this very crisis. Here is a description of the arrival of United States jackies in the midst of a local revolution:

CLAY saw that the Americans on the balconies of the club and of the theatre had thrown themselves far over the railings and were all looking in the same direction and waving their hats and cheering loudly, and he heard above the shouts of the people the regular tramp of men's feet marching in step, and the rattle of a machine gun as it bumped and shook over the rough stones. He gave a shout of pleasure, and KIRKLAND and the two boys ran with him up the slope, crowding each other to get a better view. The mob parted at the palace gates, and they saw two lines of bluejackets, spread out like the sticks of a fan, dragging the gun between them, the middies in their tight-buttoned tunics and gaiters, and behind them more bluejackets with bare, bronzed throats, and with the swagger and roll of the sea in their legs and shoulders. An American flag floated above the white helmets of the marines.

There is such a thing as waving the national flag too frequently and indiscriminately. But "Soldiers of Fortune" does it the right way.

Trails

ROAD WALKING, such as WESTON practices and HAZLITT and STEVENSON have eloquently praised, has its proper place in civilization. Ready-made travel is, all the same, despised by the lover of the woods. Give us a path through the pines, a path carpeted with needles that are the softest and most fragrant of carpets, urging the feet onward. Then are one's steps rapid and springy: then does one realize the full truth of the poet who said that travel's joy lies not in arriving but in setting forth, in pressing on. To make a new trail through the forest is man's work; to tread an Indian trail through the woods of Maine is to taste pleasure beyond the ken of city dwellers.

Phew!

Cartoon by F. G. Cooper

A Sample "Professor"

WHY DOES the average practical man distrust college professors? Why do so many otherwise sensible editors think it a sufficient refutation of WOODROW WILSON to call him "Professor" or "Schoolmaster"? Here is a case: SIMON N. PATTEN of the University of Pennsylvania, one of our most original and active-minded economists (he once wrote a defense of the protective-tariff policy), is giving his views on everything south of New Orleans. He says in part:

Sugar, fruit, rice, bananas, and other tropical plants have now become an essential element in our food supply, and only through further development of the products can a low cost of living be restored.

Now, the market pages of the papers in which this rhinestone of thought was published prove that bananas, rice, and sugar are exceedingly cheap. Any family that will base its diet as far as possible on these foods will save money. Our high-cost-of-living problem is the problem of growing, moving, and marketing the farm products of our own country. Professor PATTEN either did not know what he was talking about or he did not care. Practical men prefer statements that have some relation to the facts.

The Simplicity of Algebra

THE BUMPTIOUS FOOLISHNESS of many of our "business experts" and "uplifters" is very well shown in the following item from one of their magazines:

The psychology of success is important. It is composed of ambition or aspirations and confidence or self-esteem. The following equation by WILLIAM JAMES is interesting:

$$\text{Self-esteem} = \frac{\text{Success}}{\text{Pretensions}}$$

By a simple process of algebraic transposition, WILLIAM JAMES'S equation becomes: Success = Self-esteem × Pretensions.

This latter equation may be true sometimes in New York City, but is not likely to be true very often anywhere else. The expert who so deftly transposed WILLIAM JAMES is one RICHARD PRENTICE ETTINGER, Director Efficiency Bureau, New York University, and he ought to go down in history as the man who put the "bray" in algebraic.

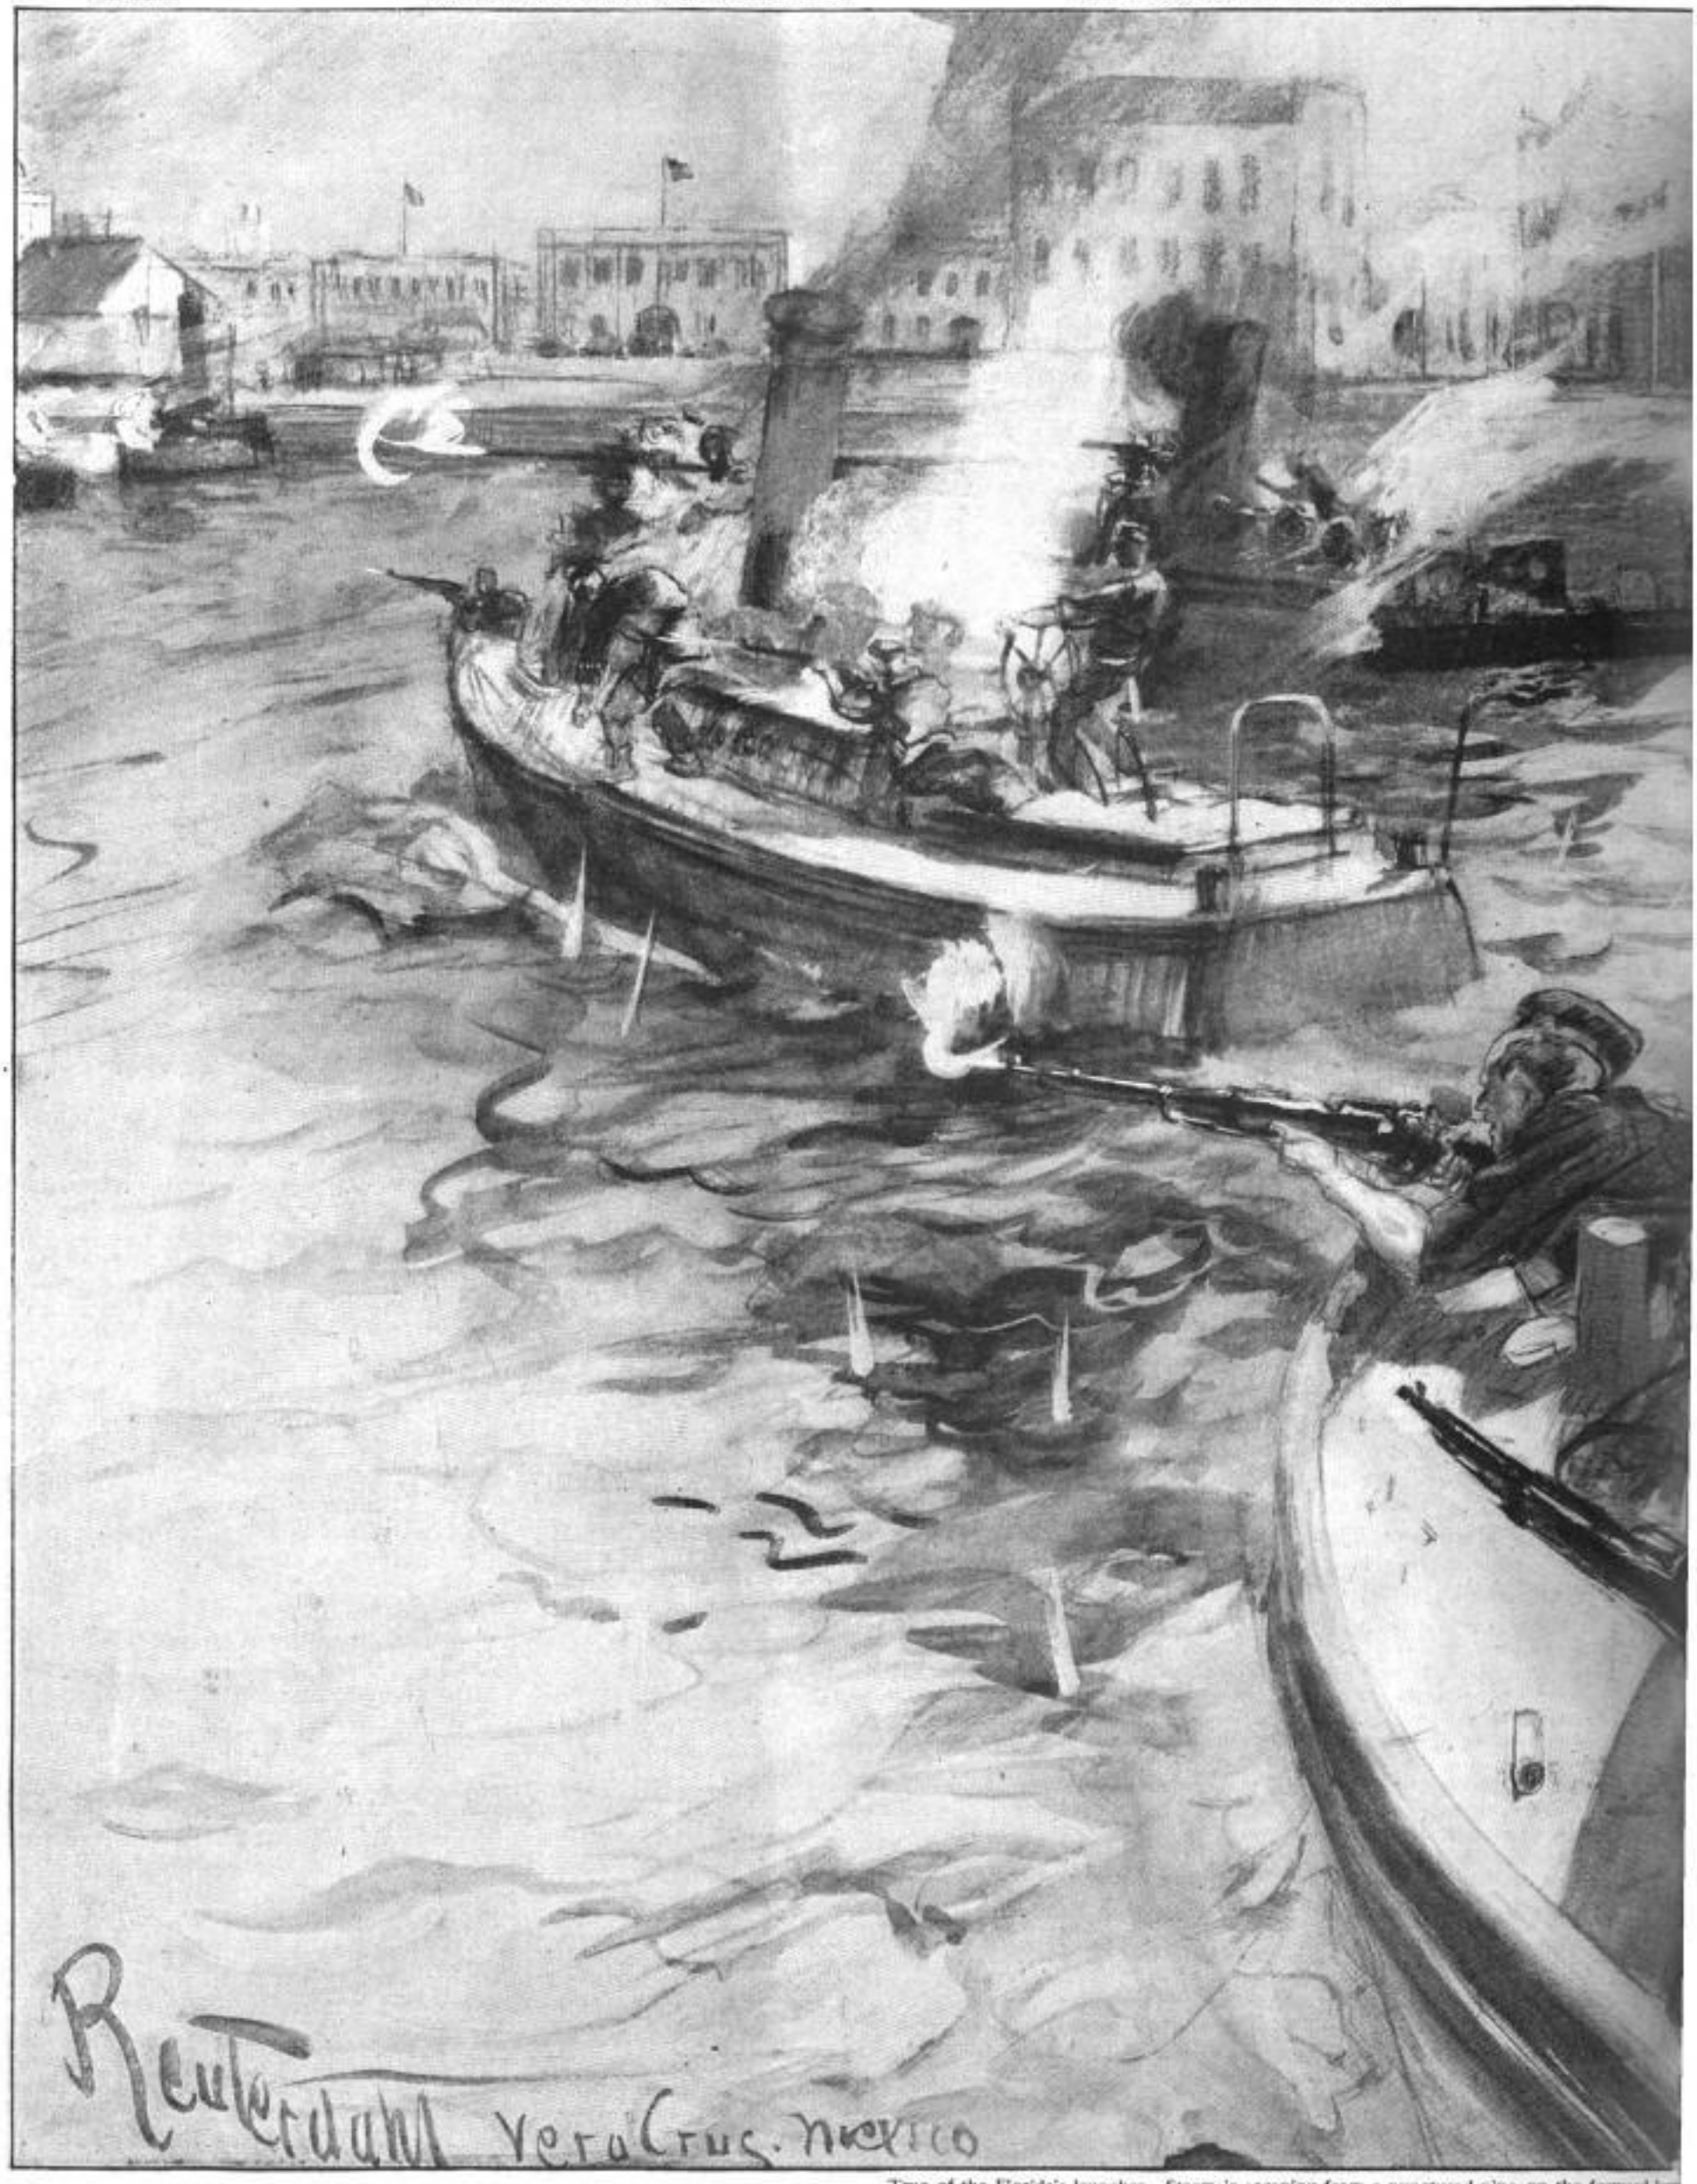
It Is and It Is Not

FROM A RECENT BOOK of uplifting tendencies:

On the other hand, it is marvelous how much nerve disease or weakness entirely disappears if the mind can but realize the fact that no disease is actually present.

What would become of the Republican party if this great truth should be applied in the field of politics? And why not?

The Real Argument for Religion



FOR GENERATIONS theologians have written learned treatises to prove the existence of God. Each generation has overthrown the contentions of its predecessor, and forced a restatement of the arguments. Yet through it all the faith of men has gloriously persisted, with small regard for the theologies, natural and dogmatic. One reason for this is compactly stated by that incorrigible idealist, RUDOLF EUCKEN, in his newly translated "Knowledge and Life":

The peace of mind and the fullness of hope which religion brings to the souls of men have undoubtedly meant far more than all the efforts of theologians and philosophers to found religion upon a scientific basis. . . . It is because religion is no mere theory of divine things, but the inauguration of a new life, that it cannot possibly doubt the real presence of a Divine Being within the human soul.

More and more we incline to think that one who has had no experience of religious power cannot, after all, be argued into accepting the Divinity and His religion by any intellectual persuasion. The person who has experienced the saving power of religion needs no proof of its validity. It is real to him as love is to the mothered child.

Make This a More Enjoyable Summer

MAKE it one long vacation filled with boating pleasures from beginning to end. Make it a summer of skimming about over lake and stream to the summer home, camp, hunting or fishing grounds without a lick of work. Simply forget oars and paddles. Just have the bulliest time you ever had—scooting about with your motor-tow-boat.

There's just the price of a Caille Portable Boat Motor standing between you and such sport. If you haven't a row boat, don't let that deprive you of a summer chock full of fun—buy one or rent one—but get one. Then attach a

CAILLE Portable Boat Motor

by simply forcing two thumb screws. It weighs but 55 pounds, generates 2 H.P. and drives row boats 7 to 8 miles an hour or slow enough to troll. It is steered by a rudder—like any launch. The rubber is of our folding, stone-dodging type (Pat. applied for). Weedless propeller is protected by a substantial fin. Motor is easily adjusted to any angle or depth of stern. Starts with half a turn of the fly wheel. Can be run in salt or fresh water. Furnished with battery ignition or high tension magneto. No extra charge for underwater exhaust.

Sold by leading Sporting Goods and Hardware Dealers everywhere.

Send for Catalog

It's a beauty—chock full of interest for lovers of boating. Use the coupon.

For Larger Boats

we build a complete line of marine motors from 2 to 30 H.P. in from one to four cylinder designs. These are made in various types for heavy, work boat service and for pleasure boat use. The 8 H.P. Unit Power Plant shown herewith is an ideal motor for the average pleasure boat. It embodies a reversing gear mounted on the same bed with engine insuring perfect alignment of shaft.

We will gladly assist in solving power problems for those building launches. We will also gladly send our Marine Motor Blue Book to any address. Dealers wanted.

The Unfinished Drama

(Continued from page 8)

ever, arranged before an effective background and made to wave their tall straw hats and give a bewildered cheer for the American flag.

Back to the Groove of Habit

GRADUALLY, partly because of the strong hand used quickly when needed, partly because the townspeople began to understand that our way of treating a captured city was different from theirs, the indolent old tropical seaport began to be itself again. Shutters came down, shops opened, soft-eyed women with hair down their backs began to appear on the balconies—even, now and then, to smile at some smart young officer riding by. Newsboys and peddlers awoke, donkeys with milk jars bobbing on their flanks pattered through the streets. The Portales became gay again.

Every Mexican plaza is a sort of general reception room—that of Vera Cruz peculiarly so, because of the cosmopolitan crowd always coming and going through the port. Officers from the fleet, coffee growers, mining men, business men from the capital, soldiers of fortune and adventurers, wives and children, and even a Mrs. Hanksbee or two with susceptible ensigns buzzing about her—you had but to take a table under the Portales, order something to drink, and sooner or later everybody in Mexico, so to speak, passed by.

A band from one of the battleships played away in the center, companies of marines or bluejackets in service equipment went tramping by, and people ate and drank and heard rumors and declared over again—at least all those who had left their investments behind—that we must go all the way to the capital now, or every American might as well leave the country.

On the first Sunday morning mass was said as usual in the old church from whose belfry snipers had been firing a few days before. Rows of women, like blackbirds in their black mantas, kneeling on the stone floor, peons at the back and sides, with melancholy eyes fixed on the altar and blazing candles, the intoning of the priest coming through the cool interior with its vague, sweet incense smell, and, outside, armed men marching by and the pounding of the band.

The Classes of Refugees

IN the midst of the service a dozen sailors in white, wearing cartridge belts and bayonets in scabbards, slouched in. There was a hush and fans stopped waving as they shuffled across the rear of the church to the center aisle. There the first, turning to the altar, knelt on one knee and crossed himself. The others did the same, and they found places in the pews with the rest.

For a moment, in that cool interior, these people of different race and speech knelt together, and through the clatter of the Plaza and the strangely clashing forces of the moment reached the power in whose name the conquistadores fought through tropical jungles, burned, sacked, tortured, and civilized and founded cities like this. Then a bell tinkled, feet stirred, and the people drifted out. The sailors came with them, dipped their fingers at the font, crossed themselves, and, meeting the sunshine, picked up their rifles and were soldiers again.

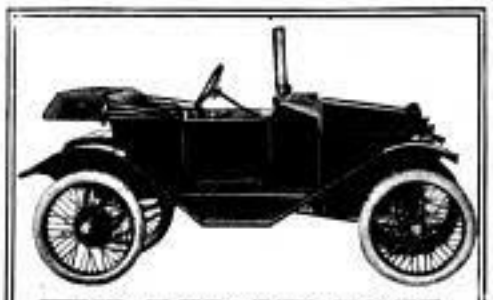
There were many sorts of "refugees." One or two were women who held a quaint sort of court at the tables under the Portales—gossiped, flirted, were furious when somebody else's dress clashed with theirs—in brief, attracted more attention and had more excitement probably than ever before in their lives. There were men, ferocious and voluble beyond words, sitting thus in the shade of the Diligencia's arcades, with plenty to eat and drink, and a fleet and thousands of capable men to fight for them—café warriors whose shrill-voiced complaining contrasted oddly with the reserve and almost universal tact and big brotherliness of the professional fighting men. There were business men leaving the work of years without knowing whether they could ever return to it, and impatient of any other suggestion than that of going through with what had been started, and pacifying the whole country if Americans were ever to be secure in it again.

And then there were those who had no money to waste in the Portales, and came in worn and dusty from a week's slow progress under guard in crowded day coaches, with nights spent herded in dirty provincial jails.

Such were the farmers and their families who came in one hot afternoon from a land-development colony in Oaxaca. They were typical American prairie farmers—lean, sun-baked, patient, quizzical, with tired-looking wives and incredible numbers of tow-headed children—just the sort of queer, hopeful fish who jam the home-seekers' trains to some Government land opening in the Northwest.

Like Those of Acadia

THEY had come to the tropics just as they had gone to Texas and Oregon before, learned the new ways, got used to the climate, put in their oranges and pineapples, and were just getting ready to make a little money when the order came to go. One man told me that he and his family had four hours to pack up and get out. A squad of Federal soldiers rose up and told them it was not thought safe for them to stay.



"It's a fine country," he said: "ain't a richer country nowhere. The Mexicans round our colony liked us all right, and we liked them. Why, they actually cried, some of 'em, when we come away. Just two weeks more and we'd had them pines ready for market." His weather-beaten face lit up as he thought: "They're them long ones—you know what they are all right if you've ever been to Mexico City. There was twenty thousand dollars' worth of them pineapples our colony growed. And now they'll go to waste." They were treated well enough, he said, along the line, although they were crowded into jail at Cordoba and had to listen all night to what the guard said was going to be done to them in the morning. "The worst of it"—and again his face lit up as if a new idea had struck him—"was our Jersey cows. We had nine of them, nine Jerseys, and had to leave 'em behind!"

A New Method of Conquest

WITHIN a week the navy had taken a hostile town, put it in order, and all but made friends with its people. Just what may result from that sudden

A squad of soldiers succeeding the bluejackets as police in a Vera Cruz square. "Within a week the navy had taken a hostile town, put it in order and all but made friends with its people"

TRUMBULL
CYCLE CAR

YOU could write an almost perfect description of this wonderful little car just by putting down the car qualities you have wanted for years: lightness, low fuel cost, lowest possible tire cost, the rugged strength of a truck and the graceful, stream lines of an imported racer: all achieved without freakiness or experimental vagaries.

Every mechanical device that insures strength and durability, every refinement of design that has been developed in the automobile industry is incorporated in the Trumbull.

Trumbull specifications are those of a highly developed ultra-modern automobile. The only difference is in size. Mechanical starter? Yes. Electric lights? Yes. Comfort? Ample for two, with compartment in rear for two hundred pounds of luggage. Top, wind shield, electric lights and horn, mechanical self starter and tools are included as regular equipment at the extraordinary price of

$425
FULLY EQUIPPED

The Trumbull motor is a marvel of compactness and reliable, silent power. It speeds the car from forty-five to three miles an hour.

Proportions, finish and little niceties of detail are adequate beyond your keenest anticipation. It is a car you will be proud to drive and display to your friends.

But above all—it's economy!

It runs thirty-five miles on a gallon of gasoline. Tire cost is low. Cost of upkeep is less.

Trumbull Cycle Cars are on exhibition in various sections of the country. Write to us for the name of nearest agent and for full description and specifications.

order to take a customhouse—this war which isn't war—can scarcely be surmised here and now. It was not the navy's part to reason why, but to do what they were told, and they did it well and quickly. Many, especially among the poorer classes, were doubtless sorry to see their conquerors, who first smashed doors and then fed and cared for them, go away. Everywhere their work seemed to be done, not only bravely and well, but with a certain gentleness and understanding sympathy. One battalion of bluejackets which made its headquarters in an orphan asylum adopted the whole hundred and fifty little brown, bright-faced youngsters, fed them, and gave them the time of their lives. During the first two days this part of the town was handled more roughly perhaps than any other, yet the night before the battalion left, the women of the neighborhood, to show their gratitude, brought an embroidered tablecloth to the battalion commander and a hatrack for his adjutant, and when the battalion marched down to the water the next day the orphan boys' band played at the head of the column over the same space across which the advance, under fire, had been made a week before.

Our Own Legionaries

THE army transports came—white steamers covered with men in khaki, swimming slowly in in single file behind a line of black destroyers in the hush of a tropical dawn. There was a sound of band music shortly after lunch that day, and suddenly, from a dozen different directions, the men who had taken Vera Cruz, dusty and sunburned now, came marching back to their ships. Past the commanding officers of the navy and land forces these amphibious gentlemen of the sea returned to their native element. Infantry and marines presented arms as the bluejackets tramped past, the marines swung in, there were cheers back and forth, a band played "Auld Lang Syne," and the navy's work was done.

The Sailors Swallowed Up by Ships

THE manner in which the five thousand men stepped off into the sea, so to speak, with as little confusion and delay as if they had marched straight off the wharves on some sort of invisible bridge, was characteristic of the quiet efficiency of all the navy's work at Vera Cruz.

All at once they were gone, and that highly organized strength and intelligence, officers and men, signal flags wigwagging against the sky, sentries in the dark, steamers and "kickers" boiling back and forth at the landing stage—all that flexible, closely articulated, watchful mechanism which had flung itself through the streets of Vera Cruz and out into the dunes and sand ticks eight miles away—shrunk down to a few black specks against the Gulf.

Brickbats & Bouquets

PROVIDENCE, R. I.

Please allow me to contribute a few bouquets and perhaps a brickbat. I like your paper because of its entertaining stories, its fearless handling of the pure-food problem, and the weekly series of photographs of current events. I also like the editorial page.

Now for brickbats!

I find that because the paper is not returnable it is not kept by most news dealers except on order. This is especially inconvenient when one is traveling and desires the paper regularly. Another feature that I do not like is that of serial stories. At present there are two of these running, and that seems to me like "crowding the mourners."

I have been a regular reader of COLLIER'S now for a year or more, and but for these two features could feel quite satisfied. KELSEY S. ORDWAY.

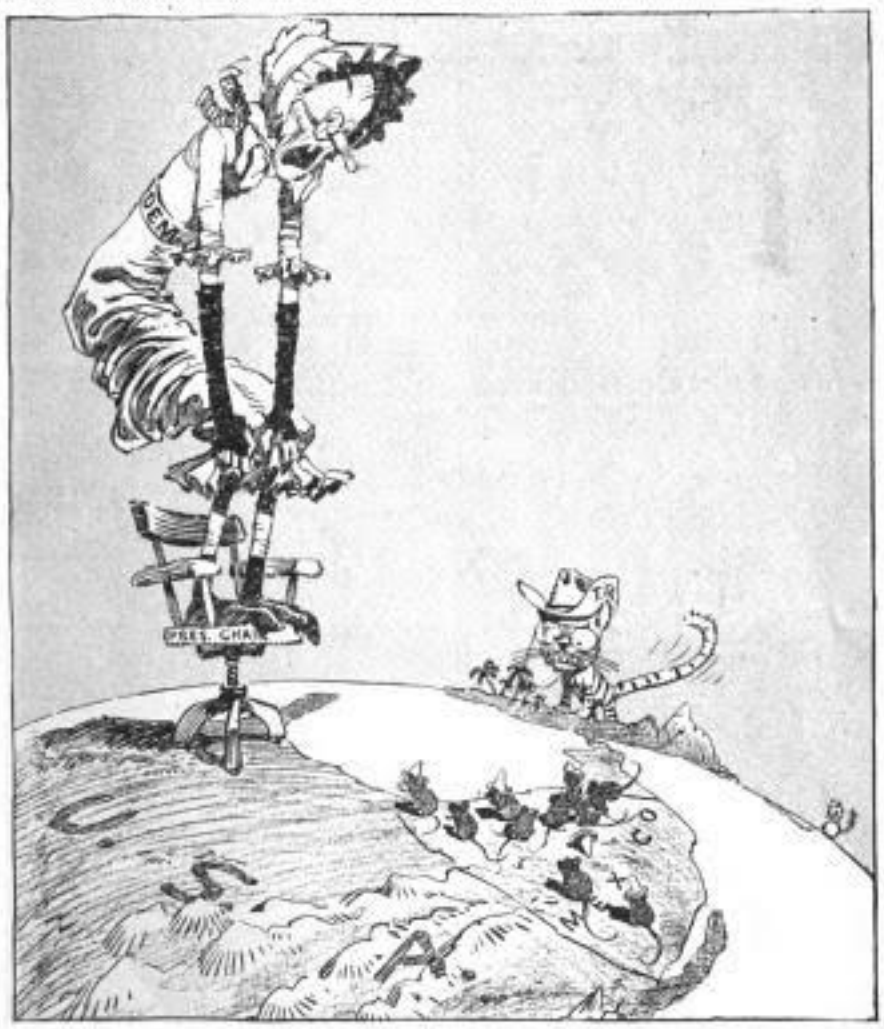
✚

CAMP MEEKER, CAL.

"The Last of the Family," appearing in your issue of May 2, is a splendid thrust at the vicious and erotic trend in the popular fiction of the day. All honor to the author and to the publisher—and to the dear old "lady of Virginia"! She represents the type of femininity, now obsolete, which produced the "true Southern gentleman," a term synonymous with courtly gallantry and knightly devotion to womankind.

Also, I will say that your present serial is truly refreshing after the tainted melodrama which preceded it. This story is "different" from the ordinary run of fiction, and yet is eminently down to date and true to the spirit of our hustling age. The "Madame" with her keen business instinct and supreme selfishness is as much a character in her way as "Becky Sharp." The story presents a fine illustration of the humbuggery which people love, and it has pathos, too. The pathos is expressed in the title, "The Tyranny of Beauty."

For a fact, COLLIER fiction is improving—hope it doesn't backslide!



MRS. RUSSELL JAMES.

While the Cat's Away . . .

Assured Safety for Record Race or Pleasure Ride

Specify the Springs That Won't Squeak

The "veteran" drivers in the big Indianapolis Race demand Detroit Springs. They know all championship chances may be ruined, the driver's life imperiled, by the slightest spring trouble. Detroit Springs alone possess flexibility to absorb big shocks at highest speed. They alone own the emergency-strength that warrants confidence against accidents.

And—this safety assurance is every bit as important for the pleasure car. Avoid all spring trouble, riding discomfort, danger—by specifying

RESILIENT Detroit Springs

SILENT TRADE MARK =SELF-LUBRICATING

Guaranteed For Two Years

from date stamped on top of shortest leaf. A guarantee that covers emergencies and unusual service for twice as long a period of time as the usual spring guarantee. One that necessitates a standard of quality that makes possibility of accidents and replacements too remote to consider.

An exclusive advantage of Detroit Springs is the self-lubricating device. Detroit Springs wipe out that pest of motoring — squeaking. Every movement of the spring automatically spreads the long lived lubricant with which the cups are filled. The leaves softly, silently slide one over the other. This assures a velvety resilience not to be reasonably expected of any other spring.

Is it any wonder that careful drivers, car buyers, are demanding Detroit Spring equipment on their new cars?

Is it any wonder that dealers are learning that one of the best "closing" arguments they can point to is Detroit Steel Spring equipment on their cars?

Every car owner every dealer —every maker of motor cars —You—will profit by prying into the facts about Detroit Springs. You will be interested in

NOISE

The motor's complaint against incorrect oil

If your motor makes some unusual sound, stop your car. Investigate.

Noise frequently means unnecessary friction—the direct result of incorrect lubrication.

Common noises are:

"Thumping." A dull thump at each revolution of the main shaft indicates worn main or connecting rod bearings. This trouble is hastened by oil of low *quality* or incorrect *body*—will finally result in badly worn bearings and knocking.

"Knocking." This may be due to loose wrist-pins. It may be due to badly worn bearings or bushings which should be refitted or replaced. Incorrect lubrication will cause both of these troubles.

"Carbon Knock." A sharp muffled ring, at ignition, indicating excessive carbon deposit usually caused by oil of low *quality* or incorrect *body*.

"Pounding." Due to engine laboring under overload. Lubrication plays no part in this trouble.

"Hissing." This is frequently due to heavy scoring of cylinder walls. It is most often brought on by inefficient lubrication.

* * * *

There is only one insurance against the results of incorrect lubrication. That is the use of oil of the highest *quality* which is correct in *body* for your type of motor.

You can secure this oil by referring to the Lubricating Chart which is partially shown at the right. For a number of years this Chart has been a standard guide to correct lubrication.

It represents the professional advice of the Vacuum Oil Company—the recognized world leaders in scientific lubrication.

Our complete Chart will be mailed to any motorist on request.

We will also send on request a pamphlet on the Construction, Operation and Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

It is safest to buy Gargoyle Mobiloils, in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

Abroad at Home

(*Continued from page 12*)

by the sound of the word "Europe." Nor have they attempted to secure old masters.

Does it not seem a mistake for any museum not possessed of enormous wealth to attempt a collection of old masters? A really fine example of the work of an old master ties up a vast amount of money, and, however splendid it may be, it is only one canvas, after all; and one or two or three old masters do not make a representative collection. Rather, it seems to me, they tend to disturb balance in a small museum.

Thirty-Thousand Corots

TO many American ears "Europe" is still a magic word. It makes little difference that Europe remains the happy hunting ground of the advanced social climber; but it makes a good deal of difference that so many American students of the arts continue to believe that there is some mystic thing to be gotten over there which is unobtainable at home. Europe has done much for us and can still do much for us, but we must learn not to accept blindly as we have in the past. Until quite recently, American art museums did, for the most part, buy European art which was in many instances absolutely inferior to the art produced at home. And unless I am very much mistaken a third-rate portrait painter, with a European name (and a clever dealer to push him), can still come over here and reap a harvest of thousands while Americans with more ability are making hundreds.

One of the brightest signs for American painting to-day is the fact that it is now found profitable to make and sell forgeries of the works of our most distinguished modern artists—even living ones. This is a new and encouraging situation. A few years ago it was hardly worth a forger's time to make, say, a false Hassam, when he might just as well be making a Corot. . . . Which reminds me of an amusing thing a painter said to me the other day. We were passing through an art gallery, when I happened to see at the end of one room three canvases in the familiar manner of Corot.

"What a lot of Corots there are in this country," I remarked.

"Yes," he replied. "Of the ten thousand canvases painted by Corot, there are thirty thousand in the United States."

A Hotel Worth Imitating

THERE are two interesting hotels in Buffalo—one with a kind of solid dignity which has for years enjoyed a high reputation and which is patronized to-day at luncheon time by many of Buffalo's leading business men; another more "commercial" in character. My companion and I happened to stop at the latter, and we became very much interested in certain things about it. For one thing, every room in the hotel has a bath—either a tub or a shower—and running ice water. Everywhere in that hotel we saw signs. At the desk, when we entered, hung a sign which read: "*Clerk on duty, Mr. Pratt.*"

There were signs in our bedrooms, too, I don't remember all of them, but there was one bearing the genial invitation: "*Criticize and suggest for the improvement of our service. Complaint and suggestion box in lobby.*" While I was in that hotel I had nothing to "criticize and suggest," but I have been in other hotels where, if such an invitation had been extended to me, I should have stuffed the box.

Besides the signs, we found in each of our rooms the following: A clothes brush; a card bearing on one side a calendar and on the other side a list of all trains leaving Buffalo, and their times of departure; a memorandum pad and pencil by the telephone; a Bible ("Placed in this hotel by the Gideons"), and a pincushion, containing not only a variety of pins (including a large safety pin), but also needles threaded with black thread and white, and buttons of different kinds, even to a suspender button.

The Reward of Virtue

BUT aside from the prompt service we received, I think the thing which pleased us most about that hotel was a large sign in the public wash room, downstairs. Had I come from the West I am not sure that sign would have startled me so much, but coming from New York—! Well, this is what it said:

Believing that voluntary service in wash rooms is distasteful to guests, attendants are instructed to give no service which the guest does not ask for.

Time and again, while we were in Buffalo, my companion and I made excuses to go downstairs and wash our hands in the public wash room, just for the pleasure of doing so without fear of being attacked by a swarthy brigand with a brush. We became positively fond of the melancholy wash-room boy in that hotel. There was something pathetic in the way he stood around waiting for some one to say: "Brush me!" Day after day he pursued his policy of watchful waiting, hoping against hope that something would happen—that some one would fall down in the mud and really need to be brushed; that some one would take pity on him and let himself be brushed anyhow. The pathos of that boy's predicament began to affect us deeply. Finally we decided, just before leaving Buffalo, to go downstairs and let him brush us. We did so. When we asked him to do it he went very white at first. Then, with a glad cry, he leaped at us and did his work. It was a real brushing we got that day—not a mere slap on the back with a whisk broom, meaning "Stand and deliver!" but the kind of brushing that takes the dust out of your clothes. The wash room was full of dust before he got through. Great clouds of it went flouting up the stairs, filling the hotel lobby and making everybody sneeze. When he finished we were renovated. "How much do you think we ought to give him for all this?" I asked of my companion.

"If the conventional dime which we give the wash-room boys in New York hotels," he replied, "is proper payment for the services they render, I should say we ought to give this boy about twenty-seven dollars."

A Landmark

THERE are many other things about Buffalo which should be mentioned. There is the Buffalo Club—the dignified, solid old club of the city; and there is the Saturn Club, "where women cease from troubling and the wicked are at rest." And there is Delaware Avenue, on which stand both these clubs and many of the city's finest homes. Unlike certain famous old residence streets in other cities, Delaware Avenue still holds out against the encroachments of trade. It is a wide, fine street of trees and lawns and homes. Despite the fact that many of its older houses are of the ugly though substantial architecture of the sixties, seventies, and eighties, and many of its newer ones lack architectural distinction, the general effect of Delaware Avenue is still fine and American.

My impression of this celebrated street was necessarily hurried, having been acquired in the course of sundry dashes down its length in motor cars. I recall a number of its buildings only vaguely now, but there is one which I admired every time I saw it, and which still clings in my memory both as a building and as a sermon on the enduring beauty of simplicity and good, old-fashioned lines—the office of Spencer Kellogg & Sons, at the corner of Niagara Square.

A Recipe for the Simple Life

IT happened that just before we left New York there was newspaper talk about some rich women who had organized a movement of protest against the ever-increasing tendency toward show and extravagance. We were, therefore, doubly interested when we heard of a similar activity on the part of certain fashionable women of Buffalo.

Our hostess at a dinner party there was the first to mention it, but several other ladies added details. They had formed a few days before a society called the "Simplicity League," the members of which bound themselves to give each other moral support in their efforts to return to a more primitive mode of life. I cannot recall now whether the topic came up before or after the butler and the footman came around with caviar and cocktails, but I know that I had learned a lot about it from charming and enthusiastic ladies at either side of me before the sherry had come on; that, by the time the sauterne was served, I was deeply impressed, and that, with the roast and the Burgundy, I was prepared to take the field against all comers, not only in favor of sin, laxity, but in favor of anything and everything which was favored by my hostess.

Digitized by Google

Throughout the salad, the ices, the Turkish coffee, and the Corona-coronas I remained her champion, while with the port—nothing, it seems to me, recommends the old order of things quite so thoroughly as old port, which has in it a sermon and a song. After dinner the ladies told us more about their league.

"We don't intend to go to any foolish extremes," said one who looked like the apotheosis of the Rue de la Paix. "We are only going to scale things down and eliminate waste. There is a lot of useless show in this country which only makes it hard for people who can't afford things. And even for those who can, it is wrong. Take the matter of dress—a dress can be simple without looking cheap. And it is the same with a dinner. A dinner can be delicious without being elaborate. Take this little dinner we had to-night—"

"*What?*" I cried.

"Yes," she nodded. "In future we are all going to give plain little dinners like this."

"*Plain?*" I gasped.

Our hostess overheard my choking cry.

"Yes," she put in. "You see, the league is going to practice what it preaches."

"But I didn't think it had begun yet: I thought this dinner was a kind of farewell feast—that it was—"

Deprivation of Champagne

OUR hostess looked grieved. The other ladies of the league gazed at me reproachfully.

"Why?" I heard one exclaim to another, "I don't believe he noticed!"

"Didn't you notice?" asked my hostess. I was cornered.

"Notice?" I asked. "Notice *what?*"

"That we didn't have champagne!" she said.

Cleveland will be the subject of the next article, to appear in an early issue.

A Rally on the Colors

(Continued from page 18)

be here in the morning. You have been so good to me. I can't thank you, but I appreciate it."

"If you were really grateful you would let me read the letters to you. Come," she urged gently, "hear just one, and if it wearies you we will keep the others till morning."

"Well, if you insist," he sighed indifferently.

She placed the lantern on the floor and knelt close to the pillow that her voice might not reach the others, and slowly read:

DEAR HARRY, MY OWN SOLDIER BOY—*I know that you are getting well or I would have heard before now, but the suspense is hard to endure. I have had no news except the brief cable that you were seriously wounded, and I am counting the hours until the first mail comes, for, of course, some one has written if you could not.*

You must not worry about me, but get well as fast as you can and come home to our boy. You can't think how dear he is and how he grows. He has six little teeth, tiny pearls in the sweetest mouth, and he sits up so strong. I am shortening his dresses and he isn't a little baby any more but a real boy. He says "Dad, dad," quite plainly, and I think he suspects he has a daddy neither "present nor accounted for," who might be coming home soon.

We write you a letter daily, so you will probably get a whole series by each transport, and oh, sweetheart, I hope you are sending us word by each returning boat, for these days are pretty bad and the long nights worse, waiting for weeks for letters. But I mustn't talk about it, just keep busy with the boy, our boy, whom you have never seen. We kiss each other for you and send a hundred in this letter. Get well and come home to your lovers,

Your wife and baby.

The letter ended, but the nurse still knelt in the lantern's dim light. It was a supreme moment. She felt if it failed "Colorado" was lost.

"Are you willing to die and leave such a wife to face the future alone?" she said. "Are you willing this boy should be left to fight his own way with no father helping—at first for her the bitter loss and loneliness, and then the long years when she will need you for his sake? Think it over, and when I come back, if you have concluded to make another try for it, you will take your glass of milk and give yourself at least a fighting chance," and shading the lantern she hung it on the tent pole and left him.

An hour later the nurse returned, making her last rounds, but there was no request from "Colorado" for milk, or any sign that her effort to rouse him had been successful. She saw in the moonlight flooding the tent where the sides were rolled up to admit the breeze that he was not asleep, and she threw herself down on her own cot, wondering if he would silently drift away alone, while all about him slept.

THE Shadow seemed very near. Its presence made her wakeful. Was there nothing to stir the boy to one more effort? He was a brave man with a record for nerve and courage, and for weeks he had made a great fight against fearful odds, but he was giving up now. Yes, one thing might rouse him. She resolved to try it though it might snuff out his heartbeat in an instant. She took the chance, weighing swiftly the consequences.

Kneeling by the pillow, she spoke in low, tense tones that pierced the sluggish brain and burned themselves into his consciousness.

"I want to say one thing more that I think you may not have remembered in this easy scheme of dying to get out of your troubles. You excuse yourself because you are so worn and ill that you can't fight any longer—"

A note of scorn crept into her voice.

"Well, I want to say that nobody but a coward would do that, nobody but a quitter, and you know God hates a quitter. What can you expect from Him when you run up the white flag like this?"

PAUSING a moment, that his wavering faculties might be arrested and his emotions stirred by her words, she went on: "Oh, it's nothing to die—any one can do that—but it takes a brave man, a soldier of the real sort, to tackle what you are up against and come through with colors flying. They'll put you with the heroes, of course, but you will know through all eternity that you have no right there, and I shall know that a man who can storm an entrenchment with his line to cheers and red fire couldn't muster up courage enough alone to pull himself out of a hole." Silence—but the boy's eyes were on hers.

"Pennsylvania" was still across the aisle—he had had a bad time; but he was better now, and just here he took it upon himself to speak.

"'Colorado,'" he said, "I've been hearing what she says. You don't know all I know about her right to talk. You wouldn't be here to play the quitter, you'd have been out of it all that first night if she hadn't got up when you fellows came in; seventeen hours she'd been at it, and she'd just lain down; at first she told us boys she absolutely

In the Picture—a Week's Output—Twenty-Five Thousand Rims.

Tires Last Longer on Stanweld Rims

THE best tire built is soon made inefficient if fitted to an imperfect rim. Makers of few rims cannot afford to spend the time, money, and energy spent to make Stanweld Rims the most perfect rims.

Safety

To begin with, Stanweld Rims are made of a special steel, according to our own rigid specifications. Every lot of steel is tested chemically and physically before being made into rims on which will depend the lives of thousands of car-owners. And the rim is again tested for strength when finished.

Perfection

Stanweld Rims are inspected three times for accuracy of dimensions, perfection of form, smoothness of tire-seat, and ease of operation. There is another point, however, that means more from the standpoint of tire-economy than anything else. That point is design.

Stanweld Number Sixty Rims

Take Stanweld Number Sixty Rim, for instance. It is positively the only rim made from which casings and tubes can be removed without stretching, contracting or distorting them in any manner. That's a great advantage, because no tire will return to its exact original form after being pulled out of shape. And a tire out of shape is soon a tire out of service.

Operation

To operate Stanweld Number Sixty Rim you first unlock six automatic clamps—and they stay unlocked. Then you remove the tire, with the outer rim attached. Next, with a screw-driver, you unlock a toggle-lock and remove the inner band.

This inner band is in no way attached to the tire proper. It can't freeze to the casing, and you don't have to use special tools to pry it off.

After the band is removed, the entire inside of the casing is easily accessible. You can remove the tube as easily as you'd remove it from the box it came in. Or, you can conveniently repair or replace the casing without destructive stretching or pulling.

Makes Straight-Side Tires Bigger

Stanweld Number Sixty Rims can be changed from clincher type to straight-side type by merely changing the side-rings.

When used for straight-side tires the Number Sixty Rim allows greater spread of the tire at the base than any of the old-style rims. This feature gives the tire greater air-space; reduces the strain on the tire-walls; gives the car greater riding-comfort; and increases tire-mileage.

You'll Want Them

You'll find Stanweld Number Sixty Rims on high-quality cars. But that doesn't mean you have to buy a high-priced car to get them.

Nearly every car sold with demountable rim-equipment can be purchased with Stanweld Number Sixty Rims at no additional cost—if you just ask for them. Or, if you already own a car, you can equip it with Number Sixty Rims for very little money. Then you'll have the best rim-equipment made, and you'll save your time, temper, strength, and a large part of your tire-expense.

The main office is glad to furnish any one with complete information about the Number Sixty Rim, or any other type of rim.

Just write a letter or post-card today.

The Howard Watch

THE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class; as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch—with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making world.

The wonderful character of the HOWARD Watch is that it meets men of so many different kinds and occupations on their own ground. Men in commerce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel in 18K gold case at $170—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U.S. Navy. You'll enjoy it. Drop us a post card, Dept. A, and we'll send you a copy.

couldn't make another turn, but we knew she'd do just what she did; get up and work for hours for all of you. She was no quitter, she was a man; and now, say—you're going to shame us all or you ain't." They waited a tense moment; they heard "Taps" blowing along the bay, where a newly arrived regiment was tented on the Laneta; and through the ward floated the perfume of the "Dame de Noche," that blossoms only with the twilight.

"Colorado" sighed; then in a voice weak and quavering, but vibrant with a new note, he said: "Bring on your milk."

He got well.

TWO years after he got back home there was a new baby, a girl this time. He said he had asked the volunteer nurse's name on purpose before he left the hospital so as to have it handy when the time came; now the time was come, and for her the new baby was named.

The Tyranny of Beauty

Continued from page 15

pack, showing how the milk works through the pores of the skin and feeds the muscles underneath, to do another set of the same kind showing how the apple acid works through the pores and dissolves the fat. Have him draw it just the way she writes it in the text—these drawings that don't go with the text ain't with a row of pins. And there's gotta be a picture of a bottle—mark it 'Pure Apple Acid'—"

"A photograph of a test tube half filled with liquid would look more 'scientific,'" suggested the chemist with a sneer which she did not apparently see, for she snapped up the word and ordered a photograph of the test tube in place of the bottle.

"PUT down a note on that, and then put down another note that she's to look up some statistics about the consumption of apples and the death rates in the States where they're most used. Cancer—that's a good idear—put that word down. With the right sort of tables we could show that apples—apple acid, that is—are a preventive of cancer. Apple States and cancer States. . . . But tell her she's got no time to be running round to libberries looking up facts—write what oughta be facts about the action of apple acid on the human system and have that young newspaper man do a line of pictures that'll convince the public. She can pay him five dollars for his work. The most important thing now is to get the proper shade of pink and the right finish on the wrapper, and I guess I better have her look up the samples, she's got such taste. Put down 'heavy pink, suède-finish paper for wrappers'—that's the first thing she's to do—something extra classy. . . . It might pay to put a foil underwrapper on this soap—give the idear that the acid's very powerful. Miss Beekman, you see that there's a foil underwrapper—tell the forewoman to rewrap this French soap that way.

"You know what's in this soap, Mr. Pusey?"

"About what's in it. I can analyze it for you and tell exactly."

"Don't waste time on that. I simply want a new antiobesity of our own make—cheap—so all you gotta do is get a good formula and start manufacturing it. But the main thing now is to decide on a shape and size that looks expensive. Do that this afternoon."

A SNEER at her had been growing on his face while she dictated, and, barely concealing it, he inquired with supercilious coldness: "Do I understand that you wish me to put 'apple acid' in this new soap?"

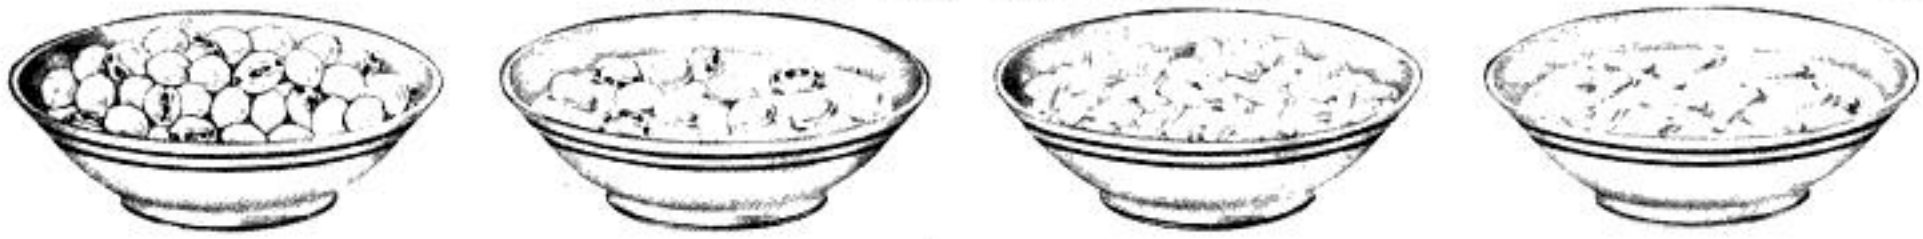
"Put apple acid in the soap?" she snapped. "Where are your ears? Who said anything about putting it in the soap? Didn't you understand those were notes to Miss Cryder telling her to put it in the advertisement? . . . Here, Bessie, take another note—tell her to be extra particular not to say the apple acid's *in* the soap—somebody thinking himself smart might take it into his head to analyze it and then accuse me of selling goods under false pretenses. Say for her to be sure to add a guarantee in fine print: 'No acid in this soap'—that'll keep us on the safe side. . . . That'll do, Mr. Pusey. Gemme those dummies right away."

Exit Mr. Pusey with an assorted glance at Miss Beekman that would probably have been lost on madame even if she'd seen it. He pitied himself immeasurably, and raged with his whole scientific soul. She heaved a sigh of relief. "Well, that's settled. Now if we can get the pink paper this afternoon and rewrap that French lot as our own make—introduction size, only three dollars—won't be sold in this size or price after this month—next size twice as expensive—twelve hundred cakes oughta run out in a week with a proper demonstrator and the right 'dope' after Julia Cryder's got it sounding scientific. . . . Henrietta dear—you better see to the fittings of the demonstration booth—you got such taste in those things. Arrange boxes of soap between boxes of Oregon apples—that'll carry out the idear of the apple acid: make the booth a bower of apple blossoms—those new paper flowers, you know—you can gettum at any of the stores. Might be prettier to have an apple tree in full bloom in the middle of the booth with the demonstrator standing under it. Then we'll have some small pink flowers to stick under the ribbons on Zulu—we oughta move about a thousand Zulu at the same time—'Put on fat, or take it off'—play up that idear—and another thousand on the preparations. Give-away flowers do a lot of talking, so get something that costs about a dollar a hundred and looks like a present. If we work it right, a week's demonstration oughta net us five-six thousand—that'll near pull us outa the hole and square us with the bad season. Trouble is to find a demonstrator who can handle it—draw in the crowd on her own account—not the goods at all. There's one if I could get her. Have to pay her a thousand dollars, but I'd offer her a deal—every dollar over six she can keep, every dollar under five she makes up outa her fee. But could I get her?"

"I know who you're thinking of," purred Beekman. "I know—Winkie Wakefield!"

"Winkie Wakefield!" I cried, horrified, at the same moment that my aunt uttered the name in Eureka tones. "Surely, Aunt Maggie, you must have seen some of the New York papers this summer—you must know her latest—"

"Know her latest scandal? I should say! Why, they talked of nothing else out in Col'raydo this summer. Did me a good turn—I placed a ten-gross lot of Zulu with one firm on Winkie Wakefield's name—told them she'd been coming to the *salon* for years—I made her face—she used Zulu night and morning. But I suppose she's in retirement—ain't she, Henrietta?"



DEAR Henrietta, with a sidewise glance at me under her lashes, communicated that Winkie was in retirement—after the fashion of her kind—and would be in for a very private treatment at four o'clock. She was also in money difficulties and might be open to a—suggestion.

I protested hotly: "Aunt Maggie, you surely wouldn't let a woman of that sort represent you publicly?"

I can't be too explicit on Winkie Wakefield's special qualifications for the position now opening her way—I shouldn't wish her recognized under the name I've given her; suffice it that she was very beautiful and had achieved one of the largest notorieties in the country, capping the climax of a gay career through the usual channels of stage and divorce court by getting herself mixed up with one of the most sensational murders of the day—a person my aunt scorned to speak to in public, fumed when Winkie accosted her before women, and wouldn't have dreamed of inviting to the house.

"She don't represent *me*—I got nothing to do with her character outside her honesty in money matters," returned my aunt loftily. "She can move this stock—the White Sisterhood's aching in their bones to have a squint at her even a mile away and with a cake of soap in her hands! All it needs is the right staging for her act—you'll see to that, Henrietta dear—and Winkie Wakefield and I, we'll give ole Winston quite some pointers on his ole law of diminishing returns! I guess after he's certified

10 Meals With Us

Ten meals like these—delightful meals of Puffed Grains served in various ways. Breakfasts and suppers which you'll never forget. Our offer today is to pay for all ten, so all your folks may know the joys of Puffed Grains.

The Coupon Pays for All

Today we make this offer to you, as we make it every spring. Every year, on the verge of summer, when millions of homes enjoy Puffed Grains.

Go to your grocer and buy from him a 15-cent package of Puffed Rice. Take this coupon with you. He will give you for it a 10-cent package of Puffed Wheat, and we will pay the dime.

Thus for 15 cents you get two packages this week—ten meals of Puffed Wheat and ten of Puffed Rice. And ten of the meals are our treat.

You Will Never Forget

After this test you will never forget the delights of Puffed Wheat and Puffed Rice.

You will see whole grains puffed by steam explosion to eight times normal size. You will see grains thin and porous, crisp and fragile, with a taste like toasted nuts.

You will see bubble-like grains which fairly melt in the mouth into almond-flavored granules. And a thousand future meals will be made more delightful because you know of Puffed Grains.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

Every Granule Exploded In Prof. Anderson's Way

Those cells in each Puffed Grain are caused by a hundred million explosions. Each separate food granule is exploded from inside.

The grains are sealed in guns, then subjected to fearful heat. Thus the trifle of moisture inside of each granule is changed to explosive steam.

Then the guns are shot and the steam explodes. Each granule is blasted to pieces.

This is Prof. Anderson's process for making digestion easy and complete. No other process does that. In the best of cooking at least half of the granules remain solid and unbroken.

So Puffed Grains are more than enticing. They are scientific foods. Your physician knows them to be the best-cooked foods in existence.

Good for 10 Cents

Buy from your grocer a 15-cent package of Puffed Rice. Then present this coupon and he will give you a 10-cent package of Puffed Wheat. He will collect the 10 cents from us.

Serve some of these grains with cream and sugar. Mix some of them with fruit. Serve some for supper, like bread or crackers, floating in bowls of milk.

Use some like nut meats in home candy making or as garnish for ice cream. And let the children when at play eat the grains like peanuts. You will find these both foods and confections. Cut out this coupon, lay it aside and present it when you go to the store.

The Quaker Oats Company

Sole Makers

SIGN AND PRESENT TO YOUR GROCER 58.

Good in United States or Canada Only

This Certifies that I, this day, bought one package of Puffed Rice, and my grocer included free with it one package of Puffed Wheat.

Name _____

Address _____

To the Grocer

We will remit you 10 cents for this coupon when mailed to us, properly signed by the customer, with your assurance that the stated terms were complied with.
The Quaker Oats Company—Chicago

Dated _____ *1914*

This coupon not good if presented after June 25, 1914. Grocers must send all redeemed coupons to us by July 1.

NOTE: No family is entitled to present more than one coupon. If your grocer should be out of either Puffed Wheat or Puffed Rice, hold the coupon until he gets new stock. As every jobber is well supplied, he can get more stock very quickly.

10-Cent Coupon Good Only When Puffed Rice is Purchased

books for me a few years more he'll begin to discover that the law of diminishing returns ain't all there is to the beauty business—not while I'm on top, anyhow. There's another law—the law of crossing the footlights. It don't matter how good your goods are—if they don't cross, they're no good. And it don't matter how bad they are—if they cross, they sell on the craze, and then you get the law of accelerating returns. The craze—that's what does it. You gotta start a *craze*—let the craze work for you. Or else you gotta hitch your goods on to a craze already started—like Winkle Wakefield's. Why, men'll buy this soap as much as women!... No, Henrietta, I wasn't thinking of her—I was thinking of Lillian Russell—if I could get her for a thousand for one week. But your suggestion is worth a mint more money to us—stand Winkle under the old apple tree and have the old oaken bucket beside her for a cash box to drop the money into as she takes it outa their hands and a dipper to fish out the change with—why, she oughta move a thousand cakes of Apple Acid Soap a *day!* Three dollars a cake—eleven cents that cost us, didn't it?—and three-four hundred Zulu along with it—oughta clean up twenty thousand fer us on a week's demonstration if the police don't interfere with the crowds—that's all I'm afraid of. When these good women turn out for a free view of one of her sort, they get to crowding and pushing and stamping and tearing off veils, and before you know it somebody's fainted, and then there's a riot, and in come the police and break up the sale for you. But three or four officers in pink uniform to match the wrappers, and set Winkie up real high so's the ones on the outside can see her too, and I guess we can manage the crowds that'll come—all that's needed is to get a popular preacher to denounce her from the pulpit the Sunday before—tell what she's going to do and warn his congregation notta go near the store. But I guess Julia Cryder can fix that—she'll find the right one and poke a stick in his cage."

All of a sudden she rose and stretched, exclaiming: "Will you looka the time! Most two! I gotta place in here"—she pointed amidships—"calling for clear green turtle soup and broiled squabs with French artichokes. Henrietta dear, you look like you had the same sort of place and call in your insides. We can plan out Winkie's act while we eat—that'll save time—I gotta see her this afternoon and then secure the department-store assignment for her and see about the ads—so hurry with your hat."

Thus died the Beekman conspiracy, stillborn, entombed, and sunk to oblivion in broiled squabs and turtle soup.

ARE the spiritually significant moments of life ever dramatic? I wonder! I had set my mouth for a dramatic, exciting exposé of Miss Beekman's schemes and a denouement by which she'd get her just desert. Nothing happened: my aunt, without knowing it, pricked the bubble of Miss Beekman's ambition and the rest of the conspiracy flattened out through those spontaneous readjustments that take place automatically in the presence of creative individuals. With invisible emanations given off from her personality she denatured the plots against her and went about her own affairs. The establishment was reanimated, quivering with a fresh vital energy after its long languishing. Orders flew right and left—different wrappers, different tints for this and that, different names for old stock that wasn't moving fast enough. Next morning she told me to make up ten thousand jars of Zulu for a window demonstration and put a sign over it: "Ten thousand dollars' worth of pure skin food—what New York uses in one day."

THESE changes, apparently trifling and often looked at askance by her underlings at the time—like changing the name of a soap and making it a tremendous seller—all brought results in hard cash—changes that seemed to come by inspiration and that she usually graced with the remark: "I think I see myself sitting down under any ole law of diminishing returns."

BUT in spite of her bravado, I knew that the argument had made a profound impression on her by the way she was constantly studying out some new method of eluding its workings. "Play up a new line on the big market—" and that happy inspiration put into effect with the aid of Miss Cryder and Winkie Wakeman for a week in a department store netted twelve thousand dollars and sent Apple Acid Soap booming and soaring to the skies. And who but a genius—confronted as she was that day with a debt, no credit, and two remonstrating men—could almost on the instant have perceived that way out: the law of the footlights—the law of accelerating returns through crazes—and have thrown herself upon uncaptured markets with the elements that came to hand?

Looking back, I like to tell myself that on that first of September when the clock struck twelve I witnessed the birth of a commercial Napoleon—a woman of greatness, though she was a kind of monster. In her loyalty to a petty cause she showed a courage of conviction, a singleness of purpose, a devotion to the thing she'd created that might well have graced a saint. Even her mad rush for wealth was in some sort a self-denial and an austerity: if she loved money for what it brought, she loved it far more as the measure of her capacity to wrest it from the world. She saw it not as the fruit of fraud, but as tribute to her worth and usefulness. Out of her claptrap and tricks she certainly won a hardy self-respect; she was ethically a rudimentary type.

FROM the first of September I noticed a change in her difficult to define except with the word Napoleonic. Her operations grew larger and were also of a somewhat new type—her main idea now was to push across the footlights and let the craze do the rest. That was where the money lay—in cutting the selling costs—for the production costs could not be cut by the infinitesimal fraction of a cent except by using inferior ingredients, and that, as I've already said, she never considered. Indeed, filler for all our standard articles on the one-cent test cost too little to bother about, and my labor added only the twenty-fifth of a cent a jar to Zulu and less on the germ-proof face powder where a dollar's worth of labor was sufficient to dye and scent a hundred pounds of chalk which in turn yielded 6,400 quarter-ounce boxes of mineral paste for the trade.

As a logical consequence of the Napoleonic stage, my aunt now made her plunge into the retail mail-order business—on a wholesale plan. Though originally one of the reasons she'd given for taking a whole building, this had been

hanging fire for several years. First she thought she would—that was under the stimulation of Mme. Granville; but while organizing the new establishment, one of the big drug concerns put out a line of facials with demonstrators, then, becoming disgusted with the expense, threw over the demonstrators and relied on magazine advertisement entirely, only to discover presently that their stock would not move. They were compelled to revert to their demonstrations.

"What fools men are dealing with women," was her comment. "You'd think an idiot child would know that when it comes to toilet preparations, women buy on smell—more afraid of getting the wrong scent tag on them than they are of a rattlesnake." Which means that perfumes not merely go out of fashion—they become absolutely taboo at certain trade levels—the badge of the "other class"; so the printed advertisement can never capture more than a portion of the women with the dollar. Madame's own demonstrations had trained her in the target advertisement that aimed a pink jar at a woman's eye and nose and told her: "You can be beautiful!" and picked off sales as it went along. Shotgun methods that aimed vaguely at the dear public, hit or miss, were to her mind abhorrently wasteful of cash and uncertain of result. She said she "knew ole Granville was a liar," and let the mail-order business go at that.

But now with a load of high-priced stock to move in a hurry through the fall season, goods easy to pack and mail without fear of breakage, she opened her advertising campaign with Apple Acid Soap and saw results that surprised her.

MISS WINKIE had done her duty by the house and herself—took the fat White Sisters into her childlike confidence and told them she wasn't half as bad as the papers had tried to make her out—not nearly so black as she'd been painted, as they could see by looking at her—and that her lovely form and face were the result of using Apple Acid Soap, and bit an Oregon apple to prove it. She sold the bitten apples for a dollar each and pocketed the proceeds as one of her perquisites.

Madame overlooked this trifling peccadillo—because she had to or lose Winkie, who was making more off bitten apples than her thousand-dollar fee—and rushed a small advertisement of the soap with Winkie's indorsement into one of the women's journals just as the forms were closing. Two hundred women responded in one week—nine hundred dollars! We were still using the French soap as an "introduction size" while waiting for our own small cake, "made in our laboratories and guaranteed to contain no acid," that was to sell at the same price, and madame had to send around town and buy it even of retailers to fill the orders. But the deed was done, and we became a mail-order house forthwith.

My aunt flung herself into this new line of activity as a hungry dog grabs a bone. She fairly barked and growled over it. Place had to be made for the department, a staff organized, a special catalogue system installed. And then—the "litterchure."

JULIA CRYDER and she hobnobbed together for hours—lunched together, dined together often—in the throes of creation; for it had suddenly seemed to come to my aunt that she could make her advertisements as personal and talky as a demonstration. I do not say she actually wrote the advertisements as they appeared—Julia, dear, fricasseed them into shape for serving—but she delivered the bone and meat; she gave them that something—Heaven alone knows what it is—that crosses the footlights. "Fat—the Vital Index"—she and Miss Cryder wrote a scientific booklet under that title to prove it: if you had too little, you were sick; if you had too much, you were sick; you might not know it, but you were. Fatty degeneration of the heart was an awful thing—the young newspaper artist drew a picture to show what you looked like with a fatty-degenerate heart; and several more to show the heart strangling with its degenerate fat. On the other hand, if you were too thin . . . But you need be neither—the Del Mar Beauty Parlors would weigh and measure you, standardize you as to fat and lean and make you well and keep you well. Scales were introduced into the parlors for this purpose and card records for the use of customers.

(To be concluded next week)

Wilson Bro's

Athletic Union Suit

Licensed Under the Klosed-Krotch Patents

MADE BY Wilson Bro's EXCLUSIVELY LICENSED UNDER THE Klosed-Krotch PATENTS OCT. 18-1910

Look for the label

THE favorite undergarment for the active men who desire the maximum of comfort and neatness. The closed crotch prevents binding and chafing—no edges or buttons between the legs. Front and back openings are separated and cannot gap open—always orderly and smooth. Combines freedom, coolness and lightness—the ideal undergarment for sultry days. Wilson Bro's Athletic Union Suit is the only garment of its kind licensed to be made under the Klosed-Krotch patents. Comes in a variety of woven fabrics. $1.00 and up for men; 50c and up for boys.

Other furnishings bearing the Wilson Bro's mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

Wilson Bro's
Open-Mesh Union Suit
Licensed Under the Klosed-Krotch Patents

MADE with the same patented closed crotch as the Wilson Bros. Athletic Union Suit. A superior open-mesh fabric, airy, absorbent, elastic, long-sleeves, half sleeves and sleeveless; ankle, three-quarter and knee-length. $1.00 and up for men—50 cents for boys.

Wilson Bro's
Combinette Shirt
Licensed Under the Klosed-Krotch Patents

A ONE-PIECE garment that combines outer shirt and drawers. Ideal for playing golf, tennis and other open air activities. Crotch is closed like the Wilson Bros. Athletic Union Suit. No working up or bunching of shirt tails. Half or full sleeves. Soft attached collars or without. $1.50 and up.

At your furnisher's or he can get them for you.

Wilson Bro's Chicago

SAXON $395

Price of $395 includes windshield, top, sheet curtains, lamps, tools, jack and tire repair kit.

3000 SAXONS Now in Use

The Saxon is a tried and proved car. A car that is making good throughout the land. A car that has proven its mettle on the hills of Pittsburgh, Seattle, Kansas City, Boston, Cincinnati. A car that is standing the strains of country driving in Michigan, Wisconsin, Pennsylvania, New England, Colorado, Texas and all the other States. A car that is pleasing the fancy of wealthy buyers in New York and Chicago—and fitting the pocket book of thousands all over the country.

More than 3000 Saxons are already in use and we are shipping them at the rate of 75 a day.

No Test Too Hard

Saxons stand the trying test of owners' use because long before we put the cars on the market they had received at our hands all the testing we could then devise.

But we are still thinking up new tests. At Detroit a Saxon has just completed a grind of 135 miles a day for thirty consecutive days.

Under official observation it has gone a distance in thirty days of 4050 miles, equivalent to a year's use in the hands of the average owner.

It has averaged 30 miles to the gallon of gasoline with two passengers. Similar tests by our dealers show similar results.

Saxon Sturdiness Throughout

The old Saxon virtues of simplicity, sturdiness and endurance have been built into this car. Every bit of material used in it is of high grade—equal, in all the essential parts, to the quality of material used in cars costing five to ten times as much.

The smooth running, powerful motor of Saxon design is of Continental make. We use vanadium steel springs. The material in our axles, frames and transmission is as good as you will find in cars at $1500 to $2000.

And every Saxon car is thoroughly tested in the factory and on the road before it goes to you.

Good Looking and Economical

Saxon cars from the first have won the public by their good looks. They are snappy and up-to-date. Streamline body, tapered bonnet, molded oval fenders, racy lines give a smartness and distinction wholly new in low-priced cars.

The Saxon is wonderfully economical. You get 28 to 32 miles from a gallon of gasoline; 150 miles from a quart of oil. A set of tires should easily run 5000 miles, and when replacement is necessary a complete tire costs only $11.95.

Order Your Saxon Now

The uses of the Saxon are numberless. The demand for them has been far ahead of what we anticipated. Some folks are going to have to wait. The wise thing to do is to order now.

Write Dept. E **Saxon Motor Company, Detroit, Mich.**

and get it first, get it before it goes into book form.

The Munsey with its complete novel and all other features costs you 15c.

The same novel when it goes into book form will cost you $1.50.

The Double-Squeeze at Villa Borghese

(Continued from page 16)

examined the sky once again, Win whispered: "My name's James—S. W. James—remember! Explain later."

Getting the sign, Tris Ford nodded.

"When's the next train to Rome?" asked Win, smiling significantly upon Mrs. Leonard.

"I don't know exactly," answered Ford.

"Must start at once," announced Win.

"W-h-a-t for?" Tris Ford could not suppress his curiosity entirely.

"To see the American Ambassador."

THE manager's face brightened. "He's here—on the dock—waiting for—" Win scowled.

"—for an American he has to meet," completed Ford.

"After he sees his friend—whoever he is—have the Ambassador look us up at the Excelsior—that's the top-notch hotel, isn't it?"

"Mebbe it is," acknowledged Ford. "I'm stopping there."

"On our way," ordered Win, rather arbitrarily. But he winked at Tris Ford.

"I'll join you there in—half an hour," said the manager—"after I've arranged with the Ambassador. Say—John Bismer's all right. Why—he's a real fan."

But Win Shute was hurrying away—out of range of the human ear. With Mrs. Leonard he rattled off in a one-horse victoria fortified by a taxi-fare register. That's why he didn't see the wireless operator of the *Colonia* taken from the ship and paroled in the custody of the British Ambassador.

Judge—Well, you certainly performed that robbery in a brutally ingenious way, but—
Crook—Aw, Judge, yer flatters me!

At the time agreed Tris Ford knocked at the door of S. W. James—for so James Winton Shute was registered at the hotel in Naples. "Shall we talk here?" Ford asked, "or go to my room?"

"Here—Mrs. Leonard is across the hall."

"Say—who's this Mrs. Leonard and what's the game?" demanded Tris Ford. "You didn't wise up to it, but the American Ambassador was down on that dock looking for *you*."

"Honest? Are you next to the Ambassador?" Win Shute asked, eagerly.

"Sure I am. The President of the United States has 'released' him to me!" There was a matchless smile.

"Fine business! Now you can help me get Miss Leonard out of trouble."

"Miss Leonard?—daughter—"

"Only daughter—only girl!" Win's eyes gleamed. Then, catching the look of understanding on Tris Ford's face, half humorous, half glad, he blushed—blushed as a bush leaguer sometimes does when returning to the bench after his first safe hit.

"You haven't been signed, have you?" asked the manager.

"Not yet," confessed Win, suppressing the inevitable sigh. "But I'd sign in a minute if she'd offer me a contract—contract with a reserve clause for life," he announced boldly.

THEN he told all about it, ending with the why and the wherefore of his incognito of "S. W. James."

"She'll never care for me a second when she knows I'm a professional ball player. *She's* a dead swell," Win exuded gloom with every syllable.

"If she won't have you," said Tris Ford, "you wouldn't have her." This was not an Irishism.

"Tris—the unclad lad with the bow and arrow has winged me—might as well confess it."

"You don't have to tell me that," laughed Ford.

"Why not?" Win was startled. Had the world begun to guess?

"Because you haven't so much as referred to your own case—how you got aboard that ship, and how you were treated."

"Oh, I cabled that from Gibraltar. I'm all right—so what's the use bothering over it now?"

"Well, I'm—" Tris Ford didn't finish. His expression was enough.

"I know—you think I ought to be fighting mad at the crooks that put me aboard that boat drugged," said Win. "One way I am—another I'm not. If I hadn't been sent off on the *Colonia*, I shouldn't have met Imogen Leonard."

TRIS FORD wagged his head from side to side, looking the while like a fair reproduction of Resignation. He asked the king of second basemen if he had any objection to further activities on the manager's part to land the chief crook in prison. Win Shute had none, provided he was not dragged into it until he had made his "play for the girl." But when Tris Ford sought information about Jerrold Mansel, there was a protest.

"See here, Tris," argued Win, "what Mansel did to me—suppressing my messages and faking a wireless from you to the captain—was rotten bad, I know. But let me tell you something: at the same time he was protecting Miss Leonard!"

"How?"

"The captain of the *Colonia* was getting messages asking him if a person answering her description was aboard the boat—she traveled under the name of Riley, remember I told you. Same time *she* was getting messages from some friend ashore, warning her. As I understand it, her wirelesses were in code—but she didn't have the right code with her: so couldn't read 'em, and had to ask for translations in plain English. Of course then the wireless operator spotted her. But Jerrold Mansel didn't give her away to a soul on the ship—not even to the captain!

"What's more—he didn't take advantage of his inside information; he didn't try to—to work on her sympathies because he was shielding her. There's some good in that chap yet."

Tris Ford gave assurances of fair dealing in regard to the wireless operator—for Miss Leonard's sake! Abruptly he asked about the young lady: where she was. He was told that Imogen Leonard was detained in the best hotel at Genoa, which was surrounded by guards, and that Win Shute wouldn't have left her there alone if she hadn't insisted that he take her mother to Rome to see the American Ambassador. This mission had made it possible for Win to obey the cablegram directing him not to leave the ship until arrival at Naples. "Why is Miss Leonard detained?" Tris Ford asked, pointedly.

"Her mother knows—I don't," answered Win.

"You don't know?"

"Of course not! You don't suppose I tried to pry into her secrets." Win Shute's manner said further: "How very preposterous!" But Tris Ford wasn't taken in. He looked Win straight in the eye, smiled in a way to take the sting off what he intended to say, then let fly: "You batted .337 this last season, didn't you?"

"B'lieve I did—but what are you driving at?" The manager paid no attention to the question, simply went ahead:

"That means you made a safe hit every third time you faced the pitcher—a remarkable record. But two times out of three you failed to deliver the punch. Perhaps you went out on a pop fly, perhaps you struck out. I remember one

Why are Delco Equipped Cars So Eagerly Sought After by Intelligent Automobile Buyers?

Why is it that before the end of the season Delco Equipped Cars are almost invariably oversold?

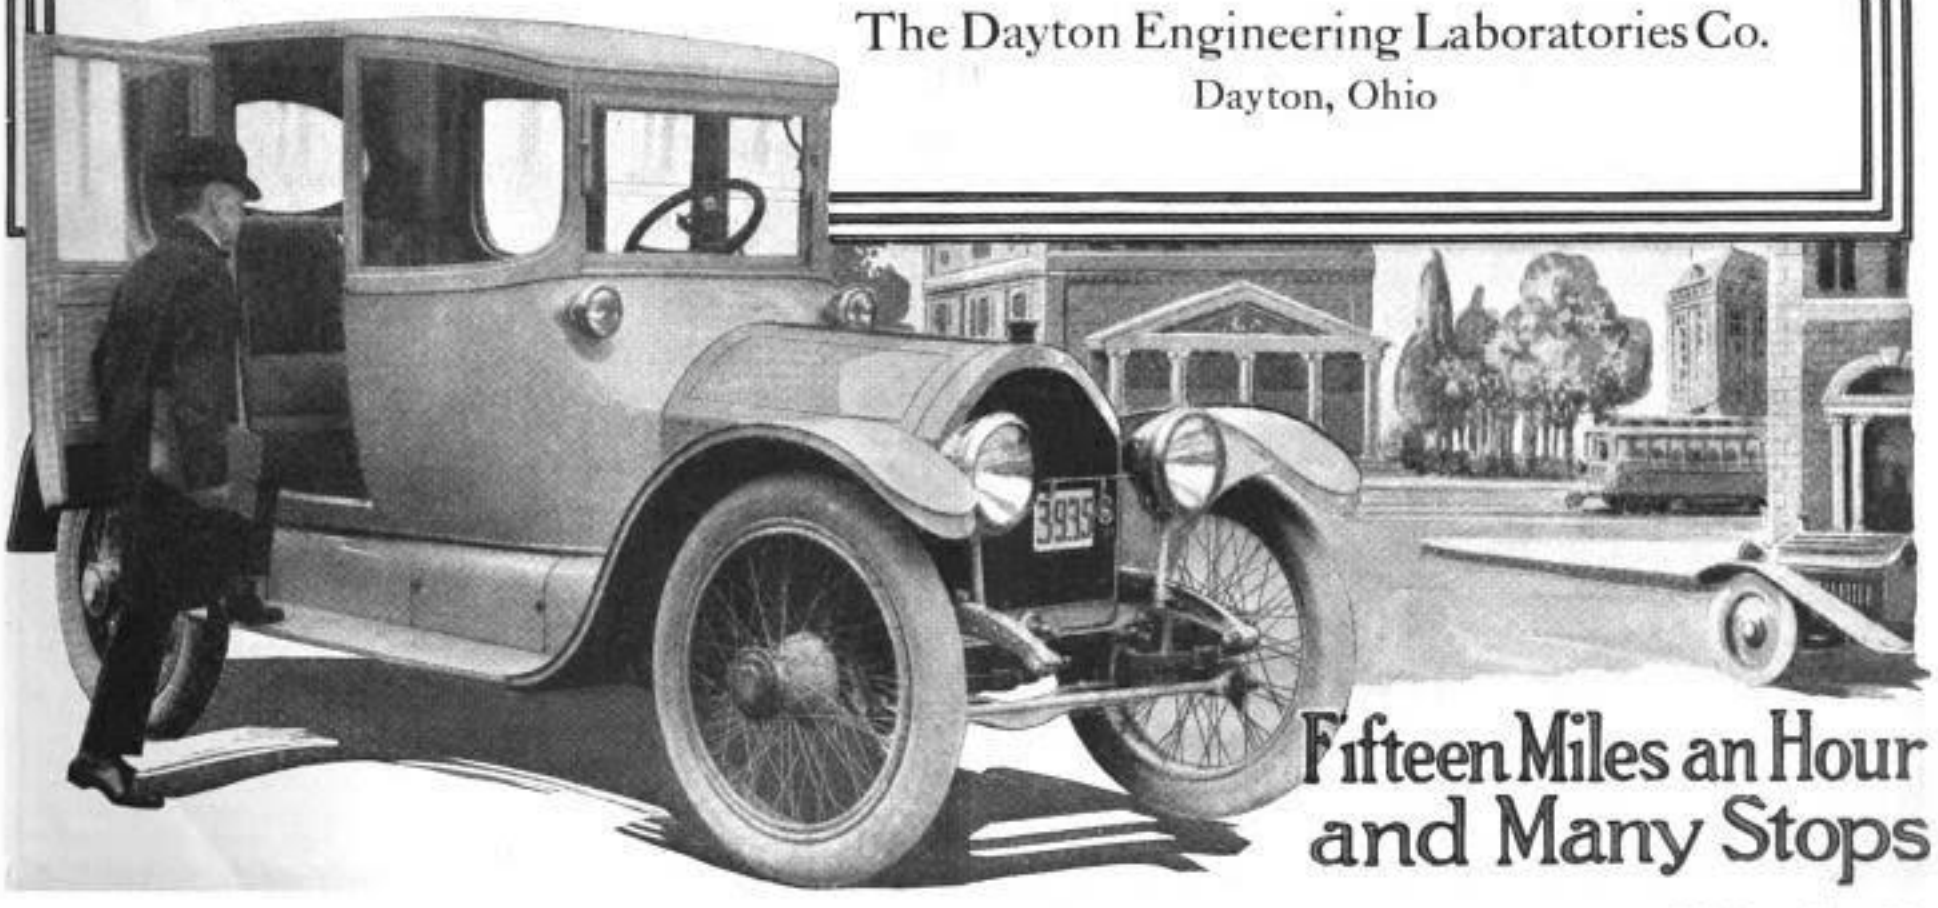
Why is it that Delco factories in spite of their constantly increasing output have never been able to supply the demand made upon them?

Frankly—it is because more than 115,000 car owners have so emphatically demonstrated Delco efficiency—

Because—owing to the fundamentally correct principles upon which Delco engineering is based, the owner of a Delco Equipped Car is practically certain of perfect cranking, lighting and ignition no matter whether he drives his car sixty miles an hour with few stops or fifteen miles an hour with many stops.

There are three underlying principles of successful electrical equipment for a gas car—

First—Its ability to maintain a fully charged battery no matter how fast, or how slow the car is driven.



Second—Its ability to stand up under the excessive strains and stresses of hard driving.

Third—Its adaptability to the particular car upon which it is used.

The simplicity and correctness of Delco design—the almost unbreakable character of Delco construction and the wide range of Delco efficiency have back of them the testimony of three years of actual service on the very highest type of American cars, and the experience of more than 115,000 thoroughly satisfied owners.

That is why this season as in former seasons, the demand for Delco Equipped Cars is greater than the factories can supply.

The Dayton Engineering Laboratories Co.

$25,000.00 in Cash Prizes

to more firmly establish this Emblem and its significance in your mind. This Emblem is the token by which you may identify the members of this Association. It typifies the ideals that are the Qualifications for Membership.

The privilege of using this Emblem has been bestowed upon these manufacturers so that wherever you see it you may know that it is associated with those concerns whose record of achievement has won for them this merited distinction evidenced by the endorsement of public approval.

We believe implicitly that there are men and women everywhere to whom these concerns mean infinitely more than merely successful commercial enterprises. We *know* that their years of fair dealing with worthy products have built up a legion of warm and loyal friends, and we say to each member's friends, "You are justified in having confidence in every other member."

It is one of the axioms of this Association that "an exchange of ideas creates new ideas." The offer that is here described on this page has been arranged to create an even greater appreciation of the integrity and merit that underlies these products. To give a just reward for the time and thought that will be spent, we are offering these prizes. Read every line of this message—then turn your ideas into dollars.

To Everybody

$10,000.00 in Cash Prizes for IDEA LETTERS

on either of the following subjects:

1st. Your ideas of the Superior merits or any new uses of our Members' products, such as may be used for an advertisement; privileged to use illustrations, if desired.

2nd. Your suggestions of NEW BUSINESS IDEAS pertaining to production or sales in any branch of any Member's business.

First Prize	$1,000.00	Eighth Prize	$100.00	Next 25 Prizes	$50.00 each
Second Prize	500.00	Ninth Prize	100.00	Next 50 Prizes	20.00 each
Third Prize	250.00	Tenth Prize	100.00	Next 100 Prizes	10.00 each
Fourth Prize	100.00	Eleventh Prize	100.00	Next 200 Prizes	5.00 each
Fifth Prize	100.00	Twelfth Prize	100.00	And $3,000.00 in prizes of $1.00 each for the next 3,000 ideas accepted.	
Sixth Prize	100.00	Thirteenth Prize	100.00		
Seventh Prize	100.00			Total, $10,000.00	

SPECIAL: "AWARD OF MERIT" TO EVERY PRIZE WINNER

You will receive a handsome "AWARD OF MERIT" as a permanent record of your "accepted ideas," with your name engrossed thereon, containing our complete membership and bearing the Association Emblem embossed in its natural colors, officially signed and sealed by the officers of the Association.

CONDITIONS: 1st—You may submit one letter only for each Member of the Association.

2nd—Each letter may be written on any or all of the subjects as listed above the prizes on this page.

3rd—Each letter must contain the respective Member's name at the top, followed by your idea, expressed in not over 50 words. Sign your name and address at the bottom.

4th—Each letter must be on one sheet of paper, written on one side only.

5th—This contest closes on May 15, 1915, and all contest mail must bear postmark not later than that date. No questions can be answered in this contest. Do not send any of your suggestions direct to Members of the Association, but mail them in one package

ADDRESSED TO: "Idea Letter Department"
Rice Leaders of the World Association
Fifth Avenue and 34th Street, New York City

where they will be officially stamped, entered in the contest, and forwarded to each of the respective Members who will judge and pass upon the ideas submitted for their respective concerns.

6th—No contestant shall submit the same idea for more than one Member.

All ideas submitted will be judged upon their merit and value, and will become the property of the Association and its respective Members, and will not be returned.

The person having the largest number of idea letters accepted will receive the first prize, the second largest number second prize, etc.

Should there be a tie for any of the prizes, full prize will be given those tying.

Prize Winners' Names, listed by Countries, States and Cities, will be on display in the windows or stores of various merchants whom you see making window displays in the Window Display competition. These lists will be mailed to merchants from our New York Association offices on August 14, 1915.

Power and Riches Come from Ideas

Read Every Word of this Unusual Message.

It carries beyond the thousands of dollars in cash prizes unparalleled opportunity to submit your ideas to these great concerns; consider what it would mean to you, beyond a cash prize, to have your ideas accepted by such concerns.

Add your own ideas to those that have been behind the sale of these famous products. Successful as they have been, such ideas have by no means exhausted the fertile field of possibilities. Some of the best advertising and sales ideas in use today have been inspired in just this way.

Look for the window displays of these products at your dealers; ask your dealer and friends about these products. An exchange of ideas creates new ideas.

To Dealers

$15,000.00 in Cash Prizes for WINDOW DISPLAYS

of any of our Members' Products as herein listed.

Consider the magnitude of this opportunity. Nearly Five Hundred Cash Prizes. Did you ever hear before of $2,000.00 in Cash being paid for one Window Display?

First Prize	$2,000.00	Eighth Prize	$250.00	Next 20 Prizes	$100.00 each
Second Prize	1,000.00	Ninth Prize	250.00	Next 30 Prizes	50.00 each
Third Prize	500.00	Tenth Prize	250.00	Next 100 Prizes	25.00 each
Fourth Prize	250.00	Eleventh Prize	250.00	Next 300 Prizes	10.00 each
Fifth Prize	250.00	Twelfth Prize	250.00		
Sixth Prize	250.00	Thirteenth Prize	250.00	463 Prizes Total	$15,000.00
Seventh Prize	250.00				

SPECIAL: "AWARD OF MERIT" TO EVERY PRIZE WINNER

You will receive a handsome "AWARD OF MERIT" as a permanent record of your "accepted model window display," with your name engrossed thereon, containing our complete membership and bearing the Association Emblem embossed in its natural colors, officially signed and sealed by the officers of the Association.

Special Prize to Every Contestant

An album containing the first 100 prize-winning window displays, with each winner's name, will be mailed free to every contestant after the cash awards have been made.

This album of model window displays and valuable ideas brought together from all parts of the country could not be purchased, nor could a value be placed upon it. It is made possible only by this universal campaign, embodying displays of such varied lines as represented in our membership. The cost of producing this album will represent a small fortune.

CONDITIONS: 1st—A display can be made of any of the products herein listed as being produced by any of our Members.

2nd—Each display must be exhibited for at least one week, any time between May 16th, 1914, and May 15th, 1915.

3rd—Each display must contain the Association Banner, which bears the Association Emblem and list of members. It will be mailed free upon request.

State which Members' products you will display, and when you will make the first display.

Address "Window Display Department," Rice Leaders of the World Association, Fifth Avenue and Thirty-fourth Street, New York City.

4th—Photograph of display—mailed flat—bearing on the back the name of the store in which display was made, address, and date of display, photographer's name and contestant's name, to be mailed to "Window Display Department," Rice Leaders of the World Association, Fifth Avenue and 34th Street, New York City, on or before May 15, 1915. All photographs submitted shall become the property of the Association and will not be returned.

5th—In the event of a tie for any prize, full prize will be given those tying.

6th—If any merchant in the United States desires to enter this contest and does not handle any of the goods listed as produced by our Members, the Association will see that he is loaned during the time of the contest some product of some Member free of cost in order that he may enter this contest.

We reserve the right to disqualify any contestant whom we learn is using, what we consider, unfair methods in this contest. The judges, whose names will be published, will be men of authority on window display.

PRIZE WINNERS' NAMES: Large sheets containing list of all prize winners in Idea Letter Contest, listed by Countries, States and Cities, will be mailed August 14, 1915, to every merchant who enters this Window Display competition, to be displayed in his window or store, whereby the public may see who are the prize winners.

Enter this Unusual Window Display Contest. It will further the *prestige* of your store and the *confidence* of your customers.

game where a bush-league pitcher didn't allow you a safety and fanned you twice."

"What *are* you driving at, Tris?"

"Merely this: the best of us get fooled once in a while."

"And you think I'm fooled on Miss Leonard?" asked Win, frowning. "I'm not fooled—not for one minute."

"Not necessarily," was Ford's diplomatic rejoinder. "But you might be fooled and still keep out of the bonehead class. They tell me history's full o' brainy men who get fooled by women. And the better looking and the cleverer they are the easier a man's fooled. I assume Miss Leonard's—eh—good to look at?"

"Well—rather!"

"And not exactly dull," drawled Tris.

"Clever enough to dope out new plays for the Giant-killers! And she doesn't care for baseball," Win Shute sadly remarked, failing completely to note the incongruity of his characterizations.

TRIS FORD didn't. He laughed gleefully. Then announced that he must keep his return engagement with the Ambassador. As he was leaving the room Win called after him:

"Want to talk over the World Series with you when you have time."

"When *I* have time? Say—you've got it bad, ain't you?" The manager of the Giant-killers walked down the hall chuckling.

THE Ambassador of the United States accredited to Italy welcomed Tris Ford with a broad, see-what-a-big-boy-am-I grin. Ford could guess—'twas the symbol of accomplishment.

"Job's done!" exclaimed John Bismer. "Jerrold Mansel has confessed and incriminated that scoundrel Stinger! Seems it took a lot of work and pull to get Mansel reinstated as an operator and assigned to the *Colonia*. The wireless company had kept tabs on him—knew he was drinking and slipping down grade—and they weren't keen to have him back at the key. Jake Stinger had to give that part of the plot his personal attention. He dealt directly with Mansel. So you'll get your man higher up all right."

"Will Mansel testify against Jake Stinger?" asked Ford, joyously.

"No doubt of it—that is, if you promise him immunity."

"We'll do more than that," said Ford. "Iv'e been thinking of what Mansel did—saving the *Regent's* passengers—and can tell him that after he's helped us out by testifying he can come to me and I'll see that he gets a fresh start."

"I call that mighty liberal of you," said the Ambassador.

TRIS FORD shook his head. "No—Mansel will be doing a great thing for baseball—helping to soak the gamblers—so he deserves consideration. Besides, there must be plenty of good in a real hero like him."

"Ought to be and bet there is." The Ambassador pulled out his watch, caught the time, and got quickly to his feet. "If you'll excuse me," he said, "I'll complete this job with the British Ambassador so's we both can get back to Rome. Won't I see you there?"

"Sure," answered Tris Ford—"we play a game of ball there before long—our club and the new world's champions."

"Of course! I hadn't forgotten that big event. Keep this under your shirt—I've promised the President to get the King to see the game!"

"Fine!"

The Ambassador gripped Tris Ford by the hand preparatory to going.

"One minute, please," begged Ford.

John Bismer bobbed his head.

"Funny thing—but Mr. Shute has got it awful bad—got stuck on a girl! Why"—Tris Ford leaned toward the Ambassador—"she's made him forget all about being kidnaped—forget all about baseball!" This was the climax.

Forget baseball! The Ambassador couldn't believe it.

"Yes, sir. Why—he hasn't asked me a thing about the World Series yet, and I haven't had a chance to tell him about the round-the-world trip of our club and the world's champions."

"You don't tell me! He *has* got it bad. Hope she's the right girl."

"Shute swears she is—all right in every department. She's what I want to talk to you about, if you'll give me a minute more."

THE Ambassador was obviously surprised.

"You can help," Tris Ford added quickly. "You see, she's an American girl, and she's in trouble—in trouble over here."

"Over here? Where?" For the first time the Ambassador spoke sharply.

"Genoa."

"She's not Imogen Leonard?"

"That's her name—Imogen Leonard. And Win Shute says she's a mighty fine girl."

"I'll be damned!" exploded his Excellency John Bismer. Then after a period devoted to deep thought: "Does the White House know anything of this—know your man Shute's interested in this particular young woman?"

"Not as I know," answered Ford. "Didn't know it myself till less'un an hour ago. But I say—why did you ask?"

It was the born diplomat, Tristram Carlingford, who put the question.

It was the Ambassador ex officio who parried:

"Because Washington knows that Imogen Leonard is under surveillance by the Italian Government. It is an international matter. And for the present, I regret to say, I can do nothing for you. I bid you good morning, Mr. Ford."

The Ambassador bowed—rather stiffly, the manager of the Giant-killers afterward thought—and hurried off. His gait at least was not according to the canons of diplomatic usage.

Literally and figuratively Tris Ford threw up his hands when he got back to Win Shute's room.

THE President of the United States had been inducted into office with one dominating ambition, namely, to place a trust magnate behind the bars. While engaged in popularizing himself with the electorate he had attacked the giant combinations and especially lambasted the heads of the trusts. Guilt, he insisted, was *personal*, therefore nothing short of a magnate's confinement in a penal institution would "make the punishment fit the crime."

But when it came actually to picking the one trust—the one magnate upon whom the presidential wrath was to descend, it was far from an easy assignment. The ramifications of big business were multifarious, and to turn in one direction was to tread on some important body's money-crusted corns in another. Ultimately, the President's own predilections influenced him—unconsciously of course.

AS a boy he had been afraid of firearms of every variety. Hunting held for him no lure. Even when he became first citizen the presidential salute of twenty-one guns made him jump. He much preferred "Hail to the Chief" capably rendered by sounding brass and jingling cymbal. No, the President wasn't a sportsman. He was an advocate of peace. Thus, unwittingly swayed by his personal bias, the head of the nation selected the president of the Powder Trust for the role of horrible example.

J. Pierce Lamont, president of the Pierce Powder Company, was the magnate marked for sacrifice. And the At-

Boy: "Ma makes me wash my face every day. Gee, I wish I was him!"

Whenever you see this tread, think—

"That is the tire that costs more to buy and less to use than any other tire.

"That is the tire that is dependable, gives the service a good tire ought to give.

"They put the quality *into* that tire so that I will get the mileage *out* of it.

"That tire is the Republic Staggard Tread Tire. It can't be made any better; it's worth every cent asked for it; it's a real quality tire."

S. H. GREIDER, Box 13 RHEEMS, Pa.

torney General, aided and abetted by the Secret Service, got busy, very busy. This was some time before Win Shute was shanghaied, before Imogen Leonard sailed for Alexandria, via Genoa, under the name of Miss Riley—as directed by her employer, who explained that her confidential relations with him, big figure in the business world, would subject her to the importunities of interviewers.

EVERYTHING was done with unwonted secrecy, considering that it was a government undertaking, and the man hunt was progressing most favorably when, one day, the Washington correspondent of the New York "Standard" called at the White House and requested an interview with the President. The "Standard" was an independent paper which leaned toward the President's party; its support the executive fervently desired for his administrative and legislative program. The "Standard" was a great newspaper, therefore not untinged with "yellow."

The details of that interview will never be known. But it subsequently leaked out that the President, later in the day, made the big mistake of his term in attempting to go over the correspondent's head by appealing directly to the editor. In a word, the President tried to suppress news! Result—"pitiless publicity." (The phrase is quoted because it was the President's own, uttered before election and turned on him when he ran counter to it.) In twenty-four hours the country rocked with indignation.

AN American girl, sole support of a widowed mother, while enjoying her first real vacation in years—a trip to Europe—had been torn from her parent by Italian soldiers, thrown into prison, and there given the "third degree." Poor, persecuted Imogen Leonard!

Such was the "flash," in newspaper parlance, that traveled over free America. In more detail:

Miss Leonard was stenographer and private secretary to one of the officers of the Pierce Powder Company. This concern, sometime called the Powder Trust because of its command of the industry, had manufactured powder for the Italian Government under a secret formula furnished by Italy—a powder peculiarly adapted for transportation and for use in the tropics. This manufacturing was done by agreement that powder so made was not to be sold to any other country than Italy, excepting of course the United States.

In the war with Turkey over Tripoli, Italy found that the Turks were using identically the same powder! And while the Turkish supply could not be directly traced to the Pierce Company, the Italian Government was convinced in its monarchical mind that the American Powder Trust had violated its agreement.

IF Italy could prove this, there was a large monetary forfeiture provided in the original agreement—something that could be enforced either through diplomatic channels or through The Hague. All that Italy needed was the proof.

Imogen Leonard could furnish the proof! Because of her confidential relations with the head of the trust, Italy believed there was no doubt about it. This was why she had been forcibly taken from the *Colonia* when the steamship called at Genoa and placed under surveillance.

Regardless of party affiliations the press, the country hurled at the White House the verdict—outrage!

The President was not without his excuses. Proof of J. Pierce Lamont's guilt under the criminal section of the Sherman law lay in a secret memorandum whereby the restraint of the powder trade was maintained. This memorandum had been dictated by Lamont to his stenographer, Imogen Leonard, and by her transcribed and mailed unsigned to the smaller fear-ridden manufacturers of powder. Wherefore, Miss Leonard could give testimony that would convict J. Pierce Lamont—land a trust magnate behind the bars!

UNFORTUNATELY, Miss Leonard's vacation, comprehending a sea trip at the expense of her employers, was so timed—owing to a leak in the United States Attorney's office—that she was beyond the three-mile limit before the Secret Service knew of it. Nothing remained, therefore, but to engage the cooperation of some foreign power in the enterprise of detaining the vitally important witness and effecting her return home—to the witness box. Italy's fight with the Powder Trust dovetailed nicely into this scheme. Miss Leonard was to be detained by the Italian authorities and pumped, but with the American Ambassador standing by, ready to offer a refuge—and safe return home!

ON the part of the Administration at Washington it was Machiavellian, on Italy's part the execution of America's "third degree." At best it wouldn't look well in print—at worst it would defeat the President's party at the next election. Wisely, the White House kept silent. But the American Ambassador to Italy bestirred himself.

Less than twelve hours after the storm broke in the United States, Imogen Leonard, under the courteous escort of His Excellency John Bismer, started for Rome to rejoin her mother.

The same day in the White House, after his "shop talk" with the correspondents, the President buttonholed one of the newspaper men with whom he maintained confidential relations, and asked him how the story about Imogen Leonard had broken loose. He received this reply:

"The 'Standard' got it from its correspondent in Italy. American by the name of Shute gave the tip."

"Not Win Shute—second baseman of the Giant-killers?" inquired the Chief Magistrate.

"Dunno," was the newspaper man's confession. He was not a fan.

The next morning the "Standard" had another gorgeous beat. Its correspondent in Italy had discovered the lost ball player, Win Shute! Followed a most dramatic story of the drugging and shanghaing of the king of second basemen.

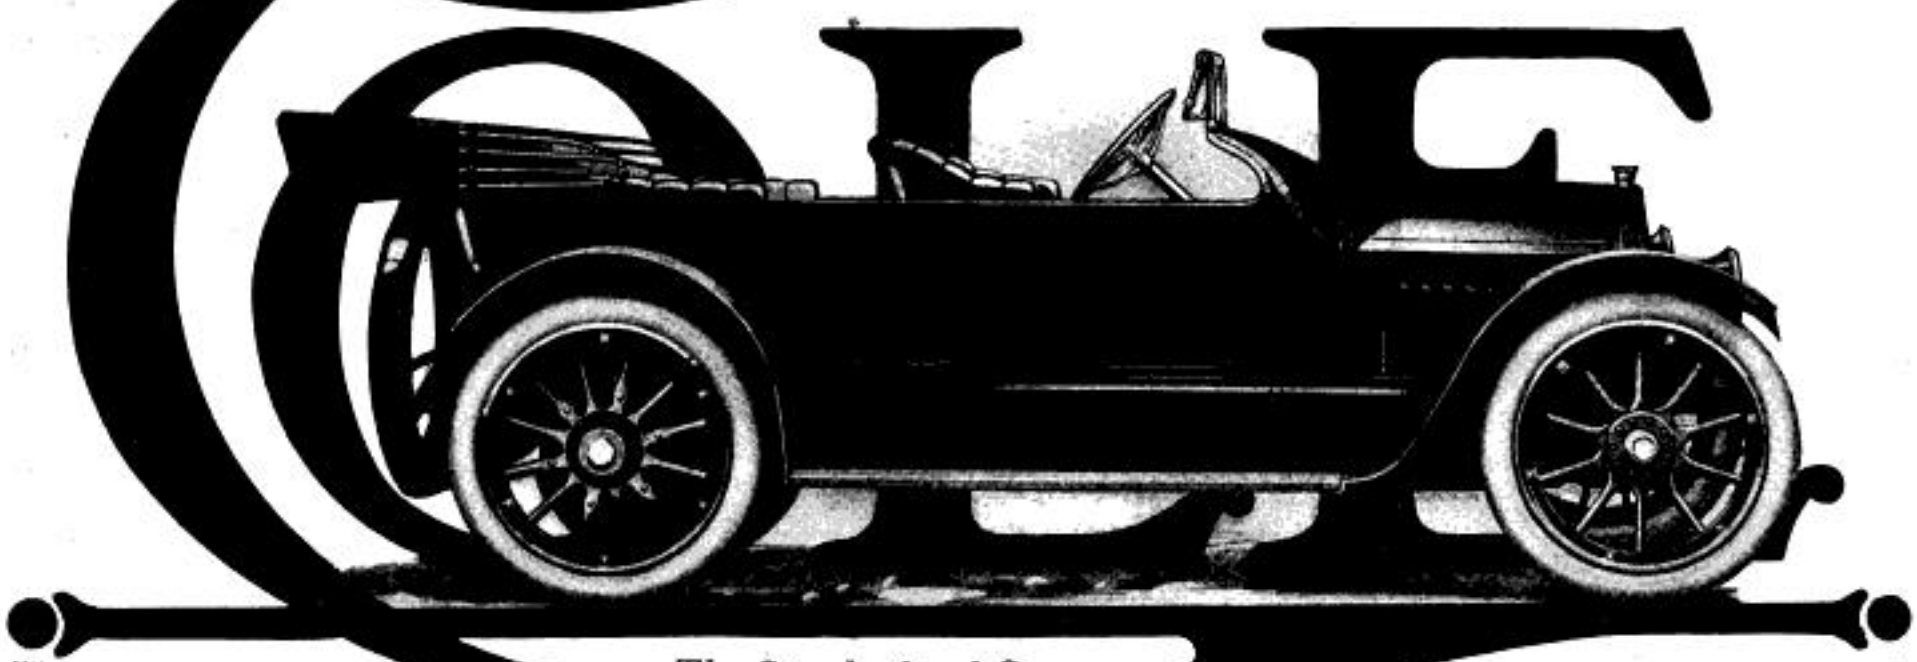
James Winton Shute had *paid in news* for the release of Imogen Leonard!

OUT of the horde of Americans who have invaded Europe, three are remembered: General Grant, Colonel Roosevelt, and Pitcher Larkin. Each made his impress, but of these impressionists Barney Larkin contributed by far the most color. He said when he got back to the Giant-killers' ball park that he might forget his trip abroad but he didn't think Europe would!

Naples, where the globe-running baseball players landed, was the one place where Barney devoted himself strictly and whole-heartedly to sightseeing. Accompanied by Earnest Steadman, his guide, custodian, and friend, he fared forth, with the best intentions to behold every treasure that the city and its environs advertised. But he was first conducted to the Neapolitan Aquarium—and never left it. Here "Damon and Pisentorius" were enraptured with the curious marine wonders of the Mediterranean—cuttle fish, crested blubbers, impossible-looking crabs, crayfish, and pipefish, the electric rays, which Barney, after experiencing a shock, pronounced, "lives wires, all right!"

Above all, the eccentric twirler was delighted with the Octopus! At home Barney had seen pictures of it in the papers, usually labeled Standard Oil, or Sugar, or Steel, but in a foreign land he saw it in the original—mother of the trusts! He had to be dragged away to the train.

At Rome he announced that he was tired of "lookin' round." But some one told him of the Catacombs—cellars where the early Christians were laid on the shelf. He apparently became fascinated with the subterranean phenomenon, and devoured all of the literature he could find on the subject. The reason he gave for visiting the Pantheon was that "twenty-eight wagon loads of the best bones" had been carried there from the Catacombs and planted beneath the altar.



WHEN he made his excursion to the Roman Catacombs, he took Earnest Steadman with him. Apparently he wandered through the galleries absorbed in what he saw. But there was malice aforethought in his wanderings. He succeeded in losing his keeper!

Rome remembers to this day what ensued. The alcoholic eruption ended shortly after midnight. Barney Larkin, a dirty sweater draped togawise about his powerful shoulders, his head bare save for a wreath filched from the tomb of Raphael, paraded up and down the middle of the Piazza di Spagna, pausing only to cool his brow in Bernini's nautical fountain, and proclaimed himself Cæsar! At his heels shuffled the riffraff, tagrag, and bobtail of modern Rome shouting "Eviv-va l'Amer-i-ca-no!" It

The New Ten Four **$1665**

COLE

The Standardized Car

Already the sensation of the year

THE announcement of this new Cole Four—the Standardized Car—at $1665, was instantly followed by a volume of demand which leaped ahead of our most sanguine expectations.

The constant increase of this demand shows that we were right in believing that the motoring public wanted a high-grade Four at an economical price.

Nothing but Cole Standardization could possibly have produced such a car at such a price. It's a five-passenger car, beautiful in design, luxurious in comfort. *Cole Standardization keeps quality up and prices down.*

Before you buy any car, see this new Cole Ten Four, which right now is selling the heaviest in the centers where seventy-five per cent of America's automobiles are made—in Detroit, Indianapolis, Cleveland and Buffalo—where motor-judgment is keenest and where actual big value is the prime essential in a sale.

New gasoline feed that positively saves you at least 25% in fuel

And, added to all the other standardized features which have made the Cole the most talked of car, you now get the new Warner Vacuum Gasoline Feed System. In its simplicity alone it is marvelous.

With the tank on the rear of the car, where it rightfully belongs, where it balances the car and adds to your safety, this system positively feeds the gasoline, no matter how steep the hill you may climb.

The carburetor can be regulated to work under the most adverse conditions—the flow of gasoline to carburetor is even and smooth—a constant, steady feed, without sudden changes that mean waste and upset adjustment of the carburetor.

A constant, even pressure, eliminating necessity of pumping by hand—no hand-pressure pump, no power pump, no pressure gauge on dash. You can leave filler cap entirely off without affecting the working of this system. No filter on gasoline line to clog or freeze—absolutely none of the old-fashioned sources of bother, worry and trouble.

Instead of the old systems, there is a small tank located on engine side of dash—where it gets and retains the heat from the motor, which helps carburetion. The top chamber of this tank fills and empties into the lower chamber automatically, supplied from the large tank at the rear of the car. The lower chamber is piped to the carburetor, giving an uninterrupted, even flow at unchanging pressure.

You cannot waste a drop of gasoline; there is no sudden change of pressure to alter the gasoline mixture.

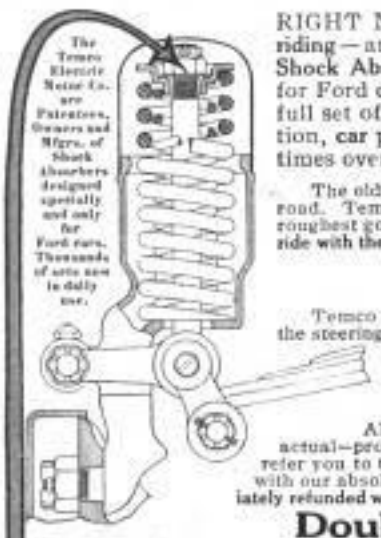
It is automatic and fool-proof. It requires no attention whatever. It works silently and surely for you, saving gasoline and reducing your operating expense.

See this new Cole Ten Four today. 'Phone for a demonstration. Don't invest your automobile-dollars until you realize how completely and constantly Cole Standardization is bettering the automobile for you—giving you an improved product, reducing the cost of driving it and lowering its first cost to you.

Why the Standardized Car?

Write to us today for "Why the Standardized Car?"—our new booklet that tells you and shows you with untechnical simplicity just how and why Cole Standardization produces a better car at a lower cost.

Cole Motor Car Company of Indianapolis, U. S. A.



Notice to dealers and users: We have arranged to display our various models for your inspection, at our big new factory in Indianapolis, while you are here to attend the Five Hundred Mile Race, May 30th.

Ford Owners Ride With Velvety Ease

Save Your Tires, Your Engine, Your Car With a Full Set of Double Spiral Springs

TEMCO Shock Absorbers ONLY $15

RIGHT NOW—make sure of the **luxury of riding**—anywhere, all the time, with **Temco Shock Absorbers**, designed and built specially for Ford cars only. Only $3.75 each—$15 for the full set of four—and you have **tire** protection, **engine** protection, **car** protection, that actually save the cost in cash many times over. **And all the comfort and luxury besides.**

The old pitching and side jerking is a thing of the past. Car holds the road. Temco Shock Absorbers give a gentle up and down swing on the roughest going—take up all the sharp jars of paved streets—**make your car ride with the buoyant sensation of a large launch. You rest in your car.**

Stiffness Vanishes

Temco Shock Absorbers give your car great flexibility—actually help the steering mechanism—reduce friction between the motor and the running gear—preserve the alignment—save repair and upkeep expense—keep your car in better condition, thus giving you the most use and the most pleasure—**add to the sales value of your car.**

All the claims we here make for Temco Shock Absorbers are actual—proved by daily service upon thousands of Ford cars. We will refer you to these owners in all parts of the country. We back every set with our absolute guarantee of complete satisfaction—**or your money immediately refunded without question or argument.**

Double Spiral Vanadium Steel Springs

The known quality of high-grade springs proves the standard efficiency of the Temco—long double coil sensitive to the least jar—tough and tested quality to outlast any car. This is a new element in shock absorber construction—based upon scientific mechanical principles—not the product of a "cold blacksmith" or experimenter. The special creation of a master designer whose work has won him great reputation. No friction whatever. Design and construction covered by our original patents (Sept. 9, 1913) and patents now pending, covering **double** spiral spring and other improvements as here illustrated in sectional cut. All infringements will be vigorously prosecuted.

Observe the simplicity of mechanical construction—load is entirely suspended from warranted hanger bolts, yet neither bolts nor springs touch surfaces of polished steel—mud proof—ice proof—dirt proof case.

Sold Upon 30 Days' Free Trial
Fully Guaranteed

Equip your Ford with Temco Shock Absorbers, and learn the possibilities of your car for service and luxury of motion. You can apply them yourself. No changes. No holes to drill. If you cannot get them of your dealer, order direct from us. $15 prepaid to any address in the U. S. Write **today** for complete information, with illustrated circular—free.

required six Roman policemen, reinforced by a pair of Carabinieri, to complete his arrest. The next day he pitched one of the most effective games of his careless career.

This game was staged in the Villa Borghese, where Rome annually engages in the Battle of Flowers. It was a rare occasion, honored by the King of Italy and his suite, all in brilliant uniform—especially the representative of the cavalry arm who wore a long cape of Alice blue. The diplomatic corps contributed quantities of gold lace to render the spectacle even more splendid. It really transcended the posters with which the late Phineas Barnum was wont to commemorate the performances of his circus before "the crowned heads of Europe." Barney Larkin said it beat pitching on ladies' day with the President of the United States looking on—"beat it all hollow."

TRIS FORD was in the King's loge, seated next to Victor Emanuel III, to explain the game to his Majesty. In the adjoining box was the American Ambassador. His Excellency John Bismer had with him Mrs. Leonard and her daughter Imogen Leonard. He had insisted that they be his guests, and as James Winton Shute offered no objection—indeed, offered no conflicting invitation—the ladies had accepted.

Baseball history repeats itself. The Giant-killers went to bat in the last half of the ninth inning with the score 2 to 1 against them. On the first ball pitched, Ryan singled—and the King nodded approvingly at Tris Ford, who was trying to sit unmoved in his chair. The Giant-killers then fooled their opponents—rated as the world's champions—who figured that Olds, the next man up, would bunt. Instead of that, the signal was given for the hit and run, and Ryan sprinted for second base at the same time Olds was swinging at a fast ball. Expecting a bunt, the first baseman was almost toppled over by the "grass cutter" and juggled it long enough to let the batter get to first and Ryan to second. A moment later the pair pulled off the double steal. There was a man on third, a man on second, and nobody out!

JOHN BISMER leaned into the adjoining box and whispered to Tris Ford: "Exactly the situation in the last game of the World Series!"

"One big difference," corrected the manager of the Giant-killers, "there ain't the same lad at bat. Watch!"

The man who came to bat in the crisis had a familiar bearing. He carried himself like a figure known to this recital. But his face was either unknown or strangely transformed. The sporting writers at home could have explained this: Those prehistoric caps worn by the Giant-killers! Long had the homely headgear been condemned as something which dated back to the time when baseball was known as "rounders," but Tris Ford wouldn't change. To alter the design might bring bad luck! Now the man at bat was glad that there had been no change. Not a soul—not *the* soul—would recognize him!

He shifted around restlessly at the plate. "Hardest man to pitch to in the league!" he was called.

"One ball."

"One strike!" he had let it go by.

He moved about, swung his bat, raised his shoulders to let out a kink in his muscles, and—quickly but unostentatiously pulled down the visor of his cap.

Instantly the runner on third edged off the bag, more and more, and the moment the pitcher lifted his arms and began to wind up he dashed for the plate. There was a gasp, for it seemed that the man was rushing in to certain destruction. But the agile youth at bat reached out and deftly tapped the ball! It rolled with exasperating slowness toward the pitcher, who was hurrying to field it.

UP went a shout. The tying run was scored for the Giant-killers! And like unleashed lightning the batsman was making tracks for first base.

At the same time, rounding third and never pausing for an instant, the base runner who had been on second was coming home. Of course he was crazy! The pitcher would look up, see him halfway to the plate, toss the ball to the catcher, and the foolish base runner would be an easy out.

But the pitcher was rattled. Already the score had been tied. He must make sure of one put-out! So, blindly he

Spark Plug Logic for Motorists

THE efficiency of a motor can be made or marred by the spark plugs used. Bosch Plugs are the right plugs for every motor. There are scientific reasons why they are right. Here are three of them:

1. The intense heat of ignition sparks will burn away soft spark plug points. That is why the points or electrodes of cheap plugs fail to last. Bosch Plugs have especially heavy, nickel electrodes that persist in withstanding the intense heat. That is why the 1914 Grand Prize and Vanderbilt Cup Race winners used Bosch Plugs.

2. Bosch electrodes are not pointed; because pointed types make a thin, streaky spark and burn away quickly. Bosch electrodes are crescent shape and have a knife edge that provides a ready path for the electric current and makes starting easy. For a quick get-away use Bosch Plugs.

3. The three exclusive, crescent shaped electrodes form the spark into a ribbon of flame, igniting a larger number of gas particles than any other form of electrode. That is why Bosch Plugs give new life to engines not previously Bosch-Equipt.

Perhaps your car is not efficient, perhaps it needs new plugs. Try a set of Bosch Plugs; the same as those used by all such high grade cars as the Peerless, Pierce-Arrow, Mercer, Garford, Speedwell, Jeffery, Velie, Marmon, Case, Stutz, Moline-Knight, Lozier, etc.

Bosch Plugs can be bought for $1.00 each from your dealer, Bosch Service Stations, or direct.

Write for "Locating the Spark Plug," sent free to any motorist upon request.

THE TENTH YEAR A Money-Making Business

We have been advertising in the Leading Magazines for ten years. That means that we have made good with the

EMPIRE CANDY FLOSS MACHINE

A 6 cent pound of ordinary sugar with this machine will within 8 minutes make $1.50 worth of candy floss. No experience necessary. Over $100.00 a day profit has been made with this wonder money-maker. And it will keep on making this enormous profit year after year with no expense for repairs. Ten years of big money-making experience have proved this your opportunity.

HERE IS PROOF:—

"We received the Empire Candy Floss Machine and have operated it daily. It does beautiful work and we sell all we make." E. F. Passey, Logan City, Utah.

"Send me catalog of Candy Floss Machine. I operated one for three weeks and averaged from $15.00 to $126.00 per day with it and like it very much, and now want to buy one of my own." M. M. Wenzel, Emporia, Kansas.

"I have just finished a very successful week at El Paso fair. My profits were over $1,000.00." H. A. Adams, El Paso, Texas.

"The Empire Candy Floss Machine you shipped me on June 5, 1909, was in every respect what you represented it to be. It will make floss rapidly, is a novelty that attracts crowds wherever operated. Everybody buys it and it has proven a great money-maker." O. M. King, Mercur, Utah.

BUY INDESTRUCTO BAGGAGE

When you go to buy a trunk, keep this one fact before you: that you are buying for now and for the future.

A trunk is the poorest thing in the world on which to try and save money. No trunk can be too good for you—too strong—too serviceable.

Pay enough for your trunk to get real value, sure service, but see that you get what you pay for. That means, remember the Indestructo name.

Compare the Indestructo with any other trunk made. See it side by side with other trunks in the stores.

You will find that not one of them has the distinctive features of the Indestructo—that not one of them gives you the same solid assurance of real worth and service—not one of them is so well able to care for itself in the crash and crush of hard baggage handling.

One proving bit of evidence as to the standing of Indestructo Trunks in the business world is the way leading merchants—the best and wisest merchants have accepted the Indestructo.

Remember that no other trunk can give you the service, satisfaction, the beauty and lasting value, and the special Five Years insurance and Registry features that are all yours with the Indestructo Trunk. It is worth your while to buy right and be satisfied.

Say to yourself, "The next trunk I buy will be an Indestructo"—then make good on that promise.

Our booklet explains that fully—ask for it.

wheeled and threw the ball to first base. The man who had bunted was out by inches. But—another runner had flashed over the plate!

The Giant-killers had won! When it was explained to him, the king congratulated Tris Ford. The next thing John Bisner got the manager's ear:

"That proves it—proves you have the best team. With the king of second basemen in the game you would have won the world's championship—sure!"

IN a grotto of the Borghese Gardens they met right after the game. With his uniform there was no mistaking his profession. He was a ball player. And she had said she didn't care for baseball! Courageously, but not with much confidence, he had submitted to the test. She should look upon him in his true setting—in the pastime he loved. If he was to lose out in the Important Game, as he had come to think of mating, he would be seen playing for all he was worth. And he had so played—had never played better in his brilliant service on the diamond.

"You know now—I'm a ball player," he said.

"And *you* know—I'm a 'stenog,'" she returned.

"Mighty glad you're not a swell," he told her.

"And I'm glad your side won," she told him.

Then a look of sadness swept over her. His heart almost stood still. Was it the end of the Important Game—and defeat?

"But I'm so sorry—very sorry—that you didn't hit the ball," she assured him.

"When?" He was confused.

"That last time—with two of your own men on bases, nervous to get where they started from!" She was very earnest. "I knew you wanted to send the horrid little ball way out—far out so it couldn't be gotten back till after the two men were through running. And you tried—tried so hard, you dear boy. I was so disappointed—for your sake—that you couldn't knock it square—but just rolled it on the ground as I did when I tried to play golf. If it's any comfort to you, I'm heartsick over it!"

HE stared at her, wondering if possibly she could be making fun of him. Then, noting the heartfelt pity in her Irish blue eyes, he said, for the first time: "Imogen!"

And for the first time she answered: "Win!"

What eventuated was not lost upon Tris Ford, who came that way, with Mrs. Leonard in charge, at the right—or the wrong moment. To the surprised matron Tris Ford observed:

"Say—that young fellow was always the best in the country at pulling the play."

"What play?" anxiously inquired the mother of Imogen.

"Why—the double-squeeze!"

THE END

Goodyear Prices

What They Buy

At Goodyear prices, this is what you get today in an automobile tire:

The tire which—starting from a tiny factor—won against some scores of rivals the topmost place in Tiredom.

The tire of which more than three million have been put to the test of use. And which this year—after those millions of mileage comparisons—has jumped 55 per cent in sales over last year.

The tire which scores of experts—working in laboratories—have spent years and years in perfecting. They have built thousands of tires in thousands of ways to learn how to better this one. In these ways they have spent $100,000 yearly to attain the farthest limit in low cost per mile. And all their achievements are embodied today in this Goodyear No-Rim-Cut tire.

You get the tires which once cost users one-fifth more than other standard tires. They retain the same costly features. And today—as then—No-Rim-Cut tires are the only tires which have them.

Four Exclusive Features

Our No-Rim-Cut feature is found in these tires alone. That completely stopped rim-cutting, the major cause of tire ruin. And it brought you this saving in a feasible, faultless way.

Our "On-Air" cure is employed in no other tire. It adds $1,500 per day to our tire cost. But it saves our users the countless blow-outs due to wrinkled fabric. We final-cure on air-filled tubes, under actual road conditions.

Our rubber rivets are created in these tires only. Hundreds are formed, during vulcanization, to combat loose treads. Thus we lessen this danger by 60 per cent.

All-Weather treads are exclusive to Goodyears. These are double-thick, tough anti-skids. They are flat so they run like a plain tread, yet they grasp wet roads with deep, sharp, resistless grips.

Note again those four exclusive features. Mark that they cover the four greatest tire troubles. Together they have made No-Rim-Cut tires the most popular tires in the world. They've saved motorists millions of dollars. And no other tire, whatever its price, offers you one of them—or anything that fairly compares with them. **You get them all in No-Rim-Cut tires, and you get them at Goodyear prices.**

Higher Prices

Are They Just?

Now comes a condition where 16 makes are being sold above these Goodyear prices.

Some are nearly one-half higher. Numerous makers charge for three tires as much as four Goodyears cost. Tires which once undersold No-Rim-Cuts now cost you $4 to $15 more than these per tire.

It has come about in this way:

In the past few years No-Rim-Cut prices have been cut in two. Last year alone these prices dropped 28 per cent.

Other makers shared our lower cost for rubber. But we made other savings. We built new factories, modernly equipped. We invented and built money-saving machines. We employed efficiency experts.

Our output doubled over and over, until it lately exceeded 10,000 motor tires in a day. Our overhead cost dropped 30 per cent—labor cost 25 per cent. All because of this matchless output.

Profit Down to 6½ Per Cent

With multiplied output came the need for less profit. Last year we brought the average down to 6½ per cent.

The result of all is this year's Goodyear prices. They have come down so fast and far of late that others have ceased to follow. And the paramount question in Tiredom today is this question of extra price.

The self-evident truth is this:

You get in Goodyears the utmost in a tire. Their place and prestige prove that. Their amazing sales, after years of comparison, show what men have proved about them.

You get in Goodyears four great features which no other maker offers. Each adds to our cost but reduces your upkeep. And no extra price can buy one of them.

As for "quality" in a tire—that can mean only minimum cost per mile. And all our tests show that we have that. Any item of "quality" which means higher cost per mile is something no user wants.

It is folly to add to your tire cost. Get Goodyear tires at Goodyear prices. Almost any dealer will supply them.

TUXEDO—And That Spring-y Feeling

IN comes Spring and that old lazy, yawny feeling. Makes a man get out his old pipe, puff away and start dreaming of good times to come.

Air's mighty sweet in his nostrils—and so is Tuxedo, too. Tuxedo has that "ethereal mildness" that the poet spoke of. A grand old tobacco to dream over.

We keep it mild and aromatic on purpose. Our idea is to make a tobacco that a man can smoke day in and day out and always find it a pleasant, light, easy, gentle smoke.

Tuxedo

The Perfect Tobacco for Pipe or Cigarette

Only ripe, mellow, perfect leaves of the highest grade Kentucky Burley are used in Tuxedo. This superior tobacco is further refined by the famous, original "Tuxedo Process", until every trace of harshness and "bite" disappears. All the exquisite mildness and mellow fragrance of the Burley leaf are developed to perfection.

Tuxedo is recognized as the favorite tobacco of critical American smokers—endorsed by hundreds of prominent men.

Tuxedo will afford *you* wholesome enjoyment and pleasant relaxation—try a pipeful.

YOU CAN BUY TUXEDO EVERYWHERE

Convenient pouch, *innerlined* with moisture-proof paper . . . 5c
In Tin Humidors, 40c and 80c

Famous green tin, with gold lettering, curved to fit pocket 10c
In Glass Humidors, 50c and 90c

THOS. E. NEWTON

President of the Michigan State Fair; and owner of the Gayety Theatre of Detroit, Mich., says:

"For a long time I wondered why so many of my friends were taking to the pipe. One day I tried it myself, and now I congratulate myself for having started with Tuxedo, for since then life has been very enjoyable."

Thos. E. Newton

JOHN E. NORTHUP

Former Assistant State's Attorney and one of Chicago's leading trial lawyers, says:

"I enjoy a good game of golf, enjoy a good meal, enjoy the society of my friends, but the pleasure of all combined is lost unless I can top it off with an enjoyable smoke of Tuxedo."

J. E. Northup

GEO. C. DANIELS

New England Passenger Agent of Southern Railway Co., Boston, says:

"For heavy smokers, Tuxedo's mildness lets them smoke as much as they want of it. For light smokers, this mildness proves beneficial and healthful."

Geo. C. Daniels

GEO. A. KINGSBURY

Manager of the Chicago Opera House, says:

"I've smoked more expensive tobaccos than Tuxedo, but I never smoked a better one—and never hope to."

Geo. A. Kingsbury

MILTON OAKMAN

Sheriff of Wayne County, Detroit, Mich., says:

"Tuxedo represents the top notch in tobacco quality. It is the mildest, smoothest, most soothing smoke I have ever enjoyed."

Milton Oakman

EDW. H. CROSBY

Dramatic Editor of the Boston Post, says:

"I get genuine joy out of a pipeful of Tuxedo. I like its mildness and the fact that it doesn't bite my tongue."

Edward H. Crosby

We Give You This Fine Leather Tobacco Pouch

Illustration one-third of actual size.

Every smoker appreciates a leather tobacco pouch. This handy, serviceable, Tuxedo Draw-Pouch is made of fine, soft, flexible tan leather, with a drawstring and snap that close pouch tight and keep the tobacco from spilling.

Send us 10c and your tobacco dealer's name, and we will mail you prepaid, anywhere in U. S., a 10c tin of TUXEDO and this handsome Leather Draw-Pouch. We gladly make this offer to get you to try TUXEDO. Address

Beautiful women the world over are constant in the use of

NYAL'S FACE CREAM

—with peroxide—

It gives health to the skin, brings out the rosy blush of beauty.

Softens and gives smooth elasticity to the dry skin.

Prevents sunburn, keeps off freckles.

Prevents chapped lips. Is delightful for the hands.

Will not soil the daintiest fabrics.

25 cents and 50 cents

Sold only at Nyal Drug Stores.

Send 10c, stamps or silver, for valuable booklet by an eminent authority on *"The Care of the Complexion."*

There are more than 16,000 of the best Druggists in America selling—

NYAL'S FACE CREAM

—with peroxide—

There is one of these Druggists near you.

Look for the *Nyal* Trade mark (on door or window).

Where you see it, you will find a high-class Drug Store.

Send 10c, stamps or silver, to pay for packing and postage, and we will send you prepaid, a generous sample of Nyal's Face Cream.

NYAL COMPANY

From 300 to 13,000. Three years ago, the output of the Paige factory was only 300 cars. Now, we build 13,000

Just consider these figures for a moment.

From 300 to 13,000 is a tremendous stride. Reduced to terms of **men** and **human activity,** these figures become an inspiration that must seize upon the imagination of every American man and woman. Three years is but a short time. Yet—within this period—the Paige has sprung from nothingness into the very front rank of a national industry.

The public has demanded more and more Paige cars each year. And step by step with this increasing demand has come the expansion of the Paige Company.

Public demand has moved us bodily from a small, tumble down building into the present mammoth Paige factory.

Public demand has replaced a small handful of workmen with a veritable army.

Public demand has increased our sales organization from 39 to 1026 Paige agencies.

Public demand has absorbed Paige cars in every State of the Union—and many lands oversea.

Public demand has increased Paige sales from **$44,000** to more than **$1,250,000** a month.

As you consider this three year record, one perfectly irresistible conclusion will begin to lodge in your mind. Such a tidal wave of public appreciation must be based upon something more substantial than mere fancy. **Paige value must be unusual value. Paige cars must have earned their reputation of "preferred investments" with the motor buying public. The answer must be in the car itself.**

Make it a point to investigate Paige cars at your first opportunity. Approach this investigation from any angle that you will. Then—beyond any question of doubt—you will understand the motive which has prompted so many hard headed men to stake their faith and money to the extent of more than a million and a quarter dollars a month.

Paige Literature will be sent upon request.

PAIGE "36"—Glenwood Model **$1275**

116-inch wheel base—left side drive center control—multiple disc cork insert clutch—silent chain drive for camshaft, pump, generator and magneto—fully equipped, including Gray & Davis large unit electric starting and lighting system.
Paige "25"—116-inch wheel base, fully equipped, $900—with electric lighting and starting—$975.

Get acquainted with the Paige dealer in your community and ask for a demonstration.

"SIXES" RUN 32.8 MILES ON ONE GALLON OF GASOLINE

NINETY-FOUR CARS MAKE STARTLING AVERAGE IN "FRANKLIN" TEST

"Stock" Machines With Three Passengers Each Make Simultaneous Record Runs in All Parts of United States

VICTORY FOR LIGHT-WEIGHT IDEA

Many Dealers, Sold Out, Compelled to Borrow the Machines of Local Owners to Take Part. Varying Weather Conditions Met.

Syracuse, N. Y.—On May 1st, 94 Franklin dealers in the United States and Canada, in 94 Franklin Six-Thirty stock touring cars, regardless of weather conditions, made a test to demonstrate the best possible mileage on one gallon of gasoline.

The rules required that the finish be as near the starting point as possible. Each test was made with two official observers, and results sworn to before a Notary Public. The test represents the average of 94 cars, 94 drivers, various road conditions, all kinds of weather, different grades of gasoline and, therefore, what can be obtained by skillful driving in the scientifically light-weight six-cylinder Franklin car.

The highest mileage was made by Wm. F. Sanger, Milwaukee, Wis. (See list.)

The different conditions under which the tests were made are graphically shown by the following telegrams:

Salt Lake City, Utah—"40.1 miles. High wind and wet roads or could easily have made 50."

Laramie, Wyo.—"32.1 miles. Weather cold. Roads rough but hard."

San Diego, Cal.—"33.1 miles. Roads very slippery. Drizzling rain during run. Rather cold. Conniry drove. Top and glass front down. H. C. Covell, Club representative, Louis Elmgren, Fire Chief, observers. Car with load weighed 3385."

Georgetown, Texas—"Made 17.2 miles. Top and windshield up. Wet and badly washed pike roads. Very little wind. Three passengers and car weighed 3310 including accumulated mud. Showered just before starting. Average speed eighteen miles per hour. Affidavit follows by letter."

Bangor, Maine—"21.5 miles. Dry dirt roads, rough in places, and hilly. Weather cold, thermometer 31 at six, 45 at end of run. Strong wind. Driver, Hall. Weight 3250. Glass front and top down. Snowed lightly during night. Started at ten, finished at eleven-thirty."

Newark, N. J.—"On official test obtained 34 4-10 miles. Roads dry, fair condition. Weather clear, mild. Driver, Walter Parcells. Weight of car including passengers 3320 pounds. We doubled back over identical course. Course contained 15 hills (grades from 2 to 8 or 10 percent). Demonstrating car used, run total 5,000 miles covered period 6 months."

York, Pa.—"Made thirty-seven and nine-tenths miles on turnpike which was covered one-tenth of way by deep blue stone. Can do forty-five miles if roads are in good condition."

Kansas City, Mo.—"Williams makes forty-two and eighty-eight hundredths miles on one gallon gasoline. Weather cool. Slight wind. Roads good."

(Continued in booklet, sent free on request by Franklin Automobile Company, Syracuse, N. Y.)

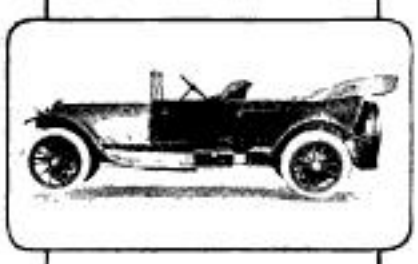
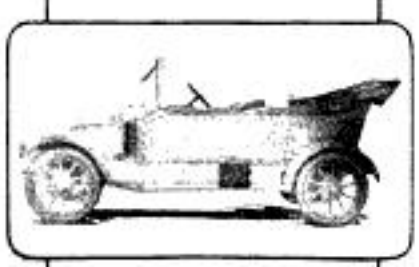
Everywhere



The designer of this system is one of the world's greatest experts in motor and dynamo construction. The systems are built under his direct supervision.



In the Gray & Davis factory over three acres of manufacturing space are devoted to constructing starting-lighting systems.

Before shipment, each starting-lighting unit is given tests far more drastic than actual touring service.

America's expensive automobiles as well as the moderate priced cars carry this equipment.

One of the foreign automobiles using the Gray & Davis system. The foreign demand is taken care of by agencies in Paris and Berlin.

ON the roads, in the city's streets, *everywhere* the Gray & Davis Starting-Lighting System is found on leading cars in each price class.

Even to England and continental Europe Gray & Davis equipment is now exported in constantly increasing quantities.

Every motorist driving a Gray & Davis equipped car counts confidently upon swift, certain starting and unfailing illumination at night.

To this is added security based upon years of specialized electrical experience and the immense Gray & Davis organization. There is also available to users a large Service Department operating 67 stations throughout the country.

The approval of the Gray & Davis system by so many prominent motor car engineers and manufacturers and the enthusiastic indorsement accorded it by owners in every community, are natural tributes to all that the name "Gray & Davis" represents.

The claim of exceptional starting-lighting efficiency does not rest upon advertising statements alone, but is *proven* in the practical service rendered by over 122,000 Gray & Davis dynamos and motors now in actual use.

When you buy *your* car, be sure to select an automobile carrying this equipment. You will then be assured of service, safety, satisfaction the three big factors that are built into *every* Gray & Davis system.

GRAY & DAVIS, Inc., Boston, Mass.

The Strange Adventures of Mike, "the Vagabone"

By Peter B. Kyne

ILLUSTRATED BY F. C. YOHN

A YOUNG Chinese Prince of the recent dynasty, together with a gorgeous retinue, having arrived in San Francisco Bay that morning, international etiquette demanded that his host, our own avuncular relative, should receive him with due pomp and circumstance; wherefore a battalion of infantry, three companies of coast artillery, a field battery, and a squadron of cavalry were waiting in the Embarcadero when his Royal Highness came down the gangplank of the *Mongolia* and disappeared in a sea of bobbing silk hats, beneath which gentlemen of the Chamber of Commerce, municipal dignitaries, and kindred unfortunates, whose fate it is to ride in open carriages at the tail end of any and all parades, struggled to express the hospitality of the city.

To B Troop had been assigned the task of escorting the royal carriage, in consequence of which that gallant galaxy of dare-devils, known throughout the service as "The Suicide Club," had formed on the dock, troop front, facing the gangplank. On the right flank my friend, First Sergeant John Ryan, a trifle bored, sat his chestnut mount, Jack Dempsey II.

Presently the tumult and kotowing died, the silk-hat brigade was forced back in favor of the local Chinese gentlemen who were really giving the party, and the Prince, closely convoyed by a slashing-looking big white man in a handsome but distinctly Oriental uniform, entered the carriage through which he was to drive through Chinatown and eventually (through the mercy of all the gods, Christian and Pagan, and the watchfulness of B Troop) to his hotel. The pleasant call of a C trumpet quavered along the dock and B Troop came to attention. Then that same melodious sound bade them draw sabers, and as a unit eighty-odd blades came to a "carry." A third call, and the long line of gleaming steel flashed forth in that most beautiful of all military courtesies, the saber salute.

The Prince's carriage started slowly down the dock toward the entrance, the Prince bowing and smiling his delight at this graceful compliment, while the white officer with him lifted his hand smartly to the visor of his cap. And then a strange thing happened!

The big white man started, surprised, his great red mustache lifted to reveal a wide mouth with an atlatis work of gleaming, strong white teeth. He smiled—and instantly I knew that man for the exile of Erin that he was. Even had I been in doubt his bellowing voice would have crystallized my suspicion into certainty.

"The saints protect us! Jawn Ryan! And are you shtill bitin' holes in the atmosphere? Sure I hearrd tell you were kilt in the cornfield at Yang-Tsun! Thrue it is the divil always minds his own!"

Beyond the peradventure of a doubt he had addressed First Sergeant John Ryan of B Troop! And, since that son of Mars was at attention with the hilt of his saber at salute beneath his Irish nose, it is not surprising that, what with the saber and the twitching head of Jack Dempsey II, the Sergeant's view of the man who thus addressed him was slightly obstructed. But the glad hail of that booming voice evidently was sufficient. Sergeant Ryan forgot that he was at attention saluting royalty, for out of the mists of the long ago he saw the face of a bunkie, shining humorously in the light of many a wet and hungry bivouac. And now that same comrade's face smiled at him from a (temporarily) royal carriage; the raw Irish immigrant he had taught to stand erect on his hips as a soldier should was now the companion of the heir to a throne, and twenty years of discipline were not proof against the old cavalryman's joy and amazement. He stood in his stirrups, dropped his point until the blade rested across Jack Dempsey's neck and stared over the horse's head at the man who marveled that he was "shtill bitin' holes in the atmosphere."

"Mike the Vagabone!" he yelled joyously. "Glory be! Since when did you take to hobnobbin' wit' royalty, ye sinful skut?"

"Attention!" cried the troop commander angrily. "Sergeant Ryan, what are you thinking of? You, of all men? Come to attention!"

So Sergeant Ryan returned to attention—but not with his eyes to the front as prescribed in the Regulations. His fascinated stare followed Mike the Vagabone down the dock, as the latter, caring little for princes and less for troop commanders, stood erect in the carriage, leaned over the rear seat, and tapped his martial breast, upon which gleamed dully a silver sharpshooter's badge, the campaign medal issued to participants in the Spanish War and the late disturbance in our island possessions, the special Congressional medal "for patriotism, loyalty, and fortitude" issued to the Spanish war veterans held over to fight in the Philippine insurrection, and lastly the inconspicuous bronze medal of honor that Congress so grudgingly gives for conspicuous gallantry in action.

"I'm a Chinese colonel from the County Mayo," he called back. "'Tis the hardware that helps, Jawn, and you have as much yourself. Come to me when ye've serrved ye're hitch and I'll have ye made a major. Ye should see me parade the Imperial Guard—"

And then the troop commander, suppressing a grin that augured complete forgiveness for his top cutter, barked out an order; B Troop clattered away behind the carriage that bore the Prince and Mike the Vagabone; a snare drum rattled a brief preliminary solo, the band played "Hail to the Chief," and the incident was over. Naught remained save the story of Mike the Vagabone, for assuredly, when a vagabond named Mike rides in state with the Hope of a Nation there must be what Frenchmen call *le raison d'être!*

When the parade was over, therefore, I followed John Ryan and B Troop back to the Presidio, and at the stables, in the box stall where he maintained Jack Dempsey, I cornered him. Here, while rubbing down his horse's dripping legs with a clean piece of sacking, he told me this tale of Michael Joseph Kelleher, one time private in a regiment of United States infantry and now companion to a prince.

"I'm a Chinese colonel from the County Mayo," he called back. "'Tis the hardware that helps, Jawn, and you have as much yourself"

IN ME young days [began the old soldier] I was that flighty and unsettled that 'tis small wonder I found meself one fine day lendin' a regiment av me own forlorn hopes. I'd been sent to America to grow up into a shtreet-car conductor, but what wit' goin' broke a mont' afther landin', and the blandishments av a recruitin' sergeant, I was forced to take on in the arrmy from necessity and shtay wit' it from choice. I was out av place in the infanthry and left it afther two enlistments, bein' discharrged a sergeant. I was the Firrst Dijooty Sergeant av E Comp'ny av the Bloody Fourteenth, and as such it was me evil luck to acquire a reputation as a dhrillmasther. I was a bright, clane young man, if I do say it that should not, born wit' a good commandin' voice and a diz-

Digitized by Google

like for a dirrty soger. Back av that I had a tongue that was worse nor a clanin' rod across the back av a recruit, so 'tis no matther av wonder that the rooks did bether with me in awkward squad than most. I'd give a rook five days in the Manual av Arrms, right and left hand salute and squad formation, and bad luck to him if he didn't make comp'ny dhrill on the mornin' av the 6th. While 'tis usual to let every comp'ny dhrill its own recruits, whenever we got a large batch our Colonel (he had an eye on me) would say to the Adjutant: "Be in no hurry to assign these men to their comp'nies. Lave them mess wit' the band and do fatigue, and turrn them over to Sergeant Ryan av E Comp'ny for a week av eddication. They'll be the bether for it."

Well, sor, at the first call for volunteers in the war wit' Spain, I got Michael Joseph Kelleher. He come to me wit' a detachmint av rooks from Plattsburg Barracks, and the minute I clapped eye on him I knew him for the rascal he was. He was a long, handsome, red gossoon wit' grass on his teeth, as fine a figger av a man as ever shtepped into a Government sock, and me heart wint out to him. He hadn't his uniform issued him as yet and sure he was wearin' the corduroys he'd landed in, and them a ruin av rags entirely.

"Kelleher, avic," says I, "if there was ever a born color sergeant, 'tis you," and I give him some good advice to guide him. For why should I not? He was wan av me own. And I give him me copy av the Blue Book and bade him shtudy hard, which he did, although be the same token 'tis little good it did him for many a day. Bright as a heliograph he was, but a hobbledehoy he was then and shtill is, and what wint in wan ear come out the other, double time.

Dear knows I rode him rough, but he'd only shtand and smile, like he was makin' game av me. Two mortial weeks I had him in the awkward squad and I'll never believe till me dyin' day that he wasn't divilin' me afther the second dhrill. Glad I was to get rid of him for a spell the mornin' we bruk camp at the Presidio and hiked down to the transport.

Auld Bill Cooney, our Colonel, was shtandin' outside his tent watchin' the camp bein' shtruck, when Michael Joseph Kelleher come rompin' by, proud as could be bekase he was a soger bhoy and off to the wars, where he wanted to be; for, as he often remarked to me (off djooty): "I didn't come here to fiddle me time away doin' fours right and fours left. I kem to fight," and he was the happy lad that mornin' to think he was bound to the fightin' at last. He seen auld Cooney shtandin' there as solemn as a bull carabao, and what wit' his youth and innocence and the good feelin' wit'in him he shtepped up in back av the Colonel and fetched him a slap bechune the shouldher blades that would have put a volunteer on the retired list.

"Well, Colonel darlint," says Private Kelleher, "we're off to the front at last, are we not? And good news, say I."

THE Colonel coughed and shtaggered, and whilst waitin' to get back his breath he turrned slowly for a long, long look at Kelleher. Then he tossed an eye at me, shtandin' froze a little distance off. I come a-runnin'.

"Sergeant Ryan," says he, "who is this vagabone?"

"Private Michael Joseph Kelleher, sor," says I. "He do be a rookie, sor, and knows no bether," for I was fond av the omadhaun, for all his nonsense, and was for makin' it right for him.

"Have ye not, then, taught him his manners?" says the Colonel.

"I've thried, sor," says I. "Dear knows I've bruk me heart on his thick head."

"For the sake av his name and his brogue," says Cooney (he was Irish, but second-growth), "I'd like to overlook his insolince. But he do need dhrillin'. Havin' failed to learrn from the best dhrill sergeant in the regimint, let the sergeant av the guard have a back at him. Take the blackguard and turrn him over to the guard. And tell the orficer av the day he's to be confined in an ambulance wit' the curtain's dhrawn, on his way to the thransport. 'Twould plaze him well to march t'rough the crowds wit' his cumrades, posin' as a hero, kissin' every girrl that looks at him and struttin' wit' a posy in his piece. You vagabone!" says he, "you bloody young vagabone! Thirrty days and thirrty blind for your enthusiasm."

SO I LED the lad away and turrned him over to the guard. But others in the comp'ny had hearrd the Colonel call him out av his name, and from that day to this I've never hearrd him called aught but Mike the Vagabone, except at roll call.

And he was the "vagabone"! Well named he was.

"If I live to be a t'ousand years old, divil a prettier sight will I see than I saw at that minute"

A clane suit av white ducks he never owned and clane equipmint av his own he was long showin' to the Adjutant at guard mount. He'd borrow mine instead. Let the rigimint have ordhers to parade in pith helmets, white ducks, and brown leggings, and Mike the Vagabone would come sneakin' into line av file closers wit'out pipe clay on his helmet, and wearin' fatigue clothes and yellow leggings. Let the order be to parade in karki and campaign hat and the Vagabone would fall in wit' blue trousers and forage cap and a white duck blouse. And when the comp'ny commandher would ax him what in this and that he meant be such actions, he'd lie and swear he'd sent to the wash the clothes he should have paraded in, but the thievin' Filipino had promised to bring them back and failed him. Or else some wan had stolen his white duck trousers, lavin' him only the blouse. He was borrn wit' a good excuse and the brass face that ye can never see the lie in back av. Well do I remember the day he appeared at guard mount wit' a week's growth av red beard. The Adjutant flew at him.

"Me man," says he, "how dare ye appear on guard mount lookin' like an ugly ducklin'? Have ye no razor? Shtop! Not a wurrd out av ye—I'll confine ye for this."

The Vagabone was took be surprise. What wit' my equipment, that I'd gone over wit' a burnishin' chain until I could see meself in the metal, and some clane new clothes from his cumrades, Mike was lookin' like four aces and a king, barrin' his face, and to give the divil his due he'd clane forgot to shave that and only remimbered it when he saw the Adjutant and the guardhouse shtarin' him in the eye. But 'twas a cute adjutant that could down the Vagabone.

"Confine me, if ye plaze, sor," says he, "but thry me ye must wit'in twenty-four hours, and the Colonel'll turrn me back to djooty. I've done nothin' amiss, may it plaze the Adjutant. I'm only raisin' a Van Dyke beard, and Gawd knows, sor, if I'm to raise a beard I've got to give it a shtart some time, and wan time is as good as another. What opportunity have I to raise it bechune guard mounts, sor? I'm detailed to guard wanst a week. Ye cannot thry a man for raisin' a beard. If ye're to thry anybody for my whiskers, sor, thry Sergeant Ryan. I axed him if I might raise a beard, and he informed me that there was nothin' in the Regulations agin it," and he looked the Adjutant in the eye and winked at him, as much as to say: "Put that in ye're pipe and smoke it."

Colonel Cooney, who'd been watchin' guard mount, hearrd him and sure he laughed long and loud, whilst the poor Adjutant grew red in the face. Well, they both realized the Vagabone's Irish wit had saved him in the nick av time, for all they knew he was a liar. In the army ye cannot confine a man for raisin' a beard, even though a smooth-shaven man is considhered dirrty if he doesn't shave! Arrah, 'tis the quear wurrld we live in—the queer wurrld!

Wan day he was walkin' No. 2 post, at the end av which he connected wit' a volunteer sinthry from a camp close by. Av coorse, bein' a sociable divil, he made friends wit' the volunteer and shtood gassin' with him instead av walkin' his post in a millit'ry manner, and auld Cooney, comin' down the shtreet of a sudden, almost surprised him in the act. But he turrned lazy-like and walked back to meet the Colonel, for well he knew the Colonel had seen him and was bound to give him what Paddy gave the drum.

"Me man," says the Colonel, afther acknowledgin' the Vagabone's Present arms, did I not see you talkin' wit' that volunteer sinthry just now as I turrned the corner? I'll have none av that in this regimint, and well ye know it. Call the Coprll av the Guard and give me ye're belt this minute."

"Sor," says the Vagabone, throwin' the look av murder into his eyes, "I'm only a private soger and ye can insult me if ye feel like it. But the day I get me discharrge ye'll apologize for the hurrt ye're tongue has dealt me this minute. Coprll av the Guard! Relief! No. 2!" and he unbuckled his belt and handed it to the Colonel. The Colonel looked at him in the greatest surprise, wondherin' whether to get mad or hear what the Vagabone had to say further.

"I have not insulted ye, me man," says he kindly. "I'm simply makin' ye do ye're djooty. Ye know 'tis agin millit'ry discipline for a sinthry to gossip on post."

THE Vagabone raised his two eyes to heaven. "Dear knows," says he, "I'm not above a bit av gossip on post, provided I don't get caught at it, but gossip wit' a blackguard av a thievin' volunteer—may Gawd forgive ye, Colonel Cooney, but that's one thing I will *not* do. Kill, shteal, and lie I might, but forget I'm a regular soger—never!"

"Put on ye're belt," says Cooney, "ye're a good soger and I was wrong to speak as I did. I wasn't sure, but I thought I saw ye at it."

"Sor, I never spoke to a volunteer in me life."

"Continue the motion, then. They'll do ye no good," and the Colonel saluted him and walked back to tell the Coprll av the Guard wit' the relief to go back about his business.

Two weeks later, Major Knox, the regimintal trial orficer, and a good pious Catholic wit' a heart as big as a breech-block, had the Vagabone before him for absince four days wit'out lave. He tackled the Vagabone in the usual way av all thrial orficers, shtrivin' to get a confession av past misdeeds before findin' him guilty av the present charrge. He give Mike a long, harrd look, and says he:

"Me man, when did I see you before?"

"I don't know, sor," says the Vagabone as meek as Moses, "unless it was at Mass in the Cathedral San Ignacio last Sunday."

At that the Major's harrd look vanished, and says he: "So you were to Mass, were ye? Well, I can't deny I wasn't there. Where was I sittin'?"

"Beggin' the Major's pardon, ye were not sittin', sor. Ye were kneelin'."

"Case dismissed," says the Major; "go to ye're quarthers and thry to behave yerself in the future. There can be no real harm in an enlisted man that goes to his Mass on Sunday."

SO YE can see from what I've just been tellin' ye what a rascal the Vagabone was. I was full six months makin' a clane soger out av him and fillin' him wit' a proper pride in the serrvice, for a heedless divil he was and always will be. But be degrees I got him to shtand erect on his hips and keep his blouse but-

Digitized by Google

toned and I shaved him wit' me sharp tongue, but left him a mustache. "A wide flowin' mustache for a soger, ye vagabone," says I, "but a Van Dyke beard for a Dutch docthor." So in time he blossomed out into a real soger, and won great respect be rason av challengin' and batin' the regimintal bully in the finest fight ever seen in the auld Eighth Corps. He was ripe for a coprilship when he decided he would get sick.

YE MUST know, sor, that from the 5th av February, '99, until the followin' April our brigade lay quiet in the trinches we'd trun up from auld Fort San Antonio Abad on the bay clear acrosst counthry to the Pasig, and whilst we had shootin' day and night on the outposts all that time, 'twas a quiet life we led and the Vagabone got tired av it, as he got tired av everything else, and wanted a change. He was what Colonel Cooney called "a damned fine soger but a timperamintal Irish jackass," and a little outpost firin' was hardly the kind av active service to suit a temperamintal jackass av the breed that only death can shtop wanst he's fixed bayonets and shtarted a charge. So the Vagabone grew lonely and sad, and what wit' frequent outpost, indifferent rations, mosquitoes, and the rainy season comin' on, he lost flesh and spirit and made up his mind he'd quit sogerin' and go to hospital until something wort' while developed in the way av war. The arrival av fifty pounds av books and auld magazines from a deluded maidservant in the Shtates, to whom he'd give all his brass buttons before we sailed, put the idjee into his schamin' head.

"Be the Great Gun av Athlone," says he to himself, "I'll go to hospital now and spend a quiet three weeks or a month lyin' on the broad av me back in bed, readin' and smokin' and gossipin' with the other unfortunates and gettin' three good, well-cooked meals daily" —and wit' that he cast about in his wicked head for the right disease. Firrst he thried atin' soap to bring on a simblance av bowel complaint, but the soap had more lye in it than the Vagabone himself. He got sick to his stomach and give up the idjee simultanyus wit' the soap.

HE HAD more luck wit' his next illness. Afther considherable speculation over the merits av lockjaw, insanity, rheumatism, Charley horrse, and locomotive-attacks-ye, he decided to fool the docthors and become paralyzed in his off hind leg!

Well, sor, the next mornin' he failed to answer reveille, but when the comp'ny was dismissed he come limpin' up to the comp'ny commandher, usin' his Krag for a crutch and dhraggin' his leg afther him like a run-over dog.

"I was unable to be present, sor, to answer me name," says he. "I have a great notion somethin's wrong wit' me. Whin I woke up this mornin' I had pins and needles in the calf av me leg. It spread to the knee, then to the middle av the thigh and then to the hip, and there it shtopped. Captain, dear, if I was to close me two eyes this minute, I'd have to take your worrd for it that I have two legs instead av wan. Divil a bit av feelin' in it at all, at all," and wit' that he commenced to whimper and fell in a heap agin the Captain.

"Musha now, me poor lad," says the Captain, "but this is terrible news ye have for me, Private Kelleher. I'll be a badly disapp'inted man if ye're not paralyzed," and he called four men to pack the Vagabone off to medical headquarthers down in the village av Pasay, whilst the Firrst Sergeant entherel the scamp's name in sick report.

Sick call went at eight o'clock and at nine-thirty the Copril in charrge av the sick report come back wit' the book and the information that Mike the Vagabone had been sent to the Second Reserve Hospital in Malate for observation and threatmint, and would wan av the bhoys be so kind as to bring his readin' matther and equipmint down to Pasay and put it in the ambulance alongside av him? Ye must know that in them days, wit' the throops on active serrvice, when a man went to the Second Reserve he took his field equipmint wit' him and it was checked and stored at the hospital, for what wit' a big sick report and us in the field, we could not be hampered carryin' exthra equipmint around wit' us, whilst the owner was in the hands av the poultice wallopers.

SO THE Top Sergeant detailed a man to bring the Vagabone's effects down to the ambulance, and away he went, bag and baggage, to hospital. And at hospital the guard checked his rifle, belt, haversack, canteen, poncho, and shelter half, whilst a brace av big buck hospital corps men laid Mike on a stretcher and carried the malingerer upstairs to a clane, white bed in a clane, cool room, along wit' half a dozen convalescents, where they shtripped him and bathed him and put a suit av pajamas on him and left him alone wit' his happiness and a flour sack filled wit' readin' matther.

And there the Vagabone shtayed for three mortial weeks, livin' on the fat av the land and foolin' the docthors. But wan av these was a bright young conthract surgeon, and afther three weeks, when Mike's dead leg showed no signs av decay, he got suspicious that the Vagabone was malingerin' and said as much to the Major docthor in command.

"What makes ye think he's malingerin'?" says the Major docthor.

"His leg do have a healthy color and it shows no shrinkage," says the young man; "besides which the red divil do look too happy for a man wit' one leg in the grave."

"Jab an inch av needle into his dead leg unbeknownst to him," says the Major docthor. "'Tis very simple. If he jumps he do not be paralyzed."

"I've jabbed the divil until in all pity I've had to lay off on him, sir. He do be as foxy as Napoleon Bonaparte, and divil a jump out av him. I think he suspected I might thry that trick and he was primed and waitin' for the jab."

"Do he give ye a black look?" says the Major.

"He do."

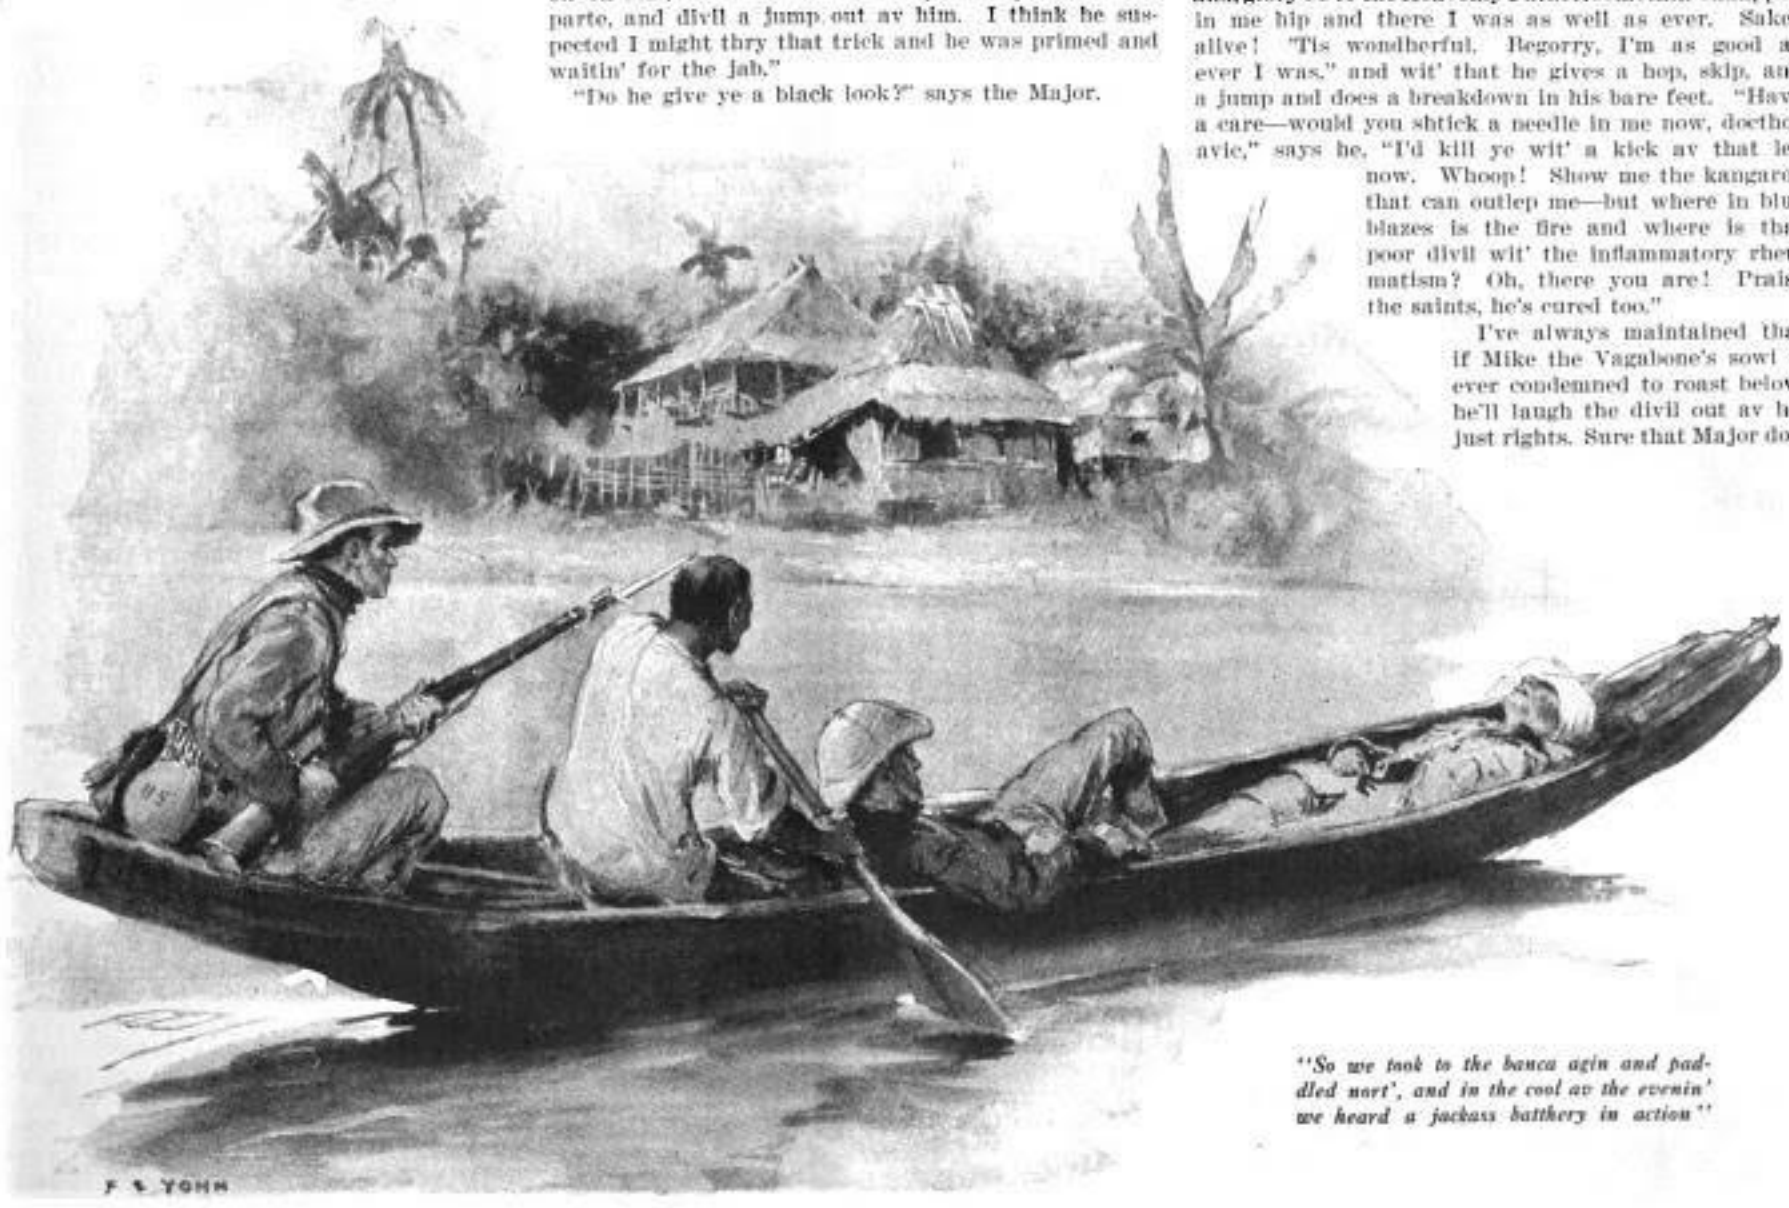
"And ye say he's not melancholius and down in the mouth?"

"As brisk as a bee and as playful as a kitten. Sure he do be whistlin' like a t'rush from mornin' till night."

"Hah-hah!" says the Major docthor, for a wise auld lad was that same Major, and he hadn't been docthorin' sogers forty year for nothin'. So he knew a trick or two that Mike the Vagabone had never heard av.

"We'll give him his degree this day, then," says the Major docthor, "and if he come through it safe, be the Rock av Cashel, he do be paralyzed! Do you move all the convalescents out av No. 3 ward, save and exceptin' this Private Kelleher, and when ye have them all out do ye come back here and wrap me in cotton battin' from heels to hair, and put a nightcap on me. Then do you take two men and carry me on a stretcher into Kelleher's room and lay me in bed there. Bein' Irish, he's inquisitive, so he'll ask the nurses what's up wit' me. They'll tell him. I'm helpless and dyin' av inflammatory rheumatism. Lave Kelleher alone wit' me ten minutes and then do you and half a dozen men come runnin' down the corridor, yellin' fire."

SO 'TWAS done as the Major docthor ordhered, and, sure enough, the minute the hullabaloo shtarted Mike the Vagabone forgot he was paralyzed. Faith, he was a soger agin. The time for action had arrived, and wit'out thinkin' he made one grand lep out av bed and made for the Major.



"Come with me, allanah," says he, "ye poor misfortunate divil; 'twould be like them to lave ye here to burrn to a crisp," and wit' that he scooped the Major docthor off the bed and went peltin' down the corridor wit' him to beat four av a kind! At the head av the stairs he was met be that young contract surgeon and the Sergeant av the Hospital Guard.

"Wan minute, please," says the Sergeant av the Guard, shovin' a bayonet agin' the Vagabone's belly, as the Major docthor shlipped out av his arrms.

"I congrate ye, Private Kelleher," says the contract surgeon. "Ye're a fine light lad on ye're feet. Be the same token take a look at what ye've been runnin' away wit'," and the Vagabone looked, and there shtood the Major docthor wit' his nightcap off! The Vagabone knew the jig was up and that he'd been tricked be smarter men nor himself, but did he give up? Not he! He let out a whoop av pure joy and grabbed the young contract surgeon around the neck, for 'twould not have been policy for him to let on he'd recognized the Major docthor.

"GOD bless ye, docthor dear," says he, "I'm cured at last! Sure ye scared the paralysis out av me shoutin' fire, and I made wan lep on me good leg, and, glory be to the Heavenly Father, somethin' shnapped in me hip and there I was as well as ever. Sakes alive! 'Tis wondherful. Begorry, I'm as good as ever I was," and wit' that he gives a hop, skip, and a jump and does a breakdown in his bare feet. "Have a care—would you shtick a needle in me now, docthor avic," says he, "I'd kill ye wit' a kick av that leg now. Whoop! Show me the kangaroo that can outlep me—but where in blue blazes is the fire and where is that poor divil wit' the inflammatory rheumatism? Oh, there you are! Praise the saints, he's cured too."

I've always maintained that if Mike the Vagabone's sowl is ever condemned to roast below, he'll laugh the divil out av his just rights. Sure that Major doc-

"So we took to the banca agin and paddled nort', and in the cool av the evenin' we heard a jackass batthery in action"

Digitized by Google

thor could no more get mad at the villain than he could fly. He rowled on the floor in his cotton battin' regimintals and praised his Maker for creatin' a Private Kelleher!

"I'm neglectful av me bounden djooty, you scamp," says he, "be not havin' a gineral court-martial sit on ye, but I haven't the heart. What the divil were ye up to, acushla, for ye're no coward? The way ye thried to save me proved that ye're the last man in the wurrld to think av yerself and the first to think av others. What do ye mane be such actions?"

"Not givin' ye a short answer, sor," says the Vagabone, "I might as well admit I was be way av takin' the rest cure. Sure there was no fightin' to fit a man av spirit, and our comp'ny cook was an assassin, and I was tired av listenin' to tree lizards and upset lead whistlin' so high the thrill was all out av it. But I suppose I'll have to go back to it now," says he.

"What's your comp'ny and regimint and where stationed?"

"E av the Fourteenth, sor. They're stationed in the trinches at Pasay on the south line."

"They're stationed there no longer. They moved out last night, wit' Gineral Lawton. He's took them up the river in cascoes, and across Laguna de Bay to take Santa Cruz and the Lake towns. Faith, if it's wurrk ye're lookin' for to fit ye're spirit, me lad, ye'll get ye're belly full av it in the hill provinces."

THE Vagabone's face fell a foot. "Then do I have to shtay here until they come back to the coast, sor?" says he.

"Ye do not. Ye've been here too long already, but as ye appear to have some good in ye I'll give ye a chanst. If ye have to wade t'rough hell fire and swim a bloody river, ye must report for djooty to ye're comp'ny commandher wit'in forty-eight hours, or I'll prefer a charrge agin ye if the provost guard can find ye, and ye'll be bobtailed out av the serrvice."

"I'll be off directly," says the Vagabone.

"Ye will take wit' ye a note to ye're comp'ny commandher, which ye will present upon arrival. He will then give ye a receipt for ye're worthless carcass, and ye will mail that receipt to me, or bring it in person if ye ever come back alive, which I much misdoubt. Forty-eight hours ye have to report for djooty somewhere in the wilds av Santa Cruz Province. Forty-nine hours will not save ye from charrges if I find it out, and find it out I will. Dhress now, get ye're equipmint from the guard, dhraw two days' rations from the hospital commissary, and go where glory waits ye. The *Napidan* leaves the dock at Binondo at two o'clock to follow the throops that went up last night, and ye may get a ride on her."

The Vagabone saluted and went back to his room to dhress himself. Wan hour later, wit' a note to his comp'ny commandher in his pocket, two days' rations in his haversack, and the light av heaven in his eyes, he was shtandin' on the Bridge av Spain, lookin' across the Pasig to where the *Napidan* was lyin' at Binondo. She was a little, light-draft, flat-bottomed river gunboat thrown together in a hurry and armored wit' sheet steel just thick enough to shtop a Mauser bullet. She had a pirate crew av 'tillerymen aboard, wit' a rovin' commission, two jackass guns, two Gatlings, and two automatics chuckin' half-pound shrapnel. She was the joy av life on the river.

THE Vagabone looked at her from the causeway on the Puente de España, and says he to himself, says he: "That divilish Major docthor said she'd sail at two o'clock. I have two hours to wait, and to kill time I'll cross into the Escolta, get a haircut and a shave and the last dhrink av San Miguel beer for many a day," and away he went. But what wit' hoppin' and jumpin' he took a beer too many, wit' the result that when he got down to Binondo at four o'clock the *Napidan* was twelve miles up the river beyond Pateros, and the 'tillerymen was that busy swappin' compliminits wit' the amigos on each bank a message from their guardian angels wouldn't have caused them to turrn about and wait for the Commandher in Chief himself. So what did Mike the Vagabone do but—

"Is Sergeant John Ryan somewhere around here?" demanded a booming voice from the stable entrance.

"Come in, ye divil," the sergeant yelled. Then, turning to me: "'Tis the Vagabone himself, God bless him! He's come to look me up for auld sake's sake." Then again—and aloud: "Come in, ye vagabone, and explain to a bethter man nor yourself why I find ye keepin' comp'ny wit' Chinamen. Have ye no pride, ye Sassenach?"

BI'T Mike the Vagabone had entered and his great arms closed around the bunkie of other days, the while he hugged him with an ursine hug.

"We were just talkin' about ye—" began the sergeant.

"'Twas nothin' good, I'll warrant. But come out av this. I'm not used to bein' enthertained in a stable. Take me to the canteen, as a bunkie should, and let us have a beer, as sogers should."

"Captain, dear, if I was to close me two eyes this minute, I'd have to take your worrd for it that I have two legs instead av wan"

The sergeant raised his eyes mournfully. "The serrvice has gone to the dogs since you left it, Michael," he said. "We have no canteen. The W. C. T. U. took it away from us. God forgive them!"

"Which I shall not," supplemented the Vagabone, "for 'tis to beer I owe the greatest event av me entire life, and the proud position I at present occupy as Colonel av the Imperial Guard av the Chinese Empire. Sure, if I hadn't missed the *Napidan* goin' up the Pasig in April av '99—"

But here the Sergeant, remembering his manners, introduced me to Colonel Kelleher, who graciously acknowledged himself felicitated thereat and sat down on a bale of hay.

The Sergeant silently handed him a plug of vile black chewing tobacco, the Colonel bit off as much as he could, forgot his high station, and became again Mike the Vagabone.

The Sergeant winked at me, counseling silence, and presently the Vagabone spat at a crack and commenced his story.

"YE WILL remimber, Jawn, in April av '99 I was took wit' a bad case av partial paralysis and sent to hospital in Malate. Well, sor, the day before I was discharrged cured, Lawton took a flyin' column up into the Laguna de Bay counthry—"

"Aye! Well do I remimber it! They've called us Lawton's Billposters ever since, from a habit we had in that campaign av rushin' a town and clanin' it out; afther which we'd post up notices in Tagalog and Spanish, tellin' the poor divils av natives our intintions were peaceful, and nobody but a fool blind to his own best intherests would doubt it. Dear knows, we thried hard to give them the glad right hand av brotherly love—"

"We did—back av the ear," supplemented Mike the Vagabone dreamily.

"Gwan wit' your shtory," continued the sergeant, "and tell us no lies. Ye were malingerin' in hospital, and the docthor found ye out first and kicked ye out afterward. Ye were to go up river on the *Napidan*, and ye went hellin' around and missed her. That much we know. Proceed, ye vagabone."

WELL, sor [the Vagabone resumed patiently], I arrived at the stone wall where the river boats touch at Binondo, to find all things as quiet as could be and divil a gunboat in sight. The siesta was not yet over, and every coolie and cargador was curled up sound asleep wherever he could find a bit av shade, but I shpotted a Kansas volunteer fightin' wit' a switch engine at the terminus av the Manila & Dagupan Railroad back av the Captain av the Port's office. Ye will recall they made the Kansans run the railroad on the advance to Malolos. 'Twas too hot to walk over to him, so I yelled. Says I:

"Ye Kansas man! There's a regular talkin' to ye. Where is the *Napidan*, avic?"

"To hear ye ax that question," says he very uppish, "wan would think I had her in me pocket. Go to the divil and hunt for her."

"Will ye fight?" says I, for I had little use for militiamen.

He got down from the engine and come over for a look at me. "Will *you* fight?" says he.

"Troth I will, and gladly," says I, puttin' up me dukes.

"Indeed!" says he, "ye surprise me. I didn't think ye would."

"And why not?" says I.

"For the reason that ye're regimint's in action up in Santa Cruz Province this very minute, whilst you're loafin' around here, dhrunk and disordlierly. Faith, if you're a regular, I'm glad I'm a volunteer."

I was on the p'int of assassinatin' him when a carromata dhruv up behind me, and a small, slight, red little fox av a man wit' thick eyeglasses shtepped out.

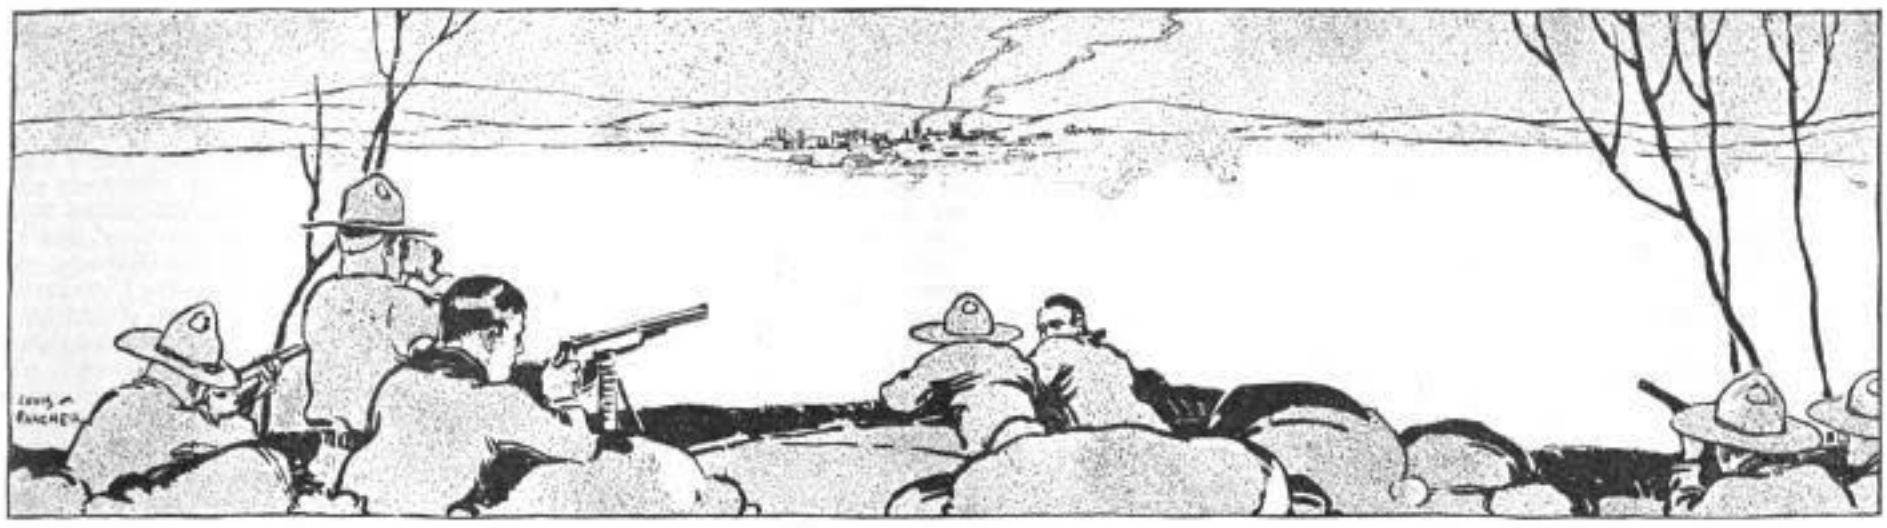
"What's this?" says he. "Have ye nothin' else to do save make a brawl in public?"

THE Kansas man flew back to his engine, whilst I faced about and give the new arrival the figger four. And whilst salutin' I had a chanst to look at him. He was wan av these auld-young men that might have been thirty-five or sixty, accordin' to the light he was in. He was wearin' a broad, flat, cork helmet wit' a sun cloth hangin' down over the back av his neck, like the pictures av Stanley in Darkest Africa, an enlisted man's blue Chambray shirt, corded drab ridin' trousers, pigskin puttees, and tan shoes wit' toe caps on them—and he was hidin' a bit av a smile as he looked at me.

"Bad luck to ye," says I, "but ye shpoiled a beautiful fight. I thought ye were an orficer, for ye have the same nasty-nice way av addhressin' a man. I'll give ye to undherstand I'll have no war correspondents makin' game av me, ye little scrawny gossoon." I was a mad young man, for I'd give him a salute he was not entitled to, and as I said he was wishful to smile his contimpt at me. "Wipe off that smile," says I, "or be the Rock av Cashel I'll shpank ye. I've ducked many a man in the river for less."

AT THAT he burst out laughin' and shtuck out his hand. "Peace! Peace!" says he. "Did ye not see the Kansas man had a monkey wrench in his pocket. He'd have kilt ye wit' it if I hadn't snapped out at ye like an orficer. What have ye rolled up in that paper undher ye're arrm?"

"Not givin' ye a short answer," says I, shakin' hands wit' him, "'tis a quart bottle av Milwaukee beer, no less. Did ye think it was a map av me father's estates in Ireland?"



"I did not," says he, "but ye might have the manners to ask a man if he has a mouth. 'Tis crool hot on this open dock. Shtep into the carromata."

So we got into the carromata and I unwrapped the bottle and produced a corkscrew, for in them days I always went arrmed. I handed the bottle to him for a shantha.

"I'd dhrink to ye wit' more pleasure," says he, "if I knew ye're name. I can tell ye're comp'ny and regimint from the device in ye're campaign hat, but if I'm to dhrink wit' a man I must know his name."

"I'm Private Michael Joseph Kelleher," says I, "numbher wan in the front rank av the first set av fours first squad, first section. *(Continued on page 23)*

The War in Colorado

By Peter Clark Macfarlane

ILLUSTRATED BY LOUIS FANCHER

THE WAR! For that is what it amounts to. The two factions of an industry have organized, armed, raided, pillaged, given battle! The State of Colorado is shocked and shamed. Expiation is demanded. Impeachment threatens. Courts-martial impend. Popular indignation clamors for a scapegoat. Let us hope it does not find one. To do so would make the devil laugh. It would be such an easy, shiftless, fruitless way out.

The situation calls for slow thinking. Monstrous things have been done in Colorado, yet the men who did them are not monsters. They are of like passions, and often of like sympathies with ourselves. If we had been where they are, we might have done what they did.

The mine owners (hereafter to be known in this story as the operators) are the usual rugged, aggressive type of American business man. The mine workers are Austrians, Greeks, Italians, and Mexicans, with a sprinkling of men of Saxon and Celtic blood. The operators tell me that the strike was caused by agitators. I think we may admit that fact. However, no scientist has ever been able to agitate a vacuum.

Let me illustrate: The Colorado mines are peculiarly subject to explosions caused by gas or dust or both. For a long stretch of time they have killed twice as many workers as all the other coal mines in all the rest of the United States combined, which by itself is something to pause and think about.

Now for our illustration: Let us take a single instance of one of those explosions. Its cause was undetermined. One theory was that a Japanese miner, "sneaking a smoke," struck the match that fired the gas that exploded the mine and slew some scores of men, tearing many bodies so far from human semblance that they were scarcely recognizable as such. Now, in that hypothesis, the match of the Jap was the voice of the agitator. But if there had been no gas or dust there would have been no explosion.

Injustice the Primal Cause

IN THE present situation Frank Hayes, vice president of the United Mine Workers, we will say, was the agitator. He struck the match. But if there had been no long-continued, no high-heaped series of wrongs, real or fancied, floating in the minds of the miners like a gas, coating memory thickly with explosive dust that flared up with the fiery words of the agitator, there would have been no strike—and especially no such stubborn, blood-flowing contest strike as has resulted.

And now to look for gas and dust.

Take first the matter of corporation domination in the political life of Colorado. To an astonishing degree the State has been controlled during a score of years by the great corporations, some of which, it must be admitted, have played a conspicuous part in the development of its natural resources.

These corporations have influenced courts, legislatures, and even the voters themselves. Wherever the corporation overshadows the commercial interests of a locality, political freedom has been endangered, and justice for the individual, as against the combination, has been difficult or impossible to obtain. For instance, the counties of Huerfano and Las Animas have been the center of trouble in the present strike. Going back, you will find that these two counties have been dominated commercially for years by the coal operators. You will be told that in these two counties the corporations vote the sheep on the hills and the mules in the mines to carry their ends. You will hear that the dominant ring can convict or acquit as it will; that it can send its enemy to the State Penitentiary or let its friends go free. In consequence there is a widespread belief that there is no justice in these counties for a private individual when a corporation interest is concerned. Concerning this general situation a recent Federal Grand Jury report says:

"The coal companies have been sufficiently influential to nominate, elect, and control many county officers, and have done so, with the result of complicating the industrial situation by arousing political prejudices. Some county officers reputed to have the support of coal companies have shown undue activity in controlling elections, presumably to eliminate unfavorable votes of miners, and have thus aroused political and social dissatisfaction."

Miners' Cry for Fair Dealing

AND now if, in the midst of a corporate principality of this sort, we turn to consider the situation of the mere mine worker, we shall begin directly to smell the gas. The coal mines are scattered about through the hills and frequently tucked away in the cracks of inaccessible cañons. About each mine springs up a little town, the whole life of which is drawn from the mine.

Sometimes the little town is incorporated, and sometimes not. If it is, almost every municipal officer is a mine employee or a man who draws his income from the mines. The superintendent of the mine

"Camp marshals, acting in the capacity of judge and jury, passed sentence: 'Down the canon for you!'"

is to all intents and purposes the superintendent of the town. The justice of the peace may be a boss in the mine; the town marshal may be another employee of the mine, and both subject to orders of the superintendent.

Under conditions like these in the town, in the township, and in the county, the situation of any individual miner is easily comprehended. He has only such rights, civil and industrial, as his employers feel disposed to accede.

Now there is no use arguing that every coal superintendent is a tyrant, or that every mine boss takes continual advantage of the position in which he finds the men who work for him. That is not so. It is not in human nature. Most of these superintendents and bosses have come up out of the mine themselves. They know how it is with the miners. But their point of view is shifted. They have to hold their jobs, to get out the tonnage, to take orders from above—and being human they choose the easiest way. What that easiest way often results in another extract from the Grand Jury report will indicate:

"Many camp marshals, whose appointments and salaries are controlled by the local companies, have exercised a system of espionage and have resorted to arbitrary powers of police control, acting in the capacity of judge and jury and passing the sentence, 'Down the cañon for you' (meaning thereby that the miner so addressed was discharged and ordered to leave the camp) upon miners who had incurred the enmity of the superintendent or pit boss for having complained of real grievances or for other cause. These, taken with brutal assaults by camp marshals upon miners, have produced general dissatisfaction among the latter."

Nor can there be any doubt that the offenses of which the miners complained were often very real. Take the matter of weights. The coal diggers are paid by the ton. Man after man has testified before the recent Congressional Investigating Committee to dissatisfaction over company weights and the belief that he was being cheated every time his car of coal was weighed. Officials of the State Labor Department testified to finding scales that would not balance, scales that were tricky, that weighed short hundreds of pounds, and of places where they were not permitted to inspect the scales at all. At least one superintendent has testified that he knew the men in his mine were being robbed systematically of their weights, and that he was powerless to prevent it because of orders from above direct to the weigher. Experience has shown that the only sure protection to the coal miners in the matter of weights is the right to combine in the employment of a man of their own choice at their own charge to check the weights registered by the company.

The Principal Grievances

NOW the astonishing fact is that for seventeen years there has been a law upon the statute books granting to miners of the State of Colorado this right to have weights checked by themselves. The record shows that this law has been almost habitually violated by one subterfuge or another. The testimony before the Congressional committee was that men who signed petitions for check weighmen, or served on committees named to intercede for them, found themselves mysteriously discharged, "sent down the cañon" upon one pretext or another, and that this happened so regularly that finally men knew better than to ask for a check weighman. The operators have nearly all testified that they would grant the check weighmen if they were requested, and the strikers have cynically replied that "requesting" check weighmen had proved unhealthy.

The fact certainly speaks for itself. There were practically no check weighmen, and one of the seven principal demands of this long and bloody strike is for a right which the laws of Colorado have conceded for seventeen years. Four others of the seven principal demands cover grievances of the same sort.

Since 1901 there has been a law enjoining semi-

Digitized by Google

monthly pay days. The president of the Colorado Fuel and Iron Company told the Congressional committee that his company had instituted the semi-monthly pay day on February 1, 1913, or twelve years later.

In 1899 there was enacted a law dealing with the so-called "truck system." This law forbade the paying of men with scrip in lieu of lawful money, forbade compelling them to trade at company stores or to board at company boarding houses. Testimony was produced before the Congressional committee showing that up to within a short time of the strike scrip was used and men were threatened if they did not trade at the company stores and board at the company boarding houses.

Officials of the State Labor Department testified to finding scales that would not balance . . . and scales that weighed short hundreds of pounds

Elusive Laws

SINCE 1899 there has been an anticoercion statute, making it unlawful for an employer to prohibit his employee from joining a labor organization. This law appears in some places to have been observed in the letter, but it was generally violated in spirit.

Mr. J. F. Welborn, president of the Colorado Fuel and Iron Company, the Rockefeller concern which mines more coal than any other operator in Colorado, denied that men had ever been discharged for belonging to a union, and said: "We have known that they not only do belong to a union, but that they have their order and hold occasional meetings." But the Federal Grand Jury, before quoted, found that "the coal companies have discouraged and opposed the organization of labor unions and fraternal societies in the camps, etc. . . ."

But the record as to the State eight-hour law must be regarded as the crowning instance of contempt for popular government of which the Colorado corporations have been guilty.

Since the middle nineties public sentiment in Colorado has demanded an eight-hour law. After several years one was passed, only to be declared unconstitutional by the courts. In 1901 the people remedied this by voting a constitutional amendment, but the corporation's influence in the Legislature of 1903 was strong enough to defeat the majority will of the voters. The bloody strike of 1904 was in part a protest of the workers against such nullification of their will. The Legislature of 1905 got as far as to pass an eight-hour law, but it was a "fake" bill framed by the enemies of the idea; and it was not until ten long years after the constitutional amendment that the Legislature of 1911 did enact a real eight-hour law for smelters and mines.

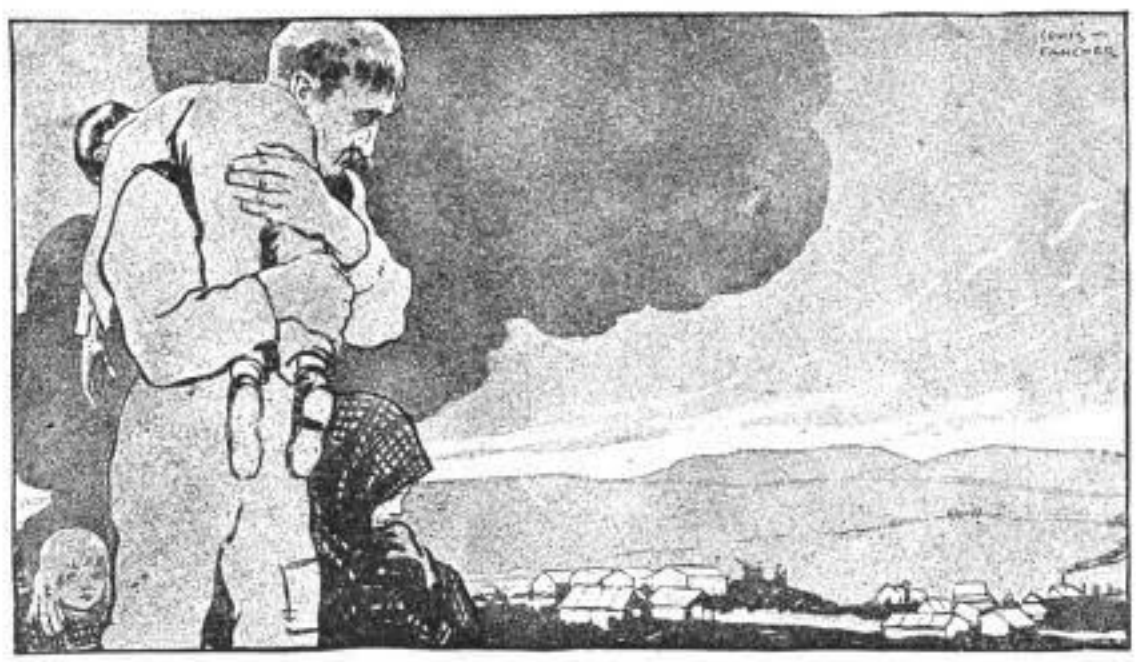
Against this belated statute the operators next invoked the referendum, thus suspending it automatically, and into this referendum-election ballot slipped a proposal for a "fake" eight-hour law in order to divide the vote and confuse the electorate. But so anxious were the people to get the eight-hour law that they both sustained the legislative enactment and carried the fake proposal. The result, of course was the raising of a constitutional question as to which law was the real law, which again meant more delay, and it was not until the Legislature of 1913 that the matter was cleared up by a ruling of the Supreme Court and the passage of a new law with a "safety clutch" in it, so that the day of its effect could not be postponed.

Is it to be wondered at if the working miners of Colorado lost some of their respect for law? Would it be strange if this record with regard to the laws which have not been enforced—the control of elections, legislatures, courts, and juries—kindled rebellion in the hearts of working miners against the very Government itself?

Perhaps this, too, will explain why the coal miners of Colorado have grown so stubborn in their devotion to the union idea. The conviction has been hammered into them through from ten to twenty bitter years that they are helpless as individuals and that their only way of escape from a condition bordering on hopeless peonage is in allegiance to a great national labor union, like the United Mine Workers of America. The State having utterly failed to protect them, their forlorn hope now is that the union may.

Now it must be borne in mind that what has been written here about the violation of laws and the violation of the rights of workingmen did not lie against all employers or against all mines; one was guilty of one wrong, another of another, and the whole effect was cumulative; and, further, that resentment against one was transferable to all when all presented a common front of arrogant indifference.

It must be remembered, too, that some of these charges the operators have denied specifically, and that while they would admit others, they deny altogether their importance and refuse to recognize that they are any particular factor in the present situation. On the other hand, however, these very denials were themselves denied by actions of operators in the year preceding the strike, for at last they began to be alarmed at the ominous feeling among their men. In the North a stubborn strike had been in progress since 1910. They knew that union agitation was going on in the South. They knew that there was gas enough and dust enough to make match striking dangerous, and they began to clean house. One hears of changes in the rules, of the inauguration of the eight-hour day before the last law was passed, of generous proposals regarding check weighmen, and, most significant of all, of an advance in wages claimed to represent 10 per cent. This was the back-firing of the companies against the explosion which they themselves had made inevitable, but it came too late.



Operators Ignored Miners' Overtures

THE men were not to be satisfied with concessions. They demanded the union and power, so that they might treat with their employers on terms approaching equality, now and always. The agitators were striking matches all over the district.

The first move in the present belligerency was the writing of a letter to the operators, dated September 8, inviting them to "a joint convention of miners and operators," and containing the following explanatory paragraph:

"We are making this last endeavor to settle our differences peacefully, and with the hope of preventing a strike. If you will kindly come to this joint convention we feel sure we can adjust all points at issue between our respective interests in a satisfactory manner."

This letter was signed by Frank J. Hayes, vice president of the United Mine Workers of America; John R. Lawson, International Board member of the same order for the Colorado district; John McLennan, president of the district local, and E. L. Doyle, the district secretary, as "*The Policy Committee Representing Colorado Mine Workers.*"

A miner with his dead son over his shoulder, and the remainder of his family, marching out of the Ludlow tent colony after the attack by Troop A

The operators did not reply to this letter, and they likewise ignored its invitation. Not that they objected to dealing with a labor union theoretically. Far from it. As Mr. Osgood told the Congressional committee:

"I cannot question, and do not question, the right of men to organize and sell their labor collectively."

But, referring to the United Mine Workers' organization, he added: "From my knowledge of this organization, I don't want any business relations with it, and I am not going to have any business relations with them."

Now that was exactly what the copper operators told me in Michigan, that they believed in unions and the right of men to bargain collectively, and if their miners would, for instance, affiliate with some nice gentlemanly labor organization like the United Mine Workers of America they would be very glad to recognize them. Yet here were the Colorado coal operators telling me they did not like the United Mine Workers, and preferring that their men should affiliate with, say, the International Sunday-school Union, or something like that. Pardon the flippancy, but surely we must admit that this presents a very human picture. The operators do not want their men affiliated with any unions that have power behind them—they want to own their own business, make their own laws, try their own cases, and—send the recalcitrants "down the cañon."

Rockefeller Justice in Colorado

ON THE other hand, the mood of the strikers is equally human. Imagine one little Greek who can barely mumble a few words in English trying to make a bargain with a superintendent who has the Rockefeller millions behind him. Where does the Greek get off? Has he any right of bargain at all? Can he do anything but take what is offered or "go down the cañon"?

Imagine, on the other hand, the same superintendent representing the same Rockefeller millions, but on the other end of the table, not the poor little Greek alone, but with him stout-hearted John Lawson, having behind him the 400,000 members of the United Mine Workers' Association. That is different. If I had a lot of coal mines and had got into the notion of thinking that they were mine, and that I had the right to run them as I saw fit, I would much rather deal with the Greek, and I would go to just about any length to keep from having to deal with John Lawson.

If I were the lonely Greek, and if I had a background of three or ten years' experience in the mines I would endure just about any kind of a fight to get John Lawson to stand with me when I talked to the boss.

Despite all befogging, this is the real issue in Colorado to-day, the right of the miner to bargain collectively for the sale of his labor, and there is no real gain from being hypocritical about it.

Mr. Rockefeller's recent statement says:

"Surely, no thinking man can ask, much less expect, that we will abandon our own employees and the cause of the workers of the entire country because violence and wholesale slaughter are brought about by an element which has come to regard itself as above and beyond the reach of the law."

This fine sentence hints at a passion for social justice with which, unfortunately, the Rockefeller name and enterprises are not associated in the public mind, and indicates that the real issue in Colorado is the sacred concern of the coal operators for the rights of their employees. I am sorry to say that there is small evidence of this sacred concern for the rights of employees to be found upon the coal fields. The men who work in the coal mines appear to have been deliberately and systematically deprived of the rights to which we are accustomed to believe that free men in America are entitled, and the issue is: Shall this continue?

Miners' Grievances

AGAIN, Mr. Rockefeller's reference to the strikers as "an element which has come to regard itself as above and beyond the reach of the law" indicates a further misconception. He would have put it more accurately to speak of them as "an element which has come to regard itself *as unable to secure the benefit and protection of law.*"

The convention issued a demand for the recognition of the union; for a 10 per cent advance in wages; for an eight-hour day; pay for labor unproductive of tonnage which the miners were compelled to do in getting ready to take out coal, called "dead" work; "the right to trade in any store we please, and the right to choose our own boarding place and our own doctor"; and "the enforcement of the Colorado mining laws and the abolition of the notorious and criminal guard system which has prevailed in the mining camps of Colorado for many years." These demands met with the same reception as the invitation to the convention. They were ignored. The strike became effective on September 23. The number of men who left the mines is variously estimated at from 50 to 90 per cent. The few mines where conditions had been especially good continued to

Stalking the Pestilence

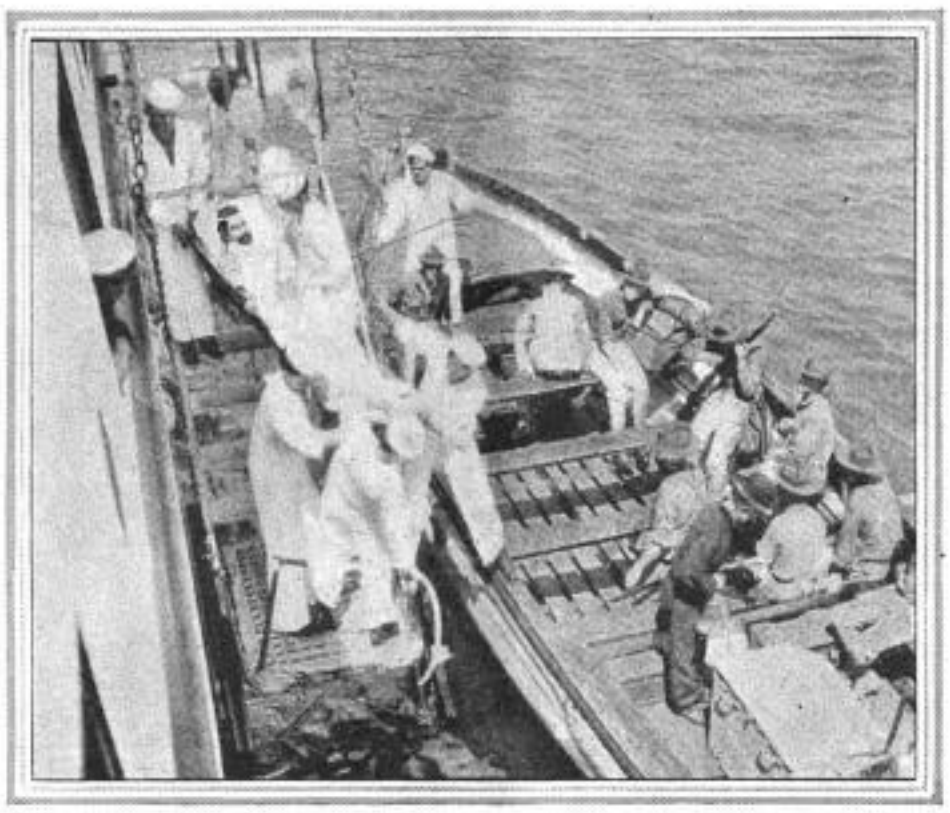
By Jack London

Photographs by JAMES H. HARE, Collier's Staff Photographer

IN ALL the long red history of war, disease has stalked at the heels of armies. In the present generation it bids fair to cease stalking, at least at the heels of armies that are scientifically and modernly handled. I have just been studying the mortality statistics of Vera Cruz for the last sixteen months. There is a peculiar blank space at the head of the column marked "Cerebro-spinal Meningitis." For the first six months of 1913 there were no deaths from meningitis. In July there were three deaths. By December, in that month alone, there were twenty deaths. The abrupt appearance of this disease led me to inquire of Major F. M. Hartsock for an explanation.

The appearance of meningitis in Vera Cruz seems to have been due to Mexico's customary way of doing business. From far up to the north a drove of Constitutionalist prisoners, infected with meningitis, was sent south. They were moved right along. No one in authority cared to segregate them and stamp out the disease. This wretched drove became a perambulating plague. It was a case, in poker parlance, of "passing the buck."

At last they arrived in Mexico City, where they promptly infected their prison. Again the buck was passed, and they were shipped on to Vera Cruz. I do not possess the date of their arrival in the latter city, but it is patent that it must have been some time in July, 1913, at which date the death figures suddenly appear in the meningitis column.



There seems to have been no further place to which to pass them along, so they were finally segregated in prison. From the first to the twentieth of April, 1914, there were six deaths from meningitis. It was about this time that the American forces landed and took possession of Vera Cruz, while General Maas, his soldiers, and released prisoners took to the brush. And they took their meningitis with them, for there has not been a case of it since in Vera Cruz.

Conquering the Grisly Monster, Typhoid

WHAT the adventures of this meningitis will be now that it has again gone wandering may be imagined. The very clothing of these men, as well as themselves, is saturated with meningitis, and that they will spread the infection cannot be doubted. At any rate, the times have changed, for the disease left town with old-fashioned war when modern war marched in.

Smallpox appears to be endemic, rather than epidemic, in Vera Cruz, while tuberculosis, strange to say, collects a greater toll of death than all the more serious diseases added together. Here, in the *tierras calientes*, or hot lands, where it is so continuously warm that in a room flung wide to the outer air and every vagrant breeze even a sheet over one at night is suffocating, the natives crowd into small, unventilated rooms, weaken their lungs, and fall victims to the White Plague. Malaria, also, is a never-absent disease, the death line of it rising rhythmically in the rainy season and falling in the dry season. It, too, by its weakening effect on its victims, is the cause of their contracting other diseases from which they perish, chiefest of which, of course, is tuberculosis.

But our army surgeons, wise in tropical diseases from their service in Cuba, Porto Rico, Panama, and the Philippines, are not apprehensive of any grave epidemics in Mexico. They have learned much and rapidly in the last decade and a half, and what they have learned is demonstrable by statistics.

Mexican wounded were cared for along with the American on the hospital ship Solace, but when the vessel sailed north they and the advanced convalescents among the marines and sailors were transferred ashore

Typhoid has ever been a grisly monster to north European and American armies. The Latins and the Asiatics are more immune, this being doubtless due to a rigid selection, operating through many centuries, by which typhoid killed off all that were predisposed to typhoid. Thus, whenever men are gathered together in armies, there will be found a far greater proportion of nonimmunes among the north Europeans and Americans than among the Latins and Asiatics.

In 1898, in Florida, the United States mobilized 12,000 men for a period of four months. During this time there were 2,600 cases of typhoid and 480 deaths from typhoid. Nor is this the whole story. The soldiers carried the disease with them into Cuba, where many another death resulted from the four months spent in Florida.

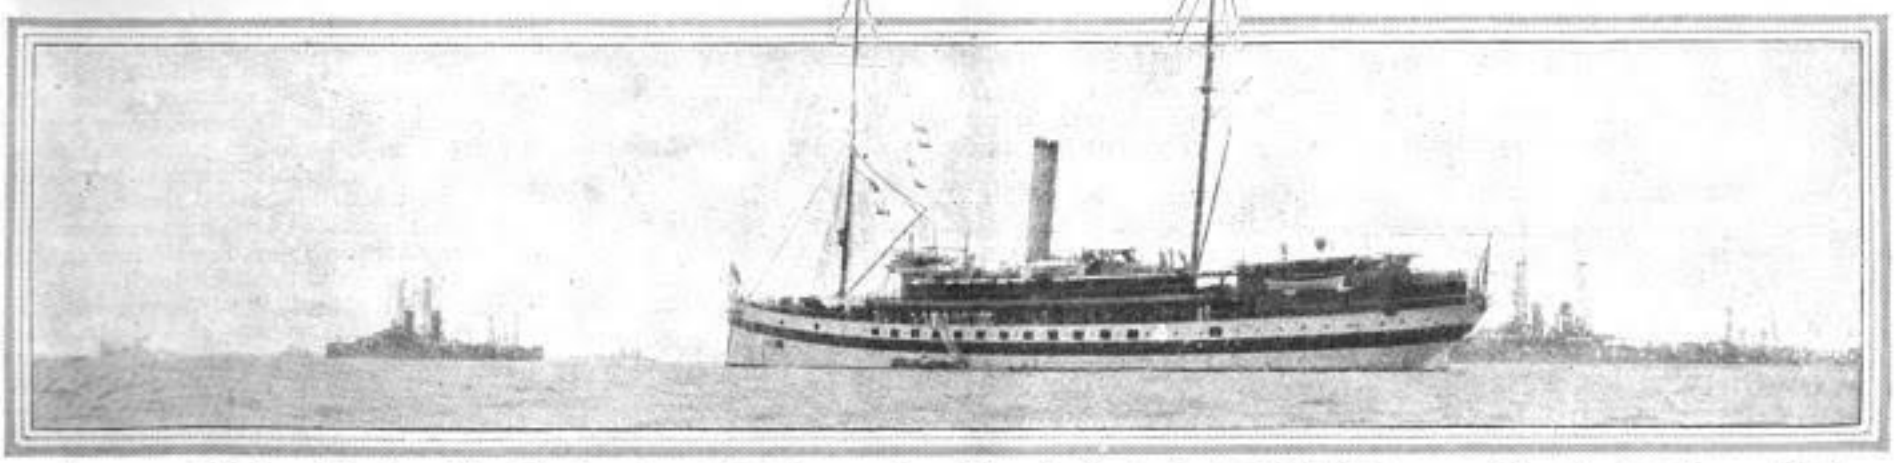
The Weapons—Sanitation and Vaccination

IN 1911, in San Antonio, Tex., 12,000 soldiers were mobilized for four months. During this period there were two cases of typhoid and no deaths.

In 1913 and 1914, at Texas City and Galveston, 12,000 soldiers were in camp for many months, during which there was not a single death from typhoid nor a single case of typhoid. In this last long mobilization all other infectious diseases were practically negligible. In the year 1913, in the entire army of the United States, whether stationed at home, in Panama, Hawaii, or the Philippines, there were only six cases of typhoid. This remarkable record, covering so brief a period of time, has been made possible by two things: first, the education of the soldiers in camp sanitation and personal hygiene; and, second, the inoculation, or vaccination, of the soldiers against typhoid.

Uncle Sam's Sure Method

THE United States was the first country to inoculate its soldiers and sailors against typhoid, and it is safe to assume, no matter in what other ways its soldiers may lose their lives in Mexico, that none will die from typhoid. This inoculation is a fairly simple matter. The serum is hypodermically injected into the arm in a series of three injections, the intervals between injections being ten days. In a way, the injectee becomes a sort of peripatetic graveyard. The first injection puts into his blood the nicely dead carcasses of some 500,000,000 microorganisms along with all their virtues of deadness which bring about a change in the constitution of the blood that makes it resistant to future invasions of full-powered, malignant typhoid microorganisms. With this first injection, theoretically, the man has had reduced the 100 per cent of his nonimmunity to typhoid to 32 per cent.



The second injection, ten days later, consists of a thousand million nicely dead carcasses of the disease. Also, it reduces his nonimmunity to 8 per cent. The third injection introduces another billion of the same ably efficient carcasses, and reduces his nonimmunity to zero. In short, when his body has become the living cemetery of half a billion more dead bodies than there are live humans in all the world, he has become so noxious to the particularly noxious and infective typhoid that he may be classed a positive immune.

No Indisposition from Inoculation

IT IS very easy, the actual process of inoculation. I have had the pleasure of reducing my nonimmunity of 100 per cent to zero per cent. The first inoculation was perpetrated in a transport hospital, the second in a captured academy turned into an army hospital, the third in a field hospital. The stab of the hypodermic syringe, different from the manner of administering morphine just under the skin, goes straight down and squarely down into the meat of the arm for half an inch; but the pang of the stab is no severer. The hurt of the stab is over the instant the skin is punctured. It is only the nerves of the skin that protest in either case.

After an inoculation there is no indisposition. The arm is a trifle sore for several days, and that is all. Some inoculatees aver that they awaken from the first night's sleep with a dark brown taste in their mouths. In rare cases a mild increase of temperature is noted, reaching its height some six hours after the inoculation and fading quickly away. I have talked with a daring one who took the total quantity at one time, and who stated that the impact was equivalent to a man's fist between the eyes and that he was not quite himself again for all of twenty-four hours.

But the big thing about the whole affair is the statistics. Individuals do not count. What counts is the results achieved by the inoculation of thousands of men. What counts is the reduction to nothing of typhoid cases in the army hospitals. What counts is the reduction to nothing of the army funerals due to

I was reminded that while a fleet of battleships lay about us, the Solace was the only hospital ship in the entire United States navy. More than that—I remembered that she had not been originally designed for the purpose, being merely a merchant vessel purchased by the Government and made over. . . . Surely the United States, that pays twelve to fifteen million dollars for ships like the Arkansas, the Texas, and the New York, should be able to afford the modest cost of a real hospital ship

Digitized by Google

typhoid. Modern war of men against men on the field of battle is now preceded by microorganic wars on the part of our surgeons before ever our men depart for the front. And, Heavens, what tremendous wars are waged by the surgeons! The mortality stuns one when endeavoring to contemplate its totality. When two billion five hundred million microorganisms are slain merely to make one soldier immune against one disease, the sum total of slain microorganisms for a whole army is as much beyond mere human conception as is the entire visible sidereal system along with what is invisible outside of it. Yet there can be no discussion of the efficacy of inoculation against typhoid. The morbidity and mortality tables of our large-scale army experiments tell the incontrovertible tale.

Surgeon Pioneers

NO HEALTHY recruit, having successfully passed the rigid physical examination, is any longer permitted immediately to join the organization to which he is allotted. Healthy recruits have a way of coming down with all sorts of diseases as soon as they change their environment, particularly with measles, mumps, diphtheria, whooping cough, and scarlet fever. In the old days so recent, before it was understood, the recruits spread these diseases among the regiments they joined.

But to-day, ere they are received into the ranks of their company and regiment, no matter how healthy they may be at the time, they are forced first to undergo twelve days of isolation. In this phase the clean record of the Texas City and Galveston mobilization in such simple diseases exceeded the record of the previous mobilization at San Antonio. While all this is a very recent practise, it is a practice wider spread than the army. No scientific hog breeder to-day, whether importing a prize boar from another State, another country, or another farm, is rash enough immediately to turn it in with his herd. It must first undergo its quarantine in a segregated part of the farm.

The army surgeons to-day are our foreloopers and pioneers. Not only do they stay at home with the army and make it fit, but they scout ahead of the army so that its fitness may continue in strange lands and places. They gather the data on the diseases prevalent in all countries, and their battles and campaigns are planned and mapped and ready to be fought on an instant's notice, no matter to what intersection of latitude and longitude the army may be summoned.

So it is, first, that every soldier up to the present moment landed in Mexico is free of all disease and immune to such diseases as smallpox and typhoid; and, second, that a completer and better body of data has been gathered by our surgeons on diseases in Mexico than has been gathered by the Mexican Government. Our men start uninfected with a fair promise of escaping infection when they tread Mexican soil.

Thanks to our discoveries in Cuba some years ago regarding yellow fever, Vera Cruz was cleaned up. Hitherto, along with Panama (since cleaned up by us), it ranked with Guayaquil as one of the three plague ports of the New World. Remains Guayaquil—still revolutionizing—as great a yellow fever pesthole as ever. We have cleared yellow fever out of Panama, and it is to be doubted if a single case of yellow fever shows itself among our troops in Vera Cruz.

The Petrolero to the Front

YELLOW fever is so simple a thing to manage. Yet we paid a terrible death penalty for our ignorance through all the centuries down to just the other day. We know now that a certain breed of mosquito is the only carrier of the disease. We know that the way such a mosquito becomes infected is by biting a human being who is stricken with yellow fever. We know that only in the first three days that a human being is so stricken is it possible for the uninfected mosquito to become infected.

The remedy, or rather the preventive, is equally simple. First, wire screen the yellow fever patient so that no mosquitoes may be infected by him. Second, fumigate the house in which he lies so that no possibly infected mosquitoes therein may infect other humans. Third, and purely a prevision, destroy all mosquitoes in the neighborhood.

In the days of the Paris Commune the *petroleur* flourished. To-day, in the American armies on service in the tropics, the *petrolero* flourishes. He is the man who spreads oil on all stagnant waters. The larva of the mosquito cannot hatch in running water, nor in fish-inhabited water. But it can hatch in a sardine can or in the depression made by a cow's hoof in soft soil when such receptacles are filled with rain water.

Not content with their own tropical experience, our army surgeons in Vera Cruz are reinforced by such experts from the Marine Hospital Service as G. M. Guiteras and Rudolph von Ezdorf, who have taken charge of the public health of this one-time death hole of Vera Cruz.

Killing two birds with one stone, or performing two

On the deck of the Solace—"One was struck by the preponderance of youth. . . . Lord, lord! they were . . . healthy-bodied and lusty so short a time before"

actions with one movement, is a joy forever and cuts down the overhead. It so happens that the same preventive measures for yellow fever are preventive of malaria. Every wire screen about a patient, every drop of oil on the surface of standing water, performs the double duty. Further, purely as a prophylactic measure, each soldier will receive a determined number of grains of quinine daily until such time that Vera Cruz has been metamorphosed into a health resort.

Putting the Taxes at Honest Work

THE authorities of Vera Cruz did not know as much about their own water supply as did our army surgeons before our expedition started. They knew that the source of the water supply, the Jamapa River, was a fast-flowing stream and uncontaminated. Also, to make doubly sure, they were in possession of analyses of the water.

Amebic dysentery is of rare occurrence in Vera Cruz. Smallpox is no longer a thing of which to be afraid. And, further, most of it seems to have deserted Vera Cruz along with General Maas and his soldiers.

The United States is large. The United States army is small. It is scattered here and there in army posts. The average citizen knows less of his own army than he knows of north and south polar exploration. As regards the duties and activities of the army surgeons he does not dream of anything beyond the fact that they keep the soldiers well in time of peace, and in war dress wounds and amputate limbs. It would make him sit up and take notice if he could see how complex and multifarious are their activities here in Vera Cruz.

To commence with, the army is not their only problem. To keep the army well, they must keep the city well. Not only must they attend to their own sick and wounded, but they must attend to the sick and wounded of the Mexican populace and army hospitals, public hospitals, charity hospitals, women's hospitals, and orphan asylums. Now Uncle Sam is somewhat meager in such matters. The people of Vera Cruz supported these institutions before, says Uncle Sam. Therefore make Vera Cruz support them again. Do you think I am spending my money like a drunken sailor? Uncle Sam concludes indignantly.

And our surgeons go and do it, though it takes all the rest of the army to help. Vera Cruz must pay for these institutions. But these institutions are two months behind in their bills and salaries, and there is no money in the city treasury. The last was clean looted by the officials who had charge of it. Army officers are told off to handle the collection of taxes. So far as the Vera Cruzan taxpayer is concerned, the taxes are as they always were. But for the first time in the history of Vera Cruz the taxes are expended without graft for public service. The back bills and salaries are paid, and the future bills and salaries are guaranteed.

A fine physical example of inoculation against typhoid—Jack London himself, snapped on the street in Vera Cruz

Hospitals First

THE hotels and cantinas are crowded with thirsty refugees, soldiers, sailors, and foreign guests, all with a penchant for long, cool drinks. More ice than ordinarily is consumed. The ice plant is a private enterprise. Its output is limited. There is not enough to go around. Hotels and cantinas are cash buyers and they pay a premium for ice. Result: (*a*) the hospitals are skimped in ice; (*b*) the surgeons make the suggestion and the army takes charge of the ice plant, supplying the hospitals first and letting the hotels and cantinas have what is left.

The naval authorities have already taken possession of the island and lazaretto of Sacrificios, just outside the port of Vera Cruz. There is no yellow fever at present, but if a sporadic case should appear, Sacrificios is just the place to segregate it.

I was in the field hospital just after an operation for appendicitis had been performed on one of our officers. In old San Sebastian Hospital lie many of the sick of the city and many of the soldiers that General Maas left behind to fight from the housetops. Many amputations had been performed, and more were being performed.

Also, I watched the dressing of the wounds of these poor Federals, and I want to register my protest right now that modern war, for the man who gets bullet wounded, is not at all as romantic as old-time war. Furthermore, a modern bullet, despite its steel jacket which keeps it from spreading, is a terribly disruptive thing to have introduced into one's body. I would far prefer being struck with an old-time bullet than with a modern one.

It seems that the flight of our long, sharp-nosed, lean, cylindrical, modern bullet is divided into three flights much as the spinning of a top is divided into three spins. When first a top is spun, it jumps and bounces, and bounds about in an erratic way. After a time it attains equilibrium. This is its mid-spin. It makes no perceptible movement, and to the eye seems stationary and dead. It is this stage that the small boy calls "sleeping." Then comes its last spin. It bounds and wobbles about as it loses the last of its momentum, and it finally lies down on its side and is dead.

Sleeping and Wobbling Bullets

ALMOST precisely the same thing occurs with the modern bullet. Its first flight is something like seven hundred yards. During this period, like the top, it is erratic. It wobbles. If it hits anything while it is wobbling, a bad smashup is inevitable. In its mid flight, between seven hundred and twelve hundred yards, it "sleeps." If it hits anything while it is sleeping, it drills a clean hole. From twelve hundred yards on, losing momentum and equilibrium, it again wobbles, and this is no time to be struck by it.

In the hospital of San Sebastian I examined the wound of a finely formed and muscular young man. Midway between knee and thigh a wobbling bullet had ploughed a path two inches wide and three inches deep. It was a clean path. Not an atom remained of the flesh that had filled that groove. You who read this, just draw with a lead pencil a groove two inches wide and three inches deep, and you will more

Bothering Nobody

By Ed Cahn

ILLUSTRATED BY W. GLACKENS

FOUR of the six members of the unregenerate group of waiters known in Maxmum's Mammoth Café and Cabaret as "The Sinful Six" had chanced to meet in a semisecluded corner of the kitchen. They were earnestly assuring themselves that last night's affair had forever cured them of the poker fever, and that never—no, never again—would one of them take a chance on a card or any other mortal hazard whatsoever. They had been cleaned out—their souls purged clean along with their pocketbooks, and, after three hours' work to-night, it began to look very much as if their luck had been swept away with their money. While they were mourning this fact and telling awesome stories to each other about rapacious and nontipping customers, Jim Fitch came hurrying up.

"Anybody in this bunch made any money to-night?" said he in a right-down-to-business tone. "I ain't myself, and I gotta get some coin somewheres mighty sudden."

"Jim has been and gone and done something brilliant again," groaned Manners.

Butterfield raised one sandy eyebrow close to the hair line and closed the other eye as if it hurt, while he plunged his fingers into the capacious pocket wherein he stored his tips, and drew forth the enormous sum of fifteen cents. "Here, my boy, go pay the villain his blackmail and get the fatal papers."

"Quit kiddin'," said Fitch. "This dilemmer I'm in is some emmer. I got to have at least five bones."

The four laughed callously, preparing to depart.

"Why, you poor, knowing innocent, you," said Gresh, "there isn't five bones among the whole passel of us. But you might try touchin' Frawley; maybe he's had a few live ones to-night; we haven't. It's a safe bet that we are the poorest bunch of waiters in the place."

"I just come from Frawley. He says he ain't made a bean. Putrefying Purée! What'm I goin' to do?—that's what I'd like to rise to inquire."

"You might tell us your troubles," said Butterfield, "but be quick about it. I've already kep' my guy waiting fifteen minutes for his chuck, and most likely he's doin' the big contortionist act in his chair now lookin' for me."

"The trouble is that the little Irish-faced kid singer in the cabaret owned up to me that she ain't had a bite to eat all day, and I up and asked her to have a good feed with me after she quits to-night. She's busted flat and she won't get a sliver of pay until to-morrow. You know how much good it would do her to try to get a meal on account around here. Maxmum's that stingy he'd rather fire her than feed her."

"Holy parsnips! And her singing away like a whole bush full of thrushes, the game little bog trotter!" cried Maloney. "Boys, if Jimmie's broke and all the rest of us are broke, it's up to the Sinful Six to hustle up some feed money somewhere."

"IT WON'T do to let her starve," rumbled Butterfield, "for she's a nice little shamrock and no nonsense about her."

"You bet she is. Say, I heard a Johnny asking her just before I did and she turned him down so hard that the jar most made him bite his tongue off. She don't know me so terrible well, but she's the kind of a girl that would sooner go out to ham and beans with a respectable waiter than to terrapin and trimmings with a Johnny."

"Take a look at the only respectable waiter in captivity," scoffed Gresh.

"Aw, you know what I mean, and you can pan me all you like if you'll just give me a idea where to get the feed money. That kid is hungry for real eats."

This set them all to exploring their pockets again, but there was a ludicrous lack of result. It was within an hour of closing time, and to rely on the tips to be garnered during that interval would be extremely risky.

"It's a desperate situation and requires desperate measures." Maloney threw out his chest at the phrase.

"It will need desperate characters to apply the remedy," remarked Butterfield, arranging the order on his tray with great deliberation, "and I guess we must be them. I respectfully call the attention of the meetin' to Cubby's Lunch."

"Nothing stirring there," objected Fitch. "Cubby could not make a go of it and shut up for good this morning. That is, his landlord shut him up and now the landlord's got a furnished lunch room to rent to the next sucker, for he grabbed everything but the dishes and the linen and the kitchen tools. Cubby managed to clamp on to them and get them away."

"So much the better. We won't have Cubby tumbling around under foot. It'll be nice and quiet and select. You and the Dublin Daisy can eat in peace and the service that you'll have will be tiptop."

"Huh?" Fitch was dull, but Maloney instantly perceived the beauty of Butterfield's idea. "Yes," said he, beginning where Butterfield had left off, "there's going to be some class to this dinner. Exclusive is too promiscuous a word for it. It is going to be the finest that money can buy and still not cost us a red cent. Now there ought to be blue points to begin with, then some of that nifty turtle soup and some celery hearts and olives. I'll tend to all of them if you boys will see to the rest."

"A rubber-lined stunt!" they chorused in a delighted whisper, glanced wearily around, and felt to see if the inside pockets of their coats were still there.

"Jim," promised Manners largely, "this dinner is on us. You're to fear nothing. All you have to do is to ease yourself into your good coat and escort the Irish Thrush around to Cubby's, where you will both be fed like absentee landlords lordin' it on the Riviera."

"MANNERS has said it. Now, Fitch, don't be a muff and let her get on to it that we're opening up specially for her." Maloney constituted himself head of affairs.

"How can we do it when—"

"Everybody duck!" warned Butterfield; "here comes the steward."

"I'll slope along ahead and open up," said Maloney; "the rest of you come along on as fast as you can. Divide up the courses among you and everybody bring service for his stuff. I'm tending to the first two, you know." The little group melted away before the steward's disapproving eye, Gresh remarking to Maloney as they fled:

"I know where to get a pair of broiled squabs as easy as breathing."

"Get 'em then. I've got to annex some of that soup if I have to carry it away in a sponge."

Gresh went behind the counter and unloaded his pockets

Butterfield bustled forward and obsequiously and addlepatedly relieved the newcomer of his hat and stick

A TALL, red-haired young man, with a back as straight as a gun barrel and a head held rigidly level, stepped out of Maxmum's service entrance and set off at a lively pace.

He turned the first corner he came to and stepped into a convenient doorway where he removed his hat.

A saucer reposed on the top of his head, and set into the saucer was a paper container with a wire handle.

"Gosh, Maloney," said he to himself approvingly, "that was as neat a piece of work as you ever did. Think of the convulsions the steward would be in if he could see you now, making off with three dollars' worth of real green turtle soup under your hat with a perfectly good saucer keeping it from scorching your crimson head."

He removed the container from the saucer, dropped the latter into a side pocket, put on his hat and struck out, carrying the container in his hand, remarking whimsically to nobody in particular: "If anybody looks any honester than me, I'd like to see them."

Turning down a quiet side street, Maloney soon came to a halt before a dark window lettered in giant characters, "The Cubby Lunch." He set the soup down in a sheltered corner and fell to work upon the lock of the door with a hairpin, which he had providently secured in advance from a pantry girl.

In less than two minutes he heard the welcome click which announced that this one of his many minor accomplishments had not failed him, and, catching up the soup, he walked in as casually as though he were not now in actual fact guilty of burglarious and unlawful entry.

"Oh, fine, if the light has not been turned off at the meter and the meter locked." He struck a match and found the switch, snapped it and was rewarded with a flood of light.

HE REMOVED the "To Let" sign on the door and looked around. Cubby's was a small place, with just room enough for four small tables in a row against one wall and a counter, flanked by a row of high stools on the other with a narrow aisle between. Behind the counter, near the door was a gas range and across the rear of the room was a partition to mask the grosser culinary processes.

Another match proved that the gas had not been turned off and that the range was ready for business.

"Fine! Oh, fine!" hummed Maloney, setting the soup where it would keep hot and proceeding to disgorge his pockets of their loot.

From behind his false shirt front came three small tablecloths freshly folded from the laundry. From an upper waistcoat pocket came three hearts of celery wrapped in the remains of a fine napkin. A lettuce leaf, reposing in his tip pocket, was filled to bursting with ripe olives. One trouser pocket gave up a handful of silver, oyster forks, spoons, and knives sufficient for service for two, while the other revealed two water glasses conveniently telescoped. From one of the deep, rubber-lined pockets in his waiter's jacket he

Digitized by Google

drew twelve first-grade blue point oysters still in their unopened shells, and from the other large pocket two oyster plates and two shallow soup plates, swathed in napkins so that the sound of their clinking might not strike upon the ear of the trustful doorkeeper at Maxmum's and send Maloney back to the locker room to be searched.

He put the oysters under the cold water tap, and, finding an old broom behind the partition, he proceeded to whisk the litter on the floor out of sight under the tables. A more or less white coat hung forgotten on its peg, and, after turning the inner and cleaner side out, he donned it. Then he spread the tablecloths over the three foremost tables and considered the stage about set.

MALONEY looked at his watch. It was nearly Maxmum's closing time. He wondered if any of the boys would succeed in getting a good steak, and then the paralyzing thought struck him that he had nothing to cook it in if any of them should. A profane searching of every nook and corner in Cubby's revealed nothing nearer a griddle than a cracked teapot. He thought of sprinting up and down the near-by streets in search of a hardware store, but the voice of reason promptly discouraged that. How many of them would be open at a few minutes to one in the morning, and with no more than ten cents in his pocket how many could he buy?

Vainly hoping that the patch of ground behind the building would yield a griddle among its other débris if only he burned matches enough exploring, Maloney went to the back door.

STEPPING outside, he was attracted by a light shining from an uncurtained window of the house next door. The street was one which had recently been invaded by small businesses, and Maloney saw that the imposing store fronts only masked remodeled private dwellings. His neighbor was one of these, and evidently the rear was occupied by a family, for here was a kitchen with a row of heavenly pots and griddles hanging behind it in full view.

As he looked and coveted and cursed the blooming cook, who was seated upon the knees of a big policeman in the middle of the room, the shrill alarm of approaching fire engines smote the air, and, perhaps in answer to Maloney's prayer, came nearer and nearer.

The cook and the policeman jumped up and ran out of the kitchen toward the front of the house.

Without a moment's hesitation, Maloney swung himself over the fence, skipped up the steps and was into that kitchen almost before the cook and the policeman had reached the street. He snatched down a giant frying pan and swept a bowl of loaf sugar and a salt and a pepper shaker into it from the kitchen table, and on the way out opened the ice box. A bottle of cream stood temptingly in the way, so Maloney added it to his collection in the pan and took a chunk of ice which stood beside it protectingly under his arm. Then he shoved open the door with his foot, let it close noiselessly behind him and fled to the fence. It was a simple matter then to drop ice and pan over first and follow it with the bottle of cream carefully held in his free hand.

"There's no stopping the righteous when they're bent on business." He closed the back door and drew the shade at the back window. The fire engines clattered past and Maloney blessed them as they clattered.

GRESH was the first of his collaborators to put in an appearance. "I sneaked a minute ahead of time to see if you got the place burgled all right," said he. "Fitch is terrible scary for fear something will go wrong and we'll all get nabbed. He said Miss Duveen is the kind of a girl that thinks it's a disgrace to get pinched."

"He's too nervous a guy to be allowed with girls," said Maloney: "I passed the word to him that I would telephone if anything went wrong and as he's not heard from me he ought to (*Continued on page* 35)

The Tyranny of Beauty

Chapter IX—The Anatomy of Success

By Jane Bunker

ILLUSTRATED BY MAY WILSON PRESTON

EVERYBODY still remembers the famous magazine advertisements of her "take it off or put it on" scheme—"Go look in the glass and ask that face, *Why so fat?*" or else it read, *Why so thin?* for Zulu. People soon took it up as a gag; a popular song came out with the words, and funny picture post cards innumerable.

For months she literally ate, drank, and slept the mail-order department. It was no affectation now when she told her guests that she was "merely taking a little relaxation between two days of strenuous toil." She had her lunch sent in almost every day, and dictated to two stenographers between bites and chews. She had discovered that with magazine advertisements she could talk to a million women *in their homes* about their secret vanities, and in some cases talk better than in the hurrying crowds around a demonstrator. For instance, this little appeal inserted in one of the smaller magazines as a "tryer": "Write to me to-day and tell me frankly your trouble and I will advise you free of charge. All communications confidential!" It brought her over seventeen hundred responses. Most of them were common vanity cases, but a few that she showed me were pathetic—terrible disfigurements from burns, scalds, chemicals, accidents, or disease. Some were comic even while they were tragic. One woman wrote that her husband had got drunk and bit off her ear—"he did it in fun and didn't know what he was doing"—so she'd forgiven him and asked if we could supply a wax ear—if there were any way of fastening one to her head.

Of course the bulk of these inquiries were handled with form letters by the manager of the department, but there yet remained hundreds of odd cases like the above to be sent on to madame, and she answered them all in her snappy, energetic way and signed them. To the earless lady she suggested the Mérode style of hair to cover the bit-off piece, and if her own hair weren't ample, our hair department could supply a perfect coiffure of the sort, ready made, and then advised a course of facial treatment for heightening her beauties. The earless one bought a bill of nearly forty dollars in consequence of a timely letter and the repentance of her sponse.

The two stenographers who took these letters—very competent and high-priced women—attended to the orders or to the follow-ups when the orders hadn't materialized within a reasonable time, carefully referring in a sweetly sympathetic way to the troubles mentioned in the previous communication, and hoping they were no worse.

"MAKE friends—make friends with all the troubled ones because they're the ones that talk for you," said madame. "You catch more flies with molasses than vinegar, and there's nothing a woman loves more'n her ailments, unless it's her delicate skin." And with that in view she not only spent her own time and that of a high-priced staff, but flung ten, fifty, then a hundred thousand dollars into magazine advertising with no more concern than she'd fling a handful of kindlings in the fire. "I gotta keep the pot boiling till the soup's ready to eat," said she.

She had her lunch sent in almost every day, and dictated to two stenographers between bites. With magazine advertisements she could talk to a million women **in their homes**

EXPANSION and ever more expansion claimed us for the winter, and I seemed to drop out of all relation with her. Whether she merely forgot me or was so occupied with her business, so absorbed in her own thoughts, I hardly knew. More and more often did her name appear in the society column, yet more and more seldom did she bring the columns marked to my laboratory for me to take home and ask: "How's mama?" Even during the time when my grandmother was quite sick, threatened with pneumonia, my aunt came only once—a hasty call in her car—and dashed off after telling me: "Get whatever she needs, Lucy; don't save on doctors and nurses—two if you need them; you can't be spared outa the business to take care of her. Hand the accounts to the bookkeeper—I'll speak to him about it when I go back. Is there anything you want, mama?—anything I can do for you?"

"I was hoping—you'd bring that baby over—I've not seen her yet—I'd like to see her—just once before—I die," whispered the poor old lady painfully.

It was pitiful enough to turn a stone to wax. Dear soul!—she'd counted so on being a grandmother to Maggie's children. She was a grandmother by instinct, but she'd never been able to indulge her longing to cuddle her children's children, spoil them surreptitiously, and make them adore her and think a day lost when they didn't "go to gamma's." All her family was scattered—the boys years before we came to New York—and I could see how tenderly she'd been looking forward to Maggie's children—first the boy, whom she'd seen only half a dozen times in his life, now a little girl to be named Margaret for mother and grandmother. And yet the baby was eight months old—living in the city with her—and her grandmother hadn't yet had a glimpse of her.

MY AUNT drew back at the request. "I forgot you hadn't seen Marguerite. I'd oughta let the nurse bring her over soon's we come back from Col'raydo; but you understand how that was—so much going on in the business I couldn't think of anything else at the time. I don't know about it now, mama—you threatened with pneumonia. I'll have to ask my doctor first and see if it's safe. If he says yes, I'll send her over the first clear day. Oscar'd have come over with me now, but he's laid up with one of those beastly colds everybody's having these days, but I'll send him over to pay his respec's soon's he's able to be out."

My grandmother sighed and closed her eyes. My aunt with a questioning look at me, to which I returned a signal that we'd better leave the room, bustled off to the office. Later my grandmother whispered she was glad Maggie took such good care of her children and seemed fond of them, but if Oscar came to the house, please not let him see her—he was more than she could stand.

He never came. He had far too much on hand running the social side of his ménage and arranging for other hired-hall concerts under Julia Cryder's management to bother his head with an old sick mother-in-law belonging to a world other than his. So, with two trained nurses and a doctor, we pulled her through, and I—stirred perfumed pork fat.

In this way winter passed and summer came, and though the business had increased tremendously, my aunt had not been able to escape either the law of diminishing returns in the business or the law of increasing extravagance in her own home. The spectacular success with which she'd put herself over the reef into wider waters had made her, if anything, more reckless of expenditure than she'd ever been in her life before—she seemed to feel that she only had to give a few thinks, give a few orders, and pocket ten or twenty thousand cash as a reward!

SOON the law of diminishing returns began to show in the mail-order department, and advertisements ate up more and more, yet left less and less in proportion in the cash box.

Digitized by Google

But while this last venture was in process of maturing, and she was still feeling her way as to what was and was not worth while in effort and advertising, came the events that brought my aunt to the up-the-Hudson stage, completed her Napoleonic development, and made her a woman of substance as well as power.

"Looka that and temme whatcha think." I laid my resignation on her desk. "I think it's a miracle of hog"

BEING a ready-cash woman, she had cast her bread upon the waters in more ways than one—she had, as I know for a fact, often lent money in considerable sums to her society friends, and had had her bread come back bread pudding in the form of invitations that in her early days many of these women wouldn't have dreamed of giving or accepting from her. If, as I suspect, they asked her to luncheon privately, as in the olden days they'd returned her hotel luncheons by automobile rides up Riverside, or only to the huge receptions with which they paid up their social debts in a lump, omitting her from formal dinners with their own set, and introducing her little or not at all, she never knew the difference. As always, little Julia dear saw to it that the Oscar Willings had their names "among those present," and Mrs. Oscar at least was convinced that she had arrived on the fringe of the Four Hundred.

I DON'T think Oscar was fooled as to their exact position in the social scale, and he played a wife's part nobly and gracefully, sorting the sheep from the goats, and running with the proper herd as far as the herd would run with him, and holding up his end of the prestige while she earned the money for it. He was becoming quite grandiose. There was no love lost between him and me, however, by that time—I knew too well who made him.

Well, early in June that year my aunt and uncle were invited to a week-end up the Hudson at the great estate of one of these near-Four-Hundreds. For her it was the psychological moment—her imagination took fire immediately and was fed by his—she must have the same and go her friends one better if she could.

I have always believed that the visit was secretly arranged with this end in view, for only a month later the estate—hill and dale, hothouse and henhouse, fish pond, garage, mansion, and all the furnishings and family heirlooms in the way of second-hand antiques and new frescoes—was offered her for the modest sum of three hundred and fifty thousand dollars, the owners saying they were going abroad to live.

It was one of those places that make a big show on little money and large talk and get their photographs in the magazines—one of those concrete-and-flowers creations that go up overnight and pass for lilylike luxury and value-in-the-substance wealth: precisely the sort of "pink jar and purple ribbon" that could always capture my aunt if shown at the right moment. To have that estate (it was the first of its kind she'd ever entered as a visitor)—to stroll amid those concrete pergolas—sit on a concrete bench beside a concrete pond and watch a ten-cent goldfish eat bugs off a five-cent lily pad—to say: "All this is mine and my children's—the old family homestead"—how it thrilled her!

THE first thing Monday morning she came tearing to the cream room to tell me all about it, and that she meant to have one just like it to the last hydrangea in a tub (I believe there were forty of those shrubs in a row, and she thought them very elegant). And when the actual, identical property, ready-made, with no more to do but move in, was offered her, she fairly shrieked: "I'll buy it!"

She had nothing to buy it with!

That was the astounding fact that burst upon her intellect for the first time when she took stock of her resources on a demand for the trifling amount of three hundred and fifty thousand dollars in a lump. A river of cash poured in, as always; poured out again as fast as it came; she dipped a few bucketfuls as it went along. She had simply nothing she could convert into that amount of cash all at once: nothing to sell, nothing to mortgage, nothing as collateral on which to borrow even enough to raise a mortgage on the property. She had her personal belongings and the fixtures of the establishment—the fixtures were then worth about two thousand dollars at a liberal estimate—its good will and the name and prestige.

THOSE were the days when she remembered that I was her blood relation. She spent hours in the cream room watching me weigh and measure, mix ingredients, and stir the creamer, moaning: "Why, I'm actually *poor!* Temme whatcha think, Lucy—couldn't we turn out a million jars of Zulu in a few days, and I could bond it for enough? Can't you suggest something in a new line of goods we might put out in a hurry, the way we did Apple Acid? Ain't there some way of mortgaging the prestige of a business big as this?"

For once her natural shrewdness and inspiration deserted her—she seemed to lose her grip. She was so aghast at the revelation of the true inwardness of the bubble she'd been blowing all these years that she was even minded in a morbid moment to start in saving money. I thought of her saving money with a husband like Oscar!

She'd always known as a matter of pride how the business depended on her personally, yet even with her lesson in September it hadn't come home to her that nothing but her colossal energy pumped in kept it alive on only a name and a secret.

It sobered her at last, and in the sobering process she became a capitalist in attitudes and ideals. Investments—income that she didn't have to earn—substance, these now had man meanings for her and became a policy.

And with that she pulled off the most brilliant deals of her life, one right after the other. Her main asset was her name—the prestige of Zulu and the Del Mar Beauty Parlors. She couldn't mortgage her prestige, but she capitalized it and sold it for cash!

THE idea for this must have been lying dormant in her mind since we'd moved into the building. At that time, as I have already said, there was an unexpired lease on the former establishment, and she'd sublet one floor outright, but the other, fully furnished and stocked, she had engaged a woman to take on shares as a branch, my aunt holding herself responsible for the lease and receiving half the profits. The arrangement had proved so satisfactory that she had renewed the lease in her own name and the contract in the same terms.

The risk she assumed for a going concern backed by her prestige was practically nil, and the income—about two thousand a year—was in effect payment for the use of the prestige.

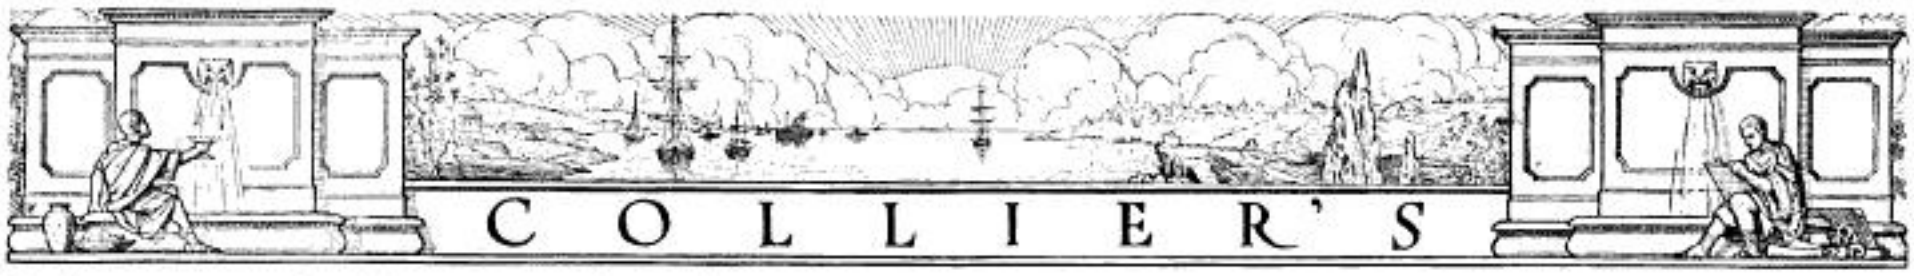
If she could do it with one branch, she could do it with more in the same way, she argued—set up stores in other parts of the city and get women to run them on the same terms.

And at once she did it—hired a store, painted it pink, furnished through by an installment company, sent in a load of Zulu and Apple Acid Soap and other preparations made in our laboratories, and put a big sign over the door: "Del Mar Beauty Parlor, Branch." Of course only her own preparations might be sold there.

Half profits was not, I think, an unfair division. The woman who took the parlor risked one month's rent and her labor—if she couldn't make a success of it, her backer had the place on her hands and stood to lose a month's rent or more if she couldn't find some one else, or had to close the branch.

As a matter of fact, though, these branches could hardly fail, because she had in her employ many competent women trained in the central establishment and eager to strike out for themselves, and they took her new stores as fast as she opened them—seven in New York, two in Brooklyn, one in Jersey City—glad enough to do so on her terms. Within the year she was receiving bids from men as well as women to stake them for the beauty game in other cities, and almost before she knew it she had a string of sixty-three Del Mar Beauty branches, stretching halfway across the United States, all doing a thriving business and all using only her preparations.

AND with that she sold them all out and realized a lump sum of a quarter of a million dollars, and still kept her name over the doors. Some of them bought her out for as much as six thousand dollars, some for as little as two; our old crack between two walls—"The Little Pink Shop," that she'd taken up again—paid her that.



Then with this lump sum in hand she prepared for her next great expansion—bought the equity in a half-million-dollar lot, on which to erect a million-dollar beauty building, the greatest of its kind in the world—twenty stories high, a roof garden and restaurant for women at the top, Turkish baths in the basement, suites of offices for surgeons who'll remake your racial facial pattern while you wait, laboratories for the manufacture of beauty preparations by the ton, a training school for beauty specialists and teachers of the Del Mar system, a publishing department for the scientific literature on beauty and books on scientific skin decoration and development, "Fat—the Vital Index," and others of the kind; everything, in fact, that deals with woman's almost-only business—Beauty; such were the plans now coming to maturity. But this time her private suite—four offices, a bedroom and bath in order that madame may stay overnight when the weather is too inclement for motoring up the Hudson to the estate she will one day buy—will be done up by

In Justice to the "A. P."

THE OFFICERS AND MEMBERS of the Associated Press have been kept busy lately repelling attacks upon that organization. In so far as they are defending themselves from the charge of willful distortion of the news, we sympathize with them. Six or seven years ago we printed a series of articles which dealt with the general subject of "tainted news," and from time to time since then we have pointed out examples of this insidious practice. During this time not less than a score of persons have come to us with alleged examples of tampering with the news on the part of the Associated Press. All of these cases we looked into with care and pains, and many of the same cases were investigated by other publications and persons. We have never found a case that justified us in publishing the details or in making any charge of willful distortion against the Associated Press. A very different point is this: The Associated Press gets much of its news from official sources, and the news, as given out by headquarters, is apt to be colored the way officials like it to look. It is entirely natural for the Associated Press representative at St. Petersburg, for example, to keep in close touch with Russian officials, for they are the source of nine-tenths of the news which he must send out. In less degree, the same is true of Washington. The information sent over the Associated Press wires is likely to have a slight official bias. But that the Associated Press changes it or colors it in the process we do not believe. That the agitators, who are the most conspicuous assailants of the Associated Press, should confuse these two very different things is characteristic of their wobbly cerebration.

Is There a News Monopoly?

THE ASSOCIATED PRESS is also defending itself against the charge of being a monopoly. Mr. WILL IRWIN, for example, says that the Associated Press ought to be required to give its services, under proper restrictions and conditions, to any newspaper which asks for it. To this the president of the Associated Press, Mr. FRANK B. NOYES of Washington, D. C., replies that

> a competitor has as much right to demand and receive the same news service as he would to demand and receive the use of the other paper's press, composing room, editors, and reporters. Just as much right and no more. And that is absolutely no right.

This is the way railroad presidents used to talk a few years ago. On this point Mr. IRWIN is clearly in tune with the times, and it is only a matter of time when the Associated Press will have to conform to the current beliefs about monopoly. Where a city has only one morning paper and where that morning paper, possessing the Associated Press franchise, is able to keep the franchise exclusively and prevent any other paper from getting it, there arise all the mischiefs which attend monopoly. Indeed, we think the subjection of the agencies for distributing news to the public may go even farther. A single newspaper in a city, or two or three newspapers, can inflict injustices and discriminations quite as intolerable as the worst practices of street car or public lighting monopolies. We think the time will come when newspapers will be recognized as having the qualities of a public utility, and will be subject to inquiry and regulation by commissions similar to those which have arisen in many States during the past few years to supervise railroad, telephone, and lighting corporations.

A Real Case of Tainted News

THE MOST SERIOUS EXAMPLE of "accelerating" public opinion that has come to our notice for a long time was disclosed at the hearings of the United States Senate committee, commonly known as the Lobby Investigation. Now, the great majority of the newspapers in small towns do not, and as a matter of economy cannot, set up the type of all their reading matter. They buy about half their reading matter in the shape of what is known as "ready print," or "plate matter." The most important house in this line is known as the Western Newspaper Union, which supplies more than six thousand papers in the West and South. The president is GEORGE A. JOSLYN. He was examined as a witness. A brief extract from his testimony makes the practice clear:

> SENATOR CUMMINS—Do you also put in plate matter that is *furnished by people who desire to further a particular cause?*
>
> MR. JOSLYN—Yes, sir.
>
> SENATOR CUMMINS (continuing)—Or the cause of a particular man, and distribute it to the newspapers?
>
> MR. JOSLYN—We distribute it to the newspapers free. *It is paid for by the people who are interested.*
>
> THE CHAIRMAN (Senator OVERMAN of North Carolina)—I understand that any company, person, corporation, association, or firm who desire to exploit themselves or exploit their business, and to create public opinion, could come to you and pay you a certain sum . . . and you would send out the matter they wanted you to send the different papers, which would print it?
>
> MR. JOSLYN—Yes, sir.
>
> THE CHAIRMAN—And for that sum of money you would send it out to these papers *without marking it "Advertisement"?*
>
> MR. JOSLYN—Yes, sir.

A little later on Senator OVERMAN made the point even more plain:

> THE CHAIRMAN—*There is no way for the general public, then, to know that it is paid for?*
>
> MR. JOSLYN—*No, sir, there is no way for the general public to know that it is paid for.* To-day there is a new law, I understand, with regard to that, which makes it necessary to have it marked in some manner to indicate that.

Mr. JOSLYN's concern, the Western Newspaper Union, received about $42,000 a year from the Canadian Government to print in American country papers glowing tales of how American farmers can make the Canadian prairie blossom as the rose.

> For the past twelve years, which is as far back as I can go from our records—I know that before it was not quite as much—it has averaged a little less than $42,000 a year that they have paid the Western Newspaper Union for this character of matter. The reading articles alluded to run only at infrequent intervals. Sometimes they run an article for a week, or three or four weeks, and then they will not run one again for several months.

Senator CUMMINS expressed the belief that the emigration of some eight hundred thousand American farmers to Canada during the past few years was largely due to this paid propaganda in the guise of honest news. The Lobby Investigation revealed only one customer of the Western Newspaper Union. It would be interesting to know something about the other "persons, corporations, associations, or firms" who exploit themselves through the Western Newspaper Union.

Who Are the Americans?

IN PRESIDENT WILSON'S funeral address at the Brooklyn Navy Yard over the bodies of the sailors and marines killed at Vera Cruz, this question was answered finally and beautifully. It is the more memorable because of the endless lies that have been told respecting WOODROW WILSON'S attitude toward newcomers. This is the answer:

> Notice that these men were of our blood. I mean of our American blood, which is not drawn from any one country, which is not drawn from any one stock, which is not drawn from any one language of the modern world, but free men everywhere have sent their sons and their brothers and their daughters to this country in order to make that great compounded nation which consists of all the sturdy elements and of all the best elements of the whole globe. I listened again to this list with a profound interest at the mixture of the names, for the names bear the marks of the several national stocks from which these men came. But they are not Irishmen or Germans or Frenchmen or Hebrews any more. They were not when they went to Vera Cruz; they were Americans, every one of them, and were no different in their Americanism because of the stock from which they came. Therefore, they were in a peculiar sense of our blood and they proved it by showing that they were of our spirit—that no matter what their derivation, no matter where their people came from, they thought and wished and did the things that were American; and the flag under which they served was a flag in which all the blood of mankind is united to make a free nation.

The men for whom these stately words were said once bore these names: BOSWELL, DEFABRIO, DE LOWRY, DEVORICK, FISHER, FRIED, FROHLICHSTEIN, HAGGERTY, LANE, MARTEN, PERCY, POINSETT, SCHUMACHER, SMITH, STREAM, SUMMERLIN, WATSON. All are American names.

That Dear G. O. P.

WE ARE INDEBTED to "Punch," an English weekly published with humorous intentions, for a conversation which exactly illustrates the present status of the Republican party:

> SQUIRE—Well, Matthew, and how are you now?
>
> CONVALESCENT—Thankee, sir, I be better than I were, but I beant as well as I were afore I was as bad as I be now.

In Praise of Weeds

SENTIMENTALITY ABOUT FLOWERS is an old story, but sentimentality about weeds is, one may say—speaking as an agriculturist—a more serious matter. And yet look at that delightful chapter in that delightful book, "A Year in the Fields," by JOHN BURROUGHS:

> One is tempted to say that the most human plants, after all, are the weeds. How they cling to man and follow him around the world, and spring up wherever he sets his foot! Some of them are so domestic and familiar, and so harmless withal, that one comes to regard them with positive affection. Motherwort, catnip, plaintain, tansy, wild mustard—what a homely human look they have! Your smart new place will wait long before they draw near it. Our knotgrass, that carpets every old dooryard, and fringes every walk, and softens every path that knows the feet of children, or that leads to the spring, or to the garden, or

Digitized by Google

THE NATIONAL WEEKLY

to the barn, how kindly one comes to look upon it! . . . Weeds are Nature's makeshift. She rejoices in the grass and the grain, but when these fail to cover her nakedness she resorts to weeds. It is in her plan, or a part of her economy, to keep the ground constantly covered with vegetation of some sort, and she has layer upon layer of seeds in the soil for this purpose. . . . The soil is a storehouse.

Dipping into the treatises of CATO and VARRO, in the translation made by "A Virginia Farmer" under the title "Roman Farm Management," we find, if not the counterpart of this passage by JOHN BURROUGHS, at least ample evidence that the ancient Romans knew full well the value of what we used to call "waste material." Our farm journals nowadays talk a good deal about the conservation of certain weeds or, rather, their utilization as Nature's insurance against worn-out lands. To quote one of JOHN BURROUGHS's contemporaries, MR. E. P. POWELL:

The Roman farmer composted everything, manipulated its fermentation, and saved every ounce of the result as plant food. It is most curious to find VARRO in the forty-second chapter discussing very familiarly that recent discovery in American farming, alfalfa. We have to console ourselves that they did not know what we know about bacteria.

After all, MR. BURROUGHS's kind words for the weeds are not all sentiment.

The Bible in Mexico

FOR THE DISSERTATIONS of those who still insist in strident tones that HUERTA was the only ruler whose government could have maintained order in Mexico, we recommend the following text from the thirty-first verse of the ninth chapter of the Second Book of the Kings: "Had ZIMRI peace, who slew his master?"

The Citizen and the Facts

DO YOU KNOW how your State spends your money? In the last analysis this is your responsibility as a voter, and if you don't know the facts the chances are that the spending will not be done to the best advantage. The facts are both dead and useless unless you see them clearly and currently. A great advance has been made in both these points by MR. A. V. DONAHEY, Auditor of the State of Ohio, who has cut the size of the annual financial report from 871 pages to 260 pages. The consequence is that he can get it out within a month of the close of the fiscal year instead of ten or eleven months later. The reformed report is interesting, useful, and very widely circulated; it is an aid toward better government and more wakeful citizenship. What other States are doing this?

Her Umbrella Again

TWO MONTHS AGO we confessed our admiration of Queen MARY, the royal partner of GEORGE V, King of Great Britain and Ireland (at least up to the date of going to press), Emperor of India, Defender of the Faith, etc. The specific inspiration of our praise was, briefly, her devotion to that essentially pacific and utilitarian tool, the umbrella. Never, so far as we could learn by a study of the illustrated papers, did she attend ceremonies, public or private, without grasping the instrument, usually with both hands, always with the earnestness of domination. Not without reward did we write our editorial on "Her Majesty's Umbrella," for from the Dominican Republic, from Sosua (to be precise), from Puerto Plata, from W. A. MORRIS, surgeon, comes a letter bidding us cease our royal quest and inclosing a picture of Queen MARY *sans peur et sans parapluie*. The picture is from the "Lady's Pictorial" of London, and bears the date of March 14, 1914. Her Majesty, accompanied by the King and H. R. H. Prince ALBERT, is in this picture visiting for the first time the central offices of the Young Men's Christian Association in London. Out of deference to this useful organization she has evidently checked her umbrella at the door. We fear we were guilty of a serious inaccuracy in our earlier generalizations about this exemplary Queen.

The Conjurer

Cartoon by F. G. Cooper

The Miners' War

IN SOME RESPECTS our civil war in Colorado is of more national consequence than events reported from Tampico or Chihuahua. More lives were lost at the battle of Ludlow than in the American occupation of Vera Cruz. COLLIER'S views have been misinterpreted by the more extremely partisan part of the capitalistic press in Colorado, but probably most of our readers share COLLIER'S conviction that wrongs have been committed on both sides. It is significant that when, shortly before the outbreak of the present strike, representatives of the labor unions tried to secure a conference with the representatives of the "Big Three," the request was refused on the ground that the labor leaders were not citizens of Colorado. To quote State Senator HELEN RING ROBINSON:

Perhaps all the wasted millions and the wasted lives of the past red weeks might have been saved if at that juncture the people of Colorado had realized that it was the time and place to . . . burst into universal, echoing peals of mocking laughter at the idea of absentee mine owners refusing to treat with absentee labor leaders because of their absenteeism.

That is by no means all. The State has made itself a party in a dispute where it should have been a mediator standing for legality, plus human justice. The State militia has not only served the mine owners instead of serving the State—in many instances mine guards, still on their companies' pay roll to the tune of $3.50 or more a day, were enlisted as militiamen and wore the State's uniform and drew the State's dollar a day *while continuing to take orders from the operators*. These facts are reported by Senator ROBINSON in the "Independent" and also by MR. MACFARLANE in this week's COLLIER'S. "Some of these men," writes MR. MACFARLANE, "never reported to their officers for drill and were never disciplined." So-called business interests have undertaken to suppress the truth about Colorado and bitterly opposed Governor AMMONS's appeal to President WILSON for Federal troops. Before the situation demanded Federal action, before the present strike was declared even, the miners had a grievance in the nonenforcement of labor laws on the statute book. A specific instance is that of weight checking. Whatever one's feelings may be about the inherent merits of trade-unionism and the "open shop," the fair-minded reader is impressed, in reading MR. MACFARLANE'S article, by certain questions plainly and dispassionately put:

Is it to be wondered at if the working miners of Colorado lost some of their respect for law? Would it be strange if this record with regard to the laws which have not been enforced—the control of elections, legislatures, courts, and juries—kindled rebellion in the hearts of working miners against the very Government itself? Perhaps this, too, will explain why the coal miners of Colorado have grown so stubborn in their devotion to the union idea. The conviction has been hammered into them . . . that they are helpless as individuals. . . . The State having utterly failed to protect them, their forlorn hope now is that the union may.

Mellen's Epitaph

"I WAS PROUD to be called 'Mr. MORGAN'S man,'" says MR. MELLEN. It is given to few men to write their own epitaphs.

"Fallen on Evil Days"

A KEEN OBSERVER tells us that "very seldom in the history of the world had the race for wealth been so keen, or the passion for speculation so universal, or the standard of public honesty so low." This is the verdict of WILLIAM EDWARD HARTPOLE LECKY in the thirteenth chapter of his "History of England in the Eighteenth Century," and he is writing on the condition of what later became the United States in the year 1778. The point is of interest to all of us who are too apt to think that there *once* were good times. The golden age of honor and of achievement is now and it is ours.

COMMENT ON CONGRESS

IT IS more than time—indeed, it may be too late—for the public generally to recognize the gravity of the Mexican trouble, to understand clearly the situation into which we have come through a devious and wobbling path laid out by the Administration. When the President, more than a year ago, refused to recognize Huerta, he had nothing further in mind than to frown upon assassination. He fully expected that, under the blight of American official disapproval, the Huerta régime would shrivel up within a few weeks, that an election would be held, and that law and order would be restored. It is only fair to say that at the time the uninformed public generally held the same hope. But it is equally fair to say that persons familiar with Mexico, well-informed diplomats, and men skilled in international law, were aghast at the President's action, and felt that extremely unhappy consequences must follow. These men and many other leaders of opinion, in Congress and out of it, did not express their convictions, and this silence on their part is partly responsible for letting the United States drift into a tragic situation. They were silent partly because they knew Wilson's intentions at the time were good, partly because they realized that Wilson had a difficult job to reduce the tariff, and they did not wish to embarrass him in his domestic program by calling attention to the menace in his mistaken foreign policy. It is possible now to say that this was a very unfortunate kindness. The evil in our present Mexican policy much more than balances the good that the Administration has accomplished through the reduction of the tariff.

Wilson's Tragic Position

FROM the day when Wilson made his first mistake he was at the mercy of events. To-day, after numerous shifts, each slight at the time, but enormous in the aggregate, he finds himself giving aid and comfort to Villa, and, naturally enough, digging up after the event antecedent intentions to prove that all along his Mexican policy was meant as an aid to Villa's so-called fight for liberty. For Americans to understand Villa and his fight, transfer the analogy to any part of the United States where negroes are in the majority. Imagine, in Mississippi, let us say, a bold and brutal negro who has spent his lifetime as a criminal bandit, taking advantage of a period of disturbed peace to lead a negro rebellion with the ostensible purpose of confiscating the big plantations and dividing them into forty-acre plots for his followers, the process being accompanied by the murder of such owners as had failed to run away, the real motive being plain loot. It is the preposterous position of giving comfort and sympathy to this sort of thing, and permitting Villa to get arms from the United States while he prevents Germany from selling arms to the regular Mexican army—it is this position that Wilson now accepts and defends. It is undoubtedly true that the land tenure in Mexico constitutes a grave economic wrong, which ought to be remedied. But that a civilized country should help the Villa way of changing it is unthinkable.

"A Tragedy of Errors"

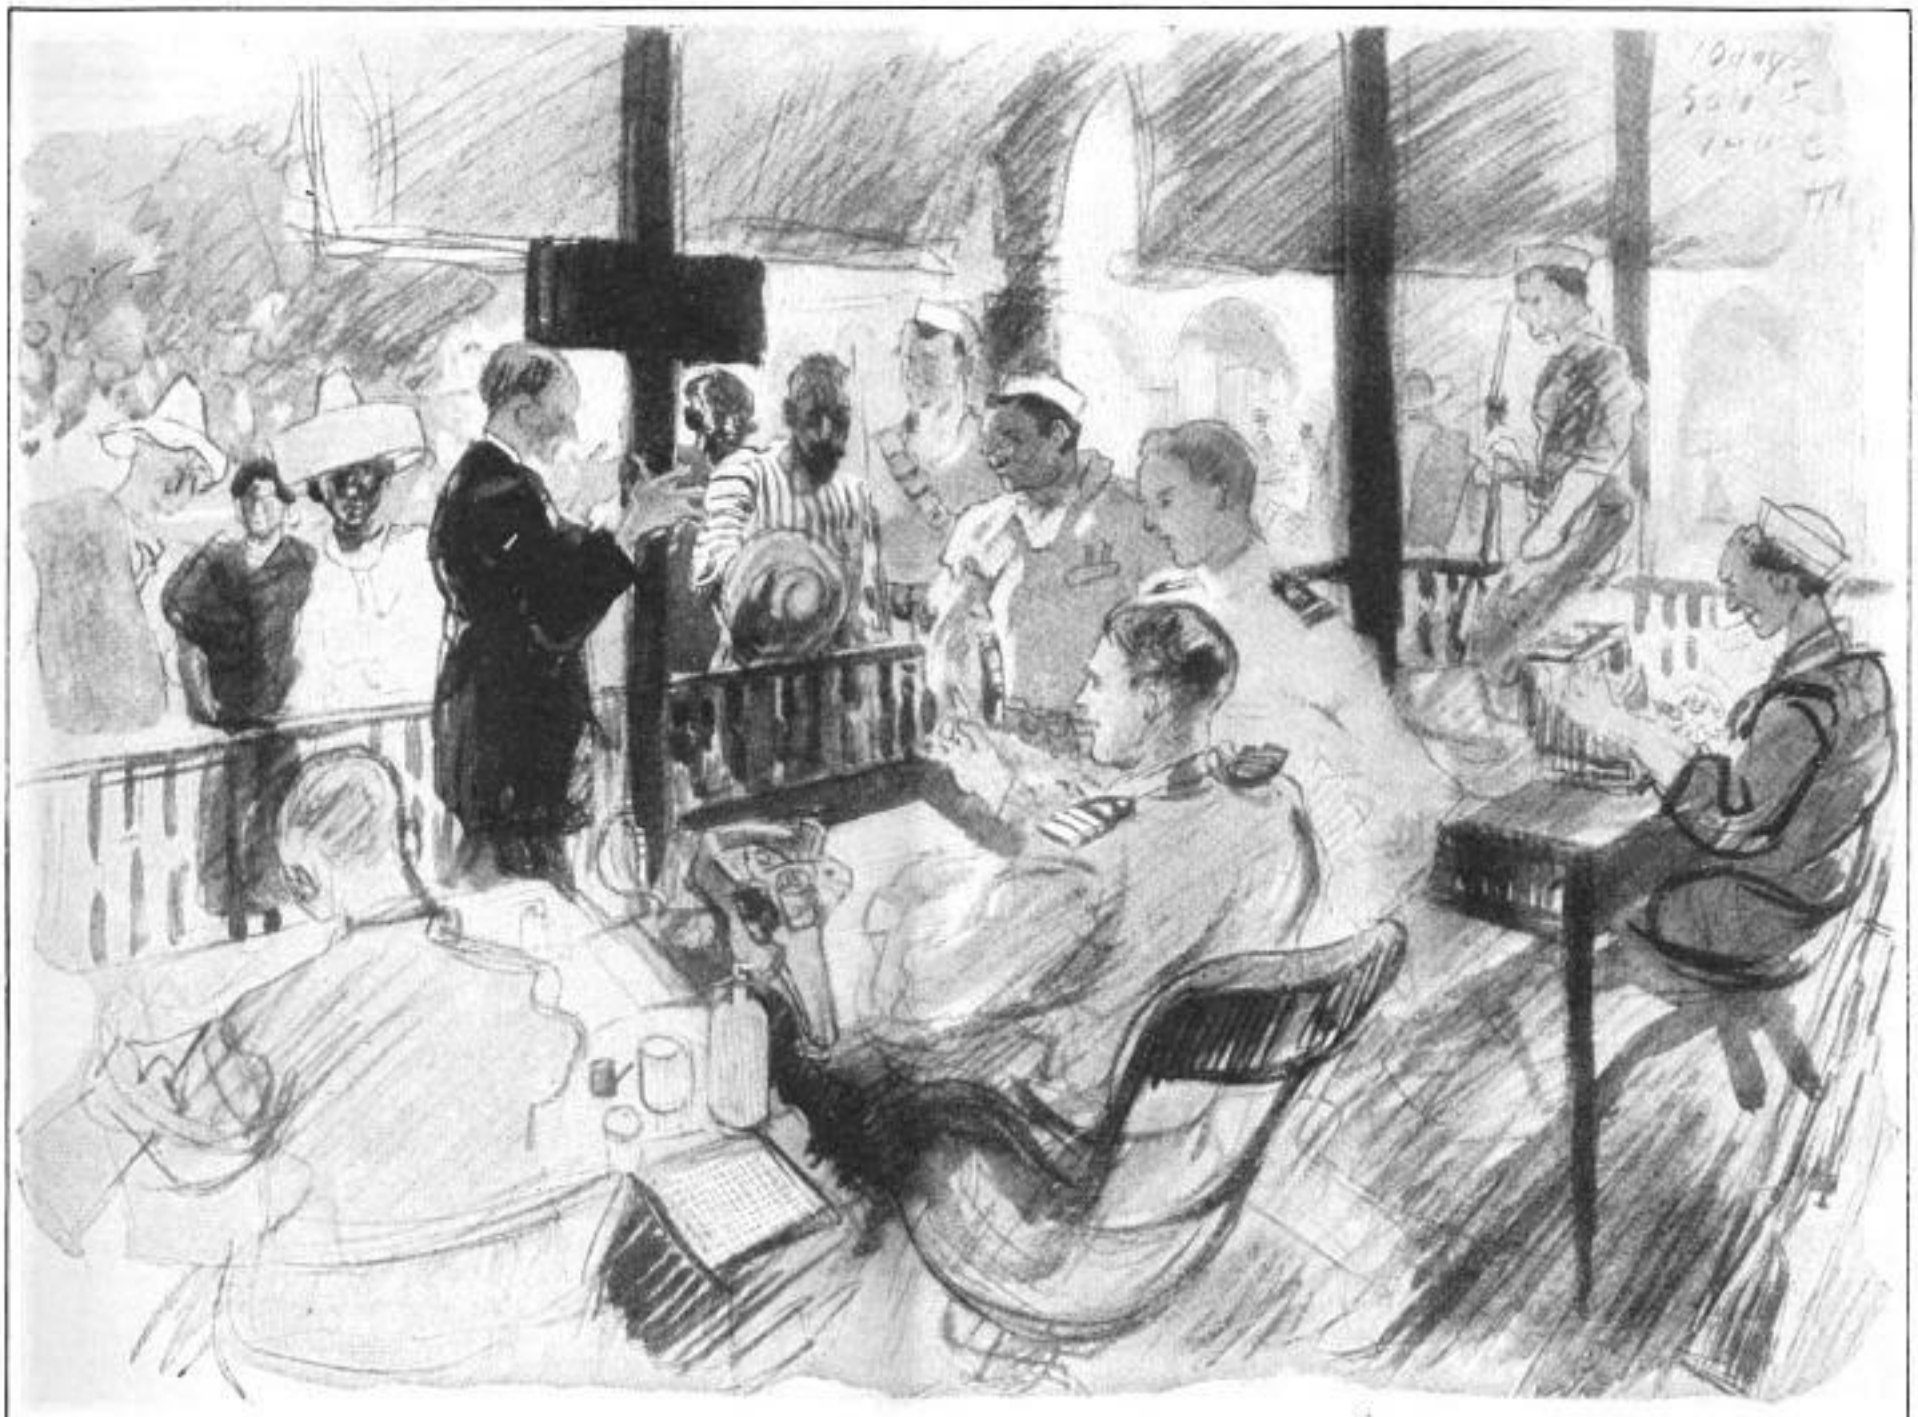
THE great immediate necessity is for light, for frankness and publicity. A man in public life who is probably the most intelligent and powerful friend of the Administration in the country spoke the other day, in confidence, of Wilson's Mexican course as "a tragedy of errors." The immediate necessity is for this sort of thing to be said publicly, to raise the lid in Congress, and permit frank and sincere discussion. It is not believable that Southern Democrats could in their hearts support a negro rebellion like Villa's. Yet they think themselves called upon, as a party matter, to defend the Administration's policy against Republican attacks.

The West Must Wait

THE ablest member of the Cabinet is Franklin K. Lane. (Practically no observer in Washington would question this; some might say it is difficult to decide whether Mr. Lane or Secretary of Agriculture David F. Houston is the abler.) Secretary Lane has prepared a program of legislation which sums up all that has been done during ten years in the name of conservation, crystallizes it in definite statutes, and make it possible for development to go on in the West. But the Democrats have agreed upon their legislative program for the remainder of the session, and it does not include any of Secretary Lane's bills. This is unfortunate. Mr. Lane is the one member of the Cabinet with a constructive program of legislation affecting the interests that fall under the supervision of his department. His five conservation bills are just as important as the legislation which the Democrats have agreed to take up, and, to the States and parties directly concerned, much more pressing than the Administration's program. The Alaskan coal-leasing bill is complementary to the measure authorizing the building of a Government-owned railroad in the Territory. It dovetails into that measure and will help to open Alaska. The general leasing bill for oil, coal, and phosphates provides for the opening of rich natural resources under the public domain now largely withheld from use. The water-power bill seeks to bring about present development under fixed tenure for a definite and sufficient period, and preserve the land and rights for future use by the nation itself. Another bill allows the settler on irrigation projects twenty years instead of ten years to repay the building cost of irrigation. The design is to stimulate settlement on these projects. It is an admirable program of necessary legislation, and has the approval of the chief men interested in the conservation of natural resources in the United States. Also, it does much to minimize the inconveniences and relieve the hardships which followed the adoption of the policy of conservation with regard to Western resources. Conservation necessarily arrested the development of some sections of the West temporarily. Secretary Lane's program would cure this. For failing to pass it the Democrats should be held responsible by the communities affected.

HOW SENATORS AND CONGRESSMEN VOTED

FOUR hundred and thirty-five Congressional vacancies and thirty-one Senatorial vacancies will be filled at the primaries this summer and the election next November. In the great majority of cases the present incumbents are candidates for reelecton. The best basis for determining whether they should be elected is, to a large extent, the way they have voted upon important measures. Collier's Washington Bureau will provide the record of the votes of any Senator or Congressman on every important roll call since March 4, 1909. This service is entirely free of charge. Give the name of the Congressman or Senator whose record you wish and address COLLIER'S WASHINGTON BUREAU, 901 Munsey Building, Washington, D. C.



Record-Breaking Rhetoric

NOTHING is falser than the notion that the Congressional Record is a dull magazine. It is, on the contrary, a constant reminder of the superfluousness of editors. What editor could improve upon the magnificent words of Mr. Henry Vollmer, a new member of Congress? Mr. Vollmer is chanting the praises of his own great State:

> In this proud sisterhood of States, the one which I have the honor in part to represent on the floor of this House is content with claiming nothing less than unquestioned supremacy as the greatest farming State in the Union. The rolling prairie between the fortieth and forty-fourth parallels of north latitude, which is folded in loving embrace by the limpid silver of the Father of Waters on the east and the tawny gold of the Big Muddy on our western slope, is a garden of the Lord, which, in the liquid music of the Indian tongue, was appropriately named Iowa, "beautiful land."
>
> From the day when the first meadow lark intones her song of spring, which no Mendelssohn, no Mozart or Grieg or other inspired human genius can approach in its glorious motif of the ever-recurring miracle of the rebirth of Nature, till that perfect season in the Middle West, known as the Indian summer, when "the frost is on the pumpkin and the fodder's in the shock," the 60,000 square miles of Iowa soil are one vast workshop for the production of what Dick Oglesby called "the corn, the corn, the royal corn, which has within its yellow heart enough of food and wealth for all the nations."

We have no sympathy with Mr. Hughes of West Virginia, who interrupted the gentleman from Iowa to ask the vulgar question: Was it true that the soil of Iowa is so rich that people could not go barefoot—it would make their feet grow too large? Mr. Hughes can have no literary sense at all. We recognize in Mr. Vollmer, who made this his virgin speech in Congress, a successor to Chateaubriand and De Quincey, to Augustin Thierry and William Hazlitt, to Walter Pater and Lafcadio Hearn—a master of resounding prose, poetry-tinged and palpitant.

Americans Dispensing a New Brand of Justice in Vera Cruz

By HENRY REUTERDAHL, Collier's Staff Naval Artist

THE proceedings of the Provost Marshal's Court in Vera Cruz during the navy's occupation were a strange sight to the natives. The Mexicans were accustomed to seeing accused persons tried, found guilty, and hurried off to jail with hardly a chance to say a word in their own defense, and a court that gave everybody a fair hearing made them wonder if the despised gringos were so bad after all. Commander D. F. Sellers of the *Arkansas* presided. He is seated at the middle desk in the drawing reproduced above. With an enlisted Indian and a Mexican acting as interpreters, he arraigned scores of lawbreakers, heard the evidence for and against them, and disposed of their cases as he saw fit. He filled the city lockup with "snipers," thieves, wife beaters, brawlers, "plain drunks," and other disorderly persons. This quick and effective method of handling the lawless proved to be a business stimulant as well as a moral remedy. The Provost's Court helped indirectly to restore business confidence. Ten days after the seizure of the city, trade was more active than it had been in several years. A plazza facing the Plaza was used as a court room. Sun-tanned bluejackets patrolled the curb while hundreds of curious natives looked on. The court was turned over to the army when Admiral Fletcher yielded control of the city to General Funston.

"THE NAVY ON THE WATER WAGON."—*A Mexican, remembering the "dry" order which goes into effect in the navy on July 1, invented the phrase as he watched a bluejacket driving a sprinkling cart in Vera Cruz, and the whole fleet saw the joke*

This Lubricant Puts the Kibosh On Friction

Oil or grease plus the proper proportion of Dixon's selected flake graphite is as much better than oil or grease alone as oil is better than water.

Why? Because graphite gets at the cause of friction. No matter how highly polished and finished a bearing may be, under the microscope it looks like the surface of a rasp file. Oil and grease cannot permanently fill up these roughnesses.

Dixon's selected flake graphite fills them, smooths them, makes a new oily surface that eliminates the grinding of this microscopic rasp. Heat or cold will not affect graphite. Pressure makes a graphite-lubricated surface smoother. The more and harder it is used, the finer finish it develops.

DIXON'S Graphite Lubricants

Some motorists speak disparagingly of graphite lubricants. We don't blame them. There are makers of graphite greases who think any graphite is a good lubricant. The fact is, Dixon's selected flake graphite is the only graphite that will not pack or ball up, because this peculiar form of graphite flake *will not adhere to itself.*

Some dealers do not even recommend Dixon's Graphite Lubricants. Why? Because they can buy lubricating greases for 3c a pound and sell them for 25c a pound. The profit is tempting

We make high priced, high grade automobile lubricants. We sell only dealers who are in business to stay, who sell real service. They know and recommend Dixon's Graphite Lubricants. If you will go to such a dealer and buy a can of

DIXON'S Graphite Grease 677

for Transmissions and Differentials

you will find your car will run more smoothly than ever before, grow constantly quieter and easily travel a mile or more farther per gallon of gasoline. Equally good for motor boats.

Write for "Words of Wisdom from the Speed Kings" and the Dixon Lubricating Chart.

The Joseph Dixon Crucible Company

Pickups of Sport

By GRANTLAND RICE

Illustrated by F. C. COOPER

To Any Champion

No matter how you rule the field—
How thick the laurel on your brow—
How rival claimants break and yield
Or to your mighty valor bow;
No matter how you lead the race
Amid the glory of the fray,
Somewhere across the open space
Your conqueror is on the way.

Reign while you may with iron hand
And deem yourself the ruling king,
And let your vaunted pride expand
The while you hear the welkin ring;
Then turn and look to plains below
Where only puny weaklings stay,
But where, oncoming, blow by blow,
Your conqueror is on the way.

Turn to the roaring welcome now
And let it sink deep in your soul;
Look to the laurel on your brow
While yet the cheering echoes roll;
Feel in your heart you'll never fail
And hold the dream while yet you may;
For, stalking up the open trail,
Your conqueror is on the way.

Youth and the Throne

"YOUTH must be served" perhaps upon the field—but youth has yet to establish a Napoleon in control of the army.

The game doesn't belong exclusively to young legs and steel arms. If one were asked to name six of baseball's greatest managers, he would undoubtedly include Connie Mack, John McGraw, Fred Clarke, Clarke Griffith, George Stallings, and Frank Chance.

Mack is over fifty; Jennings is forty-four; Stallings is forty-five; Clarke is forty-two; McGraw is forty, and Chance is thirty-five. Chance is the youngest of all managers to achieve success, for he was only twenty-seven when he first led the Cubs to victory. But as a rule the successful manager is the one who has left thirty several years behind. It doesn't take so much time to learn a game, but it takes somewhat longer to learn the knack of making others learn.

June

A cottage sleeping in the sun
And slanting shadow of the trees,
Where barefoot children romp and run
With lilt of laughter on the breeze;
A trellis where red roses creep—
The insects' drowsy monotone—
A mocking bird calls, half asleep,
That June has come to claim her own.

The Polo Round-up

AT one stage we figured America with a conquering edge over England's Polo Four. But when England began to emit shrill, plaintive, birdlike cries about her team's weakness, and when one or two of her men were injured and when everyone seemed to take it for granted that America had a soft time ahead, we immediately figured England with a bully ripping chawnce to get there. You recall how America had no chance last year with the Big Four practically a total loss. And the only man Travers had to beat in the first round was a doddering old gentleman of fifty-nine summers—who was suffering with lumbago. With a cinch ahead the time is always ripe to get set for a morbid shock.

Jerry and the Jinx

GREAT BRITAIN has massed her jinx on Jerry Travers to a fare-you-well. He is in control of America's golfing goat, but England seems to have his. Where lesser lights have gone far, the winner of four American championships has never gotten started against the Union Jack. He was toppled in the first round at Muirfield in 1909. He fell before Hilton at Ajawamis in 1911. And he was toppled again in his first round at Sandwich. Golf abounds in a strange, weird psychology that puts everything into the mental attitude of one day's play—or one week's effort. And as great and as game a golfer as Travers is, not even the lion-hearted Jerry is above this spectral shift in form.

Golfers know what this shift means, and for this reason sympathize with Travers without losing one whit of respect for his courage or his skill. They know and understand that he was up against an unbeatable force that recognizes no master.

Speaking of Batting

THE present Athletics are supposed to be the strongest attacking machine ever sent to the field.

Before awarding them the laurel, suppose we turn to the Athletics of 1860-1871.

In excavating into the dope George Moreland has discovered that this old machine in its 405 match games averaged 38.30 runs to the battle—that it averaged 50 runs to the game no less than 89 times; that it piled up over 100 runs on ten occasions—and that in its 405 championship games it scored 15,353 to 5,349 for its opponent.

The record of that club was 351 victories and 54 defeats. What we can't quite understand is the 54 defeat part of it.

But judging from these statistics, hitting the baseball is something of a Philadelphia institution. The habit seems to have become fixed. Small wonder with such a buoyant and elastic start.

Applied Mediation

"Now wait," said the batter to Johnson
As the Washington star took his stand,
"Why waste all your curves or the strain on your nerves
With an easier system at hand?
I know what you've got, so before you
Go shooting that pill at my head,
Let's adopt the new fashion bereft of all passion
And try mediation instead."

"Hold on," yelled the rival eleven
As Brickley dropped back for a kick;
"Why wreck an occasion by such an evasion
With up-to-date methods to pick?
You might break a leg or an ankle,
We might loose an arm or an eye—
So let's get together out here on the heather
And give mediation a try."

Ballade of Bum Golfers

(Abstracting the refrain from Mr. Francois Villon)

Experts, who look upon my game
With curling lip and sneering eye,
Who see four hundred things to blame
And tell me as I vainly try—
"Don't lift your bally wrists so high"—
"Tilt in, to give the ball a run"—
"Don't use a brassie from that lie"—
I cry you mercy, everyone.

Star entries in the golfing frame
Who need no daily alibi,
In dreams I hear you still exclaim:
"Your grip, old top, is all awry"—
"My word—look how he shifts his thigh"—
"Such knee work all good golfers shun"—
"Now THIS is how Braid lets 'er fly"—
I cry you mercy, everyone.

My style, I know, is worse than lame—
My wretched scores bring forth a sigh;
My stance and grip and eke my aim
I know would make a baby cry;
But all I ask, or specify,
Is PEACE beneath the pleasant sun
Apart from every "How" and "Why"—
I cry you mercy, everyone.

Call me a dub—a mutt—a guy—
But was golf built for war—or fun?
A duffer let me live—and die—
I cry you mercy, everyone.

Wahoo Sam

TY COBB on a steady average, is the most dangerous batsman in baseball. This isn't a matter of opinion—but of record, based upon a nine-year batting mark of .371—20 points above his closest rival, Napoleon Lajoie.

But when the pinch arrives with runners on base and Tyrus at bat, did you ever hear of the palpitating pitcher walking him? Not very often, and for a very excellent and abiding reason—the reason being that to walk Cobb brings up Sam Crawford—which is said to be the origin of "out of the frying pan into the fiery furnace."

No, heady pitchers esteem it no great bliss to push the pill in Cobb's reach with runners on base. But passing Cobb to bring up Crawford is another matter, and those who try it once are quite content next time to take a chance with Ty.

You hear quite a bit about the durability of Wagner, Lajoie, Mathewson, Plank, etc., but little of the span established by Wahoo Sam.

This is his seventeenth season in baseball—his fifteenth season in the Big

Show—and out of the seventeen years he has served to date he has established a mark above .300 on no less than twelve occasions. And when the Tigers started their early drive to the front in budding May, Crawford was the main factor in the uplift with a mark above .420, leading his circuit a dozen leagues in extra base wallops.

Not forgetting to mention that Crawford crashes into a baseball harder than any rival in the game—not barring Frank Baker, Joe Jackson, Hans Wagner, Cactus Cravath, Sherwood Magee, Ty Cobb, or Tris Speaker.

On top of all this we reserve for the last the most eminent boost of all in these latter days of fragile talent—in the last ten years Crawford has stood to the guns in 1,500 battles—an average of 150 games a season—or less than half a week's absence from April to October. Which, after all, is the crowning test of value to a club.

The Strange Adventures of Mike, "the Vagabone"

[Continued from page 8]

firrst platoon, second compu'y firrst battalion av the finest regimint in the second brigade, firrst division av the Eighth Army Corps. Dhrink hearty, misther—"

"Van der Houten," says he, "Rudolph Van der Houten av the Chicago 'Record-Press.' How?" and he tipped the bottle on his head.

"Ye're name's agin ye, Rudolph," says I, "although I will say this: Wanst I met a good Dutchman. If I might make so bowld, where did ye think ye were goin' just now?"

"I was lookin' for the *Napidan*," says he, "but they tell me in the Captain av the Port's office she went up river two hour ago."

"Then bad luck to them," says I, "for that means a gineral court-martial for me," and I towld him av the tight pinch I was in and the reason for bein' in it. He laughed like a hyena and swore he must write to his paper about it. "If ye do," says I, "I'll break ye're back for ye, Rudolph," so he laughed agin and swore be the Nine Gods av War I was a man afther his own heart.

"And where are ye bound now, Private Kelleher?" says he.

"TO report for djooty wit' me comp'ny, wherever it is," says I. "I'm goin' up the river this night if I have to swim every shtep av the way."

"Private Kelleher," says he, plaintive-like, "'tis up the Pasig River and across the Laguna de Bay I must go this night also. 'Twould not be a bad idjee if we were to tackle it together and take our chances agin fire, flood, and the public enemy. Sure, I'll be charmed at ye're comp'ny, more particular since I notice ye have a Krag and a belt full av ammunition."

"Have ye hearrd aught av the plan av campaign av the Gineral commandhin'?" says I.

"I have," says he. "The column's to tackle Santa Cruz this afthernoon, and follow the lake shore to the nort'."

"Then we'll follow too," says I, "and the sound av volley firin' will guide us home."

"And pray, how?" says he.

"Ye shall engage a launch for us," says I. "Bein' a war correspondent, ye have a limitless expinse account, if half av what I've heard av war correspondents be true. Hire a launch and I'll go wit' ye. Are ye armed at all, at all, Rudolph?"

"I have a serrvice pistol and fifty rounds av ammunition. Noncombatant that I am, nevertheless I am not a fool."

"And ye will engage a launch, allanah?" says I.

"I suppose I must," says he, and the wurrds weren't out av his mouth when a little Chinaman walked out av the door av the Captain av the Port's Office and come over to us, helmet in hand. Faith, he was no common coolie. I was sober enough to see that. He was dhressed in a pongee uniform, av a civilized cut, and was wearin' goold eyeglasses and a little tickler av a dress-parade sword.

"I BEG ye're pardon, gintlemin," says he, and as Gawd is my judge, I thought he was an Englishman wit' an Oriental cast av countenance, "but the fact av the matther is I am very desirous av j'inin' your Gineral Lawton's column in Santa Cruz Province, and the Chinese Consul has graciously placed his private launch at my disposal. Fortunately, I learned in the office yonder that you two gintlemin had missed the *Napidan*, and it occurred to me that I could give ye a bit av a lift up river. I should be charmed, indeed," says he, bowin' low, "to offer ye me poor hospitality aboard the consul's launch."

"Answer him, Rudolph," says I, "for I'm speechless." And I was.

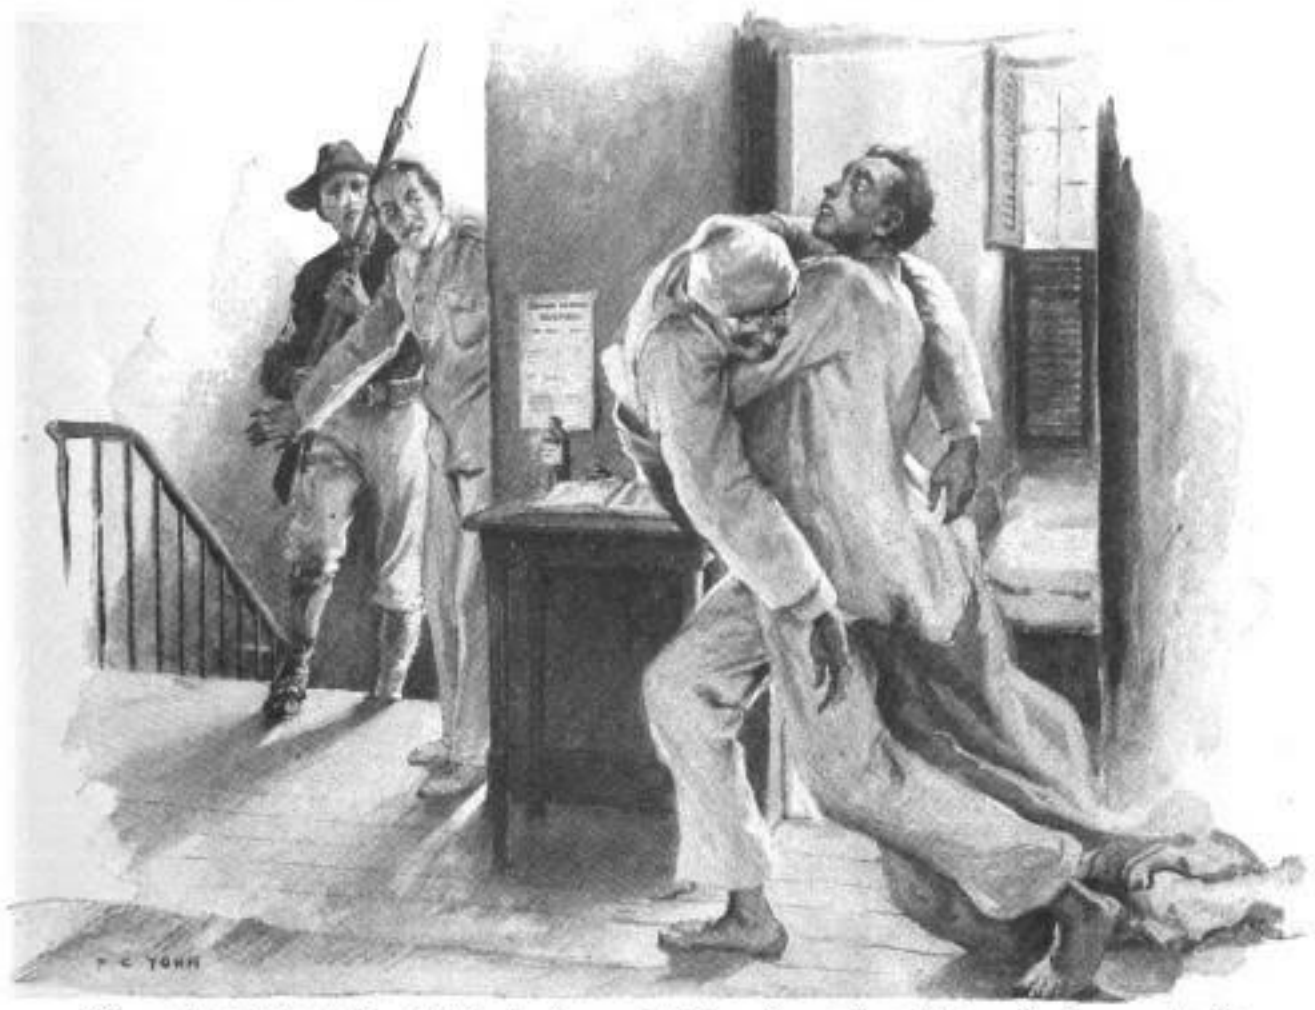
"Thank ye, sir," says Rudolph, liftin' his hat politely. "We accept wit' the utmost pleasure. To whom are we indebted for this delightful invitation."

The eddicated Chino hands up a bit av a card, and I looked over Rudolph's shoulder and read it. He was Captain Woo Ting Hock av the Chinese army, milit'ry attachay to the United Shtates forces operatin' in the Philippine Islands.

"Learrnin' the art av war at firrst hand from them that knows it," says I. "'Tis a grrand idjee. Ye should come to the Bloody Fourteenth, Captain Woo Ting Hock, if it's action ye're lookin' for. 'Tis the regulars that does the real wurrk."

"I REGRET that I have no card available, me dear Captain Woo Ting Hock," says the war correspondent, "but me name is Rudolph Van der Houten av the Chicago 'Record-Press,' and this brave young man is Private Mike Kelleher av E Comp'ny av the Fourteenth Infanthry."

"They're the right av the line, Captain dear," says I, "and the pride av the serrvice." I shtood up and, wit' the remainder av the bottle av beer in me hand, I give a toast for the benefit av the Kansas volunteer, he bein' in earshot. "Two cigars for two hussars, but a chew av tobacco for a militiaman," says I, and threw the impty bottle at the switch engine. "Come, Rudolph," says I, "and we'll accomp'ny this pleasant Captain Woo, for a finer little Chino 'twould be hard to find in or out av China."



So Rudolph paid off his cochero and we went aboard a beautiful launch wit' a dragon flag floatin' above it and the Shtars and Shtripes above that. There was a bit av a cabin amidships, wit' a long cushioned seat on each side, and the minute I was aboard I excused meself to Rudolph and Captain Woo and lay down for a wink av sleep, for to tell the truth I was a bit heavy wit' that black San Miguel beer I'd dhrunk earlier in the day. Besides, I wanted to get the fog out av me brain, for I knew afther we passed Pateros and the last av our outposts on the river we'd get promiscous shootin' from bot' banks, wit' or wit'out the askin', and I had hopes av collectin' heavy toll for the disturrbance. More be the same token, seein' that Captain Woo and Rudolph was both as innocent as lambs, figurin' on a peaceful trip, I said nothin'. For why should I worry and excite them? 'Tis time enough to cross a bridge when ye come to it, and 'twas far from me intintion to frighten them into changin' their minds at the prospect av a bit av fire, and puttin' back to Manila to wait for an armored boat. That would have left me at the merrey av the Major doethor, so I planned to let them run into the mess unbeknownst to them, and wanst into it 'twould be as safe to keep on as turrn back. As for the crew av the launch, I had no worries. They was both Chinamen.

WELL, sor, things kem out as I thought they would. Two mile beyant Pateros I was awakened be a handful av broken glass shpillin' in me face, so I knew some sniper had taken a crack at us and the bullet had gone t'rough the cabin window. I got up on me two knees and took a look out the window, and sure enough on the left bank I could see a squad of amigos! They was a fair target, what wit' their white tunics and scarlet trousers, so I poked me Krag t'rough the broken window and bid them the time av day. Three av them was overcome at me excessive politeness.

"More power to ye, Mike," says the war correspondent, whom I now detected sittin' quiet and peaceful, playin' double-dummy bridge wit' Captain Woo.

"I'm a quick-tempered man when I'm woke up suddint, Rudolph," says I.

"'Twill be dark in half an hour, Private Kelleher," says the Captain. "Sure they've been shootin' at us this last half hour, and 'tis only now they've hit the launch at all, at all," and he give a cowld, disdainful smile, and I knew him for a man and a soger, for all that he

"He scooped the Major doethor off the bed and went peltin' down the corridor wit' him to brat four av a kind"

Simply dip the Conklin in any inkwell, press the "Crescent-Filler" with the thumb and pen *fills itself* in 4 seconds.

Conklin's
Self-Filling Fountain Pen
NON-LEAKABLE

The "Crescent-Filler" identifies the original and recognized leader of all "self-fillers"—the only self-filling pen proved by sixteen years' use and by more than a million satisfied users.

The "Crescent-Filler" is the logical and practical filling device and is found only on the Conklin. It is never in the way when writing, but always at your thumb's end for filling. Incidentally, it prevents your pen from rolling off the desk.

The "Crescent-Filler" is simple and aboveboard. It's *outside* the barrel, where it's "get-at-able." We are proud of the "Crescent-Filler." Conklin dealers are proud of it. Conklin users are proud of it. It is the hall-mark of quality and efficiency among fountain pens.

Sold by Stationers, Jewelers, Druggists, on 30 days' trial. Prices, $2.50, $3.00, $3.50, $4.00, $5.00 and up. Write for catalogue and two little books of pen wit — all free.

was a Chinaman wit' an English accent, on account av havin' been eddicated in Europe.

"Then ye'll not be for turrnin' back?"

(Chinaman that he were, I almost said "Sor.")

"Hardly," says he.

"Thank ye, sor," says I.

"That's betther," says Rudolph, and he had that same precise little crackle in his voice that shtopped me from lambastin' the volunteer at Binondo. I fair jumped at the sound av it, but he was only grinnin' at me, so I said nothin', not bein' certain av his meanin'. I continued swappin' a shot here and there until sunset, and then a coolie dhrew the curtains around the cabin windows, lit a light, and set out a pleasant bit av supper from a big hamper basket. 'Twas very dark, but we took it aisy, feelin' our way upshtream, for the coolie at the wheel knew the river like a fish, and we had no worries. Waust in a while we'd use the searchlight.

AFTHER supper we all three sat down to a friendly game av poker (I had twelve dollars Mex. goin' in), but, thanks to Captain Woo, I didn't last long, so I turned in for the night, whilst Rudolph and Captain Woo went back to double-dummy bridge at a cent a p'int.

I was awakened be the launch hangin' into the bank and rappin' me head agin the bulkhead. I rolled out fightin' mad. "Was that a shrapnel hit us, I dunno," says I.

"A shtray bullet hit us, Mike," says Rudolph, "and we're in the divil's own fix. It went t'rough the gasoline tank, more's the pity, and every last dhrop av fuel has leaked out into the bilges. The first we knew av it was when the engine died and the boat swung wit' the current and dhrifted."

"Heaven help us," says I, for 'tis small appetite I have for dhriftin' into the hands av an enemy wit' a taste for anatomical research. 'Twas the habit av Pleo del Pilar's men to mutilate and kill all prisoners, and well I knew it. D'ye mind the copril from the Ninth that was crucified at San Francisco de Malabon?"

"Where are we, avie?" says I to Captain Woo Ting Hock.

"The pilot says we cannot be far from Taguig," says he. "Do ye know aught av Taguig, Private Mike?"

"Divil a bit, Captain Woo, save and exceptin' 'tis a wicked barrio, swarmin' wit' brown men in red runnin' breeks, for all that the river gunboats have shelled it out a dozen times." And that was the truth, for I'd hearrd av Taguig from a wounded man that was brought into the Second Reserve.

RUDOLPH commineed to talk most shamelessly. "That settled it," says he, "for av coorse, wit' our gasoline gone, we can proceed no further. We must drift down shtream wit' the current and wait in Manila for the gunboat."

"I fear we must," says Captain Woo.

"I fear we must not," says I. "We're as safe in the back yards av Taguig as we'll be for twenty miles down river. You and Rudolph may returrn to Manila if ye think ye can make it alive, but I shall not. Taguig is a barrio at the head av the river, where it kisses the lake, and I shall land, make a reconnoissance in the rear av the town, shteal a banca from the beach if I can, and paddle thirrty miles across Laguna de Bay to report to me comp'ny commandher. Mark me, gintlemin, there's current enough in the river to give ye steerageway, but ye may shtrike a bit av shtill wather and drift ashore, or a banca filled wit' bolomen may come alongside and dissect ye. Ye have naught but a serrvice pistol, Rudolph, to make reply."

"Faith," says Captain Woo, "I'm thinkin' we might do worse nor trust ourselves to Private Mike and his rifle."

"Very well," says Rudolph. "Forward! Let the battle commince. But how about this launch and her crew?"

"Let them take a chance on the river," says Captain Woo coldly, "and the gods protect them." He was careless and cowld where his own was concerned, as I've since found out. "'Tis an hour till daylight. We'll rest agin the bank till then, afther which we'll land and place ourselves undher the protection av Private Mike. Havin' come this far to see a bit av a Yankee fight, I'll not turrn back now."

And so 'twas done. When 'twas light enough to see we landed, the two coolies went overboard and shoved the launch off the bit av bar where she rested, and away they went down river.

"Ye will now," says I, turrnin' to Captain Woo and Rudolph, "pay shtrict attintion to me and do as I bid ye. There forninst ye is a thick-topped mango tree. Do the two av ye climb into it and wait until I come back from a bit av a scoutin' expedition. I'll get the lay av the land about Taguig and, God willin', I'll come back to ye. If I do not, ye will know it be the shootin'. Shtay hid in the mango tree until ye see the *Napidan* comin' down river, then hail her, and go back to Manila. Ye might have the kindness to write to me comp'ny commandher and tell him to take me name off the muster rolls." And wit' that I was off, pokin' along up the river bank.

I FOUND a trail t'rough the bush and followed it for a matther av two miles, until presintly I hearrd the sound av dogs barkin', so I knew I was near a barrio. I moved off be the right flank to circle around the barrio, and be good luck I enthered a big field av pole beans, where I could make fast time bechune the rows wit'out bein' seen. From the bean field I went into a shtrip av bamboo, and from the bamboo I went smack into the arrms av a Filipino sinthry! He shtepped out at me from behint a tree and t'rew up his Mauser to shoot. I hurrled me Krag at him, butt firrst, and took him in the belly before he could fire, and he sagged into the grass; whereupon I took off his scarlet trousers, tore them into shtrips, and tied him up nicely, put him and his rifle and a haversack filled wit' ammunition across me shouldher, and carried him a half mile. I hid him in a bit av cogon grass, gagged him, and went on about me business until I hearrd ducks quackin' be the hundreds, so I knew I was close to wather, and as I was thravelin' at right angles to the river now I knew it must be the Laguna de Bay. So I crept along, quietlike, and sure enough I come out on the lake shore, and there was nothin' but wather as far as I could see. Taguig lay below me a matther av half a mile, with a dozen bancas dhrawn up on the beach and as many more settin' out for the fishin'. There was a fair sprinklin' av scarlet trousers along the beach, so I knew betther nor to show myself.

HOWEVER, I had small need to worry now, for I'd got the lay av the land and I knew where the bancas was beached. I decided to lay quiet till sunset, then sneak down the lake shore afther dark, shteal a big banca, put out acrost the lake, and be out av sight av Taguig be daylight. So I went back to the cogon grass, where I hid me prisoner, untied his legs, and marched him be devious paths to the bean field. I shtruck me auld trail here and backtracked until I found Rudolph and Captain Woo sittin' in the mango tree.

Faith, their two eyes popped out when they saw me wit' a prisoner and an exthra piece wit' lashin's and havin' av ammunition for the same. Rudolph was as happy as a child. He give his serrvice pistol and belt to Captain Woo and equipped himself wit' the Mauser. I showed him how to wurrk it and give him some shlight dhrill in aimin'—takin' a full deep breath, exhalin' slowly and pullin' the thrigger when the breath was half exhaled. The range scale was be the metric system, but I set the sights to point-blank range, which, as ye know, is good for anything up to three hundhred yards.

"And now," says I, "I have a fine field av pole beans to hide in. The hoein' and cultivatin' has been done, and the beans will not be ripe for harvest for a month, in consekens av which there'll be no men in that field but ourselves," and I led the way to the bean field wit' our prisoner, and the four av us went in and sat down. I spread me shelter half for Rudolph and Captain Woo, and they went at their double-dummy whist agin whilst I looked afther me prisoner. We lunched and breakfasted on me two days' rations I had in me haversack at noon.

HALF an hour before sunset we moved out av the bean field and down t'rough the cogon grass to the lake shore, and the minute it was dark I left Captain Woo and Rudolph to watch the prisoner whilst I shlipped down the beach to forage for a banca. The beach was deserrted, so I found a banca, launched it, and piled into it every paddle I could

Digitized by Google

find in the other bancas! 'Tis attintion to small details that wins great victories, and I was minded to discourage pursuit before ever it shtarted.

I WAS paddlin' back to the p'int where I'd left the lads when all av a sudden I saw a light flash up, and I knew the cogon grass was afire. Simultanyus wit' that I hearrd the bark av a six-shooter and a yell av "Madre de Dios!" From the beach forninst me a man challenged, "Quien vive!" and shot at me wit'out waitin' for an answer—which he wouldn't have got, and knew it! A bugle blew in Taguig, and I hearrd a Filipino orficer yellin' to an outpost off in the woods a bit.

"Damned pig!" says the voice av that illigant Captain Woo, "wan av them found our trail in that bean field and followed us."

"Well, I've kilt the beggar for settin' the grass afire, at any rate," says Rudolph. Maybe he said more. I never hearrd it if he did, for the outpost beyant in the woods was shootin' at the fire, and I knew 'twould be like Woo and Rudolph to run down the beach in the dark, lookin' for me, little thinkin' that the firrst p'int the main guard in Taguig would rush to protect would be the boats! And if the lads missed me in the dark I knew they'd run to their death amongst the bancas!

Lady of the House (just returned)—Poor polly! Have you been terribly lonesome?
Parrot (feverishly)—Gimme a stack o' blues!

I was less than a hundred yards from them, and, av coorse, they could not see me paddlin' up, a little offshore, but the flames from the burrnin' cogon grass was leapin' high, and I could see Captain Woo and Rudolph retreatin'. Over a little five-foot cut bank down to the beach they lepped just as a dozen av the native outpost comes chargin' into the clean space the fire had burrned over, and I knew unless I could shtop them 'twas Fiddler's Green for the three av us. I fired at them, but well over their heads, and they shtopped at the whine av the bullets, not knowin' which way to turn, for the sinthry on the bank below them was shootin' too—at me! I could not hope to paddle in to Rudolph and Captain Woo and get them into the banca and off again wit' all that fine shootin' light from the burrnin' grass; and in the twinkle av an eye I knew there was but wan thing to do—disperse the outpost and escape in the banca before the arrival av the main guard from Taguig!

"Back where ye were and undher the cut bank!" I yelled like a Bull av Bashan. "Engage the divils whilst I come ashore and flank them!"

"Bully for ye, Mike," says Rudolph, and back he and Captain Woo run for the cut bank. The outpost orficer was indiscreet enough to come runnin' to the cut bank and look over, and Captain Woo reached up and grabbed him be his bare ankles and jerked him down on his face, Rudolph tappin' him simultanyus wit' the butt av the Mauser. As I turned the banca inshore and bint to the paddle I could see Captain Woo unbucklin' the man's belt. It contained an auld Webley revolver and a long Spanish cavalry broadsword, and Woo buckled it on, tossin' away his own belt and the little tickler av a dress-parade sword.

I SAW no more av the Donnybrook undher the cut bank, for at that instant the banca grounded on the shingle and I lepped out, dhraggin' her high and dhry. In the meantime the sinthry in front av me, and below Rudolph and Captain Woo, kept bangin' away, which was not wise av him, for he shot from the hip continyus, and I marked him down be the flashes av his piece. I fixed me bayonet, bint double, and went into the bush afther him. He emptied his magazine at me as I kem, but every shot went high, and I went into him up to the lockin' ring and passed on.

A slight night breeze was blowin' the fire down the beach toward Taguig, and the enemy (there was a dozen av him) kept followin' in the wake av the flames, shootin' wild and wishful to get bechune us and the bancas. But Rudolph and Captain Woo, more power to them, had the good shuse to follow the fire too, thus dhrawin' the enemy along wit' the light av the flames and makin' things aisy for me when I should fall upon them from the rear.

WHAT wit' the shootin' and cracklin' av the fire I broke t'rough the bush unbeknownst to the enemy, swung around in his rear, and come out into the burrned-over space. 'Twas grand shootin' light, and I'd dhropped four av them before they woke up to the fact that they was flanked, and then, thinkin' they was totally surrounded, they did what a Malay will always do when he's cornered! They emptied their pieces at me, and disdainful av reloadin', fixed bayonets and dhrew bolos, turrned and went over the cut bank afther Captain Woo and Rudolph. Two men they felt certain av, and those two they would have.

Och, wirra! wirra! 'twas the frightened man I was. I fixed me own bayonet back on agin as I run afther them. When I come out on the bank, ready for the jump, and looked down, if I live to be a t'ousand years old, divil a prettier sight will I see than I saw at that minute. Captain Woo and Rudolph had moved out onto the beach where they had fightin' room and a good light, and there all hands were at it like Kilkenny cats. Eight men went over the cut bank afther Captain Woo and Rudolph, and five av them bit the dust before they reached the cinter av action. Rudolph's Mauser had jammed (a rusty auld divil she was, and small blame to her) and he'd taken the Webley from Captain Woo, imptied that, picked up the Mauser agin, fixed the bayonet on it and met the survival av the rush. As for Captain Woo, his pistol was impty, but he had it in his left hand, parryin' cuts from bolos, whilst wit' his right he went feelin' around wit' the auld Spanish broadsword. He was yellin' and screamin' like a wildcat. 'Twas hard to tell whether he was bilin' mad or frightened to death, and had I not been a busy man and in command av the expedition I'd have sat down to laugh at him.

ALL av these things I saw out av the tail av me eye as I lepped down into the scrimmage. Two men wit' bayonets was worryin' Rudolph whilst Captain Woo did a fencin' match wit' wan, so I went to the aid av Rudolph, he bein' a civilian and not accustomed to such wurrk, like Woo and meself, although be the same token he was givin' as fine an exhibition av bayonet practice as a man could wish. I give wan av the skuts "butts to the front" on the back av his head, and dhropped him just as his cumrade dhruv his bayonet clear t'rough Rudolph's thigh, and the little man went down as flat as a flounder. Out come the steel and up it went, but before the native could dhrive it t'rough poor Rudolph's mid section I shtruck up the gun and he turrned on me, backin' away.

"Mike," says Rudolph, cryin' wit' rage, "do you take the conceit out av that lad for me."

"Trust me, Rudolph," says I, and I shtepped around that red-breeched Malay like a cooper around a barrel. Sure 'twas sinful. He knew naught av bayonet exercise, and I polished him off in a jiffy, turrnin' just in time to see poor Captain Woo, wit' his rusty auld Spanish broadsword bruk in two, fendin' off a horrible cut from the bolo. The blade come down on the barrel av his impty pistol a glancin' blow, but heavy, slid off, and bit clane t'rough the little China-

—The car you can safely buy over the telephone

You, your wife, or your daughter, can step to the telephone, call up a *National* dealer and say: "Deliver a *National* to my address."

YOU can do this with the same confident knowledge that you are sure to get just what you want, that you can when you order anything else you *know is right*, because you know the reputation of the manufacturer and the product. You can buy a *National* "without lifting the hood." You can ride in a *National* without worrying about the separate mechanical parts. Our engineers have that responsibility and there is fourteen years of *National* success and *National* stability in your purchase, whether you make it by 'phone or in person.

VARDON PRAISES
THE COLDWELL
MOTOR MOWER

Philadelphia, Nov. 12th, 1913.
COLDWELL LAWN MOWER COMPANY,
Newburgh, New York.

Dear Sirs:—The American courses have improved very much since last I played here in 1900, and I have come to the conclusion that your Motor Mower is to blame.

I cannot find words to express its great merits, but at any rate I can truthfully say that it is O. K. in every particular. Would advise Green Committees to do away with horses and procure a Motor Mower which pays for itself in two seasons.

Yours faithfully, (Signed) HARRY VARDON.

The Coldwell combination roller and motor mower will do more and better work than three horse mowers. Rolls and mows in one operation. Climbs 25% grades easily.

Motor mower book, and catalogue of 150 different styles of horse and hand mowers, free on request.

Digitized by Google

THAR'S two things I want when I go fishin'—fish that bite an' tobacco that don't. I can't be sure about th' fust, but I can about th' second—I allus take along a tin o' VELVET.

Velvet Joe

A *BITE* in VELVET is as rare as hen's teeth and for the same reason—"there ain't no sech animal." But VELVET doesn't depend on *bitelessness* alone for its popularity. VELVET has all the flavor and smoking qualities that Nature puts *only* into choicest Kentucky Burley—the one kind we use—the *Burley de Luxe.*

VELVET is *really* the "Smoothest Smoking Tobacco," with an individual aged-in-the-wood mellowness about it, the result of over two years' careful curing.

5c Bags
10c Tins
One Pound
Glass Humidors

There's a big "catch" of pipe comfort and satisfaction waiting for *you* if you bait with VELVET.

man's helmet into his skull. He wilted like a cabbage, wit' the blood shpoutin' over his face, and the boloman backed away to face me.

I come right at him wit' the bayonet and he give ground. Sure he knew he had no chanst, so what does he do but flip his bolo at me and rip it clear t'rough me right shouldher muscles, high up on the neck. I plucked it out, threw it at him, missed, and kept advancin', backin' him into the wather, and when I shlipped a shell into the breech he fell on his two knees, beggin' for mercy. I'd have kilt him undher other conditions.

"Come here, ye skut," says I, "and pick up that little dead Chino."

WIT' a little persuasion he did as he was bid, I got a grip around Rudolph wit' me left arm, and, dhraggin' him afther me, we reached the banca and piled them into it. Then the prisoner and I shoved her off, and I bade him shtep in and pick up a paddle, whilst I lepped in afther him and sat on the edge av the sterrn wit' the muzzle av me Krag contiguous to his backbone.

"Donde?" (where?) says he. "To Santa Cruz," says I, and he bent to his wurrk. For an hour he paddled wit'out missin' a stroke whilst I sat and enjoyed the yellin' and the screamin' on the beach when the paddles were found missin' from the other bancas! As I said before, 'tis the little things in life that count.

By-and-by I felt me crew givin' a back twist and dhrag to his paddle. So quiet he was I would not have noticed it had I not been expectin' the same. He was gradually turrnin' the banca in the dark, to head back toward Taguig, so I tapped him one for good luck, and we hove to till mornin'. Whilst waitin' for the native to show signs av life (for I'd bumped him well wit' the butt) I crawled over him to Rudolph. I had a first-aid package and some matches, and whilst he lit the matches I ripped off wan leg of those illgant English corded ridin' britches and done up his leg. He'd bled a lot and was weak—but cheerful. He swore continyns and was much plazed when I towld him a damn fine soger had been shp'iled to make a good-for-nothin' little war correspondent.

"Begorra, ye little wasp," says I, "where did ye learrn how to handle a bayonet? 'Twas a grand spectacle ye put up. Sure ye juggled ye're piece like a band leader juggles a baton. Where did ye learrn how?"

"In the militia," says he.

"Ye're a liar," says I. "Ye did not."

"We had a captain that had been a regular," says he.

"That explains it," says I.

"Is Woo kilt, Mike?"

"He is," says I, "and more's the pity, for a fine little Chinaman he was, and a gintlemin every inch. I would not abandon his body, for Chino that he is, a fine fightin' man and a kindly host he was, and I would not lave his body for the pariah dogs. A milit'ry funeral he shall have if I have to give it him meself."

"He was the only man," says Rudolph, "that ever give me a batin' at double-dummy bridge. He had me I. O. U. for a hundhred and forty dollars. Shtill, for all that, I wouldn't have wished him dead," and poor Rudolph choked up.

'Twas a long night—longer betoken av the fact that I'd lost me pipe in the ructions at Taguig. 'Twas a currly briar root, well cured, and the pride av me whole existince. I've never had another like it. But the sun come up at last, and all about us was the mist off the lake and nothin' livin' as far as I could see around us. Me prisoner was lyin' quiet enough, wit' a bump on his head like a biscuit and a black look in the eyes av him, and Rudolph was sound asleep on the broad av his back, wit' his head restin' on Captain Woo's body.

NOW, 'tis not becomin' that a white man should use a dead Chino for a pillow, even a fine little Oriental like Captain Woo Ting Hock av the Chinese Imperial Guard, so I took Rudolph be the legs and dhrug him back a bit.

"Thank ye kindly, Private Mike," says the voice av Captain Woo. "He's had his hard head in me kidneys all night and I hated to move for fear av disturbin' him. Is he badly hurrted, poor lad?"

"Ye little Chinese skyrocket!" says I. "are ye dead?"

"No, thank ye, Private Mike," says he, "but I'm hungry enough to ate a child wit' smallpox, and there's no circulation in me legs. What wit' Rudolph's head on me all night long I'm cramped and paralyzed."

"Howld over ye're head till I look at it," says I, and I was the happy man. I'raise be, 'twas a glancin' cut, though faith, be the way he'd bled, I thought his skull had been chopped in two halves. I shtraightened him around and made him comfortable, and waited for the mists to rise. And when they did, across the lake, twenty mile away, I see the white steeple av a cathedral, so I knew that must be Santa Cruz. So the prisoner was put to wurrk again at paddlin', and about noon we was off the city. But there was no signs av life on the beach, naught but a mess av impty Krag shells, so we took to the banca agin and paddled nort', and in the cool av the evenin' we heard a jackass battery in action. We followed the sound and come to Muntinlupa, and I could see the Fourth Cavalry disembarkin' from some cascos undher the fire av the *Napidan.*

WHEN the fightin' was over and the Billposters come flockin' into town we went ashore, and a detail av hospital corps men took Captain Woo Ting Hock and Rudolph Van der Houten in charrge, whilst I went up to report to me comp'ny commandher. I found him undher a tree lickin' his chops and watchin' his dog robber cookin' a chicken they'd shtolen together. I reported to him and give him the docthor's note. He read it and scowled, for I was two hours late!

"Well, me man," says he, "ye have not fulfilled ye're conthract wit' the Major docthor, so I'm sadly afraid ye're in throuble up to ye're schamin' neck. If there's wan thing in life I hate and despise 'tis a cowld-footed, malingerin'—be the Great Gun av Athlone! How come this blood on the back av the envelope?"

"I don't know, sor," says I.

"Go and report to the Firrst Sergeant," says he. "I'll have ye thried the firrst chanst I get," and I went away, but not to the Firrst Sergeant. Off to the field hospital I went, to have the hole in me shouldher dhressed, and who should I see the minute I come in but Captain Woo wit' his head bandaged and Rudolph shtretched out on a field cot. They was talkin' to the Lootenant Colonel.

"Come here to me," says Rudolph, but I was afraid av the Lootenant Colonel, and winked at him to lave off, and shook me head.

"Lootenant Colonel," says he, "have the kindness to ordher Private Kelleher to come here." So the auld man turrned and give me a look, and I come up like a sheep-killin' dog.

"Me man," says the Lootenant Colonel, "do ye know who this is?"

"The finest fightin' Dutchman that ever fingered a gun, sor," says I.

"He's ye're new colonel," says the auld man.

"Me what!" says I, and the hair rose on me head like the quills on a hedgehog, whilst Rudolph lay back and laughed himself sick.

"Explain yerself, Rudolph," says I sternly. "What joke is this?"

"DIVIL a bit av a joke, Mike," says he. "Sure me name isn't Rudolph Van der Houten at all, at all. It bein' a rare hot day when I met ye afther landin' in the island, I had laid aside me blouse. I'd shtepped out av the carromata to give ye a dhressin' down wit' me tongue, but left me blouse on the seat inside; so I was sportin' no insignias av rank when you turrned to face me. Right away ye became impudint, and sure ye amused me. Then, findin' ye was Irish and a private in me own regimint that I'd just been app'inted to command, thinks I to meself I'll tell him I'm Dutch and see what he says. Ye suspected me av bein' a war correspondent and I encouraged ye in the deception, and ye're a fine, jolly lad, Private Michael Joseph Kelleher, and 'tis the rattlin' good time we had together thravelin' on the same democratic footin'. I would not have missed it for the stars av a brigadier."

"Sor," says I, comin' to attintion and salutin' him, "I thank ye kindly for them sintiminta. For a Dutchman I had me suspicions av ye when I saw ye in action. Beggin' the Colonel's pardon, 'tis more bellke some Irishman chased wan av ye're ancesthors—and caught her," says I, "back in the days when men shtole their wives and wooed them wit' a club. There's but wan bit av shame I feel for the whole thransaction, sor, and that's to think I had the insolince to dhrill ye in aimin' a rifle—"

Westinghouse Electric

Booklets and Catalogs

A LIBERAL education in practical electricity.

This organization, which has been first in most of the important developments in the electrical field since electricity became a serious business, may well be ranked with the educational institutions of the world.

Here is the opportunity to learn about some of the practical things Westinghouse Electric is accomplishing and where they touch your own private interests.

Choose from among the catalogs listed, those which describe apparatus for your own particular business or your home. You will find, boiled down, much practical information on the subject and a description of the latest machinery for doing the thing, whatever it may be, by electricity.

Electric Cooking Devices: Including Toaster-Stoves, Percolators, Chafing Dishes, Samovars, Frying Pans, Milk Warmers, etc. No. 4197.

Electric Curling Irons: Hot when wanted. No soot. No fumes. No. 4265.

Instrument Sterilizers: For physicians and dentists. Electrically heated. No. 4218.

Switchboards: Standard forms and built to order for special purposes. No. 1504.

Small Motors: Great time, labor and money savers in the home, office, store and shop. Booklet No. 4230.

Electric Vehicle Motors: Interesting and useful data for prospective owners of electric pleasure and commercial vehicles. Booklet No. 3223.

Polishing and Grinding Motors: For jewelers, opticians, dentists, hotels, machine shops, garages and homes. Booklet No. 4220.

Dental Lathe: Moderate priced of the highest reliability. No. 4257.

General Utility Motor: Unique. One motor to run sewing machine, polish silverware, sharpen knives, and has a dozen other uses. Booklet No. 4219.

Sewing Machine Motor: Makes play of sewing. Runs any family machine. Booklet No. 4152.

Motor-Driven Eraser: For draughting rooms. Saves time and tracing cloth. No. 4140.

Ventilating Outfits: Pure air for offices, stores, theatres, restaurants, public buildings. Full line described in No. 4256.

Motor Drive for Various Industries

Publications showing the advantages and economies of motor-drive in many industries, data on the proper motors and sizes to use on the various machines, and other useful information, are now ready. In writing for these, please use your business letterhead, since otherwise the request cannot be filled.

General—How Electric Power Helps Manufacturers.
Motor-Driven Wood Working Machinery.
Westinghouse Electric Motors in Machine Tool Service.
Electrically Operated Clay Working Plants.
Motor-Driven Pumps.
Irrigation by Means of Electrically Driven Pumps.
Motor-Driven Dairy, Creamery and Ice Cream Machinery.
Motor-Driven Refrigerating and Ice Making Machinery.
Motor-Driven Printing and Cut-Making Machinery.
Motor-Driven Laundry Machinery.
Motor Drive in Paper Mills.
Motor-Driven Shovels.
Motor-Driven Equipment for Garages.
Motor Drive in Cotton Spinning Rooms.
Motor Drive for Worsted and Woolen Looms.
Motor Drive in Knitting Mills.
Motor Drive in the Silk Industry.
Electrically Driven Pickers.
The Illumination of Textile Mills.

Electric Irons: For all household and many other purposes. No. 4281.

Electric Meters and How to Read Them: Explaining just what the meter measures. No. 4032.

Portable Meters: For every kind of electrical measurement. No. 1104.

Precision Meters: For making electrical measurements of greatest accuracy. No. 4087.

Battery Charging Rectifiers: For charging automobile storage batteries. Type for Electric Vehicle Batteries. No. 4201.
Vibrating type for ignition batteries. No. 4237. For telephone batteries No. 4204.

Electric Breakfast Sets: Cooks breakfast at the table in 15 minutes. No. 4266.

Automobile Equipment: Electric Starting, Lighting, and Ignition apparatus, meters, vulcanizers and battery charging outfits. No. 4221.

Graphic Meters: For analyzing and checking factory operations. No. 4180.

Tailors' Electric Irons: For every shop use. No. 4190.

Moving Picture Rectifiers: Making alternating current available for direct current arc lamps. No. 4205.

Electric Meters: Accurate instruments to measure current for every purpose. No. 4241.

Ozonizer: Refreshes the air, removes odors from bedroom, nursery, kitchen, smoking room, theatre, office, store and factory. No. 4242.

Electric Fans: Over 24 different styles and sizes for all purposes. No. 4268.

Arc Lamps: Newest improvement, long burning flame carbon. No. 4258.

Automobile Fittings: Switches, Sockets, Fuse boxes, wire, etc., for equipping automobiles with electric lights. No. 4263.

Small Lighting Generators: One-kilowatt steam-driven generator. Will provide current for forty 25-watt incandescent lamps. No. 3695.

Electric Radiators: Luminous and radiator types. No. 4197.

Heating Pads: The modern successors of the hot water bottle. No. 4197.

Water Heaters: Heat water in tanks, vats and sterilizers. No. 4240.

Hat Making Machinery: Electrically heated. Saving. Easily regulated. No. 1175.

Newspapers, Matrix Dryers: Electrically heated. No. 1176.

Candy Factories: Electrically heated chocolate warmers. No. 2476.

Carpenter Shop: Electrically heated glue cookers. No steam or gas piping. Can be easily moved about. No. 4240.

Westinghouse Mazda Lamps.—Twice the light of old style carbon lamps for less than half the cost of current. Light closely resembles sunlight. All sizes from 25 to 1000 watts for every kind of service. For literature address Westinghouse Lamp Co., 1261 Bway, New York.

"RESOLUTE" Painted With RIPOLIN

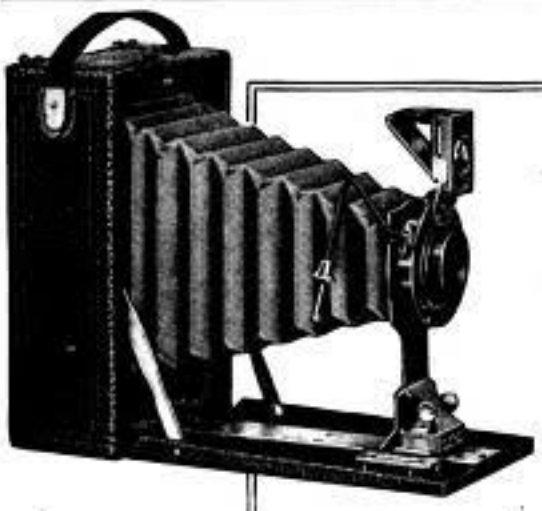
Would Herreshoff venture to paint a prospective cup defender with RIPOLIN Enamel Paint unless he knew for a certainty that RIPOLIN is the world's highest standard?

Note also that he uses RIPOLIN on his houses as well. In fact, RIPOLIN is the championship paint both on land and sea. Smooth as fine porcelain, durable, of great covering capacity—therefore most economical.

Because, once you use RIPOLIN, repainting is unnecessary—simply clean with damp cloth and RIPOLIN looks like new—will stand any amount of rubbing or scrubbing—never discolors.

RIPOLIN is made in Holland by the old Dutch hand process and comes in that brilliant, high gloss, like glass, or in a beautiful eggshell finish or absolutely flat. Any tint desired can be obtained by mixing pure color ground in oil with white RIPOLIN. A gallon will cover from 500 to 700 feet, depending on the surface.

Let us send you a book showing residences, exclusive clubs and palatial hotels finished with RIPOLIN. With it we will send the RIPOLIN coaster trip offer illustrated above. Read and twist this tin—the crusted rusted flake or crack. We will send also the name of the RIPOLIN dealer in your territory.



Note Seal on Can

J. A. & W. BIRD & CO.

Importers and Distributors of RIPOLIN for the United States and Canada

92 Pearl Street, Boston **67 Beaver Street, New York**
660 People's Gas Building, Chicago

An ideal vacation camera, making 3¼ x 5½ pictures (post card size) for **$10.50**

Loads in daylight

Weighs only 29 ounces

Dimensions 2⅜ x 4⅝ x 7⅛ inches

Covered with genuine grain leather

Film Premo No. 1

A remarkably light, compact camera for pictures of the artistic 3A proportion.

Can be carried and used anywhere, and is so easy to operate that anyone who can read the simple instructions that come with the camera, can make first-class pictures from the very start.

To load, merely open back, drop in Premo Film Pack, close back and all is ready. To change films for successive exposures just pull out successive film pack tabs.

This model is fitted with a tested meniscus achromatic lens of the highest quality obtainable. The shutter is the new Kodak Ball Bearing with cable release, and the camera is fitted with two tripod sockets, reversible brilliant finder, and is made throughout of the best of materials, by men who have spent their lives in camera making.

Get the new Premo catalogue—a book that no one interested in photography should be without. It describes the many Premo advantages fully—the daylight loading Film Premos, the Premos that take films or plates with equal facility, the Premo Film Pack and tank developing system. It's free at the dealer's, or will be gladly mailed to any address on request.

Rochester Optical Division
Eastman Kodak Company **Rochester, N.Y.**

Well, ser, at that him and Captain Woo and the Lootenant Colonel had a fine hearrty laugh, whilst I shtood there like a fool until Rudolph reached up and shook me be the right hand whilst Captain Woo took me be the left.

"We have to thank ye for our lives and a most delightful journey, Mike Kelleher," says Rudolph, "and I'm thinkin' neither Captain Woo Ting Hock nor meself will forget ye for that. A great soger," says he, turrnin' to the Lootenant Colonel. "I'd sell me immortal sowl for a regimint like him. He's the finest fightin' Irishman Gawd A'mighty ever created."

"And I'm to be thried for mailingerin' bekase I was two hours late reportin' for djooty," says I. "Seein' that the Colonel has some slight personal knowledge av the difficulties av the journey and the sincerity av me intintions, 'tis belike he might put in a good wurrd for me wit' me comp'ny commandher and not lave me to be made the laughin' shtock av me cumrades."

"Laughin' shtock, is it?" says he, his two eyes snappin'. "Faith, the man that laughs at you must laugh at a medal-av-honor man—"

"And whip ye into the bargain," says Captain Woo, squeezin' me hand.

(Mike the Vagabone ceased speaking and dreamily nibbled a straw for the space of a minute before resuming.)

AND so Rudolph and Captain Woo, God bless them, made much av me for a bit, and then I had me shoulther dressed and I went about me business, for I knew me place. But when I got me discharrge mulher Gineral Ordher No. 40, Captain Woo sent for me to come down to the Hotel d'Orient, where he was shtayin'.

"Private Mike," says he, "China needs men like you to dhrill her sogers. That was a hard batin' the Japanese give us, and maybe 'twould not have happened wit' men like you to counsel us. I have a captain's commission for ye. Do you come wit' me, Friend Kelleher, and I'll make ye a colonel yet."

AND so [continued the Vagabone dreamily] I went to China wit' Captain Woo Ting Hock, and I'm a colonel av the Imperial Guard this day. Sure, I'm the Prince's bodyguard wherever he goes, and wit' diamonds and pearls and jade he do load me for the slightest favors. Divil a wurrd av lie in it, Jawn.

"You Vagabone," murmured Sergeant Ryan. "You bloody Vagabone!"

Stalking the Pestilence

(Continued from page 12)

fully comprehend what happens to human flesh when a high-powered, wobbling bullet goes tearing through it.

High-Velocity Bone Shatterers

THE effect of such bullets on human bone can be readily imagined. There is no reason, with modern antiseptic surgery, why a clean-drilled hole through flesh and bone cannot be healed nicely. Unfortunately, such being the terrific impact and wobble of our high-velocity bullets of to-day, the bone is shattered for too great a distance into too many minute fragments. The only thing to do is to take off the limb.

When leaving the amputated in the wards of San Sebastian, I chanced to wander into the hospital chapel. The Chapel of Bethlehem it had been called once upon a time. It was very old, some two centuries or so, and was a fine example of the architectural feats achieved by the Spaniards in brick and stucco in a day when reinforced concrete was unheard of. Wide arches of incredible flatness and supporting enormous weights were revealed to be of brick by the spots where the plastering had come off. High arches spanned deep-embrasured windows, in which some of the ancient, hand-hewn sashes still remained. The high walls, rising to rafters far above, had caught the dust of years on the uneven plaster, which gave a fathomless velvet depth to the surface. The floor was of great, square marble flags.

Blasters of Flesh—and Repairers

THE statues of Christ, the Virgin, and the Saints that had graced the altar were long since gone. Gone, too, was the altar. Nothing remained save the lofty walls and cool depth of shadow to suggest that it had been a chapel. And as I stood in this place whence the worship of the gentle Nazarene had departed, strong on my vision were the amputated limbs, gaping wounds, and ruined bodies caused by our wobbling bullets.

Came another picture: I seemed to glimpse a vast massed background of machinery and electrical apparatus, of weary-eyed astronomers searching the heavens, and chemists and physicists dissecting the atom, of teachers and preachers and great libraries of books. And against this background, well to the fore, were two groups of men whose brows were the brows of thinkers, and whose hands worked unceasingly at the making of devices. One group toiled at the mixing of chemicals and the making of mechanisms for the purpose of blasting human flesh and bone at longer distance and more efficiently. The other group toiled likewise with chemicals and instruments, seeking out new methods and greater knowledge of the constitution of man in order that they might repair the blasted flesh and bone caused by the devices of the first group.

Laughs for Our Descendants

SOME day in the far future pictures will be painted like that, and our descendants will gaze at them, shake their heads, and laugh at their silly ancestors, just as we to-day gaze at pictures of witch burning, and shake our heads and laugh at the silliness of our very immediate ancestors. Man has climbed far. It would seem that his climb has only begun.

Out across the inner and outer harbors, in the midst of a fleet of similar monsters, the grim monster, the *Arkansas* was a striking sample of the mechanisms produced by the war makers. Twelve million dollars she cost. Her great guns, turned upon Vera Cruz for an hour or so, could level the city to the ground as a stream of water would level a house of sand. Magnificent universities have been founded on less than it cost to build and equip her. The money expended on her would save from the White Plague a hundred thousand times more lives than she will ever destroy.

The Arkansas and the Solace

OVER a thousand skilled men are required to man her—skilled men such as built the Panama Canal and whose skill might well be devoted to making the Mississippi flood proof. Why, down in the bowels of the *Arkansas*, imbedded in the thickest of armor plate, in the battle control station, an enlisted sailor in the course of describing the new gyro-compass, gave me a lecture that no college professor could have bettered and that no tyro in such matters could have understood. Could Columbus or Captain Cook have stood beside me, listened to the lecture, and tried to master the details of that intricate compass, I swear their brains would have flown apart and they would have bitten their veins and howled.

Quite in contrast, and lying not far away, was the solitary hospital ship, the *Solace*. Spick-and-span, and sweet and peaceful, and very antiseptic she was. I was followed up the gangway by two young men just brought off from shore. I walked up the incline on my good two legs. They came up on their backs in wire-basket stretchers. A long roll of body-blasted young men had preceded them in the previous few days. Seventeen of these young men lay embalmed in caskets covered by the Stars and Stripes, waiting transshipment to their homes in the States. Two more young men lay dying. Threescore and more in various stages of recovery from body blasting lay in the bright and airy 'tween-decks wards. A number of amputations had been performed on them. The careful doctors, waiting, knew there were yet other amputations to be performed to save the lives of some of the young men.

The Price of Service

PASSING through the wards, one was again struck by the preponderance of youth. Lord, Lord! they were boys, healthy-bodied and lusty so short a time before, now lying, lax-muscled, with drawn faces that told all the story of the body blasting they had endured. One, alive and so lively just the other day, now with one leg, searched my eyes as if for understanding and sympathy

Digitized by Google

for the terrible stump that screamed advertisement of the cropper he had received—smashed down, from the back of life, to be a cripple to the end of his days. Another, a very boy, red-lipped and bright-eyed with fever, smiled wistfully. There was little hope for him. He was conscious, and, perhaps as men sometimes will be in such grievous circumstances, he was aware that time would soon cease for him.

Oh, there was no whining among those lads! They tell of one, shot in two places, who was fetched aboard crying bitterly and indignantly. His plaint was that the Mexicans had got him unexpectedly before he had had a chance to get even one of them. As he said, he wouldn't have minded his own catastrophe if he had got one of them—only one of them.

The Dove Among the Eagles

THE beautiful operating room was well appointed. There were convalescent wards, segregated wards for infectious diseases, and, here and there, offices and workrooms presided over by experts, such as ear and throat specialists, eye specialists, stomach specialists. Also there was a dentist and a completely equipped dental parlor.

On deck, under the awnings, we drank long, cool drinks and gazed across the creamy-crested, pea-green waves to the big looming battleships, and on to the tiny, half-submerged atolls with lagoons of chrysoprase, and to the low-stretching breakwater, the lighthouses slim and white as votive candles, and the old fortresses of Santiago and San Juan de Ulloa. Suddenly all the panorama narrowed to a sleek gray dove that perched on the rail a dozen feet away, settled its wings, and preened its feathers.

Somehow, that little gray dove reminded me that, while a fleet of battleships lay about us, the *Solace* was the only hospital ship in the entire United States navy. More than that—I remembered that she had not been originally designed for the purpose, being merely a merchant vessel purchased by the Government and made over. Also, I remembered having traveled, years before, in tropic steamers, mere merchant vessels built for money making, that were far better fitted for the tropics than was the *Solace*.

Is the Nation So Poor?

SURELY the United States, that pays twelve to fifteen million dollars for ships like the *Arkansas*, the *Texas*, and the *New York*, should be able to afford the modest cost of a real hospital ship, designed, not for the making of dollars, but for the alleviation of the ills and injuries that afflict its sailors and marines.

But there is justification for the existence of that array of war monsters among which we lay. As long as individuals in a wild country—say the head hunters and cannibals of the Solomon Islands—carry killing weapons, even a philosopher, traveling among them, would be wise to go armed. Neither algebraic equations nor high ethical arguments are efficacious dissuadements to a kinky headed man-eater with an appetite. In those Solomon Islands more than one scientist, for lack of a rifle, has had his head decorate the grass huts and his body served up succulently from the hot ovens.

Arms and Savagery

ON a coral beach on the windward coast of Guadalcanar stands a monument to the memory of the "Austrian Expedition." This was a party of professors. They were equipped to pursue the vocations that obtain in a high civilization. They carried sextants, barometers, thermometers, artificial horizons, cameras, and fountain pens. They carried naturalists' shotguns of the tiniest caliber, butterfly nets, geologist's hammers, and notebooks for all sorts of records, also certain instruments with which to make skull measurements of the natives they might meet. But what they did not carry was Mauser rifles and long-barreled revolvers. They were not equipped for the anthropophagi they encountered. One man came back from that expedition to tell the tale, and he was merely a man in the employ of the professors. The column stands on the beach to mark that once they had been. Their heads remain to this day up in the bush of Guadalcanar.

As with individuals, so with nations. As long as certain nations go armed in a wild and savage world, just so long must the enlightened nations go armed. The wild and savage world, with its silly man-killing devices, is doomed to pass. But until it passes, it would be silliness on the part of the enlightened nations to put aside their weapons.

An international police force and an international police court will mark the beginning of the end of war. But as yet these two institutions have not been founded. So the United States will be compelled to go on building $15,000,000 battleships and training its young men to the old red profession.

The point is: when wild and savage conditions make it imperative for a man or nation to go armed, it is equally imperative for the man or nation to go well armed. Ever has the sword, in the hands of the strong breeds, made for wider areas and longer periods of peace. In the end it is the sword that will make lasting and universal peace. When the last savage nation is compelled to lay down its weapons, war will have ceased. War itself, superior war if you please, will destroy itself.

And There We Are

BUT in the meantime—and there you are—what would have been the present situation if the United States had long since disarmed? Somehow, I, for one, cannot see the picture of Huerta listening to and accepting the high ethical advice of the United States.

The War in Colorado

(Continued from page 10)

operate almost full-handed. The majority were greatly crippled.

The miners resorted to the usual picketing, employing argument, persuasion, and intimidation. When intimidation failed they had recourse in many instances to brutal violence to keep from the mines such men as wanted to work.

The mine owners, having foreseen that the strike was inevitable, made early preparations to protect their property by the importation of machine guns, the recruiting of a force of the usual mercenaries, or "gunmen," to act as mine guards, their campaign, both offensive and defensive, being in general command of the Baldwin-Felts Detective Agency of West Virginia notoriety.

Bloodshed began early and, indeed, preceded the beginning of the strike. One month to a day before the miners' convention, Lippiatt, a union organizer, was shot down on the streets of Trinidad in a gun play in which Belk and Belcher, two Baldwin-Felts detectives, were the other participants.

A few weeks later there was another gun play in the same streets, and Belcher, one of these two detectives, was this time the victim. The miners charge that the killing of Lippiatt was a deliberate murder. The operators make the same charge concerning the death of Belcher.

The strikers, in part because they were told to get out, and in part because they wished to escape the kind of surveillance which the mine guards exercised over residents upon company property, had moved themselves and their families out into colonies of tents. The largest of these was at Ludlow, fifteen miles north of Trinidad.

Many of the strikers were, it is claimed, Balkan and Tripolitan war veterans. These began to arm and to move about over the hills like an irregular soldiery.

Several conflicts with the mine guards resulted, some of which developed into all-day battles, usually with rifle firing at long range from behind cover. Some lives were lost, although the mortality was low considering the amount of gun firing indulged in; but much bad blood was engendered, the noncombatant population of the little mining towns was terrified, and a situation developed which made it inevitable that the National Guard should be ordered into the field.

On the day before the militia appeared—the last of October—there was an all-day battle between strikers and mine guards on the heights which surround the Ludlow tent colony on three sides.

The coming of the militia checked these hostilities, and the State troops were received by the strikers with bands

The *Extra* Quality

You'll know genuine Chalmers "Porosknit" (Guaranteed) by the sewn-in label. Buy by the label.

The label means *extra* quality in materials—*better* yarn than needed. It means extra care in making—reinforced seams, *double*-seamed by cover seaming—extra stitches everywhere. It means cleanly making, in a spick-and-span, modern mill. It means underwear fit, comfort, *coolness*.

This Label on Every Garment—Ask Your Dealer

CHALMERS TRADE MARK "Porosknit" REG. U.S. PAT. OFF. GUARANTEED
FABRIC PAT. DEC. 12, 1905. DESIGN PAT. DEC. 8, 1903

Chalmers "Porosknit" is made in *all* styles—for man, for boy. (The Union Suits are especially comfortable.) Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air. The yarn's softness eliminates irritation of the skin.

Our Guarantee With Every Garment:

"If any garment bearing the genuine Chalmers 'Porosknit' label, and not stamped 'Seconds' or 'Imperfect' across the label, fails to give you its cost value in underwear satisfaction, return it direct to us and we will replace it or refund your money, including postage."

It's Cool in Glacier National Park
"Land of Shining Mountains"

Enjoy the freedom of mountain and trail in Glacier National Park this summer. Centuries ago, the aboriginal Blackfeet Indians, gazing in awe at the eternal, glacier-capped Rockies of northwestern Montana, named this region—"Land of Shining Mountains." 1525 square miles of mountains towering above mountains. 250 lakes kiss the sky, hide in canyons of dizzy depths or nestle in pine-laden valleys.

You can tour the Park on foot, horseback, stage, automobile and launch, stopping at the Great Northern Railway's attractive chalet camps or pitching your tent where you will. Vacations $1 to $5 per day. Sunny days—cool nights. The new and enlarged Glacier Park Hotel, accommodating four hundred people, affords every convenience. Rates $3 to $6 per day.

Low Round-Trip Summer Tourist Fares
Via Great Northern Railway, Daily June 1 to Sept. 30

To Glacier Park or Belton in Glacier National Park—From St. Paul or Minneapolis, $35; from Chicago, $47.50.

To the cities of Puget Sound and the Pacific—From St. Paul and Minneapolis, $60; from Chicago, $72.50.

Proportionately Low Fares from Other Points.

Definite Expense Tours

For your convenience, the following special tours of the Park by automobile, launch, stage and horseback have been arranged for this season:
One day tour—$8.25 Five day tour—$31.25 Three day tour—$21.00 Seven day tour—$47.00

Descriptive Literature Free

Let us help plan your vacation this year. Send the coupon for Walking Tour Book, aeroplane folder and other descriptive literature free. The Walking Tour Book, beautifully illustrated, contains actual experiences of persons who have toured the Park on foot. Send for it today.

New York State Highway,
Mapleton, N. Y.
Constructed with "Tarvia X".

Do dusty roads bother you?

DON'T you often find the fun of a ride or a walk through the country marred by the dust—aren't there days when you are fairly choked with the clouds raised by passing automobiles, your shoulders white with dust, your clothes all but ruined?

And haven't you seen that dust float over the lawns into fine homes, making the verandas uninhabitable and ruining costly furnishings?

And did you ever notice how rain on a grade gullies out the side of the macadam, making it rough as the rocky road to Dublin, necessitating costly repairs?

By way of contrast, how would you like to live in a township *that bonds its macadam with Tarvia?*

The roads then are dustless, mudless, smooth—the air is pure and clean—the adjacent lawns green and fresh, and you can ride or walk in comfort.

What's the use of paying taxes to maintain roadways that not only create a nuisance but don't stand the stress of modern traffic?

If *your* town isn't a Tarvia town yet, why not get after the local road authorities till they make it one!

There's economy as well as civic beauty in tarviated roads.

Booklets regarding the Tarvia treatment free on request.

of music. For several weeks indeed they fraternized most cordially, even playing ball together. The great majority of officers and militia sympathized with the strikers, while the strikers welcomed the militia as relieving them from the oppressive brutality of the mine guards, who, they claimed, insulted their women, looted their tents, and assaulted unarmed or lonely strikers.

But this honeymoon period passed. Militia and strikers soon came to hate each other bitterly.

Mine Guards as Militiamen

MANY things contributed to this change of attitude. The mine guards had earned the bitterest enmity of the strikers. When the militia came the operators began the discharge of their mine guards because there was no longer need of them; and many of these mine guards enlisted in the militia. In some instances, at least, the operators arranged for this enlistment, and continued to pay men $3.50 per day for duty as mine guards while they drew $1 per day from the State.

When, a few months later, the militia was withdrawn from the field, numbers of men who had served in it were immediately reemployed as mine guards.

It is not unnatural, therefore, that the strikers have come to regard the militia and mine guards as one body of men. There can be no doubt whatever that there were men wearing the uniform of the National Guard who were a disgrace to it, who did every sort of thing that soldiers should not do, and whose presence in the strike district was a constant menace to peace and an important factor in creating the situation which afterward resulted. Soon every contact of the militia and the strikers was breeding hate. In a parade of women in Trinidad, where confusion arose over the line of march, women were kicked, knocked down with the fist, struck over the head with sabers, and one was jabbed in the leg with a bayonet. One thing largely responsible for the position in which the National Guard later found itself was an institution called the Military Commission.

This commission claimed the right to supersede the ordinary civil process, and entered upon a series of high-handed acts, the recital of which in free America, if practiced upon farmers or business men, or anyone else than strikers, would have alone been sufficient to arouse the entire nation.

This commission arrested in all 176 persons, and detained them in defiance of law and their supposed constitutional rights for from a few hours to a few weeks and even months. These prisoners were men and women. Almost invariably they were strikers, or their allies, suspected of crime or the intention to commit crime, or of having knowledge which the military wished to obtain. The persons so arrested were denied the right of habeas corpus, supposed to be inalienable. They were not allowed to communicate with friends. They were denied attorneys. They were placed in common jails. Their mail was opened. They were spied upon. They were even tortured, if we may believe those of them who tell of being kept awake for five or six days and nights at a stretch, of having cold water thrown upon them and being pricked with bayonets, of being tantalized by the withholding of tobacco or of food, all with the object of inducing them to confess upon themselves or others.

Reminiscent of Russia

I THINK no charges were ever placed against any of this long list of military prisoners, although later, after their discharge by the military, some of them were arrested and charged by the civil authorities. No attempt was made to hold trials as in West Virginia—or to pronounce sentence. Individuals were merely grabbed and held at the discretion of officers of the National Guard, after a method that was reminiscent of the Russian secret police. This Military Commission was no doubt laudably conceived. It may have done some good. It undoubtedly did a great amount of harm, and was a contributing element in the unpopularity of the militia and in begetting that reign of lawlessness on the part of the strikers which for days had the whole country aghast.

This, with a brevity that does injustice to all sides, is the general outline of the situation in Colorado, on, say, April 1.

Primarily up to this time it was just an ordinary industrial struggle, although unusually bitter and bloody, the operators battling to keep the power they have had over their workmen, and the strikers battling for a transfer of some of this power into their own hands.

Violence Begetting Violence

BUT the background, as we have seen, was bad. The character of the strikers made the situation doubly dangerous. They were, in the main, semi-ignorant, and utterly unreasoning when their passions were finally aroused. They hated like animals. They fought like tigers. They shamefully maltreated the bodies of the dead that came into their hands. Once their passions were stirred, they could not be controlled by their Anglo-Saxon leaders. They were of many nationalities. Thirty dialects are said to have been spoken in the Ludlow Tent Colony. Each nationality was a clique and a law unto itself, flaming up like powder at any story of insult or injury. But this state of mind was not natural. It was induced—superinduced, we may say. It was a case where one wrong bred another, where that sort of violence which consists in robbing a man by trickery of the fruits of his labor or imposing upon him by means of superior power is matched in the end by that cruder and more horrible seeming violence, when the worker, tricked too long, turns his tools into weapons and begins to answer with the ultimate argument. Even then, deprived for years of their legal rights, abused and imposed upon—disappointed and embittered by their experience with the military—their outbursts of violence were still only sporadic and occasional.

It took the great disaster at Ludlow to set all these men on fire at once, to turn a very considerable portion of these twelve thousand strikers into troops of armed brigands who marched over the State from end to end of the coal-mining district, leaving death and ruin in their pathway. This battle commenced at about 9.30 in the morning of April 20 and raged till midnight. It began accidentally. Each side thought the other was attacking. Each side fought with a commendable reserve during the major part of the day.

A Packed Troop of the Guard

THE soldiers with the machine gun mounted on the ridge, three-quarters of a mile to the south of the colony, held their fire long, unable to believe that the strikers would actually attack the militia, although the entire colony appeared to be preparing for battle, as streams of women and children hurried backward to safe shelter in the deep gulley or arroyo behind the colony, and groups of armed men, in easy range of the machine gun, hurried unmolested to strong defensive positions in a railroad cut on one side the colony and behind the steel culvert of another railroad up on the other side.

The strikers themselves did nothing to draw fire into the colony at this time, and it is probable that the only balls which did enter the tents during the major part of the day were strays and short shots, the position of the militia on Water Tank Hill being high enough that they could fire over the tops of the tents to the open space behind, across which strikers were occasionally seen to be moving.

It was after four o'clock when the real tragedy of the day began with the advent of an organization called Troop A.

Troop A is the bottom depth into which the Colorado National Guard descended during its period of strike duty. This troop consisted almost entirely of mine guards and mine employees, who had been hastily sworn in at Trinidad when the main body of State troops was withdrawn. It would have been quite as rational—and much fairer—to have organized a troop from the tent colony at Ludlow and mustered it into the National Guard, in the expectation that it would truly represent the neutral peace power of the State.

Women and Children Perished

THIS ragtag and bobtail Troop A, which had never had a roll call or a drill, came on the scene about 4.30 p. m., and under cover of railroad cars and embankments supported an advance directly upon the tent colony itself, the first effect of which was to dislodge a group of strikers from their position behind a steel railroad culvert and drive them back into the tents from which a desultory rifle fire then commenced.

This, as I say, was the beginning of the tragedy because it made the tent colony the battleground.

Darkness fell with Troop A in posses-

Digitized by Google

sion of one side of the colony and with some of the tents in flames. The men raced in and out of the burning tents. Some they looted, some they fired. In one it is claimed they captured a considerable store of ammunition. They were surprised to find women and children in the colony protected from rifle fire by cellarlike caves dug under the floors of tents. All found were rescued; but the next morning yet other women and children were found alive in these burrows in the ground, and it was not known that any had perished. On the second day after, however, the bodies of two women and eleven children were found in one of the holes, evidently dead from suffocation and some of the bodies carrying the marks of fire. Although no one of the bodies showed a bullet mark, this discovery overwhelmed the militia in shame, at the same time that it inflamed the strikers to that series of murderous raids of which all the country knows.

More Savage Than Mexicans

STILL, so far as these deaths go, they were accidental, and the responsibility of the militia for them—while grave and real—is general rather than specific. Yet the death of these helpless women and children casts a horror over the battle which almost makes sober thought impossible. Another incident, however, occurred for which this mob of soldiers and mine guards is directly responsible and which therefore creates a much darker blot upon their record of that day. That was the abuse and slaughter of three helpless unarmed prisoners.

Somewhere about nine o'clock in the evening the soldier mob came into possession of these prisoners, one of whom was Louie Tikas, called "Louie the Greek," and a leader in the tent colony. The next morning these prisoners were lying in the roadway. Each had been shot to death. Three bullets had been fired into the back of Louie Tikas. He had been kicked about the face and his skull broken with a blow from the butt of a rifle. How these men met their death had been told only in part when I left the scene, but that this raging, semimilitary mob did not shoot down three helpless, unarmed prisoners is something they will be called upon to prove. It must be admitted, however, that there is some explanation of the ferocious mood in which they acted.

Former Strike Breakers the Strikers

SEVERAL times the bodies of mine guards which had come into possession of the strikers at or soon after death had been found horribly mutilated, and this very battle afforded an instance of the kind in Private Martin of Troop B, who in the early fighting was shot in the neck but not mortally wounded. His companions applied the customary first aid, and placed the wounded man in a hollow place out of the range of fire, but were later driven back from this position, and it was not until after dark that a rescue party could reach the wounded soldier. They found him dead. The first-aid dressing had been torn from his wound, his face had been crushed in by the butt of a gun, and a shot had been fired into his open mouth which blew away the entire top of his head. The news of the condition of Private Martin's body was conveyed to his comrades about the time they were gaining possession of the tents, and undoubtedly added to their fury.

The entry of the Federal troops into the strike zone met with a reception exactly like that accorded the militia in their first advent—warm-hearted and cordial. The strikers have been asked again to give up their guns. They will probably do as they did before—give up some, but retain more, at least until they feel finally assured as to the position the United States troops will assume. I have not a doubt that these soldiers can keep the peace in Colorado.

But an armed peace will not terminate the strike. Nothing will do that but a removal of the conditions which caused the strike.

The situation is not an easy one for any concerned—operators, strikers, militia—or people. It is not a simple one. It cannot be dealt with superficially. It cannot be solved by offhanded arrogance. There is an issue of right and wrong and human liberty here that men will have to dismount from high horses and approach on foot—almost upon their knees. If the mine owners are allowed to import outside miners, I think they can beat the strike. If they are given soldiers enough for mine guard duty, they may wear it out. They did beat out in the strike of 1904, but the men imported to break the strike of 1904 are the strikers of 1914. The men imported to break the strike of 1914 will themselves become strikers if no relief is granted.

Militant Capital Creates Militant Labor

I HAVE been many times outraged by the injustice which labor unions at times inflict upon their own members and upon nonmembers, as well as upon employers who are at their mercy, and I hesitate to find against any employer in the struggle for the genuine open shop, except as organized labor gains stability and self-control. But, on the other hand, when employers have made the use of their power which the coal operators appear to have done in Colorado, I see no alternative but to check power with power and to let John Lawson sit down beside the little Greek while he makes a bargain for the sale of his labor.

Even this does not strike me as fundamental. I come back to the fact that after all the coal operators, from their point of view, are pretty good sort of men, and that the strikers, from their point of view, are the same, and to the belief that neither seeks the extinction of the other; but that if they would put away stubborn pride and sit down together they might work out their problems amicably and advantageously.

However, perhaps that millennial day is still on the other side of the hill. Of one thing I feel convinced: So long as we have militant organizations of capital we shall have militant organizations of labor, and if the two persist in raising very much of the kind of hell we have seen in Colorado lately, there is a great third party which will rise up and do a little militating upon its own account.

The Tyranny of Beauty

(*Continued from page 15*)

Tiffany. The day of plaster negro boys and tiger skins in combination with stained-glass saints is over. Her private note paper now bears a crest.

Then with this gigantic enterprise on her hands she turned around and organized all those stores she'd just sold out into the Del Mar Facial Syndicate and made them all pay tribute to come in. That's Napoleonism for you!

THE precise details of this deal I never knew—what each paid to "sit in" and so on—except that on her side she was to furnish the members with a line of specials for sale to no one else, and she came to see me about those—"The Peachblow Goods," as she named them. "Peachblow Cream" was Zulu colored dull pink and differently scented, put up in a peachblow jar costing fourteen cents—very beautiful and specially made for us and no one else—and tied with gold ribbon. It retailed for three dollars an ounce; thirty-three off to the syndicate. Peachblow Mineral Germ-proof Face Powder, warranted not to ferment with the perspiration of the skin, our same chalk differently tinted. One dollar a box. And so on—I don't remember all the list. The name "Peachblow" sold them to the Facial Syndicate at three times what we sold them under their original names to the trade. And the syndicate was happy.

IT wasn't mere money getting that had driven her through all this. Her pride had been pricked—she meant to show Mr. Winston the error of his judgment on her and all her works—prove that she could build a great business and credit—play the game straight through in the man's world and beat him to his own goal. But with her attempted organization of the Facial Syndicate and this new big building in plan, another fact had suddenly come home to her that I suppose she always knew but never realized: that she was personally liable for all the debts of the business—that her private belongings could be attached by her creditors if she didn't meet her obligations.

This was one of the warnings her old friend had given her that day before she sent for me, and I judge he'd pretty well scared her. He had also improved the opportunity to force home another

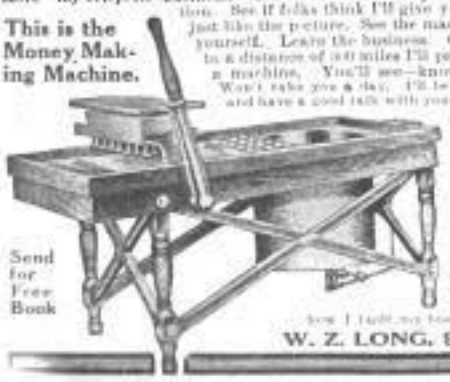
Wouldn't You Like to Own a Store Like This?



Wouldn't you like to be proprietor of a money making business? Once I was just a struggling candy maker. The profits from Crispettes, the new, delicious popcorn confection built this big business for me. The very same proposition that made me, should do the same for you. **Start in the Crispette Business for yourself.** Build a business of your own as I did. Get a window—a small store—a cozy nook where the rent is low. Keep **all** the profits. I'll teach you the Crispette business—tell you how to succeed—show you how to make Crispettes by my special secret formula. I'll do it right here in Springfield—personally or by mail. But the thing for you to do is to

Take advantage of my offer to come and see me

Don't say you're coming. Just drop in quietly. Call on any banker or merchant. Ask them about Long—about my store—my crispette business. Ask them if what I say isn't the truth—right from the shoulder. Look into my reputation. See if folks think I'll give you a square deal. Then come and see my store—see that it's just like the picture. See the machine. See crispettes made—make a batch yourself. Learn the business. Get my pointers on how to succeed. Up to a distance of 100 miles I'll pay all your traveling expenses, if you buy a machine. You'll see—know—learn everything. It's simple—easy. Won't take you a day. I'll be glad to see you—glad to show you the store and have a good talk with you. You'll go home ready to make more money than you ever made in your life.

This is the Money Making Machine.

Send for Free Book

Every Nickel You Take in Nets You Almost Four Cents Profit

Think of it! Think of the fortunes made in 5 cent stores. It's one business in a hundred. Everybody likes crispettes—children, parents—all folks. One sale always means two—two means four. Nuff said. It's a great business. I want to send you my free book "How to make money in the Crispette Business"—it pays illustrated—complete information and shows it how I built my business. Read it and then come to Springfield—see my store—see my machine—see me—then you'll be ready to talk business.

This is a recent picture of the man who made a big success with a Long Crispette machine, in a store window

W. Z. LONG, 915 High St., Springfield, O.

suggestion he'd made her several times before—incorporation. The idea had always repelled her. The beauty business was hers, to the last chair, jar, secret, and cent of profit, to do as she pleased with; a corporation—that "artificial person of the law's creation"—seemed to take it away from her; and while admitting the advantages in lessening her personal risks, she feared the lessening of her power, the complications likely to arise—above all, reports to the State Comptroller on the finances.

But without a corporation back of her she discovered she couldn't swing either the Facial Syndicate or the twenty-story building. Her operations had passed the private-owner stage.

SHE came over one Sunday afternoon, ostensibly to bring the little boy "to see gamma," but really to have a quiet chat with me and pour her scheme out, uninterrupted.

My heart flew up in the air. At last my time had come—my good and faithful service was about to be rewarded—I was to be an officer, director, partner in the business I'd helped create and that had devoured fifteen years of my life—my whole youth. But the joy uppermost at the moment was not that at last I'd have a reward, but that at last I'd have a say in the management; and with that say there'd be no more Winkie Wakefields—the day of her breed as representatives of our business would be over.

His Compliment

"Watch out, ma'am; that dawg's got a terrible sweet tooth"

For years our demonstrator staff had been a sore spot with me. Some of the women were respectable, of course; the majority were not; and I believed in giving the honest women the chance to earn our twelve-to-eighteen-dollar salaries, and that the business ought not to stand for the other sort. I'd protested more than once against the scandaleers, only to be told by my aunt: "That's what makes them successful. I ain't running a Sunday school, and the morals of my help ain't any more to me than the morals of back-fence cats 'so long's they get results. If you don't like the demonstrators, you ain't obliged to talk to them—I'm sure I never asked you to."

WINKIE WAKEFIELD with her thousand-dollar fee had been the bitterest pill of my life, but I'd realized the emergency she was called in for and swallowed my feelings. But now—good-by, Winkie! I scarcely heard my aunt as she rattled on:

"Of course, Lucy, I'll give you the one share of stock the law says every director's gotta own—I'm not asking you to put money into the corp'ration any more'n I'm asking Oscar to—I give him his share. I keep the rest against what I put in—the whole business, furnishings, stock and goods on hand, good will and name. Soon's the papers are signed we gotta push Zulu to the million mark, so I want you to look up the mechanical mixers this week. I gotta push the mail-order business on it hard. I been waiting to get outa that what's in it because I want things fixed so I'm protected. What I take out now in profits can be attached—what I take out as 'corp'ration dividends' can't be. Great scheme—I wonder I didn't get it through my head sooner! Some points I don't like about it, but keeping it all in the family with you and Oscar, I guess it'll work out all right.

"This mail-order business is the biggest thing I struck yet—millions in it if it's handled the way I see it's gotta be done to make it pay big. It needs support—demonstration support. Why, the biggest returns I had yet come from this town where Winkie Wakefield demonstrated. That proves it. Next biggest comes from Chicago, where I got several more like her, only not quite so much so—yet, though one of them, I guess, will have her name in the biggest divorce scandal of years before the season's over; at least, she guaranteed it when she struck me for a raise to fifty a week last fall—that'll boost the goods right along out there. So I'm going to increase the demonstrator staff to a hundred and twenty-five to support the ads.

"BUT I see another thing—you gotta support your demonstrator staff if you want the best results—star demonstrators. Why, I never got such results even from the poor ones as I did right here in this town the week or two after Winkie Wakefield moved Apple Acid Soap. The White Sisters got it into their heads she was on for a run, and every time they saw a Del Mar demonstration advertised for a store they shooed in to look at her—asked every girl I had on: 'You Winkie Wakefield?' If I'd thought to put all the demonstrators in the apple-blossom costume she wore that week and told them to say yes, they'd have cleaned up thousands!

"It was a tip to me, anyway—I see how to work it now—let her demonstrate two days on a one-week stand and push her on to the next while a girl dressed like her finishes out. Papers get hold of it and make a rattling mystery out of it ('Which is the real Winkie Wakefield?') and keep the women trotting all over to see the different ones and find out.

"She's keen on the idear—it's a lot of publicity for her when she goes on the stage again—so I'm going to hire her as star demonstrator at five hundred a week—let her keep what she makes selling bitten apples, only she understands she's gotta furnish the apples herself—and she starts in soon's I get this incorporation settled."

AT the mention of Winkie Wakefield I had turned cold and then sick to the very marrow of my bones. That girl to receive five hundred a week while I, who'd given my youth and made the business, was receiving only fifty a week! Impossible that such a thing could be! Still, wasn't I a director? It was time for me to assert my authority. I spoke as quietly as my disgusted, beating heart would allow: "I couldn't countenance the employment of Winkie Wakefield as our regular representative."

"What?" My aunt almost jumped out of her chair. "You—what?"

"I can't countenance any more of the Winkie Wakefield brand. If I'm to be an officer and a director in this new company, I want the company to stand for some—moral principles."

My aunt snorted. "Director! Dummy director, you mean. What responsibility do you take—what risk do you assume more'n you ever did? You're only an employee of the company, same as you are of the business to-day—*I* am the company, same as I am the business, and you got no more to do with my idears than you ever had. How much voting power you think one share of stock gives you against mine? One millionth of the total shareholders' voting power; that's all."

"I'm not talking about voting power—I'm talking about moral responsibility—my responsibility as an officer and a director in a company that uses my name, and I don't think the company, any more than the business—and I never did think—ought to stand for that kind of women demonstrators. Money isn't everything—reputation's something."

SHE looked me over from head to foot and slowly brought out: "I guess Oscar was about right when he called you 'immorally good' that time you slammed the door in his face."

For the moment I was stunned, as much at my aunt's seeming blame for my protecting her interests by keeping her husband out, as by his slur. Then hot indignation swelled my bosom. I

SMOOTH RIDING on Rough Roads

Road Smoothers

Quickly applied to your Ford Car

gives you that enviable pleasure of comfortable motoring—regardless of how rough the roads or how fast you drive.

¶ It's a combination of a helical spring to take up the shock, an air-chamber to check the rebound and anti-side motion links that prevent side rocking and consequent skidding turning corners. No wearing parts means no friction—no oiling—no trouble.

¶ Taking the Bumps is the hardest kind of work. That is why in K-W Road Smoothers are found—*no* cheap castings, but instead—high grade drop forgings, electric smelted chrome Vanadium steel springs, the best of workmanship, and the K-W Quality that makes possible our broad guarantee.

BEWARE OF IMITATIONS

¶ **There is only one Road Smoother**—Don't Confuse with ordinary shock absorbers or auxiliary springs. Look for the name—K-W Road Smoother.

¶ *Write for booklet, "Taking out the Bumps."*

SOLD BY RELIABLE DEALERS EVERYWHERE

saw myself everlastingly stirring grease to gold for that sneering, supercilious loafer to squander on pearl stick pins and imported automobiles and all the rest of it, and Winkie Wakefield disseminating it on the strength of her immoral character at five hundred a week.

Suddenly a revulsion shook me from head to foot, then solidified inside me like a rock. No business or company that I was director of—even in name—should use a woman's immorality as part of its machinery. I said, cold but trembling: "Either the demonstrator staff must be cleaned up and Winkie Wakefield dropped off, or I stay out."

I THINK I took my aunt by surprise, though she knew the moment I'd spoken that nothing under the heavens could move me. She looked at me a full half minute, hurt and piqued—mostly piqued—before she said coldly: "Very well—then you'll have to stay out; I'm not going down on my knees to beg anybody to come in who feels that way. I'll take Beekmann in in your place—she'll be only too thankful of the chance; she's already offered me ten thousand for a twentieth interest; she's been saving her money up to buy into the business ever since she come to me, and she knows which side her bread's buttered on a lot too well to try her hand dictating to the president of the comp'ny."

She had risen as she spoke—I suppose to show me how little on her knees she was to me—and finished with a smile that set me worlds below her in wisdom. "Tell mama I gotta go, and call Oscar to get his coat on and come—not keep me waiting the way he did last time," said she in a tone that closed the whole matter, but added, while his grandmother buttoned him up, this parting shot: "I'm sorry you take the stand you do—it's cutting off your nose to spite your face; but I know there's no use arguing with you and trying to make you see that the beauty business is nothing but the public's own taste and moral principles sold back to it for cash. You'd stick to your ideals no matter what you lost by it—Henrietta always did say you were the stubbornest person she ever saw."

SO Miss Beekmann went in after all—put in by me—and to-day she could retire in comparative affluence on the proceeds of her share. Not until the beauty business had become a closed book of my life did I learn with what cunning she had dropped poison in the only crack through which my aunt's mind could be reached against me: I was "stubborn"—I was "an unpractical idealist that couldn't take the world as it is"; give me the least authority, and I'd oppose everything that didn't happen to fall in with my ideals—and, once a director, I might make common cause with my uncle against Winkie Wakefield. Which dear Henrietta never, never would—madame's mere smile was law unto her, and there was the ten thousand to prove it.

Oscar had been none too pleased with Winkie's engagement, her bitten apples, and her press notoriety. In his capacity as social leader to his family he saw how she reflected on his wife. "Shocking poor taste for a lady to be known to know a—er—person of that stamp, you know," he'd confided to Julia Cryder. "People will get the idea that she is—er—received at my home. I shall tremble now when I look at the society notes, in fear that some one has added her name to our list of guests."

Miss Cryder agreed with him—it was "bad tone among the best people, with whom any association passed more or less as approval." She was very jealous for the precise right "tone" the Oscar Willings gave forth in the social orchestra of the day.

NATURALLY, then, my aunt felt she had cause to fear me; she didn't dare risk it with Oscar "acting so" at home. Unconsciously I'd driven my own nails in my own coffin; I had proved Miss Beekmann's predictions right.

"One of my family opposing me was more'n apleuty," admitted my aunt when her mother, furious at the injustice done me, sent for her and forced an explanation after Miss Beekmann had bought in and become a member of the company. "Lucy started laying down the law to me before ever she got in, and whadda y' s'pose I could expect after she got in? Well, there's no use stirring up family feeling discussing it now—Henrietta's legally in and I can't put her out for Lucy if I wanta, and I certainly can't

"Hello, Agin"

"Tenement Tommy" Asks for A Square Deal

HE lives in New York's stuffy tenement district, the most congested spot in America.

In his sultry three-room home there is scarcely space to eat and sleep. His playground is the blistering pavement of the ill-smelling streets, hemmed in by scorching brick walls.

No trees, no grass, not even a whiff of fresh air,—in the only world Tommy knows. Ash cans are his background, and the rattle and roar of traffic his environment.

Tommy's widowed mother is broken with worry; his sisters and brothers are as pallid and frail as he. The winter struggle has sapped their vitality. They are starving for air.

No medicine will help Tommy. What he, his mother and the other children need are: a chance to breathe something pure and fresh, —a taste of sunshine and outdoor freedom, —an outing in the country or at the seashore.

But between Tommy and his needs stands poverty, the result of misfortune. He must suffer just as if it were all his fault.

And that is why Tommy appeals for a square deal. Nor does he wish you to forget his mother, or his "pals" and their mothers,—all in the same plight.

This Association every summer sends thousands of "Tenement Tommies", mothers and babies to the country and to Sea Breeze, its fresh air home at Coney Island. A dollar bill, a five dollar check, or any amount you care to contribute, will help us to answer Tommy's appeal.

SUGGESTIONS

A lawn sociable by your class, Sunday School or Club.

A card party at your summer hotel or camp.

A subscription among your friends.

NEW YORK ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR

R. FULTON CUTTING, President

put my own husband out for her, and that's all the places there is—three directors. And, besides, I don't see how Lucy's got any grouch anyway—it was her own choice to refuse the responsibility and stay out and be what she always was ever since we began—an employee at the same salary. Henrietta gets no more pay for being a director, if you mean that—when I let her in on the ground floor I fixed it so she didn't dare to ask an increase—the name satisfies her, like it always did, and she's got no Sunday-school idears of her own to set up against mine about what's right and wrong in business. Sell your goods—pay your bills—leave other folks' private morals alone—nothing else counts for a row of pins in business."

"Well, you could pay her a hundred a week—she produces ten times that for you and gets next to nothing out of it for all her faithful service."

MY aunt sighed: "I can't see even that, mama. I'm sorry—Lucy's a good girl and I'd like to favor her, but we're introducing a mechanical mixer for the cream—she'll have three-quarters of her work cut off, and by rights her pay'd oughta be cut to go with it. But she's my own niece, so I keep her on at what she's been getting when I could hire a girl now for fifteen to eighteen a week to do all she'll hafta do when the mixer's in operation."

"And you think yourself very generous, Maggie," observed my grandmother, for my aunt turned red and retorted: "And I am—even if you don't choose to see it so. Flesh and blood ain't all you gotta consider when you build up a huge business like mine," and hurriedly terminated the interview.

It was their last. By the crowning irony of all our lives, my aunt reached the point of success—the Del Mar Facial Syndicate—that was to make her a multi-millionaire almost in the same week in which I went through my greatest anxiety and grief—her mother's death—and the loss that hardly affected the daughter left me desolate and alone, with even the work of my hands taken from me by a machine after my youth had gone to the mixing of fortunes for another woman's husband to squander.

And what availed it all to me in the end, "this million-dollar heartless success"?

FOR a little space I drew a feminine conscience comfort out of self-blame: if I'd never been a party to the swindle in the first place I'd not be where I was now—justly punished for my sins—a shallow comfort, for I knew that no matter what we'd undertaken in the first instance—canned goods, infants' underwear, Bibles—the ultimate result, though varying in detail, would have been the same in essence; my aunt was a devourer, and the world is full of Lucys, Henrietta Beckmans, and Julia Cryders, waiting to be devoured, their labor and moral worth transmuted into barrels of gold, and always with an Oscar Willing at the bunghole with his little straw.

Why keep on then? I had my grandmother's house in Columbus and a little money of my own, saved the last few years because I had nothing to spend it on; I could live back there in the village with my parents and share my simple loaf with those who loved me. Well, I, too, could give an ultimatum—a quarter interest in the business—that partnership I'd been promised when I started, and had a moral right to now, that I'd done my full share, or I'd leave.

I WROTE my resignation, went to my aunt's office, and put my case.

She did not even take me seriously.

"Why, what would you do with all that money if you had it?" she demanded in a casually remonstrating tone of voice, glancing over a roll of big blue prints in her hand. "Fifty dollars a week is a great plenty for a girl. Don't get silly all at once over rights—I can't imagine what put the idear into your head unless you've been listening to some of this talk on socialism—and now after fifteen years' bigger pay than anyone else ever got in the whole place go cutting off your nose to spite your face. . . . The architect's just sent up the special plans for my private suite in the new building—" she thrust a sheet in front of me to close the conversation. "Looka that and temme whatcha think."

I laid my resignation on her desk. "I think it's a miracle of hog."

Bothering Nobody

(Continued from page 14)

bring her along rejoicing. He ain't doing the hard part of this stunt."

"'Swhat I tol' him. Believe me, I risked my job and my immortal soul to lift this stuff."

GRESH went behind the counter and unloaded his pockets. First appeared rolls and butter, then a compact bundle of French fried potatoes, then the promised pair of squabs from one rubber-lined jacket pocket, and plates from the other. Next, Gresh gingerly hauled forth another bundle in a bit of napkin which was soaked and dripping. "What's that?" asked Maloney, jealously checking up.

"This is sparrowgrass, Maloney, and I hope I may die if I ever try to 'propriate my more of it to myself for anybody whatsoever. That durn butter sauce is the leakiest stuff for leaking that I ever seen. I bet I've left a two-foot trail of it from Maxmum's clear here. It's been running down my laigs and near tickling me to death."

"Well, you oughtn't to be kicking if you're tickled. Guess I don't look like a real cook, hey? I reckon this white coat ain't a bit good. All I need is the finishing touch, and here it is." So saying, Maloney set the cook's cap he had made out of folded napkins on his red head, and, setting his arms akimbo, posed for Gresh's admiration. After getting it he remarked inhospitably: "The fewer extra waiters there are hanging around here when Fitch and Miss Duveen come in the better."

"I'll slide out the back way when I see them coming."

"There's no back way out: the back door leads into a blind yard and a fence and a person's got to climb it and sneak through yards for a block before there's a chance to get out onto the street. You might go and meet the boys and tell them that, Gresh. I don't look for trouble, but I always expect the unexpected to happen and this would be a fine time for it to turn out that way. The boys oughta be posted. Say, did anybody put Frawley onto the game? I didn't see him myself."

"You bet they did," answered a voice from the door, and Frawley came in, closely followed by Butterfield.

"We've got a steak and a flask of black coffee and a wedge of Limburger cheese and service for all of it. Would have brought lots more, but the steward and the chef got wind that something was going on, and they had their eyes peeled. Butterpats nearly got nabbed as it was."

GRESH walked to the door and after a moment announced: "Here they come! I'd know Jim Fitch's clodhopping lope anywhere."

"Who is going to be the waiter?" asked Frawley—"me?"

"Nope, your station is too near the cabaret; Miss Duveen must have noticed you lots of times and she might remember your mug. Better slide out of here and take Gresh with you. Butterfield can be the waiter."

The rejected ones left. Butterfield removed his street coat and tied on the apron he had brought along. Maloney retired behind the counter, and when Fitch and the pale object of all these plans entered, he was so busy making a workmanlike clatter with his one cooking utensil that he could not spare the time to look up.

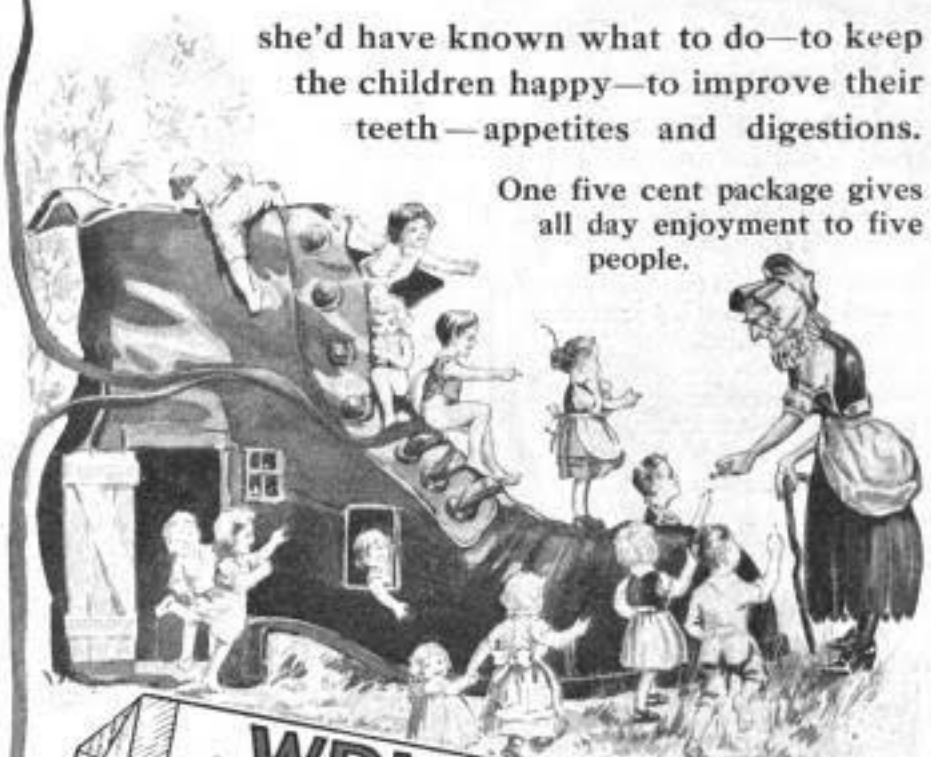
Butterfield received the guests with the proper ceremony and pulled out their chairs with all the alacrity in the world.

Miss Duveen drew off her gloves and looked around her. "The Cubby Lunch; it is well named, Mr. Fitch. It is a dear little cubby-hole, isn't it? But it's nice. I like a small, quiet place ever so much better than a large, noisy one. I get so tired of Maxmum's because it is so big and so blatant."

"Me too, Miss Duveen," agreed Jimmie Fitch. "It's a funny thing about this place, the fellow that owns it is a friend of mine and his name is Cubby. He's having the help work late just on my account. Now, you go ahead and order what you want."

AT this, Butterfield, who was out of the range of Miss Duveen's eyes, began to paw the air.

"Oh, thank you, but I'd much rather that you do the ordering, Mr. Fitch. I am sure you can do it much better than I can."



"I thought you'd say that so I telephoned ahead and ordered a good, substantial supper. It ought to be about ready now. Waiter!"

"Yes, sir!" said Butterfield with the real respect commanded by his art.

Remember the Blobs?

The old-time inkwell used to give up many fearful and wonderful blobs. Carter's Inx have had a leading part in making blobs a *recollection* of the inks of other days.

Carter's Inx are as scientifically compounded as the most important laboratory serum or chemical extract. The results are uniform inks that write smoothly and dry into records that are permanent.

Carter's
Pencraft
Combined Office and Fountain Pen
Ink

Look for this decorated carton

is two perfect inks in one, *for fountain pens and inkwell use.* It writes a brilliant blue and dries a non-fadable jet black. It is less gummy and less corrosive. Various sizes at prices from $1.00 (quart) to 15 cents per bottle at all the best stationers'.

After all, no ink like Carter's.

THE CARTER'S INK COMPANY
Boston, Mass.
New York Chicago
Montreal

Largest Manufacturers of Writing Inks, Adhesives, Typewriter Ribbons and Carbon Papers in America.

DAY TIRE VALVE

does away forever with tire valve troubles. It has no springs or other delicate parts to become deranged. The Day Valve has but three parts—**only one working part**—as against seven complicated parts in old style valves.

It outlasts other valves because of its simple and heavy construction—is absolutely leakproof—is interchangeable without danger of affecting the working part—can be removed for deflation in 1-10 the time required by old style valves.

With the Day Valve you can pump the biggest tire with a foot pump in 1-3 the time and with 1-3 the number of strokes. Its air passage is 3 times as large and you don't have to overcome the 30-pound back pressure of the spring resistance in old style valves. All your effort goes to sending air into the tire.

Get a set today at your dealers or direct. Price, 50 cents for a set of 5 valves. Satisfaction guaranteed or money back.

Illustration at left is sectional view of valve showing position of plunger and air passage when valve is open.

Illustration at right is sectional view of valve with cap on showing position of plunger when valve is closed.

MEAD CYCLE CO., Dept. R-54, Chicago, Ill.

"Bring the supper that I ordered and be sure that turtle soup is hot—good and hot."

"Yes, sir."

THE oysters, thanks to the tap and to the cook's ice, were just at the right temperature, the soup also, the celery, and the olives perfection. Maloney had kept the vegetables hot in the oven and as he was a born cook as well as a born waiter, the food went onto the table tasting as if it had never been filched from Maxmum's kitchens, bundled into various rubber-lined pockets, carried some five blocks and reheated before being served.

Butterfield was all attention, Maloney exerted himself to cook the steak to the very point of perfection and succeeded, and, best of all, Miss Duveen with no false modesty ate with the most hearty enjoyment and thoroughness.

"Where's Manners?" whispered Maloney to Butterfield. "If he don't hurry up we are going to be stuck. Those two have wiped out more than half of the meal and no dessert in sight yet."

There was a step in the entry and the door opened. But it was not Manners with the dessert. It was a choleric-looking individual in evening dress, who came in and stared about in the most astounded and astounding way.

"I am the owner of this building and I'd like—" he began, walking up to the counter.

Maloney stared at him with an expression of the most wooden and stupid indifference. "Me no spik da Englesse," he interrupted.

Butterfield bustled forward and obsequiously and addlepatedly relieved the newcomer of his hat and stick, gently pushing him into a chair at the third table. "Yes, sir, just a moment, sir, right away!" He hurried off with the hat and stick, depositing them in the window.

"I say!" expostulated the irritated newcomer. "I don't care for anything to eat! Come here a moment!"

"Something to drink, sir, yes, sir, something to drink," mumbled Butterfield, fussing away at the counter. "Yes, sir, in one moment, something to drink! Coming, sir."

THE man seemed about to fly into a rage, but the sight of Miss Duveen's startled and half-frightened face deterred him. He seemed to choke back some strong remarks and contented himself with saying: "I want to see whoever is in charge here right away!"

"Yes, sir, I'll take your order in a moment, sir. Just a little patience, sir, and you'll have something to drink," soothed Butterfield.

Maloney in the meanwhile was washing and stacking the dishes turned over to him in a convenient and compact bundle. The last of the substantial part of the meal had disappeared and Fitch was beginning to thank the gods that the dessert had not arrived and that he might make his escape that much sooner, when Manners opened the door.

Maloney leaned over the counter and pulled at his coat.

The man at the third table sprang up and strode forward: "Are you the—"

"No, sir, he's not, and he's got his nerve imposin' on a pore feller that can't speak English," interposed Butterfield.

He managed to crowd the irate owner back into his chair, and Manners slid behind the counter, where Maloney snatched the ice cream and macaroons out of his hands and himself served them, while Butterfield strove to quiet the man at the third table by repeated assurances that the boss would be in any moment.

FITCH lost no time in getting to work on his dessert, an example which Miss Duveen, uneasy at the behavior of the man just behind them, took care to follow.

"Some guy that's had a little too much," said Fitch. "He's just aching to make a rough-house, but I guess the boys can keep him quiet until we are out. He's got a wicked eye, but don't be frightened, and don't hurry; I'll take care of you."

But Miss Duveen did hurry. She was too nervous to finish her ice cream and declined the cheese absolutely. But she drained her coffee cup. "If we are going to have trouble," said she, "the coffee will give us strength. My, isn't it delicious? Maxmum's could learn something from your friend's coffee maker."

"You bet they could," agreed Fitch. "Nobody never got no real good coffee in Maxmum's."

He noticed that Butterfield was wig-wagging his napkin behind him in a manner which plainly said: "Go! And quickly!"

Just then there came a veritable shout of wrath from behind him. "Now see here! I won't endure any more of this nonsense. I want to know who—"

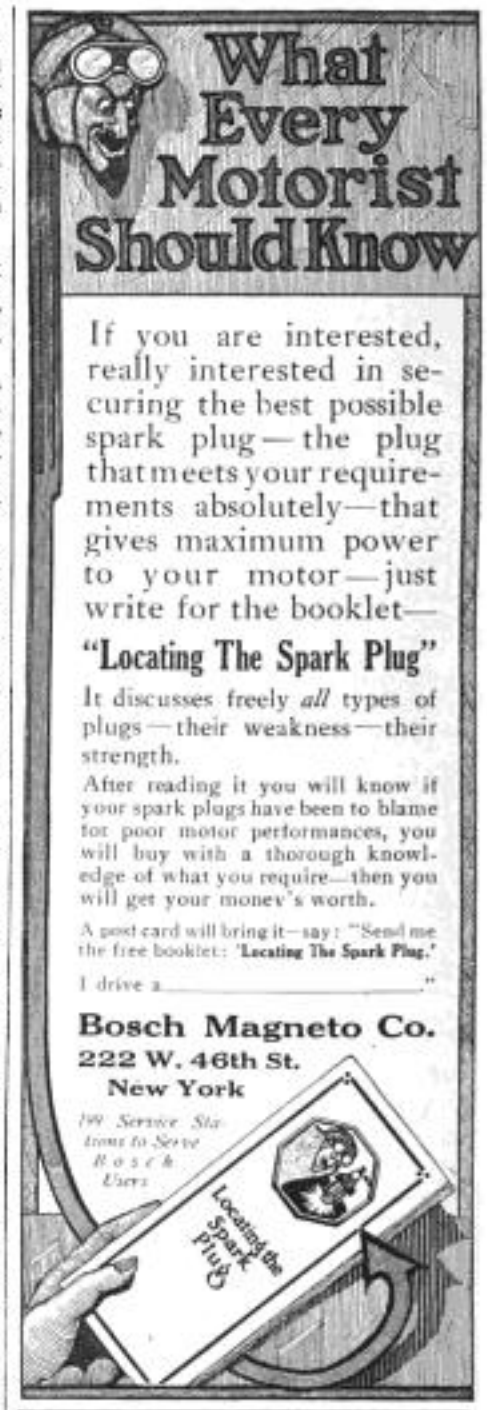
"Oh, let's go!" said Miss Duveen in a panic. "That horrid man is going to be disagreeable."

FITCH rose instantly. "I'm ready, and we don't even have to wait for a check because Cubby will send it to me." He caught her arm protectingly and they walked out and, to Fitch's unutterable relief, were safely away after all.

Maloney, having very nearly returned the cook's pan, her sugar bowl and shakers, and the empty cream bottle by dropping them over the fence into the yard, now took off his white coat, flung it under the counter and added his cap to the pile of dishes.

Butterfield removed his apron, rolled it up and stowed it in his pocket. He dropped his respectful and apologetic tone and with them the elaborate tissue of imaginary facts with which he had been trying to quiet the owner.

"Come on, now! Get a move on! We are going to close up!" said he, and thrust out his lower jaw belligerently.



The man did what Butterfield was earnestly desiring him to do. He jumped out of his chair and let fly a blow aimed at that jaw. Butterfield saved his jaw and then punched his assailant and that worthy punched him. Then there was a lively little fight on in the narrow aisle between the row of stools and the row of tables.

"Good work!" approved Maloney. "Give it to him for intruding, and for being the landlord, and for being alive; give it to him good and plenty."

HE jumped over the counter, snatched the cloths and napkins off the tables and, putting them all together for the sake of the greater strength, wrapped the pile of dishes in them. Then he darted out and deposited the bundle in a

Then there was a lively little fight on in the narrow aisle between the row of stools and the row of tables

The Coward Shoe

"REG. U. S. PAT. OFF"

"Weather Wore Me—Not Age!"

If you could sheathe your house in a vacuum it would last for thousands of years. Weather causes ninety-nine per cent. of house decay.

Rain seeps through defective paint, creeps under cracks and scales. Then your wood rots, your house value is lowered, the tone of the neighborhood, too. Finally, the repair bills come.

Dutch Boy White Lead

and Dutch Boy linseed oil will save you from paint disaster. They do not vacuum your house but they weather-proof every spot, fill up every crack, sink in every exposed wood pore and rivet on your house a protective film that defies all weather. Pure White Lead and Pure Linseed Oil make a reliable paint—any tint—and they *last*. Watch your painter mix it.

Write for Paint Adviser No. 79

A group of practical helps

Sent FREE

Tells how to mix materials for any surface or weather condition; how to choose look-best and last-longest colors; how to estimate quantity of paint and probable cost; how to test paint for purity.

COLORADO

The Beautiful and Economical Place for Your Vacation

Do you know that the mountain people are proverbially strong and sturdy? Why? The Rocky mountains are always healthful. The dry, high altitudes are a-tingle with vital forces. If you're spent and worn; if your mind is sluggish; if your ideas come slow; if you're jaded, tired and draggy—it's time to cut the traces of your tasks and strike out for Colorado.

The journey means one night on the cars from Chicago or St. Louis—and such a trip! Great, commodious steel sleepers, beautiful dining cars, valet, barber and music on the Rock Island Lines' "Rocky Mountain Limited," daily from Chicago.

We maintain Travel Bureaus in all important cities. Our representatives are travel experts, who will help you plan a wonderful and an economical vacation, give you full information about hotels, camps, ranches, boarding places, and look after every detail of your trip.

Write today to L. M. Allen, Rock Island Lines, Room 722 LaSalle Station, Chicago.

Low fares June 1 to September 30.

125 Kingston St., Boston, Mass.

public waste-paper can at the nearest corner, and darted back again.

The fight was still on, the unlucky landlord getting rather the worst of it so far as damage to the attire was concerned, but in other respects the honors seemed about even.

"The door is wide open!" said Maloney, and swung himself over the counter again.

Butterfield made a dash for the door. The landlord dashed after him, picking up his hat as he ran, and as he passed, Maloney leaned over and dropped the piece of Limburger cheese which Miss Duveen had declined into his gaping coat pocket.

The waiter disappeared up the street, the disheveled owner of the Cubby Lunch just two short laps behind.

MALONEY put on his hat, jarred the dust off the ancient "To Let" card onto the table where Fitch and Miss Duveen had so lately feasted, and hung the card in the door again. Then he switched off the lights, snapped the lock on, and closed the door from the outside.

As it was after two o'clock in the morning there was not a soul in sight.

At the corner he rescued his bundle of dishes and silver out of the waste-paper can. "Seein's every piece of this stuff is monogrammed bigger'n a house with Maxmum's 'nitials, I got to tote it along with me and go to all the trouble of smuggling it back to the beanery little by little."

At the room which he shared with Frawley and where the Sinful Six were wont to gather to discuss their merry crimes he found Fitch, Manners, and Frawley. Fitch explained that Miss Duveen lived close by and had not lingered long at the door for conversation. They were speculating as to the whereabouts of the absent Gresh when Butterfield came in, still a little out of breath, but with a pleased expression on his large, yellow face.

"How'd you manage, Butterine?"

"Had luck, so I didn't need to manage. I just sprinted away from Cubby's until I got to Mulligan's Alley and dodged into it. It's as dark as Africa in there and my man lost me. Guess he was afraid to follow very far. I dusted through to the other end, stood still until I got my breath, and then strolled along here like a gentleman. Where's Gresh?"

At the end of half an hour Gresh kicked open the door and came in, laughing.

"Where've you been?"

"Me? Oh, I have been watching the whole show. When you and Butterscotch fired me out I just stuck around in a dark doorway opposite. I saw the fight. Say, Buttercup, you have a lallaboolulu of a left hook!"

"When you skipped out, with him pelting after you, I trailed along and I was right on hand when he came back out of Mulligan's Alley and run into the cop on the beat.

HE told the cop the whole yarn, who he is, how he owns the place, and has fired out the tenant and locked up this morning himself. How he happens to go by on the way home from the opera and finds it wide open, running full blast with a lady and gennelman (yep, that's what he called you, Fitch) dining in great style, and how you try rough stuff on him, but that he gives it to you so hard you beat it. I wonder if the poor simp will ever wake up to it that it was a trick to give Maloney a chance to shut up. He sure wasn't on to it the last I seen of him.

"He and the cop start back to Cubby's with me gumshoeing behind. Every once in a while the landlord would say: 'Most peculiar smell in the air! What is it? Have you been eating garlic, officer?' until he had the cop mad. But there was a fierce smell about; I got a whiff or so of it myself.

"Well, when they got back to the place it was dark and the sign hung in the door. The guy could hardly believe his eyes and he took on so that the bull got suspicious.

"Finally, though, he found his key and unlocked the door and they went in and switched on the light. You must have closed up fine, Maloney, because they couldn't find a dish nor a scrap of linen nor a pot or pan or a bite of grub.

"The bull looked at him hard; for he was a sight in them torn clothes and as mad as hops, and asked him if he hadn't been drinking a little something extra. Says he: 'Ye tell me there's a swell male been cuked and ate here jist now? Will you tell me phwat it was cuked in and ate off'n? The place is as empty as this table.'

"'This is the table they sat at!' says

If All Tires Were

PENNSYLVANIA Oilproof VACUUM CUP TIRES

SKIDDING on slippery pavements—the greatest single cause of Automobile accidents—would be unknown.

V. C. tires have been guaranteed for many years not to skid on wet or greasy pavements, else returnable at purchase price. Never a claim from a user.

Tire trouble and expense—the greatest drawbacks to the use of automobiles—would be so normal and nominal as to constitute the least of all automobile service complaints.

V. C. tires are guaranteed for a low minimum of 4,500 actual miles and maintain an average nearer twice that distance.

The oiled road would be a *complete* comfort—not to be avoided, but enjoyed.

V. C. tires are guaranteed absolutely immune to the rubber destroying effects of oil.

Every year adds enormously to the number of those who know Vacuum Cup Tires as the ONLY tires for utmost safety and service. 1914 has already broken previous yearly records.

Wide-Awake Agents Or Crew Managers Can secure special concession and reap the benefit from the best money making agency proposition on the market by writing now for full particulars. Hugro Mfg. Co., Chicago, Ill.

Agents Hurry—Something New. Sanitary Tele-phone device. Millions will be sold. Steel Corporation bought 1200. Sells itself. Splendid profit. Write today for territory. Plymdale Co., 570 Nasby Bldg., Toledo, O.

They Sell Themselves. Agents Reaping Rich Har-vest to new adjustable floor and wall mops, dustless dusters and other sanitary brush specialties. Write today. Silver Chamberlin Co., Maple St. & Boulevard, Clayton, N.J.

Live Agents Wanted To Take Orders For Our guaranteed hosiery (6 pairs guarantee). Exceptionally large profits. Exclusive territory. Permanent business. C. H. Stuart & Co., 45 Union, Newark, N. Y.

Agents Wanted

Agents—Automatic Rain Water Separator—Only device that automatically discharges dirty water into waste, then diverts clean water into cistern. Wonderful invention—no competition—easily attached—sells on sight. $1.00 up—anywhere there are cisterns, to architects, builders, and home owners. Salesmen make big profits daily. Send for particulars and territory Today. The Automatic Rain Water Separator Co., 20 Gardner Bldg., Toledo, O.

Agents, Would You Take A Steady Job With regular weekly income to start and chance to work up to big yearly profits? No experience required. Great crew managers' proposition. We manufacture. Middlemen profits saved. Get posted on our 1914 exclusive territory—business building selling plans. Act quick. E. M. Davis, Pres., R 86, Davis Bldg., Chicago.

Local Managers Wanted In Each City And Town to co-operate with us in a campaign to establish a paying business all over the country. Do not write unless you are able to finance orders and can furnish the best of references. We have a money saving device which has a large field for intelligent men. Once sold a steady income earner. Tevlo Corporation, 25 Broad St., Office 737, N. Y. City.

We Need Live Wire Representatives For Un-occupied territory to handle The Fuller Sanitary Brushes. Our product is nationally advertised and covers every need. Your territory is valuable. Write for particulars. Fuller Brush Co., 37 Hoadley Place, Hartford, Conn.

$2500 Accident And Health Policy For $6.00 yearly. No dues or assessments. Pays $2500 death, $15 weekly for injury or sickness. Sells to men and women. Ages 16 to 70. $5000 Policy for $10 yearly. Deposit with State. Write to Underwriters, Newark, N. J.

Agents—Big Income. New Invention. Scrubs, takes up water. No wringing, no cloths. Big sale, big profit. Exclusive territory. Patent Vacuum Cleaners, Washers, Fiber Brooms, Polish Mops, etc. Write today. Special terms. Pirrung Mfg. Co., Dept. 365, Chicago.

Agents To Sell A Line Of Quick-Selling Novel-ties, useful in the home, the office, the outdoors. Splendid opportunity. Address Novitas Sales Co., 180 High St., Waltham, Mass.

Agents—"Large Profit" Free Sample Our Gold & Silver Sign Letters for Store fronts & Office windows. Easily applied. Big demand everywhere. Write today for liberal offer to agents. 432 N. Clark, Chicago, Ill.

Sells Like Hot Cakes; Big Profits; Nothing Like It; ironing wax, pad and rest, performs clothes clamps to ironing board, refills with new wax; sample 50. Marshall Mfg., 14 Front St., New York.

You Vacuum Sweeper Agents Owe It To Your-selves to get our "direct from the factory" prices and details of the newest and best machine on the market. W. C. P. & Co., 500 Fisher Bldg., Chicago.

Honest Man Wanted In Each Town To Dis-tribute free advertising premiums; $15 a week to start; experience unnecessary; references required. Address McLean, Black & Co., 148 S. Beverly St., Boston, Mass.

Can You Do What Others Are Doing? A Large manufacturer wants reliable workers established everywhere. Guaranteed hosiery sold only through agents. Liberal terms. J. Parker Mills, 720 Chestnut St., Phila., Pa.

Agents Of Ability And High Character Wanted on a new household article. Large profit. Special selling plan that puts results. Address Merritt & Brook, 50 to 60 Temple Place, Boston, Mass.

High-Grade Salesmen

Wanted: Hustlers To Take Orders For Made-to-measure high grade men's tailored suits from $9.00 to $22.00. You can make good money. Elegant large book outfit free. Experience unnecessary. No pocket fobies affair. Splendid opportunity to make money. Handy Dandy Line, Dept. A, Sangamon St., Chicago.

New, Original And Different Plan Of Placing Postage Stamp Vending Machines with special advertising features. Salesmen cleaning up big, quick profits; $5.00 on each transaction. Good contract, exclusive territory; no money required. District Managers Wanted. Chapman Service Co., Dept. A., Milwaukee, Wis.

Bright Aggressive Solicitor Wanted In Each town to sell income insurance to men and women. Policy costing $10 a year pays $5000 for accidental death—$25 a week sickness or injury. $5 a year buys policy paying $2500 accidental death—$15 a week injury or sickness. Midland Casualty Co., 1345 Insurance Exchange, Chicago.

Salesmen Wanted Residing In Or Making Small towns. Take orders on our special plan allowing return of unsold goods. Makes quick easy sales, $4.00 commission on each order. Write for pocket outfit today. Canfield Mfg. Co., 208 Sigel St., Chicago.

Agents Wanted

Agents—Sell 5 Silk Wash Ties For $1.00. Catchy Gold Filled Tie Clasp and Stick Pin Free. Wins sales. Big Profits. Write for samples and terms. Comer Mfg. Co., 4 Tenth St., Dayton, Ohio.

Household Necessity Recently Invented Sells readily at 75c. Costs distributors 25c. Nothing like it on the market. Tested and approved by Good Housekeeping Institute. Get your territory now. Hugro Mfg. Co., Chicago.

What Are You Selling? If We Had Your Ad-dress we'd show you how to sell more, send you free pocket sample and largely increase your profits—not one week but weekly. S. Mfg. Co., 2003 Warren St., New York.

Agents To Take Orders For Visiting And Busi-ness Cards of Distinction, Sell at sight. Large Profits. Complete Outfit Free. The Furman Printery, 95-W Bank Street, Waterbury, Conn.

At Last—A Compressed Air Clothes Washer; cleans tub of clothes in 3 min. Washday now a pleasure. Women grab it at $5.50. Price to agents 50c in quantities. Wendell Washer Co., 207 Oak St., Leipsic, O.

Agents: — Electric Sign — Flashes Changeable wording in radiant sparkling beams of blazing electric light. Outselling everything at $10.00. Valuable exclusive territory. Sample free. Flashtric Sign Works, Chicago.

Sign Men—Make Big Money Handling Our Metallic Letters. Best chempost. Be independent. Non-experience required; we show how. Sample, instructions free. N. Y. Sign Letter Co., 371 Fulton St., Brooklyn, N. Y.

Agents: For "Everbrite" Gold Glass Letters for window signs and house numbers. These letters and numbers can be sold in every city in the country. Chicago Glass Novelty Co., Marion, Ind.

Get The Habit. Others Have. Earn Extra Money in spare time or entire time, selling my window sign letters. Always in demand. No experience required. Samples and particulars free. Chas. Goodman, 117 Nassau St., N. Y. C.

the poor landlord, and then turned up his nose. "There's that smell again!" says he as fretful as a porcupine.

"The cop wiped his hand across the table and then showed it to him. 'D'ye mane to tell me anybody's been settin' at this table when it's an inch thick with dust? Just look at it, me frind.'

"Sure enough, there was a lot of thick, black dust on his hand; I could see it from the window, and I tell you, fellers, if I had not seen Fitch and Miss Duveen settin' there myself, I never would have believed it either.

"The guy certainly looked foolish at that, and then he got mad and hopped around, cussin' everybody, and when he was out of breath he began to sniff for that smell again.

"All of a sudden the cop pulls out one of them circulars describing crooks that the police have, and read it. Then he looks hard at the landlord, puts the circular back in his pocket and makes a sudden grab for the landlord's collar and gets it.

"'Hey, you! Come along wit' me,' says he, and starts to drag him off like a sack of meal.

"I wish you could have seen that feller fight! His scrap with Butter wasn't in it. The cop was twict as big as he was and he had him puffin'. When he got him to the door I steps up.

"'Gimme a hand,' says the cop. 'This gink here is crazy.'

"'With pleasure,' says I, and I jumped in and helped handcuff him. We dragged him to the alarm box and put in a call for the wagon, and while we were waiting for it the cop showed me the circular. The picture was of a guy that had escaped from the bughouse, and it did look lots like the landlord, and the description fitted him too. It said that he had a habit of going around making fool complaints to policemen and that he never wore a hat, and it was easy to know him because he was always talking about bad smells."

GRESH laughed reminiscently. "I could have told the cop that I had seen the poor stiff's hat blow off when he was chasing Butterfield, but I didn't. A waiter should always mind his own business."

"The last I seen of him he was setting in the wagon with three cops for company. One of them was pulling a big hunk of cheese out of his coat pocket and he was swearing something vile."

"What some folks have to suffer so that other folks can eat," remarked Fitch, shuffling the cards.

"The Irish Thrush had to be fed," said Maloney, "and the landlord only got what he deserved—the idea of him interfering with us. Was it any of his business that we happened to use his property? Maybe this will teach him not to go prowling around empty buildings at one o'clock in the morning and not to monkey with these here honest, peaceful waiters when they are busy pulling off a rubber-lined stunt and not bothering nobody."

As Never Before

Men Are This Year Flocking to No-Rim-Cut Tires

Users Increase 55 Per Cent

There are more tire users—perhaps by 20 per cent—than one year ago. But Goodyear tire sales show an increase of 55 per cent. The difference shows that tens of thousands are discarding other tires for Goodyears.

It has been so for years. The better men knew Goodyears the faster our sales have grown. Now—after millions of mileage tests—Goodyears outsell any other tire in the world. Our one-day output often exceeds a whole month's production in 1909. And we are gaining new users faster than ever before.

The Court of Last Resort

This verdict comes from users—the court of last resort. It comes from men who have made their comparisons—hundreds of thousands of them. It comes from men who know tire mileage, for most cars have odometers.

Never will all men agree on one tire. Good and bad fortune, abuse and accidents have too much to do with tire service.

But Goodyear has won more, and is winning men faster, than any other tire. And no other evidence compares with that in denoting superlative worth.

The Four Winning Features

These four great features—found only in No-Rim-Cut tires—are the reasons for Goodyear supremacy.

We ended rim-cutting by a method we control. That method has never been approached. It wiped out for our users the chief source of tire ruin.

We saved blow-outs—the countless blow-outs due to wrinkled fabric. We did this by our "On-Air" cure—an extra process which adds to our tire cost $1,500 daily.

We fought loose treads—reduced this danger by 60 per cent. We did this by creating, during vulcanization, hundreds of large rubber rivets.

We made an anti-skid as smooth running as a plain tread. Made it double-thick and tough—equipped with hundreds of deep, sharp, resistless grips. It is called the All-Weather tread.

GOODYEAR
AKRON, OHIO
No-Rim-Cut Tires
With All-Weather Treads or Smooth

These features have saved tire users millions. No rival offers anything like them. So men have bought No-Rim-Cut tires to get them.

Yet 16 Makes Cost More

These tires for years—because of these features—cost more than other standard makes. But multiplied output and new efficiency cut down our factory cost.

Now 16 makers ask a higher price—up to one-half more. And for tires which embody none of our exclusive features.

It's a curious situation. Once you had to decide if No-Rim-Cut tires were worth our higher cost. Now the question is—Are other tires worth $5 to $15 more?

They are not. We are giving you the utmost in a tire. We give you four important things no other tire can offer. But we build up to 10,000 motor tires daily. And we sold last year at an average profit of 6½ per cent. Those are the reasons for present Goodyear prices.

If you want these prices and these tires your dealer will get them for you.

Where You Need Good Bearings

Where weight of car and load come pounding down through axle-spindles in the wheels.

Where side pressure focuses as you steer to right or left. Where bevel gears turn the power toward the wheels.

Where shocks and vibration are constant and severe. Where friction must be held down. Where shafts must *stay* in line and gears in perfect mesh for greatest efficiency as your car grows old.

There good bearings are essential to *continued satisfaction* in the use of your car.

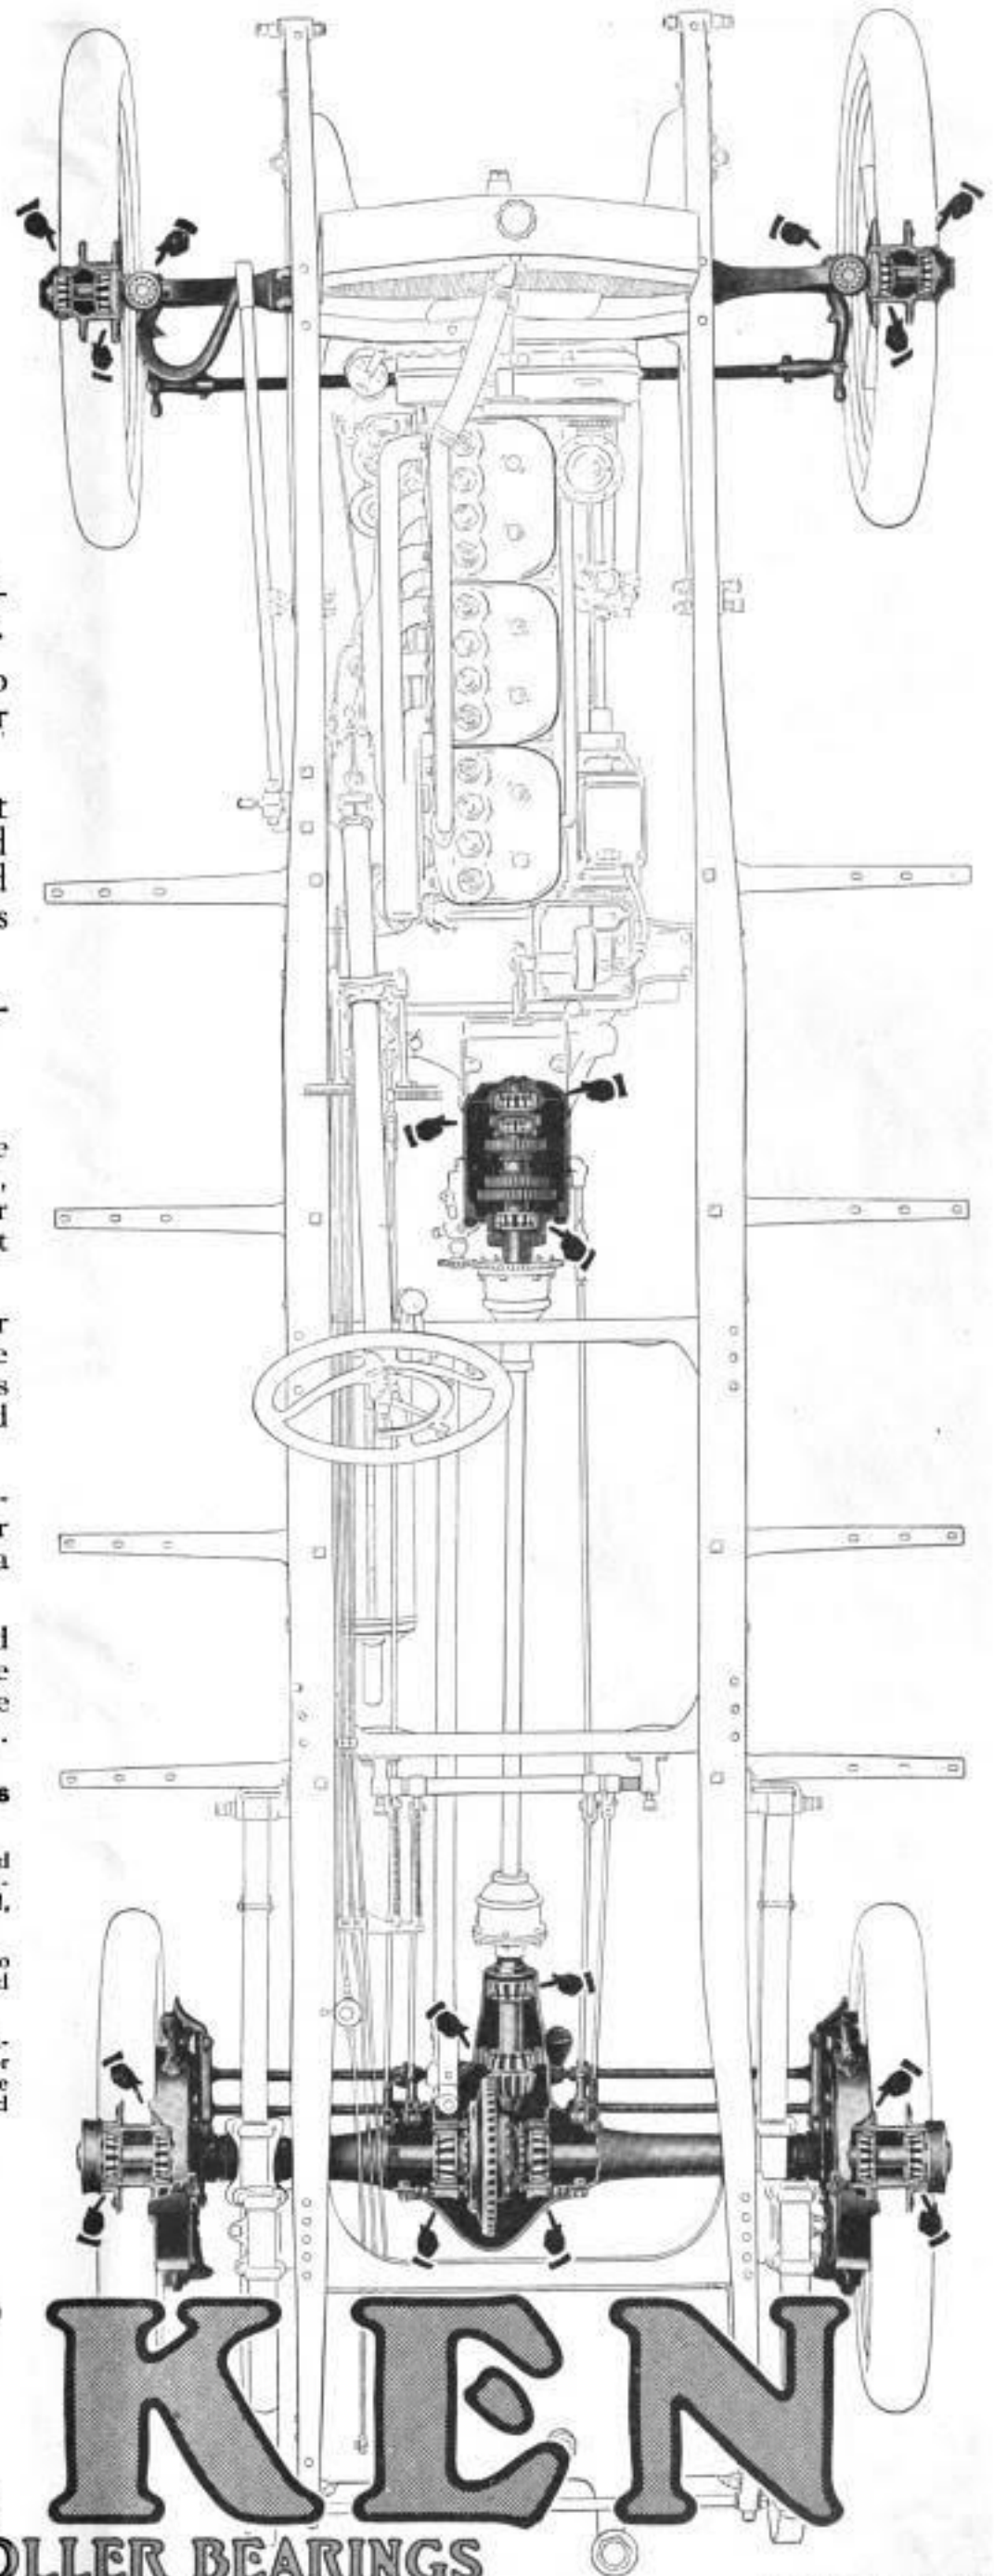
Look to the Points of Severest Service

At axle ends in all four wheels, in steering-knuckle heads, each side of the differential, on the pinion-shaft, in the transmission—to get full economy of power and lowest upkeep cost—you need bearings that resist wear and tear to the uttermost.

Timken Bearings resist load and shocks and wear along the entire length of their rollers—not at mere points. They resist end-pressure that often exceeds down-pressure because their rollers are tapered and revolve at an angle to the shaft.

Because pressure is distributed over sufficient surface the wear is almost nothing. Yet when slight wear does ultimately come it is not necessary to throw a Timken Bearing away and buy a new one.

All effects of the slight wear are entirely eliminated by a simple adjustment. Merely advancing the cone and rollers a little farther into the cup brings all into the same relations that existed when the bearing was new.



Know What Bearings You Have at These Points in Your Car

Ask the maker, his sales agent or your garage man what bearings are used in your car and where. At the severe service points—you should find Timkens—in front and rear wheels, in steering-knuckle heads, at the differential, on the pinion-shaft, in the transmission.

Then talk with men who ride on Timkens and talk with repair men who know the inside of all makes of cars. Find out what *any* man who has had experience knows about the service Timken Bearings are giving.

You'll appreciate, too, the engineering "reasons" that are given in non-technical language in the Timken Primer "On Bearings." Write at once for this Primer, another "On Axles" and the "Users' List" that tells where Timken Bearings and Axles are located in each model of Timken-equipped cars. Address Dept. B-1, either Timken Company.

We Are Counting on *You*

FISK Advertising must reflect the "honesty of purpose" governing the manufacture and sale of Fisk Products.

What we say is to be taken at its face value. We are counting on *you* to recognize and appreciate this fact and to make the most of it.

Fifteen years of expert tire making, fifteen years of selling these tires cleanly on the basis of merit, entitle us to your CONFIDENCE, which, if once obtained, we endeavor always to hold.

The Price of Rawhide

By Charles E. Van Loan

ILLUSTRATED BY ARTHUR E. BECHER

ACCORDING to the daily papers, the most expensive dog whip in the world is owned by the stoop-shouldered, hollow-eyed Indian Rajah who recently blazed his way across the continent from San Francisco to New York. The handle of the whip is studded with emeralds; its butt is formed of a single sapphire; a string of pearls serves as a thong. The cost of this barbaric ornament, say the gentlemen of the press, barely escapes five figures.

Some of these statements may be true, but one is certainly an error. The most expensive dog whip in the world now dangles against a library wall in Berkeley, Cal., suspended by a buckskin thong, which is its sole decoration. When this whip was new it cost 25 cents. When it was old and well worn, it cost far into five figures and at least one racing stable.

With due respect to the press, the Rajah's dog whip, for all its jewels, takes second place.

MR. "RAINBOW" SMITH, owner of the Gibraltar Racing Stable—colors: red, yellow, and blue with green cap—poked his sleek head out of the tackle-room window and inclined his ear against the wind. It bore muffled wailings, broken cries, pleadings, and the thin whistle and thwack of a rawhide whip.

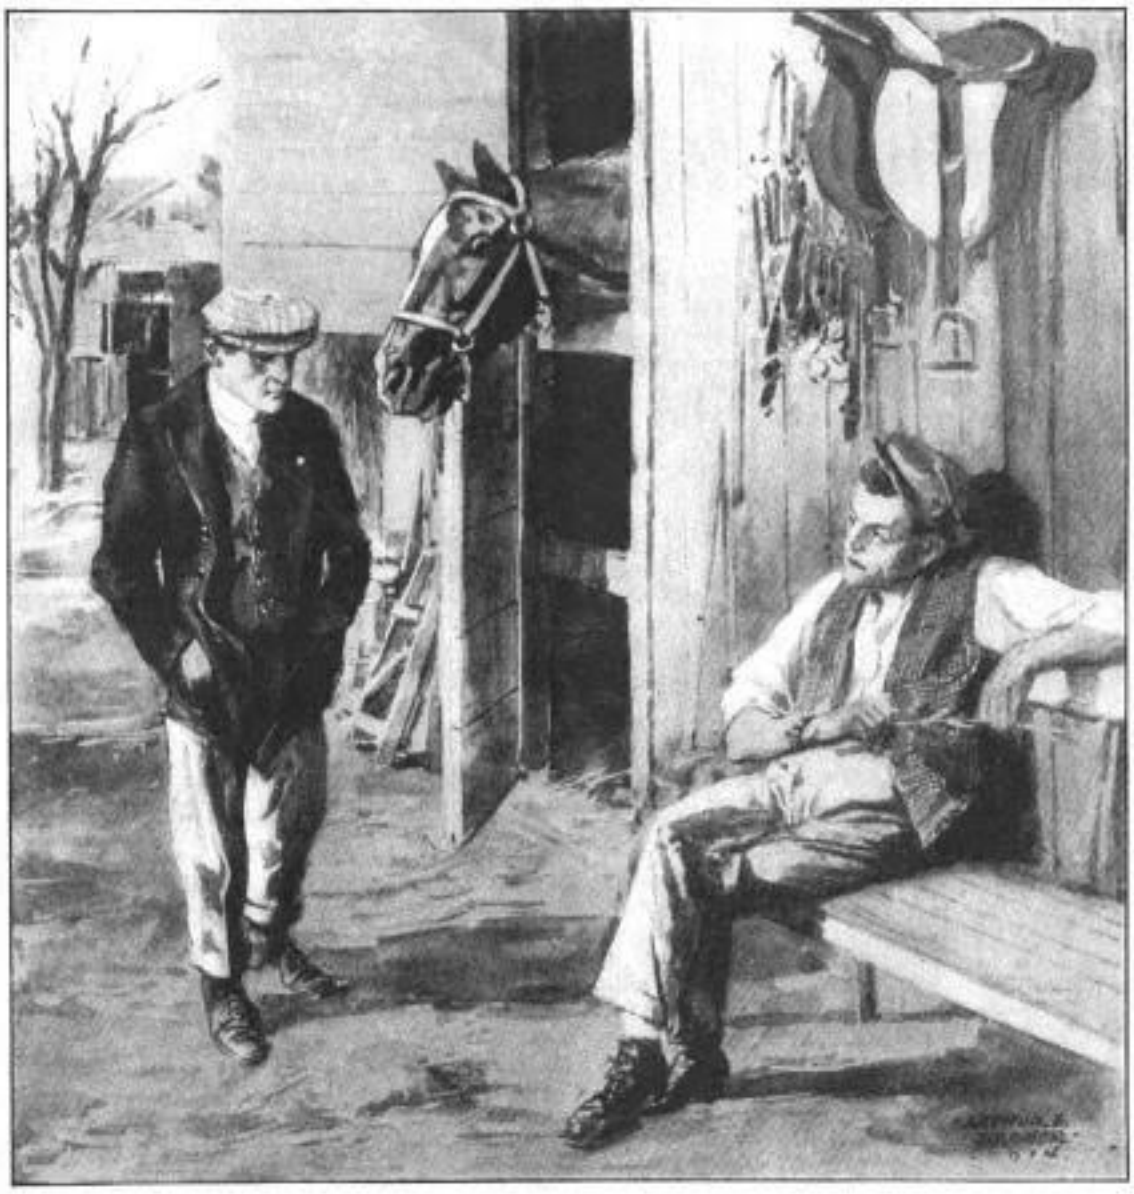
"Ouch! Please, Misteh Burns! Don't whip me no mo'! Oh, please, suh! Oo—ow—wow!"

Mr. Smith slammed the window with a bang and abandoned himself to the sort of language which best expressed his feelings. "Slim" Carter, who trained Smith's thoroughbreds, looked up from the racing saddle which he was mending.

"Burns pullin' the Simon Legree stuff again?" he asked.

"Yes, the brute! It's the third time this week and I'm getting good and sick of it. Every time those little exercise boys work a horse too fast or too slow, Burns takes 'em into a stall and cuts 'em to pieces with a dog whip. Something ought to be done about it, Slim."

"Yeh," said the trainer, laboriously threading a needle, "but you better let George do it, boss. Burns is the head of the Big Five—the brains of the combination. Get him sore at you and you've got 'em all to fight. It's hard enough to win races around here without going out of your way to make it harder."



"All very true," said Smith, "but somebody ought to put in an oar. The way Burns whips those nigger kids is a holy fright!"

"That's why he never has any white boys around his stable," said Slim. "They wouldn't stand for the beatings. I've known Burns for twelve years, boss, and he's always been just the same as he is now—meaner than mustard and so crooked he could hide behind a corkscrew. Licking little darky boys is his natural gait. He never picked a fight with a grown man in his life and nobody ever picked one with him without being sorry for it afterward. Burns is a dog—the kind of a dog that will take a kick without snarling and then bite your leg off when you ain't looking. Poor old Joey Barrett—that was before your time, boss—gave Burns a call down one day in the paddock in New Orleans, and Burns never opened his mouth. He started a selling-race war and never quit riding Joey until he had him broke. That's the way Burns works—always under cover. You keep off of him. He's poison, just poison!"

"All the same, I've got a notion to tell him what I think of him," said Smith, stubbornly.

"Think all you want to, but don't say nothing," urged Slim. "You'll be sorry if you do."

An hour afterward Rainbow Smith, perched upon a bale of alfalfa hay at the end of the barn which housed his racing string, disregarded this excellent advice. He had, however, the excuse of opportunity. Burns, a short, thick-set man with a ragged mustache and a beady eye, slouched over from his own barn and opened the conversation. "I wish I had that little exercise boy of yours," said he.

"You're breeding trouble," warned Sheets. "The first mistake you make that old boy will fan you to sleep with a rawhide!"

SMITH grunted.

"One of my nigger kids took the brown colt out this morning and like to run the eyeballs out of him," continued Burns. "Tipped him off to all the clockers at the track. I s'pose I won't get any price now. If I could borrow that kid of yours—"

"If I had a yellow dog that I didn't think anything of, I wouldn't lend him to you," said Smith, coolly.

"Well, o' course, if that's the way you feel about it," said Burns, and paused, showing his teeth in what was meant to be a smile.

"That's the way I feel," said Rainbow.

"I don't know's I ever did anything to you, Smith." There was conciliation in Burns's tone.

"No, you bet you didn't!" snapped Rainbow. "You don't usually pick people your size!"

"Sa-a-y, what are you trying to do?" demanded Burns. "Do you want to start something?"

RAINBOW sneered cheerfully.

"If anything starts," said he, "you can take a ticket that I'll be right there or thereabouts when it finishes. Now that we're on the subject, I might as well tell you what I think of you, Burns. You're the sort of a cowardly brute that licks little niggers because they won't get back at you. You haven't got the nerve to lick a white boy. Why, say, if you ever took a dog whip to that little kid of mine he'd grab a pitchfork and run you off the race track!"

"Seems to me you're taking a lot on yourself, young feller," said Burns. "When I ask your advice about how to handle my stable boys it'll be time for you to give it, understand? I don't want any half-baked dudes sticking their noses into my affairs and—"

"Let your voice fall right there!" interrupted Smith, hopping down from the bale of hay. "Half-baked dude, am I?"

Digitized by Google

"I don't like a bone in your head, but I'm here to help you root for the black horse"

Smith advanced, rolling up his cuffs and Burns beat a hasty retreat toward his own barn. At the door of his tackle room he paused and shook his fist.

"Don't think you're getting away with anything!" he bawled. "You started it! Now see where you finish!"

Slim Carter showed a frightened face at the window.

"You have spilled the beans," said he, reproachfully. "Boss, for heaven's sake, why couldn't you take it out in *thinking*, like I said?"

Rainbow Smith shook his head.

"The play came just right, Slim, and I—well, I had to get it out of my system. I feel better now."

"I'm glad of that," was the dry rejoinder, "because your little burst of conversation is likely to cost us something. The man that said talk was cheap never got into a jam with Burns and the Big Five!"

"SKEETS" BRANNAN, exercise boy and attaché of the Gibraltar Racing Stable, sat upon a bench in front of Rainbow Smith's barn absorbing the lazy calm of a southern California winter afternoon. The level rays of the setting sun struck through the bare branches of the walnut trees and turned even the drifting dust into a golden cloud. Somewhere a bugle blew twice, distance mellowing its staccato summons. Skeets offered himself a chew of tobacco and crossed his short legs in a creditable imitation of Slim Carter.

"They're calling 'em out for the last race," thought Skeets. "A fine bunch of cat hounds, runnin' for a feed bill!"

Down the lane between the stables came a diminutive figure, stirring the dust in the furrows beneath the walnut trees. It halted and surveyed Skeets with interest.

"Howdy, jock!" said the stranger.

Now there is no surer or shorter cut to an exercise boy's heart than to address him as "jock." It is a subtle form of flattery since every exercise boy hopes to be a jockey some day and even the brevet rank is not to be despised. Skeets cocked his eye at the stranger, taking note of the wizened features, the bowed legs and the worn, dusty clothes and recognized one of his own kind in this dwarfed atom of humanity, half child, half man, and wholly a product of the race tracks.

"Howdy your ownself!" said Skeets.

THE stranger, accepting this as an invitation, approached and sat upon the bench.

"Chew?" asked Skeets, producing his plug.

"Sure." This preliminary attended to the boys sat for some time in silence, grave as a pair of very old monkeys blinking in the sun, their jaws working in unison. With the ease and accuracy born of long practice, the stranger squirted a stream of tobacco juice at an unfortunate beetle, shifted his quid and spoke.

"I'm looking for a job," said he.

"Nothing doing here!" said Skeets with an air of finality.

"Well, maybe somewheres else then."

"Gallopin' 'em?"

"Yeh," said the stranger. "I come West with Barney Fowler. We been stablin' outside the track. He went broke and had to sell his string at auction. He didn't have no good hosses anyway. It left me kind of flat. Do you know of anything?"

Skeets jerked his head in the direction of the Burns barn.

"Feller over there wants a boy but you hadn't better hook up with him."

"Why not?"

"He's too handy with a rawhide."

The other considered this statement for some time.

"Well," said he, "I got to eat, jock. What's this owner's name?"

"Burns."

"Colors blue an' white with a pink horseshoe on the back?"

"That's him."

"He's got some pretty fair hosses, ain't he?"

"They're good horses when the price is right," admitted Skeets. "Every one of 'em takes a look in the betting ring on the way to the post. This Burns is a tough proposition. Last week my boss bawled him out for licking his niggers so often, they had some words about it and—well, we ain't won a race since."

"How's that?"

"They jobbed us, that's how—jobbed us to get even. Burns is the main squeeze of the worst bunch of crooks at the track. They call 'em the Big Five—Burns, Powell, Duffy, Crane, and Cahill. It's a combination of owners and their jocks and an outsider that runs his horses on the level ain't got a chance. They won't let him win. Any time three or four of them scoundrels are in the same race you can kiss the outside horse good-by even if he's twenty pounds the best. Crooked? Those birds would steal a blind man's glass eye!"

"How do you know they jobbed your boss?"

"HOW do I know anything? I can see, can't I? The day after Smith and Burns had this cussing match we started Conqueror in a mile race—he's the best we got and a sweet colt too—and the boss bet on him at 5 to 1. It looked like stealing the money. Conqueror was knocked into the fence when the barrier went up—Jock Harris done it with one of Crane's horses—and the colt never had a chance after that. He won't run a lick if he's interfered with, and they know it. We put Sweet Clover in a five-eighths race. She was the class and could have won like breaking sticks, but Burns and his gang of high-binders had horses in there too, and they took care of the filly. They pocketed her on the turn, and when the boy tried to come on with her they closed in and wouldn't let her through. She was jumpin' over horses in the stretch, but it didn't get her anything. Oh, you bet they jobbed us!"

"Why not holler to the judges?"

"Huh!" There was scorn in Skeets's voice. "You got to prove that they done that stuff a-purpose. When you go beefin' around the judges' stand, they want to see the dope in black and white. Suppose they yanked Burns up and asked him about Conqueror and Sweet Clover. He'd say we had bad racing luck an' was squealing. He's too foxy to fight in the open and besides, any time you go cry-babying to the judges everybody on the track gets sore at you."

"That's right too. Where I come from, down in Tennessee, a man like Burns would get himself shot some dark night."

"They ought to shot him a long time ago," said Skeets. "Most people don't want any trouble with him and—speakin' of the devil, there he comes now. That's Burns with the gray suit."

The other boy rose to his feet.

"I reckon I'll brace him for that job," said he.

"You're breeding trouble," warned Skeets. "The first mistake you make that old boy will fan you to sleep with a rawhide!"

The small Tennesseean shook his head.

"No he won't, jock. Or nobody else. I ain't been licked since my daddy died. He had the rawhide privilege on me and he shore gimme enough of it to last me the rest of my life. Nobody else better try to wallop me. I won't stand for it."

"Just the same, you're taking chances," persisted Skeets. "I know this bird and you don't. I've heard them little niggers crying in the night a-many a time. One mistake and he'll cut the liver out of you with that whip."

Again the positive shake of the head.

"I ain't no nigger, jock, and the man that starts in to rawhide me is the one that's taking chances. You can bet on that. Well, so long."

Skeets delivered a grim apostrophe addressed to the retreating back.

"Go on, boy! You wouldn't listen, but when it comes you won't be able to say that I didn't give you the right steer."

RAINBOW SMITH was smoking a cigarette outside his tackle-room door. Here and there in the darkness lanterns flashed like fireflies and disappeared. Somewhere negro stable hands were crooning a camp-meeting melody; the words came faintly through the dark:

I'm gwine to leave dis worl' of care
An' don't go' grieve fo' me;
'Cause golden sl'ppehs I'm gwine to wear
When I walk on 'at silvah sea!

It was a time for peace but the owner of the Gibraltar Racing Stable tramped nervously up and down reviewing the disasters of the last month. The record was one of unbroken defeat, chargeable in the main to Burns and the Big Five. A dozen times Slim Carter had repeated:

"Boss, it would have been better if you had taken it out in *thinking*."

A small figure shuffled out of the gloom and stood before Smith.

"Mister, would you please to lend me a gun?"

"What's that?" Rainbow started in spite of himself.

"I said I'd like to borrow a gun. I want to kill a dawg."

Smith peered through the darkness.

"Why, it's the new kid from the Burns stable!"

"Yes, suh. That's why I want the gun." The boy's voice shook a trifle and he moved nearer to Smith, responding to the unspoken sympathy in Rainbow's last remark.

"Come on; tell me about it," said Smith. "What's the trouble?"

"Run your hand down my back if you want to know," said the boy. "Feel my laigs too."

THERE was an interval of silence, broken by a long low whistle from Smith.

"The brute! What did he lick you for?"

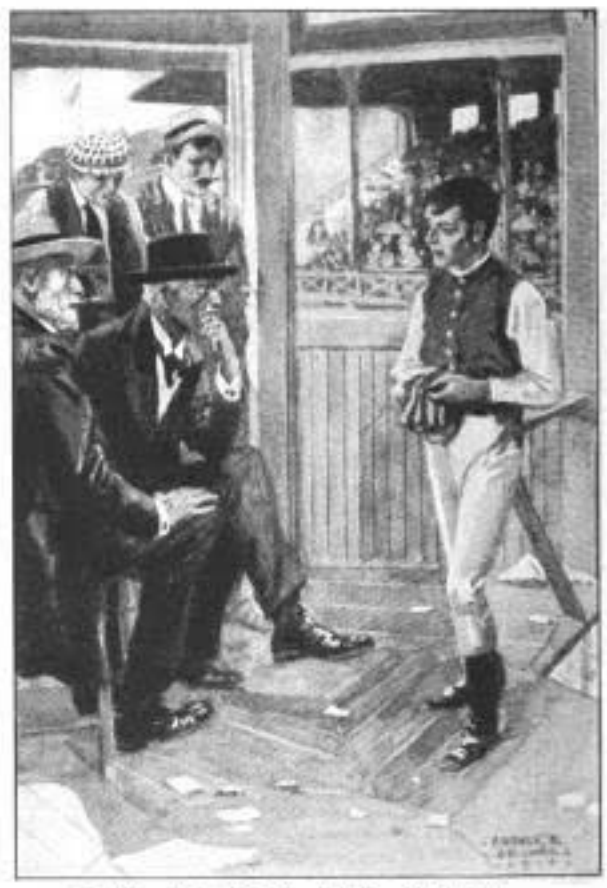
"For comin' second with that black hoss to-day. Soon as he found out I could ride, he got me made an apprentice jock. Before the race he tells me to keep that Matador hoss out of the money. I tried, mister, but he come second in spite of all I could do. He's one of them hammer-heads, and when he wants to run you can't stop him 'less you bust his jaw."

"I saw the race," said Smith. "He was pounds the best horse. You could have won with him."

"Easy, but they was betting on another one. Crane and Cahill and that gang. My bunk is in the stall next to the tack room and I heard 'em cooking it up last night."

"Well?"

"Burns didn't say nothing to me after the race but to-night he got three or four drinks in him. Then's when he's meanest. He slipped in and ketched me when I was undressing to go to bed. Never give me no chance. . . . He couldn't make me cry, mister. That was what he was aimin' to do. Them little niggers, they cry and beg. He just about wore that whip out on me, I reckon. . . . But he didn't make me cry."



"Poor little devil!" muttered Rainbow. "Poor game little devil!"

"Mister, I ain't asking for sympathy." There was a quaver in the boy's voice which belied his words. "I'm asking for the loan of a gun. I can take care of myself, I reckon. Nobody is going to do what he done to me and git away with it. I'll shoot the—"

"There now! There now!" soothed Rainbow, laying his hand on the boy's shoulder. "Little kids mustn't cuss like that. It's bad luck. Shooting Burns won't help matters any; he's not worth being locked up for. Forget it."

"DON'T you think I'll forget it!" said the boy. "Where I come from we bushwhack folks like him! In Tennessee—"

"You're not in Tennessee now," said Smith sternly. "You come into the tack room, son. I've got some dope that'll take the sting out of those welts. When I get

"Little boy," said Judge Applebee kindly, "we want you to tell us everything you know about this last race"

Digitized by Google

"Take that hoss back!" cried Jockey Kelly, in sudden panic. "Take him back, kid! He ain't the one they're bettin' on!" Jockey Pike's shrill answer was addressed to his mount: "Eat 'em up!"

done with you, you won't feel so much like committing murder."

"'Tain't murder to kill a dawg like him, mister."

"Right you are, but that's what a jury would call it. By the way, what's your name, son?"

"Pike, mister, Jefferson Lee Pike."

"Well, Jeff, I'm going to have a look at that back of yours. We'll have a talk together and if I can't suggest a better way of getting hunk with your brute of a boss than shooting him—something that will hurt him a lot worse than a chunk of lead in his craw—I'll agree to lend you all the artillery in my stable. Is that fair?"

"That's fair," said Jefferson Lee Pike, gravely. "But one way or another, I'm going to git him, mister."

"I wouldn't mind getting him myself," said Smith. "We're in this thing together, Jeff."

The conference was a long one, but when it ended Jockey Pike returned whence he came weaponless. Rainbow Smith, standing in the door of the tackle room watched the small figure until the darkness swallowed it. Then the owner of the Gibraltar Racing Stable shook his fist in the direction of the Burns barn.

"I always said you'd lick the wrong boy some day," he muttered, "and by golly, I believe you've done it!"

A WEEK passed and again Rainbow Smith had a nocturnal visitor—but this time Jefferson Lee Pike pranced rather than walked, and out of great exuberance of spirit turned at least one cart wheel under the walnut trees.

"We got 'em, mister! She's working out fine!" he crowed. "Just made to order for us. Those burglars are cooking up a big killing and fixing to put all the eastern pool rooms out of business. I been listenin' to 'em the last couple of hours. They're aiming to slip one over with Whitethorn—she's that leggy chestnut mare of Crane's. They'll all have hosses in the race but Whitethorn is the one they'll win with. Burns says he'll start the black hoss Matador and give me the mount on him. They figure he ought to be favorite."

"When do they expect to pull this, Jeff?"

"The last week of the meeting. They're going to send their bank rolls East to-morrow morning—every nickel they can rake and scrape. Oh, it'll be a reg'lar hawg killing—to hear them tell it!"

"Then they're not figuring on doing any betting here at the track?"

"Burns says no. They're a little leery of the judges and anyway they couldn't bet much in the ring here. The bookmakers are afraid of any race that them fellers are in. The money will be placed in the East—Chicago and New York—and some in Cincinnati. They got it all doped out that this'll be the biggest killing they ever made."

"You say you're going to ride Matador?"

"Yes, suh. Crane and Duffy kicked some, but Burns he says they needn't to worry none about me. 'I had one settlement with that kid,' he says, 'and he'll ride a hoss like I tell him to now.' The others wanted him to give the mount to Jock Jamieson, but Burns thinks the judges are onto Jamieson's strong-arm work. He says they wouldn't suspicion a kid apprentice like me."

"All right, Jeff," said Rainbow, patting the boy on the back. "Keep your ears open and your mouth shut and if you hear anything, let me know."

"You bet I will, mister. And say?"

"What is it, Jeff?"

"I reckon this is better than shooting him after all?"

Judge Lucien Clay Applebee of Crab Orchard, Ky., sat in the stilted pagoda at the edge of the running track and examined the jockey slip for the day's racing. The judge's forehead gathered itself into creases and wrinkles, his bushy brows lowered in a frown and he nibbled nervously at his sparse goatee—the latter a sure sign of serious mental disturbance.

"It seems a pity, suh, a monstrous pity," said Judge Applebee to his assistant, Judge Peter Terrill, "that high-class hawsses, delicately bred an' carefully nurtured to their full strength, hawsses that show blood an' breedin' in every line an' movement, should be completely at the mercy of low-bred human bein's. A monstrous pity. Did you ever think of that, suh?"

Peter Terrill, Associate Judge, grunted by way of reply. He was looking through his field glasses at a blond lady in the front row of the grand stand.

"A dream!" said Peter. "Eh? What was that, Judge?"

"I was sayin', suh, that it's a shame a decent, respectable hawss should have to associate with some owners I could name."

"Meaning the Big Five?"

"Exactly, suh, the Big Five. Here they are, all in the fourth race. The time is gettin' short and I reckon they have had another caucus. I would give a sweet apple, suh, to break up that nest of thieves, but," and here Judge Applebee sighed, "it is almighty hard to catch them at their devilment, suh."

"You bet!" said Terrill. "They're foxy."

"All we can do is watch the bettin' fo' suspicious angles," said the judge, tugging at his goatee. "This black hawss Matador figures to be the best. With any sort of a rider he should win. Burns has got that little apprentice up again."

"Good horse; bad rider," said Terrill laconically.

"At least Pike is an improvement over Jamieson, suh. That boy is too strong in the arms to suit me. . . . Still, the inexperience of the rider may be their alibi this time."

THE judge sighed again and pressed an electric button. An attendant appeared immediately, hat in hand.

"In that fourth race," ordered the judge, "I want the betting followed very closely. Notify me at once of any decided changes in price, also if any big bets are made and by whom."

"Yes, sir, Judge, yes, sir." The attendant withdrew.

"I wish," said Applebee, "that I knew what is going on inside that man Burns's head. He is the brains of this combination."

If the judge could have been listening outside Burns's tackle room, his wish would have been gratified. Burns was giving Jockey Pike his riding orders.

"Listen to me, boy, and don't make any mistakes. I'm not betting on this horse to-day. I don't want him to shove his nose in front of that mare of Crane's at any stage. Understand?"

Jockey Pike nodded as he struggled into the silken breeches.

"Mind what I say about not getting in front of that mare," warned the owner. "If you do," he glanced significantly at the rawhide whip hanging inside the door, "if you do, I'll make you wish you'd died young. . . . Don't hurry him away from the barrier and keep him under wraps. Shake him up a little in the stretch, but don't take a chance on catching the mare. Now repeat what I said."

Jockey Pike recited his lesson with parrotlike glibness.

"Correct!" said Burns. "I'll likely tell you different in the paddock for the benefit of those rubbernecks that are always hanging around to steal an earful, but these are the real orders. Make just one little break and what you got the other night won't be a circumstance. You *sabe?*"

"Yes, suh," said Jockey Pike, stamping into his boots.

THE third race was over, blanketed horses were being led back to the stables, the jockeys trailed along the fence toward the paddock. Underneath the grand stand the great betting ring surged and eddied and rippled with a thousand human cross currents and suddenly became still as a pool, every eye directed at one point. "Gentleman Sam" Moss, bookmaker, had turned to his blackboard, a stick of chalk between his fingers.

The other bookmakers always waited for Sam's prices before posting their own—a delicate compliment to his native shrewdness and special information.

The spell was broken with the first stroke of the chalk—Matador opened the favorite at 7 to 5. Cahill's Miramar was second choice at 5 to 2. Duffy's Bright Eyes opened at 4 to 1, and Whitethorn at 6 to 1. The others, horses of little account, ranged upward to 25 to 1. Immediately the betting ring filled with the droning voices of the block men, calling the bets to the sheet writers. In the pagoda, Judge Applebee nodded over the opening prices.

"The black hawss is favorite," said he. "Now which way will the cat jump?"

Ten minutes passed, the prices fluctuating but slightly. Whitethorn slipped up to 8 to 1. Matador remained at 7 to 5. A sudden flurry developed on Miramar and the price dropped to 2 to 1.

"Nothing yet," mused Judge Applebee. "They must be waiting for the closing odds. They won't take Matador at that short price, but—"

Again a period of waiting and, in answer to the shrill call of the bugle, the horses began to file out of the paddock, the silks of their riders making bright blotches of color against the green background. There was a craning of necks in the grand stand, a flurry in the betting ring, and a general movement toward the fence. A telegraph operator, bareheaded and in his shirt sleeves, clattered up the steps and stood before the judges.

"Chicago and New York are hollering over the direct wire," said he breathlessly. "There's a strong play in the pool rooms on Whitethorn, and they want to know what's doing. There's no play on her here, Judge. She's 10 to 1 in the ring now."

Applebee and Terrill exchanged glances.

"The cat has jumped all the way East," said Applebee.

"This is the big clean-up that we've been looking for," said Terrill. "I knew they'd try to put it over before the end of the meeting."

THE attendant was close on the operator's heels. "Somebody is setting in a chunk on Matador," was his report. "He's been backed to 4 to 5."

"Find out who did it," said Judge Applebee.

The horses approached the stand, mincing sedately in single file. Jockey Pike was riding third in the line, a small, monkeylike figure perched upon the powerful black favorite.

"Don't you think you'd better warn that kid?" asked Terrill.

"No, sur!" said Applebee, tugging at his goatee. "Let 'em run this race their own way. If that black hawss is beat, I'm going to know why. If they win with Whitethorn—and it looks like they're fixin' to do it—I swear by the

The Day's Work

By Lida Hervey Spence

ILLUSTRATED BY FRANK SNAPP

AS PA went back up the walk to the porch he stooped, with a little sigh, to pull a weed out of the lawn. Ma, from her seat at the window, noticed every little weed that pushed through the hard alkali soil; and pa noticed them, too, just as he noticed everything else that concerned her now that she was so sick.

He went slowly up the steps, his head bent, but as he passed through the narrow hall into the living room his shoulders squared themselves, the lines left his mouth, and a gentle smile settled itself there.

He started slightly when he saw ma propped up in her big rocking-chair by the living-room window. He hoped the loud voice of the contractor had not reached her.

"Well, my dearlie!" he said tenderly, seating himself beside her and taking her wasted hand, on which the veins stood out prominently. She did not speak, but let her hand lay passively in his.

He had an uneasy feeling that she had changed someway, and was regarding her with wistful anxiety, when she raised her dark, shadowy eyes to his. Then he knew. Her cheerfulness had left her—her cheerfulness that had always so persistently kept in view the silver lining to any cloud.

Ma sat perfectly quiet for a little while, then her hand stirred restlessly in his, and she drew it tremblingly away and folded both hands in her lap.

"Pa," she whispered in a weak, reproachful voice, "why'd you tell that contractor a bit ago that you wouldn't go to work when you ain't had a job for so long?"

PA'S breath quickened chokingly and his heart swelled. He turned his head. He saw a basket of socks and stockings that would never be darned by the hands that had sorted them. The hot blur that veiled his eyes was suddenly absorbed in the glitter of an object on the low window sill. It was ma's open-end brass thimble.

The blue in his eyes deepened. His thoughts went back over the years and ended with a quick vision of youthful busy hands.

He brought his gaze from the thimble back to ma.

"But, my dearlie, you don't want pa to leave you—not as sick as you are?" he asked with the least little break in his voice.

He took her hand in both of his and turned her loose wedding ring round and round on her finger.

"But, pa, I ain't got no heart to get better if you don't get to earnin' a little somethin'," she protested. The trembling voice faltered and broke. "I'm just plumb worried to death 'ithout a cent comin' in and that doctor's buggy hitched to the gatepost every day—I am, pa!" Her voice ended in one of those trembling pauses that grip the heart.

The late afternoon light fell softly between the skimpy scrim curtains upon the two old faces.

"There, there, my dear," he soothed fondly. "Ain't there always been money when we needed it?" He laid a gentle hand on her knee.

"But I've always been able to help save and—"

"What's the bone of contention here?" came a full-throated voice from the kitchen door—a woman's voice vibrant with tenderness.

"Ain't I right, Em?" appealed ma, turning a little in her chair.

"'Course you're right, muzzer—what is it?" asked Em with a fond little laugh, going up to her mother's chair and looking lovingly down at her.

"Why, Em, you know how long pa's been out o' work? Well, that red-faced contractor was out at the gate a bit ago and offered him a job on the new schoolhouse, and don't you know he up and wouldn't take the work just 'cause I'm sick?"

SHE pulled nervously at the fringe of the gray plaid shawl that covered her frail shoulders. A tabby cat came into the room and sprang lightly on pa's lap. It curled up comfortably and purred its satisfaction.

Em flashed a sudden smile at her mother.

"I see pa refusing work as long as he's been idle," she ridiculed, with a significant glance at pa, who sat watching ma, his loosely clasped hands hanging between his knees.

"Well, he did—and Em, I just can't keep on a-bein' cheerful fer thinkin' o' how we're a-gettin' in debt."

"Pa's an old fraud!" scolded Em playfully. "He just wanted to find out how you felt about his leaving you! I know him! 'Fess up, pa!" demanded Em, looking at her father in bright appeal.

"You've never missed kissin' me good-by mornin's and noontimes in all the years o' our married life, pa," she said

Pa debated a moment, and then:

"Your ma knows I'll do anythin' she wants me to," he said with a fond look into ma's anxious face. Getting up, he stooped and kissed her gently on the forehead.

"Well, I want you to go right now and tell that contractor you'll go to work to-morrow." She laid her hand on his as it rested on the arm of her chair. "It'll make us all cheerfuller'n anythin' else in the world," she assured him earnestly.

EM STOOPED to straighten a rug of bright braided colors—the last piece of ma's handiwork. Pa put his hand caressingly under ma's chin and smiled down at her.

"All right, my dearlie, whatever you say goes," he told her simply. He took his hat from the deer-horn rack. He turned it round and round in his hands. He hated to leave ma, but ever since he had misspelled a word at school just to let her go up ahead he had never overlooked an opportunity to please her. With a patient little sigh he put on his hat. Tabby purred and rubbed herself against his leg. Pa looked down at her and smiled a little. Seemed like there was always something comforting around. Then he threw back his shoulders and went down the steps whistling "How I Love You, Mollie Darling."

As the picket gate clicked behind him he heard a familiar metallic tap-tap-tap. He turned. It was ma tapping with her thimble on the window at him. His mind went back to the months before Em was born. It was then ma first began saying good-by that way when he would start to go to work. She smiled now and made a brave attempt at waving her hand. Without ceasing to whistle, he waved back at her. Then he thrust his hands deep into his trouser pockets and walked rapidly away.

Purpled by the light of the fast-setting sun, the mountains rose before him. With the fading light came the stillness of evening. He couldn't remember ever having known an evening over which such a hush seemed to hover. Seemed as though everything was just kind of listening.

Dusk was becoming dark when he got back home. The lamp was lit and Em soon had supper on the table. Ma's returned cheerfulness thrilled him pleasantly. With Em on one side and him on the other, they pulled ma's chair up to the table and put a stick of wood under each rocker so's it wouldn't tip. It was a merry moment.

When they were seated at table a quietness fell. Pa's tranquil eyes closed, and from his lips came simple, oft-repeated words of thanksgiving.

DURING the meal Em talked cheerfully and beamed sunnily, but pa missed her customary fine color. Ma's pain-lined face wore a gratified look, and her weak voice joined happily in the conversation made by Em. She did not eat anything. Neither did pa.

After supper ma wouldn't consent to be made ready for bed until Em had cleared off the dishes and put the fringed tidy back in the center of the table. Some one might happen in.

After they had put her to bed she asked pa to hand her the little shelf clock. She set the alarm at five. Pa shouldn't be late to work next morning if she could help it, she told them.

After pa had lain down she asked him to call Em. When Em came up to the bed ma asked her to bring pa's overalls and put them on the foot of the bed, so's they'd be handy for him in the morning.

When morning came ma was worse. But she had pa prop her up in bed and put her gray shawl over her shoulders. She was watching him dress.

"It's just too bad, pa, that I can't get your breakfast!" she told him regretfully. "I've always just loved to get breakfast."

Pa was putting on his overalls and did not reply.

"We'll soon be married forty year," she went on, "and there's mighty few mornin's you've had breakfast cooked by anyone, only me!" Her face settled into lines of peaceful recollection.

"Yes, my dearlie," said pa in his quiet voice, pulling his suspenders over his drooping shoulders, "and mighty near always the same kind of breakfast." His voice was gently reminiscent.

"YES, I've most always fried either bacon and eggs or ham and eggs and made biscuits and coffee," she went on, getting her breath with difficulty. "Come here, pa, and let me straighten that gallus for you. In all these forty year you ain't learnt how to put on your gallusses straight!"

He went up softly to the bed. She reached out with a hand weaker than it had been yesterday and straightened the suspender. Then she playfully gave him a little push.

"Now ain't you glad I patched them overalls when I did?" she asked, looking with housewifely pride at the neat patches on his clean, worn overalls.

"I'm glad for ever' blessed thin' you ever done, my dear," he told her. He stooped to fasten his shoe that was already firmly tied, and she did not see the pain in his eyes.

Digitized by Google

"Now you're all dressed, you and Em can dress me," she said, pushing aside the bedclothes.

Pa stooped over her and tenderly brushed a strand of hair from her eyes. "My dear, it 'pears to me that yours is the purtiest hair I ever seen! Funny—I used to think that when it was as black as a crow's wing, and now that it's all silverlike I wonder how I used to like the black so well," he said with the sincerity of one whose compliments are few.

MA LOOKED up at him with a pleased smile, her eyes softening.

"Don't you think you'd better stay in bed today, ma?" he asked haltingly, a note of pleading in his voice. He knew she was fearful that if she didn't get up he would hate to go to work.

"Indeed, I don't think any such a-thin'! Why, if my breath wa'n't so short and fluttery I'd be out in the kitchen this minute a-gettin' your breakfast for you." She stretched out her hands to him to help her up, saying:

"I don't believe I'll go into the other room just yet, though—so you needn't dress me. You can pull my chair over by the window where I can look at the mountains."

"All right, my dearlie," he said, helping her to a sitting position on the edge of the bed. He pulled up her chair close to the bed, and over it he spread a log-cabin quilt, the blocks of which were made mostly of scraps of her wedding dress and Em's little-girl clothes. Then he lifted her carefully into the big chair and tenderly wrapped the quilt around her feet and legs and put a pillow at her back and one under her head.

A wave of gratitude swept through him. He'd had lots of things to be thankful for, but there'd never been anything that made him feel so blessed as the privilege of taking care of her now. She wouldn't know how to get along without him!

He pulled the chair over by the window, surreptitiously tipping far back the mirror on the old-fashioned bureau. She might see herself different from what he did—she never even liked a calico dress after it faded a little.

She smiled peacefully and laid her head back among the pillows and looked toward the mountains, lilac-hued in the distance. He stood back of her looking at the mountains, too.

"It ain't any wonder David set so much store by the hills, pa," said she, her strong face lighting.

"No," answered pa thoughtfully. "Seems like I never look over at them and catch the kind o' coppery color o' the light on the plain places and the shadows in the hollows but what, somehow or other, I feel mightily helped up—'specially if I'm a little bothered about anythin'."

THEY watched the mountains in quiet understanding. The first shaft of the sun flushed its color through a shadow and gilded their dim splendor into living gold. Pa's patient eyes brightened and he felt wonderfully comforted. Even if there were a passing within the shadow, anyone could see what a *shadow* was.

After breakfast pa came in to kiss ma good-by.

"You've never missed kissin' me good-by mornin's and noontimes in all the years o' our married life, pa," she said. Gently she pulled his face down against hers and held it there a second. "We was happier'n most folks, I reckon."

"We ain't had no cause to complain, ma. We was blessed all along the way—and it was such a pleasant, peaceful way."

NEITHER noticed the use of the past tense nor the fact that their voices had taken on a new tenderness. Each held to the other's hands, and they looked long into each other's eyes, the peaceful blue in his meeting the dusky shadows in hers.*

Drawing in a quick little breath, she settled herself back among the pillows and said briskly: "Didn't I hear the whistle, pa? Don't be late to work!"

"By George, maybe you did hear it! I'd better be a-movin," he said, and went quickly out of the room.

Walking around the house, he came up the back steps into the bathroom, where he slowly took off his overalls. He thought what a long time it had been since he had told a lie—not since he fished all one Sabbath morning and told his father he had been to Sabbath school. But lie or no lie, he did not intend to go to work that day. Hanging the overalls on a hook, he was turning away, when he suddenly caught up the garment (*Continued on page 34*)

Exit Madame

By George Weston

ILLUSTRATED BY MAY WILSON PRESTON

"Now who is he?" wondered madame. "I t'ink me I know ever'body in ze Colonie Francaise, but never before have I seen such a melancolie"

MONSIEUR DEJOIE—

(Murmurs of astonishment from Madame Dejoie's faithful subjects and cries of wonder: "What? You are going to begin with *him?*")

Hélas, mesdames! And hélas, messieurs! It may be that grief has upset me, knowing so well as I do that this is the last adventure of Mme. Dejoie, queen of the Restaurant Dejoie, so pleasantly, so agreeably situated on West Twenty-sixth Street in the shade of the Sixth Avenue L.

But let me see. . . . Where was I? . . . Ah, yes, yes, yes. . . .

M. Dejoie was in the basement, counting out his money, while madame sat at her desk upstairs dispensing smiles of honey. And having thus bemused the muses, I will add that it was half past seven on a mild spring night when suddenly the restaurant door opened and in stalked a young and tragic Frenchman.

"Now, who is he?" wondered madame. She watched him from her throne while he gazed uncertainly around the room. "I t'ink me I know ever'body in ze Colonie Française, but never before have I seen such a melancolie!"

Apparently then for the first time he caught sight of her desk. He threaded his way among the maze of tables and stood before the bright grill of madame's cage, and the far, far brighter grill of her eyes.

"Well, m'sieur?" she asked.

"Madame," said he, speaking sadly in French, "I have called to inquire if you would conduct a lottery for me."

"A lottery?" she gasped. "But no, m'sieur! It is a t'ing prohibit' by law in ze States United!"

"I do not mean a grand lottery," he hastened to assure her. "I mean a little lottery—a—what do you call it?—a 'ruffle'—"

"A 'riffle,' m'sieur," she kindly corrected him.

"A 'riffle,' yes, yes! If madame will be so kind."

She thoughtfully made change for a waiting customer, meanwhile sizing up this pale and tragic young Frenchman who had seated himself by her desk and was giving Louis a most frugal order.

"But what is it, m'sieur," she asked, "that you have desire to riffle?"

"My masterpiece!"

"Your masterpiece?"

"My 'Happiness'!" And he handed her an envelope with a fine, hopeful grief and started on his onion soup like a drowning man grasping at straws.

MADAME opened the envelope and drew out a photograph. And (leaning over her shapely shoulder in the spirit) we, too, will look and see what we can see.

It was the picture of a statue composed of two figures. One was standing upon the other's neck. The upright figure, tinted green, was feminine. She was playing a harp and was singing. But the prostrate figure, mottled in red, looked horribly worried and seemed to be in the throes of contortion. At the base of the group the single word "Bonheur" had been chiseled—"Bonheur," that is to say, "Happiness." And in the corner of the card were the name and address of the artiste, Jean Narcisse, 17 Rue Moulin.

"Well," said M. Narcisse, finishing his soup with a mournful emphasis, "what do you think of it?"

"Merveilleux!" exclaimed madame.

Paternal pride arousing him from his sad estate, the young man cleared his throat three times, once like Rodin, once like Phidias, and once like Michelangelo.

"M'sieur made him, zen?" asked madame.

"I am the sculptor, yes."

"And you come from Paris?" she asked, looking at the address in the corner.

"From Paris, yes." And, paternal pride so soon forgotten, he drew a sigh which any draftsman might have envied.

"Zese poor yo'ng artistes!" thought madame, and she looked at the hungry young Frenchman with growing sympathy. For (a secret to tell) madame's spirit often chafed against the confines of cash books and cabbages. Once she had even sent an anonymous story to the "Courrier" (which was much too good to be printed), and once again she had bought a sketch-book and had toiled in secret until she could draw a cup and saucer which could be distinguished from either a lighthouse or a hive of bees. And having paid these tributes to the beaux arts, what more natural than a feeling of fraternity for this young sculptor who had achieved such a wonderful statue and who had acquired a hunger more wonderful still?

"You understand the allegory?" he asked.

"Ze allegory?" breathed madame. "Tell him to me, m'sieur!"

"The green figure represents the human race. I have used green marble to signify youth and the springtime of the world. The recumbent figure represents human passions—wherefore the restness and the mottles. The human race, having triumphed over passion, lifts her face to the sun and sings—as you see in the statue. And the result is 'Bonheur'—the title of the group."

"Merveilleux!" repeated madame, again lapsing unconsciously into French. Almost mechanically she made change for another group of waiting customers and then once more she turned to the gifted sculptor by her side.

"And you come to ze States United to sell heem?" she asked, picking up the photograph.

He sighed like a tempest at sea. "For six weeks now have I been here," he woefully told her. "I have a studio where my statue reposes, but not one single offer have I been able to secure. Two or three have seen it, but no one wants to buy. I call it 'Bonheur.' Hélas, I should have called it 'Malheur'! For to bring it here it took almost my last sou, and now—so far from home—with Bonheur like a stone around the neck—" He made a gesture more eloquent than money—"I want to riffle him," he sadly said, and sadly he applied himself to the rosbif au jus which Louis had placed before him.

"Ze pore yo'ng artiste!" murmured madame, her tender heart turning within her as she watched him start on the beef. And, looking down at the picture of his masterpiece, a sudden determination took possession of her and warmed her through and through. "Yes," she muttered, "I mus' help him if I can. But ze on'y way to help him is to make his statue talk' about from one end of ze country to ze opposite—like anuzzer 'September Morning.' And to do it I mus' give it ze boom-boom! I mus' give it ze puff-puff! I mus' be what zey call a pressing agent, and if I cannot press him into fame and fortune, why, zen my name isn' Gaby DeJoie—c'est tout!"

AH, messieurs, think, think for a moment of the problem before Mme. DeJoie! Consider its enormity, the difficulty of its details, the almost impossibility of its tout ensemble.

And you, mesdames, more subtle than many mes-

Digitized by Google

sieurs, reflect upon the task before poor madame. How would *yow*, for instance, have proceeded in a matter so unique? Here was a statue unknown, by a sculptor unheard of, and it was necessary to give it a hundred thousand dollars' worth of advertising, free, gratis, and (as the novelists say) for nothing.

"But all ze same," reflected madame, bending over the photograph, "zere *is* a way—somewhere. For have I not always found it so?"

Well, then!

"Suppose," she thought—"suppose we *do* have a riffle! We will have ze statue brought to ze restaurant and I will sell chances from one cent to five dollars. Zen we could have a lawsuit over ze winner, and ever'one would read it in ze paper."

BUT here objections began to hurl themselves like old shoes at a wedding. "Yes, yes," sighed madame. "It would take much time, and my customers would not like it to be held up for chances. And ze lawyer would advertise himself instead of ze statue, and when ze air had clear' from smoke ze lawyer would have all ze glory and all ze statue and all ze money, too!"

She stared at the photograph with concentration redoubled.

"How would it be," she thought, "to hire a store on Broadway and set up ze images zere? We would put it in ze window and take out ze glass. A big crowd would soon appear. Zen in ze store we would have a ventriloquist, and when ze crowd was staring at ze statue, ze red figure below would suddenly cry 'Take from my neck your foots, you big, green lobster above!' La-la! And ze ventriloquist could even make ze green girl sing as well!"

A ravishing plan, but here again difficulties arose like crows in a cornfield when the gun goes *bang!* There would be the rent of the Broadway store, the expense of taking out the glass window and hiring the ventriloquist, and even then the gendarmes might stop the proceedings before they had fairly begun, because of the collection of a crowd.

Ah, no, that wouldn't do.

Madame drew a deep breath of thought.

"If we could on'y get him started!" she despaired, returning to the photograph. "What a subjec' for ze caricature! Zis red illness wiv his neck underfoot he could be M'sieur Murphy, and ze green figure could be Mademoiselle New York City. Or ze ugly one below could be Huerta, and ze victor could be ze President Wilson. Or it could even be 'Votes for Womens'! Yes, yes, if we could on'y get him started! If we could on'y t'row him in ze public eye!"

But the public eye is a difficult target to hit, as millions and millions have found to their cost since this wise and wary world began to wag.

"If madame—" began the tragic young sculptor beside her.

"Oh, m'sieur, will you not be quiet!" she implored him. "I am t'inking of a way to make your fortune. Please zerefore do not interrup' me so!"

THERE was a note of authority in her voice which made him subside and, touched by his obedience, madame leaned over toward him. "I have done harder t'ings zan zis, m'sieur," she gently assured him. "Some day perhaps I will tell you. But for ze present—"

She bent over the photograph again. "If I could make ever'body t'ink of Bonheur ever' time zey went to bed," she pondered, "or ever' time zey get up. Or ever' time zey eat—" She looked around the restaurant. "Or ever' time zey drink—"

In a far corner she saw one of her customers holding a glass of water up to the light and unconsciously her mind returned to business. "Is his glass dirty?" she thought. "Is zere somet'ing in ze water—"

Ah-h-h-h-h!

"Something in the water! Something in the water!... What, for instance?"

Madame turned up her eyes for a moment and then, quite involuntarily, she clapped her hands and turned, radiant as a star, to the eagerly waiting young man by her side.

"I have it!" she whispered in tense excitement.

"Mon Dieu!" exclaimed M. Narcisse. "You have it? Then give it to me!"

MME. DEJOIE called for a glass of water.

"You see zis?" she asked.

"Yes, yes!"

"Zen consider. Ever' man, woman, and infant in zis great city will drink water in some form to-day. Is it not so?"

"Yes, yes."

"And zis water, from where does it come? I will tell m'sieur. It come' from a great reservoir in ze Central Park."

"I have seen it; yes!"

"You have seen it? Bien! Zen you will know zat an unfortunate man could ver' well jump in zat reservoir, and wiv one big splash end all!"

"But, madame," objected M. Narcisse, after an uneasy pause, "you do not think my affairs sufficiently desperate—"

"Me? I t'ink nossing! Listen, m'sieur! Let us picture to ourselves a mos' unhappy man. He has a photograph of your masterpiece Bonheur—"

"You think Bonheur would make him unhappy?"

"M'sieur! I beg of you! He has ze photograph and ze allegory touch him to ze quick. 'I have never conquer' my passions,' he says, 'and so I can never be happy.' What pity! And jus' zen, desperate and moody, he strikes ze water wiv his eye—"

"Reading about it in the papers, eh?" demanded the other, looking around at the overstrewn floor. "And, by jing, if he isn't wearing the raincoat yet!"

"He sees the reservoir?"

"He sees ze reservoir; yes, yes! 'I can never be happy,' he says, 'so why should I live?' A terrible t'ought strikes him—"

"He contemplates a drowning?"

"At ze least. He draws a pencil from his pocket and writes his sentiments on ze photograph of Bonheur. 'I have never conquer' my passions, and so I can never be happy. Good-by, ever'body.'"

"Ha!" exclaimed M. Narcisse.

"And zen he put ze photograph back in his pocket—"

"It will be wet when they find him," the other objected. "The colors will run—"

"He put' it back in his pocket, I say, and zen in a frenzy he divest' himself of his coat and his pantaloons!"

"Quel diable!"

"And zen—splash!"

"Ah, yes!"

"And zere you are," said madame. "Presen'ly ze gendarme discover ze clothes of ze poor suicide. Zey seek to identify him. His pockets are search'. But ze on'y t'ing zey find is ze photograph of Bonheur, bearing your name and address. And, ah, m'sieur! Imagine, if you can, ze sensation!"

"IT IS a wonderful plan," thoughtfully admitted M. Narcisse, speaking always in French, "but—"

"Consider ze columns and columns in ze newspapers!" cried Mme. Dejoie. "'Suicide in reservoir!' 'Photograph of Bonheur ze on'y clue!' Wiv a picture of your masterpiece in ever' paper! And ever'body talking of zis wonderful statue which make' ze poor man drown himself!"

"It is true I would never have thought of it," said M. Narcisse, "but—"

"Ze whole city would talk of it! Zey would discuss nossing else! You t'ink zey would drink ze water? But what else to do? A sensation wizout parallel, m'sieur!"

"But—"

"Zey would have to drain ze reservoir—"

"But—"

"And if ze body was not discover', zey would have to search ze mains! And all ze time ever'one would be talking about Bonheur, and your fame and your fortune would be establish' forever!"

M. Narcisse was silent for an interval, and though his face was troubled, it was plain to see that he was uneasily enjoying a prospect so pleasing.

"Of course," mused madame, "I know it sounds ver' wrong to get all ze world worked up on such a worry. But sitting here at my desk, m'sieur, I sometimes t'ink of ze difficulties of zose poor artistes who try to write, or to draw, or to follow ze beaux arts. And you know what I sometimes t'ink? I t'ink ze world is a big, strong man, wiv a number twelve boot, and he is always hiding jus' around ze corner to hand ze poor yo'ng artiste a—what-you-call-it?—a good, swif' kick in ze bridges! Well, zen! Sometimes ze artiste kicks back! Voila ze kick-back!" And beaming down upon the utterly flabbergasted M. Narcisse, madame smiled her sweetest smile. "Well, m'sieur?" she said. "What you t'ink of my plan?"

"Ah, madame," he stammered, "it is a plan magnificent. But I think it contains one serious, one fatal flaw—"

"And zat is?"

"I do not think we would be able to find a man who would be willing to drown himself. Is it not so?"

MADAME stared at him and then she raised both shoulders. In the same disdainful silence she received the money of the last departing diners, and then returned to the mutely pleading M. Narcisse.

"But no," she thought. "It is not his fault. All men are so. Because he's a man his head has grown big; it rattles a little." And in the patient tone that a mother uses when telling her first-born that he cannot have the moon for a teething ring, she said: "Drown himself, m'sieur? Why should a man drown himself? Wouldn't the result be jus' the same if you put his clothes on ze bank and make it *look* as if he had drown' himself? Wouldn' it even add much to ze mystery?"

"Jarnibleu!" cried M. Narcisse.

"Well, zen! Well, zen!" cried Mme. Dejoie. "Here is ze pen and here is ze ink! Let us prepare ze photograph!"

AND now, to my great distress, I must speak of a delicate subject. Let us therefore follow M. Narcisse outside the restaurant so that the darkness may hide the blushes which will presently mantle my brow.

Forgive me, mesdames. Your pardon, messieurs. But you see those dark gray pantaloons which encircle the classic limbs of M. Narcisse?

Eh, eh! He has no others! And now the murder's out!

He has no others, mesdames! He has no others, messieurs! And he has no money wherewith to purchase an extra pair!

But the night is dark; the air is mild; his raincoat's long; and in the mazes of Central Park there are shadows discreet toward which a man of genius may slowly guide himself while his mind is engaged in grand but somber thoughts.

"And what if I do divest myself of these, my only pantaloons?" mused M. Narcisse. "Better to be with fame and a sans-culotte than to be costumed comme il faut and unknown to all the world. For with fame comes money, and with money come all the desirable things of life, including—yes, if I wish it—the wardrobe of kings! For Mme. Dejoie is right: it is necessary that I should have what she calls 'ze puff-puff.'" And striding toward a particularly dark clump of trees near the reservoir, he cried in his heart: "Then vive 'ze puff-puff!' A bas les pantaloons!"

Before such devotion to arts and letters a stranger must stand abashed. And while we stand abashed with eyes averted, M. Narcisse is blotted from sight in the darkness. After an interval he reappears and approaches the reservoir. On the bank he places a pair of dark gray pan- *(Continued on page 30)*

Cleveland Characteristics

Chapter III of "Abroad at Home"

American Ramblings, Observations, and Adventures

By Julian Street

Illustrated by Wallace Morgan

BEFORE leaving home we were presented with a variety of gifts, ranging all the way from ear muffs to advice. Having some regard for the esthetic, we threw away the ear muffs, determining to buy ourselves fur caps when we should need them. But the advice we could not throw away; it stuck to us like a poor relation.

In the parlor car, on the way from Buffalo to Cleveland, our minds got running on sad subjects.

"We have come out to find interesting things—to have adventures," said my blithe companion. "Now supposing we go on and on and nothing happens. What will we do then? The publishers will have spent all this money for our traveling, and what will they get?"

I told him that, in such an event, we would make up adventures.

"What, for instance?" he demanded.

I thought for a time. Then I said:

"Here's a good scheme—we could begin now, right here in this car. You act like a crazy man. I will be your keeper. You run up and down the aisle shouting—talk wildly to these people—stamp on your hat—do anything you like. It will interest the passengers and give us something nice to write about. And you could make a picture of yourself, too."

Seeking Excitement

INSTEAD of appreciating that suggestion he was annoyed with me, so I ventured something else.

"How would it be for you to beat a policeman on the helmet?"

He didn't care for that either.

"Why don't you think of something for yourself to do?" he said, somewhat sourly.

"All right," I returned. "I'm willing to do my share. I will poison you and get arrested for it."

"If you do that," he criticized, "who will make the pictures?"

I saw that he was in a humor to find fault with anything I proposed, so I let him ramble on. He had a regular orgy of imaginary disaster, running all the way from train wrecks, in which I was killed and he was saved only to have the bother and expense of shipping my remains home, to fires in which my notebooks were burned up, leaving on his hands a lot of superb but useless drawings.

What They Were Afraid Of

AFTER a time he suggested that we make up a list of the things we had been warned of. I did not wish to do it, but, acting on the theory that fever must run its course, I agreed, so we took paper and pencil and began. It required about two hours to get everything down, beginning with *Aches, Actresses, Adenoids, Alcoholism, Amnesia, Arson,* etc., and running on, through the alphabet to *Zero weather, Zolaism,* and *Zymosis.*

After looking over the category, my companion said:

"The trouble with this list is that it doesn't present things in the order in which they may reasonably be expected to occur. For instance, you might get zymosis, or attempt to write like Zola, at almost any time, yet those two dangers are down at the bottom of the list. On the other hand, things like actresses, alcoholism, and arson seem remote. We must rearrange."

I thought it wise to give in to him, so we set to work again. This time we made two lists: one of general dangers—things which might overtake us almost anywhere, such as scarlet fever, hardening of the arteries, softening of the brain, and "road shows" from the New York Winter Garden; another arranged geographically, according to our route. Thus, for example, instead of listing Elbert Hubbard under the letter "H," we elevated him to first place, because he lives near Buffalo, which was our first stop.

I didn't want to put down Hubbard's name at all—I thought it would please him too much if he ever heard about it. I said to my companion:

"We have already passed Buffalo. And, besides, there are some things which the instinct of self-preservation causes one to recollect without the aid of any list."

"I know it," he returned, stubbornly, "but, in the interest of science, I wish this list to be complete."

So we put down everything: Elbert Hubbard, Herbert Kaufman, Eva Tanguay, Upton Sinclair, and all.

A few selected items from our geographical list may interest the reader as giving him some idea of the locations of certain things we had to fear. For example, west of Chicago we listed *Oysters,* and north of Chicago *Frozen Ears* and *Frozen Noses*—the latter two representing the dangers of the Minnesota winter. So our list ran on until it reached the point where we would cross the Great Divide, at which place the word "*Boosters*" was writ large.

Speaking of Boosting

I RECALL now that, according to our geographical arrangement, there wasn't much to be afraid of until we got beyond Chicago, and that the first thing we looked forward to with real dread was the cold in Minnesota. We dreaded it more than arson, because if some one sets fire to your ear or your nose, you know it right away, and can send in an alarm, but cold is sneaky. It seems, from what they say, that you can go along the street, feeling perfectly well, and with no idea that anything is going wrong with you, until some experienced resident of the place touches you upon the arm and says: "Excuse me, sir, but you have dropped something." Then you look around, surprised, and there is your ear, lying on the sidewalk. But that is not the worst of it. Before you can thank the man, or pick your ear up and dust it off, some one will very likely come along and step on it. I do not think they do it purposely; they are simply careless about where they walk. But whether it happens by accident or design, whether the ear is spoiled or not, whether or not you be wearing your ear at the time of the occurrence—in any case there is something exceedingly offensive, to the average man, in the idea of a total stranger's walking on his ear.

I mention this to point a moral. However prepared we may be, in life, we are always unprepared. However informed we may be, we are always uninformed. We gaze up at the sky, dreading to-morrow's rain, and slip upon to-day's banana peel. We move toward Cleveland dreading the Minnesota winter which is yet far off, having no thought of the "booster," whom we believe to be still farther off. And what happens? We step from the train, all innocent and trusting, and then, ah! then . . . . . ! . . . If it be true, indeed, that the "booster" flourishes more furiously the farther west you find him, let me say (and I say it after having visited California, Oregon, and Washington) that Cleveland must be newly located upon the map. For, if "boosting" is a Western industry, Cleveland is not an Ohio city, nor even a Pacific Slope city, but is an island out in the midst of the Pacific Ocean.

Nor is this a mere opinion of my own. Upon the mastodontic brow of the Cleveland Chamber of Commerce there hangs an official laurel wreath. The New York Bureau of Municipal Research invited votes from the secretaries of Chambers of Commerce and similar organizations in thirty leading cities, as to which of these bodies had accomplished most for its city, industrially, commercially, etc. Cleveland won.

Recklessness of Not Living in Cleveland

NO ONE who has caromed against the Cleveland Chamber of Commerce will wonder that Cleveland won. All other Chambers of Commerce I have met sink into desuetude and insignificance when compared with that of Cleveland. Where others merely "boost," Cleveland "boosts" intensively. She can raise more bushels of statistics to the acre than other cities can quarts. And the more Cleveland statistics you hear, the more you become amazed that you do not live there. It seems reckless not to do so. The Cleveland Chamber of Commerce can prove this to you not merely with figures, but also with figures of speech.

Take the matter of population. Everybody knows that Cleveland is the "Sixth City" in the United States, but not everybody knows that in 1850 she was

Chamber of Commerce representatives were with us until we went to our rooms late at night. But at our rooms they left us, merely taking the precaution to lock us in

It is an Elizabethan building, with a heavy timbered front, suggesting some ancient, hospitable, London coffee house where wits of old were used to meet

Digitized by Google

forty-third. The Chamber of Commerce told me that, but I have prepared some figures of my own which will, perhaps, give the reader some idea of Cleveland's magnitude. Cleveland is only a little smaller than Prague, while she has about 50,000 more people than Breslau.

If that does not impress you with the city's size, listen to this: Cleveland is actually twice as great, in population, as either Nagoya or Riga! Who would have believed it? The thing seems incredible! I never dreamed that such a situation existed until I looked it up in the "World Almanac." And some day, when I have more time, I intend to look up Nagoya and Riga in the atlas and find out where they are.

The Chamber of Commerce gives me the further information that "Cleveland is the fifth American city in manufactures, and that she comes first in the manufacture of steel ships, heavy machinery, wire and wire nails, bolts and nuts, vapor stoves, electric carbons, malleable castings, and telescopes"—a list which, by the way, sounds like one of Lewis Carroll's compilations.

The information that Cleveland is also the first city in the world in its record, per capita, for divorce, does not come to me from the Chamber of Commerce booklet—but probably the fact was not known when the booklet was printed.

Besides being first in so many interesting fields, Cleveland is the second of the Great Lake cities, and is also second in "the value of its product of women's outer wearing apparel and fancy knit goods."

It is, furthermore, "the cheapest market in the North for pig iron."

The Slave!

THERE are other figures I could give (saving myself a lot of trouble, at the same time, because I only have to copy them from a book), but I want to stop and let that pig-iron statement sink into you as it sank into me when I first read it. I wonder if you knew it before? I am ashamed to admit it, but *I* did not. I didn't consider where I could get my pig iron the cheapest. When I wanted a piece of pig iron I simply went out and bought it, at the nearest shop, right in New York. That is, I bought it in New York unless I happened to be traveling when the craving came upon me. In that case I would buy a small supply wherever I happened to be—just enough to last me until I could get home again. I don't know how pig iron affects you, but with me it acts peculiarly. Sometimes I go along for weeks without even thinking of it; then, suddenly, I feel that I must have some at once—even if it is the middle of the night. Of course a man doesn't care what he pays for his pig iron when he feels like that. But in my soberer moments I now realize that it is best to be economical in such matters. The wisest plan is to order enough pig iron from Cleveland to keep you for several months, being careful to notice when the supply is running low, so that you can order another case.

Apropos of this let me say here, in response to many inquiries as to what the nature of this work of mine would be, that I intend it to be "useful as well as ornamental"—to quote the happy phrase coined by James Montgomery Flagg. That is, I intend not only to entertain and instruct the reader but, where opportunity offers, to give him the benefit of good sound advice, such as I have just given with regard to the purchasing of pig iron.

The Pink of Hospitality

BECAUSE I have told you so much about the Chamber of Commerce you must not assume that the Chamber of Commerce was with us constantly while we were in Cleveland, for that is not the case. True, Chamber of Commerce representatives were with us all the first day and until we went to our rooms, late at night. But at our rooms they left us, merely taking the precaution to lock us in. No attempt was made to assist us in undressing or to hear our prayers or tuck us into bed. Once in our rooms we were left to our own devices. We were allowed to read a little, if we wished, to whisper together, or even to amuse ourselves by playing with the fixtures in the bathroom.

On the morning of the second day they came and let us out, and took us to see a lot of interesting and edifying sights, but in the afternoon they turned us loose for a couple of hours, allowing us to roam about at large while they attended to their mail.

We made use of the freedom thus extended to us by presenting several letters of introduction to Cleveland gentlemen, who took us to various clubs.

On the Bodily Habits of Clubs

ALMOST every large city in the country has one solid, dignified old club, occupying a solid, dignified old building on a corner near the busy part of town. The building is always recognizable, even to a stranger. It suggests a fine cuisine, an excellent wine cellar, and a great variety of good cigars in prime condition. In the front of such a club there are large windows of plate glass, back of which the passer-by may catch a glimpse of a trim white mustache and a silk hat. Looking at the outside of the building, you know that there is a large, high-ceiled room, at the front, dark in color and containing spacious leather chairs, which should (and often do) contain aristocratic gentlemen who have attained years of discretion and positions of importance. One feels cheated if, on entering, one

In this charming, homelike old building with its grandfather's clock, its Windsor chairs, and its open wood fires, a visitor finds it hard to realize that he is in the "West"

fails to encounter a member carrying a malacca stick and wearing waxed mustaches, spats, and a gardenia. The Union Club of New York is such a club; so is the Pacific Union of San Francisco; so is the Chicago Club; and so, I fancy, from my glimpse of it, is the Union Club of Cleveland.

A Goodly Fellowship

IN THE larger cities there is usually another club, somewhat less formal in architecture, decoration, and spirit, and given over, broadly speaking, to the younger men—though there is often a good deal of duplication of membership between the first mentioned and the second. The Tavern of Cleveland is of the second type; so is the Saturn Club of Buffalo, of which I spoke in a former chapter. Almost every good-sized city has, likewise, its university club, its athletic club, and its country club. University clubs vary a good deal in character, but athletic clubs and country clubs are in general pretty true to type.

But, besides such clubs as these, one finds, here and there, in the United States, a few clubs of a character more unusual. Cleveland has three unusual clubs: the Rowfant, a book collector's club; the Chagrin Valley Hunt Club, at Gates Mills, near the city, and the Hermit Club. Were it not for the fact that I detest the words "artistic" and "bohemian," I should apply them to the Hermit Club. It is one of the few clubs outside New York, Chicago, and San Francisco possessing its own house and made up largely of men following the arts or interested in them. Like the Lambs of New York, the Hermits give shows in their clubhouse, but the Lambs' is a club of actors, authors, composers, stage managers, etc., while the Hermit Club is made up, so far as the theatre is concerned, of amateurs—amateurs having among them sufficient talent to write and act their own shows, design their own costumes, paint their own scenery, compose their own music, and even play it, too—for there is an orchestra of members. I have never seen a Hermits' show, and I am sorry, for I have heard that they are worth seeing. Certainly their clubhouse is. It is an Elizabethan building, with a heavy timbered front, suggesting some ancient, hospitable, London coffee house where wits of old were used to meet. This illusion is enhanced by the surroundings of the club, for it stands in an alley—or perhaps I had better say a narrow lane—and is huddled down between the walls of taller buildings.

The pleasant promise of the exterior is fulfilled within. The ground floor rooms are low and cozy, and have a pleasant "rambling" feeling—a step or two up here or down there. The stairway, leading to the floor above, is narrow, with a genial kind of narrowness that seems to say: "There is no one here with whom you'll mind rubbing elbows as you pass." Ascending, you reach the main room, which occupies the entire upper floor. This room *is* the Hermit Club. It is here that members gather and that shows are given. Large, with dark panels, and heavy beams which spring up and lose themselves in warm shadows overhead, it is a room combining dignity with gracious informality. And let me add that, to my mind, such a combination is at once rare and desirable in a club building—or, for the matter of that, in a home or a human being. A club which is too informal is likely to seem trivial; a club too dignified, austere. A club should neither seem to be a joke, nor yet a mausoleum. If it be magnificent, it should not, at least, overwhelm one with its magnificence; it should not chill one with its grandeur, so that one lowers one's voice to a whisper and involuntarily removes one's hat. In some clubs a man leaves his hat upon his head or takes it off, as he prefers. In others custom demands that he remove it. Some men will argue that if you give a man his choice in that matter he feels more at home; others contend that if he takes his hat off he will, at all events, *look* more at home, whereas, if he leaves it on he will look more as though he were in a hotel. These are matters of opinion. There are many pleasant clubs which differ on this minor point. But I do not think that any club may be called pleasant in which a man is inclined to take off his hat instinctively because of an air of grim formality which he encounters on entering the door. To make an Irish bull upon this subject, one of the nicest things that I remember of the Hermit Club is that I don't remember whether we wore our hats while there or not.

The Chagrin Valley Hunt Club lies in a pleasant valley which acquired its name through the error of a pioneer (General Moses Cleveland himself, if I remember rightly) who, when sailing up Lake Erie, landed at this point, mistaking it for the site of Cleveland, farther on, and was hence chagrined. Here, more than a hundred years ago, the little village of Gates Mills was settled by men whose buildings, left behind them, still proclaim their New England origin. If ever I saw a Connecticut village outside the State of Connecticut, that village is Gates Mills, Ohio. Low white farmhouses, with picturesque doorways and small windows divided into many panes, straggle pleasantly along on either side of the winding country road, and there is even an old meeting house, with a spire such as you may see in many a New England hamlet.

He Discovers Western Reserve

THE old Gates house, which was built in 1812 by the miller from whom the place took its name, is passing a mellow old age as the house of the Hunt Club. In this charming, homelike old building with its grandfather's clock, its Windsor chairs, and its open wood fires, a visitor finds it hard to realize that he is actually in a portion of the country which is still referred to, in New York, as the "West." The Connecticut resemblance is accounted for by the fact that all this section of the country was in the Western Reserve, which belonged to, and was settled by, Connecticut.

Thus travel teaches us! I knew nothing until then of the Western Reserve, (*Continued on page 29*)

The Trouble Makers of Mexico

By Jack London

ILLUSTRATED BY H. L. DRUCKLIER

THE commonest, as well as the gravest, mistake in human intercourse is that very human weakness of creating all other individuals in one's own image. What "I like" I can see no reason but what everybody else should like. What is good for me is good for you. If I am fascinated by a certain book, I am astounded to learn that you do not like that book. If I find vegetarianism provocative of good health in me, ergo, it will be provocative of good health in you. If black coffee produces sleeplessness in me, I am appalled when you drink two cups of black coffee in the evening.

When my wife and I fall out, it is because I ignore the fact that she feels, reasons, and acts in ways different from my ways. She, likewise, makes the same mistake about me. Her entire family and mine may fail to patch the matter up, and, in the end, a judge, equipped with the wisdom of the race embodied in our law, may divorce us because we are different from each other—incompatible, in short. I once knew the dearest, sweetest, and most sympathetic of women, who was unable, when she lacked in appetite, to comprehend that anybody else could be hungry.

Useless Tragedy

IN THE same way different groups of people, of the same race and country, fail to understand one another. The cowboys of the open range never understood the settler with his barbed-wire fences. The East does not understand California to-day in her attitude on the Japanese question. The East thinks California is like the East and that Californians are like Easterners. In brief, the East recreates California in her own image.

Since such mistakes of understanding are common among groups of people of the same breed and country, it is patent that deeper and more disastrous mistakes may be made among people of different races dwelling in different countries.

The chief cause of our misunderstanding to-day of the Mexicans is that we have created them in our own American image. With a comfortable sense of fairness we have put ourselves inside the Mexicans, along with our morality, our democracy, and all the rest of our points of view, and, accepting therefore that the Mexicans should think, feel, and act just as we would under similar circumstances, we are shocked to find out that they won't do anything of the sort. Instead of having our eyes opened by this cardinal error, we proceed to reason that their conduct should be made to become like our conduct, and that we should treat with them and deal with them as if they were still just like us, with a history behind them similar to ours, with institutions similar to ours, and with an ethic similar to ours.

Here, in the portals of Vera Cruz, the talk about Mexico and Mexicans buzzes high all day long and far into the night. Never was there a more animated and indefatigable debating society. One listens to the talk and wonders what it is all about, what bearing it has on the situation. I, for one, cannot comprehend how it is germane whether Madero was a patriot or a grafter; whether Huerta is a heroic figure of an Indian or a lunatic black Nero; whether Huerta murdered Madero or Madero committed suicide; whether the Huerta government should have been recognized by the United States long ago or that United States intervention should have taken place long ago.

What I see, with all this talk of little things filling my ears, is a torn and devastated Mexico, in which twelve million peons and all native and foreign business men are being injured and destroyed by the silly and selfish conduct of a few mixed breeds. I see a great, rich country, capable of supporting in happiness a hundred million souls, being smashed to chaos by a handful of child-minded men playing with the tragic tools of death made possible by modern mechanics and chemistry.

A Republic Where Nobody Votes

THESE child-minded men are playing with the tools of giants. It is like a family of small children playing with sticks of dynamite on the front porch, in the basement, and up in the attic of their dwelling. One can see a hurry call sent into the nearest police station by the good citizens of the neighborhood for a squad of police to take the dynamite away from the children.

From garret to basement the dwelling of Mexico is being torn to pieces by the dynamite in the hands of the contending factions. The stay-at-home American listens to the slogans uttered by the various leaders of this anarchy, makes the mistake of conceiving the leaders in his own image and of thinking that "Liberty," "Justice," and a "Square Deal" mean the same to them that they mean to him.

It is fair to assume that sometimes Huerta remembers and regrets his mistake in not killing Villa the time he had him backed up against a wall facing a firing squad. It was on this latter occasion that Huerta compelled Villa, on his knees, to beg Huerta for his life

Nothing of the sort. In the four centuries of Spanish and Mexican rule, liberty, justice, and the square deal have never existed. Mexico is a republic in which nobody votes. Its liberty has ever been construed as license. Its justice has consisted of an effort at equitable division of the spoils of an exploited people. That even thieves' honor did not obtain among these thieves is shown by the numerous revolutions and dictatorships. In a country where a man is legally considered guilty of a crime until he proves himself innocent, justice must mean an entirely different thing from what it means to an American. And so it is with all the rest of the bombastic and valorous phrases in the vocabulary of the Mexican.

Now the foregoing must not be taken as a denial of any right or good in the people of Mexico. On the contrary, the great mass of the Mexicans have nothing to do with the matter at all; but, being different from the American, being unversed and uninterested in the affairs of government, they sit supinely back and let the petty handful of leaders despoil them and the country.

Proclivities

ALSO, there have even been isolated cases of leaders, such as Juarez, to go no further, who were animated by ideals somewhat resembling our own. In the Madero revolution there were similar men. The test of the matter is the whole matter, and the whole matter is that no measure of liberty, justice, and the square deal has been achieved in all Mexico in the last four hundred years.

There is all the difference in the world between fighting and government. Anybody and anything can fight. Dogs and cats, centipedes and scorpions fight. Fighting is a very primitive sort of exercise. Governing is a high achievement, especially governing with peace and honesty and fair dealing, and this is something which the Mexicans have never succeeded in doing from the day they broke away from Spain's palsied grasp.

After the fall of Iturbide, in 1824, a republican constitution was adopted and promulgated. In the forty-seven years between 1821 and 1868 the form of government was changed ten times, federal republics, central republics, and dictatorships alternating one with another. In those forty-seven years over fifty persons succeeded one another as presidents, dictators, and emperors. One authority states that in the same period there were three hundred attempts, more or less important, at revolution. Clearly, the Mexicans have demonstrated a penchant for fighting, but what they have not demonstrated is the high ability requisite for governing.

The Turbulent Element

EVEN the deeper read and widely traveled American, able somewhat to refrain from seeing Mexico in his own image and in his image of his own country, is guilty of the error of seeing Mexico in the image of a Latin country. It should be understood at the outset that Mexico is not a Latin country. Mexico is an Indian country. The people of Mexico are not Latins. They are Indians. And they are Indians, only somewhat resembling the Indians of the United States. They are not merely a different tribe. They are a different race of Indians.

Sixty-five per cent of the inhabitants are pure Indians; 15 per cent are pure Spanish, Americans, English, and other foreigners. The remaining 20 per cent are mixed Indian and Spanish. It is this mixed 20 per cent that, according to the stay-at-home American notion, constitutes the Mexican, and practically the totality of the Mexican population.

And it is just precisely this 20 per cent half-breed class that foments all the trouble, plays childishly with the tools of giants, and makes a shambles and a chaos of the land. These "breeds" represent neither the great working class, nor the property-owning class, nor the picked men of the United States and Europe who have given Mexico what measure of exotic civilization it possesses. These "breeds" are the predatory class. They produce nothing. They create nothing. They aim to possess a shirt, ride on a horse, and "shake down" the people who work and the people who develop.

These "breeds" do politics, issue pronunciamentos, raise revolutions or are revolutionized against by others of them, write bombastic unveracity that is accepted as journalism in this sad, rich land, steal pay rolls of companies, and eat out hacienda after hacienda as they plenic along on what they are pleased to call wars for liberty, justice, and the square deal.

They claim the government of Mexico is theirs, these gentlemen with shirts, on the backs of stolen horses. And government, to them, means just precisely the license to batten upon the labor and industry of the country. The trouble is, so lacking are they in the ability for government, that they cannot maintain for any length of time the battening government of their dreams. They continually quarrel over the division of the spoils, and fight among themselves for a monopoly of the governmental battening privilege.

Devoid Even of Thieves' Honor

AS I have said before, they are devoid even of thieves' honor. They cannot trust one another. They cannot believe one another. For once, each correctly conceives the next one in his own image. Aware, in his heart of hearts, that he wants nothing less than 100 per cent of the swag, that only by accident could he ever be guilty of telling the truth to a fellow robber, that he is continually bent upon overreaching and double-crossing his fellow comrades of looters, he cannot expect anything else from his fellows.

To paraphrase Kipling, the consistency of these half-breeds is to know no shred of consistency. Because of this they are not even successful robbers. Tammany could give them cards and spades in the game they play and win out against them hands down.

They are brave on occasion. But they are not courageous. Their honor and valor reside in their tongues. They are turncoats from moment to moment. They will dine in the homes of their gringo friends one evening, and, before daylight, go gunning for their gringo friends and for the pay rolls and gold watches of their gringo friends.

They are what the mixed breed always is—neither fish, flesh, nor

Digitized by Google

fowl. They are neither white men nor Indians. Like the Eurasian, they possess all the vices of their various commingled bloods and none of the virtues.

It is impossible for the average American to understand them. Honor is one thing to them, another thing to an American; so likewise with truth, probity, and sincerity. There is no comprehending them by the rules of conduct and forms of reasoning habitual to the American. As a sample of this, I relate the following Federal explanation of the killing of six Americans at San Pedro, in the State of Chiapas.

A Topsy-Turvy Attitude

THIS is the way the Mexican authorities explain the mishap: When the Americans took possession of Vera Cruz, the authorities in Chiapas, fearful for the safety of the handful of American small farmers because of the inflamed condition of the populace, sent a detachment of rurales to rescue them. When the Americans saw the armed body of rurales approaching, fearing they were about to be attacked, they barricaded themselves in one of their houses. So intent was the rescue party on saving them that a hot fire was opened on the house. For three hours the rurales toiled heroically at the task of rescue, pouring a heavy fire into the house from every side. At the end of this time, the six American men being dead, the rurales stormed the house and saved the lives of an American girl of eighteen and an American boy of fourteen, whom they bore away to be mobbed through the streets of Tuxtla Gutiérrez ere they were safely put in jail.

Now it is not the killing that is the point of the illustration. It is the explanation made by the Mexicans of the horrible mistake made by the Americans in not understanding that the rurales were rescuing them. Surely no American brain nor north European brain could conceive such an explanation. Our reasoning processes are different. We could no more imagine that such an explanation would hold water than would we commit a three hours' attack on persons we were trying to save.

I should be inclined to doubt my harsh generalization on this half-breed class in Mexico were I alone in my opinion. It is because of this that I give the following extract from the "Encyclopaedia Britannica," which epitomizes the condition of affairs obtaining in Mexico from the time of Mexico's independence to the beginning of Diaz's rational despotism:

"On both sides in Mexico there was an element consisting of honest doctrinaires; but rival military leaders exploited the struggles in their own interest, sometimes taking each side successively; and the instability was intensified by the extreme poverty of the peasantry, which made the soldiery reluctant to return to civil life, by the absence of a regular middle class, and by the concentration of wealth in a few hands, so that a revolutionary chief was generally sure both of money and of men."

The Self-Destroyers

NOT only is this half-caste class but one-fifth of the total population of Mexico, but only a very small portion of this half-caste class is actively engaged in fomenting the anarchy that is destroying the country and merits the harsh strictures applied to it. Educated Mexicans assert that Huerta, Carranza, Villa, and Zapata do not represent more than one hundred thousand people. There is no such thing as a national movement or a popular movement.

Here is a spectacle of fifteen millions of people, without equipment or ability for government, being harried and destroyed by a group of one hundred thousand who likewise have neither equipment nor ability for government. Surely, there can be no discussion of this. What is is. What is is incontrovertible. And the unhappy situation of misgovernment in Mexico to-day is a fact and is incontrovertible.

Two Indians at the Head of Mexico

THERE are three millions of the half-castes. When they permit, as they do, by their passivity, the pernicious and anarchic activity of the small group of one hundred thousand of them, they are themselves negatively responsible for the present state of affairs. The point is that they likewise have no aptitude for government.

Heavens, when it comes to the mere matter of ability to make organized trouble, the very half-breeds themselves are dependent on the peons! The two strongest men to-day in Mexico are the ex-bandit peon and Indian, Villa, in the north, and Huerta, the Tlaxcalan Indian, in the south.

The attitude of the hundred thousand active half-breeds is that the government belongs to them and not to the fifteen millions. It is their government, and, by the Eternal, they are going to do what they please with it. Civilization? They are not interested in civilization. Civilization can go smash, and, i' faith, they will smash it themselves if they have a mind to.

These men have talked republic since the year 1824, yet Mexico has never been a republic. Certainly it was not a republic under the capitalistic dictatorship of Porfirio Diaz. Elections here are either slates put through by dictators and their cliques, or straight-out revolutions, in either case the one object being unadulterated loot. Now they do not say this, these child-minded men. They spout patriotism and valor, liberty, justice, and the square deal—all of which glorious phrases mean nothing of the sort, but are synonymous with loot.

They are not men in a world of men, these half-breed trouble makers. They are child-minded and ignoble-purposed. The stern stuff of manhood, as we understand manhood, is not in them. This stern stuff is in the pure-blooded Indians, however; but it manifests itself all too rarely, else it would be impossible for the many millions of Indians to have endured slavery for four hundred years at the hands of their tiny group of masters.

If Only He had Settled Villa

HUERTA is the flower of the Mexican Indian. Such Indians have appeared, on occasion, in the United States. Huerta is brave. Huerta is masterful. But even Huerta has never betrayed possession of high ideals nor wide social vision.

And Huerta has made mistakes. Two of these mistakes, to be mentioned in passing but which are not apposite to the contention of this article, are: (1) his not killing Zapata when he had the chance; (2) his very grievous error in not killing Villa the time he had him backed up against a wall facing a firing squad. It was on this latter occasion that he compelled Villa, on his knees, arms clasped about Huerta's legs, to beg Huerta for his life. Villa has not forgotten that little episode. And it is fair to assume that sometimes the memory of these two mistakes flits regretfully through Huerta's mind as he sips a drink at the Country Club and contemplates Villa moving irresistibly down on him from the north; both his coasts blockaded by American warships and all arms and war munitions embargoed; Zapata at his back to the south and west like a hungry tiger; his credit exhausted, but a small portion of his own country left in his hands, and his own people in his capital city ripe to turn on him the instant he totters.

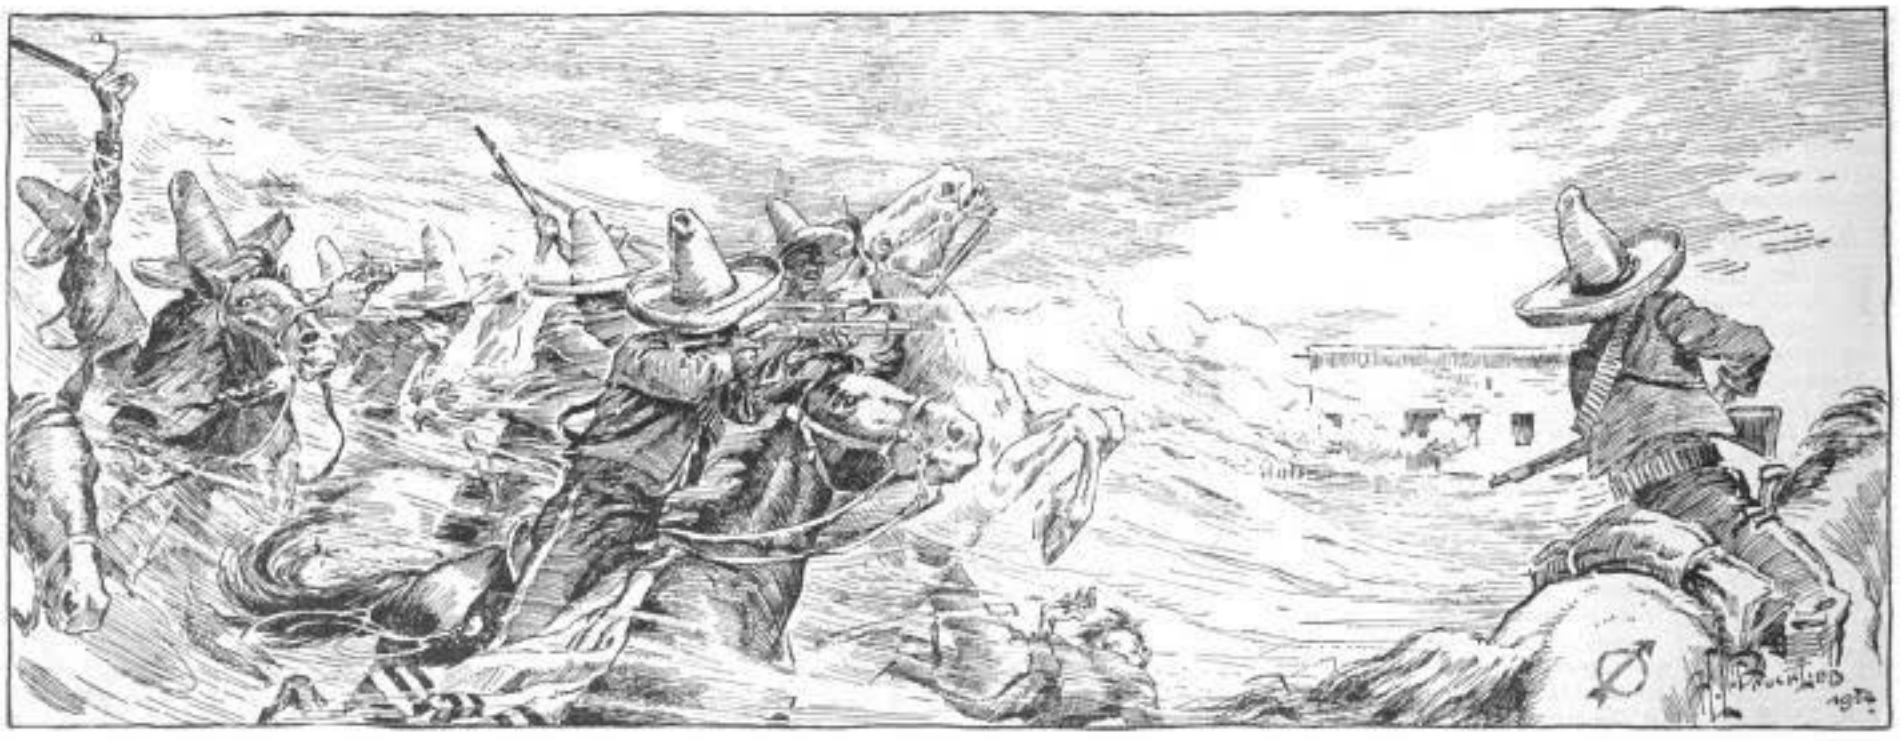
I should not like to be Villa or Zapata if only for five minutes Huerta should get hold of me. Nor should I like to be Huerta if only for five minutes Zapata or Villa should get hold of me.

Will the Peon Get the Land?

EGYPTIAN and Mayan hieroglyphics cannot obfuscate the mind of the stay-at-home American as do the phrases and slogans of the Mexican "breeds." A hieroglyphic means nothing. The phrases and slogans of the Mexicans do not mean what they seem to mean. Countless Americans think the present revolution is an expression of the peon's land hunger. Madero raised that cry. Zapata still raises the same cry. Orozco promised the peons free farms in his plan of Tacubaya, when he was already the bought tool of the great hacienda owners who had employed him to cause confusion to Madero. Carranza, in veiled words and vague promises, shied at the division of the great haciendas. Villa still shouts "free land."

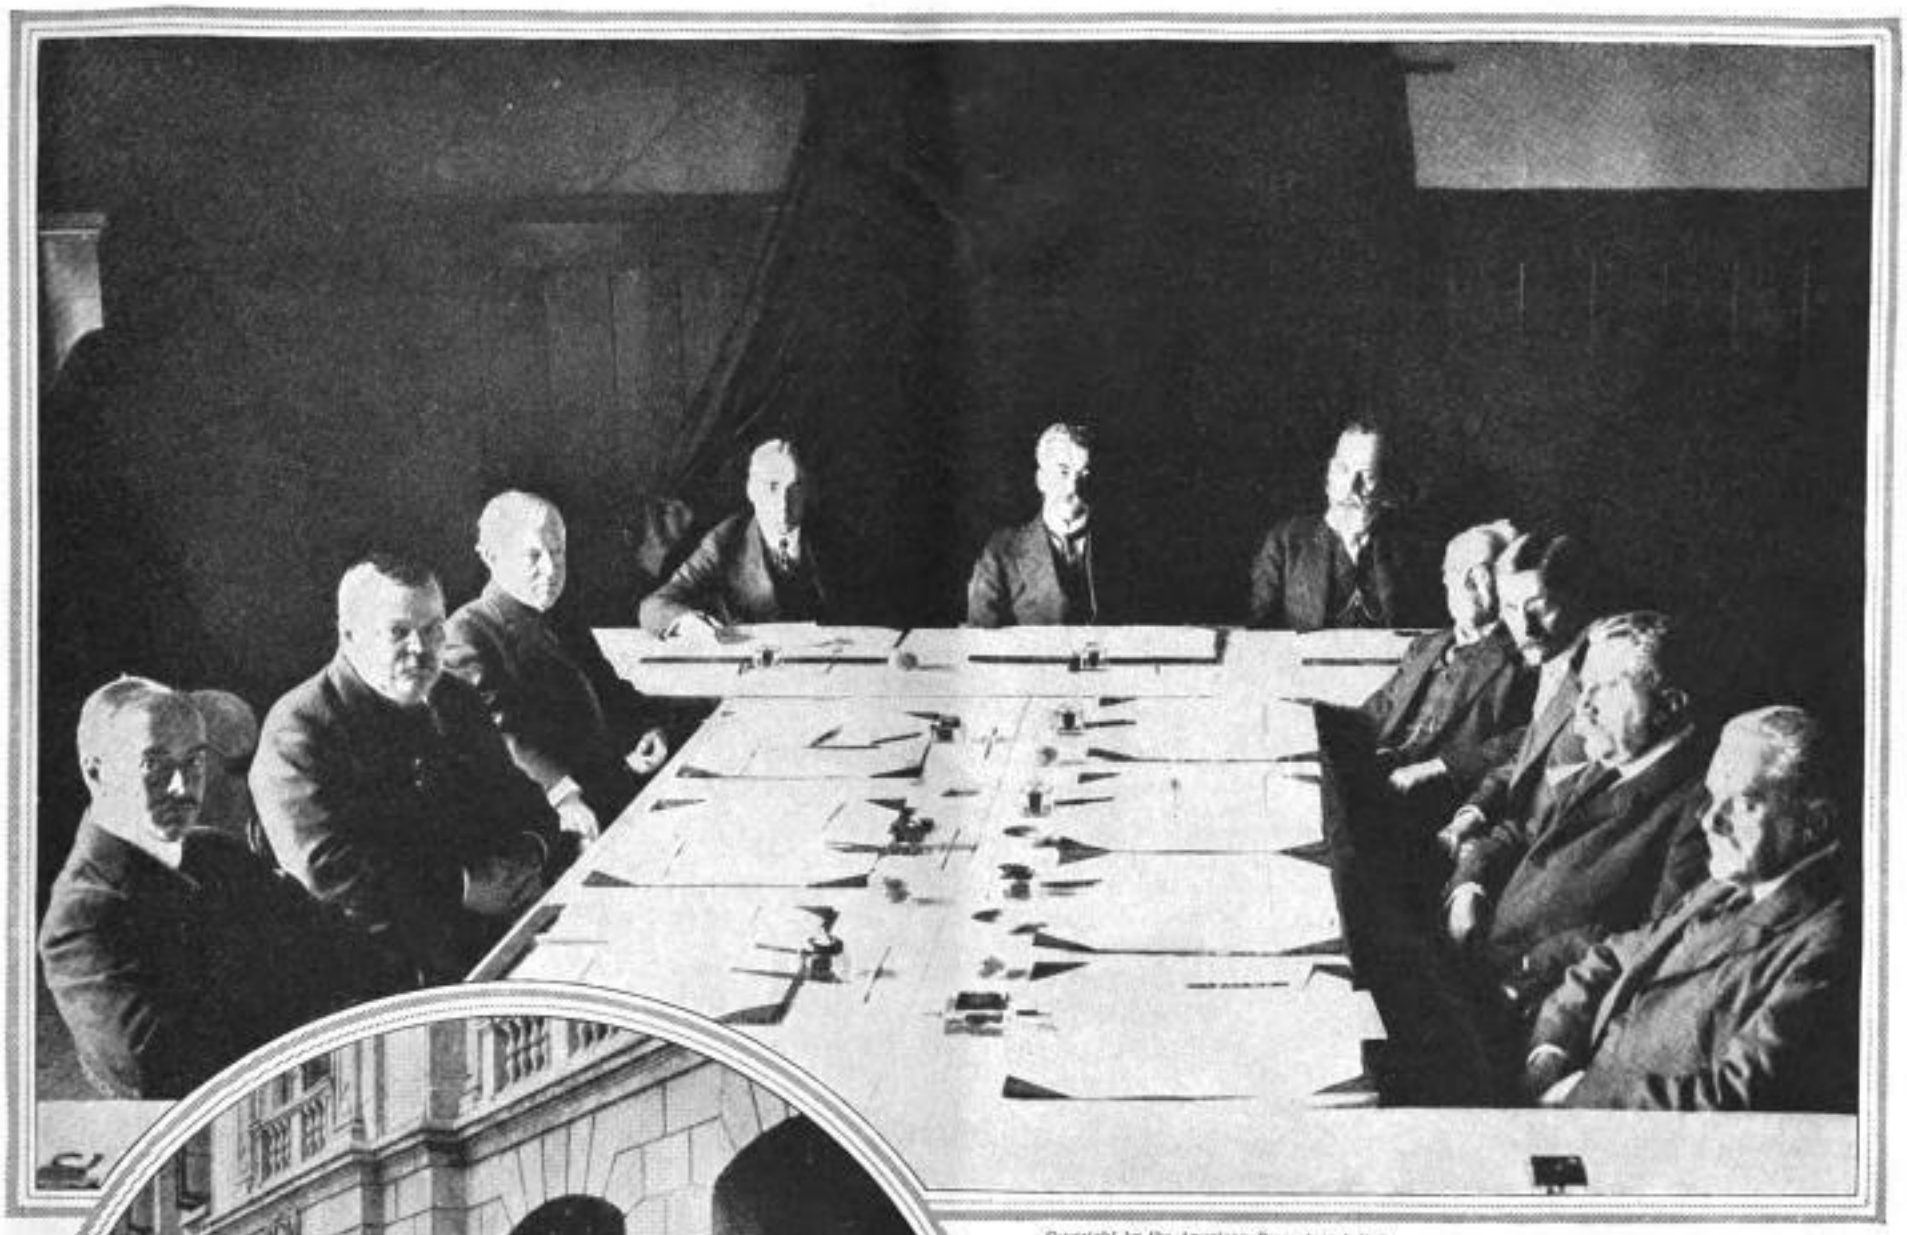
But how about the peon? There are twelve million peons. They have had four centuries to get interested in the subject. Considering the paucity of the numbers of their masters, they have evidently not considered the matter to any purpose. I doubt, by a count of noses, if one-fourth of one per cent of the peons of Mexico are bearing arms for the purpose of gaining free land or of gaining anything else their leaders desire.

Villa confiscated the great estates of Chihuahua. To each adult male in the State of Chihuahua he gave sixty acres of land. But there was a string on the gift. For ten years the land was to be inalienable. His explanation of this string is that the peon has lost his ancient land hunger, and that, if given the land outright, he would immediately sell or gamble away his holding.

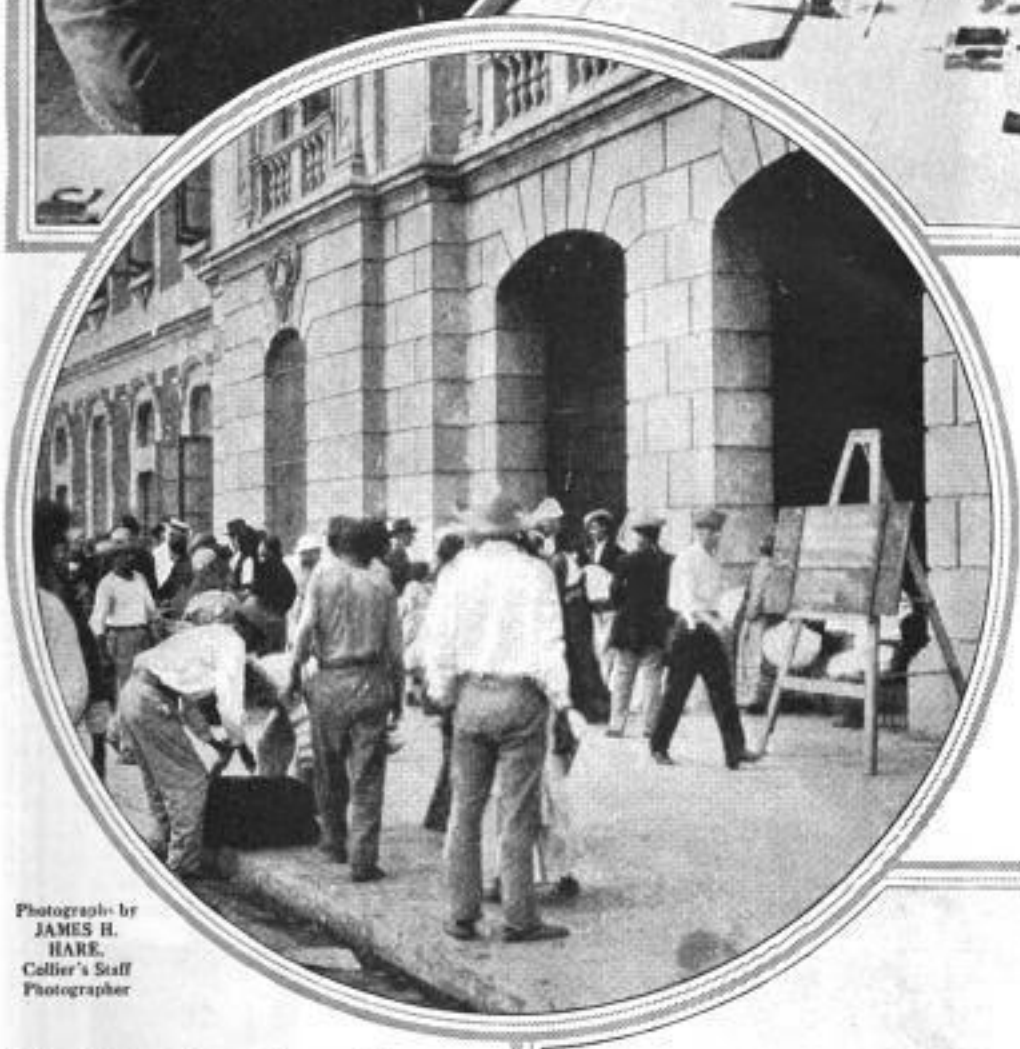


Of course the peon should have the land. Some day he will have it. But when no more than one-fourth of one per cent of the peons have risen to take the land, the feebleness of the peon land hunger is fully told. So another magic phrase means one thing to the American mind and quite a different thing to the Mexican mind. It is impossible to conceive of twelve million Americans, gnawed by the land hunger, arming and sending into the field one-fourth of one per cent of their number to fight for the land. Either the peon is different from the American, or land hunger is one thing to the one and another thing to the other. Apparently both contentions are true. The American is an Anglo-Saxon. The peon is an Indian, and a Mexican Indian at that. Furthermore, the Mexican Indian, before the Spaniard came, did not hold land individually; he held it communally.

Born Guerrillas



FURTHER to discredit this one-fourth of one per cent of peons bearing arms, two things must be taken into account. Numbers of them are restless and rough-natured only, rather than sustained by a belief in the rightness of the war they wage. Numbers of them are criminal and disorderly individuals. Numbers of them fight on either side according to the fortunes of battle. Numbers of them are happy-go-lucky, preferring the fun and adventure of guerrilla warfare to the stay-at-home, plodding life of the farmer.



The second thing is no less important. They like the job. They have got (Concluded on page 27)

Rescue in the Mexican fashion—"When the Americans saw the armed body of rurales approaching, fearing they were about to be attacked, they barricaded themselves. For three hours the rurales toiled heroically at the task of rescue, pouring a heavy fire into the house from every side"

The New Pan-American Spirit and the Niagara Conference

NO MATTER what may come of the efforts of foreign nations to help Mexico cure herself of her present ills, the work of the three South American mediators in bringing about the peace conference at Niagara Falls, Canada, will go down in history as a good piece of diplomacy. It not only proved that Argentina, Brazil, and Chile were unselfishly interested in the welfare of the Mexican people, but that they have actually strengthened the friendship between this country and the foremost South American nations. The photograph above shows the mediators and peace commissioners at one of their meetings at Niagara Falls. Ambassador Domicio da Gama of Brazil, chairman of the conference, is in the center. At his right is Romulo S. Naon, the Argentine Minister; at his left, E. Suarez Mujica, Minister from Chile. Lower left: H. Percival Dodge, secretary of the American delegation, and on the same side of the table, left to right, are Frederick W. Lehmann and Justice Joseph R. Lamar, our commissioners. Opposite them are Augustin Rodriguez (upper left), Emilio Rabasa, and Luis Alguera, the Mexican envoys, and their secretary, Rafael Alguera.

The Big Appetites of Lazy Mexicans

A PRODIGIOUS appetite is one of the main characteristics of the poor and indolent Mexican. Our men found it out soon after the occupation of Vera Cruz, and established a free food station, which you see in the circle above. Later, when business conditions became normal and the bread line was abolished, they learned that many Mexicans would rather fight for food than work for it. No longer able to get first-class rations by merely asking for them, hundreds of natives, particularly the women and children, began to hang around the army camps, where they picked up scraps of food thrown away by the soldiers. On several occasions women fought each other like wild animals over crumbs dropped from the tables.

Many of the belligerents had their clothes torn and their faces badly scratched. The fights afforded amusement for the soldiers, who looked on without interfering.

Built for Protection but Used for Torture

Photographs by
JAMES H. HARE,
Collier's Staff Photographer

THIS IS A VIEW OF SAN JUAN DE ULLOA, *the prison in Vera Cruz harbor, from an aeroplane far up in the sky. The unusual photograph was taken with Mr. Hare's camera and at his direction. Lieutenant Lamont snapped it as he was making a flight over the city and environs. San Juan de Ulloa was completed after the pillaging of the city by privateers in 1712, but it was never of much use as a fort. Chiefly it has been used as a prison, and its two centuries of history are a record of official cruelties equal to the outrages of the Spanish Inquisition. Recently the Americans released over 300 persons confined there*

A PRISONER IN ONE OF THE TIDEWATER DUNGEONS *in San Juan de Ulloa, Vera Cruz, where thousands of unfortunates have been locked in damp, filthy cells to become victims of tropic fevers or go mad from loneliness and hopelessness. The convict is a "life termer," and the flash from Mr. Hare's camera was the first light he had seen since his imprisonment. The wheel, the rack, and the thumbscrew were often used in the prison until recent years*

A FORMER TOOL OF HUERTA, *Aureliano Urrutia (in white), arriving at Vera Cruz. Later a Mexican mob, blaming him for many executions, threatened his life*

WILSON AND MEXICO

WE ASK the public, in reading what is here set down, to bear in mind two things. The first is: That we don't want the United States to annex Mexico, or to conquer it, or to send our army into it. We wish to avoid, emphatically, identification with the Hearst type of jingo. Like many others within our knowledge, we have hesitated to criticize Wilson's Mexican policy through fear of being confused with that class of critics whose wish is for warlike aggrandizement. In the second place, we sympathize heartily with the demand for agrarian reform in Mexico, which means the dividing up of the land among the peons. A man and his wife and children upon sixty acres of land is the most wholesome basis of civilization, and we hope Mexico will soon achieve it. But we believe that country will achieve it sooner and keep it longer, if it comes peaceably through orderly processes of law, than through such a creature and such an uprising as Villa's. And we believe most emphatically that this division of the land must be brought about by Mexico itself. It cannot be done and should not be attempted by the United States. A division of the land that is made by the sword will have to be supported by the sword. The United States can no more confer this reform on Mexico than it can confer self-government upon it.

Get This Clearly in Mind

ONE of the most intelligent and accurate thinking men in the United States is Mr. Herbert Quick, editor of "Farm and Fireside." He vigorously dissents from our criticism of Wilson's Mexican policy. He says:

> The thing to consider in that connection is: What would have happened in Mexico if Wilson had recognized Huerta?

Mr. Quick thinks the revolution would have come anyhow. Maybe. But stick a pin right there. The point to remember is this: Whatever would have happened *would not have been Wilson's responsibility*, nor ours. Right here is the cause of many mistakes in the discussion of Wilson and Mexico. "Refusal to recognize Huerta" is a form of words which *sounds like a negative act*. It *sounds* like merely keeping hands off. In reality it is *an affirmative act*. To borrow an expressive phrase from the contemporary classics, it is "butting in." Get this firmly in your mind and you will have cleared the ground for correct thinking about Wilson and Mexico. To recognize a new government in a foreign country is the usual thing, practically the universal thing. To refuse to recognize requires explanation and justification—and entails responsibility. That responsibility is just now coming home to Wilson, and he must stand up to it. *To recognize*, in the normal way, *would have been non-interference*. *To refuse to recognize*, as Wilson did, *is interference*—a sort of interference whose logical end is intervention. Just here is the occasion of most of Wilson's troubles—he wants to sidestep the logical result of his own act: disliking intervention above all things, he took in the beginning the one step whose logical end *was* intervention. That is Wilson's personal tragedy. It sounded fine when he did it, and we all praised him for his lofty words of distaste for a government founded on assassination. Now that unpleasant consequences have come, he must accept them as well as he did the praise. It is entirely fair to insist that he ought to have considered the consequences.

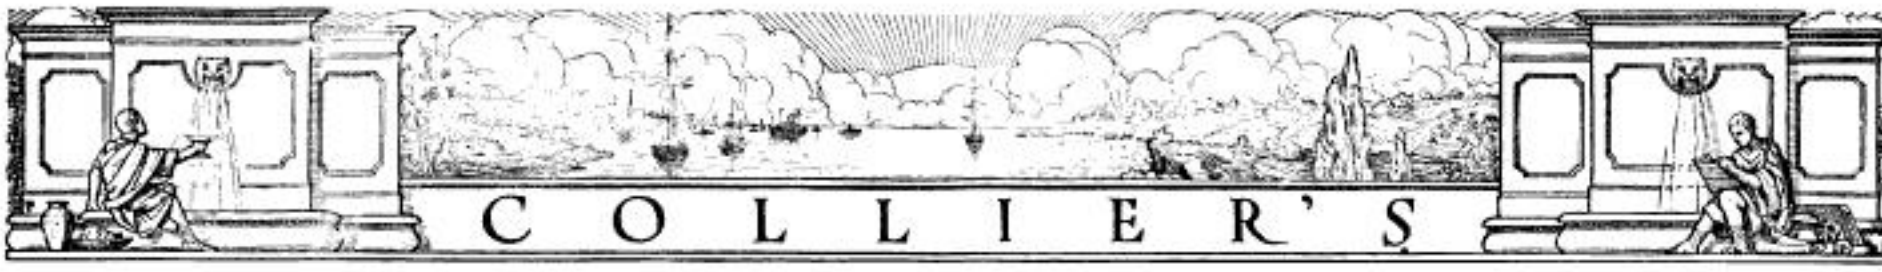
A Portrait of Villa

BY FAR the best correspondence that has come out of Mexico about Villa has been written by John Reed. It appears in the "Metropolitan Magazine" for June. Reed is intensely sympathetic with Villa. Reed himself belongs to the little group of advanced agitators in America who edit "The Masses," support the I. W. W. ardently, and are usually to be found wherever agitation takes the form of violence. He is an ardent supporter of Villa, his purpose and his methods. From his friendly account of Villa these extracts are taken:

> Villa was an outlaw for twenty-two years. . . .
>
> Seobell, the British Vice Consul said: "I represent the Spaniards."
>
> "All right!" snapped Villa. "Tell them to begin to pack. Any Spaniard caught within the boundaries of this State after five days will be escorted to the nearest wall by a firing squad."
>
> The consuls gave a gasp of horror. Seobell began a violent protest, but Villa cut him short.
>
> "This is not a sudden determination on my part," he said. "I have been thinking about this since 1910. The Spaniards must go. . . . Twice we drove them out of Mexico, and allowed them to return with the same rights as Mexicans, and they used these rights to steal away our land, to make the people slaves, and to take up arms against the cause of liberty. They supported Porfirio Diaz. They were perniciously active in politics. It was the Spaniards who framed the plot that put Huerta in the palace. . . . They thrust on us the greatest superstition the world has ever known—the Catholic Church. They ought to be killed for that alone. I consider we are being very generous with them."
>
> The revolution possesses a black book in which are set down the names, offenses, and properties of those who have oppressed and robbed the people. The Germans, who have been particularly active politically, the English and Americans, he does not yet dare to molest. Their pages in the black book will be opened when the Constitutionalist government is established in Mexico City.
>
> Villa has at least two wives; one, a patient, simple woman, who was with him during all his years of outlawry, who lives in El Paso, and the other a catlike, slender young girl, who is the mistress of his house in Chihuahua. He is perfectly open about it. . . .
>
> The colorados, or Federal volunteers, which are the remnants of Orozco's lawless army, he executed wherever he captured them; because, he said, they were peons like the revolutionists and that no peon would volunteer against the cause of liberty unless he were bad. The Federal officers also he killed, because, he explained, they were educated men and ought to know better. . . .
>
> Fierro, the man who killed Benton, is known as "The Butcher" throughout the army. He is a great, beautiful animal of a man, the best and cruelest rider and fighter, perhaps, in all the revolutionary forces. In his furious lust for blood Fierro used to shoot down a hundred prisoners with his own revolver, only stopping long enough to reload. He killed for the pure joy of it. During two weeks that I was in Chihuahua Fierro killed fifteen inoffensive citizens in cold blood. But there was always a curious relationship between him and Villa. He was Villa's best friend, and Villa loved him like a son and always pardoned him.

It is grotesque that President Wilson, after revolting at Huerta, should find himself giving aid and comfort to, and practically in alliance with, such a leader and such an uprising as Villa's.

Bosh



FROM the melodramatic interview which President Wilson gave to the "Saturday Evening Post" we take this:

> I challenge you [he said] to cite me an instance in all the history of the world where liberty was handed down from above! Liberty always is attained by the forces working below, underneath, by the great movement of the people. That, leavened by the sense of wrong and oppression and injustice, by the ferment of human rights to be attained, brings freedom.

This passage from Wilson's utterances gives the clue to what is the matter with him. *He tries to make words take the place of facts*, and, in the slang of the day, so far, he gets away with it. We have watched carefully the newspapers of the United States for their comments on this interview, and, with the single exception of the Louisville "Courier-Journal," they have, as men say, fallen for it. Some hundreds of editors have uttered quite lyrical praise for a statesman with sentiments so noble and a historian so rich in knowledge. And right here is Wilson's trouble. Through a skill in words which is in part, we think, oversubtle and in part autohypnotic, he has created a figure of himself, and a world, both of which are false, both of which are made up of words and have little relation to facts. In creating this false personality, shallow newspapers, which have not the intellect to put the acid test to his words, are as responsible as he is himself. Of course this figure and world of words is bound to come to smash sooner or later.

It would be difficult to compress more false history and bad statesmanship into so few words as are contained in the paragraph quoted from Wilson's interview. To take the most obvious example, consider human slavery. It was once practically universal; it is now practically unknown. We can't recall—and it would be entirely safe to challenge Wilson to recall—a single square foot of the earth's surface upon which slavery was abolished by rebellion on the part of the slaves. (The island of Haiti may be a possible exception.) The abolition of slavery has invariably been "handed down from above." If these words of Wilson's were true, slavery in the United States would have been abolished by rebellion on the part of the slaves. It suits Wilson to invent this sort of history and this sort of philosophy for justification when he finds himself, against his intention, identified with Villa's bloody uprising. And so far as the newspapers are concerned, he gets away with it.

These Bills Are Bad

PRESIDENT WILSON'S act in approving the Civil Appropriations Act, which forbade the expenditure of Government money in the prosecution of labor organizations for violations of the Sherman Law, was the entering wedge. It was a recognition of a special privilege to one class of lawbreakers which was to be denied to another. It afforded the inspiration for the Bacon-Bartlett Bill, which we commented on some weeks ago, and aims to create two special-privileged classes, labor unions and farmers' associations, to which the antitrust law should not apply. We have before us now the further consequence of the original bad precedent in a bill introduced by Mr. BALTZ in the House, calmly proposing that "men hired or engaged, or seeking to be so hired or engaged, as strike breakers, so called, for the purpose of assisting in or interfering with any labor trouble or strikes" shall be denied transportation by the railroads. The penalty proposed is to send the railroad to jail, or to make it pay a fine of $1,000. Some of the possible embarrassments of sending a railroad to jail have caused a further clause to be added by which the president, manager, or other officer may take the corporation's place in the Federal prison. Inasmuch as the jail sentence is only a year, no reasonable railroad president can object to it on the ground of harshness. This proposal to imprison the "president, manager, or other officers of the carrier" individually is obviously a concession to President WILSON'S views on the necessity of making crime personal. We omitted to state that it becomes also unlawful under this bill for any railroad or steamship company to transfer, handle, or carry any arms or ammunition into any State or territory "for the purpose of arming or assisting in arming or equipping such so-called strike breakers." If some of these bills, which attempt to accomplish things by the application of the Interstate Commerce clause of the Constitution, go into effect, the railroads will have to increase their rates in order to hire enough clairvoyants, crystal gazers, and detectives to know what the moral or immoral purposes of the traveler may be in buying his ticket. There is, so far as we know, no occasion for anyone to get excited over this bill. It is interesting, however, as an illustration of a tendency. You cannot start a bad precedent in class legislation without arousing an army of little Olivers who want more.

Lloyd-George and Prosperity

THE FRIGHTENED STANDPATTER is always seeing visions of blue ruin to all business. His idea of justice is concerned only with the strict enforcement of commercial contracts, anything else is anarchy and panic. Here is an English item for these ghost dancers: The Institute of Chartered Accountants in England and Wales (not a radical body) was entertained at dinner on May 5 last by the president of the institute, Mr. H. WOODBURN KIRBY, and the official report of the proceedings quotes Lord SOUTHWARK, member of the Privy Council and president of the London Chamber of Commerce, as follows:

> He would only say that they realized as business men that the pessimist was having rather a bad time at present. They had only to look at the bankers' clearing-house returns, the Board of Trade returns, the railway and shipping returns, and the great advance which the port of London was making, to see that they were doing very well.

Evidently England is discovering that prosperity results from working out some measure of social justice and thus releasing the energies of free and hopeful men. The manufacturers and traders of Great Britain will some day erect monuments to LLOYD-GEORGE.

Regulation and Taxes

THE PUBLIC SERVICE CORPORATION of New Jersey operates a system of trolley lines, gas works, and other public utilities in that State. During the year 1913 taxes paid amounted to 6 per cent of operating revenue—i. e., every time a Jerseyman bought a dollar's worth of street-car tickets he paid 6 cents taxes. The Standard Gas and Electric Company owns a number of electric and other utility companies, mostly in the States west of the Mississippi River. Last year taxes amounted to 6.2 per cent of the combined income of all the subsidiary companies, a trifle higher than the New Jersey rates. Every telephone bill paid by subscribers receiving service from the Bell telephone system (and there are several millions of them) is over 5 per cent taxes—that is, you pay a dollar to the company and a nickel for the Government. All these utilities are subject to regulation by public-service commissions. Rates must be fixed high enough to cover operating expenses, and taxes are such an expense. It follows that in fixing the rates to be charged for gas, electricity, telephone messages, trolley rides, etc., we are arranging to have these corporations collect taxes from us as users of these services. The effect is that the services cost more. How far do we want to go with this? Regulation gives us absolute power in the matter in the long run, and there is nothing to prevent us from making taxes 50 per cent, say, of operating expenses instead of 5 or 6 per cent. The very proposition suggests what a crazy patch-work taxation is in the United States. During the thousands of years that human beings have been living together gregariously they have never arrived at a satisfactory method of assessing upon each individual what his subscription should be to the common fund.

A Sure Thing

RAY STANNARD BAKER closes an article in the "American Magazine" by stating that the Washington "dope" is to the effect that in the Presidential campaign of 1916 "the battle will be between Mr. BRYAN and Mr. ROOSEVELT; and may the best man win!" We are willing to go further and say that, in the above event, the best man certainly and surely will win. It's a cinch!

Purest Buncombe

WHEN POLITICIANS raise hands to high heaven and in husky voices pay tribute to the holiness of platform pledges—look for the nigger in the woodpile. Party platforms contain planks of varying importance; the Panama Canal toll plank that was inserted in both the Progressive and Democratic platforms of 1912 was not essentially a party measure; neither did voters generally take any interest in it or weigh the issues involved. Democrats who are tempted by editors of the Hearst school and statesmen of the obsolescent Champ Clark type, will do well to note that a canvass of the delegates to the Baltimore Convention, conducted by Senator GORE of Oklahoma, shows four out of five of them (702 in 867) in support of the President in his recommendation that the shipping subsidy be repealed. Obstructionists may emulate the Missouri mule—but why insist on comparisons?

Another Lesson from Vera Cruz

ADMIRAL FLETCHER is reported as having written Secretary DANIELS that during nine days ashore at Vera Cruz not a single man got intoxicated or was guilty of disorderly conduct. As this leading Mexican port has the full complement of dives and grog shops, the record is a fine one, and all good Americans are proud of it. According to such established authorities as SOLOMON and BENJAMIN FRANKLIN, temperance is learned by practicing it.

Horrible Examples for Commencement

THE COMMENCEMENT ORATORS are going to have a lot to say this month about the part the college man is to play in the life of the nation. They can get a perfectly good idea of what that ought to be by taking the opposite of what these eminently successful "old grads" have done: WILLIAM BARNES, Jr., Harvard; COLE BLEASE, Georgetown; BENJAMIN B. ODELL, Columbia, and BOIES PENROSE, Harvard. No doubt there are plenty of others (e. g., A. RUEF, University of California; G. W. HINMAN, Hamilton), but these four come to mind as perniciously conspicuous. Note these examples and avoid them.

An Invitation

THE OXYFAKERS are at it again. They are reported to be making fine killings in Philadelphia. The oxyfakers are the braw lads with the testimonials; but some testimonials aren't flattering enough to get printed. Anyone who would like to relieve his feelings about the truth of Oxydonor or Oxypathor from personal experience is invited to send us his or her story of tin-can medicine and what it has failed to do to relieve suffering. The truth will out—but we leave it to you whether we shall print your name or not.

Is This So?

APROPOS of too many divorces, we find this key in "Thoughts on Various Subjects," by JONATHAN SWIFT:

> The reason why so few marriages are happy is because young ladies spend their time in making nets, and not in making cages.

The Fame of Lincoln

WITHIN FIFTY YEARS of LINCOLN'S death, in celebration of the centenary of peace between the United States and Great Britain, his statue is to be erected opposite Westminster Abbey, near the Houses of Parliament. In the very center of London, at the heart

Digitized by Google

THE NATIONAL WEEKLY

of the British Empire, a replica of SAINT GAUDENS's great work in Lincoln Park, Chicago, will testify to the high place our Civil War President has taken in the history of civilization. We all know why.

—And the Lincoln Myth

WITH THE FAME goes also the myth—this curious legend that LINCOLN was a "rough-and-ready debater," an "ungainly man." The plain truth is that he was a man of uncommon naturalness, dignity, and grace; an athlete of extraordinary power and endurance. Some of the photographs of him are among the comparatively few human pictures that are inherently decorative. TRUMAN H. BARTLETT proved this some years ago in an article in "McClure's Magazine," and he cited in his support such authorities as the great French sculptor RODIN. In debate and in his writings LINCOLN ranks as one of the masters of the English language. His work is a permanent part of our literature, and a sentence from one of his addresses is framed in one of the halls at Oxford as an example of perfect English speech. If you want to know what debate can be, read LINCOLN's arguments against DOUGLAS. Fame sometimes needs nothing but the truth, and LINCOLN's personality was worthy of his soul.

By No Means Apt

QUIBBLING about the use of words is not our specialty—yet the misuse of a good word does at times distress us. Take "apt," for example. When the word is not used to denote skill or suitability, habit is implied in these three letters—habit or predisposition. One says very properly "an honest man is not *apt* to forget his liabilities," just as old SAM BUTLER wrote: "For fat is wondrous apt to burn." Newspapers nowadays — and they're not without dictionary encouragement — are making "apt" a mere synonym for "likely" in cases where just one action, and no habit or custom, is involved. This abuse of a helpless monosyllable is to be noted in the news columns of the New York "Evening Post"—the Prunes and Prisms of American journalism. From the New York "Times" we learn that "when the news came that Vera Cruz had been taken he [Mr. NORMAN ANGELL] emphasized the grave danger of the situation that was *apt to ensue*." Equally cruel manhandling of the little adjective occurs in New York's renascent "Tribune," where we read:

> Mr. ADAMSON wouldn't say what he was *apt* to do.

HORACE GREELEY must have shivered in his marble tomb when the reporter for his newspaper typed this gruesome sentence.

Helps to College Temperance

A PATHETIC OLD GRADUATE, signing himself '89, has written the Yale "Daily News" a poetic exposition of the contempt which, in his opinion, former Yalensians have for the present undergraduate body. The "high point" of the piece is its melancholy recollection of the good old days

> When rolling down to Mory's
> The sweatered seniors came,
> Roaring with booze and victory
> After the Harvard game.

New Haven's latter-day degenerates are accused of drowning their numerous athletic defeats in tea. There are things too deep for grief, as another poet has said, and no doubt "rolling down to MORY'S" was a notable stage in the development of Connecticut civilization. It occurs to an unsympathetic bystander that HAUGHTON, WRAY, and the other Harvard coaches might very well be described as the men who took the ale out of Yale. More power to them! There are many ways of cutting out the drink at our colleges, and any method which does the work is a good thing for the future of the country.

"Now tell Uncle Teddy all about it"

Nelson Harding in the Brooklyn Eagle

Biographies of Souls

INTERESTED by our recent query about the six best biographies, a friend thus expresses himself:

> That list was all right, and I'm sure I have no fault to find with it as far as it goes. But why not include the biographical sketch, which literally "sketches" its subject, paying less attention to exhaustive details than to the real soul—if you'll permit that word? For my part, I'd sacrifice several of the biographies in the list you quoted for the sake of DR. JOHN BROWN'S "Marjorie Fleming," STEVENSON'S "Father Damien," and BARRIE'S "Margaret Ogilvy."
>
> Perhaps some folks would call those books tributes rather than biographies. Well, let it go at that: the tribute of a grown man to a dear little girl (comrade of WALTER SCOTT); the tribute of one brave man to another; the tribute of a son to his mother. If anyone can read these three books without a tightening of the throat, well—the curse of the crows on him for a creature without a heart!
>
> I've just realized all three of these authors are Scots. What do you know about that! Is it just a coincidence? Or is there some reason why this dour-seeming race can express its feeling so tenderly about those it loves? I do wish, with your all-seeing editorial wisdom, you'd enlighten me.

We can't, friend, though we can tell you that we easily escape your curse of the crows. We've been meaning for some time to reread "Marjorie Fleming," who wrote those immortal lines of the heartbroken but stoic mother turkey:

> She was more than usual calm,
> She did not give a single dam.

And we're pretty strong for the other two books you mention. Can any reader add to this trio of "emotional" biographies?

An Interesting Sophistry

ANOTHER COMMENT on the list of biographies is that

> It's a shame that "Henry Esmond" can't be included as a biography. If lots of books which make real people seem unreal can be called biographies, why can't a book which makes an unreal person real?

Why, indeed?

Getting Rid of Toil

WE ALL know something of labor-saving machinery in a vague way, but we are not likely to have any idea of the ceaseless, scientific, wide-reaching improvement that goes on in these devices. Magnet cranes that will pick up and carry five tons of loose scrap iron; one-man coal-handling bridges that will unload five hundred tons of coal in an hour so that you can see the ship rise in the water; lathes in which ten tools cut into two pieces of steel at one time and one man runs two such machines—these are only three of the new weapons we are now using to conquer the world of things. What are we going to do with it?

Looking Backward in 1999

THE FABIANS, feminists, revolutionaries, swinging in the welter of those times when the century was young, were often splendid fellows, charged with sincerity and zeal. How angrily and heartily they wrestled with their work, with drawn brow and uneasy eyes, finding no peace in the world, refusing the peace of an inner withdrawal; always in pain over mankind and restless with themselves. They caught at hasty regeneration and upheaval in the dark hope that they might turn dross to gold; forcing their feelings into sympathy with each new thrust of revolting women and awakening syndicalists, breathing in the wind of fury, stretching their intelligence thin over a throng of causes, accepting gospels and evangels with an ever-fresh welcome. And they paid the penalty of that variable impulse by an absence of symmetry, of serenity, of central control. There was a flatness in much of their troubled temporary work, sure of nothing except that all is change. They busied themselves with tossing age-old institutions into the bonfire, deposing God (in their own lives), planning a new and greater state, a more admirable society, on what would prove well pleasing to lawless girls and hasty improvising visionaries. They constructed a logic where no two persons agreed on the premise, and reared a philosophy out of a whirl of caprice.

Stewart Speedometer—the most popular speedometer in the world

Nearly 300 car manufacturers equip with the Magnetic Speedometer. 95% of all the speedometers in use are Magnetic Type. It is permanently accurate because it is built on the proven best principle. It has *only one moving part*, as against the dozen or more rapidly wearing parts that are *necessary* in speedometers built on the obsolete centrifugal principle.

You will *probably* find a Magnetic Type Speedometer on the car you are considering. But look—be sure!

The Magnetic Type Speedometer costs the car manufacturer more than any other type. You may be sure that he adopted it, *and willingly paid more for it, only* because he considers it *best*. And the fact that he has gone down in his pocket to provide the best speedometer proves that he has also provided the best to be had for the entire equipment of the car—he is building cars on a *quality basis*.

The old-fashioned, out-of-date speedometers, such as the centrifugal, have now been practically abandoned. They are only supplied by the very few manufacturers who try to save money at the *car buyer's* expense by "skimping" on equipment.

Stewart Model B-Z-12 Speedometer
Price $50

Save your back,—save your tires —by having a Stewart Tire Pump mounted right on, and driven by, your motor

It is time you were relieved of all back-breaking hand pumping, and all the tire troubles and expenses that are caused by using a hand pump.

Manufacturers have made it possible for you to start your motor by pressing a pedal. They have provided lighting equipments that are controlled from the driver's seat by merely touching a button.

But the most important thing of all they are just coming to,—the Power Tire Pump. Many car manufacturers are now installing this Stewart Tire Pump as regular equipment. Everyone knows that the hardest work about an automobile is the job of filling your tires by hand.

Stewart Tire Pump Complete only $15

You are sure to be up against the necessity of tire pumping *sometime,—somewhere*—on the road, if you've used all your extra tires—in your garage when you get back from a trip, to get your extra tires in condition again.

You cannot fill a tire sufficiently by hand, and an under-inflated tire wears out rapidly through rim-cutting, broken fabric, and friction. A half-filled tire drags on the road, increasing the consumption of gasoline. All this doubles your tire expense.

What's the use of beautiful spring construction and 10-inch upholstery if you haven't a pump that will keep your tires up to proper inflation?

How many car owners religiously test the pressure of air in the tires on their cars? How many run along on half-filled tires until they are nearly flat, before they again blow them up to the pressure stipulated by the tire maker?

Tire manufacturers will tell you that you should test the tires every few days, and if they don't show the right pressure, then they should be immediately brought up to the right pressure. But you are bound to put off this hard work as long as you can, if it is up to you to do it with a hand pump.

With the Stewart Tire Pump mounted on your motor you simply throw over a little lever and the motor does all the work—quickly. It fills a big 36 x 4½ in. tire, for instance, in five minutes. It is designed on the most efficient engineering lines, beautifully built and finished. The piston is steel, hardened, ground and lapped. The connecting rod is hardened steel. The cylinder has fins which insure perfect air cooling. The base is aluminum. No dust or oil can enter tire.

Complete, with air pressure gauge and 12 feet of high grade hose, only - - - $15

Can be fitted on your present car, old or new. Write for complete catalog, and let us know the car you are now driving. If you are buying a new car the dealer will install it for you.

The Great Chain of Stewart Service Stations—that mean Real Service

We maintain the most complete, thorough and efficient service organization in the automobile accessory industry—bar none. Devoted exclusively to our own products. Dedicated to you who own and use Stewart equipment on your cars. Yours to command and profit by wherever you go in the civilized world.

Look at the names of the cities dotted about the oval border of this advertisement. In each of these cities is a Stewart Service Station. This is only a partial list, comprising those in the United States alone. We have 17 direct Factory Branches and 70 Service Stations, and they are being added to constantly. They soon will cover the automobile-using world.

There are so-called "service stations,"—small concerns that merely carry a few spare speedometer parts, with no equipment to make any repairs or adjustments. As compared to these, Stewart Service Stations are completely equipped, manned by factory experts, carry a full line of Stewart products and parts, and are as well prepared to care for your Stewart equipment as though you sent it to our factory.

When you buy equipment for your car, remember the importance and advantage of being able to command Stewart Service—REAL Service. It means everything in the world to you afterward.

Disadvantages of Gravity Systems, which the Stewart Vacuum Gasoline System entirely overcomes

The gravity system requires a tank either under front seat or in cowl. The tank under the front seat compels car body to be designed "up in the air," while everybody now insists on a low, stream-line body. It forces placing the carburetor in a very low position, where it is very hard to get at, and where it loses the benefit of the motor's heat. It ousts the front seat passenger whenever tank has to be filled. It uses up space that can be used more advantageously.

The tank-in-cowl compels using a soldered tank. Rough riding is apt to open the seams and cause leaks, and soak the electric wiring, hence a constant menace from explosion and collision. The cowl tank requires unsightly and inconvenient filler spout at point where spilled gasoline attacks varnish. It causes annoying splashing sound when gasoline is low—and means partial dissembling of car when tank has to be repaired. In case of any fire under the hood a leaky gasoline tank is most dangerous. Also with a tank in the cowl, the continued odor of gasoline is very obnoxious.

Both gravity systems limit the size of the tank and force you to refill often.

Every one of these disadvantages is done entirely away with by the Stewart Vacuum Gasoline System.

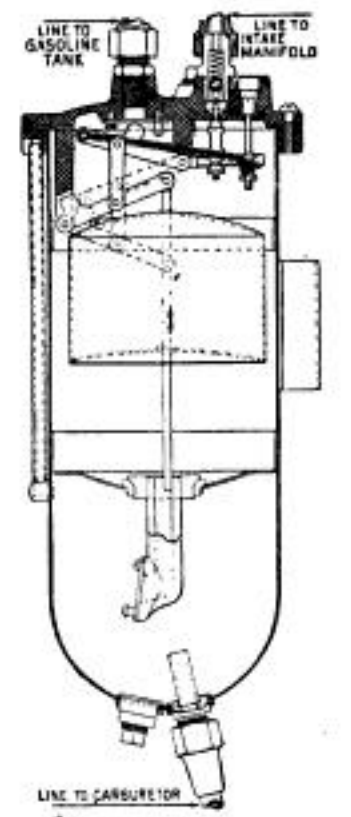
All present gasoline systems being thrown out,—New Stewart Vacuum Gasoline Tank takes their place

Until now you have had to accept a car with either a *pressure* gasoline system or *a gravity* gasoline system for supplying gasoline to carburetor.

Car owners have been forced to accept one or the other of these systems because there was nothing better. *Now*, there is!

The Stewart Vacuum Gasoline System eliminates every single drawback and shortcoming of both the pressure and gravity methods of supplying gasoline.

It is absolutely automatic. It has been thoroughly tried, tested, proven, and now adopted by a great many of the leading Car Manufacturers (names on request). They realize that this system adds the last touch of refinement and efficiency to their cars.



Over the roughest roads, and up and down the steepest grades, it insures an absolutely positive gasoline feed to the carburetor.

It is self-contained,—simple in construction—nothing to get out of order. Once installed it can be forgotten. There is absolutely nothing that requires attention. It is positively and lastingly automatic.

The Stewart Vacuum Gasoline System comprises a small round tank, 3 inches in diameter and 9 inches deep, mounted on engine side of dash. This tank is divided into two chambers, upper and lower. The upper chamber is connected to the intake manifold, while another pipe connects it with the main gasoline supply tank. The lower chamber is connected with the carburetor.

The intake strokes of the motor create a vacuum in the upper chamber of the tank, and this vacuum draws gasoline from the supply tank.

As the gasoline flows into this upper chamber it raises a float valve. When this float valve reaches a certain height it automatically shuts off the vacuum valve, and opens an atmospheric valve, which lets the gasoline flow down into the lower chamber. The float valve in the upper chamber drops with the gasoline flowing out, and when it reaches a certain point it in turn re-opens the vacuum valve, and the process of refilling the upper chamber begins again. The same processes are repeated continuously, and absolutely automatically. The lower chamber is always open to the atmosphere, so that the gasoline flows to the carburetor, as required, uninterruptedly and with an even pressure.

Stewart Vacuum Gasoline Tank

The Advantages of the Stewart Vacuum Gasoline System

—Does away with all need of pressure—eliminates power pressure-pumps, hand pressure-pumps, air gauge on dash, extra line of piping to rear tank, gasoline filter, and all labor of installing all this equipment — does not require air-tight supply tank, nor air-tight filler caps.

Does away with trouble of trying to keep air pressure in supply tank—trying to overcome leaks in connections—necessity of always tightening down filler cap,—for with this system it doesn't matter if filler cap is left off entirely, it works just as well—car starts instantaneously—no need of laborious pumping pressure in the tank by hand.

The carburetor may be placed high on the motor where it is easily accessible, and where heat of motor greatly assists carburetion.

Tank is located under hood on front side of dash—out of the way—heat of engine warms gasoline and assists carburetion.

Lower chamber of tank is constructed as a filter, and prevents any water or sediment in gasoline from passing into carburetor. A plug in bottom of tank permits drawing off this water, and also allows you to draw gasoline, if required for priming or cleaning purposes.

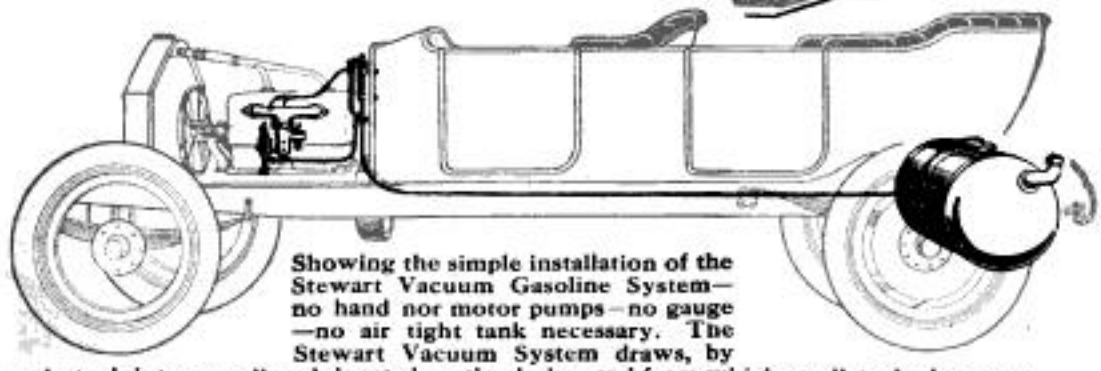
Supply tank can also be placed in advantageous position in rear of car, permitting car manufacturers to design body as low as style and requirements demand—puts weight where it is carried to best advantage to the riding qualities of the car.

Does away with gasoline tank in Cowl where they have been found to be noisy—giving off annoying odors—troublesome to fill and dangerous in collision, and hazardous from possible explosions through leakage of gasoline to ignition wires.

This system makes climbing the steepest grades as easy as running on the level.

Car Manufacturers claim for this system a 10% saving in gasoline by reason of its even flow to the carburetor, instead of the feed being forced.

Starting in cold weather is easier because of having a supply of gasoline under the hood where it receives and retains the heat of the motor for a much longer period than if drawn directly from the exposed supply tank.



This Stewart Vacuum Gasoline System can be installed on your present car, whether old or new, at any of our Service Stations or by any garage man. Price

$15

edometer Corporation

Diversey Boulevard, Chicago
go and Beloit, Wisc.

is in all cities and large towns.

Showing the simple installation of the Stewart Vacuum Gasoline System—no hand nor motor pumps—no gauge—no air tight tank necessary. The Stewart Vacuum System draws, by a, the gasoline from rear supply tank into a small tank located on the dash,—and from which small tank the gasoline flows with even pressure to the carburetor. It is absolutely automatic and unfailing. Read complete description above.

Disadvantages of Pressure Systems, which the Stewart Vacuum Gasoline System entirely overcomes

The pressure system requires, first a hand pump to supply pressure before starting the motor—next, an air gauge, then, an air pump on motor or a pressure regulator on exhaust manifold,—also an *air-tight* gasoline tank in rear—an *air-tight* filler cap—a spout strong enough to resist use of heavy wrench on filler cap—a magnetic gasoline gauge on tank—a filter on gasoline line—an extra line of piping—and all the disadvantages and annoyances of taking care of so many devices. All these contraptions cause trouble; leaks—stoppages—first, too much presssure—then, no pressure—then, no gasoline.

Every one of these disadvantages is done entirely away with by the Stewart Vacuum Gasoline System.

Sonnets on Most Anything

NEWS FROM THE FRONT

At Vera Cruz the big guns grimly wait,
A full half million youngsters pant for war,
Tense, troubled wise men mull the puzzle o'er,
With each swift minute shifts a tyrant's fate.
The news goes hurtling through each town and State,
The eager crowds before the windows stand
And urge to speed, with oaths importunate,
The tortoise boy with history in his hand.
"News, news," they cry, through all our teeming land;
"Put up the bulletin. Quick, bonehead, quick!
Ah! Daly hit too short and Weaver fanned!
Those White Sox sure are gentle with the stick!
Let's get another inning ere we go—
Aw, shucks! Here comes some dope on Mexico!"

The Waiting List for South America

THE South American fear that we are seeking to annex the whole continent is distinctly unflattering to the United States.

As a matter of fact, far from soliciting membership in this glorious Union, we are more likely to establish an admission fee with annual dues, an eligibility standard, and waiting list.

The United States citizen has unparalleled blessings, and has not been ungenerous in the past in sharing them with outlying stretches of territory which have in some manner or other gotten jarred loose from their owners. But the limit has been about reached. We are big enough. We have more railroads than we can control, more trusts than we can prosecute, more Congressmen than can be comfortably seated at Washington, and more millionaires than our colleges, libraries, and benevolent institutions can relieve.

Moreover the baseball leagues cannot be widened out to cover any more territory, and under the new primary system a candidate for President has to start two years in advance in order to stump the country.

The South American countries should begin to worry on the other side of the question. How are they going to get voted into this exclusive order of commonwealths? The list of blackballed applicants during the last century is larger than most people suppose.

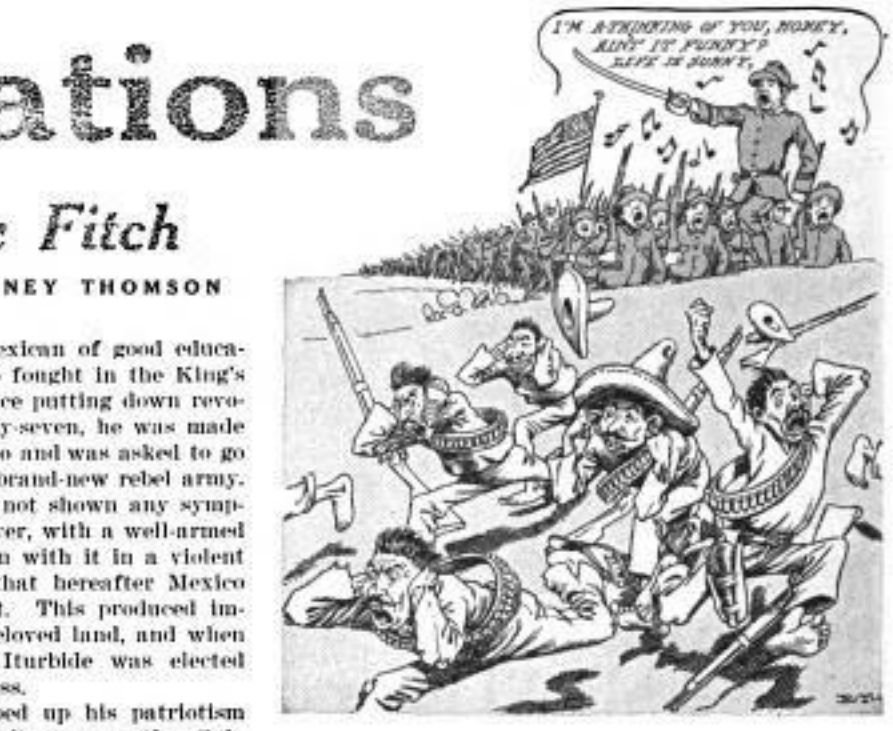
Iturbide

ITURBIDE was the Huerta of Mexico ninety years ago. Time after time, in the early twenties of the last century, citizens of this country, on laying down their newspapers crammed with Mexican news only a few weeks old, exclaimed: "What will that fellow do next? Must we go down there and spank him?"

And yet Iturbide was a patriot. Patriotism has been harder on Mexico than pulque has. Somehow patriotism below the Rio Grande when mixed with success seems to go to the head and ferment there in a most demoralizing manner. Time after time Mexico has raised up a noble patriot to chase out the cruel tyrant, only to discover that the said noble patriot has gone heartily into the cruel-tyrant business himself. It has been very discouraging.

Iturbide was a fine young Mexican of good education and old Spanish stock who fought in the King's army and did such valiant service putting down revolutions that, at the age of thirty-seven, he was made head of the royal forces in Mexico and was asked to go out and promote ill health in a brand-new rebel army.

Up to this time Iturbide had not shown any symptoms of patriotism. Now, however, with a well-armed force behind him, he came down with it in a violent form and suggested to Spain that hereafter Mexico should be ruled by home talent. This produced immense enthusiasm in his own beloved land, and when Spain gave up the argument Iturbide was elected President by a grateful Congress.



At this point Iturbide wrapped up his patriotism in an old newspaper and mislaid it permanently. Subsequent proceedings indicate that some one must have slipped him a volume of Gibbon's "Rome," for, after making himself Emperor, he started out in the good old imperial Roman way to eradicate his enemies. He became so fatal that the tarantula was regarded as a harmless pet during his reign. He celebrated Good Friday by butchering three hundred delinquents, and roamed up and down the land, irrigating it with blood. It is possible that if he had been left alone he might have settled the whole Mexican question for us by reducing the population to himself. But in less than a year Mexico rose with a hoarse shout and booted him to Italy on a pension of $25,000 a year. A little later he committed suicide by trying to come back and start another revolution.

In this country Iturbide has been so completely forgotten that the name is commonly supposed to be that of a new mineral or a patent washing powder. But in Mexico he is much honored. This is because Mexico had about twenty-five patriots in close and horrible succession after him, and his virtues shone more brightly with each comparison. Let us give three cheers for the Rio Grande.

Too Much Opportunity

THE United States is an extremely civilized country, all English comments regarding our athletics to the contrary notwithstanding. It is embarrassing to say the least, therefore, to be compelled to bury from six to eight thousand murdered citizens every year. It causes other nations, some of which have not yet begun an inquiry into the effect of sour milk on babies, to raise the eyebrows in polite horror and to say things about us which hurt.

The great trouble with this country is its unlimited opportunities along all lines, including that of the extermination of personal enemies. When the citizen of some other land has a grievance against a friend he saves his pennies painfully until he has enough to acquire a pistol, and then sets about accomplishing his revenge. By the time he has his battery perfected he has lost his ill temper or has emigrated, or has been filed away in prison for lèse-majesté, or has been dissuaded in one way or another from accomplishing his purpose. But when the American citizen or the paying guest within our dominions desires to exterminate any one he goes out and gets a revolver. He gets it at the hardware store, sporting goods store, delicatessen, or pawnshop; or he mails $3.50 and postage to a mail-order house; or he borrows one from the first passer-by, or pays half a dollar down at an installment house for a magazine murder machine, or gets one as a premium with a pound of tea. If all these fail, he steps into some church and borrows one from the janitor, or he goes up to the first policeman he meets and asks for his revolver, explaining that he wants to kill a cat. In half an hour he is armed to the teeth and in another hour he is either a murderer or a clammy victim.

There ought to be a protective tariff of $1,000 apiece on revolvers, collected by the internal revenue department. This would cut down the murder statistics of the country to a wonderful extent. By the time a man had saved the money necessary to cannonade his opponent, he would probably be supporting the said opponent for office and defending him with fists and teeth against the vile tongue of calumny. Opportunity in the revolver line is a great curse.

Why We Have an Immigration Problem

1. Telephones in London have five numbers and a prefix.

Could We Fight in Syncopations?

THE gravest crisis which the United States faces in a war with Mexico is the matter of songs.

Songs recruited the Union army during the Civil War. A score of them are still famous. Songs cast a gentle halo over the returning Spanish-American War veteran and made those young men who had stayed at home sigh for a chance at glory. We need songs in our belligerent business to-day—but can we get along with to-day's songs?

Running hastily over the most popular of to-day's musical outbreaks, the most conservative thing we can say is that songs have changed. But war hasn't. It still produces the same old brand of obituary and heartbreak.

The same kind of weeping girls will stay at home, and the same rapturous brand of sweethearts will engulf the soldier boy when he returns. Can we inspire him to enlist and comfort him in camp with this sort of thing?

Just before the battle
Let me tattle
Something that'll
Keep a jig, jig, jigging in your heart so true.
I'm a-thinking of you, honey,
Ain't it funny?
Life is sunny,
And I'd give a lot of money to be safe at home
with you—oo—oo—
Up in old Baraboo.

Chorus

Keep a write, write, writing, dearie,
And I'll be your fighting kid.
Keep a tell, tell, telling how your love keeps
swelling.
Won't you please take off the lid?
Oh, oh, I'd be glad if you did.

Once again we'll soon be trottin', ain't it rotten how we've gotten
Separated by the cruel, cruel foe!
But I'll be yours—toot, toot—clear the track—
hear me shoot—
In the land where the hot tamales grow.

If this is the sort of songs we must supply to our soldier boys, there is but one thing to do. Let them be sung at the enemy. This would be a heartless proceeding, but war is necessarily cruel and should be made as brief as possible.

The Strangest School in the World

By BRUCE BARTON

THE newspapers commented on the fact that he showed no emotion. But they need not have done so. When a man is just barely a man instead of an animal; when he cannot read or write and hardly talk; and when he has killed the one person whom he loves best in the world, a display of sensitiveness, a parading of the emotions is not to be expected. Such a one may sit stolid and unmoved even while the judge is saying the words that mean life imprisonment; even while the barred door of the cell clangs shut behind him.

And sit stolid he did. Each morning the guard who unlocked the cell door found him staring wide-eyed straight before him, and there was never any response to the morning greeting. Each night, after the long grueling day at the prison foundry had worn itself away, the guard who locked the cells left him, still bolt upright, still staring out of unseeing eyes, waiting stolidly for sleep. Other men read or wrote letters or chatted. Stone walls did not a prison make, for them; on the fairy wings of books they could travel over golden highways into the hearts of palaces and temples. With letters they could mingle in the life of those they had left outside.

But for him there were no books, no letters. He had not learned to read or write. The cell wherein he sat might better have been the grave; there would then have been no hellish torture of the mind, no deadly circle of regret to lengthen out the bitter days. The days grew into months and months to years. He was twenty-five, they told him; then thirty, forty, fifty, fifty-three.

He neither smiled nor cried, nor answered them. He did not even know whether they told him the truth—nor care. Why should he care?

A Haunt of Happiness

NOT long ago, walking up and down the barred aisles in the graduate department of the Strangest School in the World, I saw him. He came up to the other side of the bars, and stood smiling, a strange, crumpled sort of a smile, as though his lips had not quite learned how to manage it. He had a book in his hand.

"Ever read about Job?" he asked me. When I nodded he continued:

"There's a feller had a pretty tough time, didn't he? And Robinson Crusoe: ever read about him? There was some guy, wasn't it? First guy I ever read about; took me a long time—but say, friend, it was great. Which do you think I oughter read about next, Pilgrim's Progress or Sherlock Holmes? The warden says they're both great."

"Try Sherlock," I said. "He's a plain-clothes man, but he's square. You look a lot happier than when I saw you last."

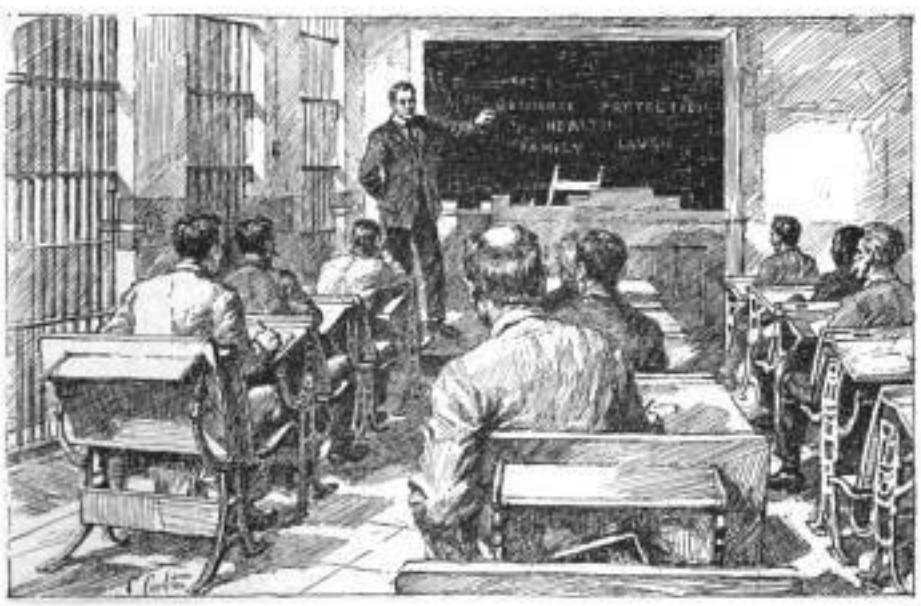
"Happy!" he repeated, the smile redoubling its effort to break through. "Happy! Say, friend, I'm the happiest guy you ever seen. Look at that." He fished under his pillow and pulled out a wrinkled letter. "There's a guy outside that writes to me every month; come walkin' through here like you about six months ago, and he ain't missed once. I write to him, too. Happy! Say, you betcher life I'm happy."

He reached a horny hand through the bars and I shook it and left him, the smile still struggling hard.

The Strangest School in the World is at the bottom of a long flight of steps in the Maryland State Penitentiary. Not the fact that it is in a penitentiary makes it strange, not the long row of whitewashed cells that almost touch the desks, nor the blue-coated guard who occupies the extreme back seat. There are schools in other penitentiaries, some of them with long, honorable histories. But the strangest school is different in its teachers, its pupils, its methods, and its results.

A Murderer as Pedagogue

THERE are one hundred and twelve pupils, sixteen teachers, and the average age of pupils and teachers together is thirty-three and a third years. One of the teachers is a murderer doing life; one is a highway robber doing twenty years; one is a bigamist; one a forger; and only the warden knows what the others were or did to bring them there. In one class of eight scholars I met two bigamists, a murderer, a burglar, and one who had burned down a store. The baby of the school is barely turned twenty-one, hardly more than a boy; the eldest is seventy-two. Altogether the school constitutes nearly a third of the whole population of the prison; and not a man of the whole hundred and twelve scholars now enrolled could read a daily paper or write his own name.



They filed in quickly at the beginning of the session, as though eager to be at their books; and when I looked around there was not one vacant seat. They were of all types, young, fresh-looking lads, with the bloom of health on their cheeks; old men on whose faces the whitewashed walls of the prison had cast its pale, fixed shadows; men who held their heads high, and men who turned their faces from you as they passed; men with hope still strong in their eyes; and dogged, almost sullen, men; white men and black men; men who would pass out into the world for a new lease of life; and men who had ceased long ago even to dream about the world. With only a few preliminaries the teacher wrote on a blackboard the lessons that were to occupy this session, and the one hundred and twelve twisted their stiff fingers clumsily about their pencils and bent their muscled backs to write.

"Use each one of these words in a sentence"—the teacher had written: "Obedience, bottom, protection, health, family, laugh."

Pathetic Scholarship

I WALKED in and out among the great straining bodies and watched them write. No breadth of thought or nicety of expression was here, but in almost every sentence one might read something that revealed the writer's own pathetic, starved experience.

"I am obedience to the warden in this place," wrote one bulky highwayman, fashioning each letter with infinite exertion. Until the school started he had

It appeals
to the most critical taste

There is no guest too fastidious, no occasion too formal or too important for

Campbell's
Tomato Soup

Its irreproachable quality commends it to the most exacting epicure. And it is so readily adapted to the character of the meal—light or hearty as the case may be—that in each instance it seems exactly the fitting key to the occasion.

Prepared as a rich Cream-of-tomato, or served in bouillon cups topped with whipped cream it is an especially inviting "overture" to any meal.

How about that particular "company-affair" of *yours?*

Campbell's SOUPS

LOOK FOR THE RED-AND-WHITE LABEL

This hap-hazard expression is common among inexperienced motorists. It often brings costly penalties.

The motorist should never rest satisfied simply because he *sees* no trouble.

You cannot spare time to frequently examine your wrist-pins and bearings. Nor can you, after each run, inspect your cylinder walls and piston rings for signs of faulty lubrication.

Every good automobile motor is built to stand abuse—for a time.

No matter how inefficient your oil is, your motor for a while will "seem to work all right."

But high fuel bills often point to power-waste—sometimes directly due to incorrect oil.

And the poorly-lubricated motor which "seemed to work all right" too-commonly is headed for the repair shop.

Lubricating oil, to prevent power-waste and premature motor wear, *must* have two qualities.

(1) Its *body* must be suited to your feed system, piston-clearance, bearing design and many other important factors which differ with different motors.

(2) Its *quality* must give full protection to the moving parts under the heat of service.

How can you make sure that your lubricant is correct in body and high in quality?

A safe, scientific guide will be found in the carefully-studied recommendations listed in the Lubricating Chart, printed in part at the right. Each recommendation in this Chart was made after a careful engineering analysis of the car's motor.

For a number of years this Chart has been the standard scientific guide to correct lubrication.

A copy of our complete Chart will be sent you on request.

On request we will also mail a pamphlet on the Construction, Operation and Lubrication of Automobile Engines. It describes in detail common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

It is safest to buy in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture is on the container.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

GARGOYLE

Mobiloils

A grade for each type of motor

VACUUM OIL CO., Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

DOMESTIC BRANCHES: Detroit, Philadelphia, Boston, Indianapolis, New York, Minneapolis, Chicago, Pittsburgh

never lived through a month in the prison without being summoned before the warden for discipline; but for six months now he has been "obedience."

"Most men are good at the bottom of their harts"—this from a lifer in for murder; and "We are protection by the warden in this place"—from a clean-looking young fellow whose six months of enforced abstinence have pretty thoroughly removed the thirst for liquor that brought him to disgrace.

"My family has a pritty hard time." One could well believe it as he looked back of the writing to the shrunken form of the negro writer.

At the back of the room I stopped a moment to glance over the shoulder of a tired-faced little pickpocket, whose hunched shoulders seemed to have shrunk in upon themselves under the weary burden of life. "I laughed at a monkey," he had written, and then added, letter by letter, "t h r e e y e a r s a g o." And I felt suddenly a great pity for the poor pickpocket, in whose life laughs had been so rare a blessing that he remembered their very number and the year in which each had come.

Method Adapted to Environment

TO Warden Leonard belongs the credit for founding the strangest school: there had been no school in the Maryland penitentiary for more than a hundred years, though every annual report had scheduled nearly a third of the inmates as illiterate. But the patience and untiring devotion of the two prisoner teachers who laid out the plan of instruction and carried it through to success is equally noteworthy. Without guidance or help of any sort they had to blaze out their own path; and they have succeeded. One hundred and seventy-two prisoners, all of them over twenty-one, all illiterate, have been taught to read and write, and have passed out of the school either into the open world or into the graduate department.

Rich Stores Magically Opened

THEY point out eagerly—the warden and his prisoner teachers—the various features of the school that stir their parental pride. It has improved the discipline of the institution wonderfully, they say; not one single pupil of the school—and there were some very bad actors among them—has been summoned for discipline since the sessions opened. Of the graduates some are holding good jobs on the outside, some the warden has lost sight of, but not one has been brought back.

The warden asked me to remember all this when I wrote, and I do. But the thing that I cannot forget is the "lifer" standing with the book in his hand behind those iron bars and smiling out at me. Thirty-three years he had lain in the grave of his cell, dead to every thought or emotion; and to-day he wanders at will with Robinson Crusoe, or travels the long road with Pilgrim, or speeds over golden highways into pleasant fields, into temples and palaces and promised lands.

The Price of Rawhide

(*Continued from page 7*)

little tin gods of war, suh. I'll investigate this combination to the bottom an' if I find evidence of collusion I'll rule every one of the scoundrels off the American turf fo' life! Warn that boy? No, suh, by Godfrey! Let him ride that favorite accordin' to his instructions! The hawsses are in the hands of the starter. You watch Whitethorn, Peter, and I'll watch that black hawss."

IN the passage between the betting ring and the paddock, Crane, rat-faced, furtive, and nervous, touched elbows with Burns for an instant.

"Think it's all right?" asked Crane.

"Of course it is! You ain't losing your nerve, are you?"

"Well, it's an awful lot of money, Burns, and if anything went wrong—"

"Brace up!" said Burns. "You talk like an old woman!"

"I—I guess I'll go get a drink. I need one."

Burns established himself on the lawn and leveled his glasses at the horses now cantering toward the starting point. The chief of the Big Five was very well satisfied with himself. The campaign against the Eastern pool rooms had been excellently planned and executed. The loot was as good as in the bank and Burns permitted himself to wonder how much his share would be. After a time he became aware of some one at his elbow and turning sharply saw Rainbow Smith grinning at him.

"Hello, Burns!" said Smith genially. "I don't like a bone in your head, but I'm here to help you root for the black horse."

BURNS grunted, but made no other reply.

"I want to see the smile on your face when he wins," continued Smith with nerve-rasping cheerfulness. "I thought you'd be interested to know that I've got a few bets on him." Smith drew a handful of pasteboards from his pocket and shuffled them through his fingers. "I don't seem to have any luck betting on my own horses lately," said he, "so I thought I'd bet on one of yours for a change."

"Oh, you talk too much!" growled Burns.

"It's my one fault," said Rainbow Smith sweetly. "But sometimes I know what I'm talking about. For instance: they're betting on Whitethorn in the Eastern pool rooms—heaviest kind of a play on her. The judges don't like the looks of it and they're going to watch this race like hawks. They—"

"Where did you hear that?" Burns was startled into asking the question.

"The same place that I heard the money to play her with came from here. Whitethorn! Why, she can't beat an apple woman up a steep hill! No wonder the judges thought it looked bad. . . . Hello! They're at the post already."

BURNS said something out of the corner of his mouth and moved away. He had received disquieting information and he wished to be alone with his thoughts. So the judges knew of the pool-room play on Whitethorn! This meant an investigation and the owners might be called into the judges' stand to explain matters. Certainly old Appleboe would want to know about Matador's race. What if he questioned the little apprentice rider? Why hadn't he given Jamieson the mount? Jamieson knew how to lie to judges.

"The boy on Whitethorn is trying for a running start." A voice broke through Burns's train of thought. Smith had followed him, cheerful and garrulous as ever. "It won't do her any good. That black horse of yours can eat her up. . . . Don't swear like that, Burns. You'll catch no fish."

On the back stretch the dancing bits of color shifted constantly with the nervous plunges of the thoroughbreds, anxious for the word to go. The big black favorite stood perfectly still, as was his habit, an easy target for the eye among the flashing bays and chestnuts. After a dozen ineffectual attempts, the colors wavered into a line, held it for an instant and then surged forward with a rush.

"*They're off!*" said Rainbow Smith.

On the platform in front of the pagoda Judge Applebee nibbled at his goatee and murmured to himself:

"Yes, there's Whitethorn out in front . . . got away runnin'. She always was a fast breaker and a front runner. . . . Where in Sam Hill is that favorite? 'Way back in the bunch. Well, he's a slow beginner. Now we'll see . . . we'll see."

Down the back stretch to the upper turn went Whitethorn, open lengths of daylight behind her. The chestnut mare was ably piloted by Jockey Kelly, a sinful youth from whom Crane kept no business secrets. His riding orders had been short and to the point.

"Get away and keep going. Everything else in the race is dead to the mare. Make a nice job of it and I'll give you a suit of clothes."

AS he swung around the upper turn, Kelly heard the thunder of hoofs very near and a coal-black head drew alongside.

"Take that hoss back!" cried Jockey Kelly, in sudden panic. "Take him back, kid! He ain't the one they're bettin' on!"

Digitized by Google

Jockey Pike's shrill answer was addressed to his mount.

"Now you're goin', baby! Eat 'em up, you hammer-headed rascal! Eat 'em up!"

The horses swung into the home stretch side by side, so close that the riders might have touched each other.

"I—I got to win with the mare!" panted Kelly. "That's the way it's framed. Didn't they tell you? Burns is bettin' a chunk on her. They're *all* bettin' on her! Take that black thing back where he belongs!"

"He belongs in front to-day!" The words were fairly bumped out of the little Tennessean as the big black horse struck his true racing stride. "And that's where he's goin'! Come on, hammer-head! Come on! You ain't *half* runnin'!"

Kelly's answer came from the rear.

"They'll kill you for this!" he yelped, and drew his whip.

Down on the grand-stand lawn Burns's face bleached to a dirty yellow and he staggered as Smith clapped him on the back.

"There he comes!" cried Rainbow. "Your horse is in front now, Burns! Kelly has gone to the bat on the mare, but she's run her race and she's through for the day. Look at that black horse come! . . . Why don't you root for him?"

The head of the Big Five was past resentment or any of the lesser emotions. His faculties were numbed by impending disaster, but his popping eyes were glued upon the straight stretch of track where the widening gap between the black horse and the chestnut mare spelled ruin. Too late now to ask himself what had happened to the careful plot; it was enough to remember that every available dollar was bet on Whitethorn—and at the paddock gate the mare was five lengths behind Matador and floundering in her stride, hopelessly beaten. The other horses pounded through the dust, far in the rear. Rainbow Smith lowered his glasses with a chuckle.

"What did I tell you?" he said. "Matador wins in a walk! In a walk! . . . Hello, Burns! What's the matter with you? You look like a sick man!"

What Burns said does not matter. Red ink could but faintly shadow his remarks.

"So that's the way you feel about it, eh?" asked Smith. "Well, cheer up! The worst is yet to come. The judges are anxious to find out why I bet so much money on Matador. They want to see me about it. I'll tell 'em I played the horse because you licked the wrong boy. Do you get that, Burns? The wrong boy! . . . Take a look at him. There he goes under the wire, winning by a city block. You can lick niggers and get away with it, Burns, but when you rawhide a white kid from Tennessee you've started something. . . . Think it over!"

"AH, Mr. Smith," said Judge Applebee, "we sent fo' you, suh, because of something that aroused our suspicions in that last race. The bettin', suh, had an angle which we did not like. I reckon it's all right now. It was a true run race after all, suh."

"It was, Judge," said Smith, "but if you want to know why, send for Jockey Pike. He can tell you something about that Eastern pool-room play on Whitethorn. You might find it interesting."

Ten minutes later Jockey Jefferson Lee Pike climbed into the judges' stand, and the sight of that small figure standing before Applebee added the finishing touch to the consternation of five owners who need not again be named in this narrative.

"Little boy," said Judge Applebee kindly, "we want you to tell us everything you know about this last race. Speak right up; you shan't be hurt."

"Y—yes, suh, Judge," said Jockey Pike. "From the beginnin', suh?"

"From the beginnin', sonny," said the judge, nibbling at his goatee.

And Jefferson Lee Pike told the truth, the whole truth, and nothing but the truth, while the Big Five looked on from afar and feared the worst, which is exactly what happened to them.

When Burns was ruled off the turf for life he was permitted to sell his horses at auction. Having no further use for his racing tackle, this also was sold to the highest bidder. Rainbow Smith cheerfully attended that sale and somewhere unearthed a rawhide whip which he insisted upon purchasing for the sum of 10 cents, though the auctioneer said it was of no value to anybody.

"I do this out of sentiment," said Rainbow Smith, grinning at Burns. "I want to hang it on my wall at home because every time I see it, it will be worth a laugh. Have you ever figured the price of rawhide, Burns?"

Bealby

The First Humorous Novel
By H. G. WELLS
Since "Kipps"
Will Begin in Collier's
NEXT WEEK

The delightful story, together with Henry Raleigh's beautiful illustrations, will bring back to these jaded days something of the freshness of Dickens.

Mr. Wells has here made an excursion into the outdoor—the Merrie England, with its jocund humor, that the author of "Pickwick Papers" loved so well.

The Trouble Makers of Mexico

(Concluded from page 14)

the habit of revolution. What peon, with any spunk in him, would elect to slave on a hacienda for a slave's reward when, in the ranks of Zapata, Carranza, or Villa, he can travel, see the country, ride a horse, carry a rifle, get a peso or so a day, loot when fortune favors, and, if lucky, on occasion kill a fellow creature—this last a particularly delightful event to a people who delight in the bloody spectacles of the bull ring.

The totality of the Mexicans being so incapable of government that a handful of disorderly and incapable "breeds" can play ducks and drakes with the whole land, poor Mexico is in such a situation to-day that, unaided from without, the game of ducks and drakes can be played interminably. There is no other Porfirio Diaz in sight. There is no strong "breed" capable of whipping the rest of the disorderly "breeds" and the country into shape. There is no popular movement on which such a strong man might depend for support. Nor is there a national cause. The educated Mexicans, the wealthy Mexicans, the business and shopkeeping Mexicans, hail American intervention with delight. The vast majority of the peons ask merely to be let alone, and not to be drafted into the fighting ranks of this leader and of that leader and of the many leaders continually arising. Victories, presidencies, and dictatorships can be only temporary. The handful of anarchs cannot pacify Mexico, because Mexico does not need pacifying. They cannot pacify themselves, which is the actual need of Mexico, because they are too weak, too inefficient, too turbulent, too disorderly.

Spain, despite her world empire, which she picked up at a lucky stroke, much as a Hottentot might pick up a Koh-i-noor, never possessed any genius for government. The descendants of the Spaniards in Mexico, interbred with the native Indians, have likewise displayed no genius for government. Facts are facts. What the Spaniards and their descendants have not succeeded in doing in Mexico during the last four hundred years is an eloquent story.

Mexico must be saved from herself. What Mexico really needs is to be saved from the insignificant portion of her half-breeds who are causing all the trouble. They should not form the government at all. And yet they are the very ones who insist on forming it, and they cannot be eliminated by those who should form it, namely, the twelve million peons and the nearly three million peaceably inclined half-breeds.

10% More for Your Money

Quaker Oats is now put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

The Cream That You Use On Quaker

Is the richness of the milk. It has a finer flavor than whole milk.

So with Quaker Oats. It is made by our process from the cream of the oats. Grains as they come to us—small and large—could never supply such flavor.

We pick out the big grains, the plump and the luscious. We get but ten pounds of Quaker Oats from a bushel. That is the secret of this taste and aroma.

But this cream of the oats, unlike cream of the milk, costs you no extra price. You get this richness unmixed, undiluted in Quaker, for one-half cent per dish.

Quaker Oats

With a Rich, Distinctive Flavor

Many years ago, in a very small way, we started to make this food of foods.

We picked out the grains as now. We rolled them, as now, into large, luscious flakes. And we employed a long process to keep the flavor intact.

A few housewives bought it. Then more and more. The fame of this flavor spread.

Now Quaker Oats has become the world's breakfast. A hundred nations send to us to get it. A thousand million dishes are consumed each year.

The reason is this flavor. We made Quaker Oats inviting. Nature made it the utmost in energy food. We made it delicious, so children would eat an abundance.

Now millions of children every day get vim from Quaker Oats.

That's what it means to get Quaker—a delicacy, a delightful dish at a very little price. And a love for food which every child needs, and most grown-ups.

Serve Quaker Oats in large dishes. Small servings are not sufficient to show in full its vim-producing power.

10c and 25c per Package
Except in Far West and South
The large 25-cent package gives ten per cent more for the money

Powder or Dental Cream—Both
Dr. Lyon's

USERS of dental cream can now have the superior benefits of Dr. Lyon's Perfect Tooth Powder in cream form.

Your druggist will supply you with *either*

Dr. Lyon's PERFECT Tooth Powder OR Dental Cream

As a product of Dr. Lyon's laboratory Dr. Lyon's Perfect Dental Cream at once becomes the *standard* preparation among tube dentifrices.

The safety and efficiency for which Dr. Lyon's Perfect Tooth Powder has been known for three generations are reproduced fully in the Dental Cream.

Dr. Lyon's Perfect Dental Cream is a true advance in dental cream formulae.

Quickly soluble. Deposits no sticky masses to encourage decay. Rinses thoroughly, leaving complete cleanliness.

Corrects excessive acidity of the mouth. Prevents receding gums and loosening teeth.

What Dr. Lyon's (powder or cream) does not do only your dentist is competent to do.

SOLD EVERYWHERE

Dainty trial package of either Dr. Lyon's Perfect Tooth Powder or Dr. Lyon's Perfect Dental Cream sent on receipt of 2 cents postage. Address I. W. Lyon & Sons, 524 West 27th Street, New York City.

IT CAN'T BE DONE

RUBBERSET

TRADE MARK

The Safety Tooth Brush

YOU can't hammer a cone-shaped peg through a cone-shaped hole—

—nor can you pull the cone-shaped hard rubber base of a tuft of bristles through one of the cone-shaped holes in the frame of the RUBBERSET Brush.

The tufts of bristles are gripped in the frame as everlastingly as the bristles are gripped in solid vulcanized rubber.

Each tuft of Bristles has it's Solid Rubber base like the famous RUBBERSET Shaving Brush

IT CAN'T BE DONE

The RUBBERSET Tooth Brush outlasts the ordinary tooth brush and never sheds its bristles. Its use will eliminate the annoyance and dangers resulting from loose tooth brush bristles. A bristle lodged in the gums, throat, stomach or intestines may result in something serious.

A RUBBERSET costs no more than the ordinary tooth brush, lasts longer, is safer. Made with plain, curved and serrated brushing surfaces, and in all sizes. Ask for, insist on and get—R-U-B-B-E-R-S-E-T Tooth Brush. Don't let the clerk substitute!

For sale at leading stores.

The Weak Point in Farming

It Has No Sales Department

By WALTER H. MAIN

ALL one summer's day I rode through central New York with a calf buyer. Now, a calf buyer holds his title largely by courtesy. True, he buys calves; but he buys everything else a farmer has to sell except his real estate. He buys anything he can load on his wagon, lead behind or drive ahead—chickens, cows, sheep, apples, pigs, potatoes. He is the first of the long string of middlemen we inveigh against, but patronize.

As we rode along he pointed out an apple orchard. "See that orchard? Last year that was loaded with the finest Red Astrachans you ever saw. I bought the lot for five dollars and sold 'em for fifty."

How to Sell Is the Question

THE county-farm doctor on a day in early spring was about to drive away, having instructed and aided a farmer in pruning and spraying his apple trees. "There's just one question more I want to ask," said the farmer. "What am I going to do with the first-grade apples after I get them?"

"Why, sell them," replied the surprised farm expert.

"How am I going to sell them for enough to pay for this spraying machine and all the work? I can't get any more for first-grade fruit than I do for the ordinary."

"Well, I can show you how to raise apples, but I can't sell them for you," replied the farm doctor and drove on, leaving a perplexed farmer to figure it out.

Industry Is Handicapped

UPON a well-kept, well-tilled farm, where everything is done according to the books, I saw some of the finest small fruits, berries, cherries, and the like that ever grew. Pathetically the man told me:

"We're trying to make this place pay expenses. We haven't done so yet, but we hope to this year."

Across the valley on a hill farm, where almost every rule of cultivation is violated, where fertilizing is neglected, where one thing grows on top of another promiscuously, where the fruit is inferior, lives a young fellow who is getting rich on small fruits.

Chaos

WHEN I met a young man, whose farm I had always regarded as a model, and learned that he had sold his acres and taken a position with a city mercantile firm, I expressed surprise.

"It makes me tired," he explained, "when I think of the hard work I put on that farm for ten years and the small pay I received. There's no money in farming."

I could go on indefinitely giving instances paradoxical and contradictory; how a machinist from the Schenectady electric works returned, disgusted, to his bench after two years on the farm; how a young college man, who had scarcely seen a farm until he was graduated, has become the manager of a big paying proposition of 1,200 acres in central New York; and scores of other successes and failures.

The Lack of a Sales Department

ANALYZE all these instances. Put them all together, shake them up well, and after you have sifted out everything else, this stubborn fact will remain:

The weak point in the whole farm proposition is the lack of a sales department.

You may brush aside every other consideration; they will all adjust themselves as soon as the sales department is settled. Make farming profitable and men will gravitate toward it. The same old economic law is in force now that has been governing man for ages: He seeks the biggest return for the least effort in the shortest time. If the farm can give that, farming will be attractive. It is money that brings men back to the soil.

Men are not going to farming for sentiment's sake; nor because theorists say they ought to; nor because country life is healthy or a good developer of character, nor for any other reason, as a rule, except that there is money in it.

When did men begin to flock to the steel business? It was not until Carnegie started the sales department of the United States Steel Corporation and made friends with kings and princes and railroad presidents and sold the steel and kept the mills going at a profit. What did it matter that Klonman made the best steel in the world and that Phipps financed the office most carefully? If Carnegie had not sold the rails, where would the Steel Corporation be to-day?

Organize the Selling

AND what of the hard toil, the grime and the sweat, the sooty, smoky steel city as a place to live in? We don't hear overmuch of that. There are plenty of people who are ready to become laborers or chemists or what not for the Steel Corporation because there is money in the business.

Social workers, who ascribe the decadence in country life to the isolation and lack of social advantages, give less than half the truth. Social isolation there has been, and is, and will be on farms from the very nature of the business. There are certain disadvantages also in living in Pittsburgh. The point is that when farming becomes profitable enough, social disadvantages will take care of themselves.

The Calf Buyer

The trouble with farming has not been so much lack of ability to raise crops as lack of ability to sell them. It has not been that farm life *per se* is unattractive; it has been that there was no money in it. Young fellows preferred the city because there was more life there, but primarily because they received more money for their work. Real money has been as scarce on farms as hen's teeth.

Farming has languished because it was not profitable. It was not profitable because farmers could not sell their produce to good advantage. They could not sell to good advantage because they had no sales department.

The Planters Have Learned It

THE planters who raise specialized crops have learned the lesson in the last decade or two. The successful orange growers of California and Florida, the tobacco growers of Kentucky, the apple growers of Oregon, the potato growers of Maine, all discovered by bitter experience there would be no profits for them so long as they were at the mercy of the commission men. They have learned their lesson and organized their sales departments. Now they have things their own way.

It is a comparatively simple proposition to organize the growers of a common produce. They have the same troubles, the same grievances, common hopes and aspirations and ambitions. In-

End time-waste in your billing

This complete correspondence typewriter automatically foots and proves your bills *while it types them*

11 questions answered

No business man can shut his eyes to this new time-saver. It will soon be as standard as the typewriter itself.

Below are some natural questions:

①

"Will it really save time and money?"

This is effectively answered in many letters we receive from users—large and small. The following is a sample:

". . . . Beg to say that we consider that we are saving 20% of our time in handling orders, entering, billing, etc., and for making out statements at least 25%."

This is one of the more conservative statements.

②

"Why should I bother about bookkeeper's work?"

It is not a question of *bookkeeping*. It is a question of *time-saving*.

This machine, by totalling and proving bills *while it types them*, saves valuable clerical time. The saved time can be used for collections or other productive purposes.

③

"Will it fit my present billing system?"

Yes. It requires absolutely no changes in system. It does your work *your* way. It applies to small billing departments as effectively as it applies to large ones.

④

"Is it absolutely accurate?"

The best evidence is this: It is used constantly by the United States Sub-Treasury and by prominent banks throughout the country.

⑤

"What is the cost?"

That varies with the carriage-width. It is higher than the cost of a plain typewriter. Compared with the cost of a standard, first-class adding machine it is low. And remember: It is an adding machine *combined with a complete typewriter.*

The initial cost is soon wiped out by the time-saving, to say nothing of the accuracy insurance.

⑥

"Is it complicated?"

No. While it totals with cold-steel precision, its actual operation is simplicity itself.

⑦

"Can my present operator use it?"

Most assuredly. Within an hour your typist can learn to operate it readily.

⑧

"Can it be used readily on my regular correspondence?"

Yes. It is an absolutely complete Remington Typewriter for correspondence purposes. The simple switch of a lever prepares it for letter writing.

⑨

"Is the touch light or heavy?"

Light. The keys are not *punched* as with the usual adding machine. They operate with a light typewriter *touch*.

When the adding and subtracting mechanism is connected, the touch of the *numeral keys* is slightly different. This prevents adding on correspondence work. On correspondence work, the adding mechanism is detached by touching a lever. The numeral keys then operate as lightly as the letter keys.

⑩

"Who are using it?"

Thousands of manufacturers and retailers—large and small—insurance companies, banks, city departments, railroads, express companies, steamship lines, telegraph companies, brokers and many in other lines.

If you wish to have the name of a user in your neighborhood we shall be glad to supply it.

⑪

"Is it durable?"

Decidedly. We have testimonial letters from offices which have been using this machine for 5 years. Their machines were the first on the market. How much longer they will keep in first class condition, we do not yet know.

The Remington Adding & Subtracting Typewriter can be had in any of the Remington Models shown on this page. Each is a member of the famous Remington family—each is a complete, easy-running typewriter, plus the adding and subtracting feature—each is designed to insure maximum durability—each has distinctive features designed to meet individual requirements.

Two ways to investigate

Sooner or later the adding and subtracting typewriter will be considered as fundamental in practically every up-to-date business equipment as desks and chairs.

Its use is spreading rapidly.

The chief reason why most offices or stores—where bills and statements are part of the day's work—are not using it now is because the office heads have not yet investigated its time-and-money-saving possibilities.

A new illustrated folder, "The Story of a Day's Work," makes it possible for business men, who are alive to the advantages of relieving human effort with improved mechanical helps, to learn specifically how the Remington Adding & Subtracting Typewriter will save clerk-time—and how it will do away with unnecessary error-risk and expensive calculations on their bills and statements.

We will send a copy of "The Story of a Day's Work" to any employer of clerical or stenographic help—on request. The information in this helpful little folder will probably mean to you the important difference between efficiency and inefficiency in certain departments of your business—the difference between an extra profit and a needless reduction of your "net" for the ensuing twelve months.

A note now dictated to your stenographer will bring you this folder by return mail. Later, if you wish, we will install a machine in your office, where you can demonstrate its usefulness on your bills—without expense to you.

We recommend that you send now for "The Story of a Day's Work."

SAXON $395

The Gasoline Toll Gate Does Not Stop You in a Saxon

Saxon owners are saved the annoyance and expense of frequent stops to pay toll at the gasoline stations. The occupants of the light but sturdy Saxon drive by in comfort while many a touring party in a big, heavy car is held up for fuel replenishment.

Thousands of owners daily find the Saxon the most economical car they ever drove; they consider it the most economical car of standard design in the world—to buy and to run.

A Year's Service in a Month Proves Saxon Economy

And the Saxon saves you money every day you drive it. Here are some economy records from a test made in Detroit, representing the equivalent of a year's service. Note them carefully:

135 miles a day for 30 days.
30 miles to the gallon of gasoline.
200 miles to the quart of oil.
Half a cent a mile for fuel; one-fourth of a cent per mile per passenger.
All the original tires good for from 2,000 to 5,000 miles more of service.

Similar records of gasoline and tire economy are reported to us by owners and dealers all over the country. No wonder Saxon owners say "It's cheaper to drive a Saxon than to use street cars—especially when you consider the time saved."

Not only does the Saxon give pleasure and health at moderate expense—to those who don't want to pay an extravagant price for a car; to those who already own a big car; to those who need a car for summer vacation use. *Its wonderful economy is a reason also for using it in business.*

Order Your Saxon Now

Saxons are selling fast—faster than we even dreamed they would. It must be a case of first come, first served. So the only way to avoid being one of the disappointed is to see your dealer and order now.

Catalog and dealer's name on request.

SAXON MOTOR COMPANY, DETROIT
DEPT. E

dreed their very self-preservation depends on their organizing.

But it is a different matter to organize the small farmer, so-called, the owner of the diversifi i farm. Suspicious of every effort to form a combination, he is the hardest man in the world to organize. Individualism is rampant. Highly independent by breeding, by nature, by training, by occupation, he is a law unto himself. He orders his goings and his comings, his uprisings and his down sittings, his planting, his harvesting, his every act according to his own sweet will. His calling needs a high degree of initiative; he is untrained in combined effort. He makes his sales the same way; he is sufficient unto himself.

One of the reasons the farmer has been receiving such a small share of your dollar and the middleman so much is that the farmer has not awakened to the situation. When he finds out that he has been getting about 10 per cent of the selling price and the middleman 90, he will start thinking. When the owner of the Red Astrachan orchard finds out that the calf buyer got $50 for the apples and realizes that for growing, tending, and investing his money in that orchard he received only 10 per cent, he will think twice.

It is to the diversified farm that the consumer must look for the greater part of his living. He may secure his flour from the wheat fields and his beef from the pampas; but his butter, his milk, fresh vegetables, his potatoes, garden truck, eggs, poultry, fruit, and the major portion of what goes on his table come from the small producer. They come through practically the same channel the Red Astrachan apples followed. The calf buyer sells to some local jobber or shipper; the shipper sells to the commission man in New York; the commission man sells to the retailer; the retailer sells to you. It is a vital problem; it is the great problem in distribution the American people have to solve just now.

The Way to a Solution

IT is easy to say cooperative selling is the solution. It is easy to say cooperative buying. If the two could be combined, if all the people on your block would take a carload of potatoes, a farmer or two up-State would be glad to sell them. They would receive more from you than a commission man would pay; you would pay less than you do to your retailer. But how is this desirable state of affairs to be brought about?

The most obvious way out of the difficulty is to form selling corporations. The old Oneida Community in central New York has developed this idea for half a century or more. Its fertile acres produce abundantly and its sales department sells in the best market. It is, of course, impossible for an ordinary farmer to develop a sales department on a similar scale; but what the Oneida Community can do for the farms in its neighborhood, any corporation, strongly centralized, can do for any community of farmers.

When Nature wishes to make something, she chooses the material nearest at hand. The most available material for a selling organization is my friend, the calf buyer. He is a type that you find in every rural community; his commercial instincts are highly developed. He isn't much on growing things, but he's a powerful good salesman. When he is about twelve years old he takes a horse and drives off somewhere and buys chickens. These he takes to market and soon branches out into buying calves. He knows every farmer in a twenty-mile radius, what he has to sell, what he wants for it, and when it will be ready for market. Furthermore, he knows where to sell the goods; he knows where there is a market for everything raised on the farm; he has been studying that question for years; he is a specialist. His customers tell him what they want and he hunts it up in the country.

The Farmer Must Learn How

HE is the man who has been taking 90 per cent of the selling price and allowing 10 per cent to the grower. He is the man whose mercantile talent his neighbors should utilize. At present he is getting an exorbitant figure for his services; 90 per cent is more than any commercial house pays its sales agents. For the interest on their investment, for fair wages, for their taxes and expenses and a decent profit the farmers are entitled to more than 10 per cent. They should have it; until they get it farming will continue to be unattractive.

The farmers in a given community when they become alive to the question will organize a selling corporation along much the same lines as the orange-growers' organization. They will hire the most talented salesman in their section, whether he be the calf buyer or one of their own number. Under a stated salary this sales agent will dispose of everything the farmers grow, from hay to blackberries.

Before such a condition can be brought about, however, farmers will have to be in position to know whether they are making money or not. Most of them cannot tell with any degree of certainty. Not one farmer in a hundred keeps books; he does not know even vaguely what it has cost him to raise ten acres of corn or ten acres of potatoes. He does not know how much he must sell his produce for to pay expenses. He does not know whether what he makes is interest on investment, or wages, or profit. A campaign of education on the principles of accounting is a prerequisite to a satisfactory solution of the question.

The Man Behind the Booze

By WALT MASON

IN festive mood a man gets stewed, he empties flagons ten or twenty; he takes a bowl with every soul he meets till he has swallowed plenty. If he has sense, it journeys hence; if he has brains, he's sure to lose 'em; and when he wakes, as morning breaks, a cop is sitting on his bosom.

"Confound your eyes," the peeler cries, "you should have stuck to river water! While lighted up by brimming cup, you waded round knee deep in slaughter! You threw some fits, you lost your wits, you thought yourself a circus pageant! You drew a gun, oh, foolish one, and shot a harmless fruit-tree agent!"

The poor sick sport looms up in court; no memories of crime are his'n; he can't recall the deed at all, but draws a hundred years in prison. The able judge says "Pish!" and "Fudge!" at pleas the prisoner's advancing; "men who will drink the old red ink must pay the fiddler after dancing!" The doomed man's wife must lead a life of endless washing, scrubbing, drudging; his children three must paupers be—so futile is our human judging. The jingled gent on pastime bent who shoots when all his wits are hazy, the bill must pay; there is no way to reach the ones who made him crazy.

The man who brews the stuff that stews respected is and clothed in honor; he walks abroad and deigns a nod or smile to sycophant and fawner. His victims rot in dungeons hot while he abides in yonder palace; he drinks a health to tainted wealth and drinks it from a golden chalice.

The men who sell the broth of hell, who see men's souls like gewgaws raffled, look on and grin when slaves of gin are marching to the jail or scaffold. "Ours not the blame! Ours not the shame!" they cry, as they have cried for ages; "we do not force men to the course that leads them to the cells and cages."

To women worn who work and mourn in poverty's abomination, to feed their broods, such platitudes must be a grateful consolation!

Cleveland Characteristics

(Continued from page 12)

and even less of hunt clubs. I had never been in a hunt club before, and my impressions of such institutions had been gleaned entirely from short stories and from prints showing rosy old rascals drinking. Probably because of these prints I had always thought that "horsy" people—particularly the "hunting set"—were generally addicted to the extensive (and not merely external) use of alcohol. As others may be of the same impression it is perhaps worth remarking that, while in the Hunt Club, we saw a number of persons drinking tea, and that only two were drinking alcoholic beverages—those two being visitors: an illustrator and a writer from New York.

I mentioned that to the M. F. H., and told him of my earlier impression as to hunt-club habits.

"Lots of people have that idea," he smiled, "but it is wrong. As a matter of fact, few hunting people are teetotalers, but those who ride straight are almost invariably temperate. They have to be. You can't be in the saddle six or eight hours at a stretch, riding across country, and do it on alcohol."

Correct at All Costs

I ALSO learned from the M. F. H. certain interesting things regarding a fox's scent. Without having thought upon the subject, I had somehow acquired the idea that hounds got the scent from the actual tracks of the animal they followed. That is not so. The scent comes from the body of the fox and is left behind him suspended in the air. And, other conditions being equal, the harder your fox runs the stronger his scent will be. The most favorable scent for following is what is known as a "breast-high scent"—meaning a scent which hangs in suspension at a point sufficiently high to render it unnecessary for the hound to put his head down to the ground. Sometimes a scent hangs low; sometimes, on the other hand, it rises so that, particularly in a covert, the riders, seated upon their horses, can smell it, while the hounds cannot.

But I think I have said enough about this kind of thing. It is a dangerous topic, for the terminology and etiquette of hunting are as elaborate as those of golf. Probably I have made some mistake already; indeed, I know of one which I just escaped—I started to write "dogs" instead of "hounds," and that is not done. I have a horror of displaying my ignorance on matters of this kind. For I take a kind of pride—and I think most men do—in being correct about comparatively unimportant things. It is permissible to be wrong about important things, such as politics, finance, and reform, and to explain them, although you really know nothing about them. But with fox hunting it is different. There are some people who really *do* know about that, and they are likely to catch you.

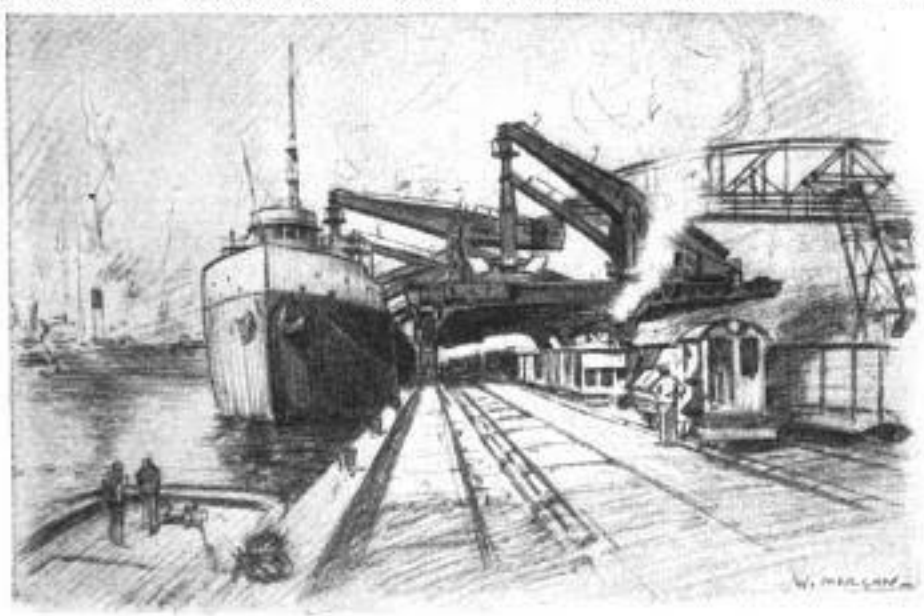
The Black Horse Troop

TWO other Cleveland organizations should be mentioned.

Troop A of the Ohio National Guard is known as one of the most capable bodies of militia in the entire country. It has been in existence for some forty years, and its membership has always been recruited from among the older and wealthier families of the city. The fame of Troop A has reached beyond Ohio, for under its popular title, "The Black Horse Troop," it has gone three times to Washington to act as escort to Presidents of the United States at the time of their inauguration. Cleveland is, furthermore, the headquarters for trotting racing. The Cleveland Gentlemen's Driving Club is an old and exceedingly active body, and its president, Mr. Harry K. Devereux, is also president of the National Trotting Association.

The Nickel Dethroned at Last

A CURIOUS and characteristic thing which we encountered in no other city is the Three-Cent Cult—a legacy left to the city by the late Tom Johnson. Cleveland's street-car system is controlled by the city and the fare is not five cents, but three. But that is not all. A municipal lighting plant is, or soon will be, in operation, with charges of from one to three cents per kilowatt hour. Also the city has gone into the dance-hall business. There, too, the usual rate is cut: fifteen cents will buy five dances in the municipal dance halls, instead of three. No one will attempt to dispute that dancing, to-day, takes precedence over the mere matter of eating, yet it is worth mentioning that the Three-Cent Cult has even found its way into the lunch room. Sandwiches may be purchased in Cleveland for three cents which are not any worse than five-cent sandwiches in other cities.



Perhaps the finest thing about the Three-Cent Cult is the fact that it runs counter to one of the most pronounced and pitiable traits of our race: wastefulness. Sometimes it seems that, as a people, we take less pride in what we save than in what we throw away. We have a "There's more where that came from!" attitude of mind. A man with thousands a year says: "Hell! What's a hundred?" and a man with hundreds imitates him on a smaller scale. The humble fraction of a nickel is despised. All honor, then, to Cleveland—the city which teaches her people that two cents is worth saving, and then helps them to save it. Two points, in this connection, are interesting.

One, that Cleveland has been trying to induce the Treasury Department to resume the coinage of a three-cent piece; another, that the percentage of depositors in savings banks in Cleveland, in proportion to the population, is higher than in most other cities. And, by the way, the savings banks pay 4 per cent.

Something About Business

WE were taken in automobiles from one end of the city to the other. Down by the docks we saw gigantic, strange machines, expressive of Cleveland's lake commerce—machines for loading and unloading ships in the space of a few hours. One type of machine would take a regular steel coal car in its enormous claws and turn that car over, emptying the load of coal into a ship as you might empty a cup of flour with your hand. Then it would set the car down again, right side up, upon the track, only to snatch the next one and repeat the operation.

Another machine for unloading ore would send its great steel hands down

Down by the docks we saw gigantic, strange machines, expressive of Cleveland's lake commerce—machines for loading and unloading ships in the space of a few hours

How a small thing has grown large

Twenty-seven years ago, in one small room, with two helpers, a man began a business enterprise—the making of men's garters

IN the left hand corner of this page you see how this room looked; about ten by twelve feet in area; with the bottom of a packing box for a desk.

In the opposite corner of the page you see the factory building as it is now; a fireproof structure, mostly windows, with daylight on all four sides; clean and sanitary.

The number of operatives is now more than 1,000.

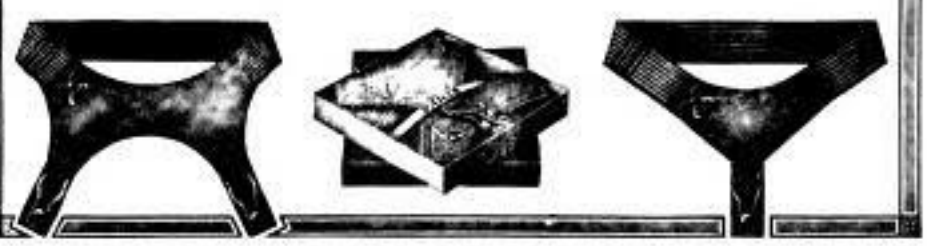
These illustrations show how a small thing has grown large.

The secret of it is quite simple; the quality of the goods explains it.

A garter to hold up a man's socks is a small article, at a small price.

Most men spend 25 or 50 cents without a second thought.

Our idea was, at the beginning, and is now, to give the best possible value for 25 and 50 cents.



The quality now is better than it was then; the shape is better; the garter fits better.

PARIS GARTERS, the first shield-garters, were originated by us; they satisfied a real need of well-dressed men; and they have been constantly improved ever since.

The **PARIS GARTER** trade mark has now become, all over the world, a sure sign of best quality. For that reason, when you buy garters, be sure you get

into the vessel's hold, snatch them up filled with tons of the precious product of the mines, and, reaching around backward, drop the load into a waiting railroad car. The present Great Lakes record for loading is held by the steamer *Corey*, which has taken on a cargo of 10,000 tons of ore in twenty-five minutes. The record for unloading is held by the *George F. Perkins*, from which a cargo of 10,250 tons of ore was removed in two hours and forty-five minutes.

Some of the largest steamers of the Great Lakes may be compared, in size, with ocean liners. A modern ore boat is a steel shell more than six hundred feet long, with a little space set aside at the bows for quarters and a little space astern for engines. The deck is a series of enormous hatches, so that practically the entire top of the ship may be removed in order to facilitate loading and unloading. As these great vessels (most of which are built in Cleveland, by the way) are laid up throughout the winter, when navigation on the Great Lakes is closed, it is the custom to drive them hard during the open season. Some of them make as many as thirty trips in the eight months of their activity, and an idea of the volume of their traffic may be gotten from the statement that "the iron-ore tonnage of the Cleveland district is greater than the total tonnage of exports and imports at New York Harbor." One of the little books about Cleveland, which they gave me, makes that statement. It does not sound as though it could be true, but I do not think they would dare print lies about a thing like that, no matter how anxious they might be to "boost." However, I feel it my duty to add that the same book says: "Fifty per cent of the population of the United States and Canada *lies* within a radius of five hundred miles of Cleveland."

Euclid Avenue

I FIND that when I try to recall to my mind the picture of a city, I think of certain streets which, for one reason or another, engraved themselves more deeply than other streets upon my memory. One of my clearest mental photographs of Cleveland is one of endless streets of homes.

Now, although I saw many houses, large and small, possessing real beauty—most of them along the boulevards, in the Wade Park Allotment or on Euclid Heights, where modern taste has had its opportunity—it is nevertheless true that, for some curious reason connected with the workings of the mind, those streets which I remember best, after some months of absence, are not the streets possessed of the most charm.

I remember vividly, for instance, my disappointment on viewing the decay of Euclid Avenue, which I had heard compared with Delaware, in Buffalo, and which, in reality, does not compare with it at all, being rather run down, and lined with those architectural monstrosities of the 70's which, instead of mellowing into respectable antiquity, have the unhappy faculty of becoming more horrible with time, like old painted harridans.

What Every City Ought to Know

ANOTHER vivid recollection is of a sad monotony of streets, differing only in name, containing blocks and blocks and miles and miles of humble wooden homes, all very much alike in their uninteresting duplication.

These memories would make my mental Cleveland picture somewhat sad, were it not for another recollection which dominates the picture and glorifies the city. This recollection, too, has to do with squalid thoroughfares, but in a different way.

Down near the railroad station, where the "red-light district" used to be, there has long stood a tract of several blocks of little buildings, dismal and dilapidated. They are coming down. Some of them have come down. And there, in that place which was the home of ugliness and vice, there now shows the beginning of the city's Municipal Group Plan.

This plan is one of the finest things which any city in the world has contemplated for its own beautification. In this country it was, at the time it originated, unique; and though other cities (such as Denver and San Francisco) are now at work on similar improvements, the Cleveland plan remains, I believe, the most imposing and the most complete.

When an American city has needed some new public building it has been the custom, in the past, for the politicians to settle on a site, and cause plans to be drawn (by their cousins), and cause those plans to be executed (by their brothers-in-law). This may have been "practical politics," but it has hardly resulted in practical city improvement.

She Dares to Plan for Beauty

NO one will dispute the convenience of having public buildings "handy" to one another. But there may still be found (even in Cleveland!) men whose feeling for beauty is not so highly developed as their feeling for finance; men who shake their heads at the mention of a group plan: who don't like to "see all that money wasted."

I met one or two such. But I will venture the prophecy that, when the Cleveland plan is a little farther advanced, so that the eye can realize the amazing splendor of the thing as it will ultimately be, there will be no one left in Cleveland to convert.

It may take fifty years to complete the work. It is a fine and unusual thing, in itself, for an American city to be planning its own beauty so far ahead. Cleveland is almost un-American in that! But when the work is done—yes, and before it is done—this single great improvement will have transformed Cleveland from an ordinary looking city to one of great distinction.

Fancy emerging from a splendid railway station to find yourself facing, not the little bars and dingy buildings which so often face a station, but a splendid mall, two thousand feet long and six hundred wide, parked in the center and surrounded by fine buildings of even cornice height and harmonious classical design. At one side of the station will stand the public library; at the other the Federal building; and at the far extremity of the mall the county building and the city hall.

Three of these buildings are already standing. Two more are under way. The plan is no longer a mere plan but is already, in part, an actuality.

A Pattern to Others

WHEN the transformation is complete Cleveland will not only have remade herself but will have set a magnificent example to all other cities. By that time she may have ceased to call herself "Sixth City"—for population changes. But if a hundred other cities follow her with group plans, and whether those plans be of greater magnitude or less, it must never be forgotten that Cleveland had the appreciation and the courage to begin the movement in America, and that, without regard to population, she therefore has a certain right, to-day, to call herself "First City."

Detroit comes next in the list of cities in which Mr. Street rambled and adventured. The article will appear in an early issue.

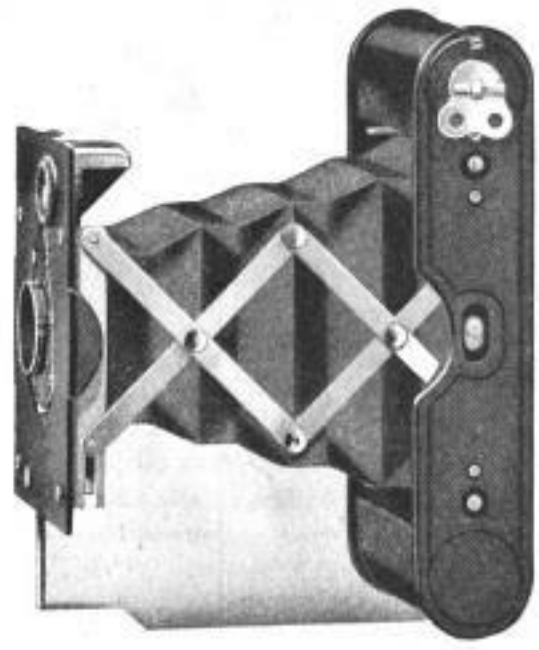
Exit Madame

(*Continued from page 10*)

taboons and a coat to match. He assures himself that the photograph of Bonheur, suitably inscribed, is safely stowed away in the pocket of the coat. Then, throwing his hat upon the waters of the reservoir, he places a cap upon his head and steals away, walking low, trying to bring the hem of his raincoat down to the tops of his shoes.

And, ah, but that was a long, long night for M. Narcisse! It was midnight when he reached at last his studio near Waverley Place. At times he was exalted to grandeur. But oftener he was depressed to despair. For when a man is properly clad it gives him a feeling of confidence. But when he has literally nothing to wear—when he has burned his bridges behind him—or has abandoned them to the mercies of the enemy—

He slept by fits and he dozed by starts, waiting for morning and the paper man, to whom he had given orders to leave all the morning papers at his door.



THREE o'clock struck. Four o'clock followed suit. Dawn began to lift the shadows from the studio. And what is this which gradually emerges from the darkness? It is the statue of Bonheur—that is to say, Happiness. In triumph slings the green stone figure, her foot

As right as a full jeweled watch

Vest Pocket Kodak

with Kodak Anastigmat lens

HERE is efficiency—a camera that will slip easily into the vest pocket—so small and light that there is always room for it, yet in every detail of construction and equipment, an instrument of precision.

The Kodak Anastigmat lens is ground by skilled workmen, from the finest Jena glass. The result, under experienced superintendence and a system of most rigid tests, is a lens that gives microscopic definition, is free from astigmatism, and renders perfect flatness of field. Its speed (*f*.8) is extremely high for a lens used only with a fixed focus. The Kodak Anastigmat is made exclusively for use on the Vest Pocket Kodak, and it meets absolutely the most exacting requirements.

The Kodak Ball Bearing shutter into which this lens is fitted, has proved itself the most reliable of shutters—reliable because it works without jar or bang, and so does not throw itself out of adjustment. It has instantaneous speeds for 1/25 and 1/50 of a second, the time action—opening at one pressure of the lever and closing at the next, and the so-called "bulb" action, where the shutter opens when the lever is pressed, and closes when it is released. The shutter has iris diaphragm stops and is equipped also with the Autotime Scale—by which correct exposure can be told at a glance.

Actual Size

The camera has a brilliant reversible finder, and uses Kodak film cartridges of eight exposures. The pictures are 1⅝ x 2½ inches, but so sharp and clear are the negatives, that enlargements can be made to any reasonable size—and at small cost—to the post card size, (3¼ x 5½), for instance, at sixteen cents.

Working with a mechanical precision that is a delight, free from all complications, simple in every detail, instantly ready for business without focusing, so small and smooth that it is pocketed without annoyance—here is *efficiency*.

Vest Pocket Kodak, with Kodak Anastigmat lens, - - - $12.00

If it isn't an Eastman, it isn't a Kodak.

A $10. repair bill on 70 acres of roof—over a 16 year period

Bush Terminal Co.

Barrett Specification Roofs

THE Bush Terminal Buildings in Brooklyn, N. Y., extend a mile along the shore.

The net roof area of these buildings is 3,100,000 square feet—or more than 70 acres.

Every inch of this is roofed with Barrett materials—and, since 1897, when the first roof was covered, the cost of maintenance has been *less than $10.00*.

The Bush Terminal people write us:

"We use this kind of roofing because our experience has shown it to be the best and cheapest. Our analysis of first cost of application and cost of maintenance entitles us to speak with some measure of authority."

The idea behind The Barrett Specification is an old one, established by years of experience—namely, that coal tar pitch, tarred felt, and gravel or slag, when properly laid, make the best and most economical roof.

Architects, engineers and contractors know that, if The Barrett Specification is followed absolutely, the resulting roof will last longer and cost less than any other kind.

Special Note—We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof, laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

Booklets on request, including a copy of The Barrett Specification.

BARRETT MANUFACTURING COMPANY

New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburgh, Cincinnati, Kansas City, Minneapolis, Seattle, Birmingham

The Paraffine Mfg. Co., Limited: Montreal, Toronto, Winnipeg, Vancouver, St. John, N. B., Halifax, N. S., Sydney, N. S.

upon the other's neck, her hand upon the harp! In contortion writhes the mottled red one, as though in the throes of a colic, ugly beyond words. Clearer and clearer the statue comes out of the gloom. Five o'clock. Six o'clock. Seven o'clock—and a heavy thud at the door tells that the morning papers have at last arrived. M. Narcisse flung on his raincoat and a moment later he was devouring the headlines on the front pages.

Yes, yes! There it was in the boldest, black letters! "Suicide in Central Park Reservoir?"

Yes, yes! And there it was again! And there once more! Taking precedence over all the other news of the day!

FOR a time the success of the plan took away the young sculptor's breath. But then, slowly arising, he strode (in his raincoat) to the looking-glass that hung on the wall. Intoxicated with his dreams, he looked with pride at the reflection of his features, pale, tragic, mustachioed and imperialed to perfection. "Au vrai!" he cried. "I always knew I would be the great man!" And exultingly then he turned to the papers, suddenly grown voracious for the details.

"How noble a heading!" he exclaimed. "'Suicide in reservoir?' And here a picture of the scene! What a beautiful sheet of water! And here again is a picture of my clothes, with that very patch upon the pantaloons so faithfully portrayed! And here—"

But all at once his jaw dropped. "What?" he choked. "What?" And, all his features denoting horror to the ultimate degree, M. Narcisse read the following fateful lines:

"In the pocket of the coat was found a book of poetry, entitled 'Patrolling on Pegasus,' written by Mounted Officer Peter J. Rafferty, otherwise known as the Minnesinger of the Police Department.

This has given rise to the rumor that the missing man may be a well-known member of the force. The following lines had been heavily underscored:

"And when the last pushcart is banished
And the taxis have took to the sea;
And when the last truckman has vanished
To the place where they all ought to be:
It is then, oh my heart, that I'll give thee a smile,
And Dobbin and me, we will rest up a while."

Dancing with rage, M. Narcisse snatched up the other papers. But yes! They were all the same! Every account made a feature of "Patrolling on Pegasus." But not one word—not one syllable—about the photograph of Bonheur.

"Diable!" groaned M. Narcisse. "It is a plot of the gendarmes to advertise the poetry of their colleague, this coquin called Rafferty! Oh, what deceit! Oh, what dishonesty to so mislead the public! And here am I, still unknown, still undiscussed, penniless, even r-r-robbed of my pantaloons! And—"

BUT again (as the novelists say) his jaw dropped, for (still frantically searching for some chance mention of Bonheur) the following momentous paragraphs had smitten him right shrewdly in the eye:

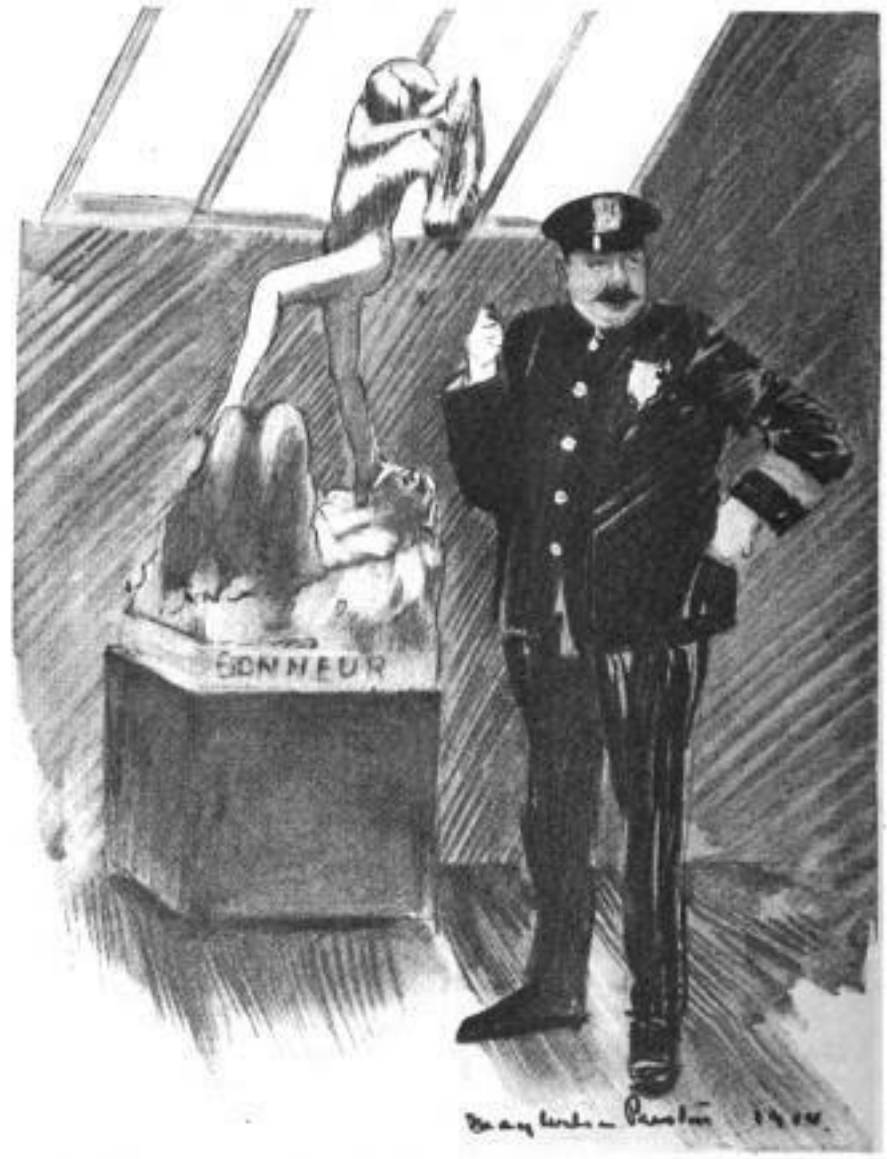
"The police are inclined to the theory that the unknown man repented of his act as soon as he struck the water. It is thought that he swam ashore and, being frightened away from his clothes, made his escape in a raincoat.

"In view of the nature of the case the police will leave no stone unturned to find this man, and if he can be traced he will either be committed for an examination as to his sanity, or he will receive the extreme penalty of the law—"

"The extreme penalty of the law!" muttered the well-nigh frantic M. Narcisse. "The extreme penalty of—Oh, ciel!"

For the door had suddenly opened. A frowning policeman had stepped inside and had shut the door behind him.

HE was a muscular man, this cop was, with a chest like Taurus the Bull and a raucous voice that would make any umpire hide his head in shame.



"Well?" he cried, "so yuh're here, are yuh?"

And finding himself unable to deny a fact so obvious, M. Narcisse took a quite unconscious lesson from the clam.

"Reading about it in the papers, eh?" demanded the other, looking around at the overstrewn floor. "And, by jing, if he isn't wearing the raincoat yet!"

And still M. Narcisse emulated the idiosyncrasies of the clam, not only as to silence, but as to perspiration as well.

"Feeling pretty sick, eh?" demanded the man in uniform. "Well, I dunno as I blame yuh. It was a slick trick, but yuh couldn't quite put it over." He balanced a bundle which had been under his arm. "Here's your clothes," he grinned. "Catch!"

"Say! That's my tombstone; d'yuh hear me? That's mine! I'm gonta buy that! How much d'yuh want for it—right now—cash?"

Publications of the Department of Agriculture

The Department of Agriculture has a number of very interesting bulletins, written in popular style, available for free distribution. These cover not only the subjects of poultry and cattle raising, the growing of fruits and vegetables, care of bees, construction of farm buildings, the marketing of farm products, and the keeping of accounts, but also cover much that is of interest to those living in cities, such as bulletins on the food values of beans, peas and other legumes, eggs, poultry, cereal breakfast foods, fruit, sugar, corn and corn products, potatoes and other root crops, nuts, milk, cheese, mutton and fish, and bulletins on "Meats, Composition and Cooking," "Principles of Nutrition and Nutritive Value of Food," "Bread and Bread Making," and "Canned Fruits, Preserves and Jellies." **A full list of these bulletins (*not the bulletins themselves*) and information on how to obtain them** will be sent to all those who will write to Collier's Washington Bureau, 902 Munsey Building, Washington, D. C. Our service is entirely without charge.

DOES
YOUR BABY

Measure up to the Standard of the BETTER BABY Movement?

If Not, What is the Reason?

In 9 cases out of 10 it is a question of Feeding.

If properly fed, other conditions being correct, Baby should at least be Normal in his physical development.

Mental development depends largely upon a satisfying food.

All milk makes a curd in the Baby's Stomach. The curd should be light, so the digestive juices of the delicate stomach can act readily upon it.

Gail Borden Eagle Brand Condensed Milk makes a light, flocculent curd similar to that of Mother's Milk.

It contains the necessary elements for building firm flesh and bone. The Baby is satisfied and grows normally.

Send for Feeding Chart and literature.

Borden's Condensed Milk Co.

"Leaders of Quality"

THE ORIGINAL

He flung the bundle across the room and the sculptor stopped it cleverly with his chest. "My clothes?" he stammered. "My clothes, m'sieur?"

"Sure," replied the cop with a genial smile. "No use being mean about it, is there? Yuh played and yuh lost. I told 'em up at Headquarters how it happened, and the on'y thing yuh've gotta do, yuh've gotta beat it!"

"To beat it?" muttered M. Narcisse.

"Sure. Yuh've gotta travel. If yuh ain't outa town by one o'clock, yuh're gonta be pinched. And it's lucky for yuh that I've got friends at Headquarters or yuh'd be pinched right now. See?"

"Peenched?" gasped M. Narcisse.

"Yuh get me all right, all right. Yuh've got till one o'clock. And I'm gonta stand right by yuh till yuh say 'Good-by.' There won't be any reporters in on this."

The situation began to dawn upon M Narcisse, and the more it dawned the less he liked its looks. When a man's cash assets can be converted into quarters and jingled between the palms of the hand without making any noise whatsoever, he is not equipped to travel. And unless he did travel—

THE voice of the officer recalled him. "Some piece of work!" he was rumbling.

The sculptor turned and found his visitor admiring Bonheur.

"You like heem, m'sieur?" he asked in the proud, tender voice of paternity.

"It's a peach—a pippin!" replied the other with rising enthusiasm. "And say! Wouldn't it make a hit for a tombstone!"

"For ze tombstone?" squealed M. Narcisse. "Bonheur for ze tombstone! What a place for ze happiness! Lees-ten, m'sieur! Leesten, and I will explique! Il y a meaning to heem, une allegorie, a story een ze stone! Zat figure of ze green—percelvez you not that which eet represent? Eet represent—"

"Sure!" shouted the other with shining eyes. "Sure I see what she represents now! She represents Ireland! By gorry, there she is, harp and all! Look at her singing! And, by gorry, why shouldn't she sing! She's getting home rule! Hurray! And that mottled red guy—with the cramps—underneath her feet— Say! That's my tombstone; d'yuh hear me? That's mine! I'm gonta buy that! How much d'yuh want for it—right now—cash?"

"Cash!" Unconsciously the word began to echo in the mind of M. Narcisse. "What?" he stuttered to himself in a rich mixture of astonishment and rage. "Bonheur for a tombstone? Never, never, never! Rather would I take a hammer and knock him into little portions!"

"CASH!" unconsciously echoed in his mind.

"What," he demanded of himself with a gesture of flame, "my masterpiece to be treated so? A thousand times, no, no! Rather would I die—yes—die!"

"Cash!" sang the refrain.

"Of course," he admitted to himself, "once back in Paris, I could execute still other masterpieces—"

"Cash!" shouted the echo.

"And if I don't get some money to go away, I shall be 'peenched'—"

"Cash!" crashed the chorus.

M. Narcisse snatched up one of the papers. "*La Provence* sails on Thursday at one o'clock for Havre and Paris!" he muttered. "And to-day is Thursday itself! In one short week I would be in—"

"Well," interrupted the officer, "what d'yuh say?"

"Eef you will payez me," said M. Narcisse, speaking slowly, "a mille francs—eet ees to say deux hundre' dollars—"

"Two hundred dollars!" cried the policeman. "Shake!" They shook. "And say," he continued, "I'll give yuh another ten-spot if yuh'll chip out the name of that guy Bonheur and carve 'Rafferty' there—"

"'Rafferty'?" shrieked the sculptor. "Zen—you—are—"

"Sure," grinned the cop, with an air of a man who was having a lovely time. "I'm the guy who wrote 'Patrolling on Pegasus'! I'm the guy who saw yuh put your clothes there by the reservoy! Who'd yuh think I was, anyway? Rudyard Kipling?"

AND now for a last, long look, mesdames—and now for a sad farewell, messieurs—let us return to Mme. Dejole, seated in the Restaurant Dejole that noon, waiting for the midday rush to begin, sorrowful, mournful, melancholy beyond all mortal measure.

WHIRLPOOL SANITARY DISHWASHER

Small in size; light and portable; easily lifted and carried.

Strongly built of stamped metal; beautifully enameled and ornamentally finished.

Indispensable in seashore apartments and other summer homes.

The housewife's salvation in the hot months of summer.

No contact with hot water, steam or heat. Self-cleansing; sanitary; no pump used.

Reduces time in hot kitchen to a very few minutes.

Large numbers are being sold in the

JOHN WANAMAKER STORE
Philadelphia

and the Wanamaker circular says of it:

"At last—a successful dish washing machine for the home."

"It cleans with hot suds, rinses with boiling water, sterilizes, and dries your dishes in a very few minutes."

"The hands need not touch the water . . . and there is no danger of roughening the skin. No matter how hot the water, even the finest glass will not crack nor break."

". . . Servants . . . have been converted to this Dishwasher after a single trial; for it saves them so much hard and unpleasant work and is so little trouble to operate."

"It makes dishwashing a pleasant task."

". . . The well-known objections to previous types of Dishwashers have all been overcome in this one."

Average family size $15.00

Information furnished regarding larger sizes. All machines strictly guaranteed, or money refunded.

If not obtainable in your locality, the Whirlpool will be sent prepaid upon receipt of price.

Returnable at our expense, after ten days' examination.

Prest-O-Lite for Motorcycles

"My Lighting System Must Be as Sturdy as My Motorcycle"

You wouldn't buy a motorcycle unable to stand hard usage on rough roads—liable to fly to pieces whenever it tipped over.

Use the same good common sense in buying a lighting system.

We back up the safety, saving and satisfaction of Prest-O-Lite with a genuine money-back offer—you can try it 30 days FREE if you wish. Insist upon the same guarantee before you accept any other system.

Remember!

We have told you the story of vibration and its effect on batteries, and other delicate apparatus. Experience has already proved it. Your safety is too important to risk on taking chances. Prest-O-Lite is simple—safe—trouble proof.

How About This?

Ask the dealer to drop a toy storage battery three feet on the pavement and see what happens. Then you'll see what happens if your machine takes a spill. Some riders have found this out by costly experiment.

In first cost and operating expense, Prest-O-Lite costs far less than any other system of brilliant lighting. It is solid, substantial, takes no power to operate. It is the most convenient system you can use.

Any dealer who is offering a combination of equipment will include Prest-O-Lite if you insist. If you know the facts you will insist.

Write your name and address below the dotted line and mail it to us for complete information on motorcycle lighting.

The Prest-O-Lite Co., Inc., 730 Speedwa , Indianapolis, Ind.

MADE BY Wilson Bros EXCLUSIVELY LICENSED UNDER THE Klosed-Krotch PATENTS DEC 19 1911

Wilson Bro's

Athletic Union Suit

Licensed under the

Klosed-Krotch Patents

NEVER a bind or chafe in this perfected garment. Never a gap or roll or bunch-up in the patented, permanently closed crotch. Separate openings front and back. Freedom, coolness, lightness—ideal for sultry days. The only athletic union suit of this kind licensed under the Klosed-Krotch patents. Nainsook to silk—$1.00 up *for men;* 50 cents up *for boys.*

Other furnishings bearing the *Wilson Bro's* mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

Wilson Bro's

Combinette Shirt

Licensed under the

Klosed-Krotch Patents

Another Wilson Bros. specialty is this one-piece outing shirt made with the same patented closed crotch as described above. Stays smoothly draped. No tail to "work out." Variety of fabrics and make-ups—$1.50 and more. At your furnisher's.

Wilson Bro's Chicago

At her feet were the morning papers, in which she had learned of the miscarriage of her plans.

IN her ears still rang the telephone report of M. Narcisse, who had called her up from the steamship dock to tell her the prank that fate had played upon them.

"Yes, yes," sighed Mme. Dejoie. "I t'ought I was so clever, but I get it in ze necklace, good and improper, jus' ze same! I have learn' my lesson: I have play' my las' Providence; I am t'roo!"

At his comptoir opposite her desk, M. Dejoie, magnificently twisting the ends of his superexquisite mustache, saw the movement of her lips.

"What did you say?" he asked.

"What did I say?" exclaimed madame. "Zis is what!" And, rising to the tips of her toes, she raised her right hand toward the ceiling, crying: "Never—no, never—again!"

The Day's Work

(Continued from page 9)

and tenderly ran his fingers around the edges of one of the neat patches. Then he clutched it tightly in his hand and held the tiny stitches for a second close to his burning eyes.

Presently he started toward the kitchen. As he reached the door, Em entered from ma's room carrying the tray on which her mother's breakfast had been served. She set it on the table and looked wistfully at its untasted contents. Then she covered her face with her hands. Her shoulders quivered.

Pa paused on the threshold. Then he started to tiptoe toward his girl, his heart a throbbing pain for her. There was a heap of comforting things he might say! His foot pressed a board that creaked, and Em drew a quick hand across her eyes and threw back her shoulders. By the time he came up to her their eyes met in a smile. Em took a lot after her ma for being cheerful!

EM stepped about doing little household duties, and pa went softly around helping her. He wiped the dishes and swept the floor—things he'd always done for ma. Then he went out to feed the chickens. Seemed more like that was doing something for ma than anything else. She always set a heap of store by her chickens. He threw them a measure of wheat and stood watching them. An old mother hen gathered her baby chicks under her. Pa looked at her thoughtfully. It was a sight of comfort to feel like you was being taken care of that way—especially when you felt a little bothered about anything.

After a while he reentered the house and went softly into the living room, where he picked up a worn Bible. He seated himself and opened the book. He found ma's place marked with a hairpin. He had seen her put it there a week or so ago. She had not felt like reading since. He did not disturb the pin, neither did he read. He closed the book and held it in one hand and rested his whitening head on the other. He was very quiet and the tears fell softly between his fingers on the worn book in his hand.

About noon the doctor drove up to the gate. As he came through the hall he saw pa in the living room. Pa put a finger to his lips, smiled slyly, and pointed to the dining room, where ma was sitting in her big rocking-chair. The doctor returned pa's smile with a questioning look and went on into the dining room.

Then the noon whistle blew. Pa tiptoed through the hall into the bathroom, where he again donned his overalls and put on his hat. After waiting a sufficient length of time, he went out and around the house and up the street.

THE dining-room window was raised. Through it he could see that the doctor was looking at him. Then he saw ma straighten her glasses and lean forward a little. She waved a welcome, but he noticed it was with an effort she raised her hand and that it fell heavily into her lap. The doctor was just leaving when pa came in. Ma's face lighted up as he entered, and her lips trembled into a smile.

"I was just a-tellin' the doctor about you havin' such a good job o' work, pa." A look of pain came into her face and her hands tightly clutched the arms of the chair.

"That pain caught you again?" asked the doctor, taking her hand and feeling her pulse.

"Yes—it comes and goes—mostly comes. But I'll grin and bear it." She joked as she winced, her voice scarcely more than a whisper.

Pa was holding her hand now and smoothing back her hair.

The doctor stood looking at them.

Ma looked up at the doctor.

"Don't you come back here to-night, doctor, unless you think I really need you," she said, a significant look accompanying her words. "Our bill must just be somethin' terrible by now!"

"You never mind that bill," he told her. "Haven't you been telling us something about a merry heart making a cheerful countenance? Who can have a merry heart thinking about *bills?*"

SHE gave a little trembling laugh. "Yes, who can? I'm just an old guidepost—always pointin' the way for others to go, and don't go that way myself, eh?"

"I think you make a mighty good stagger at lendin' the rest o' us, ma," pa said with his beautiful sincerity.

The doctor laid his fingers on ma's pulse and looked steadily into her courageous face. Then with a gentle pressure of his fingers and a quick smile he turned toward the door.

Pa was following him out when ma spoke solicitously from lips that whispered:

"Poor old fellow! You look tired! I reckon after not workin' for so long you feel purty stiff!"

Pa pretended not to hear her and shamefacedly followed the doctor to the hall door.

THE doctor turned, his steady gray eyes gazed into pa's with a look that warmed the older man's heart. He had been a sight of comfort all along—he was a chap for understanding.

After the noon dinner, of which no one partook, though each made a brave pretense, ma insisted that Em get out some of the records and play something lively on the phonograph.

"There ain't a bit o' sense in us a-settin' round here a-starin' each other out o' countenance. Might just as well have a little music on the subject," she smiled. Her voice sank into a whisper and her breath came with difficulty. "Play a lively one, Em. Play 'Arkansaw Traveler,' I reckon that's about the sprightliest one we've got."

The phonograph rasped away. Ma tapped her trembling fingers on her chair arm, keeping time to the music, and pa leaned back in his chair, smiling gently at her out of many thoughts. Em stood near the instrument waiting to take off the record. Her eyes were troubled, but her lips were smiling and her little head was held high.

"Now, play 'Loch Lomond!' I believe that's my fav'rite."

Em put on the record. Ma tried to sing, too, but her breath was too short. Her weak voice hummed:

You take the high road, and I'll take the lower,
But I'll get to Heaven before you.

Em laughed a pretty ripple, though her face held no color.

"Ma, you always did get those words wrong! It's not 'Heaven'—it's 'I'll get to *Scotland* before you!'"

"Well, honey, I'm goin' to sing it my way—and you can take either road you want to, and I'll get there before you." She smiled, but her hands tightly clutched the chair arms.

UNDER the pretext of taking off the record, Em hid her tears, but pa rocked and continued to smile gently as though his world were growing larger in a way he hardly understood with his physical senses.

A whistle sounded. Pa rose and put on his coat which he had removed when he came into the house. He hesitated. Then:

"Well, my dearlie, there's the one o'clock whistle! You still want me to go to work this afternoon?" He went over to her and tenderly brushed her hair from her thin face.

"Why, o' course I do! Pa, you don't

Neckbands that don't tighten up mean comfort and long service. A shirt may fit when new, but if the neckband shrinks you come to hate that shirt and dodge wearing it.

Emery Shirts

are made with *pre-shrunk* neckbands and remain comfortable. They are accurate in pattern and cut, measure true to size mark, and are worn with same size collar.

The Smuggled Calabash

A Tale of Crime and Reparation

Jones of Philadelphia (not the Jones you know) had business in Detroit. Before returning he crossed over to Windsor with the fell notion of buying a swell calabash and bringing it back without paying duty.

He got away with it, with much less trouble than he expected. But Jones was afflicted with a conscience. He was sorry before he got to Mansfield and it was a contrite Jones who left the train at Broad Street Station.

At home his wife made it worse. She said it sounded downright dishonest, and every time the postman rang she jumped with terror at the idea of Custom men, U. S. marshals, Federal prisons and things.

Poor Jones couldn't make that pipe taste right. He never enjoyed smoking it—got no pleasure out of it. He almost gave it away once, but instead he stuck a $5 bill in an envelope and sent it to the Detroit Custom House, hoping that would ease his conscience.

He had no sooner mailed his letter than he found that he wanted to smoke. He felt for his tobacco but he had none, so he walked over to Harrison's desk and asked for a pipeful and got it from Harrison's tin.

He lighted up with trembling fingers. Would his conscience money spent make that beautiful pipe taste as it should—as he had longed for it to taste?

Oh, Joy! Oh, Bliss! Oh, Rapture! The pipe tasted glorious, the smoke was incomparable. He leaned back in his chair and sank into a reverie of pure pipe pleasure. Suddenly he roused himself.

"Harrison," he burst out, "would you believe it? Now that I have repented and paid Government the duty I cheated it out of in this pipe, it gives me the sweetest, nicest, slickest smoke I ever experienced."

And Harrison said, "Oh, forget it, you poor self-deceived man; that pipe got good because I gave you some Edgeworth – if you had started in smoking Edgeworth you would be ahead the $5 bill you just dropped down the mail chute."

Now the question is, Was it conscience or Edgeworth that made Jones begin to enjoy his pipe?

We'll let you decide this by testing Edgeworth yourself, and we'll furnish free the tobacco for a thorough test.

If you will send us your address and your dealer's name on a post card we will postpay a sample package for you to try. We want you to try Edgeworth for the same reasons that you would want people to try any product that you had spent years in perfecting and that you made as well as you knew how. So send and get your sample.

Edgeworth is made from the finest Burley that grows on the ground and comes in two forms—Sliced Plug and Ready-Rubbed.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin, $1.00 for humidor tin. Edgeworth Sliced Plug is 15c, 25c, 50c and $1.00. It is on sale practically everywhere. Mailed prepaid where no dealer can supply.

If you want the free package, write to Larus & Brother Co., 3 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants: If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen (10 cent size) carton by prepaid parcel post at same price you would pay jobber.

EXTRAORDINARY OFFER – *30 days* – one month's free trial on this finest of bicycles—the "RANGER." We will ship it to you on approval, *freight prepaid*, without a cent deposit in advance. This offer is absolutely genuine.

MEAD CYCLE CO., Dept. R-54, CHICAGO, ILL.

seem to re'lize what this doctor's bill's goin' to be—it's goin' to be somethin' just awful. You've-just-got-to-go-to-work!" she ended weakly.

"There, there!" he soothed. "Don't get all worked up, my dearlie. I'm a-goin' to do just whatever you want me to," he added, as he stooped to kiss her.

"Pa, you're an awful good man," she told him, her voice a trembling whisper and the look in her eyes a benediction.

He stood silent. From the depths of him a lifetime of love and devotion shone out and gloriously illumined his patient face. Memory and anticipation made the past and future one beautiful reality.

He turned and walked slowly away.

He'd never been a man to whom little things seemed big, but it wasn't a little thing to leave her *now*.

SHE might be listening, so he walked briskly down the porch steps, gave the gate a sharp swing that sent it shut with a click, and went quickly up the street. He would have liked to whistle "How I Love You, Mollie Darling," but his lips kind of quivered, and, someway, wouldn't pucker. He looked back and waved at ma as he turned the corner and went out of sight. He was quite sure she couldn't see him—but "there was lots of comforting things he didn't *see* that he knowed *was there!*" A glory shone on his face. It settled there.

He went quickly around the block and again came up the back steps into the bathroom. Em, who was just going into the bedroom, motioned for him to hurry. Her face was pale and her lips were pressed tightly together. He followed her into the bedroom and helped her turn down the covers, smoothing the snowy sheets with his trembling hands.

WHEN Em went back into the dining room pa followed her to the door. The back of the big rocking-chair was toward him, but he could see the top of ma's head resting back among the pillows.

"Tired, muzzer?" Em asked, her face colorless, but her eyes still holding the cheerful look that ma loved.

"Awful tired, honey," she whispered wearily. . . . "I wish pa hadn't minded me and gone to work this afternoon," she said drowsily in a far-away voice.

The ticking of ma's treasured eight-day clock filled the silence.

"Ain't it purty nigh time for him to be a-comin' home again?"

Em started at the question. She looked more closely at ma.

"The whistle blew a bit ago," she said steadily. "He'll be here any minute now!" Pa moved softly toward the chair.

Ma was saying something. Pa could scarcely hear her. Faintly as the last note of a flute that is lost in the distance he heard her murmur contentedly:

"I'm — awful — glad — he — got — in — a — full — day's — work!"

For him the plain room suddenly became a sanctuary. The silence now was filled with old promises come true. Love had not lessened. God did not sleep.

"You know, old fellow—beastly bad form to wear a top hat with a sack."

"I shall have to reprimand that stupid valet of mine."

Let Us Lend You A KENNEY Shower

Fits any Bath Tub. Needs no Curtain. Don't Have to Wet your Hair. Almost as Enjoyable as Ocean Bathing.

10 Days' FREE Trial

No Money in advance. Only $6 If You Keep It

Just to show you how it beats a tub bath—and how it will help you stand the hot weather—we want to **lend** you a Kenney Four-Stream Needle Shower—

Want you to attach it to your bath tub—that will take you only a minute—and enjoy it ten days free.

You won't have to send us a single cent in advance. And you won't have to pay us a penny if you are willing to return the shower after a trial.

And it will cost you only $6 if you keep it—only **half** as much as the cheapest old-style shower you can get.

Makes Your Bath Twice As Refreshing

There is almost as much difference between a **needle** shower and an old-style or **overhead** shower as between a bath in a nice porcelain tub and a sponge bath out of a tin pail.

And here is a **new kind** of needle shower which throws **four** needle-spray streams instead of only one. That makes it luxuriously stimulating and refreshing.

Has all the good points of the extravagantly expensive showers without a single one of their faults.

Why The Price Is So Low

Works on a new principle. A patented feature keeps it from splashing out of the tub. No clammy curtain to spoil your enjoyment. That is a revolutionary improvement.

Doing away with the expensive curtain and with overhead piping and complicated parts is what makes the price so low.

No Shock To The Head

When you stand erect in using a Kenney Shower, not a drop of water touches your head. All shoots direct against the body, from the shoulders down. Don't have to drench your hair. But if you want to douse your head, simply bend over a trifle.

All Metal. Easy To Put Up

A very handsome fixture. Heavy nickel finish over brass. Nothing to wear out or get out of order. Easily put up. Never in the way.

A Mere Request Brings It

Just order on your letterhead or enclose business card or reference and you'll get the shower complete and prepaid for ten days' free enjoyment.

If you want to keep it, simply send $6 in full payment; if not, simply return it.

Better make the trial now. A single month's use—especially during the heat of summer—will alone be worth more than the shower will cost you.

J. C. Reddan Specialty Co.
25 West Broadway New York

Sales Agents

We want capable, wide-awake men to sell showers. We want men of some financial backing and selling ability—but the primary requirements are integrity, honesty and good sound business judgments. If you believe you can make good on a big proposition, write today.

"Acousticon"

Junior Sales Department 416 West 13th Street, New York City

"Even a Child is Known by His Doings"

Brickbats and Bouquets

CHICAGO, ILL.

HAVE just read "The Last of the Family," and I feel like breaking up furniture. Mr. Child has done such good work, too! Was this some old school-day manuscript he resurrected? Or do you occasionally print such rot to provoke a discussion? Of all the untrue, insipid, barbarous tales I have read, this is the worst. I wonder how many readers got satisfaction out of picturing a writer of fiction being assaulted by a hired plug-ugly. E. P. RUCKER.

✦

NORTH EAST, MD.

I compliment you on the clean work of COLLIER'S WEEKLY in the story, "The Last of the Family," by Richard W. Child. EDGAR Q. RENN.

✦

SAN FRANCISCO, CAL.

Please accept the thanks of a reader whose loyalty has of late been sorely tested by your fiction for printing "The Last of the Family." It is a story worthy of the COLLIER'S I have loved for years and of late have much missed; worthy of the publication that gave us "Many Waters" some years ago. I shall open the pages of succeeding numbers of COLLIER'S with renewed hope.

GEO. HOUGH PERRY.

✦

ZANESVILLE, OHIO.

Please accept my congratulations on the splendid human-interest story, "The Tyranny of Beauty," now running in your columns. It is the most delightful and unique story of the year, and your readers are consumed with curiosity to know how much of an allowance Mme. Del Mar will give Oscar and whether or not he ever penetrates the mysteries of the "lubbatory." We could wish for two issues a week during the continuance of this fascinating story.

LAURA B. POE,
Editor Woman's Page, *Daily Times Recorder*.

✦

Mark Sullivan's name is not needed in print as editor of COLLIER'S: the fact shines forth on every page.—Fresno (Cal.) *Republican*.

✦

QUINCY, ILL.

I am an old man of seventy-seven years, and I find much gratification and pleasure in reading your editorials in regard to the drink question. H. S. BROWN.

✦

NEW YORK, N. Y.

I am a sailor—if for ten years sweating out one's stamina in engine rooms makes one. I have read many, many stories, and I read "Uplifting Father." I am glad of it. I know how Father felt. It's a dandy. Brogue, character, humanness, satire, everything there.

JOHN J. GARVAN.

✦

NEW CONCORD, OHIO.

Your article "When the Farmer Shakes the Money Tree" was certainly great. Your eight articles on fire-insurance practices, etc., by McFarlane, were certainly great. Your editorial pages alone are worth more than the paper costs, even at the old price of $5 a year.

W. R. RAUGHMAN.

✦

MIAMI, FLA.

I see nothing of Mark Sullivan and "Comment on Congress" in your last issue and some preceding numbers—what is the matter? Have we attained to that stage politically where "they" are no longer needed? Being the most interesting part of your paper, I would like to see the "Comments" in every issue.

E. F. HOLMES.

✦

TRIPP, S. DAK.

I have read COLLIER'S for many years and admire the fearless way in which the editorials are written. JOHN H. CRAIG.

✦

EUGENE, ORE.

I have been an interested reader of COLLIER'S for many years. You have often been right, but you are always just as saucy when you are wrong.

ERIC W. ALLEN.
Professor of Journalism in the University of Oregon.

When You MUST Stop Your Car

Every day you drive you face situations demanding that you stop your car quickly—and safely. You face emergencies—dangers—bad corners; railroad crossings; steep down-grades; fool drivers you meet.

Whip
Ready Rolled Tobacco

"It Took Us 70 Years to Make It"

You have smoked many tobaccos originated by the Pattersons. You have found them good. Now, won't you try "Whip," our latest blend—our masterpiece—the culmination of 70 years' experience in blending smoking tobaccos?

We believe "Whip" is the best smoking tobacco ever blended. Fifty years ago my father introduced the mellow Burley leaf as a pipe tobacco. And it was we Pattersons that first produced smoking tobaccos without "the bite"—that first produced the ready-rolled style of tobacco now so popular.

We believe that "Whip" is as notable an achievement as any ever scored by the Patterson family.

"Whip" is milder than any tobacco you ever smoked—so mild that you can smoke it all day and night—so fragrant and satisfying that you will want to keep your pipe going all the time—so bland and gentle that there is never a bite at your tongue or a tickle of your throat, no matter how much you smoke.

Ask your dealer for a one-ounce can of "Whip" at 5c., or a two-ounce can at 10c., and you can prove the wonderful smoking qualities of "Whip." It is also put up in handsome Pottery Patented Self-Moistening Pound Humidors.

Or you can place the burden of proof on me. Drop me a postcard, mention the name of your dealer and I'll send you an

OUNCE CAN FREE

It took the Pattersons 70 years to produce a tobacco like "Whip." So you would naturally expect to find other smoking tobaccos far behind "Whip" in improved smoking qualities, since their makers are so many years behind us in experience. But try "Whip" and learn how enjoyable a pipe really is.

M. C. Patterson
Pres't.

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Queed"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and a little better, we believe, than many 2oz.10c.tobaccos.

Shall the Mails Be Used for This?

UNDER existing conditions, mail-order whisky dealers solicit in "dry" territory. A lawyer-reader of one such territory in North Dakota—a State that made prohibition a part of its organic law and has stuck to it ever since—sends us this letter. We pass it on to all our readers, for the suggestion made is an interesting one, and the closing of the mails to this trade in communities where prohibitory laws have been enacted would seem to be a reasonable and highly desirable subject for legislation:

DEVILS LAKE, N. DAK., May 9, 1914.
EDITOR COLLIER'S:

We are very much interested in the good work you are doing in the cause of prohibition, and while neither one of us is a crank on the subject or objects to a man taking a drink if he wants it, we realize the immense amount of harm that is done to poor families on account of the use of liquor.

You are taking some steps looking toward the suppression of this evil. We are sending you under this cover a number of liquor advertisements which have been received in our office within the last day or two, as you will notice from the post mark.

We receive as many as ten or a dozen letters of this kind from various liquor wholesale houses each month, perhaps more than that. You will notice that one of these letters is addressed to the Devils Lake Building and Loan Association of this city, which has its office in connection with ours. Four cents' postage is paid by the concern forwarding the last-mentioned letter in the hope that they will realize something from the many men, women, and children who are members of this association.

THE way to correct this evil is to use your influence so that the mails will be closed to liquor houses trying to solicit the sale of their goods in this way. Here we have a prohibition State and the majority of the people, by large, in favor of prohibition, and doing everything they can to suppress traffic in liquor, against the aid and hearty support of the United States Government, which does everything it can to allow liquor to be shipped from other States into this State and allows the mails to be used to overcome what good the State Government can do to suppress the sale of intoxicating liquors.

Respectfully, FLYNN & TRAYNOR.

A Quarter of a Million Men

Every week more than a quarter of a million men read the SCIENTIFIC AMERICAN, the most widely quoted publication in America.

Manufacturers, merchants, business men; engineers, physicians, surgeons, chemists, professors, architects; bankers, railway officials; farmers, mechanics, foremen, and superintendents read the SCIENTIFIC AMERICAN.

Every one of these men knows that when he takes up a copy of the SCIENTIFIC AMERICAN he will find not one, but many topics of definite value to him. He knows, too, that in the same issue, he will find articles on advanced science, and recent discoveries which will add materially to his stock of general knowledge.

The manufacturer knows that each issue invariably contains notes and descriptions of the varied developments of the industry in which he is engaged—and those allied to it—whether it be an economical generator of power, or a mechanical device, which will save him thousands of dollars a year.

The engineer recognizes the SCIENTIFIC AMERICAN as an authority on all matters in his profession, and knows its information is accurate, concise and helpful.

The mechanic—the farmer—the doctor—the lawyer—the banker—the architect—each knows that the information contained in the issues of the SCIENTIFIC AMERICAN is of great importance and of real dollars and cents value to him.

As a progressive wideawake man you need the SCIENTIFIC AMERICAN, you will appreciate its worth and enjoy reading it.

Remember the influence of the SCIENTIFIC AMERICAN is always on the side of greater efficiency—better ways to accomplish a definite end.

A year's subscription costs $3.00. Your check or money order for this amount and the coupon attached brings SCIENTIFIC AMERICAN to you for one year.

THE SCIENTIFIC AMERICAN REFERENCE BOOK, the price of which is $1.50 will be sent gratis with each coupon order. Fill in the coupon and mail today.

HUDSON Six-40 For 1915

The New Price is $1,550

This HUDSON Six-40 met a welcome last season which broke all Hudson records. It so met men's ideals that the end of our output left 3,000 orders unfilled. The demand compels us—for 1915—to treble our production. And that trebled output—which lowers our cost—permits a reduction of $200 under last year's price.

A Tribute to Great Engineering

Mr. Howard E. Coffin—our great chief engineer—gave his best to this HUDSON Six-40. For years he has planned that this model should be the crowning effort of his career.

He devoted three years to it—he and the 47 engineers who work with him. And their effort was to embody here the final conception of an ideal car.

It had to be a Six—this ideal car. Most quality-car buyers today insist on a Six. All the upper-class cars are Sixes.

It had to be light. Men rebel at unneeded weight. And they know that lightness combined with strength is a symbol of good engineering. So they brought the weight under 3,000 pounds—and with two extra tonneau seats.

It had to be economical. So they adopted from Europe a new-type motor—small bore and long stroke. It lowered all previous records on operative cost—size of car and power considered.

It had to be a handsome, impressive car. So they made this HUDSON, with its streamline body, one of the handsomest cars in the world.

And it had to be priced where tens of thousands could buy it. So they went below any price ever quoted on any type of quality car. And this year, with multiplied output, they reduce that price $200.

The Year's Record

The HUDSON Six-40 has now run for a season—in thousands of hands, on all sorts of roads, in Europe and America. And not a single shortcoming developed.

All the questions men had have been answered. Every innovation has proved itself practical. As the car revealed itself, men flocked by the thousands to it. And the end of the season left 3,000 disappointed.

There was no rival in sight of the HUDSON Six-40. And this year—with a trebled output, with thirty-one new features and a much lower price—effective rivalry is out of the question.

The HUDSON Six-40 is the leader in a new, immensely popular class. It marks the sane medium in size and power. It marks the top limit in quality, beauty, finish and equipment. It marks the low limit—for such a car—in price, in weight, in operative cost. The more you know of motor cars the more this car will appeal to you.

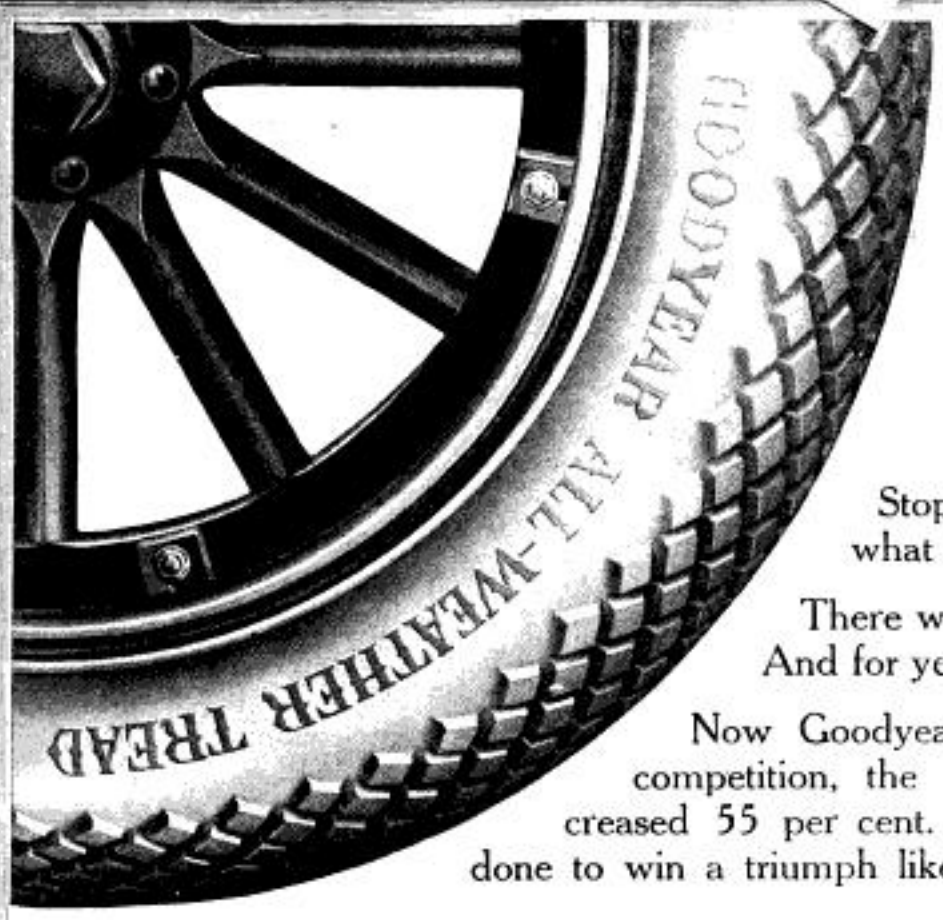
HUDSON dealers everywhere now have on show this 1915 model, at our 1915 price. Our new catalog is ready.

31 New Features

Our whole engineering corps—48 engineers—devoted all last year to refinements. They added thirty-one new features in comfort and convenience. These are some of the attractions in the model just out:

A distinguished streamline body.
All hinges concealed.
Gasoline tank in dash.
Extra tires ahead of front door.
Seats for up to 7 passengers.
Extra tonneau seats, disappearing.
Hand-buffed leather upholstery.
20-coat finish on body.
123-inch wheelbase.
Wider seats—higher backs.
More room for the driver.
"One-Man" top, with quick-adjusting curtains attached.
Integral rain-vision windshield.
Dimming searchlights.
Simplified Delco starting, lighting and ignition system.
Simplified wiring in metal conduits.
Lock on ignition and lighting switch.
Far better carburetion.
Speedometer drives from transmission.
Automatic spark advance.
Tubular propeller shaft.
10 self-lubricating bushings.
10 less grease cups.
All instruments and gauges within reach of the driver.
Trunk rack on back.
Still less weight—2,900 pounds.

New price, $1,550 f.o.b. Detroit. Standard Roadster, same price.



Our Larger Six-54

The HUDSON Six-54—built on the same lines, with 135-inch wheel base and greater power—sells for $2,350. It is for men who want a big, impressive car.

The Big Things Goodyear Did

Stop and consider—you men who fight battles—what it meant to win top place in Tiredom.

There were dozens of rivals—some strongly intrenched. And for years Goodyear held about the bottom place.

Now Goodyears rule. And so far this year, despite all competition, the enormous army of Goodyear users has increased 55 per cent. Consider what big things we must have done to win a triumph like that in this hard-fought field.

These Are Some of Them

We put in charge of our factory men of high ideals. Men who believed that the only way to win was to build the best tire in the world.

We gave them carte blanche, and they built the best tires. But the tires they built were costly. For a long, long time No-Rim-Cut tires cost users one-fifth more than other standard tires. That made the Goodyear battle hard.

But we went still further. We established a department of Research and Experiment, and put scores of experts in it. We spent in this way $100,000 yearly—just to learn how to better these tires. And we adopted every betterment, regardless of its cost.

No Rival Followed

In some of these ways no rival has followed. Goodyears are still the only tires which embody these costly features:

Our No-Rim-Cut feature, which has ended the chiefest tire trouble. That faultless feature we control by secrecy. It has saved tire users millions.

Our "On-Air" cure. All No-Rim-Cut tires are final-cured on air-filled tubes, under actual road conditions. This is done to save the countless blow-outs due to wrinkled fabric. This one extra process—employed by no other maker—adds to our tire cost $450,000 per year.

Our rubber rivets. Hundreds of these are formed in each tire, during vulcanization, to combat loose treads. This method—used by us alone—has reduced by 60 per cent the risk of tread separation.

Our All-Weather tread. This is a tough, double-thick anti-skid, as smooth as a plain tread, but grasping wet roads with countless deep, sharp-edged grips.

These things combat your four greatest tire troubles in ways that no maker has followed.

We Reduced Tire Cost

We built new factories, modernly equipped. We invented labor-saving machinery, employed experts in efficiency. As our output increased we reduced overhead cost 24 per cent, and labor cost 25 per cent. We reduced, at the same time, our profit margin, until last year it averaged 6½ per cent.

No-Rim-Cut tires—built better than ever—sell at half the old-time prices. These tires—once the costliest—now undersell 16 other makes.

That's our biggest achievement. Right in the first cost it often saves you 25 per cent. It insures you four Goodyears for what some makers ask for three tires.

The other savings are hidden. This one is clear: Goodyear prices mean an actual saving, clear and undisputed—paid you at the start.

Tell your dealer you want Goodyear tires. Then you get all these savings. Any dealer who hasn't Goodyears can get them from our nearest branch.

When Is a Picnic No "Picnic?"—Without B.V.D.

WEAR B. V. D. all day and every day, in town or out. Stow *a few extra suits* into your bag or trunk "for good measure." They'll "come in mighty handy" for a change between sun-up and sun-down—after a tramp—after a dance—after brisk play at the nets or on the links.

When you get home from the office in the evening and want to feel refreshed before dinner, cool off with a "shower" and a clean suit of Loose Fitting B. V. D. By the way, always keep in mind that *all* "Athletic" Underwear is *not* B. V. D.

For your own welfare, fix the B.V.D. Red Woven Label in your mind and make the salesman *show* it to you. If he can't or won't, *walk out!* On every B. V. D. Undergarment is sewed

This Red Woven Label

MADE FOR THE B.V.D. BEST RETAIL TRADE

(Trade Mark Reg. U. S. Pat. Off. and Foreign Countries)

B. V. D. Coat Cut Undershirts and Knee Length Drawers, 50c., 75c., $1.00 and $1.50 the Garment.

B. V. D. Union Suits (Pat. U. S. A. 4-30-07) $1.00, $1.50, $2.00, $3.00 and $5.00 the Suit.

All the Sunshine of Summer

may be found in this delicious, wholesome, nourishing combination—the choicest product of Northern fields and the most luscious fruit of the American garden—

SHREDDED WHEAT
and Strawberries

an ideal dish for the warm days when the body craves relief from heavy foods. All the body-building elements in the whole wheat grain, steam-cooked, shredded and baked in crisp, golden-brown "little loaves." The only cereal breakfast food that combines naturally and deliciously with fruits, fresh or preserved. An easy solution of "the servant problem," as well as the problem of "the high cost of living."

Heat one or more Biscuits in the oven to restore crispness; then cover with berries or other fresh fruit; serve with milk or cream and sweeten to suit the taste. Better than soggy, white flour short-cake; contains no yeast, no baking powder, no fats and no chemicals of any kind—just the meat of the golden wheat, steam-cooked, shredded and baked.

"It's All in the Shreds"

Studebaker FOUR $1050

Studebaker Gear Wheels, Differential and Timing Gears are tested with master gears under varying pressures. The inspector supplements the marvelous precision of instruments measuring to the thousandth of an inch, by his experienced ability to hear the slightest indication of inaccurate meshing.

The Way It Holds The Road Shows How It Is Built

One of the striking ways in which these FOURS show their superiority is the manner in which they hold the road.

You do not see the driver of a Studebaker FOUR continually bringing it back to a straightaway by "nursing" the wheel.

It does not creep to one side, but once "set" it goes straight ahead.

This is the quality sometimes called roadability.

Roadability indicates perfect balance, and balance goes clear back to the beginning of Studebaker manufacturing methods.

It starts with the raw material; with steels which are not only the costliest of their kind but made strictly to our own specifications.

It is developed by from two to four heat treatments, which double and treble the strength of these steels with large reductions in both size and weight.

It is carefully worked out by the forging, stamping and machining of all parts in our own plants—6,000 operations requiring 5,000 machines.

To this perfect balance, resulting from Studebaker design, wrought by Studebaker methods with Studebaker materials, is added a full floating rear axle.

The Studebaker FOUR is the only "Four" in the world at its price which has a full floating rear axle, equipped with Timken bearings.

The Studebaker FOUR is completely Timken equipped even to the hubs of the wheels.

The result of this manufacturing efficiency plus superb equipment is better quality—true roadability—vastly greater value than in any other "Four".

The Studebaker Proof Book describes and pictures the scientific manufacturing operations of Studebaker. Send for it.

Leaping, Bubbling, Laughing Clicquot Drives Heat and Thirst Away

Clicquot Club

Pronounced Kleek-O

GINGER ALE

On days when the sidewalk scorches the soles of your feet, when the sun beats hotly down and beads of melting pitch pop up between the paving blocks, drink Clicquot Club Ginger Ale. The cooling, bursting bubbles of this icy, carbonic beverage, as they dance down your arid throat, laugh at heat waves.

Fresh spring water charged with carbonic acid gas, our own extract of finest ginger root, pure juice of lemons and limes, syrup made from cane sugar, bottled in bottles scalded clean and tested leak-proof—that is Clicquot Club Ginger Ale. It refreshes, revives and delights. It's good any time, anywhere; mildly laxative and safe and beneficial when you're overheated or exhausted. Clicquot is on the Westfield Pure Food List.

Drinks called ginger ale that are not ale and contain no ginger are not to be compared with Clicquot. Try Clicquot and you will agree.

At Good Grocers and Druggists

CLEVER DEVICE

Two glasses in each bottle. If one glass is enough for your thirst we will send—for 4c postage—a patent self-clamping stopper (clever device) that will hold the second glass fresh for 48 hours.

Other Clicquot Flavors:
Birch Beer, Root Beer, Sarsaparilla, Lemon Sour and Orange Phosphate

Bealby

Chapter I—A Rebellious Heart

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

THE cat is the offspring of a cat and the dog of a dog, but butlers and lady's maids do not reproduce their kind. They have other duties.

So their successors have to be sought among the prolific, and particularly among the prolific on great estates. Such are gardeners, but not undergardeners, gamekeepers, and coachmen—but not lodge people, because their years are too great and their lodges too small. And among those to whom this opportunity of entering service came was young Bealby, who was the stepson of Mr. Darling, the gardener of Shonts.

Everyone knows the glories of Shonts. Its façade. Its two towers. The great marble pond. The terraces where the peacocks walk and the lower lake with the black and white swans. The great park and the avenue. The view of the river winding away across the blue country. And of the Shonts Velasquez—but that is now in America. And the Shonts Rubens, which is in the National Gallery. And the Shonts porcelain. And the Shonts past history; it was a refuge for the old faith; it had priest holes and secret passages. And how at last the Marquis had to let Shonts to the Laxtons—the Peptonized Milk and Baby Soother people—for a long term of years. It was a splendid chance for any boy to begin his knowledge of service in so great an establishment, and only the natural perversity of human nature can explain the violent objection young Bealby took to anything of the sort. He did. He said he did not want to be a servant and that he would not go and be a good boy and try his very best in that state of life to which it had pleased God to call him at Shonts. On the contrary.

He communicated these views suddenly to his mother as she was preparing a steak-and-kidney pie in the bright little kitchen of the gardener's cottage. He came in with his hair all ruffled and his face hot and distinctly dirty and his hands in his trousers' pockets, in the way he had been repeatedly told not to.

"Mother," he said, "I'm not going to be a steward's boy at the house anyhow, not if you tell me to, not till you're blue in the face. So that's all about it."

This delivered, he remained panting, having no further breath left in him.

His mother was a thin, firm woman. She paused in her rolling of the dough until he had finished, and then she made a strong, broadening sweep of the rolling pin, and remained facing him, leaning forward on that implement with her head a little on one side.

"You will do," she said, "whatsoever your father has said you will do."

"'E isn't my father," said young Bealby.

Bealby sat on the edge of his bed, and he wished he had some poison. Some sort of poison with a medieval manner, poison that hurts before it kills

His mother gave a snapping nod of the head, expressive of extreme determination.

"Anyhow I ain't going to do it," said Bealby, and, feeling the conversation was difficult to sustain, he moved toward the staircase door with a view to slamming it.

"You'll do it," said his mother, "right enough."

"You see whether I do," said young Bealby, and then got in his door slam rather hurriedly because of steps outside.

Mr. Darling came in out of the sunshine a few moments later. He was a large, many-pocketed, earthy-whiskered man with a clean-shaven, determined mouth, and he carried a large pale cucumber in his hand. "I tole him, Polly," he said.

"What did he say?" asked his wife.

"Nuthin," said Mr. Darling.

"'E says 'e won't," said Mrs. Darling.

Mr. Darling regarded her thoughtfully for a moment.

"I never see such a boy," said Mr. Darling. "Why—'e's *got* to."

But young Bealby maintained an obstinate fight against the inevitable. He had no gift of lucid exposition. "I ain't going to be a servant," he said. "I don't see what right people have making a servant of me."

"You got to be something," said Mr. Darling.

"Everybody's got to be something," said Mrs. Darling.

"Then let me be something else," said young Bealby.

"I dessay you'd like to be a gentleman," said Mr. Darling.

"I wouldn't mind," said young Bealby.

"You got to be what your opportunities give you," said Mr. Darling.

Young Bealby became breathless. "Why shouldn't I be an engine driver?" he asked.

"All oily," said his mother. "And getting yourself killed in an accident. And got to pay fines. You'd *like* to be an engine driver."

"Or a soldier."

"Oo!—a Swaddy!" said Mr. Darling decisively.

"Or the sea."

"With that weak stummik of yours," said Mrs. Darling.

"Besides which," said Mr. Darling, "it's been arranged for you to go up to the 'ouse the very first of next month. And your box and everything ready."

Young Bealby became very red in the face.

"I won't go," he said very faintly.

"You will," said Mr. Darling, "if I 'ave to take you by the collar and the slack of your breeches to get you there."

The heart of young Bealby was a coal of fire within his breast as—unassisted—he went across the dewy park up to the great house, whither his box was to follow him.

He thought the world a "rotten show."

He also said, apparently to two does and a fawn: "If

Digitized by Google

you think I'm going to stand it, you know, you're **JOLLY**-well mistaken."

I do not attempt to justify his prejudice against honorable usefulness in a domestic capacity. He had it. Perhaps there is something in the air of Highbury, where he had spent the past eight years of his life, that leads to democratic ideals. It is one of those new places where estates seem almost forgotten. Perhaps, too, there was something in the Bealby strain. . . .

I think he would have objected to any employment at all. Hitherto he had been a remarkably free boy with a considerable gusto about his freedom. Why should that end? The little village mixed school had been a soft job for his cockney wits, and for a year and a half he had been top boy. Why not go on being top boy?

Instead of which, under threats, he had to go across the sunlit corner of the park, through that slanting morning sunlight which had been so often the prelude to golden days of leafy wanderings! He had to go past the corner of the laundry where he had so often played cricket with the coachman's boys (already swallowed up into the working world), he had to follow the laundry wall to the end of the kitchen, and there, where the steps go down and underground, he had to say farewell to the sunlight, farewell to childhood, boyhood, freedom. He had to go down and along the stone corridor to the pantry, and there he had to ask for Mr. Mergleson. He paused on the top step and looked up at the blue sky, across which a hawk was slowly drifting. His eyes followed the hawk out of sight beyond a cypress bough, but indeed he was not thinking about the hawk, he was not seeing the hawk; he was struggling with a last wild impulse of his ferial nature. "Why not sling it?" his ferial nature was asking. "Why not even now—*do a bunk!*"

IT WOULD have been better for him perhaps and better for Mr. Mergleson and better for Shonts if he had yielded to the whisper of the Tempter. But his heart was heavy within him, and he had no lunch. And never a penny. One can do but a very little bunk on an empty belly! "Must" was written all over him. He went down the steps.

The passage was long and cool, and at the end of it was a swing door. Through that and then to the left he knew one had to go, past the stillroom and so to the pantry. The maids were at breakfast in the stillroom with the door open. The grimace he made in passing was intended rather to entertain than to insult, and anyhow a chap must do something with his face. And then he came to the pantry and into the presence of Mr. Mergleson.

Mr. Mergleson was in his shirt sleeves and generally dishevelled, having an early cup of tea in an atmosphere full of the bleak memories of overnight. He was an ample man with a large nose, a vast underlip and mutton-chop side whiskers. His voice would have suited a succulent parrot. He took out a gold watch from his waistcoat pocket and regarded it. "Ten minutes past seven, young man," he said, "isn't seven o'clock."

YOUNG BEALBY made no articulate answer.

"Just stand there for a minute," said Mr. Mergleson, "and when I'm at libbuty I'll run through your duties." And almost ostentatiously he gave himself up to the enjoyment of his cup of tea.

Three other gentlemen in dishabille sat at table with Mr. Mergleson. They regarded young Bealby with attention and the youngest, a red-haired, bare-faced youth in shirt sleeves and a green apron, was moved to a grimace that was clearly designed to echo the scowl on young Bealby's features.

The fury that had been subdued by a momentary awe of Mr. Mergleson revived and gathered force. Young Bealby's face became scarlet, his eyes filled with tears and his mind with the need for movement. After all—he wouldn't stand it. He turned round abruptly and made for the door.

"Where'n earth you going to?" cried Mr. Mergleson.

"*He's* shy!" cried the second footman.

"Steady on!" cried the first footman and had him by the shoulder in the doorway.

"Lemme *go!*" howled the new recruit, struggling. "I won't be a blooming servant. I won't."

"Here!" cried Mr. Mergleson, gesticulating with his teaspoon. "Bring 'im to the end of the table there. What's this about a blooming servant?"

Bealby, suddenly blubbering, was replaced at the end of the table.

"May I ask what's this about a blooming servant?" asked Mr. Mergleson.

Sniff and silence.

"Did I understand you to say that you ain't going to be a blooming servant, young Bealby?"

"Ah!" said Mr. Mergleson. "Got 'im! That one!" . . . "Just smack 'is 'ed once more," said Mr. Mergleson. . . . "And now you just stand there, young man, until I'm at libbuty to attend to you further"

"Yes," said young Bealby.

"Thomas," said Mr. Mergleson, "just smack 'is 'ed. Smack it rather 'ard. . . ."

Things too rapid to relate occurred. "So you'd *bite*, would you?" said Thomas. . . .

"Ah!" said Mr. Mergleson. "*Got* 'im! That one!" . . .

"Just smack 'is 'ed once more," said Mr. Mergleson. . . .

"And now you just stand there, young man, until I'm at libbuty to attend to you further," said Mr. Mergleson, and finished his tea slowly and eloquently. . . .

The second footman rubbed his shin thoughtfully.

"If I got to smack 'is 'ed much," he said, "'e'd better change into his slippers."

"Take him to 'is room," said Mr. Mergleson getting up. "See 'e washes the grief and grubbiness off 'is face in the handwash at the end of the passage and make him put on his slippers. Then show 'im 'ow to lay the table in the steward's room."

THE duties to which Bealby was introduced struck him as perplexingly various, undesirably numerous, uninteresting and difficult to remember, and also he did not try to remember them very well because he wanted to do them as badly as possible, and he thought that forgetting would be a good way of starting at that. He was beginning at the bottom of the ladder; to him it fell to wait on the upper servants, and the green baize door at the top of the service staircase was the limit of his range. His room was a small wedge-shaped apartment under some steps leading to the servants' hall, lit by a window that did not open and that gave upon the underground passage. He received his instructions in a state of crumpled mutinousness, but for a day his desire to be remarkably impossible was more than counterbalanced by his respect for the large, able hands of the four manservants, his seniors, and by a disinclination to be returned too promptly to the gardens. Then in a tentative manner he broke two plates and got his head smacked by Mr. Mergleson himself. Mr. Mergleson gave a staccato slap quite as powerful as Thomas's, but otherwise different. The hand of Mr. Mergleson was large and fat, and he got his effects by dash. Thomas's was horny and lingered. After that young Bealby put salt in the teapot in which the housekeeper made tea. But that, he observed, she washed out with hot water before she put in the tea. It was clear that he had wasted his salt, which ought to have gone into the kettle.

Next time—the kettle.

BEYOND telling him his duties almost excessively, nobody conversed with young Bealby during the long hours of his first day in service. At midday dinner in the servants' hall he made one of the kitchen maids giggle by pulling faces intended to be delicately suggestive of Mr. Mergleson, but that was his nearest approach to disinterested human intercourse.

When the hour for retirement came—"Get out of it. Go to bed, you dirty little kicker," said Thomas. "We've had about enough of you for one day"—young Bealby sat for a long time on the edge of his bed weighing the possibilities of arson and poison. He wished he had some poison. Some sort of poison with a medieval manner, poison that hurts before it kills. Also he produced a small penny pocketbook with a glazed black cover and blue edges. He headed one page of this "Mergleson," and entered beneath it three black crosses. Then he opened an account to Thomas, who was manifestly destined to be his principal creditor. Bealby was not a forgiving boy. At the village school they had been too busy making him a good churchman to attend to things like that. There were a lot of crosses for Thomas.

And while Bealby made these sinister memoranda downstairs, Lady Laxton—for Laxton had bought a baronetcy for twenty thousand down to the party funds and a tip to the whip over the Peptonized Milk flotation—Lady Laxton, a couple of floors above Bealby's ruffled head, mused over her approaching week-end party. It was an important week-end party. The Lord Chancellor of England was coming. Never before had she had so much as a member of the Cabinet at Shonts. He was coming, and do what she would, she could not help but connect it with her very strong desire to see the master of Shonts in the clear scarlet of a deputy lieutenant. Peter would look so well in that. The Lord Chancellor was coming and to meet him and to circle about him there were Lord John Woodenhouse and Slinker Bond; there were the Countess of Barracks and Mrs. Rampound Pilby, the novelist, with her husband Rampound Pilby; there was Professor Timbre, the philosopher, and there were four smaller (though quite good) people who would run about very satisfactorily among the others. (At least she thought they would run about very satisfactorily among the others, not imagining any evil of her cousin Captain Douglas).

ALL this good company in Shonts filled Lady Laxton with a pleasant realization of progressive successes, but at the same time one must confess that she felt a certain diffidence. In her heart of hearts she knew she had not made this party. It had happened to her. How it might go on happening to her she did not know; it was beyond her control. She hoped very earnestly that everything would pass off well.

The Lord Chancellor was as big a guest as any she had had. One must grow as one grows, but still being easy and friendly with him would be, she knew, a tremendous effort. Rather like being easy and friendly with an elephant. She was not good at conversation. The task of interesting people taxed her and puzzled her.

It was Slinker Bond, the whip, who had arranged the whole business—after, it must be confessed, a hint from Sir Peter. Laxton had complained that the Government were neglecting this part of the coun-

Digitized by Google

try. "They ought to show up more than they do in the county," said Sir Peter, and added almost carelessly: "I could easily put anybody up at Shonts." There were to be two select dinner parties and a large but still select Sunday lunch, to let in the countryside to the spectacle of the Laxtons taking their (new) proper place at Shonts.

It was not only the sense of her own deficiencies that troubled Lady Laxton; there were also her husband's excesses. He had—it was no use disguising it—rather too much the manner of an employer. He had a way of getting—how could one put it?—*confident* at dinner, and Mergleson seemed to *delight* in filling up his glass. Then he would contradict a good deal. She felt that lord chancellors, however, are the sort of men one doesn't contradict.

THEN the Lord Chancellor was said to be interested in philosophy—a difficult subject. She had got Timbre to talk to him upon that. Timbre was a professor of philosophy at Oxford, so that was sure to be all right. But she wished she knew one or two good safe things to say in philosophy herself. She had long felt the need of a secretary, and now she felt it more than ever. If she had a secretary she could just tell him what it was she wanted to talk about, and he could get her one or two of the right books and mark the best passages, and she could learn it all up.

She feared—it was a worrying fear—that Laxton would say right out, and very early in the week-end, that he didn't believe in philosophy. He had a way of saying he "didn't believe in" large things like that—art, philanthropy, novels, and so on. Sometimes he said: "I don't believe in all this"—art, or whatever it was. She had watched people's faces when he had said it, and she had come to the conclusion that saying you don't believe in things isn't the sort of thing people say nowadays. It was wrong somehow. But she did not want to tell Laxton directly that it was wrong. He would remember if she did, but he had a way of taking such things rather badly at the time. She hated him to take things badly.

"If one could invent some little hint," she whispered to herself.

She had often wished that she was better at hints. She was, you see, a gentlewoman, modest, kindly. Her people were quite good people. Poor, of course. But she was not clever, she was anything but clever. And the wives of these captains of industry need to be very clever indeed if they are to escape a magnificent social isolation. They get the titles and the big places and all that sort of thing; people don't at all intend to isolate them, but there is, nevertheless, an inadvertent avoidance.

EVEN as she uttered these words, "If one could invent some little hint," Bealby, down there, less than forty feet away through the solid floor below her feet and a little to the right, was wetting his stump of pencil as wet as he could in order to insure a sufficiently emphatic fourteenth cross on the score sheet of the doomed Thomas. Most of the other thirteen marks were done with such hard-breathing emphasis that the print of them went more than halfway through that little blue-edged book.

THE arrival of the week-end guests impressed Bealby at first merely as a blessed influence that withdrew the four man servants into that unknown world on the other side of the green baize door, but then he learned that it also involved the appearance of five new persons, two valets and three maids, for whom places had to be laid in the steward's room. Otherwise Lady Laxton's social arrangements had no more influence upon the mind of Bealby than the private affairs of the Emperor of China. There was something going on up there beyond even his curiosity. All he heard of it was a distant coming and going of vehicles and some slight talk to which he was inattentive—while the coachman and grooms were having a drink in the pantry—until these maids and valets appeared. They seemed to him to appear suddenly out of nothing, like slugs after rain, black and rather shiny, sitting about inactively and quietly consuming small matters. He disliked them and they regarded him without affection or respect.

Who cared? He indicated his feeling toward them as soon as he was out of the steward's room by a gesture of the hand and nose venerable only by reason of its antiquity.

He had things more urgent to think about than strange valets and maids. Thomas had laid hands on him, jeered at him, inflicted shameful indignities on him, and he wanted to kill Thomas in some frightful manner. (But, if possible, unobtrusively.)

If he had been a little Japanese boy, this would have been an entirely honorable desire. It would have been Bushido and all that sort of thing. In the gardener's stepson, however, it was—undesirable.

Thomas, on the other hand, having remarked the red light of revenge in Bealby's eye, and being secretly afraid, felt that his honor was concerned in not relaxing his persecutions. He called him "Kicker," and when he did not answer to that name he called him "Snorter," "Bleater," "Snooks," and finally tweaked his ear. Then he saw fit to assume that Bealby was deaf and that ear tweaking was the only available method of address. This led on to the convention of a sign language whereby ideas were communicated to Bealby by means of painful but frequently quite ingeniously symbolical freedoms with various parts of his person. Also, Thomas affected to discover uncleanliness in Bealby's head and succeeded after many difficulties in putting it into a sinkful of lukewarm water.

MEANWHILE young Bealby devoted such scanty time as he could give to reflection to debating whether it were better to attack Thomas suddenly with a carving knife or throw a lighted lamp. The large pantry inkpot of pewter might be effective in its way, he thought, but he doubted whether in the event of a charge it had sufficient stopping power. He was also curiously attracted by a long two-pronged toasting fork that hung at the side of the pantry fireplace. It had *reach*.

Over all these dark thoughts and ill-concealed emotions Mr. Mergleson prevailed, large yet speedy, speedy yet exact, parroting orders and making plump gestures, performing duties and seeing that duties were performed. Matters came to a climax late on Saturday night at the end of a trying day, just before Mr. Mergleson went round to lock up and turn out the lights.

Thomas came into the pantry close behind Bealby, who, greatly belated through his own inefficiency, was carrying a tray of glasses from the steward's room, applied an ungentle hand to his neck and ruffled up his back hair in a smart and painful manner. At the same time Thomas remarked: "Burrrrh!"

Bealby stood still for a moment and then put down his tray on the table and, making peculiar sounds as he did so, resorted very rapidly to the toasting fork. He got a prong into Thomas's chin at the first prod.

HOW swift are the changes of the human soul! At the moment of his thrust young Bealby was a primordial savage; so soon as he saw this incredible piercing of Thomas's chin—for all the care that Bealby had taken it might just as well have been Thomas's eye—he moved swiftly through the ages and became a simple Christian child. He abandoned violence and fled.

The fork hung for a moment from the visage of Thomas like a twisted beard of brass, and then rattled on the ground.

Thomas clapped his hand to his chin and discovered blood.

"You little—!" He never found the right word (which perhaps is just as well); instead he started in pursuit of Bealby.

Bealby, in his sudden horror of his own act—and Thomas—fled headlong into the passage and made straight for the service stairs that went up into a higher world. He had little time to think. Thomas with a red-smeared chin appeared in pursuit. Thomas the avenger. Thomas really roused. Bealby shot through the green baize door and the pursuing footman pulled up only just in time not to follow him.

Only just in time. He had an instinctive, instant, anxious fear of great dangers. He heard something, a sound as though the young of some very large animal had squeaked feebly. He had a glimpse of something black and white—and large. . . .

Then something, some glass thing, smashed.

He steadied the green baize door which was wobbling on its brass hinges, controlled his panting breath and listened.

A low, rich voice was—ejaculating. It was not Bealby's voice, it was the voice of some substantial person being quietly but deeply angry. They were the ejaculations, restrained in tone but not in quality, of a ripe and well-stored mind—no boy's thin stuff.

Then very softly Thomas pushed open the door—just widely enough to see—and as instantly let it fall back into place.

VERY gently and yet with an alert rapidity he turned about and stole down the service stairs.

His superior officer appeared in the passage below.

"Mr. Mergleson," he cried. "I say—Mr. Mergleson."

"What's up?" said Mr. Mergleson.

"He's gone!"

"Who?"

"Bealby?"

"Home?" This almost hopefully.

"No."

"Where?"

"Up there! I think he ran against somebody."

Mr. Mergleson scrutinized his subordinate's face for a second. Then he listened intently; both men listened intently.

"Have to fetch him out of that," said Mr. Mergleson suddenly preparing for brisk activity.

THOMAS bent lower over the banisters.

"*The Lord Chancellor!*" he whispered with white lips and a sideways gesture of his head.

"What about 'im?" said Mergleson, arrested by something in the manner of Thomas.

Thomas's whisper became so fine that Mr. Mergleson

"I dessay you'd like to be a gentleman," said Mr. Darling. "I wouldn't mind," said young Bealby. "You got to be what your opportunities give you," said Mr. Darling

Digitized by Google

drew nearer to catch it and put up a hand to his ear. Thomas repeated the last remark. "He's just through there—on the landing—cursing and swearing—'orrible things—more like a mad turkey than a human being."

"Where's Bealby?"

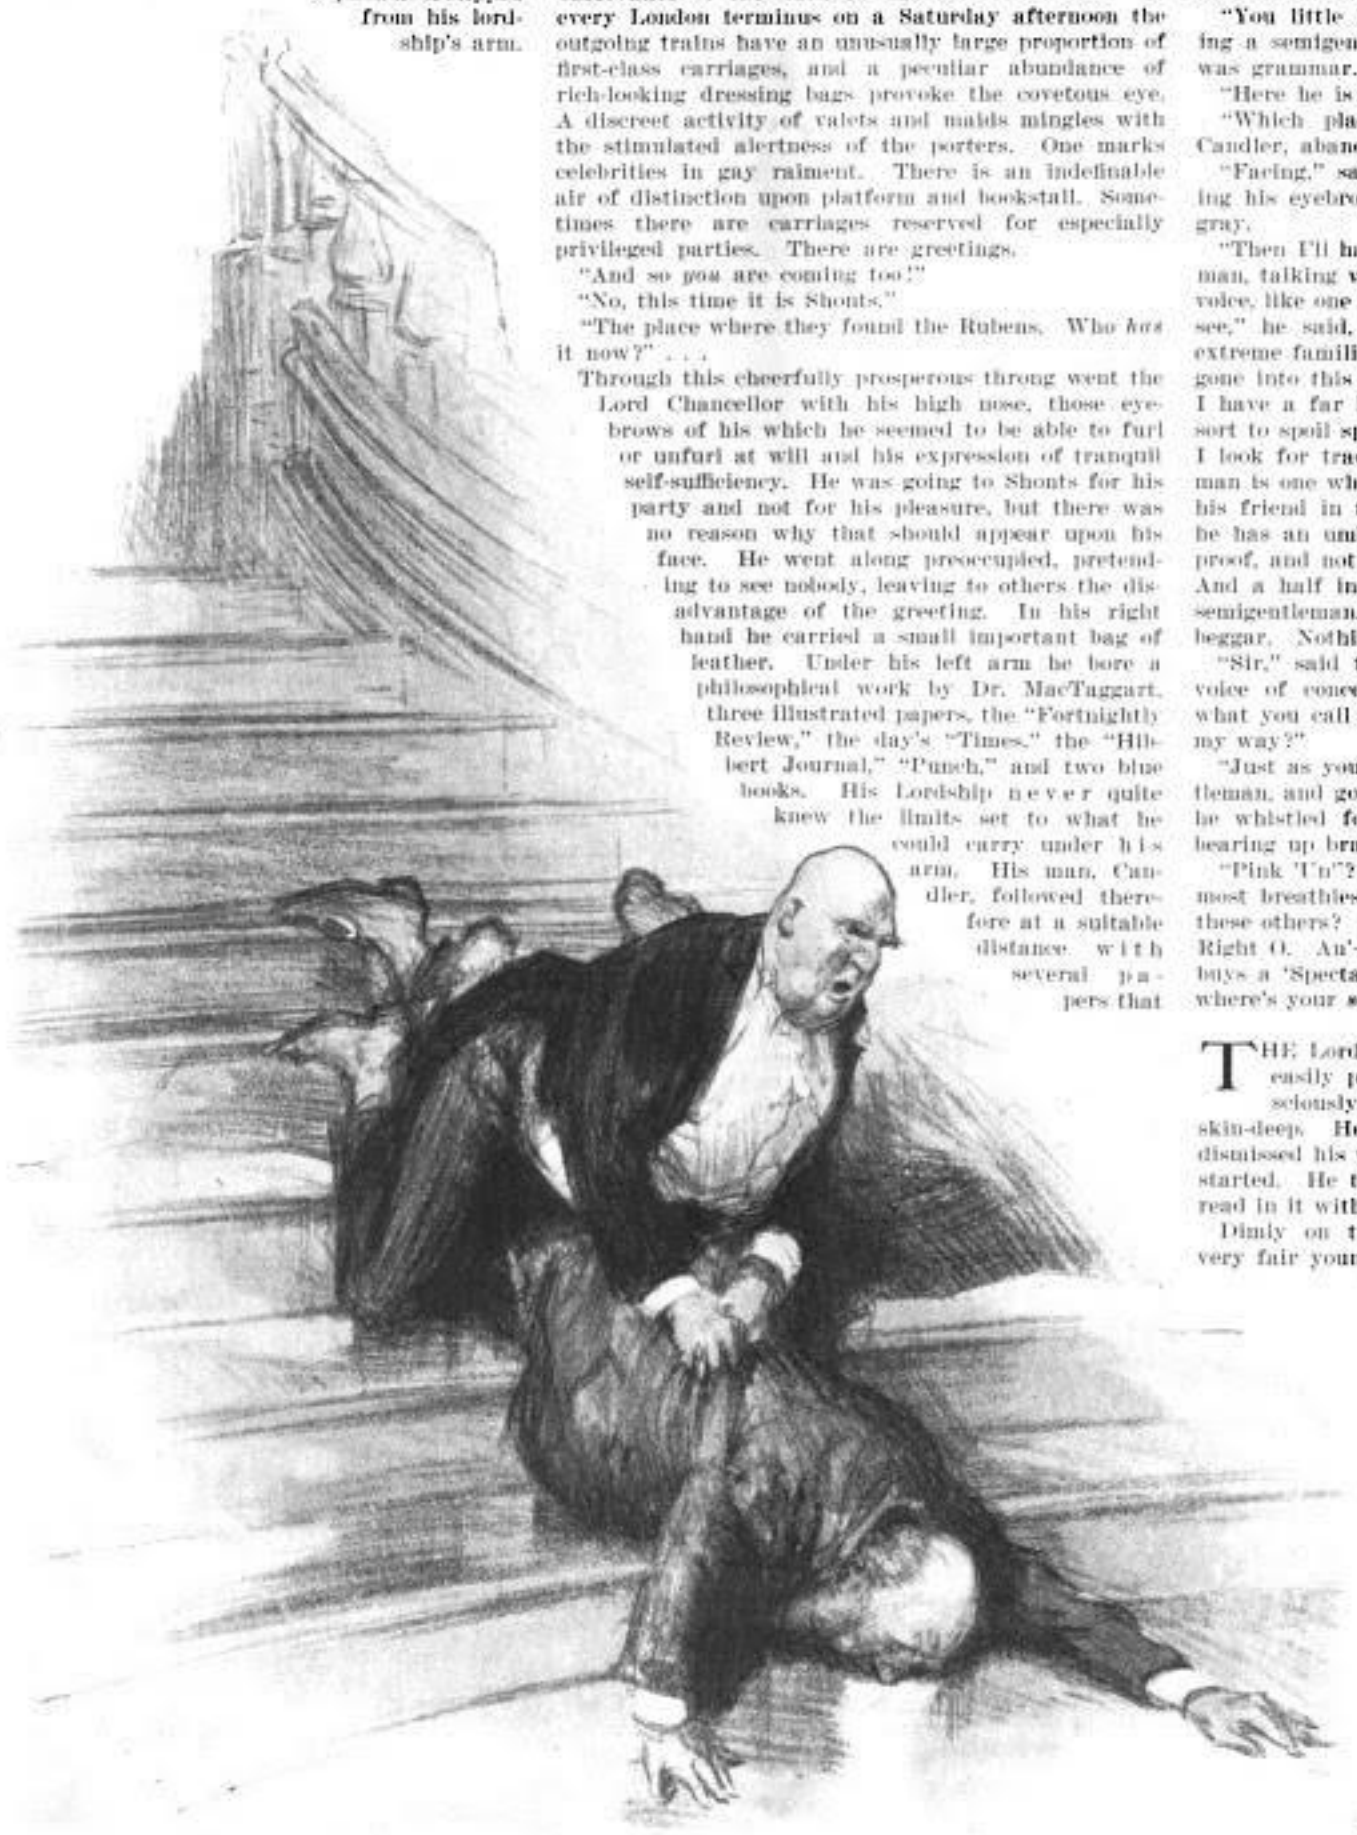
"He must almost 'ave run into 'im," said Thomas after consideration.

"But now—where is he?"

Thomas pantomimed infinite perplexity.

MR. MERGLESON reflected and decided upon his line. He came up the service staircase, lifted his chin, and with an air of meek officiousness went through the green door. There was no one now on the landing, there was nothing remarkable on the landing except a broken tumbler, but halfway up the grand staircase stood the Lord Chancellor. Under one arm the great jurist carried a soda-water siphon and he grasped a decanter of whisky in his hand. He turned sharply at the sound of the green baize door and bent upon Mr. Mergleson the most terrible eyebrows that ever surely adorned a legal visage! He was very red in the face and savage-looking.

"Was it *you*," he said with a threatening gesture of the decanter, and his voice betrayed a noble indignation—"was it *you* who slapped me behind?"



"Slapped you behind, me lord?"

"Slapped me *behind*. Don't I speak—plainly?"

"I—such a liberty, me lord!"

"Idiot! I ask you a plain question—"

With almost inconceivable alacrity Mr. Mergleson rushed up three steps, leapt forward and caught the siphon as it slipped from his lordship's arm.

He caught it, but at a price. He overset and, clasping it in his hands, struck his lordship first with the siphon on the left shin and then butted him, with a face that was still earnestly respectful, in the knees. His lordship's legs were driven sideways, so that they were no longer beneath his center of gravity. With a monosyllable remark of a topographical nature, his lordship collapsed upon Mr. Mergleson. The decanter flew out of his grasp and smashed presently with emphasis upon the landing below. The siphon escaping from the wreckage of Mr. Mergleson and drawn no doubt by a natural affinity, rolled noisily from step to step in pursuit of the decanter. . . .

It was a curious little procession that hurried down the great staircase of Shonts that night. First the whisky like a winged harbinger with the pedestrian siphon in pursuit. Then the great lawyer gripping the great butler by the tails of his coat and punching furiously. Then Mr. Mergleson trying wildly to be respectful—even in disaster. First the Lord Chancellor dived over Mr. Mergleson, grappling as he passed; then Mr. Mergleson, attempting explanations, was pulled backward over the Lord Chancellor; then again the Lord Chancellor was for a giddy but vindictive moment uppermost; a second rotation and they reached the landing.

Bang! There was a deafening report—

THE week-end visit is a form of entertainment peculiar to Great Britain. It is a thing that could have been possible only in a land essentially aristocratic and mellow, in which even the observance of the Sabbath has become mellow. At every London terminus on a Saturday afternoon the outgoing trains have an unusually large proportion of first-class carriages, and a peculiar abundance of rich-looking dressing bags provoke the covetous eye. A discreet activity of valets and maids mingles with the stimulated alertness of the porters. One marks celebrities in gay raiment. There is an indefinable air of distinction upon platform and bookstall. Sometimes there are carriages reserved for especially privileged parties. There are greetings.

"And so *you* are coming too!"

"No, this time it is Shonts."

"The place where they found the Rubens. Who *has* it now?" . . .

Through this cheerfully prosperous throng went the Lord Chancellor with his high nose, those eyebrows of his which he seemed to be able to furl or unfurl at will and his expression of tranquil self-sufficiency. He was going to Shonts for his party and not for his pleasure, but there was no reason why that should appear upon his face. He went along preoccupied, pretending to see nobody, leaving to others the disadvantage of the greeting. In his right hand he carried a small important bag of leather. Under his left arm he bore a philosophical work by Dr. MacTaggart, three illustrated papers, the "Fortnightly Review," the day's "Times," the "Hibbert Journal," "Punch," and two blue books. His Lordship never quite knew the limits set to what he could carry under his arm. His man, Candler, followed therefore at a suitable distance with several papers that had already been dropped, alert to retrieve any further losses.

At the large bookstall they passed close by Mrs. Rampound Pilby, who according to her custom was feigning to be a member of the general public and was asking the clerk about her last book. The Lord Chancellor saw Rampound Pilby hovering at hand and deftly failed to catch his eye. He loathed the Rampound Pilbys. He speculated for a moment what sort of people could possibly stand Mrs. Pilby's vast pretensions—even from Saturday to Monday. One dinner party on her right hand had glutted him for life. He chose a corner seat, took possession of both it and the seat opposite it in order to have somewhere to put his feet, left Candler to watch over and pack in his hand luggage and went high up the platform, remaining there with his back to the world—rather like a bigger, more aquiline Napoleon—in order to evade the great novelist.

IN THIS he was completely successful.

He returned however to find Candler on the verge of a personal conflict with a very fair young man in gray. He was so fair as to be almost an albino, except that his eyes were quick and brown; he was blushing the brightest pink and speaking very quickly.

"These two places," said Candler, breathless with the badness of his case, "are engaged."

"Oh, ve—*very* well," said the very fair young man with his eyebrows and mustache looking very pale by contrast, "have it so. But do permit me to occupy the middle seat of the carriage. With a residuary interest in the semigentleman's place."

"You little know, young man, *whom* you are calling a semigentleman," said Candler, whose speciality was grammar.

"Here he is!" said the young gentleman.

"Which place will you have, my lord?" asked Candler, abandoning his case altogether.

"Facing," said the Lord Chancellor, slowly unfurling his eyebrows and scowling at the young man in gray.

"Then I'll have the other," said the very fair young man, talking very glibly. He spoke with a quick, low voice, like one who forces himself to keep going. "You see," he said, addressing the great jurist with the extreme familiarity of the courageously nervous, "I've gone into this sort of thing before. First, mind you, I have a far look for a vacant corner. I'm not the sort to spoil sport. But if there isn't a vacant corner I look for traces of a semigentleman. A semigentleman is one who has a soft cap and not an umbrella—his friend in the opposite seat has the umbrella—or he has an umbrella and not a soft cap, or a waterproof, and not a bag, or a bag and not a waterproof. And a half interest in a rug. That's what I call a semigentleman. You see the idea. Sort of divided beggar. Nothing in any way offensive."

"Sir," said the Lord Chancellor, interrupting in a voice of concentrated passion, "I don't care a *rap* what you call a semigentleman. *Will* you get out of my way?"

"Just as you please," said the very fair young gentleman, and going a few paces from the carriage door he whistled for the boy with the papers. He was bearing up bravely.

"'Pink 'Un'? said the very fair young gentleman almost breathlessly. "'Black and White'? What's all these others? 'Athenæum'? 'Sporting and Dramatic'? Right O. An'—Eh! What? Do I *look* the sort that buys a 'Spectator'? You don't know! My dear boy, where's your *savoir faire?*"

THE Lord Chancellor was a philosopher and not easily perturbed. His severe manner was consciously assumed and never much more than skin-deep. He had already furled his eyebrows and dismissed his vis-à-vis from his mind before the train started. He turned over the "Hibbert Journal," and read in it with a large tolerance.

Dimly on the outskirts of his consciousness the very fair young man

The Voice of Spring

By Frank X. Finnegan

ILLUSTRATED BY ERNEST FUHR

THE languor of spring was in the air. Herman Heidelmeier's place on the corner bristled with photographs of rampant goats. An optimistic German florist yawned on the seat of an old green wagon full of tulips and jonquils to brighten city dooryards: Halsted Street gleamed in its vernal coating of mud and the challenges of roosters came softly on the mild breezes from the twenty-five-foot chicken farms of thrifty householders on the back streets. It was spring all right.

"This is the sort of a day that makes you want to sit in one of those high-backed automobiles and tell James to throw in the high speed and run over a few traffic cops," Birdie McMullen observed to Billy Sheehan. They were strolling toward Birdie's home under budding trees that were beginning their annual struggle with city smoke and dust.

"You don't need to fret very long about not having a car," he returned. "I'm figuring to worry a swell car and a lot of other things out of the old man when I start in on my own hook, and you know all you have to do is say the word—"

"Say, that's old stuff, Billy. You ought to change your act," Birdie interrupted. "What's the matter with you lately? You can't walk a block without clouding up like an undertaker's helper and handing out something about that four-rooms-complete-for-ninety-nine-fifty proposition. I thought I had hinted to you once or twice that there is nothing stirring in the matrimonial line."

"Well, you can't keep me from thinking about it, can you?" he retorted. "And every little while I'm going to try you out with a leading question. If I don't, how will I ever know when you've changed your mind?"

MISS McMULLEN laughed softly, but it ended in a little sigh. It was typical of Billy—care-free, impulsive Billy—that the automobile he had tentatively offered her as a wedding gift was to come from his father.

"Oh, Billy, Billy, when will you learn?" she said. "You were such a nice boy before you got spring fever."

"Spring fever?" he interrupted. "That's a hit, too. Here I am laying my hand and heart at your feet, not to mention a few flat buildings and everything else I expect to grab off one of these days, and you tell me it's spring fever! I wonder how you expect a fellow to act when he's in love with you?"

"Billy, I've got so many more things to keep me busy that I haven't taken the time to think about it," Birdie returned. "I always try to side-step when I see trouble coming my way, and it looks to me that this marriage game is trouble spelled out in electric lights. Why, you know I'd rather be your friend than your sparring partner, Billy."

"I'm glad you get such an awful laugh out of it," Billy glowered. "But I suppose that's the best I'm entitled to. Every time I quit joshing and try to act like a regular fellow, people begin to laugh and tell each other what a hit I would have made on the stage. When I told my father I was framing to get married, it was a bigger scream with him than the minstrel show he went to in eighty-six. He grins now every time I show up around the house, and last night I caught him winking at my mother when I passed through the room. He thinks he has something on me because I've decided it's my turn to settle down. I haven't got the comedy end of it yet, but I suppose it's there some place."

"Well, it is rather a brand-new thought to the old folks at home, Billy," she said. "I think you'd get over it if you had something to keep you busy about ten hours a day."

"But I don't want to get over it!" Sheehan protested. "Birdie, this is the real thing with me—I've been trying to make you understand that for a long time now. And you might just as well make up your mind that I'm not a quitter when it comes to a proposition like—like you.

"I guess I'll beat it for the house," he added. "I've been threatening to collect some rents for the old man to-day and I haven't got started yet. I'll lose my job if I don't get busy and drag some money out of somebody."

"Yes, I suppose the wolf is building a nest on the front porch over at your place," Birdie returned. "Forget your starving tenants for a while and come in a minute. My mother has been trying to find out what this new 'tango tea' is, and I told her you were agent for it and would tell her all about it. I think she'll order a pound if you can make a strong enough talk."

IN THE McMullen parlor they found Mrs. Haskins sunk in the depths of a rocking chair, imbibing tea and making moan. The proprietress of the Palace Photoplay Theatre was of the portly type for whom deep-seated, wide-armed easy chairs were designed.

"I was just telling your ma what trouble I'm in, Birdie," Mrs. Haskins said when the salutations were over. "It does seem to me that everybody in the world has their hand against a widow that's trying and struggling to get along and do the best she can for herself and others even if it takes her last cent once she's set her hand to it. It looks like Providence was too busy other places most of the time to look after them that has lost their protectors, like me."

"What seems to be the matter mostly?" Miss McMullen inquired.

"It's Jimmie Ferris," the doleful widow explained. "He's run away from me, and I can't find hide nor hair of him. When Thomas and me took him to raise for you, Birdie—"

"Raise for me?" the queen of Halsted Street interrupted. "Where do you get that stuff? You and your husband took him in when I rescued him from that Simon Legree bunch, because you thought it was your Christian duty and he'd be handy around the house. At least, that was the way Billy and I understood it. Wasn't it, Billy?"

"Don't ask me to referee, ladies," he begged, holding up a protesting hand. "I remember there were six in the family out there where the orphan-asylum outfit had staked Jimmie to a home, and he was getting housemaid's knee and painter's colic doing all the work for them when we went out and got him. If he'd stand without hitching in that plant, I shouldn't think he'd run out on you, Mrs. Haskins."

"You know I told you he had a record for mysterious marathons," Birdie reminded her. "He broke away from three or four places where they had him hobbled before you got him, but I thought that home-made pie of yours would keep him rooted to the spot. Maybe you don't bake so often since you took that movie theatre?"

MRS. HASKINS put down her empty teacup regretfully and sighed. "No, Birdie, it isn't that," she declared. "It's that school I've been sending him to. He didn't like it. You know yourself he told you he didn't want to go to St. Agatha's because there were girls going there, although the goodness knows it's hard enough to scrape the money together to pay the sisters every month, girls or no girls. And it's as I was saying to Father Clancy only last Sunday, if I didn't think it was my bounden duty to do what I could toward the support of the church and the school, I wouldn't be sending him there, and now he's gone and run away from home. It makes it pretty hard," she whimpered.

Mrs. McMullen, with quick sympathy, filled the widow's teacup.

"And you don't know what's become of him?" she suggested.

"Only what he put in the note he left me—that he was going away where there wasn't any schools," Mrs. Haskins explained.

"Oh, he left a note, eh?" Birdie observed. "That's like Jimmie. That kid has a great idea of detail. If he was going into a game of marbles I think he'd hold up the whole shooting match until he had a written contract framing up the rules of the game. But I don't think you need worry much, Mrs. Haskins. He'll be trailing home when he gets the far, faint smell of your hot biscuits and discovers that the eats aren't hanging from the bushes by the riverside."

"Oh, I don't know, Birdie," Mrs. Haskins wailed. "It would be just my luck to lose him. I lose everything."

"What do you care whether you lose him or not?" Billy Sheehan suddenly interposed from his corner. "You've done your best by the little tyke, and if he doesn't appreciate a good home and would rather paddle his own canoe, you should worry. He's used to being an orphan, you know."

MISS McMULLEN turned to him with as near an exhibition of asperity as her blithe nature permitted.

"That'll be about all of that," she suggested. "We went out and took this kid away from that home-finding outfit and promised to get a good home for him and see that he nestled up to a table about three times a day. Do you think we're going to side-step the first time he really needs a hand?"

"What does she mean?" Mrs. Haskins asked, looking helplessly to Mrs. McMullen.

"She means that W. Sheehan is going to burst upon the metropolis as an amateur gumshoe man and find James Ferris, the boy globe-trotter," Birdie explained. "I'd trail out and do it myself, but I've got a date with a manicure scissors this evening and I think the exercise would do you good."

"Who? Me?" Billy demanded, sitting up in alarm.

"You are unanimously elected," she said sweetly.

"Well, say!" Mr. Sheehan floundered, "that's some job you've staked out for me. Why, I wouldn't know what to do first!"

"Suppose you sniff at the note Jimmie left for Mrs. Haskins and then go out and follow his footsteps," Miss McMullen suggested.

"How could he do that, child," Mrs. McMullen demanded. "Sure, the police wouldn't let him."

"That's up to him," Birdie returned. "Billy does a lot of things the police wouldn't stand for if they knew about them."

"I've got a grand chance to locate this slippery kid," Sheehan growled. "He may have grabbed a freight train the first thing."

"It's only a few minutes ago I told you what you needed was something to keep you busy for a while," she countered. "Here it is, ready to your hand. And if you track this flighty orphan to his lair and bring him home you will be doing him a good turn, saving Mrs. Haskins from nervous prostration, obliging me a whole lot, and working off your own little attack."

MRS. HASKINS looked across at Sheehan commiseratingly.

"Oh, has he got something?" she mourned.

"Only spring fever," Birdie quickly interposed before Sheehan could protest. "I never knew it to be fatal. Billy has so much time on his hands I know he'd enjoy being a sleuth for a day or two. And, believe me, we'll find Jimmie for you, Mrs. Haskins."

"I hope so, alanna," Mrs. McMullen said as Sheehan

Digitized by Google

rose and moved toward the door. "I was just telling her that I thought you might think of something to do. She was so worried about Jimmie."

"Thinking of something to do is my one grand specialty," her daughter returned genially. "It keeps me from falling asleep at the switch. It's you for the trail, Billy, and while you're giving the third degree to some of the kid's partners in crime around here, I'll try to get a line on him myself. Call me up if you hear anything."

She followed him into the little hallway and lowered her voice.

"I told you this spring fever was contagious," she said. "Now it's Jimmie Ferris that's got it."

Sheehan gripped her hand suddenly in the darkness and leaned toward her a trifle.

"I wish you'd catch it—just a touch of the sort I've got," he whispered savagely. And Birdie, with a laugh, thrust him out into the dusk.

BILLY reported progress over the telephone that night, but he had no definite clue to the whereabouts of the runaway. Interviews with a half dozen of Jimmie's intimates in the neighborhood brought out a flood of testimony that he had made no secret of his intention to desert the lugubrious Haskins household when opportunity offered. Also he was determined to seek a clime, near or remote, it mattered little, where schools conducted by black-robed Sisters of Charity were unknown and where boy scouts controlled all things of importance.

"I don't suppose he's gone far because he didn't have more than eight cents on him," Sheehan told Miss McMullen. "If he tried riding a freight the police would probably have him by now, and I've telephoned enough to make sure he isn't locked up anywhere."

"Got a couple more nickels?" Birdie demanded.

"As many as three," he returned cheerfully.

"Stay on the job, my good man, until you turn up a clue," she ordered, "and don't do it all by telephone. Step around a bit and see what's going on."

"It doesn't look very hopeful to me," he grumbled. "I think the kid will show up all right when he gets hungry."

"The idea is not to let him get hungry if we can flush him before then." Miss McMullen said sweetly. "I assumed charge of him a few months ago, William, and the neighbors would probably chatter if he went around panhandling for his meals at their back doors. I'm going to find him before he gets notorious and you've got to be chief sleuth. Good night, Sherlock."

Aggressiveness was the touchstone of Birdie McMullen's character. She had no notion of delegating to Billy Sheehan the search for her missing protégé when she issued to him such definite instructions.

On the morning following the visit of Mrs. Haskins, learning that Jimmie was still absent from his familiar haunts and that no trace of him had been discovered by Sheehan or either of two friendly detective sergeants whom the latter had desperately enlisted in the hunt, Miss McMullen pinned on her new black hemp hat with the jaunty bunch of poppies and sallied forth herself on the trail. She had not gone three blocks from Hope Street when she caught sight of three bright-eyed lads in gray slouch hats and brown canvas knickerbockers approaching from the direction of Halsted Street.

THEY looked vaguely familiar, and Birdie would have passed them with the friendly nod she gave to all the children of the neighborhood had they not somehow given her the impression that they were anxious to slip by unnoticed. Their pockets bulged, and two of them carried under their arms little packages which they shifted uneasily as Miss McMullen drew nearer, her eyes on the trio. One of them stopped short and showed a disposition to bolt, but the others, edging toward the grassplot that bordered the sidewalk, moved warily ahead. And at that moment intuition assumed control of the situation and led the sharp-eyed young woman to bait the three of the furtive glances.

"Good morning, boys," she said pleasantly.

They stopped, looked up, and then, after a glance at one another, faced her a trifle defiantly.

"Good morning," the eldest of the three returned.

"Why, you boys are Boy Scouts, aren't you?" she went on, as though in pleased surprise. The three squared their shoulders and instinctively stood a trifle straighter.

"Yes, ma'am. We're scouts," the spokesman admitted. "I'm the one that got them two into the scouts," he volunteered with a jerk of his head toward his companions.

BIRDIE was studying them critically. "Do you know who I am?" she asked suddenly. Again they dropped their glances to the struggling greensward beneath their feet.

"I know you," ventured one of the pair who had not spoken; "it was me told Ragon and Schnable who you was. You're, now—you're Birdie McMullen."

Ragon, the leader of the group, gave his associate scout a black look for that. Evidently denial would have been better policy.

"Yes, that's right," Birdie admitted. "And now I want to tell you something. You Boy Scouts are pledged to do one good deed every day, aren't you?"

"Sure we are," Ragon promptly declared. "Some days a fellow has to skip because you can't always come across somethin' good to do."

"We're doin' somethin' good now," Schnable suddenly piped up.

"Shut up!" his scout leader ordered fiercely, and Birdie did not fail to observe that little Miller, the third of the outfit, bestowed upon the garrulous Schnable a surreptitious pinch that made him wince.

"Of course you are," Miss McMullen went on, "and you're ready to do another good turn for a chap, aren't you? Suppose I should tell you of a little boy that's hungry—a boy that hasn't any father or mother—no home—no bed to sleep in or anything like you boys have. Wouldn't you try to help him out?"

"Sure we would!" Ragon and Miller chorused, while Schnable trailed in with: "You bet you."

"Well, I know just such a boy," she continued, "and when I tell you who he is, I know you fellows are going to lend a hand. His name is Jimmie Ferris."

Had Miss McMullen suddenly flashed a police badge and told the three boy scouts that they were under arrest, she could scarcely have upset them more thoroughly. Miller and Schnable jumped from her involuntarily, but she seized Ragon's shoulder in a masterful grip before he could escape.

"NOW, then," she said in a brisk, commanding tone, "you take me to where Jimmie is right away. That's what you're going to do and I'll do the rest."

For the flicker of an eyelash Ragon contemplated resistance and flight. But Birdie's calm gaze had awed hearts far stouter than his, and on the instant he capitulated.

"Who—who told you about it?" he quavered.

"Never mind," she replied mysteriously, "let's get over to where Jimmie is. I'm in a hurry."

"We was goin' to be in the circus—Jimmie knows where there's one away off on a railroad train more'n a hunderd miles," young Schnable volunteered. This time he was neither reproved nor pinched by his comrades. The veil of secrecy had been rent. There was need no longer for the code of honor.

"Aw, come on, then," Ragon said. "I'll show you where he is. But I can prove it by you two kids that *I* didn't snitch."

IN THE hayloft of August Schnable's barn Miss McMullen found her errant protégé reclining in state on a sway-backed lounge, through the horsehair covering of which the springs jauntily protruded. Around him were evidences that he had sternly declined to enter upon the period of starvation that had been so generally predicted for him. He looked contented and even replete as he gravely welcomed the unexpected visitor to his lair. (*Concluded on page 37*)

"It's all right for girls, I suppose. But I ain't got no time to learn about no seven deadly sins. That gives me a pain"

The Pensioner

By Arthur Preston Hankins

ILLUSTRATED BY J. N. MARCHAND

DURING the latter part of California's formative period no one had suspected Dave Chipley of farsightedness, or even the desire to reap the rewards of farsightedness. Dave had been too busy flirting with the goddess Chance, taking astronomical observations through the bottom of a bottle, shooting up a town now and then, and punching cattle for the old Rover outfit.

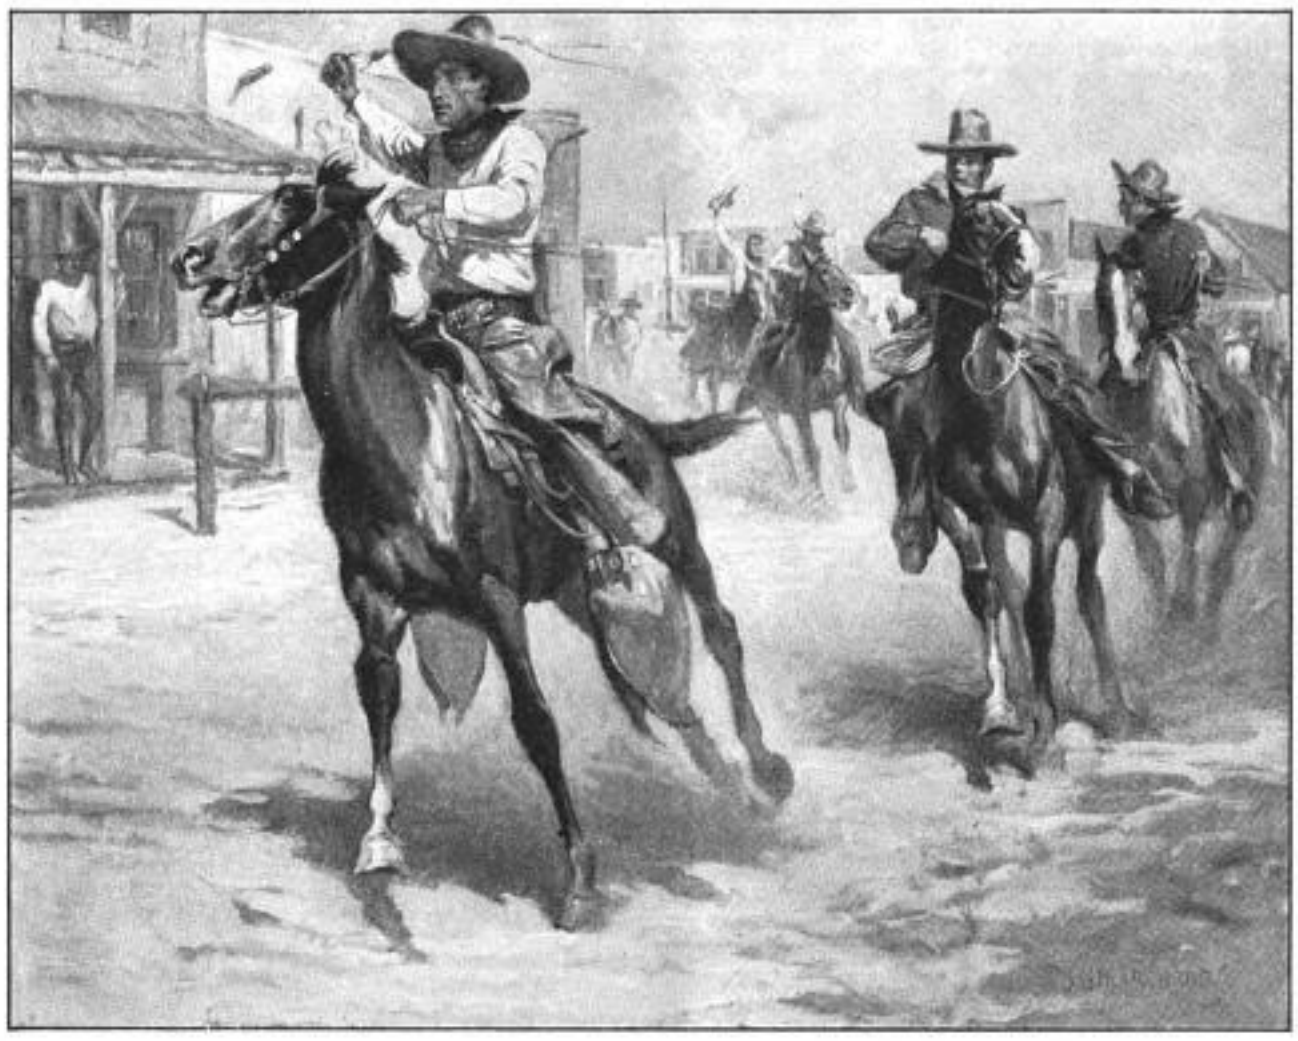
Dave's constant associate in such pursuits was Babe, the brown mare, the indefatigable cattle pony with a record from San Diego to the Tehachepi for intelligence and quickness of limb, she that later was called "The Pensioner."

To see Dave at the head of a bunch of cowmen, bent on holiday pursuits, race into a little 'dobe town on Babe, was a sight to gladden the heart of a lover of the old picturesque West. For instance, Dave and Babe had won their saddle in a roping contest at a *rodeo* in Los Angeles. The saddlery company that donated the prize had aimed to make of it a lasting advertisement and a hopeless model for all competitors. It was mounted with heavy coin silver from the horn to the tips of the low-swinging tapaderas.

ONCE, at the end of a week's vacation which had drained him of every hard-earned dollar, Dave, after consulting Babe, had refused $350 for this saddle. The bridle and the martingales were of rawhide, intricately plaited by Indian hands, and trimmed with silver and horsehair tassels wherever silver and hair could be appended. Dave's brace of six-shooters was the envy of the West. His chaps and sombreros were copied through three counties. All these were to Dave as is the sumac blossom to the bee. But Babe, the flesh and blood of his picturesqueness, was the heart of his very heart.

There came into Dave's reckless life one day the inevitable sedative element. The element was called Mary, and had brown hair and eyes, and lips that were like the heart of the ripe pomegranate.

So Dave's vacations ceased. He fingered a pass book lovingly. Gradually he added to his savings. His strong brown hands grew familiar with a notebook and the stub of a pencil. Figures pleased him, he found. He came to realize that all along he had been farsighted and shrewd, but had known it not.



His fellow cattlemen told him that the level bottom lands of the Conejo River were good for grazing till April, and from then till time for the winter rains were good for nothing. Dave couldn't believe them. He had seen that California was coming into her own. He had been studious over the marvels of irrigation. He talked the matter over with the brown-eyed one and Babe, then invested his all in bottom land at $10 an acre. He paid what he could, and gave a mortgage, with interest at 6 per cent, for the balance. It caused him to wait a little longer for his bride; but she of the pomegranate lips believed in Dave and was content to wait with him. Every day Dave and Babe rode hard and hazardously after cattle; and every cent they made paid interest on the deferred payments. Babe was growing a trifle old, though she showed it but little. However, there was now no money to be spent on a pony to relieve her, and none of the Rover nags appealed to Dave.

TWO years and a half they waited. Then the sky seemed to drop.

A big land company bought up 20,000 acres adjoining Dave's 1,000. "Finest citrus and alfalfa land in southern California," the president told the incredulous cattlemen. The company made Dave an offer for his holdings which would have netted him 100 per cent, but he refused. "Glad to welcome you," he told them. "I've expected you for quite a spell."

They laid out a town site and began developing water on top of a near-by mountain. Promptly Dave sank wells. The town meant a market, and it was time to plow his land and sow alfalfa. This required ready cash, and Dave reluctantly sold 200 acres at $50 an acre. He canceled his debt and began putting his land under cultivation.

The development of Chipley Ranch makes an interesting story, but a long one. Summed up briefly, it is this:

To see Dave at the head of a bunch of cowmen, bent on holiday pursuits, race into a little 'dobe town on Babe, was a sight to gladden the heart of a lover of the old picturesque West

Dave married the girl and plowed the land. The big company, with $1,000,000 back of them, wrought fairylike changes in the valley of the Conejo. They carried Dave along with them willy-nilly. In the year 1906 Dave sold 640 acres of his ranch for $250 an acre, reserving for himself 160 acres of the very best, for which he refused $350 an acre.

THIS little deal off his hands, he took a long breath and began to look about him. What should it be?—a trip round the world?—a year in Paris?—an automobile tour through Europe? What did people do with money, anyway?

He talked it over with the brown-eyed one. He was advised to build a home on his 160 acres before he set foot out of the county. The fine house was at last erected. The stables followed. Then the garage. Then the tennis court. Then—but just here Dave thought of something with a regretful pang.

Over at the old Rover Ranch was Babe. He had forgotten Babe during the past few years of hustling. Why, Babe—Babe—the lumps crowded one another in his throat—Babe had helped him do all this! Who but Babe had carried him day in and day out after the cattle? Never for a single minute had she failed him. Babe!—the companion of his frivolous days, the team mate in the making of his fortune! She was over there at the Rover, old, alone, neglected by him.

The dawn saw him astride a big, rawboned black, galloping over the mesa to the far southeast. The night of the following day witnessed the welcoming of old Babe to Chipley Ranch.

"Now what, old girl?" Dave whispered in her furry ear. "Kinda lean in the ribs, ain't you? Thought Dave had forgotten, didn't you? Just mislaid you—that's all. Forget it.

"I'll tell you what, Babe: All your dad-blamed life you've been hankerin' to mother a colt. I've seen it in those big black eyes. You'll have your colt, old girl. And you and said colt'll have twenty acres o' the best land in the Conejo Valley to do with as you please. You like poverty grass, don't you? Well, we'll plow out the alfalfy and let the poverty grass grow, and we'll keep it irrigated for you. The land's worth $7,000. No man'll ever straddle you again, Babe. You'll be pensioned, and you won't have nothin' to do but wad your belly with poverty grass and fret about that colt. Suit you?"

Babe rubbed her soft muzzle against Dave's neck to indicate that it would.

So the motherhood yearning within her for a lifetime was stilled. Babe's soft black eyes roved lovingly over a spindle-legged female monstrosity that staggered about and butted her flank for milk. The monstrosity promised some day to resemble a specimen of the family Equidæ. And more, Dave saw in the filly of the future a replica of his beloved Babe. There was the same white snip in the nose; the same carriage of the head; and, a year later, the filly developed the same long, tireless gait. The two occupied a pasture of twenty acres worth $7,000.

CHIPLEY RANCH was at last the earthly paradise that Mary's heart had craved. Then Dave rested and looked about again.

"It's too beautiful to leave for another year," said Mary.

So another year they stayed.

Then, half reluctantly, they uprooted themselves. Dave put on a white collar and a detestable derby hat. They packed their trunks and started round the world.

A year later they were back. And Dave, not even stopping to remove his white collar, ran to the upper twenty for his welcome from Babe.

London clothes could not fool Babe. Her low, nasal voice was lifted in greeting before Dave had reached the gate. Trailed by her slick, lithe offspring, she galloped over the green floor toward the tear-blinded man who couldn't find the gate latch.

When it was all over they stood and looked at each other.

"You're gettin' along in years, old girl," observed Dave. "But, holy smoke!—you're fat as an ole groun' squirrel in a barley field. And this-un—this here kid"—he turned to the filly—"this-un's some hoss! She's you the day I won you on aces-up from Daisy Dick, Babe."

Babe's eyes smoldered with mother pride.

"We'll have the old saddle on her to-morrow, Babe," Dave went on. "We'll see if her mother's blood flows through her veins. We'll see if she's worthy to carry the saddle you and me won handlin' the worst steer in California."

Babe's soft, luminous eyes seemed to say: "I think you'll find her worthy."

So the following morning, after many unsuccessful preliminaries, the silver-mounted saddle was cinched on the back of the unnamed filly. Two ranch hands held, one the silver bit, the other the young mare's nostrils, while Dave Chipley vaulted into the saddle, keen for a long-forgotten thrill.

Then followed an entertainment that held the ranch hands spellbound. Babe watched with interest, but evidently sure of the outcome.

TWICE Dave hit the dust, and came up with his mouth full of it. With a blood-smeared face and a blackened eye, he limped back to his neophyte, more determined than ever. The battle lasted half an hour, then the mare was spent. Triumphantly Dave swung her this way and that, patting her streaming neck, crooning love talk. She stood trembling but convinced as he dismounted.

"Gosh ding you!" Dave breathed proudly into her ear. "You got your mother's blood all right. That was worth goin' round the world for."

Babe ambled up.

"You quit your laughin'," Dave told her. "If you'd 'a' been to Paris and London

The Seago

By James B. Connolly, with

The Aerial Experiences a

ON THE SOUTH SIDE of the harbor of Vera Cruz, in a corner of the beach by themselves, the United States Navy Aviation Corps, Lieutenant Commander Henry C. Mustin in command, are encamped. If they would only move their camp nearer to the heart of the city, they would be more popular idols even than they are, not only with the dark, native population, which from the crest of near-by sand hills views their high operations with tumultuous approval, but also with the youth and beauty and maturity of the American colony.

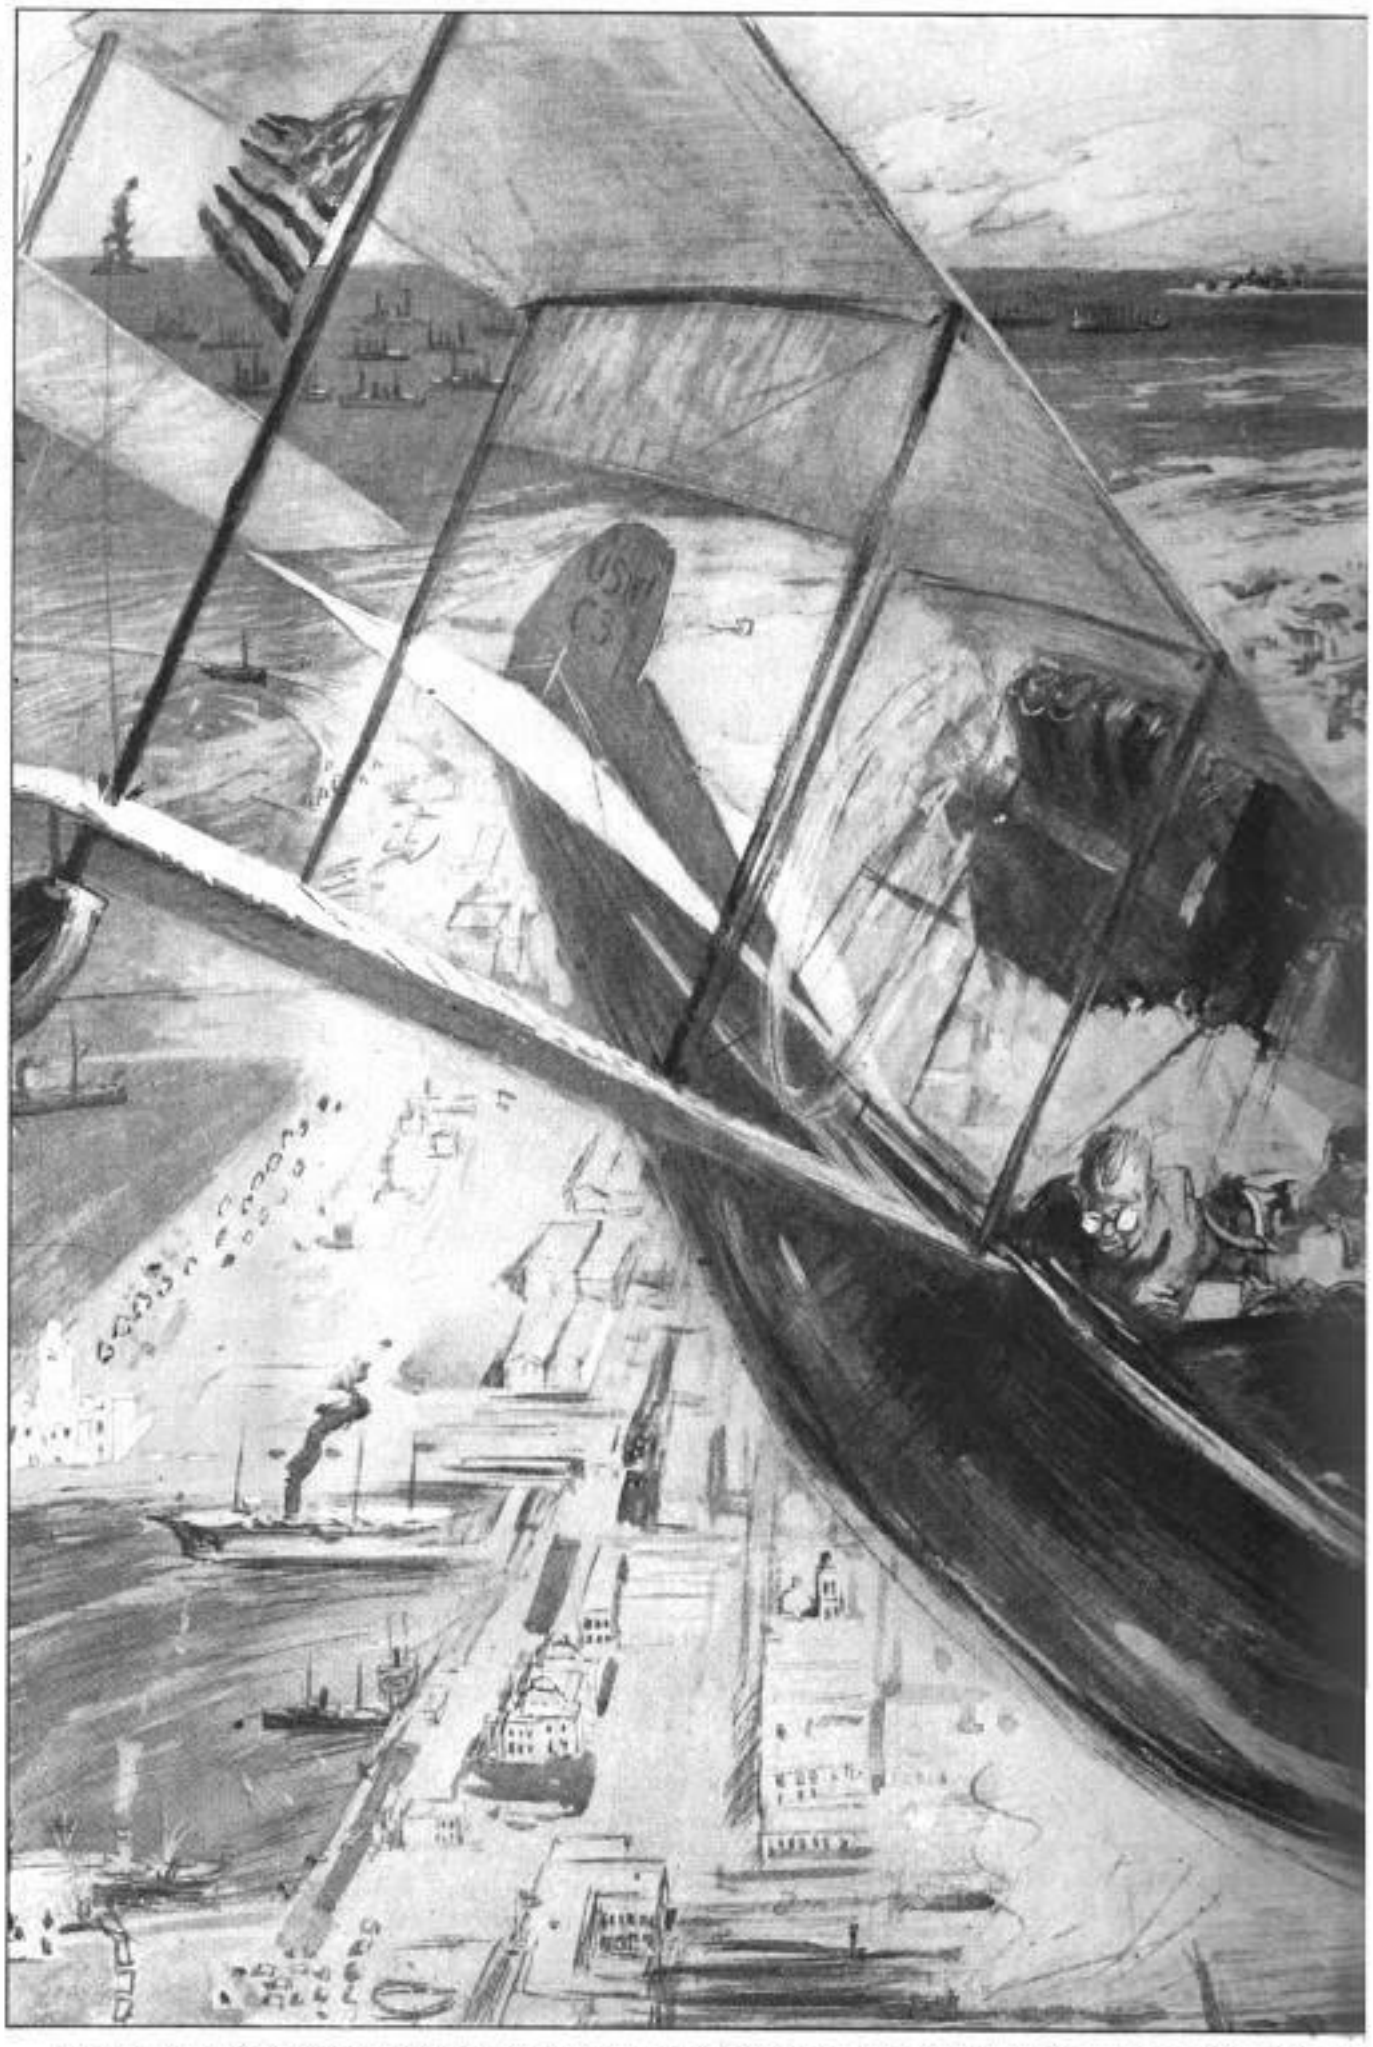
Down here in the war zone where every officer on duty ashore has to carry a .45 automatic pistol strapped to his thigh and every enlisted man a magazine rifle to his shoulder, it is taken as a matter of course that when the time comes any man in uniform will be in the way of having his liver or his lungs punctured by the enemy's Mausers, and that is all right and proper for heroes, but not necessarily hopeless with so many good service surgeons standing by to patch him up; but when, in addition to these casual and regular chances of being shot up, a man is also liable to be brought tumbling to good old earth or ocean from a height of a few thousand feet—why, then, he is in the way of being doubly a hero.

A Flock of Heroes

THE young ladies of the American colony, who are sometimes all American and sometimes but partly so—beautiful young ladies, most of them—gaze from the nearest comfortable overlook of the little aviation camp, which happens to be the shaded veranda of the combination water-front club and bathhouse—the pink-and-blue bathhouse with its salt pool open to the sky, but its sides protected by close-set slats from the sharks and other terrible creatures of the Gulf—they, gazing, express great curiosity to see at closer quarters the quaint little camp with its four khaki tents in a row, its picket line where the marine sentries stand austere guard, and its flying machines rolling loosely on the beach. But the aviators are the sternest ever. Not that they would not like to stroll, and not that they do not stroll over to the Baños, where the delightful ladies are waiting for a squad of heroes to come along and take them swimming; but never until their work is behind them will they come. Then in the cool of the late afternoon they stroll over, and later stroll up, it may be, to that exhilarating plaza in the center of the city, where, from one of the little tables under the portal of the big hotel, they also may look out on the passing show, for in that plaza, while the army band is playing, the fountains spouting, the birds chattering, and the tree leaves rustling to the night breeze in from the Gulf—in that plaza, of an evening, all the beauty and military glory passes in review.

But when the pleasant meal is over and the band hushed, taps blown, and it is time for hard-working, serious people to get a night's sleep against the strain of another day's work, the naval aviation officers fail not to recall that they are a seagoing, not a shoregoing, corps, and down to the long pier and the waiting steam launch they file and so aboard ship for the night, to the battleship *Mississippi*, whereof their chief, Lieutenant Commander Mustin, is the young skipper. A 13,000-ton battleship is the *Mississippi*, and, though now given over to the Aviation Corps, having still her place in the battle fleet; and were the fleet ordered into action to-morrow, into action she would also go, for not only does she rate a flock of flying machines but a deck battery and big turret guns also.

In the Air



IT WAS Lieutenant Commander Mustin's suggestion that he precede my flying excursion with a demonstration of hydroplaning in the inner harbor. It was too rough to go outside. Pretty nearly every afternoon a breeze makes down the coast from the north, and so the "norther," which does not blow so very hard at this time of year, but does blow hard enough to force the battleships at times even now to hoist and secure their steam launches inboard and suspend all boating communication with the shore; and the navy steam launch can stand a pretty rough sea.

We had our hydroplaning cruise, and let me say that if somebody were to hand me a million dollars to-morrow—which is Sunday—Monday morning early would find me in a flying-machine factory picking out at least one high-powered 1914 model flying boat, not forgetting also to hire a couple of expert mechanicians to see to it that her machinery efficiency was kept up to standard.

When we shoved off with flying boat *C 3*, Mustin at the wheel and I crowded into the other seat, a thirty-mile breeze was blowing outside and just sea enough inside to make little seas for *C 3* to do some fine "porpoising"—that is, to leap clear of the water and, of course, back again. We did not get a full head of power on at first because at about forty-eight miles an hour *C 3* is due to leave the water and take to the air. She was held down to forty-five miles an hour, and at that speed did some brave "porpoising." Thirty, forty, sixty, and at length one hundred feet—as the observers ashore estimated—did we make in our long jumps.

She has a blunt-nosed, elongated, fish-shaped body—*C 3*—a biplane with a little bit of a metal pontoon at the tip of each lower wing. Mustin and I sat side by side in a sort of a cockpit forward; and when she dipped her nose into a sea we got good and wet. It came over us in solid sheets so that we—I at least—could not see ahead for seconds at a time, and making me glad that the safety of the machine was not depending on the clearness of my vision. The sea water driven into us made our eyes ache and burn both—at least it did mine and probably did Mustin's, for neither did he wear goggles. It was great fun, though, for even when we were not hurdling the little seas in our long leaps we were rushing past everything along the way at a forty-five-mile gait. However, *C 3*'s real work lay elsewhere. She needed a water surface to rise from and make a landing on, but her real element was the air above. Mustin turned me over to his most practiced assistant, young Lieutenant Bellinger, for the air flight; and, Lieutenant Bellinger doing the same thing, I put hollow plugs in my ears, set a thick life jacket down over my shoulders and was carried on the shoulders of one of the enlisted force to where *C 3* was waiting, with five men to their waists in water to keep her from drifting off before the wind.

It was a good afternoon for flying, they said—not too much wind and clear air. We were strapped into our seats but not strapped so that we could not free ourselves in

The rough sketch for this drawing was made some 500 feet in the air as Lieut. Bellinger piloted the flying b air," Mr. Reuterdahl writes us, "I was in perfect comfort, well able to draw in detail. My flight las

Vera Cruz of Writer and Artist

urry if need were. The straps and the life jacket did no arm, but, looking at the engine above and behind us, I could ot help thinking that our greatest worry would not be to ave ourselves from being jolted from our seats or to remain loat long enough to be picked out of the sea, but to get out the way of that heavy engine as we hit the water.

However, there was no real fear of mishap with young Lieutenant Bellinger as operator. I had known Bellinger when he was a middy on the world cruise of the battle fleet; I had watched his development. I knew that he knew his business and saw that the men under him knew theirs. There would be many, many less accidents in the air if the aviator tended to something more than the control of his machine. The last thing that Bellinger did before going up was to take another look at the vital parts of *C 3*. Everything was all right.

A fleet of Mexican trading and fishing craft lay off the beach from the camp, also three or four pulling boats with swimming parties from the battle fleet, and one boat from which a diver in a helmet was being lowered to search for some lost article on the bottom of the harbor. These we whisked by, while the crowd of natives, men and women, on the sand hills near by accorded us their usual appreciative send off. We whisked by a flock of little naked Mexican boys playing in the water between the camp and the pale pink and bright blue bathhouse where the before-mentioned youth and beauty came to bathe and gossip.

The foregoing we passed rapidly, for five of the enlisted force, including one warrant officer in a bathing suit, had stood to their waists in water to give us a flying start with the engine working full power. The little seas kept her from rising too soon. A hundred yards from the beach she was porpoising bravely with Bellinger sawing back and forth on his control gear, like the coxswain of a racing boat. I found myself also sawing back and forth to get her going. She made an unusually long leap, and then another, and another; and this time she did not come down *spank!* on the water. I looked over the side to make sure. So it was. A steam launch, which a few seconds ago lay dead ahead, now lay almost directly under us, they looking up. We were not overhigh, and the little lighthouse on the end of the north jetty lay dead ahead. I wondered if we would come close to her. We had yards to spare. We must have been a hundred feet up in the air before I really woke up to it that we were flying.

3 over the sunlit city of Vera Cruz—white against the green and yellow sand hills. "While in the minutes, and it was only the novelty of the experience which prevented my plying my pencil continuously"

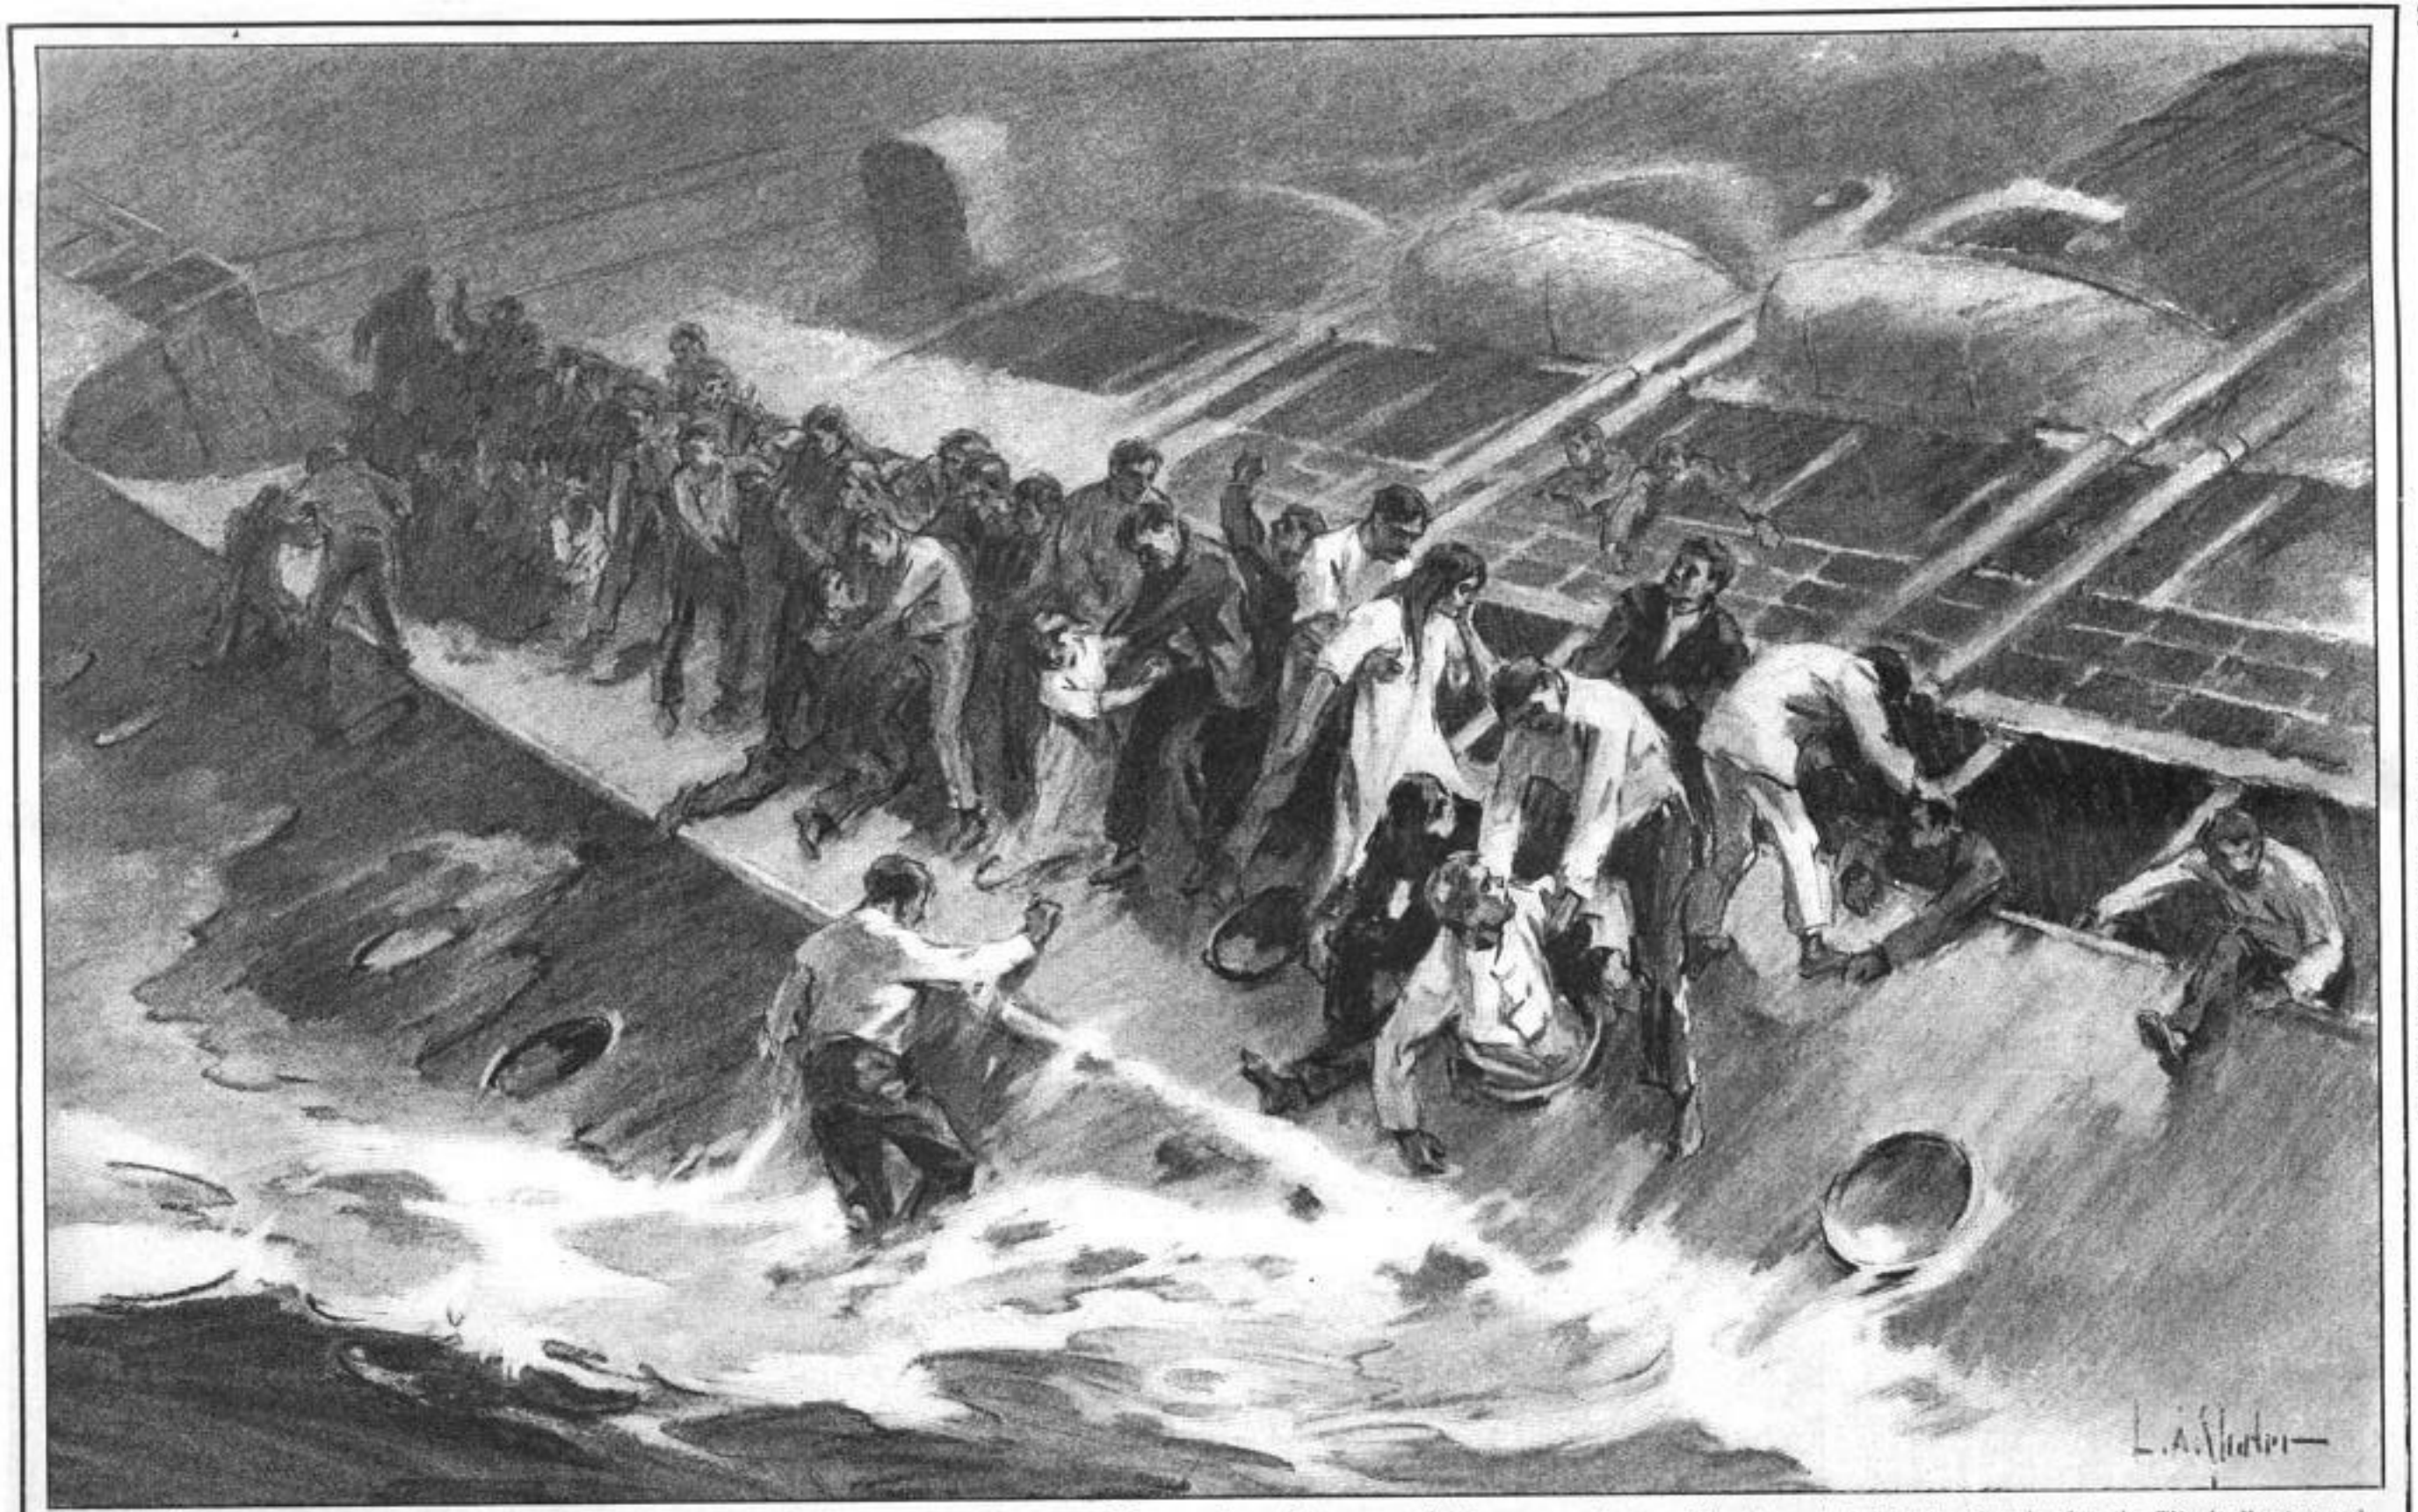
Climbing Skyward

THE breakwater was passed and the nearest ships of the anchored fleet lay a mile or so away. I thought we would be there in a flash. I wondered why, and soon saw why. A shadow of a great birdlike thing lay on the water to one side and just ahead of us. It was a tremendously large shadow at first; rapidly it shrank in size; by that I knew that we were doing more climbing than going ahead.

We quit climbing and were sailing ahead for fair. The battle fleet lay below us; and it looked so much like the little toy warships we buy for our young nephews and godchildren for Christmas that it was ridiculous. The toy ships, flat-bottomed—we pick them up and set them down on the floor and there they stay. These real warships—the two biggest in the world were there—they sat on the water just like those toy ships at home. No more life in them than that—little, gray-painted, narrow toy ships; and one differed from the others; the tops of her turrets were painted red—the only ship showing anything but the war gray in all the fleet.

Before we were three minutes in the air I settled a matter which had long interested me. A few years ago a friend of peculiarly calm make-up took me to the top of his office building for a look over the city. It wasn't the tallest building in the city of more tall buildings than any other in the world, but it was tall enough—fourteen stories. He stood on the edge of the roof and invited me to stand there also and look down on the life of the street. I stood on the edge, but I did not look down. I did not dare to look down; and just to stand on the edge took more out of me than I would care to give away every hour in the day.

The Force of the Wind



NOW, before going up in this flying machine I wondered how the great height would affect me. I hopes, I remember, that if it worried me I would not bother the operator with my troubles. As we rose higher and higher I was noting with curiosity my own feelings. I waited for that feeling which I had on the roof of the fourteen-story building to come back to me. We rose higher and higher and I waited and waited. Nothing doing. It wasn't the same thing at all. I watched the ships grow smaller and smaller below me and didn't care how small they got. I settled down under my shoulder straps and relapsed into sheer contentment.

C 3 was rated as being good for about sixty-three miles an hour. She was doing that now across the wind. The air effect was not so overwhelming as I thought it would be—that is, in the way of sound. No doubt the rubber plugs we put in our ears before shoving off made a lot of difference; but even allowing for them, there was a rushing whirr; the buzzing of the propeller, however, seemed to me to be louder. There was a great play of it, though, through the wire struts—a loud, never-ceasing, almost musical, note. I wish I could say it was musical and give *C 3* a good mark, but it wasn't. Then there was no disappointing effect in the weight of the wind as it rushed by. I put my hand up to brush my cheek, and, slap! my hand went against my chin. I forced my lips apart to yell a word to Bellinger, turning my head inboard as I did so to reach his ear the better, and my lee cheek filled out like a balloon! I could feel my lips at the same time taking on a pear shape. I turned my head well inboard then to note the effect, and had to make somewhat of an effort to bring it full front again.

Fears of the Novice

WE HAD been headed out into the Gulf; now we turned inshore. It was the first sharp turn—probably not a real sharp turn at that; but as she started to come I couldn't help it—I leaned sharply up against the incline and, without meaning to, turned to look at Bellinger. I remember how when off on a fishing trip years ago I first saw a Gloucester sail-carrying skipper roll his rail well under. I remember how I looked to the man (*Continued on page 32*)

A Thousand Lives for a Simple Lesson: An Inner Skin for Every Ship

Mr. Shafer's drawing shows the *Empress of Ireland* as she was turning over on her side just before she sank, carrying down with her 1,027 persons. Many of the passengers and crew were clambering on to the side in the hope of saving themselves. In the collision with the collier *Storstad* at the mouth of the St. Lawrence River early on the morning of May 29, the liner's hull was ripped open like a tin can, and she sank in fourteen minutes. Like the *Titanic* and the *Monroe*, both sunk in collisions within a little more than two years, the *Empress of Ireland* had no inner skin (or water-tight hull), otherwise she might have remained afloat after the accident. This safety device was installed in the *Olympic* after the *Titanic* disaster, and the *Imperator*, the *Aquitania*, and the *Britannic* have it. Nowadays nearly all shipwrecks are the results of collisions, and the recent disaster strengthens the argument in favor of an inner skin for every ship. This idea may give the word "seaworthy" a new meaning.

Lawgivers

By Jack London

ILLUSTRATED BY R. M. BRINKERHOFF

THE bronze clangor of the cathedral bells marks the hours. Out of the night day bursts with an abruptness of light and of birdcalls. Newsboys' voices announce the first editions of the Mexican morning papers and the fall of Tampico. There are dog yelps, the rattle and grind of big-wheeled mule carts, a clatter of cavalry hoofs on the asphalt, bugle calls, and Vera Cruz has begun another day.

Bareheaded women, betraying little of Spanish and much of Indian in their faces, pass on their way to market. Cargadores slither by on leather sandals, and peddlers carrying their stocks in trade on their heads. Spigotty police, in wrinkled linen uniforms, swing their clubs valiantly, and, in contrast with our husky sentries of the regular army, appear pathetically small of stature, pinched of chest, and narrow of shoulder. And in the cathedral Indians and mixed breeds pray to the gods and saints of their believing, perplexed by the incomprehensible situation of their beloved city in the possession of armed white-skinned men from over the sea.

These natives of Mexico have never possessed more than a skeleton of law. They were two entire ethnic periods behind the Spanish when Cortes landed his mail-clad adventurers on their shore. And Cortes and the generations of acquisitive adventurers that followed him, themselves with no genius for government, intermarried with the Indian population and made no improvements in government.

Improvised Proconsuls

PRIMITIVE government is simple, religious, and rigid. When the Indian governmental machinery was thrown out of gear, with here and there a smashed cog, lacking in plasticity, the millions of Indians fell an easy prey to the Spanish conquistadores. The compromise, resulting from the blending of a people backward in governmental development with a people unpossessed of the genius for government, brought about the weak and inefficient government that has been Mexico's for the last four centuries.

Come now, in the year 1914, from the United States, the white-skinned armed men with an inherited genius for government. Here is Vera Cruz with a population of 30,000; here, in addition, there are thousands of American soldiers and thousands of American and Mexican refugees from the interior. Problem: how to get these many thousands up out of bed in the morning and to work or play; how to get them home and to bed at night, all in decent and orderly fashion.

There must be safety for all. They must not quarrel with one another. They must keep themselves clean and the city clean. They must pursue the multifarious activities by which only can a city exist. They must not hurt one another, either by theft or violence, or by squalidly cultivating infection. And they must not even hurt, by excess of cruelty, the scrubby four-legged creatures that are their draft animals.

And the thing is done, decency and order made to reign, and all by the white-skinned fighting men who know how to rule as well as fight. Never, in the long history of Vera Cruz, has the city been so decent, so orderly, so safe, so clean. And it is accomplished, not by civilians from the United States, but by soldiers from the United States, and it is done without graft.

Captain Turner of the Seventh Infantry makes the following interesting announcement in the Mexican newspapers:

"As I have taken charge of the administration of the State taxes for this canton, by order of the Provost Marshal General, I beg to advise the public that from the seventh day of this month this office will proceed with its usual business under my orders.

"The public is hereby advised that persons who have not paid up taxes on city property which were due on the thirtieth day of April, 1914, will be allowed until the twenty-fifth day of the present month in which to pay them; but if any or all of them are not paid by the date mentioned above the property will be subject to the usual legal processes."

Comes Major Miller, his sword for the time being laid aside while he serves as chief of the Department of Education, with this advertisement:

"Professors and teachers formerly employed in the public schools of Vera Cruz, and who have not already signified their intention to resume work, but who desire to do so, and others who are qualified to teach and desire such employment, are requested to make application to this department. The latter class of applicants should present proper credentials and proofs of qualification."

Also, Major Miller announces that the Biblioteca del Publico will reopen on May 20.

Colonel Plummer of the Twenty-eighth Infantry advertises that the sale of cocaine and marihuana is prohibited except on a doctor's prescription, and that violation of this order will be severely punished. Since Colonel Plummer is Provost Marshal General, his advertisements include all sorts of prohibitions, from spitting on the sidewalks and in public places to warning shopkeepers not to extend credit to soldiers, and pawnbrokers not to receive pledges of Government property.

General Funston serves notice that every inhabitant of Vera Cruz must forthwith be vaccinated.

The Business of Justice

THE work of war is not forgotten. The lines of outposts and trenches circle the city; the waterworks are protected; the hydroplanes scout overhead; and night and day, on lookout and in the trenches, men and officers stand their regular shifts. But, inside the lines, colonels and majors, captains and first lieutenants turn their hands to governing and operating the Departments of Law, Public Work, Public Safety, Finance, and Education. Then there is the Military Commission, with powers of life and death, grimly sitting on the cases of persons charged with infractions of the Laws of Hostile Occupation and the Laws of War. Further, there are four Inferior Provost Courts and one Superior Provost Court sitting regularly every day. The jurisdiction of the Provost Court is limited to criminal cases, and these courts are far from idle.

Captain Callahan arrives, rolls up the sleeve of the man "P," shows a letter "P" inked on the man's arm, and explains that the defendant could be entered in no other safely identifiable way

The Captain-Judge in Action

THE ordinary citizen in any city at home may pursue his routine of life for days, weeks, and months, and see nothing out of the way or disorderly. And yet, day and night, and all days and nights, disorderly acts will have taken place and the many offenders will have been combed by the police from the riffraff of the city and brought before the courts.

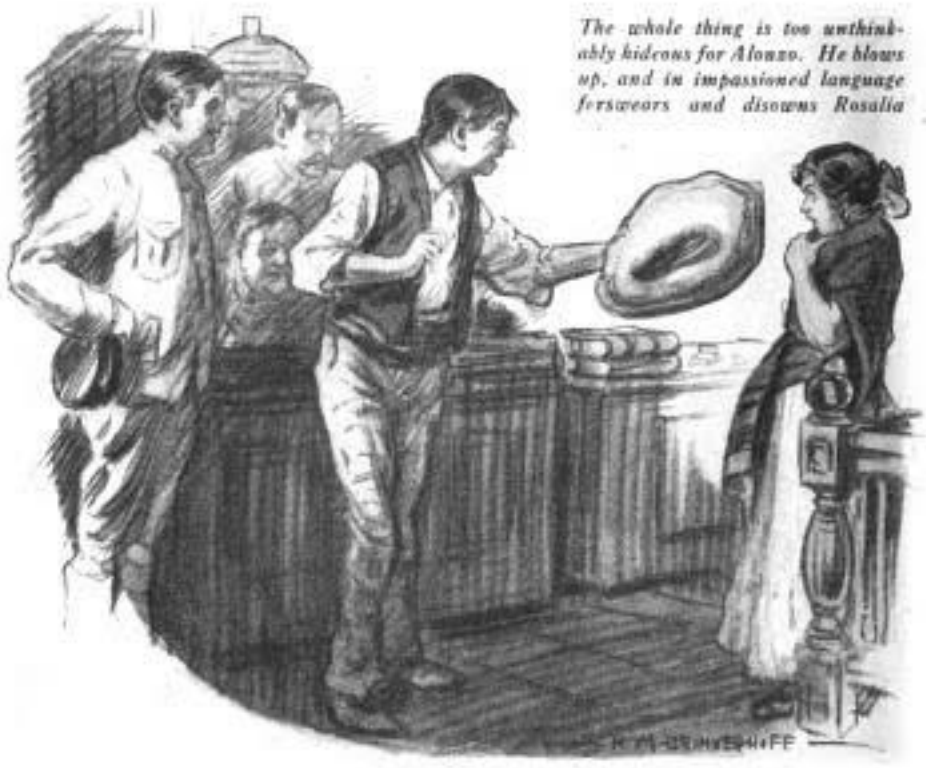
Vera Cruz, at the present time, despite its military occupation, has all the seeming of such a city. All is quiet and seemly on the streets, where just the other day men were killing one another on the sidewalks and housetops. The very spigotty police, known, some of them, to have engaged in sniping our men, have been put back to work under our army administration. And yet, for a city of this size, more than the usual combing of the riffraff is necessary. It is the desire of the military government, among other things, to rid the city of all able-bodied loafers, whether Mexican or foreign. If Mexican, they are sent out through the lines; if foreign, they are deported to their respective countries. On the other hand, there is nothing hasty in this cavalier treatment. Petty offenders continually receive dismissals or suspended sentences for first offenses. Nor is the right to be represented by counsel denied anyone.

A visit to the Inferior Provost Court in the Municipal Palace proved most illuminating. Here, at a desk across which flowed a steady stream of documents, in olive-drab shirt and riding trousers, with a .45 automatic at his hip, sat a blond lawgiver, taken from the command of his company in the Nineteenth Infantry to administer the law of Mexico and the orders, above Mexican law, which have been issued by the Provost Marshal General.

At the desk beside the Captain-Judge, an enlisted man, in uniform, pounded a typewriter, kept a record of decisions, fines, imprisonments, and probations, and performed the rest of the tasks of a police-court clerk. Soldiers clacked across the square marble flags of the court-room floor, and came and went, carrying messages, appearing and disappearing through high doorways and under broad arches. In one corner a soldier telegrapher operated an army telegraph.

Strapping soldiers, with bayonets fixed, guarded the doorway that led both to freedom and to the cells. Between these guards, small people, furtive or sullen, came and went—if witnesses, summoned from without by an alert little spigotty bailiff; if prisoners, escorted by armed soldiers.

"Tell the Lady She Was Drunk," Says the Court



AS IS usual with our police courts at home, not one but many cases are going on simultaneously. A fresh witness in a case of theft, sent for half an hour before, arrives and gives evidence between the payment of a fine and the fuddled protestations of an Indian woman that she was not drunk the preceding

Maria de la Concepcion rolls her eyes and assures the Court that she was far from drunk—so far from drunk, in fact, that she had not even taken a drop

Digitized by Google

evening. While the court interpreter has halted the testimony of a suspected fence in order to look up in the dictionary the English equivalent for a Spanish phrase the Captain-Judge admonishes a hotel keeper on the conduct of his house, dispatches a policeman to bring into court two pairs of stolen trousers evidently germane to some other case that is somehow in process of being tried, and listens to the remarks of a Spanish lawyer appearing for some man not yet brought from the cells.

The whole thing is too unthinkably hideous for Alonzo. He blows up, and in impassioned language forswears and disowns Rosalia

The stream of many cases thins for a moment, and the Captain-Judge, who has the bluest of blue eyes and the fairest of fair hair, calls the name, "Francisco Ibanez de Peralta."

A peon, covered with rags for the price of which six cents would be an extortion, shambles up and bows humbly.

"Tell him that he was drunk and disorderly on the street last night," the Captain-Judge says to the interpreter.

This being duly communicated, the culprit makes brief reply, which is translated by the interpreter as: "That's right. He says he was drunk all right and is sorry."

"Has he steady work?" asked the Captain-Judge.

"No. He says he is a cargador and works when he can."

"Tell him if he is brought here again he will be given sixteen days—turn him loose," is the verdict.

Next appears Serafina Cruz. She is blear-eyed and semicomatose.

"Tell the lady she was drunk again yesterday," says the Court to the interpreter.

Serafina acknowledges the soft impeachment with a "Si," a nod, and a yawn.

"Second offense, sixteen days in which to sober up—she needs it," is the Court's judgment, and Serafina is trailed away to the cells by a big American soldier.

Maria and the Handcart

MARIA DE LA CONCEPCION DE HENRIQUEZ, a gentle-faced, soft-voiced woman whose ancestors, by the tokens of race in her face, pronounced their names by means of many Aztec "z's" and "x's," denies flatly that she was drunk the preceding morning. The arresting spigotty officer, being duly sworn, deposes that she was so drunk that he was compelled to transport her to the lockup in a handcart. Maria de la Concepcion assures the Court that the arresting officer is a dog and worse than a dog; that he is the broken mustaches of a gutter cat, a grubless buzzard, a wingless pelican; that the truth is not in him; and, furthermore, that she was not drunk.

Captain Callahan, a blond Celt in American uniform, taking oath, affirms that he did see the lady arrive, dead drunk, in a handcart propelled by the aforesaid spigotty policeman.

Maria de la Concepcion rolls her eyes in an expression of grieved shock at such unveracity on the part of such a gentlemanly appearing American gentleman, and assures the Court that she was far from drunk—so far from drunk, in fact, that she had not taken even a drop.

The patient Captain-Judge settles the matter out of hand.

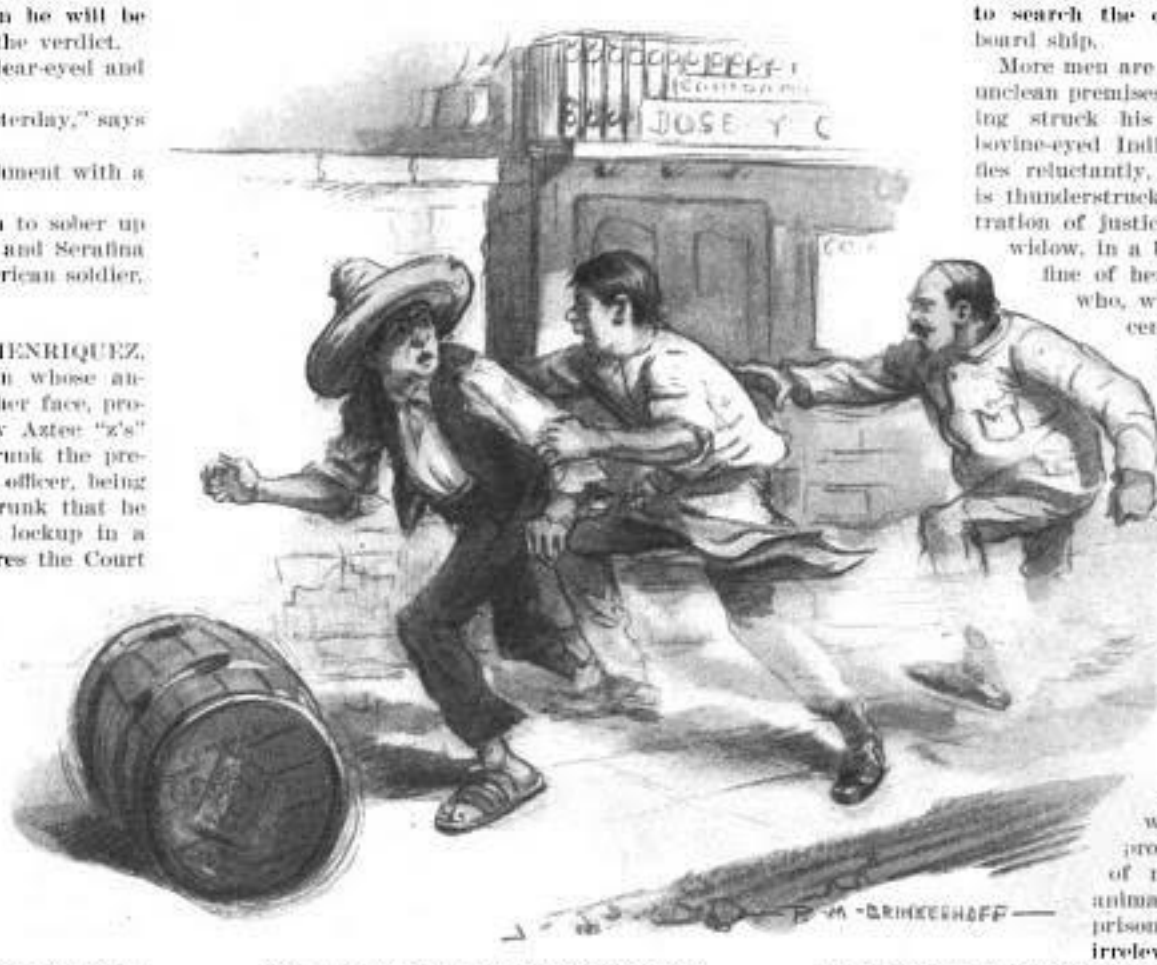
"Tell her," he commands the interpreter, "that it happens I saw her myself when she was brought in on the handcart. Ask her where is her home."

Back, via the interpreter, comes the information that she has no home.

"First offense—five days—what is the matter with that man?" says the Captain-Judge all in one breath.

"That man," from his bright, keen, elderly face, evidently is not a drunk. Also, in his face there are no signs of evil, so one wonders what he has done.

His name is José de Garro, the interpreter says for him. During the days of street fighting, while he lay hid, the United States sailors made use of his handcart, which happens to be his sole means of livelihood. He has now discovered his handcart. It is being used by the servants of the proprietor of the Hotel Diligencia, and said proprietor has declined to return it to him.



The Court does not ponder the matter. Like the crack of a whiplash, his orders are issued:

"Send a policeman to the Hotel Diligencia and bring the handcart and the proprietor here. Find from the complainant two men who will swear to his identity and to his ownership of the handcart, and send a policeman to bring the two men he names. Mercedes de Villagran!"

While Mercedes de Villagran is being brought from the cells, two thieves, Messrs. Bravo de Saravia and Pedro Sorez de Ulloa, already sent for and just brought from the cells, are considered. Captain Callahan is interrogated by the Court from without through an open window, and Captain Callahan's information causes the Court to command that the two thieves be remanded, the case being grave, and be kept incommunicado waiting the evidence in process of being gathered.

His Name Upon His Arm

MERCEDES DE VILLAGRAN proves to be a wizened little old woman, very worn, very miserable, very frightened, who is charged with having in her possession munitions of war. Worst of all, a double handful of Mauser cartridges is exhibited in evidence. In a thin, quavering falsetto she explains that after the street fighting, pursuing her regular vocation of garbage picking, she did find and retain possession of the munitions of war, deeming them of value and unaware that possession of them constituted a grave offense or any offense at all.

The owner and his barkeeper testify to catching the thief in the act with the barrel already rolled out on the sidewalk and merrily rolling onward

"Case dismissed—turn her loose," and the captain-judge has forgotten her on the instant and forever in the thick rush of his crowded life, but him she will ever remember, to her last breath, in her chatter of gossip with her garbage-picking sisters of Vera Cruz.

A prisoner is called, whose entry on the docket causes the Court's brows to corrugate; for the man has no name, and is entered as "F," with a note to the effect that Captain Callahan will explain.

Captain Callahan, not for the moment findable, possibly engaged in receiving another lady in a handcart, the Court tries two more cases of drunk, one, a second offense, receiving sixteen days and a warning that on a third offense he will be sent out through the lines.

Captain Callahan arrives, rolls up the sleeve of the man "F," shows a letter "F" inked on the man's arm, and explains that the defendant, arriving at jail so hopelessly drunk as to be speechless, could be entered in no other safely identifiable way, wherefore he had inked the man's arm, and there was the proof of it. Mr. "F," somewhat recovered after a night's sleep, is able to state that his name is Alonzo de Cordova y Figueroa. The soldier clerk, remembering the face and searching the record, announces that Alonzo de Cordova y Figueroa is a second-timer, and Alonzo de Cordova y Figueroa, in debt to the United States with his time to the extent of sixteen days, is taken away.

Patience, Swiftness, and Certitude

THE handcart, the proprietor of the Hotel Diligencia, and the policeman arrive in high garrulity. The proprietor is a squat, stoop-shouldered, pock-marked, white-haired Cuban, whose state of mind is one of amazement in that the handcart, on which he never laid eyes before, should have been found on his premises.

The handcart man looks on his property with joy, and cannot understand why the Captain-Judge does not immediately permit him to take it away, while the Captain-Judge receives particulars of a house raid the previous night in which four Mausers and a thousand rounds of ammunition had been unearthed.

Appears Tomas Martin de Poveda, charged with the ghastly crime of maintaining unclean premises. After a brief lecture on hygiene and sanitation, the Court gives the culprit twenty-four hours in which to clean up, and Tomas Martin de Poveda departs, shaking his head at such administration of justice by the three lunatic gringos.

A shopkeeper and a cigar maker arrive, take oath, and testify that José de Garro is truly José de Garro and that the handcart is truly his property, and José de Garro goes on his way rejoicing that God's still in heaven and justice in Vera Cruz.

The cases of three thieves, charged with stealing from the customhouse, and of a fence who bought the stolen property, are inquired into and continued. Follows a Jamaica negro cook and a cockney steward from an English steamer, jointly charged with stealing a gold watch from a Spanish refugee.

The Court interrogates all three, discharges the negro, holds the cockney for trial, and dispatches a summons for the master of the ship to appear in court next morning, accompanied by a polite request first to search the cockney's belongings on board ship.

More men are warned for maintaining unclean premises; and one man, for having struck his wife, a dark-skinned, bovine-eyed Indian Madonna who testifies reluctantly, receives ten days, and is thunderstruck that such maladministration of justice can be. A thin-faced widow, in a blight of black, pays the fine of her roistering eldest born, who, while crazed with several centavos' worth of ninety-proof aguardiente, demolished a window and portions of the anatomy of a spigotty policeman. The Captain-Judge has seen service in Cuba, Porto Rico, and the Philippines, and his "Carabao English," so learned, stands him in good stead. Not merely on occasion, but on many occasions, he corrects and checks the interpreter when that worthy fails properly to interpret shades of meaning or engages in animated discussions with prisoners and witnesses on irrelevant topics. Another thing that characterizes the efficiency of this blond lawgiver of a regular army captain, whose ancestors must have been more than closely related to Hengist and Horsa, is his combined patience, swiftness, and certitude. Rough and ready his justice is, but legal always, and unswayed by the seriousness or lightness of any case. He opposes directness and simplicity to the garrulity and immateriality of the Vera Cruzans. His patient questions go to the point, he achieves

COMMENT ON POLITICS

THERE can be no doubt that the political complexion of the country is anti-Democratic. This is likely to increase rather than grow less between now and the November elections. A complete Lower House is to be elected in November. If the opposition to the Democrats were united in one party there is little doubt that an anti-Democratic House would be elected. Even with the opposition divided between Republicans and Progressives, there is some chance that the Democrats may lose the Lower House. Certainly their majority will be reduced to a very narrow margin. The feeling of the country is against the Democratic party rather than against Wilson. The point as to which Wilson has lost the confidence of the country is his handling of the Mexican affair. Conceivably there may be a happy outcome of the mediation at Niagara Falls. This would to a large degree restore his prestige, but the feeling in the country against the Democratic party, which distinguishes the party from Wilson, is not likely to change. It is based largely on distrust of the personnel of the Lower House, and one of the chief counts in it is the reckless extravagance of the distribution of "pork." When the present performances of the Democrats with regard to pork are made known, as they will be during the campaign, the public indignation is going to be dynamic.

The Republican Trouble

THE party that would be best adapted to secure the allegiance of the largest number of voters in opposition to the Democrats would be a conservative party —*surely and honestly conservative*. The Progressive party is honest. Fundamentally, it is conservative also; but the bulk of the voters aren't likely to feel that way about it, because it is identified with several unfamiliar policies, and the average man regards what is unfamiliar as radical. The Republican party fills the bill for conservatism, and is sane, oh, very sane! But the bulk of the voters don't regard it as honest in the political sense, and the way the party has been going lately isn't likely to better its reputation. As Congressman Gardner, speaking for the Republicans, says:

> Two-thirds of our trouble lies in the fact that the people think that the Republican party is in bad hands. Every time we renominate a discredited leader we postpone the day of recovery.

As, for example, the renomination of Penrose in Pennsylvania, Foraker in Ohio, the continued dominance of Barnes in New York, and the hailing of Jim Watson of Indiana as a candidate for Vice President by a Republican gathering in Missouri. The Republican party *is* in bad hands, and there is no way of changing it. The Republican National Committee is exactly the same as it was in Chicago in 1912. It will continue in the same hands until after the next national convention. They occupy the relation of an all-powerful, self-perpetuating board of directors. The better men within the Republican party, like Hadley of Missouri, Cummins of Iowa, and Borah of Idaho, understand the situation perfectly. They deplore it, but they can't help it.

A New Force for Amalgamation

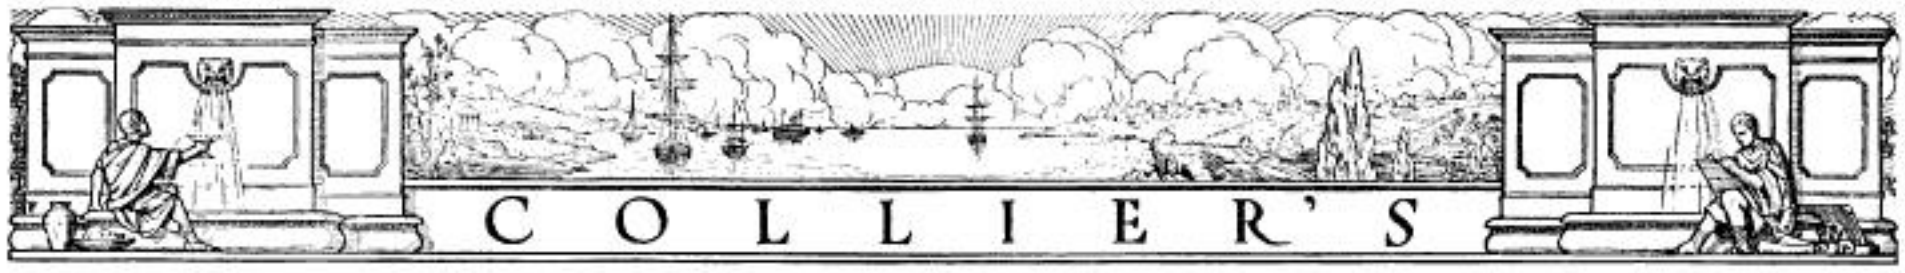
ALL the talk of amalgamation in the past has been coming from leaders and candidates for office, from national leaders all the way down to precinct committee men—men who had something to gain by amalgamation, namely, office money and power, and who were being kept out of these perquisites by continued division. The individual voter, who has no personal stake in success, has not in the past done any talking about amalgamation, nor concerned himself about it. But now, it must be said, the voter is beginning to think about amalgamation. With a number of voters, which increases daily, the chief present political concern —more important than all other policies or personalities—is to get the Democratic Congress out of power. As soon as they begin to think about that they necessarily think about amalgamation. Nevertheless, it must be said that there is a large group of voters in the Progressive party—probably about two million in all—who will go cheerfully through any martyrdom of Democratic supremacy before they will go back to the Republican party.

If the Republicans Name Roosevelt

THE most interesting comment that the present writer has seen on the much-discussed topic of amalgamation has come from Congressman Augustus P. Gardner of Massachusetts. He has been a Republican Congressman for a long time, is a son-in-law of Senator Lodge, and was the Republican candidate for Governor of Massachusetts last year. What he said appeared as a signed statement in the Boston "Globe," and is especially valuable for its quality of detachment and balance. What he says coincides with the judgments of disinterested observers:

> The only man on earth who can bring about peace between the Republicans and the Progressives is Theodore Roosevelt. If he is the Republican nominee for the Presidency in 1916, even though he is also the Progressive nominee, then the Progressive party will wither in Massachusetts and everywhere else.
>
> Personally I shall not ask Santa Claus for Roosevelt's renomination by our party, and probably the Republican leaders would rather see him strangled than nourished by a third cup of tea. Nevertheless, if he so desires, the party rank and file will sweep the leaders aside and give him the nomination in 1916.

Congressman Gardner means the Republican rank and file. This is the only way Roosevelt could be nominated by the Republicans in 1916—for the rank and file to do it spontaneously throughout the country, over the leaders' heads. Whether this is possible depends somewhat on the growth of Presidential primaries during the next two years. Congressman Gardner continues:



> But will Roosevelt seek or accept a Republican nomination in 1916? That is the real question. If he does so, he must face the cry of treachery from men like Johnson and Heney and Murdock, successful politicians, not disgruntled failures, men who burned their bridges behind them when they followed the Colonel into the Progressive party.
>
> Those men cannot and will not return to the Republican ranks. Their places have been taken by newcomers. They must succeed as Progressives or go down into oblivion as the Populist leaders did in the 90's. There is no turning back possible for them now. Their die is cast. Roosevelt must reckon with men like these if he returns to the Republican fold. . . .
>
> Anxiety as to the verdict of history has become almost a vertigo with Roosevelt. . . . Will the historian of the future look with benevolent eye on the Colonel's return to that party which he has condemned to destruction? That is a question which will surely present itself to his mind. On the answer which his judgment gives may depend vast political consequences.
>
> But suppose that Roosevelt refuses to harbor the thought of another nomination from the "party of yesterday," what then? Then, I am afraid, we are in for a survival-of-the-fittest struggle between the Republicans and the Progressives. Which will survive? To which of these parties will the anti-Democratic voter ultimately turn? . . .
>
> It is easy enough to sit in one's easy chair and draw up plans for joint primaries of Republicans and Progressives, or for gentlemen's agreements or for platform concessions. Any of those plans will work if both sides mean business. No plan will work when only one side wants it to work. The plain truth is that the Republicans are mighty anxious to get together with their old associates. I have no doubt that they would make good deal bigger concessions than I personally should approve.
>
> The Progressives, on the other hand, do not seem to me to wish harmony with their quondam friends. The only proposal which hitherto has been made us, so far as I have observed, was put forward at the Progressive glorification meeting held in Boston soon after election last November. After joyously inviting attention to the poor showing of the Republican candidate for Governor, the Progressives invited us to take the Progressive party name, the Progressive party leaders, the Progressive party platform, and then wind up by voting the Progressive party ticket. The proposals were surely characteristic.
>
> Whatever the Progressive party may be, it is not a party of compromise. Popular with them as he is, I doubt whether Progressives would follow Bird in any compromise. Many of them would not even follow Roosevelt in a compromise, provided that they recognized it to be a compromise. . . .

PUBLICATIONS OF THE DEPARTMENT OF AGRICULTURE

THE Department of Agriculture has a number of very interesting bulletins, written in popular style, available for free distribution. These cover not only the subjects of poultry and cattle raising, the growing of fruits and vegetables, care of bees, construction of farm buildings, the marketing of farm products, and the keeping of accounts, but also cover much that is of interest to those living in cities, such as bulletins on the food values of beans, peas, and other legumes, eggs, poultry, cereal breakfast foods, fruit, sugar, corn, and corn products, potatoes, and other root crops, nuts, milk, cheese, mutton, and fish, and bulletins on "Meats, Composition and Cooking," "Principles of Nutrition and Nutritive Value of Food," "Bread and Bread Making," and "Canned Fruits, Preserves and Jellies." A FULL LIST OF THESE BULLETINS (NOT THE BULLETINS THEMSELVES) and INFORMATION ON HOW TO OBTAIN THEM will be sent to all those who will write to

A Democrat to the Rescue

WE WISH that Senator JOHN SHARP WILLIAMS of Mississippi could cease to be a Democrat for a year or two. In our judgment he has more of the sound riches of history and the philosophy of statesmanship in his mind than most other men now in public life. He knows the difference between a phrase and a fact, and he thinks straight. We wish he were not restrained by party considerations from opening his mind on WILSON and Mexico. It would be interesting also for him to tell the people of the United States just how much difference there is between VILLA'S uprising in Mexico and an uprising of negro tenants in Mississippi with the purpose of dividing up the plantations, murdering the owners, and expelling all the whites.

Serpent's Wisdom

FROM the letter of an unsympathetic reader of our editorials:

Why should we go to Mexico to delve into such a problem? Is the holding of a large tract of land for speculation and exploitation a crime? Is the holding for speculative purposes of one hundred thousand acres of unimproved land, while in our cities hundreds of thousands work and sweat and starve, any more ideal than the holding one hundred thousand acres of improved land while the laborers thereon work and sweat and starve? Is the exploitation of an industry for a few million dollars the approach to idealism?

Yes, the *approach*, we hope. For we are only on the road to perfection, and no one can reasonably suppose that we have yet, or nearly, arrived. But the world grows better—even if it takes its time. The cultured Athenians whom ST. PAUL found worshiping "the unknown God" were an incomplete kind of democrats; but for a good many centuries they had discouraged speculation in corn by handling the would-be speculators very rudely indeed. Perhaps some children now living will survive to see speculation in land adjudged no less intolerable. And to those who can't get hold of the argument for free land we recommend the sententious speech of old PU-PU-MOX-MOX, chief of the Walla Walla Indians. In June, 1855, he met General ISAAC STEVENS and others who wanted to buy the lands of his tribe in what is now southeastern Washington. After hearing their promises and offers he made the following reply, recorded on page 203 of the fourth volume of LYMAN'S "History of Oregon":

Goods and the earth are not equal. Goods are for using on the earth. I do not know where they have given lands for goods.

Supporting the Colleges

PRESIDENT VAN HISE of the University of Wisconsin once turned the laugh against some of his Eastern confrères at an academic conference by saying mildly that he would rather hang on to the chin whiskers of farmers than to the coat tails of plutocrats. It is a more dignified performance and keeps the line of obligation clearer. But endowments come in time even to State universities. These gifts are usually in the form of securities, or are so invested later on by the trustees, and will be found on analysis to consist of claims on the industry, loyalty, and skill of other men. College students often pay tuition fees of one sort or another, but these seldom, if ever, amount to one-half as much as the college is spending on each such student. The other half comes from the endowment. It is a very striking fact that men are tending the great turbines beside Niagara, working fast freight trains over the Rocky Mountains, drilling into the copper ledges of Arizona, splicing telephone wires below the streets of New York, or standing up to the flames of Pittsburgh's blast furnaces—and all to get JOHNNY JONES his college diploma. No wonder that WOODROW WILSON'S motto was "Princeton for the nation's service." It is fairly certain that the carelessness of college pleasure and the selfishness of the collegian's dream of egocentric success would yield to a noble idealism if these facts could be brought home. The universities get plenty of advice in June, and we would add only this: Read the treasurer's report and think about it.

The Devil Is Sick

THIS from the Philadelphia "Record":

The Rev. BOIES PENROSE, one of the most distinguished converts of "BILLY" SUNDAY, will address the congregation of Trinity Methodist Episcopal Church, Fifteenth and Mount Vernon Streets, this evening and tell the striking story of how he was turned from the errors of his ways—one of the most remarkable of latter-day miracles. After the sermon the distinguished convert will be glad to meet any young men for an informal discussion of some of the religious problems of the day.

The "Record" is a Democratic paper, but even so it ought not to speak so lightly "sarkastical" of "PENROSE'S conversion." Who knows? He needs it so badly that the part of charity is kindest. Let us pray.

Jacob Riis

THE LIFE STORY of JACOB RIIS is as a trumpet call of idealism. He believed in better and happier people and gave his strength to that faith. As a young newspaper reporter he came in contact with the unspeakable iniquities of the old Five Points section in New York City—evils maintained and fortified by the tacit alliance of respectable landowners, corrupt police, and mercenary politicians. What could one man do against so many? RIIS never noticed the odds, but went in and won a victory as astounding as when the walls of Jericho fell. Mulberry Bend Park is his monument, and the bettered lives of those for whom he let in air and sun are his memorial. It is a true description of JACOB RIIS to say that he warmed the heart of the city.

A Staggerer

FROM a New York newspaper:

FISHING IS FUN.

Tennis is Fun. Golf is Fun Automobiling is Fun.

BUT—Making Money is More Fun.

This is the beginning of a quarter-page advertisement of real estate. Could such an "ad" be concocted or listened to in any other spot in the world? We hope not, but we don't feel confident. We hope to goodness no foreigner who writes about "money-mad" America will get hold of this document. If we believed it reflected the spirit of this whole country to-day, we'd sell out to-morrow and go to Somaliland or Zanzibar.

"The State That Makes Money Out of It"

SOME TIME AGO we printed an editorial under this head—Russia being the state. The editorial contained an error about the Dakotas—and we correct the error in an article on page 25 of this week's issue. Judging by the number of letters we have received on the subject, everybody in North Dakota reads COLLIER'S and reads it like ARGUS. We hope they'll read "Two States and a Saloon."

Our Preference Confirmed

HERE IS A SAMPLE of BERT LESTON TAYLOR'S "Line o' Type or Two" from the Chicago "Tribune"; a Congressman joins HEARST in revising the territorial limits of the U. S. A, and B. L. T. pricks the bubble in true American fashion:

BY WINGO!

I think those hearing me now will live to sit in a Congress that will see the Mexican border pushed to the Panama Canal.—Rep. WINGO.

Wingo,
Jingo,
Gringo,
Bingo!

All Congressmen should be required to read at least one good "colyum" every day. It would knock a lot of guff out of their proceedings, and possibly the Congressional Record would become more readable.

The Olympian

PENT WITHIN THE PARTICULAR CELL of the apartment honeycomb in which it pleases us to say we live, with the lady in the flat overhead practicing scales, the cook in the flat below brewing (how unmistakably!) an onion stew, and the janitor and elevator boy fighting in the air shaft—held in these chains of circumstance, the advertising pamphlet of a dictagraph company invites the dazzled eye. "Often," we read, "the sitting room, the sewing room, or the parlor is too far removed from the nursery to enable you to step easily into the nursery. If you are talking to a friend or a stranger in any room in the house, and wish to know how the children are getting along in the nursery, you do not have to leave the room to find out. You use the dictagraph." But overcoming the difficulty of reaching the distant nursery—a very real one—is only one of the boons conferred by the dictagraph. There is the problem of servants, for instance ("EUPHEMIA, please shut the kitchen door until you have finished breaking plates"), with which all are familiar. "Domestic science two or three years ago was a practically untouched field. The master of the house depended upon a retinue (ah, yes!) of willing, if untutored, servants to serve him and his guests in a bungling, obtrusive way." This distressing situation vanishes before the dictagraph as mists dissolve before the sun. The retinue remains, of course, but the bungling disappears—the master but breathes the word, the dictagraph carries it through the intricate, invisible ganglia of his establishment. Exercise is another problem difficult to solve in the city. We often think we should like to begin the day with a ride in the park, but horses—however, let us not sink to details too prosaic.

Digitized by Google

THE NATIONAL WEEKLY

With the dictagraph, "communication with the stable is assured." For instance, you decide to go for an early morning ride without having previously instructed the stableman at what hour you want the horse. Perhaps you have been restless, wake early, and decide to ride before breakfast. In either instance the dictagraph stationed at your elbow saves all bother. Without getting out of bed, you touch the key of the dictagraph. The gong in the stable arouses the stableman. The horse is saddled while you are dressing. When you go down at six the favorite horse is at the door." We see him there now, hear the merry peal of the stable gong as JORROCKS rolls out of bed and begins to groom (with that delightfully soothing "Sss—sss—sss" of his) the Irish hunter. We see ourselves drowsily becoming aware of the new day, while JAMES, having laid our robe and slippers and tempered the water carefully, sprinkles a few spoonfuls of rose salts in the bath. In fact, we might continue indefinitely, but it's already 8:37, eggs and coffee are swallowed, and if we don't beat it for the Subway and catch that downtown express we can never get into the office by nine o'clock.

Molding Marietta

SINCE WE HAVE TAKEN UP the sad case of Marietta College and GEORGE WHEELER HINMAN, another student has been expelled for criticizing HINMAN'S policy of academic repression as executed (executed is the word) by his trustees. Both victims were editors of the college magazine. One of them, J. P. CLARK, a junior, was promptly expelled for commenting on the forced resignation of Professor MORSE, head of the department of political science; the second, R. W. OWENS, a senior, first suspended, has been definitely expelled. One of them writes:

> As things stand now, we cannot enter any large college or university in the country. I think it is a sad indictment of the system of higher education when a person who has done nothing but tell the truth as he sees it cannot secure any more education. I have been trying to make arrangements to enter a large university next fall, and they wrote me and said that they sympathize with me deeply, but it all hinged on the letter of "honorable dismissal" from the college, which, of course, you cannot get when you are expelled. They could not take me in in spite of the fact that my pastor, the secretary of the city Y. M. C. A., and a prominent business man told them I was perfectly honest and straight and that they would stand back of me.

Another letter comes to us from Marietta—a letter from a keen observer of recent events, who writes:

> HINMAN has the two lower classes hypnotized. He calls the two upper classes "anarchists," and boasts that when he gets these "dreamers" out he will mold the college as he pleases. What I object to is less his suppression of all free discussion in his classes than a most pessimistic, cynical, sneering attitude toward all idealism, every uplifting movement, and every person who cherishes such things.

"Molded by HINMAN?" Then Marietta will be moldy indeed.

Times Do Change!

KEEPING GUNS AND GOING SKATING, ONE SHILLING. That was the fine Harvard College imposed by way of discipline as late as 1750. What was the fine for dancing, one wonders? Nowadays even the "modern" dances are taught to Harvard students in the college "gym." Some of the other eighteenth-century penalties are listed by Mr. A. S. PIER in his diverting book, "The Story of Harvard":

	s.	d.		s.	d.
Neglect to repeat the sermon..	..	9	Lying, not exceeding.....	1	6
Going out of college without proper garb, not exceeding...	..	6	Going on top of the college...	1	6
Playing cards, not exceeding..	5	..	Refusing to give evidence.....	3	..
			Drunkenness, not exceeding...	1	6

As the cartoonist observes, "Those were the days!" But in 1914 college authorities regard drunkenness ("not exceeding one shilling sixpence") as considerably more offensive than playing cards ("not exceeding five shillings"). Even colleges grow more intelligent, it seems.

Uncle Sam Soliloquizes

"The thrift of a carrion bird is no credit to any community. Shall I shoot it or let it starve?"

Cartoon by F. G. Cooper

A Builder

A GREAT ENGINEER and a great man was ALFRED NOBLE, who died in New York City this spring. He went into the Civil War at eighteen and served three years in the army of the Potomac before going to college. His name is identified with the great "Soo" locks on St. Mary's River, with the bridges at Memphis and at Cairo, with the Panama Canal plan, the Pennsylvania tunnels under the Hudson River, the great dry docks near Honolulu, and many other huge works. Best of all was the man himself. This is the description given by his professional associates:

> He possessed a rare combination of strength, gentleness, tact, and discernment. He was universally respected by all who had any business dealings with him, and all appreciated the nobility and simplicity of his character.

ALFRED NOBLE was a successful man.

Villa and the Movies

GENERAL VILLA is the hero of a "movie" drama. He is in partnership with an American film producer, and his income during the coming months depends in part upon the attitude of the American theatregoing public toward his cause and person. No wonder he tried to persuade CARRANZA to be kind to UNCLE SAM! We hope that the movies will prove a force that works for peace. CHARLES A. BEARD, a professor of history at Columbia University, has written an "Economic Interpretation of the Constitution of the United States"; here is an economic interpretation of constitutionalism in Mexico.

Thoughts on Liberty

JOHN REED'S picturesque accounts of life with the Mexican gunmen make diverting reading—but he is better as a literary impressionist than as a political philosopher. For example:

> "We are fighting," said ISIDRO AMAYO, "for Libertad."
>
> "What do you mean by Libertad?"
>
> "Libertad is when I can *do what I want!*" . . .
>
> I submit that it is the only correct definition of liberty—*to do what I want to!* Americans quote it to me triumphantly as an instance of Mexican irresponsibility. But I think it is a better definition than ours—liberty is the right to do what the police want.

The trouble about doing what you want to do and letting the other fellow like it or lump it, *ad lib.*, is that he is benighted enough to have *his* preferences, too; and there are a good many other fellows, and only one of you. Call it Christianity or call it Socialism: deference to other interests than self-interest, the setting of what we want to do below what seems good for society, is the only safe way of progress the world has yet devised. Incidentally, if young Mr. REED wants to expound the advantages of universal selfishness, he would better choose some happier example than that of Mexico in the throes of "Libertad."

Of the Will and the Wish

THE MAGAZINE WRITER whom we quote in the last paragraph would do well to read an article printed in the "Hibbert Journal." The article is signed by the Indian poet, RABINDRANATH TAGORE:

> When a man begins to have an extended vision of his self, when he realizes that he is much more than what he is at present, he begins to grow conscious of his moral nature. . . . Necessarily his perspective of life changes and his will takes the place of his wishes. For will is the wish of the larger life, life whose greater portion is out of our present reach and most of whose chances are not before our sight. Then comes the conflict of our lesser man with our greater man, our wish with our will, the desire for things that are before our senses with our purpose which is within our mind. Then we begin to distinguish between what we desire and what is good. For good is that which is desirable for our greater self. Thus . . . our moral faculty is the faculty by which we know that life is not made up of fragments purposeless and discontinuous.

Ex oriente lux! That is not perhaps brand-new, but what truth is new? One more question: Why does so much of our light come from the East? Is it that they take the time to live there and do not read (or write) so many magazine articles?

Overland

Mechanically—No Car Made is the Superior of the Overland

$950

AFTER all is said and done, the supreme test of any car's value is the kind of mechanical performance it gives in the hands of tens of thousands of owners. The car that requires practically no attention, after this most convincing of all tests, is the kind of a car you want to buy. For the car that takes you any place, any time, under any condition, at the lowest cost, gives that which every buyer is after—unfailing and consistent service.

Up to date, we have delivered 42,000 cars of this year's allotment. Previous to that time, we had delivered over 100,000 cars. So right now there are over 142,000 Overlands giving satisfactory service in all parts of the world.

We point and refer you to these 142,000 owners. They are our best advertisement.

Ask them about the mechanical efficiency and out-and-out economy of the Overland.

The Overland chassis is one of the most accurately made and finely finished pieces of mechanism in the world.

Each individual part or piece, from the tiniest bolt to the large body, is made as accurately and precisely as modern methods, expensive scientific instruments and costly automatic machinery can make and produce it. Parts are manufactured, tested and inspected to one two-thousandths of an inch. Nothing but the very finest steels are used.

Then, too, our huge production of 50,000 cars makes it economical for us to use the most complete equipment of labor-saving automatic machinery. A small manufacturer could not dream of utilizing such equipment. He does not produce a sufficient number of cars to offset the over-head. The result is—he has to buy, from some outside source, parts which we make. Thus, in producing every part ourselves, we eliminate these extra costs which the small manufacturer cannot escape.

And that is why the Overland is not only letter-perfect mechanically, but, in addition, and what is probably just as important, that is why it costs you 30% less.

See the nearest Overland dealer today. Have a thorough demonstration of this car, and you will have no other.

Handsome catalogue on request.

Please address Dept. 6.

Hot-Weather Reasoning

By George Fitch

ILLUSTRATED BY RODNEY THOMSON

Sonnets on Most Everything

AT COMMENCEMENT

Now genial summer warms the village hall
To fever heat; but, chill as Arctic ice
In his new clothes which grip him like a vise,
The trembling senior bears 'neath terror's pall.
Below, his friends and kinsmen one and all
Bore tunnels through him with great, glaring eyes,
The while to flag his fleeing speech he tries,
And his limp knees foretell an early fall.
Gone are the huge and costly words which decked
His proud oration—gone is everything,
Save his wide-spreading feet and ton-ton hands,
The sailor, with the hungry Fijis wrecked;
The wretch about whose neck the rope doth cling—
Ah, how he envies them as there he stands!

The Cost of Firing Brakemen

A LOCOMOTIVE weighing 830,000 pounds has just been completed. It is as long and as heavy as a small steam yacht. The railroad which has ordered it has rebuilt its entire system in the past few years, strengthened bridges and widened tunnels to fit the obese and ponderous engines now in popular use. The new locomotive cost $40,000, the improvements cost $100,000,000, and in consequence two trains can be hauled with one engine and the services of several brakemen and other employees can be dispensed with. They say it costs $2,000 to fire a 14-inch gun, but this is cheap beside the cost of firing a brakeman.

Why Interstate Commerce Commissioners Grow Thin

WE SHOULD not blame the Interstate Commerce Commission too heavily for pondering along month after month on the freight-rate problem. A freight rate is no such simple matter as differential calculus, the calculation of bridge stresses, or the weighing of asteroids. It is the result of a concentration of railroad genius of the past fifty years upon the task of making it entirely impossible for the shipper to understand a railroad book of tariffs.

When a citizen wishes to ship himself to another town he steps up to the ticket window and buys a small slip of pasteboard costing two or three cents a mile. But when he wants to ship a case of tomato catchup he goes to the station agent and asks for the rate.

Then the station agent sends for the derrick crew and they lower a half-ton book from the top of the safe, after which the agent looks up the rate on tomato catchup, without benzoate of soda, shipped in pint bottles with fancy labels in a pine box, unpainted, by a middle-aged man with medium whiskers, who owns an automobile and votes the Progressive ticket.

He finds this about an hour after supper time, and discovers that the tomato catchup, if packed by a brunette, takes the classification E in the second zone, raised to the nth power and multiplied by the logarithm .9876—amounting to 23 cents.

Thus it will be readily seen that a freight rate is no such simple thing as a passenger rate. Thousands of learned men are constantly busy planning and erecting new freight rates and classifications, and the science has now been perfected to a point where the ordinary citizen couldn't figure out the rate on a keg of nails for forty miles before the nails got stale. Undoubtedly the reason why the ancients did not have railroads was because the science of mathematics was not yet sufficiently perfected to produce freight rates.

Freight rates are based partly upon weight, partly upon distance, partly upon the amount of money the shipper has, and partly upon the parallax of Alpha Centauri. This makes their adjustment a very complicated problem. We should have patience and thank our lucky stars because we are not an Interstate Commerce Commissioner. Revising freight tariffs is about as fascinating a job as dusting off pebbles in a desert.

Let's Plan Now About Mexico

THE United States was never noted for forethought. It passes its conservation laws after its forests are gone, builds its navy when peace has been declared, and prosecutes its trusts after their founders have sold them out to the innocent investor. And it will probably begin to consider the problem of civilizing Mexico after the whirlwind of events has thrown that unhappy country squarely into its lap.

Some one must take up the task of teaching the Mexican that a government is an institution from which to get protection and offices, not merely something to shoot at. That some one must undoubtedly be Uncle Sam. Teaching standpatters in this country to let go and sit down would be easy beside the task of educating Mexico. We cannot begin to plan too soon.

In the first place, the Mexican can't read and doesn't see why he should. We must explain the necessity. This can be most easily done by introducing baseball into Mexico and posting results of the league games in every city. Within a year all Mexicans will be able to count up to nine, and in two years they will be reading baseball extras with ease.

In the second place, the bullfight, which is debasing and cruel, must be eradicated. But this cannot be done without a substitute. Let all American prize fights be staged in Mexico for the next few years. This will not only help civilize the United States, but it will allow Mexico to taper off from the bullfight in a gradual and careful manner.

In the third place, the Mexican cannot be governed because he is in too constant a state of indignation against authority. This is because authority has monopolized the privilege of making him mad. More automobiles should be introduced into the country. If Mexico had ten times its present number of cars, the ordinary Mexican would have something else on which to focus his indignation, and after a few narrow escapes on the street corners would come to regard the Government with comparative kindness.

In the fourth place, the pepper plant should be eradicated from Mexico and the ice-cream plant substituted. The Mexican nation needs cooling off, and the soda fountain in place of the chile-con-carne joint would accomplish wonders.

Let us begin, unobtrusively, to insert these germs of progress into Mexico now. They will save us much time and powder later on.

The Overworked Nickel

IT IS estimated that there are now somewhere between $80,000,000 and $200,000,000 invested in moving-picture theatres in this country.

The amount invested in street railways varies from $100,000,000 at tax assessment time to $1,000,000,000 when municipal ownership is discussed.

The amount invested in cigar and cigarette factories and breweries cannot be less than two carloads of $10 bills, closely baled.

And the humble, unimpressive nickel pays all this money back in time.

The nickel has become the hardest worked piece of money in the world and we are forever finding ways of extending its usefulness. The five-cent piece which has not hauled five citizens downtown, filled as many full of suds at a bar, entertained several more at the movies, and purchased pie, cigars, ice cream, and shoe shines for a full score at its odd moments during a summer day, has been loafing on its job.

The Dub Golfer's Own Corner

(This Department may not help a bad game of golf, but it may make it more endurable)

ONE of the most popular delusions among good golfers is the fact that one should not hit violently at the ball—that a gentle sweep accomplishes much better results. This is only superficially true.

A sweep may propel the ball farther, if one is a good sweeper, but that is all. Golfers who strike with all their force subject the muscles and organs of the body to a healthy and stimulating wrench which cannot be obtained by a mere sweep. Two hundred of these muscular upheavals during an afternoon will do the system a vastly greater amount of good than seventy-five carefully repressed strokes. Best of all is the clean miss. It pulls loose every muscle in the body and is better than a Swedish massage. We are now compiling statistics to prove that golfers who miss the ball often live on an average ten years longer than those who hit it every time. Considering the wonders performed by statisticians on the railroad-rate question pro and con, this should not be a difficult task.

ANSWERS TO CORRESPONDENTS

"DISCOURAGED" *of San Diego, Cal., asks what can be done to a caddie who shrieks with laughter when his employer has missed his fifth putt. We cannot answer this until we look up the laws of California.*

E. M. C. of Portsmouth, N. H.—*Sticking out the club toward the hole and wagging it gently will not improve your distance, but it makes people more likely to believe your excuses.*

C. Q. D., Hartford—*There is no rule which could prevent you from teeing three or four balls and driving at the flock. We congratulate you upon the idea.*

SAMSON, Asheville—*The long grass is kept at the side of the course in order to keep the poor golfers off the fair green and let the experts monopolize the links. If every dub would pull up a few handfuls of this long grass every time he hunted for a ball, this nasty plot would soon be foiled.*

A. R. M., Boston—*You interest us. Please send diagram showing how you hit yourself in the neck with a mashie while approaching. This constitutes a record, and if proved you will receive credit.*

He Likes Babies

By EWING GALLOWAY

"I AM just a singin', lovin', sympathizin', laughin' sort o' lazy sort o' chap."

That is about as much as anybody ever persuaded Judd Mortimer Lewis to say about himself. And his modest description of himself is inaccurate. He is one of the hardest working men in the biggest State in the Union. Writing fifteen hundred words of verse and humorous paragraphs a day is a man-sized job, but it does not keep Lewis from making himself one of the most useful public men in the Southwest. Most poets carry side lines from necessity—or make verse writing a side line—but not so in the case of Judd Lewis. A weekly check from the countingroom of the Houston "Post" keeps the wolf out of howling distance of the Lewis home, and for his work outside his sanctum the poet receives no remuneration except the satisfaction which comes from doing something to brighten the lives of others. Nearly every one of his poems is a cheer line thrown out to the soul-weary, but his work as a placer of homeless babies in babyless homes will be remembered as long as, if not longer than, his rimes.

Judd Lewis with a two-weeks-old boy who is going to start life over again

The Judd Lewis baby bureau is strictly a one-man affair and free from red tape. It was started about six years ago, but did not amount to much during the first three or four years. The work had to be built up slowly. Mr. Lewis made a thorough personal investigation of every couple applying for a baby to adopt, and the result was that every child was well placed. His success was talked about all over Texas and in many places outside the State, and he became widely known as a friend of homeless babies. Now, whenever there is a baby in need of a good home or a married couple looking for a child to adopt, Mr. Lewis is sure to hear about it. He keeps in touch with the public by means of the little paragraphs in his column in the "Post." Here is one of his notices:

Thirty pounds of boy for adoption. One package consists of twenty pounds; a real, sure 'nuff white hope. The other package weighs ten pounds—perhaps a little more after dinner. Each is looking for a job at making some childless couple happy. They will teach you the sweetness of dimpled arms about your neck, a baby cheek pressed against your world-worn cheek, the sound of baby laughter.

Once Mr. Lewis received a letter from an eighteen-year-old wife in an Eastern city, who said she and her husband, who was twenty-one, had been married six months and wanted to adopt a light-haired, blue-eyed baby girl. He advised her to write Santa Claus a letter when Christmas came round, hang up her stocking, and utter a little prayer when the shades of night came down, and not to write again for a year; then, if they still wanted him to find them a baby, he would get busy. Mr. Lewis never heard from her again.

Kind Hearts Exclusively

A WOMAN on a Pennsylvania farm wrote him that she would like to adopt a friendless, destitute boy of sixteen. He told her that she did not want to adopt a boy—what she wanted was a hired man. Mr. Lewis is very particular about allowing people with children of their own to adopt foundlings, for, he says, "they are unusual people indeed who can give an adopted baby a square deal under such circumstances." But applicants are never turned down because they are poor. The principal requirements are that they be all right as regards morality, kindliness, and cleanliness.

There is seldom any objection to taking an illegitimate baby for adoption. As a rule, applicants are satisfied if babies are normal and healthy. Mr. Lewis has sickly or ill-nourished babies nursed back to health in a Houston hospital. Kind-hearted women of the city frequently help him look after the welfare of babies until foster parents can be found for them. Thus far he has found homes for over a hundred babies, and he says he is in the work to stay. Most of his work is in Texas, but it is not unusual for him to reach out into other States. Recently he got two little girls from Baltimore, a kind-hearted woman volunteering to take them all the way from the Maryland city to Houston.

To Mr. Lewis the arrival of the youngsters was a great event. He described it to me thus:

"My Baltimore belles arrived at midnight, and I drove home from the station with Lily curled up in my arms and Dorothy, the three-year-old, snuggling on the seat beside me. Lily is fifteen months old. Dorothy talked all the way home. 'I'm going to det a new favver an' muvver, isn't me? You won't ever let anyone hurt me, will you? O-o-h! What is that big porch for? I 'spect the papa in that house comes home at night an' don't ever go 'way any more. When me dets my new home me'll lay wight down on my big bed an' doe wight to s'eep, then me'll be a dood dirl, won't me?'

"When I got them home they both went to sleep and were 'dood dirls.' I slept with Dorothy and Mrs. Lewis slept with Lily. I left a light burning dimly, and Dorothy waked up once during the night and scrambled to her hands and knees; I opened my eyes, and her little face, rosy with sleep, was almost against my own. As soon as she saw me smile she smiled and lay down and went to sleep without a sound.

"The next day their 'mothers' arrived from interior towns. The 'mother' of Lily came about eight o'clock in the morning, and when she arrived her baby was asleep, pink as a rose petal, fat as a butterball, with limbs outspread and with tousled hair. The 'mother' kissed her forehead and her pink hands and feet, and pushed back her yellow hair, and Lily awoke, and awoke laughing; And loved her new mother at once.

"At 2 p. m. Dorothy's new mother arrived, and I was there to meet her and take her out home. As we approached my house my own two girlies ran down the steps with Dorothy between them. I said:

"'Those two older girls are mine; the little girl is yours.'

"She dropped her shopping bag to the sidewalk, staggered a few paces and stumbled to her knees with the queerest little gurgling cry you ever heard, and her arms held out. Dorothy ran with her little arms out and sprang into her new mother's arms. When the woman got to her feet she was crying. Later she said:

"'Oh, Mr. Lewis, this is the first time in all my life that a baby has gone to sleep in my arms!'

"She remained at my house that night. When I told her good-by at the train next day she said:

"'Mr. Lewis, there are no words—I know no words—I am sure you understand—you *must* understand.'

"A few days later the new father of Dorothy came to town and remained

JAM *this* into your old jimmy pipe or roll it into a makin's cigarette:

You can't any more drive a man to cheer for a smoke that bites up his tongue than you can grow little blades of green grass on a busy street!

So—when you pike-it north, south, east, west and see men all along the line *going-to* Prince Albert, *natural-like*, figure it out they've hit the trail that leads to the land of smokings joy! If your **middle name is Missouri, you go to**

PRINCE ALBERT

the national joy smoke

For here's bully sport—this hook-up of a jimmy pipe or smokin's papers, some Prince Albert and a match. You can play the game far as you like—and the more you smoke, the greater the joy! That's 100 per cent. talk, but it is a *sure-thing bet!*

Say, *you* get real fussy with P. A. Smoke it mean-like to prove it out. And that will be all right, all right.

Because Prince Albert never bit any other man's tongue—*and it won't bite yours!*

That's because P. A. is made by a patented process that *cuts out the bite!* No other tobacco can be made like Prince Albert. That'll be about all!

Prince Albert is so fragrant, and fresh, and go-to-it-like that you get the cheerful habit of smoking P. A. as you eat three meals a day—because it's good for what ails you. The pass word everywhere is just "P. A. for mine"! Toppy red bags, handy for cigarette smokers, 5c; tidy red tins, 10c; also handsome pound and half-pound humidors.

GRAFLEX CAMERAS

THE 60-MILE-AN-HOUR MOTOR, REQUIRING A SHUTTER SPEED OF 1-1000 OF A SECOND

SNAP SHOTS INDOORS, IN THE SHADE OR ON CLOUDY DAYS

The Kind of Pictures You Can Make with a Graflex Camera

AND there is no uncertainty. When you look in the focusing hood you see the image, right side up, the size it will appear in the finished picture *up to the instant of exposure.* Finder and focusing scale are done away with. There is no necessity for estimating the distance between the camera and the subject.

If you will send us your name and address we will mail you our 64-page illustrated catalog, which tells all about GRAFLEX CAMERAS and how they work. Be sure to specify *Graflex Catalog.*

FOLMER & SCHWING DIVISION
EASTMAN KODAK CO.
ROCHESTER, N. Y.

HAVOLINE OIL

"It makes a difference"

and Lightens Your Motor Troubles

ARE your cylinders clogged with heavy carbon deposit? Does your motor generate its maximum efficiency or is it hindered by heavy frictional losses? Is its general serviceability and power of endurance being weakened by the use of non-adhesive molecule-cracked lubricants?

HAVOLINE OIL

prevents these life-destroying processes in every make of car, because:

It forms a lubricating "cushion" of oil of equal thickness between the moving metals, minimizing frictional loss and enhancing the efficiency of the motor. By our "special process" of manufacture it is entirely freed from impurities and floating carbon, leaving the least deposit—yet its life and potency are retained. The *base crude* of *Havoline* is always uniform and of known quality.

Buy the oil in the Blue Can. 2 Five Gallon Cans to the Case.

Tell us your make and we'll tell you your grade.

Write for "The Lubrican"

Ask your garageman or write us direct for testimonials of *Havoline* users who own your make of car.

INDIAN REFINING CO., Dept. "B", New York

nearly an entire week, purchasing clothing and toys of all descriptions. He spent $112 on Dorothy. And he thinks she is the greatest thing that ever happened.

"It certainly was the biggest, grandest kind of a day."

A Baby Found Too Late

JUDD LEWIS comes in contact with many broken and breaking hearts. One of the saddest sights in all the world is a mother surrendering her baby to strangers without any hope of ever seeing it again. Mr. Lewis witnesses such scenes every week or two, and each one makes his heart a little softer.

And there are other tragedies connected with his work. Recently he was asked to find a baby for a childless wife who was on the verge of insanity from brooding over her misfortune. A physician had told her husband that the placing of a baby in the yearning arms of the melancholy woman might save her reason. The poet searched Houston and the adjacent towns, but there was no baby to be had. A few days later, however, Mr. Lewis received word that there was a fine baby awaiting him at a city address. He hurried to the house, found the baby to be a model one, and immediately called up the woman's husband on the telephone. "It's too late, Mr. Lewis," replied the man; "my wife was declared insane this morning."

That was one of Mr. Lewis's very few failures; but, of course, it was not his fault.

Judd Mortimer Lewis was born and reared in the city of Cleveland. He left school when a mere boy and learned the stereotyper's trade. A stereotyper is a trained athlete who does the work of a giant with the speed of a football player, and it was at the melting pot and the casting box that Lewis cultivated the habit of marvelous industry. But he did not work with his hands alone in those days. He had a love of books that was as strong as a foxhound's appetite for fresh meat, and he patronized the public library regularly. He read stacks of good books, and when he had acquired a good vocabulary the poetry that was in him began to come out. He wrote verse occasionally, but was too timid to offer any of his rimes for publication until Miss Mary Bartley, his sweetheart, who in 1894 became Mrs. Lewis, persuaded him to send some of his best work to an editor. Lewis mailed some unsigned poems to the Houston "Post," and they were given prominent space on the editorial page. M. E. Foster, managing editor of the "Post" at that time, wrote Lewis a complimentary letter, offering him a permanent position as columnist. Shortly before that time O. Henry had left the "Post," and Foster said Lewis was the man he was looking for to take O. Henry's place. Lewis did not hesitate when the offer came. This was the chance he had been hoping for.

Unwittingly Partial to Girls

CHILDREN are the Houston poet's favorite theme. If you have ever read his poems you know that he has two little daughters of his own. The children are light-haired and blue-eyed, and few persons take issue with the father when he says they are two of the prettiest youngsters in Texas. Marjorie, aged eleven, is called "Eyes o' Blue" in Mr. Lewis's poems on childhood, and Jessamine, aged seven, is "Touslehead." "Eyes o' Blue" and "Touslehead," figuring frequently in their father's rimes, have been the cause of an extraordinary demand for light-haired, blue-eyed baby girls for adoption. This fact dawned upon the poet a short time ago, and he decided to write boy poems for a while. He wants to give the boy babies an equal chance with the girls.

It would be difficult to exaggerate Judd Lewis's popularity in the Lone Star State. He is frequently called the best-loved man in Texas. Friends who have never met him personally keep up with him by reading his column, which is called "Tampering with Trifles." How well the people like him was demonstrated when he underwent a surgical operation for a dangerous case of appendicitis. During his illness Mr. Lewis's room was kept banked with flowers. The little children of Houston got together one day and wove a clover chain, and two little girls took it to the hospital and wound it round and round his bed. Everybody in the hospital who could walk or use a wheel chair came to wish him good morning or good night each day.

Mr. Lewis said to his nurse one day: "You people are mighty good to me!"

"Why, Mr. Lewis," replied the girl, "if we were to let you die, the people of Houston would tear the hospital down about our ears!"

Prayed for His Recovery

THE Mother Superior at the head of the hospital told him of a little Catholic girl who came to the institution the morning he submitted to the surgeon's knife and went into the chapel and remained on her knees praying for him until he was brought down from the operating room—and that was four hours and a half!

The anxiety for Mr. Lewis throughout Texas at the time is shown by these lines from a little poem written by Miss Lelia Maud Leslie of Brookshire:

Far across our Lone Star prairies swept a pleading, plaintive moan,
Like the softest zephyrs sobbing in a plaintive undertone.

Then we held our breath to listen, for a catch was in our throats,
As across the miles of distance came the childish treble notes
Of myriad babies lisping low their prayers at eventide.
And amid their "Now I lay me's" came a prayer from each bedside
For "Dear Dessus, bless my Lewis, help his throat so he can sing,"
And that "God b'ess 'Turifling' poet man, cure him of ever'sing."

"It was all very wonderful and very humbling," says Mr. Lewis. "A man has to walk mighty straight and be mighty square with his fellow men to make up for such love."

George M. Bailey, the paragrapher, who has worked on the "Post" with Judd Lewis for many years, knows him about as well as anybody, and in a recent letter to me he had this to say about him:

"Lewis is a most methodical worker, and to me is an intellectual marvel. He possesses a sense of humor that is always ready to serve him in emergencies. His good nature is never ruffled. He doesn't swear at the proofreaders when they murder his poetry. He is simply a sweet-souled, talented, normal gentleman who beholds all that is beautiful in the world and whose heart is responsive to its sorrows."

A moment when writing was impossible. Mr. Lewis's mind as well as his arms was occupied by the two "Baltimore belles" for whom he found good homes in Texas

Two States and a Saloon

NORTH DAKOTA is a prohibition State. COLLIER'S and most of COLLIER'S readers know this fact, and rejoice in it; and perhaps that partly explains the prosperity of North Dakota. "It is stated, though I have not the authority before me," writes Mr. Lorwerth C. Davis, an attorney of Bismarck, "that North Dakota stands second in the list of States for bank deposits per capita, Maine, the oldest prohibition State, being first; and that it stands first in having the smallest number of persons confined in the penitentiary in proportion to population." If we were contemplating a change of address and occupation, we should think twice about North Dakota and her homesteads.

WE have received a great many letters telling us about North Dakota in the last few weeks, and the explanation is this. Some time ago a correspondent wrote in to say that he had read somewhere of a proposal to establish a municipal saloon—just one to the town; the theory being that the liquor traffic was inevitable, that well-regulated traffic is the least harmful, and that the city might as well take in the very considerable profits of such a traffic. By some mischance, the State in which this proposal was made was stated to be North Dakota—instead of South Dakota, as it should have been. And ever since then we have been opening letters correcting that unhappy slip—interesting letters, too. One of them comes to us from the Chief Clerk of the Secretary of State of North Dakota—Mr. Albert N. Wold. Mr. Wold notes that the prohibitory law is included in the State Constitution of North Dakota as originally framed and still in force. "I trust that you will find occasion to correct the wrong impression," Mr. Wold's letter concludes. "North Dakota is prohibition and North Dakota people are proud of it." Another of our correspondents, Mr. Richard C. Kittel of Casselton, North Dakota, notes that the State "has the lowest death rate of any State in the Union, and one of the largest per capita school funds in the world." One of North Dakota's educational innovations was commented upon by Mr. George Creel in the very issue of COLLIER'S which contained the editorial under review: the article entitled "A Little Country Theatre." There are lots of good things out there besides the organic law.

ONE of the letters we have had correcting the editorial bears a St. Paul, Minn., postmark, and comes to us from a subscriber who modestly requests that we suppress his name. But his letter is too pungent to suppress. He pays his compliments to the tribe of editors generally. Here goes:

You New York editors do make ludicrous blunders when you toy with the geography of the country west of Chicago. The town that had the municipal saloon is Sisseton, S. Dak. (you can locate it by studying one of P. F. Collier's atlases). The profits of the saloon were devoted to improving the roads, and they were in 1913 (if my memory serves me right) $15,000. But what may interest you more is that on Tuesday, the town voted dry. This, in my opinion, shows an unusual degree of moral fiber in the people of Sisseton.

Perhaps it is wrongheaded of us, but we are half glad we let that inaccuracy go into type. For one thing, it emphasizes this incident as it would scarcely have been emphasized in other circumstances. Here is a summary of the case as it appears to Dr. F. W. Feige of Woonsocket, S. Dak.:

Relative to an article entitled "The State That Makes Money Out of It," printed in your issue for May 2, wish to state that there is an error in the name of the State. Both of the Dakotas were admitted into Statehood with constitutional prohibition, which upon resubmission in South Dakota was defeated, and local option now prevails. North Dakota is still a prohibition State.

Last year Sisseton, S. Dak., voted in favor of saloons, whereupon a man proposed to the city council that but one saloon should be given license, he to conduct it for a salary of $1,800 per annum. All the net proceeds were to be paid into the city treasury. The proposition was accepted and this was the so-called municipal saloon. Reports of its success financially were so good that it attracted considerable attention throughout the State. Other towns considered adopting the plan. However, Sisseton voted "dry" this year and now there is a report that the individual who conducted the saloon has thousands of dollars of the saloon earnings deposited in a bank to his credit, and it is probable that the city may never profit by it.

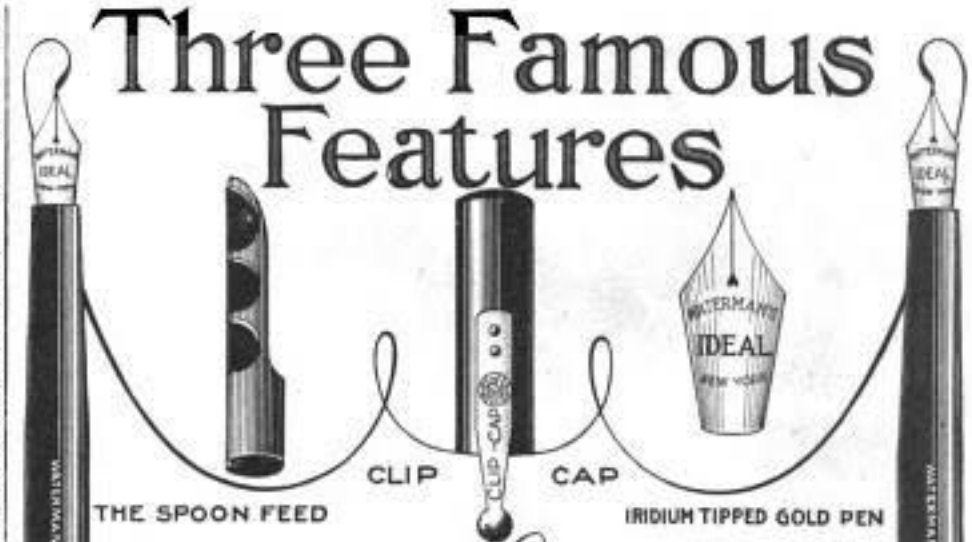
Dr. Feige inclosed clippings from the Sanborn County (S. Dak.) "Herald" which we should print in full if there were only more space for the subject.

The lesson of the late election at Sisseton, S. Dak., must not, however, be lost sight of. The town has about 1,500 inhabitants, the election took place last April, and the town went "dry" by a vote of 221 to 122. The town was "dry" for six years previously, but last year voted "wet" with the result that the "municipal saloon" plan was tried out—with the results reported. Incidentally Sisseton has reelected J. C. Knapp mayor by a majority of 41 votes. Incidentally, again, Mr. Knapp is a Socialist. Against the cash advantages of the "municipal saloon" plan are to be set down these "buts"—that doubtless contributed to the electoral result:

The police records during eight months of the "wet" régime showed 77 arrests, 44 of them for drunkenness, and 14 for bootlegging. The fines collected for these offenses amounted to $524.75 against $17 collected during two years under the "dry" administration.

Business men said that employees who had been sober and industrious during the six "dry" years reverted to their old habits; collections became more difficult and cash business fell off. Seventy-five to eighty thousand dollars was spent for booze in the community (almost $55 for every man, woman, and child) and other businesses were the losers.

The Superintendent of Good Will Mission at the Indian Agency eight miles away, reported that the sale of booze at Sisseton had a demoralizing effect. Indians who had never touched liquor were found intoxicated (both men and women); dishonesty on the part of Indians was due to whisky more than to any one other factor.



While the concessionaire claimed that giving the city and road fund all the saloon profits would eliminate any motive for "pushing" the sale of liquor, it is claimed that the bartenders "knocked down" at least a third of the sales.

Finally, an air of reputability was thrown around the saloon by reason of its partnership with the city—which increased the menace of the traffic in booze for boys and young men and young women. The very sponsors of the scheme were among the most active workers for the "drys" at the April election.

For most of these facts (and others) we are indebted to the correspondents named, and to John H. Craig of Tripp, S. Dak.; Mrs. E. E. Schultz of Waubay, S. Dak., and others. We have paraphrased these letters without special acknowledgment, and we wish to thank our correspondents for their facts, their friendliness, and their cooperation in publishing the truth about a most interesting experiment. Of course, all the facts are not presented in the above summary; we doubt the real value of the figures for fines collected under the old régime and the new, for during two years Sisseton really had no municipal court, since an injunction restrained the court from assuming jurisdiction over offenses against city ordinances. Doubtless, too, the Indians bought their booze, for the most part at least, of bootleggers.

Let us not be understood as casting stones at the town of Sisseton in printing any of these details. The citizens of that town seem to us to deserve much credit for their progressiveness, their openness of mind, and their fine sense of human values. When will we all of us prove ourselves equally enlightened? For Sisseton has tried both roads—and is on the right way again.

Three Famous Features of Waterman's Ideal Fountain Pen

The **Spoon Feed** is another successful Waterman's Ideal patent that insures accurate flow of ink to pen point. The pockets and air-vents prevent overflow blots. The **Clip-Cap** is a neat and permanent attachment that prevents loss of pen from pocket or rolling away when laid down. The **Gold Pens** are in an endless range of points to exactly suit every hand. They are tipped with the finest hard iridium for permanency. Smooth writing points from hard and firm to soft and flexible.

Avoid Substitutes. Booklet on Request. Prices $2.50 to $50.00

Brickbats & Bouquets

DETROIT, MICH.

WHEN I subscribed for your Weekly I thought I would get a paper that would give the full, plain, and unvarnished facts concerning all matters of vital concern and general interest to the public, but how terribly I have been disappointed. C. M. CARPER.

✚

WHITTIER, CAL.

The article "Abroad at Home," by Julian Street, is all right, and I will look for more of them. A. R. OGDEN.

✚

LAFAYETTE, IND.

I would like to know if Julian Street really found such a hotel as he described in Buffalo, and the name of it. Possibly he is only stringing us. I never ran across that hotel in Buffalo, and would like to stop there next time I am in that city. In fact, his description beats any hotel I know of, and I have been around the United States considerably. WM. M. NICHOLS.

✚

SAN FRANCISCO, CAL.

"Abroad at Home" reads like a dream come true. Don't be so stingy with the installments. HERBERT M. BRACE.

✚

Mr. Mark Sullivan, in his "Comment on Politics" in COLLIER'S WEEKLY, curiously reflects the marked change public sentiment has been undergoing. From an idolatrous worshiper at the feet of the National Administration, Editor Sullivan has become a study in half-suppressed criticism.

Mr. Sullivan's views are important because they represent prevailing public sentiment in Washington and the East. They are interesting because they are so thoroughly in contrariety to those he was expressing twelve or even six months ago. They are worth thought because he is a profound student of men and affairs, and conscientiously endeavors to picture things as they are, not merely as he would have them. His attitude is in response to public opinion, and is valuable because it mirrors the changes that are going forward.—Salt Lake City (Utah) *Herald-Republican*.

✚

CANANDAIGUA, N. Y.

I cannot understand why a serial having solely to do with females should find a place in COLLIER'S WEEKLY. To be sure, it is fair—May Wilson Preston's pictures are the best part of it—but we don't expect merely "fair" fiction in COLLIER'S. We don't expect a serial story in COLLIER'S unless it's "big." And you've taught us to expect only "big" short fiction too—"The Last of the Family," by Richard Washburn Child, for instance. Regards to George Fitch!
O. A. WILLIAMSON.

✚

HENDERSON, KY.

We read COLLIER'S with great interest. The whole magazine has taken on a new tone. For a while it seemed to me that much of the matter in COLLIER'S was written to interest a limited number of people, but it seems now more national and cosmopolitan in its scope, and it is a man's paper, with plenty of red blood in it. LEIGH HARRIS.

Editor and publisher of the Henderson (Ky.) *Daily Journal*.

✚

TRAVERSE CITY, MICH.

I feel that COLLIER'S is one thing very hard to do without. Of our eight and a half years of it, not a number is missing and all are neatly filed away and quite often referred to. I don't think it possible we should ever forego a magazine we have found so good and valued so much. GEORGE E. COLEMAN.

✚

HARRISONBURG, VA.

As an insurance man I want to express my appreciation of Mr. Kyne's story in your issue of April 25, entitled "Mr. Burdock's Insurance." While, of course, it is a burlesque on our methods, nevertheless, as a story, it is a "peach."

If Mr. Kyne can display as much ingenuity in a legitimate way in reaching prospects as he put in "Johnnie Cockleburr's" methods in his story, I would certainly like to "line him up" as a solicitor. If he has any more stories of this kind up his sleeve, tell him to "trot 'em out." ERNEST A. GOLDEN.

✚

NEW YORK, N. Y.

Allow me to compliment you upon the latest issues of COLLIER'S. Some months ago I was quite disgusted with the fiction department, but recently there has been a brace and COLLIER'S has retrieved itself admirably. Mr. Child's story of the sex pander and his chivalric grandmother is worthy of a place in contemporary fiction with the best efforts of Irvin Cobb, Gouverneur Morris, Richard Harding Davis, Arthur Ruhl, and Booth Tarkington. KINGSLEY MOSES.

✚

BLOOMINGTON, ILL.

In your last number the articles of Jack London and Arthur Ruhl I consider the best I have ever read. Full of facts, splendid description, and touching pathos, they are literary gems.
DR. BATH.

✚

LAWTON, OKLA.

Your issue of May 9 stirs in me a feeling of real affection for your paper such as I have not known in the past. I refer to the story of "The Border Guard," by Peter B. Kyne. It would be well if the readers of the army muckraking articles appearing in certain publications might read this story, and thus get a real view of the American soldier.
E. D. MEEKER, M. D.

✚

EDMONTON, CANADA.

I am just whirling this in unofficially to say bully for Mr. Kyne's article on "The Border Guard." I'm glad somebody's putting the regular soldier man out where people can see something of what he's doing and how very much he's good for. IRMA P. SELLARS.

✚

SPOKANE, WASH.

A bouquet, wet with tears, for the author of "A Son of the Middle Border." Therein, as in a magic mirror, we who are children of the prairies, behold ourselves, wandering hand in hand with Youth. MRS. D. O'DONOVAN.

✚

HIDALGO, VIA TAPACHULA, CHIAPAS, MEXICO.

As a general thing I fail to get up the enthusiasm for COLLIER'S that it apparently is able to do for itself. However, there is no question of the great force it wields in forming public opinion, and its editorials are always well worth the price, even if sometimes somewhat Hubbardy. The object of this, though, is to acknowledge appreciation of the article appearing in the March 21 issue on "Wilson and Mexico." The man who wrote that evidently has considerable information on the matter, and it is to be hoped that you will keep him on the job for a while yet. Also, it occurs to me that if he would get up a series of easy lessons and send these in installments with diagrams to Washington for study by our State Department there probably might come some good of it.
CLARENCE DRAGO.

American manager Cafetales de Hidalgo Plantation and Commercial Co.; La Zacualpa No. 2 Plantation Co.; Soconusco, Chiapas, Mexico.

✚

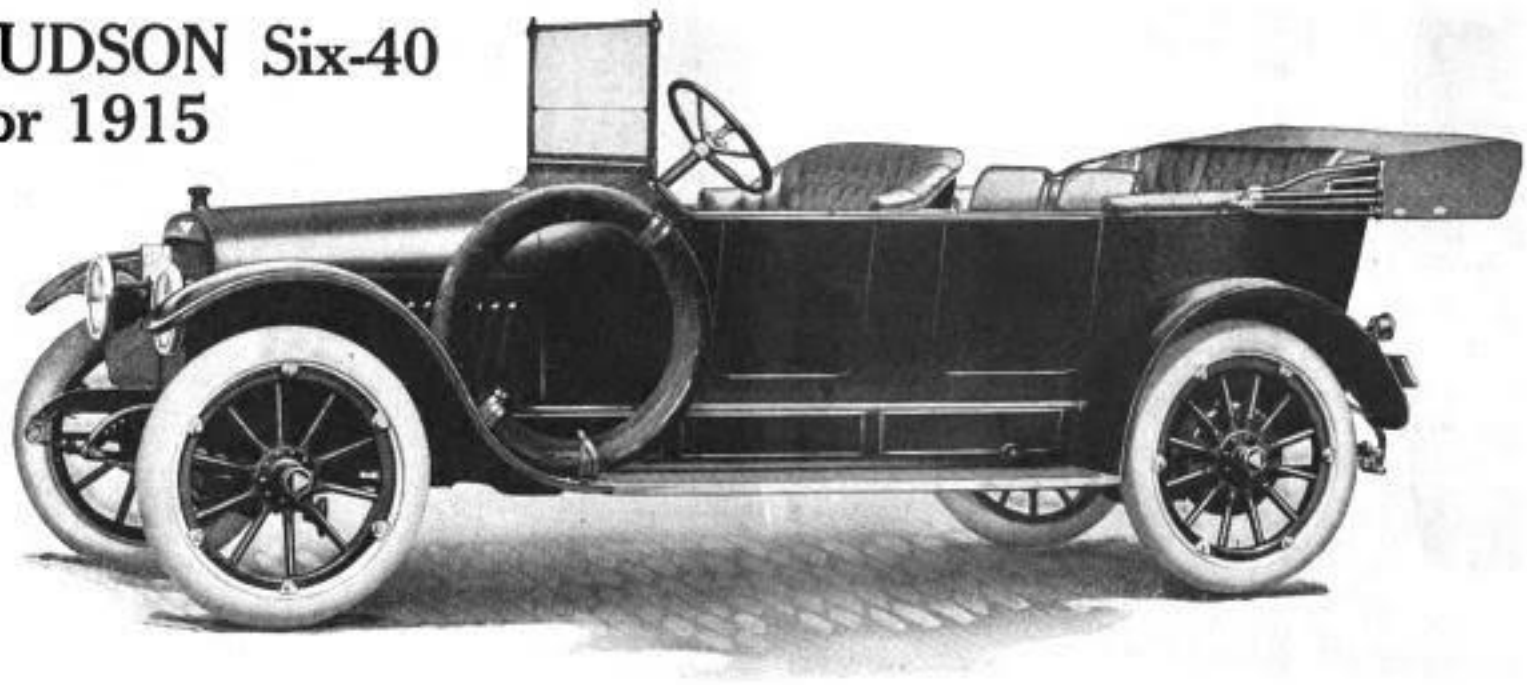
DAYTON, OHIO.

The best thing about COLLIER'S is its fearless fight against the grogshop. I cut out these cartoons and editorials and mail them to my "friends" in the business. JAMES SMITH.

✚

POINT PLEASANT, W. VA.

Credit COLLIER'S with another short classic, "A Word in Season"—editorial, May 9—a truly beautiful sentiment that angels and immortals would delight to be the author of. Oh, that every human being in this world would commit it to memory and daily recite it to himself! It has a universal application. And just that sort of doctrine is what is going to redeem this world.
WILL H. STONE, D. D. S.



✚

KIRKSVILLE, MO.

Here is a piece of my mind. Your Weekly is our nation's strongest fortification. It is founded on the Rock of Right. F. P. VAUGHAN.

HUDSON Six-40 For 1915

Now the Top Place Car

The Ideal Six, with 31 New Features and a $1,550 Price

The HUDSON Six-40 for 1915 will be accepted, we think, as America's representative car. It leads in its class. And the class which it leads best typifies the modern ideals and trends.

All things considered—all the time's tendencies toward lightness, economy, modest size and cost—this new HUDSON Six-40 will be widely conceded first place among coming cars.

The Criterions

These are the criterions by which the majority now measure a quality car. Note how the HUDSON meets them:

First, good engineering. The 48 Hudson engineers—headed by Howard E. Coffin—have devoted four years to this HUDSON Six-40. The car represents the crowning effort of the ablest corps in this industry.

Next, men insist on Sixes for high-grade cars. This HUDSON Six-40 embodies all the refinements men have worked out in Sixes.

Today's demand is for lightness without sacrificing strength. That lightness which comes through skilful designing and proper materials. The HUDSON Six-40, as built this year, weighs 2,900 pounds. The old-time average, for cars of this capacity, was fully one-third more. We have removed, by sheer good designing, the weight of a car-full of people. Yet this light HUDSON has proved itself one of the staunchest cars.

Men also seek low operative cost. This light HUDSON Six-40, with its new-type small-bore motor, has reduced this cost by at least 30 per cent, for cars of this size and power.

The Price Question

Last year we astonished all with a $1,750 price on the HUDSON Six-40. It was the lowest price ever quoted on any comparable car.

On the model just out—for 1915—we drop that price $200. That is due to trebled output. It is the saving we make by building three times as many cars.

In this ultra-value the HUDSON Six-40 leads all the high-grade cars. There is nothing in sight of it. In this point, above all, it accords with modern ideas.

Look back a little. Three years ago not a Six could be bought for less than $3,000. High-grade cars of any type cost around $2,000. Now this new HUDSON Six-40—the thoroughbred Six—is offered for $1,550.

The Popular Car

Popularity is the final test of place. This car came last year to open up an entirely new field in Sixes. From the start the demand overwhelmed us. The cars which went out sold others, until our dealers were besieged.

The end of the season left us 3,000 unfilled orders. Men were offering premiums—as high as $200—to get a HUDSON Six-40. To cope with this demand we have this year been compelled to treble our capacity.

Now 31 Refinements

Our whole engineering corps devoted last year to refinements. The car itself developed no shortcomings. But we found 31 ways to add comfort, convenience and beauty. Go see these new features. Some are very important. Most of them, as usual, will be found this year in HUDSON cars alone.

You will find this new model one of the handsomest cars ever built. You will find a 20-coat finish—luxurious upholstery. You will find the latest and best in each form of equipment. There are disappearing seats in the tonneau. Every detail, inside and outside, shows the extreme of refinement. It will set many new standards for you.

Phaeton seating up to 7 passengers, $1,550, f. o. b. Detroit.

Standard Roadster, same price.

Hudson dealers everywhere now have this new model on show. New catalog on request.

Our Larger Six-54

We build this same model with a larger engine and a 135-inch wheelbase. It is for men who want these ideal features in a big, impressive car. The HUDSON Six-54—our 1915 larger model—sells for $2,350.

[Continued from page 16

his conclusion in the midst of some long-winded explanation of things concerning other things and not the things at issue, and suddenly, like a shot, he enunciates his decision: "I find you guilty—forty days"; or: "Not guilty—next case."

Sentencing a Leech

HE finds Martin Onez de Loyola, a full-blooded Spaniard, guilty of a particularly mean crime and sentences him to six months—this merely to hold him until he can be deported to his native country, which is Spain. But the Captain-Judge is thorough. He gives instructions that when the convicted man is deported the Chief of Police of Havana be warned to keep him on his steamer and the Chief of Police of Barcelona be warned to nab him when he disembarks on his native soil.

This case of Martin Onez de Loyola merits the harshness of the sentence. A well-to-do but ignorant Mexican woman of the capital had married her deceased husband's brother, equally well-to-do and ignorant. Loyola, becoming aware of the matter, had assured them that it was a terrible crime, and had bled them, at different times, of over ten thousand pesos. In order to escape him they had started to flee the country; but Loyola, true leech that he was, followed them through the lines of two hostile armies to Vera Cruz. And so, thanks to the Captain-Judge, they were able to return to Mexico, while their persecutor, willy-nilly, made the voyage to Spain.

Francisco Hernandez, trouble-eyed and stupid, charged with stealing a barrel of wine, positively declares himself not guilty, and the patient Court unravels the tangle. Pedro de Valvidia, owner of a cantina, and his barkeeper, Garcia de Mendoza, testify to catching the thief in the act and to apprehending him with the barrel already rolled out on the sidewalk and merrily rolling onward.

He Stole a Barrel

TWO peon witnesses testify to having seen Francisco Hernandez captured while rolling the barrel, and the case begins to look dark for Francisco Hernandez, who has pleaded not guilty. But he receives inspiration. He acknowledges all the facts testified to. He was not the owner of the barrel. He did go into the cantina and roll out the barrel. He was caught by the owner and the barkeeper in the manner described, but—and he makes the explanation that is as ancient as the first theft of portable property—it happened that as he came along the street looking for a job, his profession being that of cargador, two strange men approached him and hired him to convey the barrel of wine, which they had just purchased, to their residence. That was all. He was as innocent as a new-born babe. What did *he* want with a whole barrel of wine? What could *he* do with a whole barrel of wine, being a temperate as well as an honest man?

"Where were you going to deliver the barrel?" the Court demands.

Francisco Hernandez somehow cannot remember the address.

"Who were the men?"

Francisco Hernandez says they were strangers.

"Describe them."

And one can actually see Francisco Hernandez's imagination working at high pressure as he paints the portraits of the two mythical strangers.

The Court asks several other questions not very important, merely concerning his whereabouts earlier in the day and how often he succeeded in getting work, and Francisco Hernandez, believing that his tale is believed, grows confident.

"Describe the two men," the Court suddenly commands.

The Case of Rosalia

POOR Hernandez is taken by surprise. He stumbles and halts, tries to remember his extempore description of the two nonexistent individuals, diverges, slips up, falls down, and, in the midst of his gropings and stutterings, is astounded to hear the Captain-Judge decisively utter just three words: "Guilty—six months." And while the interpreter is transposing this misfortune into understandable Spanish terms, the Captain-Judge is already into the thick of the next case.

And this is a case destined to make the entire native population of Vera Cruz sit up and take notice that never was similar justice dispensed before, albeit 4,000 soldiers and 20,000 marines and bluejackets, to say nothing of $100,000,000 worth of warships, were required to install the Captain-Judge in the Municipal Palace.

It is a sordid, squalid case. Rosalia de Xara Quemada and Cristovel de la Cerda are the culprits. Alonzo de Xara Quemada is the husband of Rosalia, and is also the complainant. He is a bulgy-eyed, cadaverous-cheeked, vulpine-faced individual, and he grins vindictively and triumphantly as he makes his charge.

Rosalia is frightened and dumbly defiant. She has a full, oval face, wavy brown hair parted in the middle and neatly bound with a light blue ribbon, and dangling earrings. There is just sufficient Spanish in the Indian of her to give her temperament and to account for the inimitable draping of the brown shawl about her shoulders and hips. Cristovel, the lover, is a depressed and gloomy young man who keeps books for a living.

A Judgment of Solomon

ROSALIA and Cristovel plead guilty, and are prepared for merciless judgment at the hands of the Captain-Judge who transacts justice with a big automatic at his hip and with armed soldiers for his attendants. But the Captain-Judge is not satisfied. He asks Rosalia and her husband, Alonzo, many penetrating questions. They have five children. For four years Alonzo has not contributed a centavo toward their support. Rosalia, by scrubbing, by peddling, by cooking, and by various other ways has given the entire support to her brood of five.

As all this comes out, Rosalia seems to take heart of courage and grows voluble, while Alonzo glowers at her in a way that would bode a beating were there none present to interfere. The reason her husband had had her arrested, Rosalia volunteers, was that just previous to the arrest she had refused to lend him five pesos. At other times in the past she had loaned him money. No, he had never returned a single loan.

The Captain-Judge orders the culprits to step forward to receive sentence, knits his brows for a moment in thought, and proceeds:

"Cristovel de la Cerda. You have pleaded guilty of the grave offense of adultery. By the Mexican law of this State I could sentence you to two years. But I shall not be harsh. I shall sentence you to six months. The sentence, however, will be suspended and I release you here and now on probation. You will report to this court every Saturday morning at nine o'clock with a letter from your employer attesting your good behavior."

As the interpreter turns this into Spanish, the husband's face is a rich study. At the mention of two years, it is hilarious. The six months' sentence leaves it still hilarious, but not so hilarious. The suspension of the sentence positively floors Alonzo, and the angry blood surges darkly under his skin.

"There Is No Mexican Law Here"

ROSALIA is similarly sentenced, released on probation, told to report every Saturday morning, and admonished to be good. But the case is not over. Alonzo de Xara Quemada, distraught with this frightful miscarriage of justice, is ordered to stand forth.

"Alonzo de Xara Quemada, your conduct has been most reprehensible."

While the interpreter struggles with the dictionary for the Spanish equivalent of the introductory sentence, Alonzo looks as if he expects to be backed up against a wall the next moment and shot.

"These five children are yours just as much as they are Rosalia's. From now on you shall do your share toward supporting them. Each week you shall pay to Rosalia the sum of five pesos. Each Saturday morning at nine o'clock you shall appear before me with the receipt for the five pesos. If you don't, we will see what six months in jail will do for you."

The whole thing is too unthinkably hideous for Alonzo. He blows up, and in impassioned language forswears and disowns Rosalia, the five children, and all memory of them and responsibility for them, forever and forever. Furthermore, he will not pay the weekly five pesos. Who ever heard of such a thing? He denies the Captain-Judge's right in the matter, and all in wild harangue an-

nounces that he will appeal to the Mexican courts against such injustice.

Whereupon the Captain-Judge's fist comes down on the desk, and the Captain-Judge thunders:

"There is no Mexican law here. I am the law. You will pay the five pesos. To-day is Thursday. Next Saturday you will appear before me with the receipt for the first five pesos. Vamos."

Alonzo de Xara Quemada starts to screech protest, but two soldiers, with wicked-looking bayonets on the ends of their rifles, step forward, and Alonzo subsides.

A Moving Picture

I DEPARTED on his heels, greedily enjoying the maledictions he muttered down the street. And on Saturday morning I made it a point to be present at the Provost Court at nine o'clock. Sure enough, Alonzo de Xara Quemada was there, sullenly exhibiting a receipt for five pesos signed by one Rosalia de Xara Quemada.

And all the affairs and transactions I have described in this article constitute but a portion of one morning's work in one Provost Court of the five Provost Courts sitting in Vera Cruz.

Before I cease, I cannot forbear describing a little scene I witnessed right after Alonzo's plaint had died away down the street. Captain Callahan was engaged in receiving a lady who was more difficult to receive than if she had come in a handcart. A sweaty and dishevelled spigotty policeman had brought her, and she had fought him all the way to such effect that he stood near the entrance to the cells too exhausted to move her a step further. In vain Captain Callahan ordered him to proceed with her. She was the stronger, and she had caught her second wind. Just as she flung herself on the policeman in savage onslaught, a big American soldier strode to her and tapped her authoritatively on the arm. She turned and stared up at him. He spoke no word, but with a curt thrust of his thumb over his shoulder indicated the way to the cells. She wilted into all meekness and obedience, and meekly and obediently, without a hand being laid on her, walked into the cell room.

The Pensioner

(*Continued from page 11*)

I'll bet you'd be as awkward as I am. Darn you, you can't lift me now—you old pot-belly!"

He unsaddled the young mare and limped painfully to the house, to be laid up three days.

THERE came to Dave Chipley one morning a man who didn't understand. He was a wealthy man from Hammond, a long ride down Conejo Valley. It was he who had bought the 640 acres from Dave.

"Mr. Chipley," he said, "I want to buy that upper twenty of yours."

"Sorry," Dave replied, "but it ain't for sale."

"Don't be so precipitate," advised the other. "Listen: I need that twenty and I'm prepared to pay for it. You will remember I offered you $750 an acre for all this land. I am now prepared to raise that offer—"

"Listen," interrupted Dave; and out came the story of Babe.

"She's old," Dave finished, "and I promised her that twenty for her and her colt. She worked—man, how she worked you'd never guess!—to put Dave Chipley on his feet. She's reapin' her reward. She's pensioned on her own land. Money can't buy Babe's pasture."

Mr. Raymond, for that was his name, had listened patiently but uncomprehendingly. He was smiling a trifle disdainfully as Dave ceased.

"You're a whimsical man, Mr. Chipley," he commented. "I have always considered you hard-headed, farsighted, and shrewd. Do you mean to tell me that you are so childish as to refuse to put that mare in a comfortable box stall and get $500 an acre for the land she makes worthless?"

"Five hundred dollars an acre!"

"That's what I said, Mr. Chipley."

"Ten thousand dollars," mused Dave. "And I paid $200!" His eyes grew thoughtful. He wavered. Then his lips straightened.

"But Babe don't like a stall," he pointed out boyishly. "She wouldn't know what to do, all cooped up. She's used to miles and miles of sagebrush, with the sky for shelter. No, Babe wouldn't take to a stall for shucks."

"You can take $500 of that $10,000 and buy 160 acres for her in the hills, fence it, and all," persisted Raymond. "I know a place with water, even, that I'll bet can be bought for less than that."

DAVE smiled. "You're entirely missin' the point, Mr. Raymond," he said. "Babe's earned good land—the best that is. That's what I promised her, you see, and that's what she expects. You see, it's a—a—an ideal." Dave blushed through the tan. "She helpsd make us rich—did half of it. Now we've got more than plenty—wealth to throw away. Say, do you know I'd 'a' called a man a liar ten years ago if he'd said there was as much money in the State as I've got now? Can't you see how I look at it? It's this way:

"This ranch represents what Babe and me did. This 160 is all that's left of what we worked so hard to swing, and what finally made us rich. Therefore Babe's entitled to her share of *the selfsame property*. See? She don't want no sagebrush hills. She wants part of the pick of the Chipley Ranch. It would be cheap to sell her twenty and put her on land that had cost me $500. They've said some hard things about me when I was young and coltish, but no one ever called Dave Chipley a cheap screw.

"So, though I'm sorry to disappoint you, I got my fool ideal to live up to. The upper twenty belongs to Babe, and there ain't enough money in the United States Treasury to buy it."

"But, Mr.—"

"But that's all, Mr. Raymond. If I was hard up it would be different. Babe's shared hard luck with me; she'd be willin' to again. But I ain't hard up. I got all the money any man needs. Stay for dinner, Mr. Raymond. Mary'll kick if you don't."

So the story of "The Pensioner" got out, and there were shruggings and regretful sighings. All of the people in the valley were new—many of them Easterners. They didn't understand.

"Well, Dave," some one might say when Dave had ridden Babe's colt into town, "how's the $10,000 mare? Don't see you ridin' her much these days."

Dave was an idealist. "Still payin' dividends," he would drawl, without anger, and lift Babe's colt into the long gallop which had made her mother famous from San Diego to the Tehachepi.

THE wet season began early that fall. The very first rain was a heavy one, and the Conejo swelled to a greater river than in five preceding years. It was not nearly down to normal when the second big rain, lasting nearly a week, sent it foaming yellow suds, cutting its banks as a knife cuts cake, racing tempestuously to the sea. That rain brought it above any preceding high-water mark in twelve years. For two weeks the sun shone, then came heavy clouds and the biggest rain of all.

Day after day it poured steadily. The river, now a wild, uncontrollable thing, raged madly along its sharply descending course, taking toll of trees and land and of everything that dared to stand in its path. The bridges were gone. Communication was cut off. Telephone wires were down. All traffic ceased. And still it rained and rained and rained.

At midnight, November 13, Dave Chipley was awakened by the incessant jangling of the telephone bell. He got out of bed and sleepily answered it.

"Who is this?" came a distant, faint, tinkling voice. "My God, who is this?"

"Chipley," Dave replied, instantly awake. "The Chipley Ranch."

"This is Pomeroy," came the tinkling voice. "I've been ringing for an hour. Can't get anybody. The dam's going—won't hold till morning. Can you get down the valley and warn the Hammond folks? For God's sake, try it, Chipley!"

THERE came a burring noise in the receiver, stabbed at intervals by a tinkling, indistinguishable word.

"Hello! Hello! Hello!" called Dave.

This is What an Owner Tells Us

"Ripolin Enamel Paint was applied to the interior of my home fourteen years ago and is in just as perfect condition now as the day it was first put on.

"In my living rooms I have the pure white Eggshell finish—soft and beautiful. In my kitchen and pantries, the high Gloss Finish, buff color. If people could only see Ripolin in actual service and know it as I know it, they would never accept anything in its place." Then he mentioned the satisfaction of escaping once for all the need of repainting. "We simply use a damp cloth," he said, "and Ripolin freshens up like new,—never discolors, cracks, chips or peels."

This man's evidence is typical of others who use Ripolin because it insures you against the trouble and cost of repainting—simple cleaning is all it needs—and remember that Ripolin can't be harmed by any amount of rubbing and scrubbing.

Made in Holland by the old Dutch hand process, a gallon will cover from 500 to 700 square feet, depending upon the surface. Your painter or decorator will tell you the quantity needed.

Any desired tint can be obtained by mixing pure color ground in oil with white Ripolin—a buff or light green shade is excellent for kitchen walls.

Let us send you a book showing residences, exclusive clubs and palatial hotels finished with Ripolin. With it we will send the Ripolin coated strip of tin. Also the name of the Ripolin dealer in your territory.

J. A. & W. BIRD & CO.

92 PEARL ST., BOSTON—67 BEAVER ST., NEW YORK—660 PEOPLE'S GAS BLDG., CHICAGO

Make Your Own Test

SEND FOR THIS TIN, *which shows the clear, soft tones of Ripolin Enamel Paint. Bend this strip—prove to yourself that Ripolin is so elastic and tenacious that it cannot peel, flake or blister. This strip will show you why Ripolin retains its freshness year after year, without repainting but merely cleaning.*

$495 MOTOR CAR

Partin-Palmer "20"

Gray & Davis electric starter when desired at small extra cost

Complete equipment includes Gray & Davis, generator system, electric lighting, electric horn, windshield, top, curtains and dust boot, tire carrier, speedometer, tools, jack and repair kit.

Look at these quality specifications—look at this new and different style—then look at the price!

How we did it— The Partin-Palmer six-passenger, 38 h. p., 115-inch wheelbase, at $975 was just as big a sensation when we put it on the market one year ago. Today it has a world-wide distribution, with a host of satisfied dealers and owners.

By following the same economical manufacturing methods, we now herald the Partin-Palmer "20" at $495—a motor car of the same Partin-Palmer excellence—not a theory but an actual ready-to-deliver-to-you motor car—made by successful, experienced motor car builders—backed by men of unquestioned financial responsibility.

2000 dealers wanted quickly Whether you want a car for your own personal use, or to act as agent, **you can't get away from this offer.**

To the user the Partin-Palmer "20" means the quality car he has long wanted at the price he is willing to pay.

To the agent it means the quick seller, big money maker he has long hoped for. To demonstrate this wonderful car in your community guarantees *easy sales* and a big volume of *immediate business.*

Only the barring answered him.

"My Lord!" Dave turned from the phone and wiped the sudden sweat from his forehead. "It won't get us. But Hammond! When the dam breaks and the water strikes the river—"

He finished in a mutter. He turned on the lights and began hurrying into his clothes.

MARY CHIPLEY awoke. Dave had meant to slip out without telling her. Now he explained hurriedly that it lay with him alone to save the inhabitants of Hammond, in the bottom lands below, from drowning.

"I'll go with you," she determined bravely, springing out of bed.

"Not this time," Dave drawled grimly. "This ain't a trip for a machine, Mary. The roads are rivers. This is the time to test that colt and see if her mother's blood runs through her veins for true."

Without even stopping to light a lantern, and only half dressed, he hurried out into the storm, strapping on one of the six-shooters he had not carried for years. As he ran toward the stables he saw a lantern bobbing about through the murk. He called.

The lantern was carried by one of his men, who, with another, had been moving some cattle from an alfalfa field near the river, the fences of which were threatened by the flood.

The man's jaw dropped as Dave's hurried explanation came out.

"Bud's just takin' your saddle hoss back to the upper twenty," he said, and lifted his voice in a call.

Bud answered it.

Dave plunged down a lane toward the voice. "Darn 'em! Who told 'em to use that filly?" he growled. "But it's lucky, after all."

In a minute he almost ran into the horse and rider. The night was as black as seven stacks of black cats, as Dave afterward expressed it. He ousted the man with three words and sprang bareback upon the mare.

"Here goes, youngster," he said as he lifted her into the long gallop. "Le's see if your mother's raised you accordin' to the standard of Dave and Babe. Go to it, kidlets!"

There was one gate to be opened. Dave accomplished this without dismounting. It clicked behind him. At a gallop he swung into the rain-corrugated road and headed down the river.

"Now hop to it, kid! You may die tonight, but if the old mare's raised you accordin' to our rules you'll die covered with glory. If you win out, maybe they'll say the $10,000 mare paid dividends through you."

THE sky was black. The rain stung like tiny rawhide lashes. The confines of tributaries of the river, dry for years, now roared with yellow, foaming torrents. Twice within a mile from the ranch the sturdy little mare was obliged to swim on the country road. Always she clambered up the slippery banks to hear the low word of encouragement, to gather muscle for another blind dash into nothingness.

It was a killing pace. Dave Chipley was a maniacal rider when stress demanded it. The road crumbled under the mare's hoofs. Once she stumbled, fell flat, rolled on her side. Dave pulled himself out of the mud, groped blindly for her quivering, dripping body, and swung himself astride.

On they went, up hill and down, charging away into the black basalt of the night. The roar of the waters deadened every sound but that of the splashing hoofs. Dave felt at last that his mount was giving out. Quivers thrilled against his clasping thighs; the pace was falling off.

"Kid, kid!" he censured. "Remember that record your old lady's got. From San Diego to the Tehachepi nothin' could touch her. You gotta die like a colt of Babe's, kid. Hop to it!"

Mile after tortuous mile dropped behind. Hours passed—dead hours that left little recollection. Dave Chipley, rough rider, had never taken a ride like this. Slower and slower grew the pace. Yet always the muscles of the mare strained for accomplishment. She was running at her limit, but the pace fell off and off and off.

"Good little kid!" breathed Dave.

NOT once had he plied the ends of the reins. Not once had his hands touched her save in caress.

She stumbled. She sprawled. Dave felt the tense pulsing of her flagging muscles. He could hear her tortured breathing above the roar of the river.

"Stay with it, girl!—stay with it for the record of Dave and Babe!"

There came a roar that mocked that of the raging river as a coast gun mocks a rifle. It filled the night with one long, rumbling boom.

"The dam's gone, kid!" Dave cried. "We're almost there. If you live we'll make it just in time. Hop to it!"

A light pierced the night, a single, lone, twinkling eye. The reeling animal passed it.

"The Pomeroy dam's gone!" yelled Dave. "Warn everybody!"

There came a startled shout of comprehension. The light vanished. On reeled the mare, stumbling now on an oiled pavement, slippery but solid. Dave drew the revolver. Shot after shot he fired into the air, yelling:

"The Pomeroy dam's gone! Run to the hills! Run to the hills!"

Lights blazed in the windows of houses that suddenly appeared. Shouts rang back and forth.

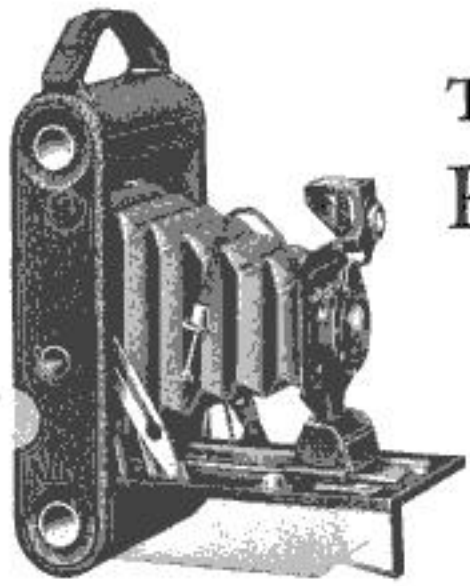
"The dam's gone! The dam's gone! Run to the hills!" Maniacally the citizens of Hammond took up Dave's cry. Women screamed. Children wailed.

On through the slippery streets staggered the mare, heaving, tottering on her last legs, but still fighting for accomplishment. Dave's six-shooter belched its orange fire into the night from house to house. "The dam's gone! Run to the hills!" Then in lowered tones: "Hop to it, kid! Hop to it! Your old lady was payin' dividends when she brought you into the world. Hop to it!"

Ahead of the mighty wall of water that swept everything before it Hammond ran safely to the sagebrush elevations. Not a soul perished, but every house in the town went down.

As the dawn came they stood huddled together on the brow of a hill, their few pitiful savings strewn about them, straining their eyes through the feeble, gray light, silent, stunned, their lips twitching with a nameless awe.

Some one with a lantern approached a group that stood about a dying horse. Mr. Raymond was one of the group. His lands were devastated, but his wife and children had been saved with the rest. He had just wrung Dave Chipley's hand.



"Poor little kid!" Dave muttered brokenly. "She sure hopped to it like her mother would 'a' done ten years ago."

He knelt beside the quivering animal. The lantern's rays played over man and horse. The glistening, loving eyes looked up at Dave; then they glazed, and the lids set tight. There came a last, long, deep sigh. Dave Chipley had flung himself prone across the neck of the dead mare. Raymond, softly damning "the luck," turned his back.

The light of the lantern had revealed something to Dave, and he was softly sobbing: "I didn't know. I never guessed it. Babe! Babe!"

"Oh, no, it's not myself! It's Fido—he's abominably fat. I want madame to give him her best flesh-reducing treatment"

The New
Kodak Jr.

With all the Kodak refinements

EASY to operate, and so thin and compact that it is pocketed without inconvenience. Equipped with new Kodak Ball Bearing shutter with cable release, for time and bulb exposures, and for speeds of 1/25 and 1/50 with No. 1, and for 1/25, 1/50 and 1/100 of a second with No. 1A. Discovering New Writers

Miss Viola Roseboro' joined the staff of *McClure's* as manuscript reader soon after the magazine was started. At one time we had a prize contest for short stories, and so great a number of stories came in that I engaged Miss Roseboro', whom I knew well, to help me read them. This led to a permanent connection. Miss Roseboro' was of great service to the magazine in discovering promising material by unknown writers. She had a singularly open mind toward the manuscript bag, a natural attitude toward stories which is rare in professional readers, who, like everybody else, in time become the victims of their own tastes and their own successes, and are therefore always hunting for the thing they themselves like best, instead of for the thing that new writers are writing best. Miss Roseboro' seized upon the early stories of O. Henry, Jack London, Rex Beach, Myra Kelly, and the "Emmy Lou" stories when their writers were unknown, with as much sureness and conviction as if she had known what the end was to be in each case, and exactly how popular each of these writers was to become.

From the Autobiography of S. S. McClure, Founder of *McClure's* Magazine.

Miss Roseboro' is now a member of the Editorial Staff of Collier's and reads all the short stories submitted to us.

The Seagoing Flyers

(Continued from page 18)

at the wheel to see if he was on the job. I knew that he was, as I knew that Bellinger was—or he would never have come through two years of flying—but I looked just the same. He did not look at me, but there was just a flash of a smile on his lips. At the inboard corner of his near eye I thought I saw a smiling wrinkle or two. I was not the first passenger to take his first flight with young Lieutenant Bellinger. Outside the breakwater there was some little sea on. I knew it because I had come through it not long before in a launch from the ship, and because the summer "norther" was still on; but, looking down at the waters of the Gulf from *C 3*, I could not say that there was. The white crests of the curling waves were there plain as could be, but no visible roll to them, no sign of life whatever. They just lay there, and, looking down, I recalled with envy that line in the "Ancient Mariner" about a painted ocean.

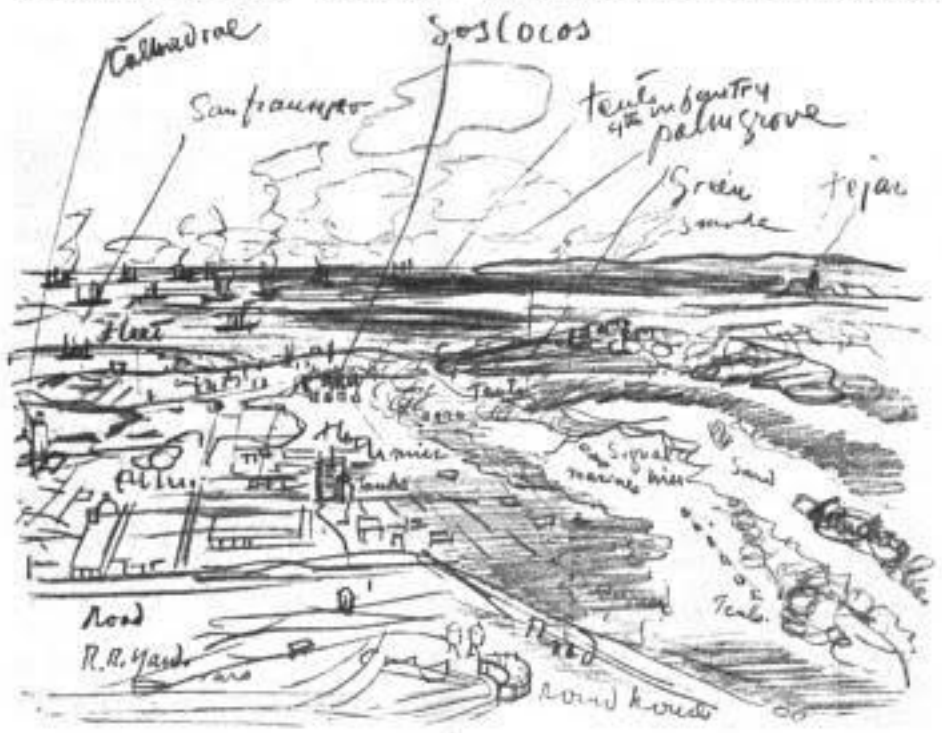
The sea was breaking over the coral reefs: that is, I knew it was, and thereby marking the line of reefs as plain as could be; but the sea was not breaking as we saw it from *C 3*. It was just lying there in motionless, white circular lines against the green cloth. In-shore the Gulf was all pale green, off-shore a hazy blue. North of Vera Cruz was a bit of beach where I knew the surf rolled high in a "norther." It must have been rolling high now, but when we passed over it in *C 3* there was no surf rolling there. Instead there was a series of motionless, curved ridges, as still and white as white frosting on a cake or winter snow on a perfectly calm day.

"I demonstrated to my own satisfaction," says Mr. Reuterdahl, "the possibility of making in a few minutes a sketch map for military purposes"

Stranger Than Coleridge's Albatross

WE turned south, and now we were really flying. Down the wind we were going at ninety-five miles an hour. Against the thirty-mile "norther" I had felt her struggle, but the thirty-mile "norther" behind her—*wasn't*—she was going like a home-bound gull. I couldn't say that she was going ninety-five miles an hour. That was, to me, one notable thing about flying—the effect was more of soaring or sailing than rushing wildly through space. (We sat in a protected cockpit, of course.) But she rated sixty to sixty-five miles an hour in still air, and the wind was pushing her at least another thirty.

We flew over the city. Now it was the buildings which looked like the Christmas toys and midgets walking near them. We passed a wharf where a row of steam cranes stood beside a loading steamer. I had been many a time at that wharf and knew that the tops of each of those cranes was at least five or six feet across; but now they pointed up toward us like so many spikes. I said to myself, if we fall, I hope we do not fall on those things; although it would not have made any real difference what you fell on when you fell far enough.



The sea has no spikes sticking up out of it, but it is incompressible also.

Down the wind we went, then across and inland. Bellinger shouted something in my ear and nodded his head toward where, beyond our outposts, smoke was rising. He went nearer, but not as near as he would have liked. Twice already he had been shot at, one shot passing through the wings, which caused his superiors to order him to be careful, not because *C 3* had been struck—that was the "trade risk" of his job—but because Huerta's people might construe it into a violation of the armistice, which pledged both sides to make no advance until a further mutual agreement was made.

We swung back toward camp, nearing the harbor, and began to take notice of many new things: as, for instance, that whereas before I used to think that the space inside the breakwater was quite commodious, I now began to wonder if there was really room for *C 3* to make a safe landing. My first knowledge that we were going to land came when Bellinger touched me on the arm and pointed down ahead of the machine. It was the first time he had in any way warned me. Even before leaving the earth he had said nothing as to how I should behave.

Hovering

I WAS glad, a moment later, that he had warned me. Her bow suddenly tipped under, straight under, I thought, and almost stood up to see how nearly straight under. I pushed back, and then, realizing that Bellinger had made hundreds of landings, sat naturally. It was a splendid swoop, over the heads of the appreciative natives on the sand hills, over the swimming boats from the battle fleet, the boat of the diving man, the naked Mexican boys still frolicking in the

The original sketch made high in the air by Mr. Reuterdahl. It could be made, he says, by a scout in half an hour 3,000 feet in the air secure against rifle fire

Ensign G. de C. Chevalier coming in after a flight, with the porpoise-like action of the hydroplane skimming and leaping the water. Photograph by James H. Hare

water, past the fleet of little trading and fishing schooners, and abreast of where all the American youth and beauty of Vera Cruz were gossiping on the veranda of the pale pink and bright blue clubhouse with the word "Baños" on it in large white letters—Baños meaning baths.

In half a minute we were back to the beach camp, with its four khaki tents in a little row, its picket line with the marines on guard, and the approving native audience on the sand hills in the rear.

While your correspondent was pulling the rubber plugs out of his ears and unshipping from chest and back the heavy life jacket, the young and highly efficient Lieutenant Bellinger was reporting to Lieutenant Commander Mustin. While I had been wholly absorbed in the sensations of a first flight in the air, he had been verifying the location of a sunken wreck which he had discovered two days previously, had made mental note of the uncharted reef on which one of our battleships had touched on entering the harbor; and there was also something further to report in connection with the outposts which had nothing to do with seagoers or seagoing maneuvers.

500 Volunteered for Aviation Service

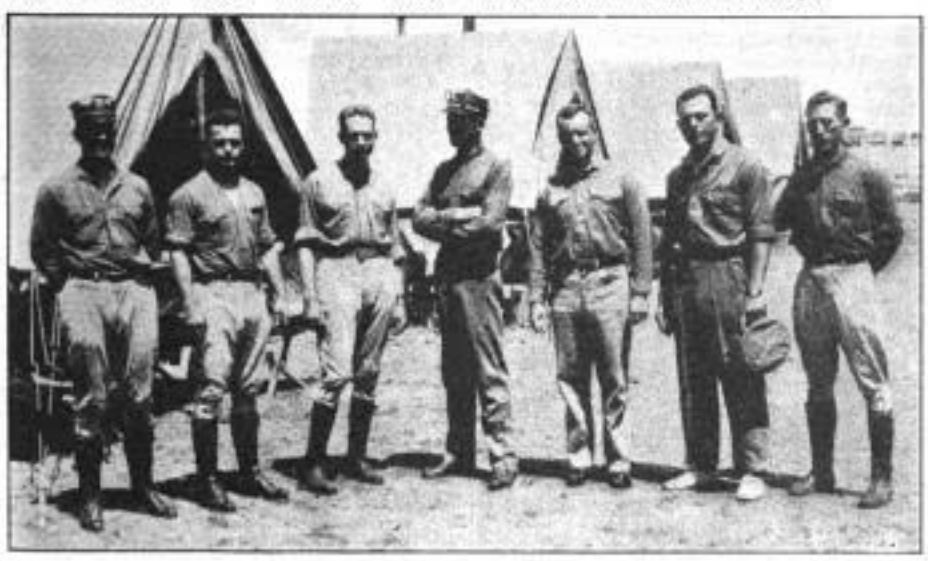
THESE young officers of the Navy Aviation Corps are but types of the naval officers who are specializing in the service these days. They all have the seagoing qualification to begin with; on that foundation they build up. Lieutenant Commander Mustin is himself a high type. At Annapolis a great athlete, as an ensign a commander of a gunboat in the Philippine War; efficient watch officer on a big battleship; ordnance officer of another big battleship. From that he specialized as an aviator.

Two years or so ago he made a flight from which he descended hurriedly and unwillingly into Delaware Bay. For two days the South Atlantic Coast was agog with searchers after him or sight of his machine. Meantime he was drifting about on the ocean on his leaking pontoon, which he kept from filling and sinking by original methods until a casual steamer spotted him and picked him up.

He learned something from that; he learns something from every new experience; and when a man of high intelligence, quiet courage, will power, imagination, backs that equipment with a wide experience, the world benefits. All of these officers are seeking to better the service. Aviating is going to be a dangerous service in war time, yet five hundred young officers made application for the corps. An increase of 35 per cent in pay goes with corps enrollment to-day; but these five hundred applied before any increased pay bill went through.

There were eleven officers in the corps; there are now nine. The missing two went the usual way. Will the others eventually go that way? Not necessarily. They are not foolish. Before Lieutenant Bellinger made his flight yesterday I noticed that he went carefully over every part of his machine. Once satisfied that every part was as strong as could be he worried no further. The naturally qualified man who is also experienced is usually the last to come to grief. Two years ago Mustin was not an experienced aviator, and was trying a difficult feat—difficult even for an old hand. Somebody had to do it—he did it. To-day it would take much to upset him.

The Value of the Flying Corps



THE navy aviators should before long be doing the best work of any in the country. And why? Because there is now a school of them. Where a lot of good men are in regular competition we always get the best results—that holds for almost any line; in a few years the navy corps will probably be regularly doing work in the air that is to-day not possible.

If you ever had a good look at the Bellinger type, and besides that had watched his development for four or five years, you would not feel nervous, no matter what your native dread might be at the thought of finding yourself a few thousand feet up in the air. If you knew Mustin, and he said "I think I can do so and so with an aeroplane," you would probably prefer to try that thing, even though it looked hazardous, than to try a most ordinary thing with a most ordinary performer. The Mustin type will increase; and then we shall see most of the presently impossible things solved. These men who love adventure for the sake of adventure, but can forget the adventure for the sake of something more useful to the service and the world—they will be the men to do it.

The great value to the fleet of the Aviation Corps to-day? Scouting. You can stand on the deck of a ship now and, by fixing your glasses on an aeroplane from its first rise, keep it in sight for eight or ten miles on a clear day; by trying to sight it intermittently you will probably lose it in half that distance. An aeroplane, from a height of ten thousand feet, can see a fleet of battleships fifty miles away, and the battleships can no more see her than they can see a speck on the sun. An aeroplane can keep a fleet of battleships in sight all day, and then, even if she loses them at night, can begin her wide circling in the morning and soon pick them up again, no matter to what course the ships change in the night.

What Is the Future?

HOW are the battleships ever to beat that game? We do not have to keep track of the forlorn little Mexican navy with our aeroplanes, but suppose it should be some other navy?

A group of Uncle Sam's aviators at Vera Cruz, photographed by James H. Hare (left to right): Lieutenant P. N. L. Bellinger, Ensign G. de C. Chevalier, Lieutenant J. H. Towers, Lieutenant R. C. Saufley, Ensign C. K. Bronson, Lieutenant B. L. Smith, Ensign M. L. Stolz

A Boy and a Motor or Four Boys—Which?

In addressing mail, sealing envelopes, folding circulars—in countless forms of office and shop work—one boy and a Robbins & Myers Motor can now do what several boys did before.

And what is more important, the work is done *on time*. Promptness is even more valuable in most offices than the wage-saving.

Robbins & Myers Motors

We Specialize on Small Motors

For 18 years we have concentrated on the building of small motors of 1-60 to 15 horsepower. We have acquired a vast experience and knowledge in this particular field; this accumulated experience is freely offered in aiding you solve *your* problems. Consult with our engineers. Let them tell you how they have helped hundreds of others. There is no charge for this service. Write us today.

Robbins & Myers Small Motors are built to serve operators who are not expert in the care of electrical machinery. They require no attention other than an occasional oiling. They are unusually rugged and staunch in construction, simple to operate and exceptionally long-lived.

You can get these reliable, economical motors on any high-grade electrically driven machine. Look for the Robbins & Myers name plate. It's your guarantee of good service.

By invitation, member of Wire Leaders of the World Association

Write for Free Booklet, "Doing the World's Work"

It will interest you if you use or make any small device or machine which can be operated by power. Write for full information on your particular needs.

How Many Hides Has a Cow?

This may seem a foolish question.

Yet the area of automobile upholstery made from one cow's hide is about three times that of the whole hide.

How?

By splitting the hide into three sheets, and coating and embossing the "splits" in imitation of grain leather.

Coated split leather is therefore artificial leather much inferior to

DU PONT FABRIKOID

MOTOR QUALITY

which is scientifically made artificial leather based on a fabric much stronger and more uniform than the fleshy split, but coated and embossed in the same way.

The difference is all in favor of Fabrikoid, which is guaranteed superior to any coated split. Not affected by water, heat or cold. Several leading makers have adopted it. Any maker can furnish on your car if you order it so.

Send 50c for sample 18 x 25 inches. Enough to cover a chair seat. Mention this weekly and specify Black Motor Quality Fabrikoid.

DU PONT FABRIKOID COMPANY

WILMINGTON, DEL. and TORONTO, ONT.

Dad Tells This:—

"Saturday we were mired down on the lower road. If Brown hadn't happened along with an Autowline in his car, and pulled us out, we'd be there yet. I carry an Autowline myself, now."

Basline Autowline

"The Little Steel Rope With the Big Pull"

has taken the bugaboo out of mud, sand, hills, balky motors—all road trouble. About 25 feet of ¼-inch Yellow Strand wire rope with special hooks and manila slings for attaching; light, flexible, easily stowed under a cushion, quickly attached without danger to paint. All supply dealers. Price, east of Rocky Mountains, $3.50.
